The Constitution defines the prerogatives of the Sovereign as well as the powers and functions of the Legislature, the Executive, and the Judiciary. It is the foundation upon which the national polity rests, and it embodies principles that ought to remain unchanged for hundreds of generations. The mode of its compilation must, therefore, of necessity, differ from that resorted to in framing ordinary codes. It is too important a work to be entrusted wholly to any one body of officials, and should be subjected at each stage for Imperial consideration and sanction. But to prepare the Constitution under the direct guidance of the Sovereign himself involves a considerable departure from the ordinary modes of procedure, which are confined to submitting for Imperial inspection drafts already prepared by his legislators. According to the course pursued, the relations between the Sovereign and the compilers, as well as the value of the whole work, must vary considerably. In the case of an absolute Monarchy, the entire power rests with the Sovereign alone, and his natural plan would be to select one or more of his officials, and direct them to draw up a Constitution according to his wishes. Such, indeed, may be regarded as the fundamental principle on which a constitution should be formed in a Monarchical country. There would, of course, be no difficulty about inviting ministerial opinions on the drafts thus prepared, or revising them after careful discussion. Even in Republican countries, such as America and France, matters connected with the Constitution are generally treated by processes different from those adopted in ordinary legislation: special representatives are chosen, in whom, as a body, the supreme authority is vested, thus forming a national convention, or congress, to undertake the task. So far, therefore, the procedure in both Monarchical and Republican countries is alike, and we may say that, to establish a constitution in Japan, it is absolutely indispensable that the Emperor should take the trouble of directly superintending its compilation. It follows, therefore, that no place can be more convenient for carrying on the work of compilation than the Palace, and we are of opinion that to these considerations must be attributed the position chosen for the new Bureau. Plainly, too, the officials entrusted with the duty of attending on His Majesty and drawing up the Constitution according to his will, must be well versed in the principles upon which the Constitutions of other countries, both in ancient and modern times, have been based, so that they may be competent, while abstaining from any expression of prejudiced views, to make appropriate replies to the Emperor's enquiries. All these considerations combine to indicate as the official most suitable for the task His Excellency Ito Hirobumi, who, in accordance with His Majesty's special instructions, has conducted direct investigations into the Constitutions of various foreign countries. It is scarcely necessary to say that, in common with our fellow countrymen, we have long expected to see him appointed to such a position.

With regard to the additional office he has been called on to fill, namely, that of Minister of the Imperial Household, there seems to be a simple reason. The Bureau for the preparation of the Constitution being established in the Palace, and the duty of consulting the Emperor devolving upon its President, there will naturally arise frequent occasions on which it will be necessary to ask His Majesty's opinion. Were the President merely on the same footing as the other Privy Councillors or Ministers of State, he would have, like them, to take his chance of obtaining an audience in the way usually pursued when any political question requiring the Imperial consideration crops up. Under these circumstances it would be difficult for him to carry out the Emperor's intentions. It is thus plain that the important position of President of the Bureau of Constitutional Reform in some

respect involves the discharge of additional duties as Minister of the Imperial Household. The public, however, is inclined to suppose that this dual office of His Excellency Ito is the precursor of general administrative changes, an idea which has probably been inspired by a superficial examination of the situation. It is true that, since the Restoration, no precedent can be found for the step now taken, and that, both when the Privy Councillors were relieved from their additional duties as Ministers of Departments, and when they were again called on to perform those duties, the Imperial Household remained under the presidency of an independent official. These circumstances have probably created a belief that a Privy Councillor would never be nominated Minister of the Household, though in former times that dignity was sometimes chosen from among the Privy Councillors, or Ministers of State, or official holding the rank of *Nagon*, so that his liability to discharge additional duties as a member of the Cabinet can scarcely be doubted. Those who are curious about these matters many consult the *Shokugensho*, where the history of official functions is given in detail. In foreign countries, too, instances are to be found of Privy Councillors acting as Ministers of the Household. Russia is a case in point: the Prime Minister there also presides over the Imperial Household. Taking all these things into consideration, we find no cause for surprise that His Excellency Ito has been appointed Minister of the Imperial Household, nor any reason to suppose that an intention of extending that Department's functions exists. If the public has been perplexed by an appointment without precedent in recent times, it is simply because the matter has not received sufficient examination. We have full confidence in His Excellency Ito, and we join with our countrymen in the hope that he will give the Mikado sound advice with regard to the compilation of a Constitution, to the benefit of his country and of his own reputation.

THE RIUKIU ISLANDERS.

(Translated from the *Mainichi Shimbun*.)

Some of the customs of the islanders are rather amusing. The people are fond of wearing their best clothes at all times, even though the cost of wearing fine apparel forces them to do with two meals a day instead of three. The custom of adopting male adults as bridegrooms obtains here just as in the main island of Japan, but, strange to say, no formal marriage ceremony takes place until the expectant bride gives birth to a child. Until the woman becomes a mother she has no claim upon her husband, but after childbirth divorce is impossible, and hen-pecked husbands are the rule. Indeed, the Japanese who have married women in Riukiu often have felt the force of the *Pantoffel-regiment*. Generally speaking, the men lead idle lives, while the women support the household cares and expenses. Sweet potatoes are the great *bonne bouche* of the islanders, and they are wonderful gormandizers. Among the upper classes rice is eaten once a day, but the common people rarely taste the cereal except on high feast-days, or in case of sickness. Rice is supposed to be a specific for every known disease. Foreigners are all called *waran* (a corruption of *Holland* or *Orando*), and the natives positively refuse to take medicines compounded in the foreign-style Hospital; for they assert that *waran* drugs, though efficacious for the time being, are certain, to prove injurious in the long run. This, as the opinion of an uncivilized people, is not a matter for wonder, but it is rather a pity that they should reject good medicines on account of a merely traditional superstition. There are two or three rice-harvests grown every year. The egg-plant and pepper bear fruit all the year round, and are noted for their extraordinary productiveness. Many of these plants bear fruit even after a lapse of ten years.

The sugar-cane flourishes everywhere, Shirishima being especially famous, and sugar mills are to be found in every village. Sago palms are equally abundant, and though not manured, will grow even in desert districts. The dried and powdered pith of the palm can be eaten when properly steamed, and the inhabitants generally keep a large supply on hand in case the crops fail or turn out badly. The fruits, although not so palatable, are treated in a similar manner, but many of the palms bear no fruit at all. At the country residences of the former chieftain, in Shikina and Sakiyama, there are a few cherry trees, but these are not found elsewhere. The interior of the island is notorious for quantities of a black, poisonous snake, called *habu*, which lives under the rocks and in close vegetation. Some of these snakes measure five or six feet in length. Another species, known as the *kanahabu*, is red in colour and of small size.¹ In the warm season, thousands of these serpents lie coiled in the meadows and pasture lands; they twist their tails about the stems of small plants and lie in wait for the passers-by, whom they attack with great ferocity. Many people have died from the poisonous bites of these noxious reptiles. Contrary to what one would expect, the aboriginal cave-dwellers, the troglodytes of Riukiu, are not at all afraid of these serpents, and catch them with their naked hands. The *habu*² in especial grows furious when approached by man, but these fearless cave-dwellers catch it just when about to strike, with the greatest ease. The skin of the serpents, when of sufficiently large size, is made into a cover for the musical instrument called *jamisen*. This instrument has three strings and emits a most melodious sound, on which account it is a great favourite with all the natives.

KOREAN TRADE.

(Translated from the *Mainichi Shimbun*.)

That a treaty between Great Britain and Korea has been ratified by the Sovereigns of both countries is an undeniable fact, but as to the latter's treaty with Germany, nothing definite has, as yet, transpired. It was in November of last year, that these two European powers, the one represented by Sir Harry Parkes, and the other by the German Consul-General in Japan, Mr. Zappe, simultaneously commenced negotiations with the Korean Government; the claims brought forward by either of the two representatives being—as far as we have heard—of a similar nature. It should certainly be an easy task for Germany to carry out her Korean policy to her own liking, inasmuch as Mr. Von Möllendorff is an important factor in the domestic and foreign administration of the Hermit Kingdom. We have not yet received trustworthy information in reference to the ratification of the German-Korean treaty; but, if it has not been ratified, it surely will be so at no very distant date,—and has been, perhaps, ere now. America has already concluded a treaty with Korea, and has even appointed a Minister in Söul. Still other great commercial nations in Europe will speedily enter into treaty negotiations with Korea. According to recent advices, Russia has already evinced her willingness to open up trade with the Koreans, and a treaty will, no doubt, speedily follow. Soon will the open ports of Korea be visited by vessels from all parts of the world, and settlers will stream in on every side. No longer will the benefits of Korean trade be exclusively enjoyed by Japanese merchants, as has been the case heretofore; and our countrymen will have to enter into competition with their foreign

¹ Probably the harmless *Coluber tigrinus*, quite common in Japan, but deemed poisonous by most of the peasants.

² The *habu* is undoubtedly nothing more than the well-known *Python reticulatus*, or Rock Python, a native of India and Southern China. It is not at all poisonous, but will readily inflict pretty severe wounds. This Python has been occasionally caught in Hongkong, the largest specimen measuring 6 feet 7 inches. The Chinese similarly use its skin in covering the body of the *samisen* or *jamisen*. The skin is supposed to be an excellent febrifuge, and is largely sold by the native druggists.

rivals, if they would retain a profitable footing in the Hermit Kingdom.

Both Europeans and Americans are now welcome to reside in the open ports of Korea. And, so far as the question of profit and loss is concerned, the Japanese merchants do not yield an inch to any foreign power, China alone excepted. While we are truly proud of this, it causes us at once great anxiety. In replying to the question why foreigners cannot compete with us in Korean trade on equal terms, we can call several facts to mind which are directly disadvantageous to aliens; among these are the inadaptability of the Korean commercial system to civilized traders, the low standard of Korean industries, and the world-wide dissimilarity between the language and letters of Koreans and Europeans. The Japanese trade with the Hermit Kingdom has of late averaged about 4,000,000 *yen* every year, but the business transacted was not through the convenient agency of either *urikomiya* or *hikitoriya*. Take the case of the rice export. There are absolutely no regular rice-dealers, and buyers are compelled to wait for the tedious arrivals of a few desultory bags at irregular dates. Fancy what a disagreeable delay it would entail upon a wholesale buyer in this country had he to go the round of the petty retailers, instead of applying at once to the Rice Exchange. The case is exactly the same with gold dust. There are no bullion brokers worthy the name, and the foreign buyer is able to make his purchase only after a most roundabout fashion. And not a little modicum of skill is absolutely indispensable in the successful management of such petty bargains. Under such perplexing circumstances, can or will foreigners enter into competition with Japanese merchants in the matter of rice and gold-dust? It is more than probable that foreigners accustomed to the wholesale employment of enormous capital will not be able to endure the vexations attendant upon such transactions as those we have described. And even should they submit to such troublesome business dealings, they are certainly not able to manage them with greater skill than do our countrymen. Were Korean exports at all like those to which foreigners have become accustomed, they might hope to make ready profits; but the larger portion of Korean exports consists of rice and other cereals,—and we certainly know more about rice than do any foreign peoples. The Koreans stand on as low a social stage compared with us as we do in comparison with foreigners. Foreign residents in the East are too utterly different from the natives of Korea to warrant their standing on the footing of buyers and sellers. The pawnbroker is the best salesman for such a state of trade. What the pawnbroker is to the salesman, the Japanese merchants in Korea are to the natives. Though dissimilar as to their command of ready money, both work, to a great extent, on a similar basis. The Tsushima islanders display wonderful aptitude in acquiring the Korean language, speaking it far better than do any Chinese. In this point we have a decided advantage over foreigners. But even were there no Tsushima, the common characters employed by the Koreans are not so very different from those of our own language, and this fact can be utilized in our favour. Here, again, are Westerners without any such facilities of communication. In short, while giving foreigners full credit for their innate acuteness, they cannot nor will they become dangerous rivals of Japanese merchants in Korea; certainly not for the next five or ten years. While this is a matter for congratulation, it is, nevertheless, one-sided and temporary. Should Chosen still remain the Chosen of to-day, there is no doubt but that the opportunities of Japanese merchants would remain as superior as they have been heretofore. But Korea will not be the semi-barbarous country she is very much longer. She, like all other Eastern nations, is destined to adopt civilized and improved commercial methods, and then will the experience and skill of Japanese

traders in Korea stand them in no great stead. That the influence of Japanese traders should, for the present, be so overwhelmingly great is due to the actual poverty of the Koreans, their ignorance of the tradal methods of civilized lands, and their slow-witted proceedings when matters of moment are at stake.

GAIETY THEATRE.

The Lynch Family Bellringers made their first appearance in Yokohama on Monday night before a good house. Bellringing is a novelty here, and it is but just to say that the Campanologists were received with warm applause. It is somewhat difficult to describe the style of music in so many words; it should be heard to be properly appreciated; but it may be referred to in good truth as exquisite and most melodious. By far the greater portion of the audience were most agreeably disappointed, for few were prepared to hear such really excellent music. One does not know which most to admire, the skill of the performers, or the dulcet notes they produce. A most agreeable effect is rendered by the gradual transitions from *forte* to *pianissimo*, while the rapid passages are executed with great delicacy and skill. One of the most difficult numbers on the programme was the "Chimes, Changes, Joy Bells," and yet it hardly elicited its meed of applause. The performers reproduce in miniature many of the various changes of a chime of eight bells, in such perfect and exact time that one is unconsciously reminded of the echoing chimes from some grand old belfry:—

Hark how it falls! and now it steals along
Like distant bells upon the lake at eve,
When all is still; and now it grows more strong,
As when the choral train their dirges weave,
Hollow and many-voiced . . . where every close
O'er the old minster's roof in echoing waves reflows.

Our favourites on the programme were the march from "Norma," the "Marseillaise" and, in especial, the "Blue Bells of Scotland." The ballad "Come Home, Father," is very pretty, but rather hackneyed, although it shows the Campanologists at their best. The duet, "Home, Sweet Home" was enthusiastically applauded, and we could gladly listen to it again. The Musical Glasses were rather less shrill and decidedly more enjoyable than others we have heard, although we have no over-great *penchant* for the verrophone (e.g. Crispini). Professor Statham is an able musician, far and away better than the usual peripatetic pianists; and it is to be regretted that he had no better piano to testify to his skill. A poor instrument is always a great drawback, no matter how efficient the performer; but a bad one is simply torture in a refined form. Mr. J. S. Farron was much appreciated in his Irish and Dutch impersonations, but as for the other comic songs they might almost have been struck out as not in strict keeping with the rest of the entertainment. As *Denis Mulvany* in the amusing farce, "The Judge's Substitute," Mr. Farron was at his best, and kept the audience agrin with the richness of his brogue. Mr. W. Lynch is a fine dancer, but for true "poetry of motion" commend us to the Irish jigs.

A second performance will be given on next Wednesday evening, the 16th inst., with an entire change of programme.

It has been a common occurrence for the Buddhist pilgrims to the Honganji at Kiyoto to be waylaid and robbed on their way to the temple. Not long ago, the priests of the temple devised a very convenient plan by which pious pilgrims could arrive at their destination without having to carry money on their persons. But even this promising idea proved ineffectual to stop the highway robberies, and so the priests, in despair, applied to one Aidzu-no-Kotetsu, a famous gambler and ex-bandit on half-pay. This interesting gentleman promised to check the rapacity of the knights of the road. We judge from the above that no one is without some fitting employment, and no man without some peculiar genius.—*Choya Shimbun*.

IN THE TOKIYO COURT OF APPEAL (KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—WEDNESDAY, 16th April, 1884.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

In the matter of a Marine Court of Enquiry into the loss of the Mitsu Bishi Mail Steamship Company's steamer *Akitsushima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsushima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

The petition of Johannes Frahm, late master of the steamship *Akitsushima Maru*, shows as follows:—

1.—That a marine court of enquiry into circumstances attending the loss of the said steamship met at Tokio the 12th of November, 1883, and sat for the hearing of the testimony of witnesses on that day and on the 13th and 14th days of November.

2.—That the said court was composed of Messrs. G. E. O. Ramsay, President; with Thomas Henry James and Archibald F. Macnab as Assessors.

3.—The judgment of the said court was given on the 19th day of November, 1883.

4.—By the said judgment the court found as follows:

We find the master guilty of:—

1st. Error in judgment by over-estimating the speed and leeway on the 9th of October.

2nd. Imprudence in shaping his course direct for the land at a speed of 8 knots from midnight of the 9th October: and also for running the ship at the same speed on a N.W. by N. course immediately after sighting the light at 4 a.m. on the 10th October.

3rd. Neglect of duty in leaving the bridge and deck when so uncertain of his position and distance from the land while the ship was steaming full speed towards it.

We therefore advise that his certificate of competency as master be suspended for 12 months.

Also we consider the chief officer, Mr. John C. Werner, to have contributed in a great measure to the disaster in neglecting to call the master when the light disappeared, in not turning her head to seaward or not reversing the engines to full speed astern, consequently we recommend that his certificate of competency as first mate be suspended for 6 months.

In both cases the suspension to be from date of judgment.

(Signed)

G. E. O. RAMSAY, President.

THOS. H. JAMES, } Assessors.

A. F. MACNAB, }

5.—That your petitioner wishes to appeal from the said judgment on the grounds following:—

1.—The charge against your petitioner was for "causing the loss of the vessel by his wrongful act or default." But the evidence produced to the court showed that the actual cause of the loss of the *Akitsushima-maru* was the existence of a false light on the coast in the neighbourhood of Siriya-saki so closely resembling the light from the lighthouse on Siriya-saki that every person of experience on board the steamer was deceived by it. That as the stranding of the vessel followed so quickly after sighting the false light the loss of the said steamer must be attributed directly to the existence of such false light on the morning of the accident and not to the cause upon which your petitioner was charged under section 10 of the government regulations namely "causing the loss of the vessel by his wrongful act or default."

2.—That the said court was in error to the prejudice of your petitioner in failing to obtain evidence as to the existence and true position of the said false light. Therefore the evidence of the seaman Nakashiyo Chogiro to the effect that the light which was sighted was taken by every person on board the steamer to be the Siriya-seki light must be taken to be correct. It is true that the statement of this witness as to the colour of the light was not clear, but he was distinct in stating that the colour and appearance of the two lights were the same.

3.—That the "imprudence" of which your petitioner was convicted by the court was directly induced by the existence of the false light at a point where your petitioner had no previous notice or knowledge of its existence. The final statement made by your petitioner to the court is sufficient to show this; and the evidence which was adduced to the court was sufficient to prove that the mistake of believing this light to be the Siriya-seki light was shared in by every practical mariner on board the ship. Up to 4 o'clock of the morning of the 10th of October the action of your petitioner had been prudent and cautious. After the severe weather which the steamer had experienced on the 8th and 9th of October during which the vessel was not under control either as to speed or steering, it would be dangerous to attempt to enter the Tsugaru Straits without first making the Siriya-seki light. But the position of that light is so well known that after it is once sighted and a bearing obtained, it may be considered perfectly safe to steam ahead in the direction of Cape Blunt, even if the vessel was at the time of taking such bearings distant only six miles to east of the said light.

Now until sighting the light at 4 o'clock in the morning of the 10th October your petitioner was in some doubt as to the exact position of the vessel: he was approaching the land to obtain a sight of the light or of some well known land mark to direct him and to assist him to ascertain his exact position. As he did not sight the light at the time he expected he took the precaution which every careful seaman would take,—namely heading his ship seaward preparatory to sounding and attempting by means other than those of

stellar observation to ascertain his position. It was during this manoeuvre that the light was sighted in a direction and position corresponding with those in which he expected to find the light. Had the light which was then sighted been the Siriya-seki light his position would have been ascertained beyond a doubt and it would have been safe for him to proceed; or, more correctly, and to put the proposition in another way,—Had not the false light been burning on the morning in question your petitioner would not have been deceived: he would have continued to exercise the precautions he had commenced to take. It was evidently his intention not to enter the Tsugaru Straits until he had made the light or ascertained his position by sighting Siriya-seki. He was deceived by the fact of the existence of an unauthorized light and the loss of the vessel must be taken to be the direct consequence of the existence of such false light and not of any wrongful act or default of your petitioner.

4.—The speed of the vessel and the lee-way made were calculated in the only way in which such matters can be calculated during the violence of a hurricane, when the attention of every person is directed toward the immediate safety of the vessel, namely the lee-way by judgment, and the speed by the patent log: and in the absence of unusual set or of undue variation in the set of the current the judgment of men who have sailed in a ship for some time is generally found to be correct; for experience gained by familiarity with the machine a man handles gives him a power of guessing correctly. The estimate formed by your petitioner of the relative speed and lee-way of the vessel coincided with the estimates formed by the engineer as to the speed and by the other officers as to the lee-way. It thus follows that even if a consultation had been held among the officers of the ship as to the position of the vessel, the same decision would have been arrived at as was arrived at by your petitioner.

5.—That the reference made by the court to the trim of the vessel was unjust to your petitioner. He was ordered to proceed to sea. The amount of cargo actually stowed differed considerably from the amount he had been told was to come aboard; he had then to fill the after tank with water ballast to bring the screw propeller into the water. At 16 feet the propeller was only just covered; had the ship been lighter "aft" than she was the engines would have "raced" more than they actually did and the ship would have made less speed and consequently still more lee-way in the gale. Upon the due consideration of all these circumstances your petitioner humbly submits that the loss of the vessel was not caused by any wrongful act or default of his, but was the direct and necessary consequence of the exhibition of the false light. Your petitioner begs a favourable and early consideration of this case that he may not be disgraced by an unreversed decision of a naval court after many years faithful and diligent service in the Mitsui Bishi Company.

Your petitioner therefore humbly prays:—

That the decision of the Marine Court of Inquiry may be reversed, and that his certificate of competency may be restored to him.

(Signed) ATTORNEY FOR THE PETITIONER.

Yokohama, the 23rd day of Nov., 1883.

Reply to Petition in appeal re *Akitsu-shima-maru*. Between Johannes Frahm, late master of the above vessel, by his attorney Peter Frahm, of No. 149 Bluff, Yokohama, the Appellant, and The Kuwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent, by his attorney, G. E. O. Ramsay.

The petitioner wishes to appeal from the said judgment on the grounds following:—

"The charge against your petitioner was for causing the loss of the vessel by his wrongful act or default."

This charge is substantiated, for the master Johannes Frahm neglected the most simple rules of navigation, never at any one time after the light was sighted were any bearings of it taken by compass. The compass the ship was steered by, being on the bridge, no bearings could be taken by it, (as elicited in the cross-examination of the chief officer by the master) from right ahead, to 4½ points on either bow, by master's statement 6 points on each bow; this was called the standard!

Further, the master never attempted to ascertain his position at any time after losing sight of the land on the morning of the 6th October: the ship's position at noon of the 9th was unknown to any one on board, nor was it sought to be ascertained; the vessel was not navigated at all, but left to take her own course; at midnight of the 9th, the master had no certain idea of the ship's position, as shown by his own evidence in reply to queries by Lieutenant James.

At the time of preparing to take a cast of the lead, the master (as by his evidence) thought the ship might be in the Tsugara Strait and in soundings; whereas the vessel found a position for herself at a point called Odonosaw, about 15 miles south of Siriya-saki: consequently the master was in error from 20 to 24 miles as to ship's position.

He wilfully neglected the printed instructions of his owners, and in fact altogether disregarded them, as follows from Book of Regulations:—

"To the Commander.

"General Regulations.

"1. You will please distinctly understand that, notwithstanding the issue of the following Regulations, the entire responsibility still rests with you for the safe and efficient navigation of your command, and you are requested to bear in mind that, although you are expected to make good passages you must under no circumstances run risks as are likely to result in accidents, as your first care must

always be the safety of the lives and property with which you are entrusted.

"Should the weather be threatening, we prefer that you should delay your departure rather than put to sea against your judgment."

Sec. I.—&c. "You must under no circumstances run risks as are likely to result in accidents; as your first care must always be the safety of lives and property with which you are entrusted."

Which he altogether disregarded, by not taking steps to correctly estimate his distance off the light. The light seen, so far as the evidence is concerned, might have been the mast-head light of a steamer proceeding down the coast.

"10. During coasting voyages or when near land it is expected that you will be on deck during the night. In other cases you must enter in the night order-book the course to be steered, and all instructions necessary for the safe navigation of the ship during the night. Should the course have to be changed you will note that you are to be called for the purpose, and afterwards enter fresh instructions."

Sec. 10. "During coasting voyages, or when near land, it is expected that you will be on deck during the night, &c." Disregarded.

"To the Commanders and Officers, Log Slate. Part 2.

"Sec. 33. The log slate to be carefully written up by the officer of each watch at sea, or in port after he is relieved, and the particulars as noted below to be particularly attended to.

"I.—Courses in degrees by standard compass.

"II.—Speed of the ship by log.

"III.—Direction and force of the wind.

"IV.—Barometer to be entered more frequently when the weather is unsettled and stormy.

"V.—Thermometer.

"VI.—Revolutions of engines per minute.

"VII.—Number of inches in well.

"VIII.—Courses and distances made good.

"IX.—Latitude and longitude and variation (and ship's reckoning up to noon each day).

"X.—Bearings and distance at noon.

"XI.—Draft of water fore and aft at starting, and as often afterwards as practicable.

"XII.—Remarks.

"1st. State of weather and force of wind.

"2nd. What sails set and when taken in.

"3rd. The true bearings and distance of any land or lights in sight. To find the true bearings and distance from any light or head-land, &c., note distance by patent log from the time when the object bears four points on the bow, till the time when said object is a-beam, due allowance being made for tides, &c."

Sec. 33. Not attended to.

"Sec. 35. The Log to be hove every two hours, care being taken that the line is correctly marked; the patent log also to be used.

"The ship's position is to be ascertained as often as possible, and entered in the Log Book.

"The first officer is expected to see the position pricked off on the chart, so as to keep himself posted as to the position and course, and commanders are particularly enjoined on all occasions when nearing land, or in places of intricate navigation to take frequent cross-bearings of any well marked object that may be visible and suitable for verifying the position of the ship."

Sec. 35. Altogether ignored by master. This section requires hand log to be hove every 2 hours.

"First officer to see ship's position marked off." Master in his evidence said:—"I should be very sorry to consult my chief officer about the navigation of the ship."

"Sec. 40. The ship's log-book is to commence with a table of deviations on the standard compass taken in each point, or every ten degrees, and is to be kept by the first officer who is required to write it up daily from the log slate."

Sec. 40. Disregarded.

Log Book. Part 2.

"Sec. 43. The log book when written up by the first officer is to be placed before the commander for his inspection, each day at noon, and he is to affix his initials thereto, in proof of his having read the same, and ascertained that there are no inaccuracies or omissions."

Sec. 43. Disregarded.

The printed book of regulations, issued by the Mitsui Bishi Mail Steamship Company is complete and exhaustive; and sets forth the orders of the directors to their commanders especially, in a most clear and distinct manner. Still the master of this vessel would not carry out the printed instructions of his owners; consequently by his wilful negligence in not obeying their instructions he throws away absolutely a fine, well and strongly built steamer valued at \$239,000 (cargo inclusive).

The master was not justified in taking the vessel to sea from Yokohama in the peculiar trim she was in, viz.: 6 ft. 8 or 10 inches by the stern, as the ship was not in a seaworthy state and condition, for

which state the master was entirely responsible; as it has been shown by his evidence that the vessel, though having a speed of 5 knots with the wind at S.W. and heading N.N.W. (wind 2 points. abaft the port beam) was making 4 points leeway, having the helm hard down, and still she would take no notice of it; thus proving the unseaworthiness of the vessel, notwithstanding her speed of 5 knots. It was a most fortunate circumstance that the hurricane force of the wind was not experienced from the East, as then the vessel would have been heading N.N.W., and making 4 points leeway, her course would have been W.N.W. when on the starboard tack; while on the port tack, heading S.S.W. and making 4 points leeway, her course would have been W.S.W., result, total destruction of ship and loss of all lives: this is but mentioned to show that the master was not justified in putting to sea with his ship in that trim, and also proves he was not a man of mature judgment, nor one to study the interest of his owners.

Part 4 of petition. The appellant saith as follows:—"That as the stranding of the vessel followed so quickly after sighting the false light, the loss of the said steamer must be attributed directly to the existence of the false light on the morning of the accident, and not to the cause upon which your petitioner was charged under Section 10 of the government regulations, namely, 'causing the loss of the vessel by his wrongful act or default.'" It is under this clause by his own showing, that he was rightfully deprived of his certificate for 12 months, as he was not justified in leaving the deck in charge of the chief officer, in whom by the tenor of his evidence he had no confidence; he ought to have taken two distinct bearings of this light, ere he left the bridge; which would have at once told him that he was in most dangerous proximity to the land or, that the light seen was not Siriya Saki. Neither did he (the master) nor his chief officer adopt any one of the most simple rules of navigation, to ensure the safety of the vessel, or to ascertain her position; all through it was simply guess, guess, from beginning to end: not did the master, prior, or subsequent to his leaving the deck, point out on the chart the supposed position of the ship to the officer to whom he surrendered charge at a most critical moment.

In the 5th paragraph of his petition he states "that the said court was in error, to the prejudice of your petitioner, in failing to obtain evidence as to the existence and true position of the said false light, therefore the evidence of the seaman Nakashiya Chojiro, to the effect that the light which was sighted was taken by every person on board the steamer to be Siriya Saki light; must be taken to be correct."

This cannot be accepted; the seaman said it was a red light, which testimony was corroborated by the statement made to Johannes Frahm (taken from his evidence) by a naval officer "that there was a light 6 miles to the southward of shipwreck. I understood him to say that that light was put there by his orders for the guidance of the fishermen; I understood him to say it was a red light. The one I saw was a clear bright light." Every navigator on the coast knows that Siriya Saki is a bright white light, and the light he saw must have been but a small wood fire, or the mast-head light of a steamer. It was the duty of the petitioner during the time he was at the wreck, to have obtained written attested evidence that a false light had been exhibited; and this he signally failed to do; even as he signally failed in his duties as a navigator and a seaman.

The Master did not even take time sufficient to prove that the light seen was not the mast-head light of a steamer going down the coast, ere he left the deck.

Paragraph 9 cannot be accepted as a true statement, as his action up to the morning of the 10th of October, at 4 a.m. had not been prudent and cautious for the reasons previously assigned; there is no reliable record to be found anywhere, as to the ship's position until she found one for herself, owing to the Master's want of precaution.

Paragraph 10 sets forth at the first,—"that during the severe weather experienced on the 8th and 9th days of October, the vessel was not under control either as to speed or steerage way." This was entirely attributable to the Master, for proceeding to sea in that trim which rendered the vessel unseaworthy. After experiencing such tempestuous weather, no careful, prudent navigator would think of shaping his course finally for a given point, upon the first glimpse observed of a light which he (the Master) mistook for Siriya-saki, but would most assuredly before leaving the deck, determine accurately his position, by taking careful bearings of the light after a fair interval of time had elapsed from the time of taking the first bearing; then, and then only, would he be justified in retiring to his room for a time: this was not done by the Master, and neglect of so doing entailed the loss of a fine and truly magnificent steamer.

Paragraphs 11 and 12 need no comment, as the master only did that which any navigator would do.

Paragraph 13.—“Had the light which was then” (4 a.m.) “sighted been the Shiriya-saki light, his position would have been ascertained beyond a doubt, and it would have been safe for him to proceed.” The ship’s position would not have been ascertained; it would have been shown (by guess) that she was somewhere on a line directly to seaward of the light; the distance therefrom could not be known; an approximation thereof could only be arrived at by guess work, or the “rule of thumb,” as it was not possible to obtain accurate bearing or bearings thereof by the compass, on account of the before-mentioned screens.

1st. It must be here recorded that no prudent man, or navigator, would attempt to navigate his ship by a compass thus placed: placed in such a position as to render a correct bearing being taken a matter of impossibility.

2nd. During tempestuous weather as that experienced by the ship on the 8th and 9th of October last, every master gives more than ordinary attention to the navigation of his vessel, but in this case the master and his officers are found entirely neglecting the navigation of the vessel, and trusting simply to the chapter of accidents that all would be well; this is proved by the fact that the master was about 20 to 24 miles out in his guess-work of navigation; he expected to strike soundings in the straits, instead of which he sights a light (which might have been a steamer’s mast-head light, or the light of a vessel at anchor) and immediately, without any attempt of verification by ocular observations, or by taking accurate bearings of the same by compass, jumps to the unpardonable assumption that it was Shiriya-saki, and after shaping a course which he only guessed to be correct, with indecent haste hands over entire charge of the vessel to a man (the Chief Officer) in whom he has no confidence, and quits his responsible duties without even consulting with the Chief Officer, or showing him his position on the chart; naturally, seeing the Master thus imprudently acting, the Chief Officer follows his example, and does not inform the Master of the fact of the light having disappeared, but stands on, and the ship succeeds in finding a correct position for herself, which, the Master, who took sole responsibility of the navigation on his own shoulders, failed to do, and also, his officers; for the Master never endeavoured at any time to find the exact position of the ship, but, as before stated, it was merely guess-work with him. It is here well to remark that the action taken by the Marine Court of Enquiry was truly lenient, and that if the said Court erred, it was on the side of mercy, and not of severity, for the above Court did not take into its consideration the disregarding by the Master of the Book of Regulations, published by his owners, the Mitsui Bishi Mail Steamship Company, which instructions had he but partly followed would have prevented the loss of the vessel, and consequently the suspension of his certificate (and that of his Chief Officer).

Paragraph 14 of Petition.—The loss of the vessel must be entirely attributable to the fact of the Master so insanely accepting the light seen as that of Shiriya-saki, without any attempt at verifying the same; the false light does not excuse the Master for neglecting the most simple and ordinary precautions adopted in navigation; hence the loss of the vessel was caused by his wrongful act or default.

Paragraph 15.—The speed of the vessel especially during this tempestuous weather (and also at all times), should have been ascertained by heaving the hand log (and that too in accordance with his owners’ instructions, Sec. 35) but which was altogether neglected; had this log been but hove in accordance with those instructions, and as is the usual practice of navigators, especially during tempestuous weather, then the accurate speed of the ship would have been ascertained; and after this had been done, had the log line been taken and held immediately over the centre of the after compass card, it would have instantly informed the master of the amount of leeway the vessel was making, and that too with accuracy: here it must be most emphatically stated, that a master who navigates his ship by guess-work only is certainly unfit to be trusted in any position of responsibility on board of a ship; and it is with feelings of regret that attention is called to this peculiarity of the master’s habit of navigating his vessel in a most hazardous and improper manner, *i.e.*, by guess, and which resulted in her total loss.

It is during a hurricane or a severe storm that extra precautions are universally taken (except in this case) to ensure safe navigation of a ship, and thus her safety is secured, and not as is stated by your petitioner “by estimating leeway by judgment,” instead of accurate observation in accordance with the method above mentioned, or by adopting other methods known to navigators in

order to determine this essential element. It is unnecessary to remark upon the concluding part of this paragraph, further than to say that the navigation of a vessel cannot be conducted on the principles of a machine.

Paragraph 17.—The Master in a peculiarly offensive manner, in reply to a query of the Court, (of which no notice was taken by the Court) disdained asking his officers’ opinions as to the ship’s position: therefore his remarks in this paragraph must be dismissed with contempt, as it was evident he looked upon them simply as men unworthy of consultation.

Paragraph 19.—In allusion thereto, it is certainly a peculiar trait of this man, that he desires to shift his neglect of duty on to the shoulders of his subordinate (the Purser) when he says, “that he was ordered to proceed to sea:” it was for him to have pointed out to the Purser, or Agent of the Company, that the vessel was not in trim, instead of which, what does he do? but deliberately puts the vessel more out of trim, by filling the after tank, and thus renders her more unseaworthy; nor did he at any time endeavour to remedy this state of affairs, which must be considered incomprehensible.

Referring to the concluding part of this paragraph, the loss of the vessel must be attributed to the Master’s wilful act or default.

After the stranding of the vessel, the Master did not adopt strenuous measures to haul or float her off; and by not so doing, he further hastened the total destruction of the ship.

Should your honourable Court desire further and more elaborate comments upon the case, so as to arrive at a just decision, the Attorney of the Respondent will be pleased to address the Court, either in person, or in writing, replying in full to all its queries.

GEO. RAMSAY,
Attorney for the Respondent.

Tokyo, March 13th, 1884.

To NISHIGATA TOTSU, Esq.,
Hanji of the Tokiyo Koso Saibansho.

On the opening of the Court, the Judge said that the present Court was held by order of the Daijokwan, and therefore the decision would be final, and there could be no appeal from it. The legal technicalities which at the former sitting of the Court caused a postponement, had been complied with and the sitting would proceed.

Mr. Uchiyama Rossetsu, addressing the Court, said that the three principal points of grievance of the appellant were as follows:—(1) That in all Western Courts of this kind the President was always a person who had a knowledge of the law. The President of the Court of Enquiry, Mr. Ramsay, he was sure, had little knowledge of the laws of Western countries and still less of Japanese. (2) The decision of the first Court had been given in opposition and without regard to the evidence given in that Court. (3) That all the evidence in the Court below tended to show that the appellant was misled by a light of the same description and colour as the Shiriya-saki light, which on being first seen bore from the ship in the exact direction where the Shiriya-saki light was expected to be sighted. That in spite of all this evidence being before the Court and in spite of the appellant’s request that Captain Young of the *Takasago Maru* and his chief officer should be summoned, who had both seen the light and had expressed their opinion that under the circumstances it might well have been mistaken for the Shiriya-saki light, the request was disregarded, thus denying the appellant an opportunity of justifying his actions. He therefore requested that the said gentlemen might be called to give evidence in connection with this point. In continuing, counsel remarked that four reasons had been given by the lower Court as their reasons for giving their decision. They were first “error in judgment by over estimating the speed and leeway on the 9th October.” He would remind the Court that when the disaster occurred the weather was not as calm as at present, a hurricane was blowing, even during the day-time it was so dark that one could not see more than two or three *ken* ahead; therefore the only way to arrive at the leeway was by estimating it. Anyone who has had the experience that the Captain had of this vessel would be competent under ordinary circumstances to estimate the lee-

way of his ship very approximately. Two or three witnesses had given evidence and they all agreed that, although perhaps other vessels under the same circumstances might not have made four points leeway, they considered that the *Akitsu-shima Maru* made this much at the time and based their assertions on the previous behaviour of the ship. In the answer to the petition of appeal paragraph 15, respondent remarks that “had the log-line been taken and held immediately over the centre of the after compass-card, it would have instantly informed the master of the amount of leeway the vessel was making, and that too with accuracy.” This the Counsel contended might sound very well in the school-room or might be of some use in moderate weather, but in this case the Court must remember that the wind was blowing with hurricane force which would naturally carry the line over the compass far to leeward and therefore could not possibly be any guide to the master in estimating the actual leeway he was making. Again in paragraph two, of the judgment of the lower Court the second reason was “imprudence in shaping his course direct for the land at a speed of 8 knots from midnight of the 9th of October and also for running his ship at the same speed on a N.W. by W. course immediately after sighting the light at 4 a.m. on the 10th October.” Regarding this point, the Captain and every one on board thought the light seen was the Shiriya-saki light, it being of the same size and colour, and was picked up in the direction expected, namely, bearing West. For the three previous days they had been unable to take an observation the weather being too thick. But they calculated to come across the light bearing West where it was first seen. The appellant had stated that when he first saw the light, he looked at it steadily for eight or nine minutes, and came to the conclusion that it was the Shiriya-saki light. The chief officer in his evidence corroborated this statement, and estimated its distance from 10 to 15 miles from the ship. The third mate also said he thought the light to be the lighthouse. Nakashiyo Chojiro being asked what light it was replied the Shiriya-saki light. On being questioned as to its colour he said it was red. And again upon being interrogated as to the colour of the Shiriya-saki light he said that was red also, whereas the Shiriya-saki light was white. Some people were colour blind, the Counsel did not say that the witness Chojiro was so, but there was every presumption of it, he having declared that both the lights were red when it was an established fact that that from the lighthouse was white. Four competent officers had stated that the light seen was a white light yet the Court had ignored their evidence in favour of one of the common sailors, and had come to the conclusion that the light seen was red. The appellant and his officers agreed that the light when first seen was between 10 and 15 miles off, but even if it had only been six miles off the course steered, supposing it had been the Shiriya-saki light, would have taken the vessel clear of all dangers. With regard to the third reason given for the judgment namely, “neglect of duty in leaving the bridge and deck when so uncertain of his position, and distance from the land while the ship was steaming full speed towards it,” the Counsel argued that if he could show that the appellant was justified in concluding that the light was Shiriya-saki, and therefore he could go to rest without fear, this reason for the decision would fall through.

Counsel then formally applied to the Court for permission to call Captain Young and his Chief Officer, and that their evidence might be taken, as he considered their testimony would materially assist his client.

Mr. Rossetsu then referred to the respondent’s answer which stated that no bearings had been taken by the compass, but the evidence of the appellant and his officers went to show that bearings must have been taken, for they unanimously agreed that the light bore West. The Counsel wished to state that the evidence of each of these witnesses, in the lower Court, had been taken in the absence of the others and yet all had agreed on this point. The answer of respondent also says that the appellant never attempted to ascertain his position at any time after losing sight of the land on the morning of the 6th October, that the vessel had not been navigated at all, but allowed to go on her own course and that everything had been done by guess. But the Court must remember that for 40 hours previous to the catastrophe

neither sky nor land could be seen, therefore no observation could be taken, consequently the only way the Captain could judge of the ship's position was by estimating the speed of the vessel, the leeway, and the courses steered. Previous to 5.30 p.m. on the 9th October the weather had been so tempestuous that the Captain was unable to get to his cabin where his charts and instruments were kept, but the weather slightly moderating at that time he was enabled to procure the chart, and after considering the foregoing points, judge of the ship's position. The Captain in his evidence stated that he thought he was in the Tsugaru Straits, whereas the vessel was subsequently wrecked near a place called Odonosawa, 15 miles south of Shiriya-saki. This showed that the master was from 20 to 24 miles out of his reckoning. When, however, the dirty state of the weather for the three previous days was taken into consideration and also the strong variable currents that exist on that coast, it was not surprising. This was not the first case of the kind, there had been several others. About the same time that the *Akitsuishima Maru* was lost, the steamship *Khiva* reported having in 12 hours got 40 miles out of her reckoning owing to the variableness of the currents. It was not, therefore, strange that the master of this vessel should, after forty hours bad weather, find himself 24 miles out. The respondent's answer stated that the appellant neglected the printed instructions of his employers. With reference to the writing up of the log and other such standing orders, there were occasions when these regulations could not be carried out. They were trifling matters in comparison to the safety of the lives of the passengers and the ship. Furthermore, it was laid down in the printed directions referred to, that the Master's "first care must always be the safety of lives and property with which he is entrusted." Counsel thought the Court would agree with him that under circumstances similar to those under review, it was the duty of the Master to use his own discretion, even should he have to disregard the minor points in the printed instructions which were only issued as general instructions.

His Honour then granted Mr. Rossetts's request that Captain Young and his chief officer should be called and their evidence taken. He then adjourned the hearing to the 22nd instant, when Mr. Uchiyama Rossetts could continue his pleading.

NIPPON RACE CLUB.

The Spring Meeting of the Nippon Race Club will take place on Thursday, Friday, and Saturday, the 8th, 9th, and 10th of May. Programme and Entries:—

FIRST DAY—THURSDAY, 8TH MAY.

The JAPAN CRITERION, a Sweepstake of \$10 each with \$50 added; for Japan Ponies that have never won a race prior to date of entry; weight as per scale; Griffins at date of entry 7lb. allowance; Subscription Griffins at same date, 10lb. allowance; winners since date of entry 7lb. extra for each race won; last pony to pay second pony's entrance fee. Five Furlongs.

Kamakura II., Yobiko, Moonlight, Moonbeam (late Tweedledum), Vermouth, Shinobadzu, Yanagawa, Blair Athol, Mist, Muddle.

The CRITERION STAKES, value \$100; for China Ponies that have not won a race since 1st July, 1883; weight as per scale; previous winners 7lb. extra. Once Round. Entrance \$5.

Sunlight (late Young Duke), Mandarin, The Bad Boy (late Primrose), Tam O'Shanter, Roebuck.

The HALF-BRED MAIDENS STAKES, a Sweepstake of \$10 each, with \$50 added, for Half-Bred Ponies that have never won a race in Tokio or Yokohama; five ponies to enter and three ponies to start, or no race; weight as per scale. Five Furlongs.

Shi-un, Nécapu, Koko-un, Tabin, Yudachi, Hatsuge.

The DIPLOMATIC CUP, presented; for China and Japan Ponies; weight as per scale; Maidens 7lb. allowance; Subscription Griffins 10lb. allowance; winners of three races of once round and under since January, 1883, 10lb. extra. Three Quarters of a Mile. Entrance \$10.

Victor, Sunrise, Sunshine, Sunlight, Lowland Laddie, Blair Athol, Roebuck.

The RIKUGUNSHO CUP, presented; for Japan Ponies; weight as per scale; winners of three races in 1883, 7lb. extra; winners in 1884, 7lb. extra, penalties accumulative; Maidens 7lb. allowance; Subscription Griffins 10lb. allowance. Half a Mile. Entrance \$5.

Kamakura II., Yobiko, Annandale, Shinobadzu, Yanagawa, Sumizome, Katerfelto, Kajiki, Kachidoki, To-un, Blair Athol, Dawn, Muddle, Mist.

The BANKERS' AND BROKERS' CUP, presented; for China Ponies; weight as per scale, with 10lb. extra; non-winners since 1st July 1883, 7lb. allowance; to be ridden by members of the Club; Jockeys who have had three or more winning mounts at meetings of the N.R.C. 7lb. extra; Jockeys who have never had a winning mount 5lb. allowance. One Mile and Three Quarters. Entrance \$5.

Sunshine, Sunlight, Dartmoor, The Bad Boy, Lowland Laddie, Curiosity, Mongol, Basuto.

The GRIFFINS' SWEEPSTAKES, for Japanese Subscription Griffins; a sweepstake of \$10 each; weight as per scale; winners since date of entry, 5lb. extra for each race won. Half a Mile.

Moonshine, Moonstone, Kumamoto, Star.

The NAVY AND VISITORS' CUP, presented; for Japan and China Ponies; weight as per scale; winners at the Meeting 7lb. extra; non-winners since 1st July, 1883, 7lb. allowance; Maidens 10lb. allowance. One Mile and a Quarter. Entrance \$5.

Sunrise, Sunshine, Sunlight, Kajiki, Kachidoki, Lowland Laddie, Curiosity, Mongol.

SECOND DAY—FRIDAY, 9TH MAY.

The CESAREWITCH STAKES, a forced Sweepstake of \$10 each, \$5 forfeit, for all China Ponies entered at the Meeting; the winner to receive \$125, and the second pony \$50; to be handicapped by the Committee; the Handicap to be published within three days after closing of entries; declarations of forfeit to be made within seven days of closing of entries; minimum weight 9st. 7lb.; winners after publication of weights, 5lb. extra for each race won. One Mile and a Quarter.

Victor, Sunrise, Sunshine, Sunlight, Dartmoor, Mandarin, The Bad Boy, Lowland Laddie, Tam O'Shanter, Curiosity, Roebuck, Mongol, Basuto.

The NURSERY STAKES, a forced Sweepstake for all Japanese Subscription Griffins of \$15 each, with \$100 added; the winner to receive 75 per cent., and the second pony 25 per cent.; last pony to pay third pony's entrance fee; weight as per scale; Three Quarters of a Mile. If fewer than ten ponies are entered, the added money will be reduced to \$50.

Moonshine, Moonstone, Vermouth, Kumamoto, Star.

The NOSHOMUSHO PRIZE, presented; for Half-bred ponies; weight as per scale; winners of three races in 1883, 14lb. extra; winners in 1884, 7lb. extra, penalties accumulative; Maidens 7lb. allowance. Once Round and a Distance. Entrance \$5.

Kanehori, Shi-un, Nécapu, Koko-un, Ko-un, Tabin, Dublin, Yudachi, Hatsuge.

The LADIES' PURSE, presented; for Japan and China ponies; Japan Ponies weight as per scale, China ponies weight as per old scale, with 10lb. added in each case; Maidens 7lb. allowance; Subscription Griffins (non-winners) 14lb. allowance; to be ridden by members of the Club; jockeys who have had three or more winning mounts at meetings of the N. R. C. 7lb. extra; jockeys who have never had a winning mount 5lb. allowance. Half a Mile. Entrance \$10.

Victor, Sunrise, Sunshine, Sunlight, Yanagawa, Sumizome, Katerfelto, Blair Athol, Roebuck, Dawn.

The Y. U. C. CUP, presented; for China Ponies; weight as per scale; winners at the meeting, of one race 7lb. extra, of two races, or of any race over "once round," 10lb. extra; non-winners since 2nd July, 1883, 7lb. allowance; Maidens 10lb. allowance. One Mile and a Half. Entrance \$5.

Sunshine, Sunlight, Dartmoor, The Bad Boy, Lowland Laddie, Tam O'Shanter, Curiosity, Mongol.

The GUAIMUSHO CHALLENGE PRIZE, presented by the Minister of Foreign Affairs; value yen 500; for Japanese Ponies to be won at two consecutive meetings by the same pony; prize entrance fees to go to the winner until the prize is finally won; weight as per scale. Three Quarters of a Mile. Entrance \$10.

Kamakura II., Yobiko, Annandale, Moonlight, Yanagawa, Sumizome, Kajiki, Kachidoki, To-un.

The WEIGHT CARRIERS' STAKES, a Sweepstake of \$10 each with \$50 added; for Japan and China Ponies; weight as per scale, with 14lb. added; winners at the meeting 5lb. extra; to be ridden by members of the Club; jockeys who have had three or more winning mounts at meetings of the N.R.C. 7lb. extra; jockeys who have never had a winning mount 5lb. allowance. Once Round.

Victor, Sunrise, Sunshine, Sunlight, Dartmoor, Curiosity, Basuto.

The FLY-AWAY STAKES, a Sweepstake of \$5 each with \$50 added; for Japan and China Ponies;

weight as per scale; winners and non-starters at the meeting excluded. Seven Furlongs.

Sunrise, Sunlight, Annandale, Shinobadzu, Yanagawa, Sumizome, Mandarin, Kajiki, Kachidoki, To-un, Lowland Laddie, Tam O'Shanter, Roebuck, Dawn, Mongol.

THIRD DAY—SATURDAY, 10TH MAY.

The HURDLE RACE, a Sweepstake of \$5 each, with \$50 added; for Japan and China Ponies; over six (6) flights of hurdles; China Ponies 11 stone, Japan Ponies 10st. 7lb. Once Round and a Distance.

Sunlight, Mandarin, Tam O'Shanter, Curiosity, Roebuck.

The MEMBERS' PLATE, value \$150; for Japan and China ponies; weight as per scale, with 10lb. added; winners at the Meeting 5lb. extra for each race won; to be ridden by members of the Club; jockeys who have had three or more winning mounts at meetings of the N.R.C. 7lb. extra; jockeys who have never had a winning mount 5lb. allowance. Five Furlongs. Entrance \$10.

Victor, Sunrise, Sunshine, Sunlight, Dartmoor, Katerfelto, Blair Athol, Dawn, Basuto.

The HALF-BRED HANDICAP, a Sweepstake of \$10 each, with \$50 added; a forced entry for all Half-bred Ponies entered at the Meeting; the Handicap to be framed as soon as possible after the last Race on the Second Day. Once Round.

Kanehori, Shi-un, Nécapu, Koko-un, Ko-un, Tabin, Dublin, Yudachi, Hatsuge.

The GRIFFIN HANDICAP, a handicap for Japanese Subscription Griffins; a forced sweepstake of \$10 each, with \$50 added; half-forfeit; the winner to receive 75 per cent., and the second pony 25 per cent.; the Handicap to be framed as soon as possible after the last race on the Second Day; winners after publication of weights, 5lb. extra. Five Furlongs.

Moonshine, Moonstone, Vermouth, Kumamoto, Star.

The JAPAN CONSOLATION, value \$100; for all beaten Japan Ponies at the Meeting; weight as per scale. Five Furlongs. Entrance \$5.

Kamakura II., Yobiko, Annandale, Moonlight, Moonbeam, Shinobadzu, Yanagawa, Sumizome, Katerfelto, Kachidoki, To-un, Blair Athol, Dawn.

The CHINA CONSOLATION, value \$100; for all beaten China Ponies at the Meeting; weight as per scale. Once Round. Entrance \$5.

Victor, Sunlight, Mandarin, The Bad Boy, Lowland Laddie, Tam O'Shanter, Curiosity, Roebuck, Mongol, Basuto.

The MITSU BISHI CHALLENGE CUP, presented by the Mitsu Bishi Mail Steamship Company; for Japan Ponies; to be won at two consecutive meetings by the same Pony; a forced entry for all winners at the Meeting, except winner of Race No. 1, Third Day; winners of one Race, \$10 entrance; of two Races, \$25; of three or more Races, \$40; optional to non-winners at an entrance of \$5; entrance fees to be paid to the winner until the Cup is finally won; weight as per scale. Once Round.

The KUNAISHO PRIZE, presented; for China Ponies; weight as per scale. One Mile and a Quarter. Entrance \$10.

Sunrise, Sunshine, Dartmoor, Lowland Laddie, Curiosity, Mongol.

The SPRING HANDICAP, value \$125; handicap for Japan and China Ponies that have run at the Meeting; the Handicap to be framed as soon as possible after the last Race on the Second Day; winners after publication of weights 5lb. extra. Once Round. Entrance \$5.

Sunrise, Sunshine, Sunlight, Moonlight, Annandale, Shinobadzu, Yanagawa, Sumizome, Kajiki, Kachidoki, To-un, The Bad Boy, Lowland Laddie, Curiosity, Roebuck, Dawn, Mongol, Basuto.

NOTE:—Whenever the terms "Griffins" or "Subscription Griffins" are used in the above programme, they shall be understood to mean ponies that were *bona fide* griffins at date of entry. All China Subscription Griffins of Spring, 1883, will be eligible to run as Maidens.

POST ENTRIES.

The following post-entries have been received for the Subscription Griffin Races at the Spring Meeting of the Nippon Race Club:—

FIRST DAY.

No. 7.—The GRIFFINS' SWEEPSTAKES.—San-no, Karasu-mori, Tobiume, Foudre, Kanga-rebei.

SECOND DAY.

No. 2.—The NURSERY STAKES.—San-no, Karasumori, Tobiume, Foudre, Kanga-rebei.

THIRD DAY.

No. 3.—The GRIFFIN HANDICAP.—San-no, Karasu-mori, Tobiume, Foudre, Kanga-rebei.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

Peking, April 11th.

The *Peking Gazette* announces the removal of Prince Kung, Pau-chwen, Li Hong-t'sau, Ching Lien, and Ung Tung-ho, from the membership of the Grand Council. The same issue gives the appointment of Prince Li, Nga-lo Ho-poo, Yen Ching-ming, Ministers of Treasury; Chang Chi-wan, Minister of Justice; and Sun Yü-wen, Assistant Minister of Works, as their successors in the Council.

Shanghai, April 13th.

MINISTERIAL CHANGES IN CHINA.

Telegrams received here from Peking state that the Empress has publicly degraded Prince Kung and four members of the Privy Council for their dilatoriness in the Tonquin affair.

London, April 12th.

THE FRENCH IN TONQUIN.

The French troops have bombarded Hung-hoa. The Chinese set fire to the town, and then fled without offering any resistance.

London, April 14th.

AFFAIRS IN THE SOUDAN.

A rumour at Suakim has been telegraphed from Egypt that Khartoum has fallen and that General Gordon has been taken prisoner.

London, April 16th.

SAFETY OF GENERAL GORDON.

Despatches have been received from General Gordon dated April 8th. He was then safe.

London, April 16th, 4.55 p.m.

Cotton, Mid. Upland, 6½d. Yarns, market ½d. higher. Shirtings, market 1½d. higher. Silk, no change.

[FROM THE "HONGKONG DAILY PRESS."]

London, March 31st.

AFFAIRS IN THE SOUDAN.

Latest advices state that General Gordon with 3,000 Egyptian troops made a sortie from Khartoum when the Egyptians fled and abandoned their guns. Two hundred were killed.

THE FRENCH IN MADAGASCAR.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsunumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-SHINMACHI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and SHINMACHI at 7 and 11.30 a.m. and 4 p.m.

The Fares are:—Special-class (Separate Compartment), yen 3.00; First-class, yen 1.78; Third-class, sen 89.

In Ishikawa Prefecture, the education fund contributed by the people has amounted to more than 2,000 yen. In the course of ten years the sum will be so large, that the interest alone will defray all the educational expenses of the entire prefecture.

From January to March last, 124 applications were made to the Hiyogo Kencho by foreigners for permission to visit Kiyoto; and 33 foreign passports were granted to natives: 10 for New York, 10 for Shanghai, 5 for London, 3 for Hongkong, 2 for Singapore, 2 for England, 1 for Ohio, and 1 for Melbourne.—*Mainichi Shimbun*.

It has already been reported that the compilation of the Civil Codes is rapidly being completed by the authorities. We now understand that the laws respecting individuals are finished, and those respecting inheritance have been commenced. There being various different methods of inheritance existing in Japan, several difficult questions are said to have presented themselves to the compilers.

A project is on foot to establish a steamship company at Inchhōn, with a capital of 500,000 yen. Several vessels will be purchased from the Ship Building Bureau at Hiogo.

Of 4,971 males and 284 females convicted of various offences at the Courts of Tokiyo, 813 were of the Tendai sect of Buddhism, 971 of Zenshiu, 1,409 of Nichirenshiu, 755 of Shinshiu, 581 of Shingonshiu, 706 of Jodoshiu, 107 were Shintoists, and the rest of unknown creeds.—*Choya Shimbun*.

REPORTS.

The Japanese steamer *Takasago Maru*, Captain C. Young, reports leaving Kobe on the 11th April, at 6.15 a.m. with light variable winds, rain and cloudy weather throughout the passage. Arrived at Yokohama on the 13th March, at 6.15 a.m. Passed Company's bark *Kanagawa Maru* off Vries Island.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard reports leaving Hakodate on the 14th April, at 12.45 p.m. with light westerly breeze and fine weather to Oginohama, where arrived on the 15th, at 1.15 p.m., and left on the 16th, at 7.15 a.m., with thick fog and light variable winds to Inuboye, thence to port light variable winds and fine weather. Arrived at Yokohama on the 17th April, at 3.45 p.m.

LATEST COMMERCIAL.

IMPORTS.

There has been no feature of special interest in the Market since our last report, business has been very quiet, with no serious fluctuations in *Kinsatsu*; clearances have been fairly satisfactory.

COTTON YARN.—Moderate sales of 16's and 20's Bombays have been made at quotations, but there has been little doing in English spinings; in consequence of a still further advance in Manchester, holders are asking higher rates, whilst dealers refuse to pay any advance on previous prices.

COTTON PIECE GOODS.—Grey Shirtings 9 lbs. have been sold at rather higher rates, but most holders decline to accept present quotations. Turkey Reds have been sold to a moderate extent, and Velvets are again in better demand.

WOOLLENS.—Fair sales of Mousseline de Laine and small lots of Italian Cloth comprize nearly the whole business.

Nailrod, small size	2.85 to 3.15

KEROSENE.

Our Market remains without change. Business has not yet been resumed; the demand from Tokiyo and the interior is small, and prices there are lower than those asked here. Deliveries have been 13,000 cases during the week, leaving a Stock of about 646,000 cases sold and unsold Oil. Quotations are quite nominal.

	PER CASE.
Devoe	\$1.75
Comet	1.70
Stella	1.65

SUGAR.

No change in prices, and the Market remains weak and unsettled. Buyers are still holding off, and Stocks are accumulating.

	PER PICUL.

White, No. 3	6.30 to 6.50
White, No. 4	5.80 to 6.00
White, No. 5	4.60 to 4.75
Brown Formosa	3.40 to 3.45

EXPORTS.

RAW SILK.

Our last report was dated the 10th instant; since that time there has been a strong demand in some

quarters for *Hanks*, and Settlements for the week are 200 piculs. Business has been confined to few buyers, the general trade not participating to any extent. Doubtless the paucity of the Stock and consequent firm attitude of holders have prevented more extensive dealings. The native manufacturers would seem to have supplied their prospective wants, and the sales for that quarter are now insignificant.

Filatures and *Re-reels* have been almost entirely neglected: in *Kakada* and other sorts there has not been a single transaction. Arrivals from the producing districts have been on a very small scale, and the total Stock in Yokohama is reduced to about 1,000 piculs.

The M.M. steamer *Godavery*, which left for Hongkong direct on the 12th instant, carried 53 bales entered at the Customs as being for France. The P. & O. steamer *Kashgar*, which sailed on the following morning, took nothing at all. The Export figures to date now stand at 28,828 bales (thus overlapping the Total Export of last season by 94 bales), against 25,609 bales last year, and 17,247 bales to the 19th April, 1882.

Hanks.—The activity noted in our last has continued, a few energetic operators apparently trying to monopolize the trade. Purchases made seem destined for both the Western and Eastern Continents, and the business done has been principally in Good Medium kinds. Prime *Hanks* are hard indeed to find; if they exist at all, they are kept in the back-ground with great persistency. The sales recorded are on the basis of *Shinshu*, \$520; *Anaka*, \$520 to \$510; *Foshu*, \$515; *Chichibu*, \$515.

Filatures.—There has been next to nothing passing in this class; the dealers do not offer any tempting lots, thinking that by waiting a little they may see yet higher prices for the next American mail. The figures paid for the few small parcels which have changed hands give no sign of any weakening tendency. Prices made as per list are the following:—*Kaga*, \$630; *Shinshu*, \$610; *Yechiu*, 587½.

Re-reels.—But one small purchase noted in Common *Bushu* at \$550. One or two parcels of good *Maibash* *Zaguri* are held at full rates, but without finding buyers at the moment. Supplies are very restricted, and dealers apparently expect that the scarcity of good Silk will enable them to maintain prices.

Kakada.—Nothing to record beyond the arrival of a few boxes: there have been no purchases, and the Stock is but slightly increased.

Oshu and Coarse Kinds.—The report of so many past weeks has once more to be repeated:—no sales. Should the rumoured *pebrine* in North China become a serious reality, these descriptions will probably form a conspicuous feature in next season's business.

France and Italy	16,967	13,114	8,614
America	9,222	8,437	5,455
England	2,639	4,053	3,173
Total	28,828	25,609	17,247

WASTE SILK.

Business in this department has not been very brisk, the purchases during eight days being registered as 140 piculs. There are still enquiries for good quality in several kinds of Waste, but suitable parcels are by no means plentiful.

The French mail steamer *Godavery* of the 12th instant carried 97 bales, the P. & O. steamer *Kashgar* nothing. These vessels bring the Export to date up to 22,338 piculs, against 22,452 piculs to same date last year, and 22,307 piculs in 1882. It will be noticed that the Export for the present

season is now less than last year's; and about equal to that of the previous year. Present Stock is 450 piculs, against 1,250 piculs in 1883, and 1,300 piculs in 1882. Supplies fall off very much, and from statistics the outlook would appear to be fairly good.

Noshi.—A few small transactions have been concluded at about previous quotations. Arrivals of desirable grades are scanty, and anything choice can only be picked up in minute quantities. The prices noted include *Filatures* at \$140 and \$132½, *Foshu* \$89, with Common at \$76, and low *Kawamuki* \$17½.

Kibiso.—Good qualities hold their own well, but sellers have had to lower their pretensions on Medium and lower Grades. Among the transactions are *Filatures* in small lines at \$120, \$117½, \$115, according to quality; *Shinshu*, \$55 and \$40; *Foshu*, \$30 and \$25. In *Neri* a little has been done at from \$11 to \$15 for uncleaned Stock.

Sendai & Hamatsuki	100	Mawata	70
Taysam Kinds	—	Sundries	60
Total piculs	1,020	Total piculs	450

TEA.

Business in old Teas has been virtually suspended during the week, whilst supplies have ceased to come in, and the season 1883-4 is closed. One or two garden samples of new leaf have been distributed among the various Tea business firms, which of course represents nothing, and the usual small forced parcels are expected in a few days. The season generally, however, is a week or ten days earlier than the last, and it seems probable that some 5 or 6 piculs of these garden lots will be down in time for shipment, even by the steamer of the 27th, and ample supplies will be available for the following opportunity. As regards probable prices for new Tea, nothing can be said, the up-country Market for green leaf being still unopened. The steamship *City of Peking*, which sailed on the 10th instant, took 131,120 lbs. of Fired Tea, distributed as follows:—for New York 31,348 lbs., for Chicago 9,764 lbs., for California 72,934 lbs., and for Canadian Markets 17,074 lbs.

EXCHANGE.

Sterling rates have considerably advanced during the week, chiefly owing to the improvement in Bar Silver. The Settlements, however, have been small, and closing quotations are firm as follows:—

Sterling—Bank Bills on demand	3/7½
Sterling—Bank 4 months' sight	3/8½
Sterling—Private 4 months' sight	3/8½
Sterling—Private 6 months' sight	3/8½
On Paris—Bank sight	4.61

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S**ETHEREAL ESSENCE OF LAVENDER,**

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

YOKOHAMA: SATURDAY, APRIL 26TH, 1884.

SUMMARY OF NEWS.

A SERIOUS epidemic of fever is raging in the Hiyogo jail.

Two attempted incendiarisms were detected in Yokohama on the night of the 21st instant.

HIS MAJESTY THE EMPEROR gave a garden party at the Yenriyokwan on the 25th instant.

AN infantry corps is to be formed in the Tokiyo University. The students have shown great willingness to promote the project.

BARON R. R. ROSEN, formerly Russian Chargé d'Affaires in Japan, has been appointed Consul-General for Russia in New York.

TELEGRAPH offices have been established at the towns of Savara and Sekimura in the prefectures of Chiba and Gifu respectively.

DAMAGED *Kinsatsu*, to the value of 1,156,508 *yen*, were burned at the Government Printing Bureau on the 20th and 21st inst.

THE condition of H.I.H. Prince Orihito, whose illness recently caused some alarm, has greatly improved within the past few days.

A SERIOUS conflagration occurred in the village of Kota, province of Noto, on the 11th instant. Some hundreds of houses were destroyed.

A THIEF was captured on the 21st instant in Yokohama, when in the act of making his escape from a foreign house with considerable booty.

A CLIFF near the village of Utsute, Shiribeshi, fell, on the 6th instant, crushing two rows of houses, and killing seven men and two women.

THE spring meeting of Union Race Club (*Kiyodo Keiba Kwaisha*) commenced at Toyama on the 25th instant. The races will last three days.

HIS MAJESTY THE EMPEROR has begun to attend the deliberations at the new Bureau of Administrative Examination (*Seido Tori-shirabe-Kiyoku*).

TWO OFFICIALS of the Agricultural and Commercial Department, Messrs. Takai and Taka-

shima, have been appointed to represent Japan at the approaching Dendrological Exhibition in Edinburgh.

It is stated that the appropriation for the War Department this year will be 10,620,872 *yen*, being an increase of 525,000 *yen* as compared with last year.

THE traffic receipts of the Government railways have suddenly increased to figures considerably larger than the receipts of corresponding periods in past years.

A LARGE CLUB is about to be opened in Tokiyo in the handsome building known as the Roku-mei-kwan. Foreigners are to be admitted as active members.

H.E. SUGI, Vice-Minister of the Imperial Household, has been appointed President of the Bureau charged with the business of constructing the New Palace.

ON the 19th instant, a coolie engaged in drawing a cart, lost control of his load going down Noge Hill, Kanagawa, and was dashed against a tree. Death was instantaneous.

A SCHEME is on foot to construct a tramway between Tokiyo and Hachioji. It is said that the concession has been obtained and a preliminary survey made.

THE imports into Japan from foreign countries during January amounted to 1,810,882 *yen*, and the exports to 2,431,739 *yen*; giving an excess of 620,857 in favour of exports.

MR. J. J. ENSLIE has been appointed H.B.M.'s Consul at Nagasaki, Mr. Enslie being at present on leave, Mr. J. C. Hall will occupy the position of Acting-Consul for the present.

AN inspector of police in Saitama prefecture has been sentenced to five months imprisonment and a fine of 10 *yen* for ill-treating two women arrested on suspicion of prostitution.

THE subsidence of an area of nearly three acres, followed by an inundation, is reported from the province of Yetchiu. No lives were lost, but considerable damage was done to property.

AN association of Japanese tea-dealers formed at Kobe last year, contemplates undertaking direct export, and its delegates are holding meetings in Tokiyo for the purpose of discussing the scheme.

H.I.H. PRINCE YAMAHASHI is a passenger by the outgoing American mail on the 27th instant. Before his departure the Prince gave a farewell banquet at the Naval College where he had been a student for some time.

SOME brokers recently arrested in Yokohama were fined fifty *sen* each for obstructing the public thoroughfare. In order to avoid paying a tax these men had been in the habit of assembling in the street and transacting their business there.

THE new Merchant Shipping Company of Osaka has reduced its capital from 1,500,000 to 1,200,000 *yen*, and has decided that during the next five years this amount may be increased by

50,000 *yen* annually at the discretion of the directors.

A GANG of gamblers, headed by one Shinzayemon, have been arrested at a village called Toshida, in the suburbs of Tokiyo. They had constructed two underground chambers in the hope of carrying on their trade unobserved.

A RELIGIOUS ceremony, usual in such cases, has been performed in connection with the final selection of the site for the new Palace in Tokiyo. The Palace is to be in pure Japanese style and will cost from two to three million *yen*.

GREAT and growing distress is reported from Korea. Bad harvests, followed by reckless, though comparatively insignificant, expenditure in connection with the opening of the country, have brought both the people and their rulers to the verge of bankruptcy.

A CHARITY HOSPITAL was officially opened in Tokiyo on the 29th instant by H.I.H. Prince Takehito. The institution had already been in existence for more than a year, but the capital required for its permanent establishment was not collected until within the past six months.

A KOREAN, who had just arrived from Nagasaki, was robbed of his valise at the Kobe railway station on the 13th instant. The valise contained valuable documents and a bar of gold worth 2,000 *yen*. The thief was subsequently arrested with the bar of gold in his possession.

THE Japanese Consular Trade Report of London for 1883 has been issued. It shows that there are five Japanese firms with offices in London engaged in the so-called "direct trade." Their total business in imports was £250,553 and in exports £212,441, during the year under review.

THE fourth meeting of the Association of Art Critics (*Kangwa-kwai*) was held at the Meiji Kwaido, Tokiyo, on the 20th instant, and was largely attended. Many beautiful specimens of painting by the old artists of the Kiyoto school were exhibited. An able lecture was delivered by Mr. E. F. Fenollosa on the possibility of reviving Japanese art.

THE statistics of the Customs Bureau give the total imports for 1883 as \$27,973,531.79, and the exports as \$35,693,522.60, the excess of exports being \$7,719,990.81, and the total bulk of the trade \$62,977,054.59. The corresponding figures for 1882 were, imports \$29,168,050.68 and exports \$37,235,775.51, the excess of exports being \$8,067,734.83 and the total trade \$66,403,816.19. It thus appears that the trade of 1883 as compared with that of 1882 shows a decrease of \$3,426,761.60. The export of specie in 1883 was \$3,156,565, and the import \$5,451,501.

A "BABY FARM," where no less than sixty-five children died within the past few years under suspicious circumstances, is said to have been discovered at Kanazawa, in the province of Kaga. It was kept by a widow, whose plan was to receive illegitimate children in consideration of a small payment, and afterwards contrive their death.

NOTES.

THE opening ceremony of the Tokiyo Charity Hospital (*Tokiyo Seriyō Biyōin*) was performed on Saturday afternoon, at 2 o'clock, by His Imperial Highness Prince Takehito. This institution had its inception in the spring of 1881, when a number of gentlemen, meeting at the Maple Club (*Kōyō-kwan*), conceived the idea of collecting a sum of 100,000 *yen*, and devoting the interest to pay the expenses of a hospital. It may well be supposed that such a scheme could not easily be realised in its entirety; but the founders did not allow themselves to be deterred by difficulties at the outset. Including among their number such men as Dr. Totsuka, Inspector-General of Hospitals; and Dr. Takagi, Surgeon-Major, both of H.I.J.M. Navy, they were able immediately to make arrangements for procuring medical services gratis, and steps were accordingly taken to open a hospital in the building formerly employed as the Tokiyo Infirmary. Thenceforward the new institution struggled on through a somewhat chequered existence, always vigorously supported by the medical staff of the Imperial Navy, among whom Dr. Takagi was conspicuous, as well as by the late His Excellency Iwakura, whose labours in the cause of humanity were not the least remarkable feature of his life. Of the work done by the Hospital, not less than of the work it is called on to do, some idea may be formed when we say that the number of indoor patients treated between August, 1882, and March, 1884, was 691; that the total number of days spent by them in the Hospital was 12,621; that the number of out door patients was 1,981, and the number of days on which they received treatment, 38,824. The accounts show that the institution has grown steadily. In July, 1882, its members were only 104, and its subscribed capital 26,600 *yen*; in March of the present year, its members had increased to 273 and its capital to 63,150 *yen*. The plan pursued is to add all subscriptions to a capital fund, the interest only of which is expended, so that permanence and regularity of working are secured. The institution having been finally placed on a solid basis, and its presidency accepted by H.I.H. Prince Takehito, the opening ceremony was to have been performed in November last, but owing to various causes a postponement until the 19th instant became necessary. By two o'clock a large number of guests had assembled, among whom were several Councillors of State and Ministers, the whole of the Foreign Corps Diplomatique, a number of Naval and Military officers, most of the foreign *employés* of the Government, many missionaries, several medical gentlemen, and a few of the leading residents of Yokohama. Having inspected the hospital and its appurtenances, the visitors repaired to booths disposed about a dais which was occupied by H.I.H. Prince Takehito, the Japanese high officials and the corps diplomatique. A number of speeches were then delivered, and the Naval Band having performed a short programme and the visitors partaken of refreshments, the ceremony ended at half past-three o'clock.

WE published, last week, a story of a flustered little lass, who, wishing to tell the late Bishop of Winchester that "Buttons" was usually entrusted with letters for the post, embodied her information in the phrase, "The

lord, my boy." This recalls a similar instance of hysterology which has been preserved for the last twenty-two years in the annals of the Royal Military Academy, Woolwich. The competitive system, then just sufficiently old to have sprinkled the once blue-blooded cadets with a tolerable mixture of budding, or full-blown, cockneys, had introduced into the Academy a youth of few "h's" and of a tremulous reverence for everything in the shape of a title. This hoiden, having been entrusted with a prismatic compass, was commencing his course of field-surveying by taking angles from corner to corner of the haw-haw that formed the southern boundary of the Academy grounds, when His Royal Highness the Commander-in-Chief happened to pass through the main-gate. The Duke was in a particularly genial mood. Seeing a busy cadet scientifically employed, he approached him and affably enquired the name of the instrument through which the youth was squinting. The cadet, thus suddenly accosted by a Royal Duke, lost consciousness of everything but the necessity of using a sufficiently exalted title in his reply, and after a moment's blushing and stammering, blurted out:—"Prismatic Highness your Royal Compass."

THE supposed attempt upon the life of the King of Italy has naturally been the subject of much comment. The story of the affair was simply this:—During the night of the 16th of February, the King was to travel by rail from Pisa to Rome. A pilot engine preceded the Royal train by an interval of ten minutes. During that interval, a carbineer, patrolling the line between Corneto and Montalto came upon a group of four men who seemed to be suspiciously employed. As they refused to move off the road in spite of his challenge, he fired upon them, and they returned the fire. After an exchange of ten shots the four men fled into a neighbouring forest, and the carbineer subsequently found traces of blood upon the line and a flask containing 175 grammes of gunpowder, with which was mixed a quantity (70 grammes) of broken glass, so that, even in the event of explosion, the effects would have been harmless. The flask was made of glass covered with a coating of thick twine, and to the neck was attached a long fuze. Nothing else was to be seen anywhere indicative of an attempt to wreck the train. So soon as these details were known, the Italian press began to throw doubts on the reported purpose of the four men. Why, it was asked, should four conspirators, engaged in such a desperate scheme, allow themselves to be intimidated by a single carbineer? And how did it happen that not one of the ten shots said to have been fired was heard either by the people in the train or by those on the pilot engine, one or other of which must have been in the immediate neighbourhood? But above all, what sort of imbeciles must they have been who expected to blow up a train by the aid of less than half a pound of gunpowder in a glass bottle? It was plain, indeed, that if the thing was really to be regarded as an attempt to assassinate the King, it must also be regarded as one of the most farcical attempts ever recorded. Nevertheless, there were found several newspapers which insisted that the four mysterious individuals were not poachers, as was sensibly suggested, but intending regicides, and the journalistic dispute had already become quite aminated when, on the 20th of February, the Minister of Public Works informed the Chamber of Deputies,

in the name of the Cabinet, that the affair was believed to have been, not an attempt to wreck the train, but simply an attack on the carbineer. Probably the public would have arrived at this conclusion immediately had not an unnecessary air of mystery been imparted to the business by the issue of a Governmental order forbidding the transmission of any telegrams referring to the incident. This order itself created a new excitement among the lovers of liberty, who hold that the Government has no more right to interfere with the transmission of telegrams than to intercept letters sent by post, and that messages transmitted along the wires will not cease entirely to be dangerous until it is absolutely certain that the authorities are in no sense responsible for them—a certainty which cannot exist so long as any official meddling with freedom of despatch is permitted.

WE learn that it has been finally decided to build a tramway from Naito Shinjiku, in Tokiyo, to Hachōji. The line will cross from the Kōshū-kaidō to the Ōme-kaidō, and the route was surveyed a few days ago by members of the Tokiyo Tramway Company. This speculation seems a little hazardous, for it can scarcely be expected that the public will rest content for any lengthy period with a tramway as a means of connecting two places between which such a large traffic exists. The proprietors of the Tramway Company have probably been carried away by their recent successes. Since the plum-blossoms began to be attractive, it is said that each tram-car has netted from seventeen to eighteen *yen* per diem, the ordinary takings being only ten *yen*.

IN commenting upon the porcelains of the Old World and New, "Cericus" writes to the *Pottery Gazette* as follows:—"The ancient dwellers in the Flowery Land must ever remain the master-potters of the world. They have supplied imitators with models and honest workers with inspiration. The influx of Oriental ideas, whose well-spring was in China, led to the European Renaissance. Persian art, modified by Saracen and Moor, led to the pottery of Spain, Sicily, Italy, and France. Japanese porcelain is the basis of the Medician, the earliest made in Europe. Chinese porcelain instigated the experiments and researches which led to the invention of the soft or artificial pastes of France and England, to the discovery of Kaolin, and so to the rise of Meissen and Sèvres. As a matter of fact, no product of later times equals the finer porcelains of the Far East." The writer has, however, evidently overlooked the fact that the influence of Persian pottery on the Chinese was of the greatest importance. Some time before the eleventh century of our era, many Chinese master-potters emigrated to Persia in order to study the ceramic art of that country; and the influence of their schooling is still felt in China, while countless smaller forms of jars and vases were the direct outcome of Persian Art. Specimens are still extant which combine the two styles after a most curious and rather bizarre fashion, and many of the arabesques so frequently to be found on older Chinese porcelain are directly of Persian origin.

A rather surprising error is made by another writer in the same journal in speaking of an old Greek tazza or *καλὰξ*, dating from 500 years

before the Chistian era. He says: "It is boldly painted, bearing beneath the bowl two quaint eyes, designed in Egyptian fashion; thus carrying one's thoughts back to an emblem of the most ancient of nations, and also to a superstition of the present day, for a Chinese junk even now needs two huge eyes on its prow to see its way over the ocean." There could probably be no more different "superstitions" than the two mentioned. The eye, according to Chinese lore, really endows the junk with the power of vision; but in Ancient Egypt the eye, pronounced as a hieroglyph *ar*, was a symbol of the creative power, and was in frequent use to represent the verbs "to do, to make, to create." The cabbalistic employment of the Sacred Eye was undoubtedly due to the older Egyptian hieroglyph. The Greeks borrowed many ideas from the Egyptians, and, among others, frequently employed modified forms of hieroglyphs to express similar ideas. The painted eyes on the old Greek tazza are evidently of the same origin.

TAMANIEB, where the second fight between the forces of Graham and Osman Digna occurred, was the head-quarters of the Arab Chief. There he kept his flocks and herds, lodged his women and children, and deposited his spoils, stores, and ammunition. It lies near the foot of the range of hills running north and south to the westward of Suakim, from which place it is about fifteen miles distant. Osman Digna retreated thither after the battle of Teb, and was followed by Graham's force, which arrived within a mile of the rebel camp on the evening of the 12th of March. The Arabs were hidden in trenches and pits. Their strength was about twelve thousand; that of Graham less than four thousand. The English General proposed to attack at daylight, but the Arabs were impatient. They opened fire at 1 o'clock a.m., and in expectation of an onset the British forces were formed in square, but subsequently ordered to lie down as the enemy confined themselves to shooting. It is probable that Osman Digna had meditated a night assault, but the bright moonlight rendered such an operation too hazardous. The bullets of the Arabs were directed chiefly against the white ambulance waggons of the English, and the Surgeons, as well as Graham's staff, had a warm time of it. In the end, however, this preliminary fusillade of five hours killed only one man and wounded three. The sun rose at six o'clock, and immediately a Gardiner Gun and a nine-pounder were trained on the Arabs. They were about 1,300 yards distant, and every shot took effect. At half-past six, Stewart's cavalry came up, and took position on the British left. Shortly afterwards the enemy drew in his advanced troops and concentrated his strength at his main position near the Tamai Wells. The English now commenced their advance. They were divided into two brigades, each of which was formed in square. The Arabs did not wait to be engaged, but rushed to the assault with devoted courage. Their onset was so impetuous that the advance of the leading brigade was checked for a moment, until the sailors, closing up, restored the onward impetus. No sooner was the advance resumed, however, than fresh hordes of the enemy hurled themselves on the squares. The Black Watch, which formed the front face of the second square, pushed forward at this point with such impetuosity that the Arabs penetrated the square, and got possession of the guns. They seem to have

been absolutely indifferent to wounds and death. Dropping on their lands and knees, they crept under the muzzles of the Gatling guns, and then commenced slashing with their scimitars, a method of fighting against which bayonets were not effective. Considerable confusion now ensued. The Sixty-fifth Regiment began to retreat, crowding upon the Marines, with whom it became inextricably mixed. The officers, however, did not lose command of the men, though it was found necessary to retire as much as 800 yards before the different corps could be disentangled and the square reformed. At this period the struggle is said to have been terrible. The Arabs dashed forward, those in the front content if their corpses might serve to embarrass the bayonets of the British and receive their bullets. Nearly all the non-commissioned officers of the Black Watch were speared or shot. The newspaper reporters and other non-combatants joined in the fight, using their revolvers with considerable effect. When the square resumed its onward movement the bodies of six hundred Arabs were lying at one of its angles. The Hussars now trotted forward to get between the Arabs and Sinkat, in hope of saving the families of the massacred garrison. At the same time the troops rushed on to recover their lost guns. This onset carried the British into Osman Digna's camp, and the battle was virtually over. Nevertheless, the Arabs would not fly. They walked slowly and sullenly away, "Sauntering as if in a bazaar, with arms folded or swinging by their sides." Not a few were shot down, but this did not accelerate the pace of the survivors. It was plain that they did not believe in their defeat, or were stupified by a catastrophe against which heaven ought to have protected them. It was impossible to take prisoners. The wounded Arabs would lie motionless on the ground, without uttering a groan or making a sound of any sort, until an opportunity presented itself to stab the advancing troops. Kind treatment did not abate their ferocity. One man attempted to kill Colonel Stewart while the latter's aide-de-camp was bringing him water. The English soldiers marched among the wounded "as among so many vipers." At 11.40 a.m., Graham telegraphed from Osman Digna's sometime stronghold:—"The camp of the enemy has been taken after hard fighting since eight o'clock this morning." The British loss was 202 men and thirteen officers: that of the rebels is uncertain, but it must have been from four to six thousand. Fifteen hundred corpses were found in one trench. Osman Digna's nephew and many Arab chiefs were among the dead. The troops then proceeded to destroy the ammunition of the rebels. In one store they found 2,000 Remington rifles. The camp and the villages in the neighbourhood were set on fire. Osman Digna, before the battle, had gone to a holy place, twenty miles distant, to pray for success. He returned, however, and took part in the combat, only flying after defeat became inevitable. The hero of the day on the English side appears to have been Adam Fraser, the biggest man in the Black Watch. He bayoneted twelve Arabs during the fight. Drummond of the same regiment killed Osman Digna's nephew. During the night after the battle, parties of Arabs wandered over the field uttering heart-rending cries of grief when they found the dead bodies of their friends literally piled in heaps. It was thought that this crushing blow had completely demoralized Osman Digna, but such

was not the case. Five days later, he had succeeded in rallying two thousand of his followers with whom he returned to the neighbourhood of Tamanieb. Admiral Hewett, meanwhile, had offered a reward of £1,000 for Osman's head, but this proclamation was withdrawn almost immediately by order of the British Government. By the 24th of March, several sheiks, formerly allied with Osman, had given in their submission to General Graham, but at the same time it became plain that another blow must be struck at the rebel leader. On the 26th, therefore, the troops again moved towards Tamanieb. A reconnaissance showed Osman encamped, with a force of about 3,000, at the head of the Tamanieb valley, from which position he was dislodged the following morning without difficulty. This terminated the campaign, not a moment too soon, however, for the troops suffered terribly from the heat in their last advance against the rebels.

THE telegrams indicate that at the end of March the position of the Gladstone Cabinet was deemed very precarious. The Colonial Secretary, Earl Derby, and the Lord High Chancellor, Lord Selborne, were said to be opposed to any use of English troops in the Soudan, and to have reminded the Premier of his Mid-Lothian speeches when he declared:—"It is disgraceful that a nation whom we call savages should, in defence of their native land, offer their naked bodies to the arms of European science, and be killed by the hundred thousand for doing with rude, ignorant courage what were, for them, duties of patriotism." Mr. Gladstone used these words of the Afghans, but their applicability to the case of the Soudanese Arabs is inconveniently plain. It is inevitable that people should ask how the Minister who "denounced the massacres of Cabul and Candahar could sanction those of Teb and Tamanieb." Mr. Gladstone himself is reported to have struggled hard against the necessity of such seeming inconsistency, though his scruples look a little excessive to persons who reflect that the fighting done by Graham was intended to prevent more terrible disasters, and that the whole aim of British policy was to restore to the Arabs the independence they seek. A Conservative victory appears to have been all but snatched by surprise on the night of March 15th, when Labouchère, Richard, and Cowen organized a sudden assault upon the ranks of the Government. The "Irish guerillas" threw their forces into the army of the malcontents, and the Government was only saved by a paltry majority of 15. This set people thinking over the strength of the two parties. The election in 1880 gave the following results, after the disfranchisement, or suspension of the writs, of 7 constituencies:—

Liberals	345
Conservatives	233
Home Rulers	62

Thus the Liberals had a majority over the Conservatives of 112, and over the Conservatives and Home Rulers combined of 50. As the numbers now stand, they show a somewhat different state of affairs, viz:—

Liberals.....	332	a decrease of 13
Conservatives ...	243	an increase of 10
Home Rulers ...	65	an increase of 3

The Liberal majority is, therefore, reduced to 89 over the Conservatives and to 24 over the Conservatives and Home Rulers combined—figures too small to inspire much confidence. In addition to the party in the Cabinet which opposed the use of English troops in the Soudan, there was said to be another, and a

stronger, party in favour of a more prolonged occupation of Egypt proper than Mr. Gladstone cared to contemplate. Under these circumstances, the London journals discussed the imminent prospect of a dissolution of Parliament, and Mr. Parnell announced that all his dispositions were made for the new campaign, when he proposed to contest 90 seats and hoped to carry 75. Meanwhile, Mr. Gladstone was confined to bed by laryngeal catarrh, and a visit to the South of France was talked of as absolutely necessary. Indeed the *Lancet* went so far as to recommend the Premier to accept a peerage, but the *Daily News* stoutly denied that Mr. Gladstone had any intention of resigning, and announced that he would speedily return to work. The various rumours were at their height a month ago, and inasmuch as the telegraph has brought us no news of a dissolution, and as Mr. Gladstone resumed his place in the house on March 31st, it may be presumed that all the predictions, except that of the *Daily News*, were incorrect. Little stomach as the Liberal Cabinet may have for fighting, Earl Granville has informed Turkey that England cannot leave the Soudan until the prestige of her arms is fully vindicated.

THE following telegrams, dated at London, March 22nd, throw a good deal of light on General Gordon's position. Later news tells that Gordon was successful in the battle on the 16th March, to which these telegrams allude, but his success was not sufficient to drive back the Arabs, as we find that, four days later (March 20th), Khartoum was surrounded by rebels whose numbers were increasing:—

A despatch to *The Times* from Khartoum, dated March 14, says:—"Six thousand rebels face the palace on the right bank of the Nile. They recently fired upon 300 blacks, who were sent down the river for wood, and killed 100 of them. General Gordon states that the garrison at Kassala is holding out strongly. General Gordon restricts himself to the defence of Khartoum, owing to the assembling of the rebels in this district. Produce continues to enter Khartoum from the south, south-west, and south-east. General Gordon has armed many of the inhabitants, but they can do but little against the mass of rebels fronting Khartoum.

The expedition to relieve Halfaya consisted of 1,200 men in three steamers. The men were concealed in the hold to avoid the fire of the Arabs on the banks of the river. The expedition returned to Khartoum, having rescued the garrison, raised the siege and captured many cattle and arms. The expedition lost only two men. There were great rejoicings over the victory and an enthusiastic demonstration in honor of General Gordon.

General Gordon will attack the Arabs opposite the town on March 16th.

Clifford Lloyd, Under Secretary of the Interior, has ordered the release of 125 untried prisoners confined in the jails at Assiout and Esneh. Some of them have been imprisoned for years.

A caravan has arrived at Suakim from Berber.

The feeling of disquiet in regard to General Gordon has been lessened but not extinguished by the news to March 15. His position is regarded as extremely precarious. It is felt that the curtain has again fallen upon Khartoum at a most critical moment. Until the issue of the battle between General Gordon and the Arab army on the 16th is known the anxiety for his fate will continue unabated. But even if General Gordon was successful in that engagement it is now generally recognized that his mission is a failure.

The rescue of the Egyptian garrisons from the Soudan is now admitted to be impossible without the intervention of English forces. The latest despatches received at Cairo from General Gordon indicate that he supposes an English force is on the way to Khartoum.

The absence of advices from Berber is a source of fear that General Gordon was repulsed in the battle of the 16th. He is hemmed in at Khartoum on all sides, and maintains his position in the expectation that an English army will speedily appear to give him succour."

It is reported that in the Cabinet meeting to-day despatches from Cairo were considered which stated that the immediate danger of the fall of Khartoum was over. But Sir Evelyn Baring, the British Minister at Cairo, urges the despatch of a British contingent to Berber either by way of Korosko or two squadrons from the troops at Suakim.

The Marquis of Hartington, Secretary of State for

War, has appointed a council at the War Office. It is believed that the Cabinet is in favor of an expedition from Suakim.

In view of the likelihood of a joint naval and military expedition up the Nile, the Admiralty has directed Admiral Hay to survey the upper waters of that stream so as to learn whether it would be feasible to send gunboats thither. Several naval officers have left Alexandria to carry out the survey.

It is believed in Suakim, from the latest intelligence received from the rebels' position, that Osman Digna's forces have almost entirely deserted him.

A TELEGRAM in the San Francisco papers, dated Washington, March 27th, announces Mr. Sargent's transfer from Berlin to St. Petersburg, thus:—

The nomination of Sargent to be Minister to Russia was a total surprise to most persons at the Capitol to-day. It was not delivered to the Senate until Secretary Frelinghuysen had spent an hour or more at the Capitol with the purpose, it is conjectured, of preparing the leading members of that body for its reception. When it was laid before the Senate in executive session a few questions were asked and briefly answered, to the effect that the transfer, though not reported or even suggested by Minister Sargent, will doubtless be agreeable to him, and would also undoubtedly be productive of good results as a matter of national policy, although in what manner was not stated or asked. The Senate, thereupon, accepting these assurances of the members of the Foreign Relations Committee, confirmed the nomination by unanimous consent. There is good reason for believing that this action was based not only upon the belief that Sargent's transfer—which, in European estimation, is a diplomatic promotion—would be agreeable to him and avert, possibly, further unpleasantness from personal hostilities, but also upon the prevalent impression that the position of American Minister at the Court of Berlin will significantly and for an indefinite time be left vacant. Secretary Frelinghuysen sent the following telegram to Minister Sargent this evening:—

SARGENT, Minister to Berlin:—The President approves entirely of your course in the Lasker matter. You have done nothing but obey the instructions of this Government therein. The President, thinking it might be agreeable to you, to-day nominated you Minister to St. Petersburg, and your nomination, without reference to any committee, was immediately and unanimously confirmed by the American Senate. This action is a manifest appreciation of your worth, and does you an honor of which any citizen might be proud.

(Signed)

FRELINGHUYSEN.

In reference to this the *Alta* says, editorially:—"President Arthur has sent in to the Senate the name of A. A. Sargent for confirmation as Minister to Russia, vice Hunt, deceased. Several constructions can be placed upon this act. It may, for example, be a fact that Germany has given our Government an unofficial intimation that Sargent's removal was desirable. In this view, the reported reconciliation of Bismarck and the American Minister would appear to be a diplomatic sham and a politic pretence. There was something about the sudden abandonment of the crusade against Sargent so different from Bismarck's usual tenacious adherence to his dislikes as to raise a presumption that his unexpected access of geniality was due to the knowledge that the cause of his irritation was about to be removed. But, again, it may be that this step was determined on by President Arthur without any hint from Germany other than the attacks made on Sargent by the semi-official newspapers of Berlin. But, in any event, it is certain that the President believed it would improve the state of our relations with Germany to replace Sargent with some man in respect to whom the same causes of friction did not exist. The St. Petersburg mission having fallen vacant, the opportunity to make this change at Berlin in a manner that is not humiliating to the pride of Minister Sargent happily presented itself and has been taken advantage of. The Russian mission is, like that to Germany, one of the first class and therefore the transfer does not involve any descent in rank for Mr. Sargent, though, inasmuch as St. Petersburg is a less pleasant place of residence than Berlin, it is not to be supposed that Sargent would have desired the transfer unless circumstances had arisen to make his further stay at Berlin unpleasant.

THE news from Korea could not well be worse. There is every symptom of the approach of a great famine, which promises to confound all classes alike in a most miserable condition. This is due not alone to the failure of the crops, although several districts last year reaped very scanty harvests, but also to the absolutely poverty-stricken condition of the people, and the total stagnation of trade. Things have been rapidly going from bad to worse during the last six months, and the climax of wretchedness has evidently not yet been reached. The rapacity of the petty traders knows no bounds; paupers overrun the streets and die of starvation in the public thoroughfares; robberies are of constant occurrence everywhere, while the authorities appear positively powerless to stem the current of adversity. A few days ago, we had occasion to speak of Korea's troubles, but the latest intelligence proves that the country's horizon is growing ever darker, and no help seems forthcoming from any side. If the moral and physical condition of Korea appears to be wretched, the political state of the country is not reported as much better. "A spirit of enervation and inaction is noticeable everywhere," says the correspondent of the *Fiyu Shimibun*, "and the whole country is in a lamentable condition." Official bribery is openly practiced, and Korean officialdom appears to be as corrupt as possible. Many of the Ministers and other dignitaries hold no less than six different appointments in order to eke out their scanty salaries, to the great confusion of public business. The different offices held by one man are by no means of a similar nature, so that the office-holder should by rights be an "admirable Crichton" in order to fulfil his multiplex duties. The Minister for Foreign Affairs, Min Yong-mok, has, for example, been appointed Superintendent of Coast Defence; while the ubiquitous Von Möllendorff, Adviser to the Cabinet and Vice-President of the Foreign Office, has been made Superintendent of the Mint. He intends striking off much finer and better coins than those issued a short time ago, but, as the *Fiyu Shimibun* quaintly observes, "the new copper coins emit a most horrible smell." In speaking of the state of the politicians at Seoul, the *Fiji Shimpō* waxes wroth on the subject of the dismay caused by the rumoured approach of the Chinese soldiery under Go Kei-cho. The fact that the boasting statements of an inebriated Chinaman at Nam Yang should cause a perfect reign of terror in the capital proves how deep-rooted are the fears of the Korean Government when China frowns,—or is supposed to frown. Prince Kung, probably the only friend of Korea in the Peking Cabinet, is no longer in power. His party has been "shattered" by the machinations of Shun, who is all for the increase of China's territorial possessions and for the enduring fame of the Manchu dynasty. In a word, the Hermit Kingdom has been quickly and not over-tenderly divested of its mysterious shell of isolation, and the curious grub has turned out a remarkably dingy moth.

AMONG the many obituary notices of the late Mr. Chenery, editor of *The Times*, that published by the *Spectator* is, perhaps, the most outspoken. It says, almost in so many words, that the great Oriental Scholar was not suited to succeed Sterling or John Delane; that he was, in short, "an accomplished Professor or wide-minded savant, rather than a journalist." Among the

instances given by the *Spectator* of the mistakes he made in reading the signs of the times, we are told that he was "entirely at sea as to ordinary English opinion on the Ilbert Bill." This strong statement is, we are convinced, not one whit too strong. It seemed to us when the sound of the storm raised in India by Lord Ripon's reform reached Japan, that the measure was a logical and inevitable sequel to the policy which Great Britain has consistently pursued in her Eastern empire during the past fifty years, and that the only reasonable objection which could be urged against it was prematurity. *The Times*, however, from the very first assumed an attitude of uncompromising hostility to the bill, not on the ground of untimeliness, but as radically faulty in principle. That opposition, culminating as it did in an unseemly and un-English attack upon Lord Ripon's religious apostasy, will long be remembered as a most unhappy episode in the career of the great journal.

The American Silk Journal for March contains the following:—"Mr. Amos Marshall and Mr. John Jewett, both of Paterson, who have for a considerable time been connected with Pelgram & Meyer's mill, will soon start for Japan, with the intention of making that country their permanent home. They will engage there in the business of reeling and shipping raw silk. We learn by the *Guardian* that it is their intention to send for some machinery in the Fall to take the place of the imperfect mechanism used in Japan, the same apparatus that has been used there for hundreds of years, and that the improvements they propose to introduce will probably revolutionize the whole business. New York importers to whom they have explained their scheme have already given them orders for more silk than they can ship for some time to come, and there being no trouble about foreigners locating themselves in the country, Western capital and management being always welcome, it is thought that the gentlemen will achieve a great success." The foreign silk merchants of Japan will be somewhat amused at this, not to put too fine a point upon it, rather startling statement. No doubt Messrs. Marshall and Jewett will find plenty of opportunities in the shipping of raw silk, but we beg to differ with regard to the reeling part of the story. American machinery is certainly not celebrated for reeling raw silk, and it appears not to be known to our trans-Pacific friends that the machinery in use in this country is of quite recent construction, made after the best French and Italian models, and most decidedly not "the same apparatus that has been used for hundreds of years." The programme sketched out by the gentlemen above-named sounds well, and is no doubt eminently acceptable to the New York merchants referred to, but as a matter of fact Messrs. Marshall and Jewett would only be able to build and run their filature at one of the treaty ports, thanks to the eminently satisfactory arrangement under which foreigners reside in Japan, namely, extraterritorial jurisdiction; consequently they would find that their ideas "about foreigners locating themselves in the country" are slightly *fades*. They would also soon discover that they could not go into the silk districts themselves and purchase cocoons. But presuming, for the sake of argument, that they were permitted to do so, they would be heavily handicapped as against Japanese in the matter of transport and in many other ways, and would

find that their competitors would soon run the reeling concern "off the rails," even if some of the *Kwaisha* did not ruin the new "shipping" business by direct export. We are much inclined to the belief that Messrs. Marshall and Jewett are pursuing an *ignis fatuus*.

THE Tokiyo Charity Hospital is an institution so worthy of support that we venture to bring it again to our readers' notice by laying before them the rules for its establishment and maintenance, in order that persons desirous of contributing may have no difficulty in carrying out their good intentions:—

1.—The Hospital shall be called the Tokio Charity Hospital and its site shall be at Shiba, Atagocho, Nichome, No 8.

2.—The Hospital shall be maintained by voluntary subscriptions.

3.—The term of subscription is five years: payment to be made in one of the three following ways:—

(a) Those who bind themselves to pay a thousand Yen or upwards are not required to pay down the whole sum at once, but only 10 per cent. of the sum as yearly interest in monthly or half-yearly instalments.

(b) Those who bind themselves to pay from 50 to 900 yen are also not required to pay the whole sum, but only 12 per cent. on it as yearly interest in monthly or half-yearly instalments.

(c) A sum of more than a hundred yen paid down in full will be kept by the Hospital and its interest alone will be made use of, the original sum being paid back at the end of the term if required.

4.—Donations whether in money or kind will be accepted, e.g., chairs, bedding, clothes, cotton-wool, linen, stockings, paper, rice, miso, soy, etc.

5.—Those who pledge themselves to subscribe towards the funds of the Hospital should fill in and send the agreement paper to the Hospital in the following form:—

A or B subscription
To the Tokio Charity Hospital
..... yen.

I agree to pay yen per month or yen per half-year as the interest of the sum mentioned from month of year of Meiji for a term of five years

Date. (signature).

C subscription
To the Tokio Charity Hospital
..... yen.

I pay the sum mentioned above and agree that the interest on the sum paid shall be spent on behalf of the Hospital from the month of the year of Meiji during a term of five years.

Date. (signature).

6.—A special collector having receipts impressed with the Hospital seal will be sent round monthly or half-yearly to the Subscribers.

7.—Tickets of recommendation will be sent to the subscribers who are requested to sign their names and append the names of the patients whom they may recommend when sending any such to the Hospital.

The tickets of recommendation will be issued at the rate of one ticket to every two yen paid down.

8.—Any patient desirous of receiving the Hospital treatment must bring with him a ticket of recommendation, but temporary relief will be afforded to those who meet with any serious accident or are taken seriously ill in the streets, even without a ticket. Six tickets will be required for admission into the wards and one ticket for an out-patient.

THE Kanagawa Police Force may take a measure of comfort in the fact that the heavy shower of hostile criticism to which they are subjected by a portion of the foreign press of Yokohama, is not altogether unknown in other countries when newspapers comment upon municipal protectors. The San Francisco papers have recently had "Robert" on the carpet, and the *Alta*, defending the force as a class, says of the individual:—He is the butt for all kinds of ridicule and abuse. If a comrade falls from grace, the whole force is condemned, and people say, "What else can you expect from a policeman?" If a criminal evades pursuit for a time, people say "the police are in with him." When he is caught, they say, "Guess he had no more money to put up, and so the police did not care to screen him longer." If a riot occurs, they say, "Can't the police stop it?" If the police stop it, the papers are full of police brutality. No matter what they do, or do not do, their

actions are misconstrued. To such an extent is this carried that when a policeman does err the force of criticism is powerless."

IN the Foreign Relations of the United States for 1882, the following despatch is printed, from the United States Minister in Tokiyo to Mr. Frelinghuysen:—

SIR: Herewith I beg leave to inclose for your information an extract from the report of Sir James Bain, ex-lord provost of Glasgow, and recently made by that gentleman to the Glasgow Chamber of Commerce, together with the words of approval thereof by the *British Mercantile Gazette*, as published in the *Japan Gazette* of the 24th instant.

Sir James Bain, you will please observe, was appointed the representative of the Glasgow Chamber of Commerce to the Yokohama Chamber of Commerce, and was requested to gather information concerning the commercial relations between Great Britain and the countries of the East. The extract from his report, which is inclosed, treats only of Japan, and points out the disadvantages to commerce arising from the territorial restrictions of existing treaties.

Referring to the desire of the treaty powers to open the empire to foreign trade, Sir James reports that he was informed by the Japanese Minister for Foreign Affairs that the Japanese Government might grant the liberty of trading everywhere in this empire, but only on condition of foreigners becoming amenable to the native tribunals; but adds that the foreign powers insist upon the privilege of general trade without the condition. The *Mercantile Gazette* remarks:—

We are disposed to agree with Sir James in considering such an arrangement perfectly equitable, more especially as the laws of Japan are now based on those of England and France, and as the system of administering justice, postal, and educational arrangements, bear favorable comparison with those of most other countries.

When the actual condition of Japan comes to be better understood by foreign states—her wonderful progress in the knowledge of good government and judicial administration—it seems to me that just men everywhere will concur with Sir James that the proposition of Japan is perfectly equitable and ought to be accepted by the treaty powers.

It is clear to my mind that the European states do not intend to release Japan, China, or any of the Oriental nations from European rule and European government so long as they can prevent it. It is not uncommon to see in European journals the announcement that the proposition to relieve Japan at any time, however remote, from the existing foreign control of her affairs, is not to be entertained by the great powers.

The world moves, knowledge advances among men and nations, and through its resistless power the people of the East must regain their lost liberties.

I have, &c.,

JNO. A. BINGHAM.

It is interesting to observe that "knowledge" is the great factor upon which Mr. Bingham relies to change the mood of indifference, and too often of injustice, exhibited by Western countries towards Japan. Yet, after all, the persons among whom one would expect to find least ignorance, are apparently most bigoted and most selfishly conservative. It is the old story, none so blind as those that will not see. What we must hope is that the world will "move on," and leave the ignorant omniscients to watch, from a distance, the better fortune they might have shared—leave them in the full enjoyment of their *habeas corpus*, and of a stagnating trade that demands no wearisome peripatations in strange places, or "disputing of vantage grounds" in inland markets.

It has been finally determined to form an infantry corps in Tokiyo University. Uniform, arms, and a small pecuniary allowance will be furnished by the Government. It is said that a number of the students have signified a desire to pay their own expenses. Apparently Japan is resolved to throw away the advantages nature has placed within her reach. To Western eyes her greatest good fortune in these days of military mania is that her situation and circumstances enable her to dispense with large armaments. But it appears that she does not think so herself.

We are informed that the Messageries Maritimes steamship *Godavery*, bringing the next French mail, with dates from Marseilles to the 16th March, left Hongkong on Wednesday at six a.m.

THE NEW CLUB IN TOKIYO.

WE learn that measures are in active progress with a view to the formation of a Tokiyo Club for Japanese and Foreigners in the new building, called the *Rokumei-kwan*. In the speech delivered by His Excellency the Minister for Foreign Affairs on the occasion of opening the building, and subsequently published in these columns, it will be remembered that the chief object of the institution was explained as a desire to promote social intercourse between Foreigners and Japanese—an object which can scarcely be better pursued than by the step now contemplated. There has, of course, been some difficulty in arranging the preliminaries for an institution which is comparatively new in Japan. Clubs do exist in the Capital, but it cannot be said that their success hitherto has been signal, or that any attempt has been made to organize them on a cosmopolitan basis. The Naval Club, which was formed nine or ten years ago, admitted Foreigners, but only as honorary members, and its promoters do not appear to have aspired at establishing a *cuisine à la Européenne*, or even à la *Japonnaise*. They contented themselves with facilities for billiards and *go*, and a reading room on a limited scale. It is, however, an essential feature in the programme of the *Rokumei-kwan's* founders that no distinction whatever shall be made between Japanese and Foreign members. Both are to be admitted on precisely the same footing, and both are to enjoy the same rights and privileges. Our readers are doubtless aware that the cost of erecting the *Rokumei-kwan* was defrayed out of a fund subscribed by the various Governmental Departments in the Capital, and that a part of the building will in future be used for purposes to which the *Yenriyo-kwan* has hitherto been applied. Under these circumstances, the most natural way to set about preparing a constitution for the new Club was to form a committee of gentlemen representing the different branches of the service, who might then proceed to nominate honorary members, draw up rules and regulations, and elect a nucleus of active members. This has been done. We understand that the rules have been prepared, and will be issued in a few days, while the first election of active members took place on the 18th instant. We are not yet in a position to explain the conditions of eligibility for membership, but we learn that they will be regulated in general by the principles observed in first-class European or American institutions of a similar nature. The spacious and comfortable qualities of the building, as well as its very convenient situation within five minutes' drive of the Shinbashi terminus, are familiar to the public, and as all the interior arrangements are to be made on the lines of a Foreign Club, it is difficult to overestimate

the advantages which the institution will confer on the Foreign residents both of the Capital and of Yokohama. It will be no trivial blessing to be able to count on a good dinner and a comfortable place to spend the evening whenever one visits Tokiyo, and to know that the Capital offers way-farers some hospitality other than the very fifth-rate accommodation for man and beast—principally the latter—furnished by the Seiyoken and its competitors. The establishment of the *Rokumei-kwan* is distinguished, indeed, by some exceptionally fortunate features. A building of such dimensions, we might almost say magnificence, could scarcely have been erected for use as a Club by any association of private gentlemen, during the next half-century, at all events; and yet a building of less pretensions would scarcely have possessed attractions sufficient to give initial impetus to an enterprise so unprecedented in Japan. Apart, however, from these material advantages, we regard the founding of a cosmopolitan Club in Tokiyo as a most happy event. More than a moiety of the reserve and distrust which at present disfigure the social intercourse of Japanese and Foreigners—if, indeed, any real social intercourse can be said to exist—is due to the inferiority of the class of Japanese with whom Foreigners are brought into contact at the open ports. It would be difficult to conceive anything less calculated to promote mutual good-feeling, than the conditions existing at Yokohama, where a coterie of *rusé*, but not over-refined, Japanese have laid seige to the Foreign Settlement, and combined their forces so adroitly that the people within the lines are virtually helpless. Of the latter, it may truly be said that they are considerably above the average of foreigners in point of intellect and respectability: of the former, that they are still farther below the average of Japanese. It is not pleasant to know that whatever industry and shrewdness one may employ to compete with one's fellow-residents, the advantage of that competition is ultimately reaped by an army of confederates, who, fattening on the proceeds of their unique opportunities, see in every fresh access of foreign rivalry an additional chance for Japanese combination. This sort of thing does not conduce to conviviality and good-fellowship. We should like to see Foreigners able to get away altogether from the elements that surround them at the open ports, and to associate freely with a class of Japanese whose thoughts travel sometimes in other grooves than those of yarns, shirtings, silk, and tea, and who have risen from a social basis a little loftier than that of hucksters and stall-keepers. It cannot, perhaps, be expected that the new Club will immediately work any very radical change in these respects, but it is a considerable step in the right direction, and we are persuaded that its results will amply repay the enterprise and liberality of its promoters.

JAPAN'S INHERENT RIGHTS.

THE *Manchester Guardian* has begun to interest itself actively in the question of Japanese treaty revision. We reproduced, in a recent issue, an able article from its columns on the subject of customs duties, and we now find another on the still more important subject of extraterritoriality:—

The chief difficulty in the way of the revision of the Japanese treaties appears to be the question of Ex-territoriality, in other words, the question of jurisdiction over Foreign Residents in Japan. There appears to be no reason to doubt that the Japanese authorities, whether from a consideration of national pride or for other reasons, are extremely anxious to exercise full jurisdiction over all residents within their borders. And there can be no doubt that much may be said in favour of Japan's claim to be placed as a civilised Power on a footing of perfect equality with all Western Powers; indeed it would appear that the Government of the United States is disposed to admit the justice of Japan's claim to have this last token of her former barbarism—the imposition of foreign tribunals—abolished. On the other hand, the foreign commercial community in Japan appear to regard the suggestion with grave anxiety. Whether Japan can fairly be considered civilised or not, foreign residents view with intense repugnance the idea of their being left to the mercy of native courts; and even if it be contended that this feeling is due solely to prejudice or to national pride on their part, there is still every prospect that the abolition of ex-territorial rights would be a serious blow to foreign commercial confidence in Japan, and would go a long way towards weakening the footing which foreign traders have obtained there. This would scarcely be in the interest of Japan itself, whose political importance in the East depends very largely upon her close associations with the Western Powers, and whose development for some time to come must largely depend upon foreign capital and enterprise. The Japanese Government has apparently offered to throw open the interior of the country to foreign residence and trade, but only on condition that foreigners in general are made subject to Japanese laws and courts. With this condition attached, the foreign residents appear to regard even the proposed opening-up of the interior as a worthless concession, and distinctly prefer to bear the ills they have rather than fly to others that they know not of. And if foreigners were made subject to Japanese courts it is difficult to see how such a change could be opposed in China. It is understood that the British and other European Governments have remained firm on this point. The instructions sent out to their representatives in Japan authorise such readjustment of the Customs duties as will be likely to bring into the Japanese exchequer a sum double the revenue at present collected. Although articles consumed by foreigners will be subjected to higher duties, the bulk of the increased duties will fall upon the native consumers. With a view to the future, the Japanese authorities have also asked that the duration of the tariff and treaties may be absolutely limited to ten years. Taking into consideration all the circumstances, it seems probable that the impending treaty revision will resolve itself simply into a modification of the duties.

The *Manchester Guardian* treats this question in a singularly superficial manner. The desire of the Japanese Government to recover its powers of jurisdiction is lightly referred to "a consideration of national pride" or "other reasons." A leading English journal might be expected to show a more appreciative and sympathetic spirit in discussing such a matter. English statesmen, at all events, are sufficiently explicit and unequivocal in their utterances when, by any chance, an attempt is made to claim exemption from the operation of British laws for the subjects of a foreign Power residing within the limits of British jurisdiction. A case in point occurred only three years ago, when the Government of the United States endeavoured to set up a distinction between the liability of natu-

ralized Americans and the liability of British subjects in respect of unlawful acts committed, or about to be committed, in Ireland. Earl GRANVILLE then (June 24th, 1881) addressed to Sir E. THORNTON a despatch, subsequently published in the Diplomatic Correspondence of the United States, containing the following remarkable assertions :—

The right of every State to subject foreigners within its limits, no less than its own subjects, to every law made for the maintenance of law and order, is an undisputed principle of the law of nations, and is a right necessarily inherent in the Sovereignty of every independent community. The principle is universally recognized, and is well stated by the great French jurist Portalis, as quoted by Sir Robert Phillimore in his "Commentaries upon International Law," vol. I. cap XVIII., Section 334, p. 454 :—*Chaque État a le droit de veiller à sa conservation, et c'est dans ce droit que réside la souveraineté. Or, comment un État pourrait-il se conserver et maintenir, s'il existait dans son sein des hommes qui pussent impunément enfreindre sa police et troubler sa tranquillité? Le pouvoir souverain ne pourrait remplir la fin pour laquelle il est établi, si des hommes étrangers ou nationaux étaient indépendants de ce pouvoir. Il ne peut être limité, ni quant aux choses, ni quant aux personnes. Il n'est rien s'il n'est tout. La qualité d'étranger ne saurait être une exception légitime pour celui qui s'en prévaut contre la puissance publique qui régit le pays dans lequel il réside. Habiter le territoire, c'est se soumettre à la souveraineté.*

It ought to be remembered that the particular measure whose exercise as against American citizens elicited this assertion, was an extraordinary piece of legislation, which, however necessary, was plainly opposed to all the principles of personal liberty, inasmuch as it conferred on the authorities power to arrest and detain in prison for an indefinite period, without trial, persons suspected of designs against the public peace. Yet even from the operation of this class of laws Earl GRANVILLE emphatically repudiated the right of any foreign Power to claim exemption for its nationals residing in British territory, and held that to admit such exemption would be to surrender "a right necessarily inherent in the sovereignty of every independent community." Mr. BLAINE, too, in the course of the correspondence to which this contention led, recorded his assent that, "the right of every Government in this respect is absolute and sovereign, and every person who voluntarily brings himself within the jurisdiction of the country, whether permanently or temporarily, is subject to the operation of its laws, whether he be a citizen or mere resident. In stating this familiar principle, no more is conceded to Great Britain than every country may of right demand, and it is one of the sovereign rights which the Government of the United States has always insisted upon and maintained for itself." These assertions leave us in no manner of doubt as to how any Western Power would behave under the circumstances with which Japan has to deal. There is not a citizen or subject of any Occidental State who would rest for a moment content were his country's "inherent rights" treated as Japan's are treated, nor is there a citizen or subject who, resting thus content, would not deserve

to be despised by all free men. Japan's justly growing indignation against the resolute refusal of a combination of foreign Powers to recognise her independence, is a sentiment with which English-speaking peoples, above all others, ought to sympathise. To dismiss it flippantly as "a consideration of national pride" is not more unjust than superficial.

The "other reasons" to which the *Manchester Guardian* doubtfully alludes, have been so long intruding themselves upon public notice that to recapitulate them seems superfluous. Briefly speaking, they amount to this—that the administration of justice by foreign courts in Japan is little better than a farce. One Power, and one only, has fulfilled its treaty obligations by establishing properly equipped tribunals with a trained judiciary. Yet even under the system introduced by that Power, Japanese plaintiffs are virtually deprived of the right of appeal, since to exercise that right they must carry their cases to a foreign country. A clumsy, more incompetent, and less accessible system than the motley miscellany of foreign courts which do duty here as a judicial machine, it would be difficult to conceive. We can be quite sure what course a Western Government would adopt in the presence of such a confused medley. One of the very first steps taken by France when she occupied Tunis was to negotiate for the abolition of the Capitulations, and no sooner did Great Britain accept administrative responsibility on the banks of the Nile, than she discovered that the maintenance of ten or twelve *imperia in imperio* was "absolutely inconsistent with the establishment of any strong and just central Government.* It will scarcely be pretended that Japan is competent to do what neither England nor France found it possible to accomplish. There is, however, one great difference between the situations: when England in Egypt and France in Tunis "claimed the co-operation of other Powers in the removal of obstacles to the establishment of good Government," that co-operation was immediately obtained; whereas, when Japan in Japan asks for similar co-operation, her request is contemptuously referred to "mere sentiment" or to "national vanity."

It is permitted to hope that the *Manchester Guardian's* interpretation of the foreign residents' mood is a little obsolete. There may be four or five hundred foreigners in Japan indifferent to the disgrace of standing in the shoes of the party of seclusion which existed among the Japanese themselves twenty years ago: there may be four or five hundred foreigners who, whether from blind distrust or interested motives, are resolved to oppose every extension of this country's foreign intercourse; resolved to dismiss with a sneer her claim

* Referring to this, the *London Times*, a year ago, wrote :—"So long as a dozen separate jurisdictions exist side by side * * * it must obviously remain impossible for any Government to issue justice and equal rights to all."

to remove what is admitted to be "a token of barbarism;" resolved to deny her "inherent rights of sovereignty;" resolved to condemn themselves and all their fellow-nationals to the ostracism of a few ports environed by an army of monopolists, whose commerce of circumvallation encroaches daily more and more upon the legitimate profits of the besieged, and daily cripples the healthy growth of industry and trade. There may, we say, be four or five hundred conservatives of this selfish and unreasoning disposition, but no one will pretend that their verdict is to determine the policy pursued by all the world towards an independent nation of thirty-five millions. The position foreigners occupy towards Japan to-day is that of tenants under a lease which expired eleven years ago and which is not yet renewed. Eleven years ago the Treaties became subject to revision at the desire of "either of the High Contracting Parties," and revision, if it meant anything at all, meant some alteration of provisions devised with reference to special conditions which either no longer exist or have been materially modified. We hear a great deal of "rights" which entitle a handful of strangers to oppose the extension of Japan's foreign intercourse and to restrain her national growth, but, in point of fact, no such rights exist. The treaties conferred on us certain extraterritorial privileges—not rights—which are in no sense permanent, and which Japan is bound by every instinct of patriotism and every principle of progress to curtail as soon as possible. The contention that "if foreigners were made subject to Japanese courts, it is difficult to see how such a change could be opposed in China," is of a piece with the singular injustice of the whole conservative argument. During the past twenty years, while Japan's adoption of Western civilization has been so remarkable as to make the world marvel, China has stood absolutely immovable. Her systems of polity, law, judiciary, education, and so following, are precisely what they always were, and the bigotry of her conservatism is such that even railways and telegraphs are not yet tolerated. Nevertheless, it is pretended that she has a valid title to demand for her own stagnation every acknowledgment which her neighbour's progress receives at foreign hands! Such logic deserves only ridicule.

We can never consent to believe that educated Englishmen really hold the views attributed to the foreign residents by the *Manchester Guardian*. The prominent trait of English character is not a lack of justice, generosity, and practicality. Most happily, evidences have of late been afforded that our faith in the larger and more liberal disposition of our countrymen in Japan is not ill-founded, and that the beginnings of a wiser policy will be gladly endorsed by this community.

THE NEW CHINESE CABINET.

WHAT may be the exact reason for the wholesale Ministerial changes reported from Peking, we cannot certainly assert, but, judging by the names of those dismissed from office and those preferred to higher appointments, it would appear that the War Party is in the ascendant. The vernacular journals of Tokijo have had much to say on the subject, but their opinions are far from being unanimous. The *Official Gazette*, for instance, in recapitulating the telegrams received from Peking, goes no farther than to conclude that "there will be strict investigation and prosecution of all the civil and military officials concerned in the late Tonquin affairs," and adds, very prudently, "but what policy will be assumed with regard to France still remains to be seen." Other journals, in especial the *Fiji Shimpō*, the *Fiyu Shimbun*, and the *Nichi Nichi Shimbun*, declare outright that the sweeping Ministerial changes portend a decided unwillingness to pay the indemnity claimed by France, and the uncontrollable outbreak of a long imminent war. "Although it cannot be denied," says the *Fiyu Shimbun*, "that China may yet alter her Annamese policy, she has at all events plainly indicated her intention to settle her dispute with France by resorting to arms." The *Fiji Shimpō* points out, very clearly, that one and all of the new members of the Cabinet are creatures of Prince SHUN, the bitter enemy of LI HUNG-CHANG and one of the most inveterate opponents of the peace faction; and thence concludes that China, under the new régime, is actively preparing for war. This, according to recent telegrams, seems to be a reasonable conclusion, and yet it is totally at variance with the latest opinions expressed in Shanghai. The *North China Daily News*, while predicting a crisis in the Cabinet at Peking, evidently does not believe in the probability of a war with France, but adds that "there is an important section of the EMPRESS's advisers who are crying out for battle, and that counsels are still greatly divided among even the most prominent and responsible statesmen of the Empire." The same journal says:—"The EMPRESS considers that she has been utterly misled on the subject of China's preparedness for war, and the fall of Bac-ninh seems to have come upon her with disconcerting suddenness." These sentences may be taken as a sort of prelude to what has actually occurred—the dismissal of the Peace Party, and of the chief officials concerned in the Tonquin affair.

With regard to the telegrams themselves, it is evident that great pressure has been brought to bear upon the EMPRESS to obtain her authorization of the changes in the Cabinet. Not only are the leading statesmen of China among those dismissed from service, but the men appointed to the vacant posts are very little known,

and have, so far as the public is aware, no recommendation save that they are the adherents and clients of Prince SHUN. The former rank and the names of the dismissed officials are as follows:—PAO CHUN, Prime Minister,—LI HUNG-CHANG is Right Prime Minister, while PAO CHUN was Left Prime Minister—Prince KUNG, LI HONG-T'SAO, Joint Lord High Chancellor, and President of the Board of Civil Affairs; CHING LIEN, President of the Board of War; and YUNG TUNG-HO, President of the Board of Public Works. The five officials promoted are NGA-LO HO-PU, President of the Board of Revenue; Prince LI, cousin of the EMPEROR; YEN CHING-MENG, an official in the Board of Revenue; CHIANG TSE-WAN, President of the Board of Punishment; and SUN YU-WEN, Secretary of the Board of Public Works. Further despatches state that T'ANG KING, Governor of Yunnan, and T'SU YIN-HU, Governor of Kwang-si, have been dismissed, on the ground of their having been responsible for the fall of Son-tai and the evacuation of Bac-ninh. PUI LA, a little known member of the Imperial Household, has been appointed President of the T'sung-li Yamên, and LUN SHU, another *homo novus*, is made Keeper of the Great Seal of the same office. Moreover, Prince KUNG and his four companions have not merely been dismissed from the Privy Council, but have lost their positions and voice in the T'sung-li Yamên, which is now entirely under the control of Prince SHUN, who has been elected Regent during the minority of the EMPEROR.

To understand the secret springs of these unpromising changes, it is necessary to go back some sixty years, to the days of SUAN TSUNG CH'ENG, who reigned under the title of TAO KWANG. This EMPEROR has nine sons; the first three died young, while the fourth, WEN TSUNG HIEN, succeeded him under the title of HIEN FENG (1851). The last three sons of TAO KWANG were Prince TONG, Prince KUNG, and Prince SHUN. In 1862, the Emperor HIEN FENG died, leaving his throne to his son, then seven years old, who was proclaimed EMPEROR under the title of T'UNG CHE. Soon after his accession to the throne, the great Tai Ping rebellion broke out, but was finally quelled by Prince TONG and LI HUNG-CHANG. In 1874, the young Emperor T'UNG CHE died, and there being no heir apparent, his successor had to be chosen from among the Imperial Princes. According to Chinese Law, none of the three Princes TONG, KUNG, and SHUN could succeed to the Throne; the heir apparent had, therefore, to be chosen from among the cousins of T'UNG CHE. The eldest son of Prince TONG was also ineligible, and so the lot should have fallen to the eldest son of KUNG. But Prince SHUN, the youngest of the nine sons of TAO KWANG and uncle of T'UNG CHE, had married a sister of the EMPRESS REGENT—the consort of HIEN FENG—and his son, backed by the powerful influence of the EMPRESS,

ascended the Throne instead of the lawful heir. The son of Prince KUNG was thus, contrary to the laws of primogeniture, superseded, much to the indignation of KUNG, who, from that time, openly became the chief political opponent of SHUN.

Despite the fact that his son was not proclaimed heir apparent, the position of Prince KUNG was far too powerful to permit his removal from the highest Council of the Empire. With the one exception of LI HUNG-CHANG, KUNG has been the leading statesman of China for nearly three decades. In the year 1860 he played a most important part in concluding a treaty of peace with the allied forces after the capture of Peking, and was chiefly instrumental in raising the indemnity of 12,000 taels. It was KUNG who solved the vexed boundary question with Russia; who kept the Formosan war from becoming a national disaster; who reasserted the supremacy of China over Korea; and who, latterly, warned the Government against the ruinous consequences of the policy pursued in Annam. As a member of the Privy Council and Minister of the T'sung-li Yamên, he showed great prudence and foresight, and did much towards hastening the adoption of Western civilization. The intimate and political associate of LI HUNG-CHANG, he was on terms of friendship with every officer in the T'sung-li Yamên, and had an influential voice in all the councils of the Empire. But KUNG was ever the principal exponent of the Peace Party, and this decidedly weakened his popular prestige, despite the soundness of his views. LI HUNG-CHANG generally shared his ideas on matters of internal policy, and surpassed him in outspoken admiration of European inventions. The Government was thus divided into two political factions, the one headed by KUNG and LI, and the other by SHUN and T'SO CHIANG-TANG,—answering to the Liberals and Conservatives. Both SHUN and T'SO are thoroughly bellicose, and differ widely in opinion from the other party. To their mutual misunderstandings and continual disputes we may attribute much of the vacillating policy of China, so conspicuous for the past twenty years. SHUN never openly dared to oppose the policy of KUNG and LI HUNG-CHANG with regard to the foreign relations of China, although he frequently expressed himself dissatisfied with what he deemed an effeminate course of action. Prince LI, who now replaces KUNG, has never been known as an influential politician, and has hitherto held only one important post, the Magistracy of T'sung Jin Fu. The other men whom SHUN has brought into the Cabinet are the mere rank and file of his faction, and of no note whatever.

There can be little doubt that these Ministerial changes are the consummation of the plans long since laid by Prince SHUN, who, from the time he succeeded in placing his eldest son upon the throne, is supposed to have aimed at holding the

power he now at last possesses. If this view be correct, the changes effected are by no means a simple consequence of the Annam fiasco or of the fall of Bac-ninh, but an outcome of the so-called "curtain intrigues." SHUN has merely taken advantage of the dissatisfaction of the EMPRESS to triumph finally over the policy of Prince KUNG and LI HUNG-CHANG. That SHUN did not long ago reach the place he coveted, was due, on the one hand, to the EMPRESS REGENT, who foresaw that his rise would herald the decline of her own power; and, on the other, to the overwhelming influence of LI HUNG-CHANG, whose position even the latest political tempest has been insufficient to undermine. In a word then, the control of the Empire now seems to rest with the War Party headed by Prince SHUN, and we need scarcely say that nothing could be more fatal to the apparent interests of China.

What LI HUNG-CHANG has to say to the triumph of SHUN remains yet to be seen. Nominally, at all events, he stills holds the office of Prime Minister, but whether even his influence is great enough to arrest the impetuosity of his new colleagues, we may not venture to predict. It is very possible that civil war will again devastate the Empire, bringing in its train a radical cure for Chinese conservatism. The dynasty of TA T'SING has never been solid, and it needed all the talent and fame of K'ANG-HI and K'IENT LUNG to secure the half-hearted allegiance of the people. The Triad Society, that bitterest opponent of the Manchus, is just now in the zenith of its power, and seditions and local rebellions are reported throughout the southern provinces. Hunan and Hupeh, not to speak of Yünnan and Kwang-si, are seething with insurrection, and a very little spark is necessary to set the whole of Central China in mutinous flames. Prince SHUN has chosen this most unpropitious moment for his political success, and will probably find his triumph attended by fatal unpopularity. His attempt to crush the influence of KUNG has succeeded, but he has still to meet with LI HUNG-CHANG,—and with, perhaps, popular sedition.

THE SITUATION IN TONQUIN.

THE news of the capture of Bac-ninh naturally excited a great deal of interest in Europe. The stirring events in Egypt and in their possibly momentous consequences had temporarily diverted public attention from Tonquin, but when the fall of Bac-ninh was announced, China's ultimatum of last autumn began to be again talked of. The Paris press immediately gave prominence to rumours of English mediation—rumours which probably had their origin in the mind of the Parisians themselves. It was announced that the members of the Left in the Chamber of Deputies intended to oppose any continuance of warlike operations in Tonquin, being averse to

further expenditure of men and money. The *Journal des Débats* wrote:—"The army has performed its tasks in Tonquin. The time has now arrived for diplomacy." The Paris correspondent of *The Times*, echoing, of course, the general bent of opinion, telegraphed to that journal:—"The occupation of Bac-ninh ends in nothing. The rainy season begins in a fortnight and will postpone operations for six months. The delta of the Red River is handed over to pillage and anarchy. The French Government will shortly be compelled to ask for a credit of twenty-five million francs and eventually for a hundred millions, which the Chamber will certainly refuse. The expedition will require 63 ships and 40,000 men. The end to be gained is out of all proportion to the outlay." Better informed persons will appreciate the exaggeration of this language. So far as the delta of Red River is concerned, it is now virtually in French possession. Except the remnants of a piracy which used to be much more formidable, the "pillage and anarchy" spoken of by *The Times'* correspondent have no existence. General MILLOTT'S instructions do not appear to have extended accurately beyond the taking of Bac-ninh. After this, he was left, more or less, to his own discretion as to whether he would carry his operations to the Chinese frontier or terminate them at convenient points mid-way. Judging by the map, one might suppose that a French army already in possession of Bac-ninh and Kwan-yen,—the two principal fortress on the main roads leading to China,—would have no difficulty in pushing its outposts to the northernmost limits of Tonquin. But roads in a map of China require a special definition. The two main routes from the Red River to the Kwang provinces are nowhere more than fifteen feet wide. Impassable by wheeled vehicles throughout the year, they are only used at best by Mandarins travelling in chairs or by coolies carrying the post. Needless to say that for the passage of artillery they might almost as well not exist at all. Under these circumstances, the plan pursued by General MILLOT was obviously the wisest. Before the Black Flags and their allies had time to rally after their defeat at Bac-ninh, they found themselves pursued by two flying columns and pushed almost to the limits of China proper. Kobang and Langson, towns just beyond the Chinese frontier, were not, however, occupied; probably because it was desired to avoid forcing the hand of the Peking Government. Then followed the assault and capture of Hung-hoa, the last place of importance on the lower half of the Red River, and Tuen-kwang (or Tuang-kwang) having been already taken by NEGRIER'S flying column, the campaign in Tonquin may be said to have terminated. It is true that the upper reaches of the Red River still remain in the hands of

the Black Flags; but considering the difficult nature of the country, and the fact that the season for military operations is now closed, no efforts will probably be made to carry the Tricolor any farther for the present. The programme seems to be that the Westerly limit of French occupation shall be fixed at a line passing from Hung-hoa, on the Red River, to Tuen-kwang; and the Northerly limit, at a line passing from the latter place to Phulan-huong, *viâ* the towns of Phu-binh and Phu-don-hong. This would still leave a neutral zone between China and the new province, while the Black Flags would be allowed to retain all the district between the Westerly limit of French Tonquin and the frontier of Yünnan, on condition that they cease from obstructing the free navigation of the Red River. There is no reason why the Chinese Government should not accept this arrangement. Their pretensions to suzerainty in Tonquin and Annam, never worthy of much consideration, have become a mere laughing stock in view of the grotesque mixture of threats and timidity which they have offered to the world as China's foreign policy. It is difficult to dispute the results of a successful campaign. The French are invincible in their position as victors. China had unique opportunities to organize a formidable resistance, but it is now quite plain that even within a few days march of her own frontiers she is virtually powerless to oppose the onset of a disciplined force. The only question that still looks menacing is that of an indemnity. The humiliation of having to pay a heavy sum to a foreign enemy over whom she did not gain the shadow of an advantage, and before whom her troops so demeaned themselves that to this day it is uncertain whether they fought at all—this humiliation may prove more than she can endure. On the other hand, that she has incurred the liability of an indemnity, there can be little doubt. The recent decrees issued at Peking dispose of that question. The Government can no longer simulate inaction, since it has publicly degraded the high officials who failed to defend Bac-ninh, and has ordered the decapitation of the unfortunate officers who avoided a direct collision with the French army. The paths of Chinese policy are inscrutable. That a charge of front should be made by the new Cabinet would be natural enough, but that the ill-starred officials who followed the lines laid down by Prince KUNG and his colleagues, should be degraded and decapitated for not having behaved as Prince KUNG'S rivals and successors might have wished, is a most bizarre issue. At all events, the result is that China is powerless. She has forfeited any shadow of title she may once have possessed to a voice in the disposal of Tonquin, and nothing remains for her but to obtain whatever recognition the French may be disposed to extend to her right of

way by the Red River and her right to preserve the integrity of her frontiers. Our own belief is that France will not press her beyond endurance. Indeed, a rumour is already afloat that the Cabinet of Paris is willing to submit to arbitration the question of the amount of indemnity. As for the War Party recently raised to power in Peking, it will probably offer the world another example of the pacific influence exercised by the responsibilities of office.

UNSEAWORTHY SHIPS.

SIR THOMAS BRASSEY, who was a member, and doubtless a very active member, of the Royal Commission on Unseaworthy Ships, has made public, in a peculiarly clear and interesting style, the problem with which he and his colleagues had to deal and the data they collected for dealing with it. Loss of life by shipwreck was alarmingly on the increase. In the five years between 1877 and 1881, it had averaged 1,692; in 1882 it was 3,118, and in the following year 3,500. The questions to be determined were, what causes chiefly contribute to these disasters, and how are they to be prevented. To the first question the general answer suggested by the Commission's enquiries was, carelessness: overloading, undermanning, and bad officering. So much being granted, it might naturally be supposed that the remedy would have been judged to lie in devising some species of official supervision or inspection so as to regulate load-lines with greater strictness, enforce rules with regard to the complement of crews and general finding of vessels, and compel the application of a higher standard of proficiency in the case of the officers. But the Commission here found itself confronted by two difficulties: first, the inexpediency of relieving shipowners of responsibility by excessive official interference; and secondly, the hopelessness of effecting any radical reform until it should become the interest of owners to keep their ships safe as long as possible. It is with the discussion of the latter of these points that Sir THOMAS BRASSEY'S essay in the *Nineteenth Century* principally has to do. The line his enquiries take becomes plain enough when we find him asserting, at the outset, that the Law of Marine Insurance needs revision "if it can be shown that the facility for insuring to the full, and sometimes to an exaggerated value, leads to carelessness and recklessness in the management of shipping, and is therefore a primary cause of the deplorable loss of life at sea."

There are four classes of policies in marine insurance; the valued policy, the open policy, the voyage policy, and the time policy. In a valued policy, the agreed value of the property insured is expressed on the face of the policy. But it need not be the real value. The law holds that only

upon plea and proof of fraud can an underwriter set aside the value entered in the policy. There are reasons for this strange usage: first, to avoid the inconvenience of protracted enquiries as to value,—enquiries which in many cases of total loss would be almost impossible; and secondly, because the price a ship would fetch in the open market is not always a true measure of her value to her owner, who may have fitted her for a special purpose. These reasons are not without validity, but, at the same time, Mr. Justice WILLES declared that "the system of valued policies, whatever its convenience, does encourage fraudulently disposed people to put high values on comparatively worthless vessels, and gives them an interest in the loss of their property."

With an open policy, values are not fixed, either for ship, freight, or goods. In the event of loss, the value of the ship is held to be the sum she is worth to her owner at the port where the voyage commences, including outfit, premium, and cost of insurance. The freight is defined as the gross freight paid by the shipper, and the value of the goods is the invoiced price, together with the charges for loading and insurance. The pecuniary consequences of shipwreck with such a policy depend very much on the time of the accident. If it takes place early in the voyage, the owner is generally fortunate. Of this Sir THOMAS BRASSEY gives an example. A steamer bound for Calcutta and back, through the Suez Canal, with a chartered freight on the outward and homeward voyage of £12,000, is insured in an open policy at the full value. She is lost in the Bay of Biscay, and thus avoids paying for Suez Canal dues both ways, for coals and provisions at Calcutta, as well as wages to crew and port charges at Calcutta and London. The total saving is £4,500, and the owner, recovering £12,000 from the underwriters, realizes £4,500 by the loss of his ship.

In the case of the voyage policy, the insurance is effected for the voyage between two specified places. But nothing is expressly stipulated with regard to the seaworthiness of the vessel *after* she leaves the port where the voyage commences. She may sail from London to Shanghai; receive serious injuries on her way out; leave Shanghai in such a condition that there is every probability of her foundering; yet as the voyage out and the voyage home are one voyage, the assured recovers the whole of his money if the ship is lost after leaving Shanghai.

In the case of the time policy, the limits of risk are designated only by certain fixed periods of time. This species of contract does not require that a ship shall be seaworthy even at the commencement of the risk: it is held that a shipowner may not have had any intelligence from his

ship for a long time, and cannot give any warranty as to her condition. A strange anomaly is thus created. The owner of a ship insured under a time policy recovers his insurance, even though the vessel were unseaworthy. The shipper of goods must insure under a voyage policy, which requires that the vessel shall be seaworthy at the inception of the voyage. "Thus the shipowner, who has the power to regulate the condition of his ship as to repairs and equipments, and who neglects to do his duty, recovers his insurance; while the proprietor of the goods, who is an innocent sufferer, loses all claim on the underwriters." It may be thought, however, that he has a claim against the shipowner, but the practical fact is that the latter, by the peculiar wording of the bill of lading, contracts himself out of all obligation.

Nearly all the principal witnesses examined by the Commission declared that in the present state of the Law of Marine Insurance, inducements to carelessness, if not to something worse, are powerful. "The care of a ship," said Mr. HARPER, divides itself into a hundred particulars; care in the appointment of a master, care in the selection of a crew, care in the officering of the ship, and general watchfulness; and that care is certainly likely to be relaxed in the case of an owner who knows that if his ship goes to the bottom, perhaps from the very circumstance that he has not paid sufficient attention to her, he not only gets the whole of his money invested in the ship, but a large profit in addition." It seemed to be the prevailing opinion that cases of deliberate fraud are rare, but Mr. LAMPORT confessed his belief that "when a ship has accidentally gone ashore, the efforts of her officers to get her off have occasionally been relaxed by their knowledge that the owner's purse will be benefited by her becoming a constructive total loss instead of an average loss. A case which seems to come under this category is that of the *AA¹ British barque *Sattara*, which, little over three months ago, was abandoned at Omaye-saki as a total constructive loss, sold subsequently by auction for a bagatelle, and is now advertised by her new owners as "ready to receive cargo" from Yokohama to London.

The Commission finally gave it as their opinion that the whole Law of Marine Insurance requires complete revision, with a view to confining insurance to a simple contract of indemnity. They did not under-rate the difficulties of changing such an "elaborate edifice, composed of materials drawn from the custom of merchants, the statutes of the realm, and the decisions of able and impartial judges," but they held that no law can be sound under which a shipowner, by the over-valuation of his ship and freight, stands to win and not to lose by the destruction of his property.

TOKIYO CHARITY HOSPITAL.

The following are the speeches delivered at the opening of the Tokiyo Charity Hospital. They were spoken in Japanese, and English translations were afterwards read by Surgeon-Major Takagi, who, before reading the address of H.I.H. Prince Takehito, said:—"By desire of His Imperial Highness, I read the following English version of His Imperial Highness's speech, it being his desire that his words may be properly understood by Their Excellencies and by the other Foreign gentlemen here present:—

CONGRATULATORY ADDRESS OF HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TAKEHITO TO THE TOKIYO CHARITY HOSPITAL.

YOUR EXCELLENCIES AND GENTLEMEN,—In this great City of Tokiyo, the residence of His Most Gracious Majesty and the metropolis of Japan, the houses of the people press as closely on each other as fishes' scales, and the firmament resounds with the hum of human beings. On the one hand, we behold the sumptuous mansions of the nobility; on the other, the emporia of trade. It is a perfect maze of busy traffic, where shoulder grazes shoulder and wheel grazes wheel,—a rich and prosperous maze to which no other city in the Empire can compare. It is, however, an universal law of society that there shall be comparatively many poor and few rich; and accordingly we find the narrow alleys of the metropolis swarming with crowds of poverty-stricken people who have not so much as a single dish of rice. No harvest is so plentiful but what it leaves some poor man's children crying from hunger; no winter so mild as altogether to save his wife from the chill December blasts. Its very population, then, must make Tokiyo conspicuous in all Japan for the number of its poor,—poor who must be all the more destitute when sickness is added to their other woes. Where, indeed, are they to find the means to obtain medical assistance? Now the two chief necessities felt by all men are; the necessity for food and drink when hungry or thirsty, and the necessity for medicine when sick. No misery is to be compared with that experienced by such as are unable to satisfy these wants. It was in August of the year 1882, that a number of gentlemen of this city formed the idea of uniting for the purpose of giving medical aid gratis to the sick poor unable to pay for medical attendance, and they accordingly started the Tokiyo Charity Hospital at premises in Shiba Park which had been temporarily hired for the purpose. This was a true instance of medicine being "the benevolent art." From that time forward the number of helpers in the good work gradually increased, and the number, too, of those sufferers increased who sought help and medicine at their hands. It is but fitting that an enterprise which has thus taken shape and which has before it the prospect of an ever-extending activity should celebrate its inauguration at this charming season of spring, at the time when all nature is in the bloom of youth and beauty. I have sometimes thought that, if a famine-stricken man is but too glad to be given even the coarsest food, what would not be his joy if the most delicate viands were placed before him! If one attacked by illness would not hesitate to refuse the ministrations of the merest quack, how highly favoured must be deem himself when he is attended by the first medical celebrities of the land! To be fed on choice morsels when hungry, to be cared for by eminent physicians when sick,—can any other privileges in this world be compared to such a state? May it be given to this institution continually to extend and enlarge the field of its activity; may it be the means of restoring to health and longevity numbers of the sick poor of this City, even as the life-giving rain restores the faded foliage to its pristine hues, or as the genial influence of spring brings back the scent and the infinitely varied beauty of the herbs and flowers! If these hopes be really fulfilled, then will the beneficent influences of the promoters of this undertaking be wafted like the zephyr across the very poorest hovels and the meanest lanes. Their names will be associated with the labours of an enlightened government, they will add another glorious chapter to the annals of an illustrious age. If they do this, what happiness will not be theirs? For myself,

having at the urgent request of all the members accepted the office of President, I have thought it right to express to you, the promoters of the institution, not only my congratulations, but my hopes for your continued activity in the future. I trust that these hopes will not be disappointed.

Inspector-General TOTSUKA then rose and said:—YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES, AND GENTLEMEN,—It is now nearly two years since the first establishment of this Hospital at temporary premises in Shiba Park, in 1882, and at last the institution is complete in all its arrangements and has entered on a wide sphere of activity. Of its success there can be no doubt. Thus it comes that we are met together here to-day to celebrate its inauguration, and to listen to the gracious and inspiring words just uttered by His Imperial Highness,—words to find a suitable reply to which were entirely beyond our power. What more is needed than such princely condescension to cover this institution with glory? It is, alas! but too true, as His Imperial Highness has observed, that this great and prosperous city of Tokiyo, the residence of His Most Gracious Majesty, the abode of innumerable families, the busy mart of commerce, does hold within its lanes and alleys multitudes of poor, whose lives are a sequence of cold, hunger, and distress. How shall these unfortunates obtain help and medicine on the day when fell disease is upon them? Terrible, indeed, is it to think of the state of those who, to add to the external assaults of cold, hunger, and distress, are attacked internally by disease! To relieve such cases is the object of this Hospital. True it is that we, into whose charge it is given over, can make no pretensions to extraordinary skill or talent; we cannot hope to fulfil all the expectations of the public. Yet, though it is not for us to work miracles, we venture to trust that, by dint of labour and perseverance, we may at least be the means of saving some few lives. It is the gracious kindness of His Imperial Highness and the protection of an enlightened Government which alone lead us to conceive such hopes. How much the most beautiful time of all the year is this charming spring-tide, when light and warmth are wafted all around and all nature awakes to new life and vigour, and the herbs sprout and the trees bud, when the flowers blossom and the bird's sing! This is the season in which falls our opening day. If, borrowing some of these sweet influences, we can restore to health and longevity any of the helpless men and women of our streets, great indeed will be the reward of His Imperial Highness's condescension. What greater glory, likewise, could be conceived for ourselves, than to hear this Hospital spoken of as successful in its field of labour. Our desire must be by persevering henceforward ever more and more in diligent and united efforts, to fulfil the hopes which His Imperial Highness and the public so kindly entertain.

Dr. TAKAGI then said:—YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES, AND GENTLEMEN,—Allow me, in the first place, to tender my sincerest thanks for the honour you confer on us by your presence here on this our opening day, when it falls to my lot to explain briefly to you the origin and *raison d'être* of this newly founded institution. The ultimate object of a Charity Hospital is of course to help in its own peculiar way towards the safety and prosperity of society. Now the members of society may, and often must, suffer either directly or indirectly, and one of the chief duties of society is to relieve such suffering. For should it not be the greatest of all reasons for grief that numbers should perish from want of means who, if succoured in time, would pass successfully through the trials of cold, hunger, and disease? The rich can call in a physician at the first signs of approaching illness, and by his help often shake it off. They are like suitors who should at once obtain the best legal opinion, and with it peace of mind. The poor man, on the other hand, when struck down by disease, can do little but sit with folded hands awaiting the decision of Heaven. He is like a plaintiff who should have no court before which to bring his suit. Now what would be the state of any society in which there are no courts of justice? We need no philosopher to tell us the misery which such a state of things would entail. It is to give to the poor such a court of justice, before which they may bring their complaints and have them speedily attended to, that Charity Hospitals are established. This consideration is sufficient to show how necessary such institutions are. No less necessary is it that they should be established on a firm basis. To build to-day in order to pull down to-morrow, were to act in a manner destructive of the very possibility of attaining to any substantial result. The first thing, therefore, when setting about the establishment of such a hospital, is to place it on a basis which shall not easily be shaken. What is this basis? It is that dual one whose names are "public duty" and "charity." Charity and public duty,—that is the

basis on which the present institution has been reared. A man's first thought on being struck down by disease is to send for a good physician. Here a question presents itself:—how are such physicians to be trained? We answer: by large practical experience of various complaints in a Charity Hospital, experience guided, of course, by proper theoretical instruction. It will be seen, from this observation, that, in the end, a Charity Hospital benefits others besides the actual patients of the poorer class who are treated within its walls. Such were some of the considerations which, in April of the year 1881, led some twenty or more persons, who met together at the *Kō-yō-kwan* in Shiba Park, to the conclusion that the sole way to ensure the prosperity and duration of a Charity Hospital was to collect together a capital of at least a hundred thousand dollars, and to expend only the interest accruing on that sum. Several subsequent meetings were held at the same place and in the rooms of the Medical Society, and various methods were proposed for raising the sum in question; but most of these plans were impracticable. In the mean time, an application for the use of the premises formerly occupied by the Tokiyo Municipal Hospital was made to the late Governor of Tokiyo, Mr. Matsuda Michiyuki, and favourably entertained by him. But the absence of the necessary funds still stood in the way of the starting of the institution. Indeed, in June of the ensuing year, 1882, the premises had to be handed back to the Municipality for a time, and it was only at a series of meetings held during June and July of the same year that the eleven Articles of the Constitution of the Hospital were voted, and that operations were commenced at the former temple of *Ten-kō-in*, No. 73, Shiba Park, which was temporarily hired for the purpose. From that time forward the Committee met on the 10th of every month, rendered account of the income and expenditure of the Hospital, and attended to the other business matters connected with the institution. In the month of December of the same year, three thousand copies of a pamphlet setting forth the objects of the institution were printed, and were circulated during January and February, 1883, among the nobility and gentry and the higher officials. This appeal for aid was responded to by subscriptions to the amount of 3,860 *yen*, besides which we received the sum of 150 *yen* 50 *sen* in donations, and a few pieces of furniture. At a Committee Meeting held on the 10th of March, 1883, it was resolved that the funds of the Hospital should be lodged in the First National Bank,—a resolution which has since then consistently been acted on. The temple of *Ten-kō-in*, to which reference has already been made, was clearly unsuitable for a hospital. A fresh application was therefore made in April, 1883, for the use of the premises that had been handed back to the Tokiyo Municipality; but this fell through. The next step (taken in May of the same year) was to petition the Governor to be allowed to purchase those premises. In the meantime, the Hospital was brought to the notice of His Most Gracious Majesty, who deigned to make a donation of six thousand *yen*. On the first of August last, permission to purchase these premises was obtained; twelve hundred *yen* were expended on repairs, and a loan arranged for to obtain funds for the construction of an Operating Theatre,—it being stipulated that the money should be repaid gradually as it accumulated from fees paid by persons desirous of witnessing the operations performed. The move into these premises was made on the 26th of September. During all this time the struggling institution owed much to the patronage of His late Excellency Iwakura Tomomi. A General Meeting of the Members was held at the *Kō-yō-kwan* in October last, at which forty-four persons were present. At this Meeting reports were handed in of the activity and financial position of the institution during the preceding year, and estimates for the ensuing year discussed. These were unanimously adopted, and additional articles to the constitution discussed and adopted. The additional articles are as follows:—

I.—There shall be a President, and one of the Imperial Princes shall be requested to deign to accept that office.

II.—There shall be two Guardians, and the Governor of Tokiyo and the Head of the Sanitary Bureau shall be requested to accept that office.

III.—After the words "when sending any such to Hospital" in Article VII. shall be inserted the following:—"Six Tickets of Admission are necessary to entitle a person to treatment as an In-door Patient, and one Ticket for treatment as an Out-door Patient."

On the same occasion the details of the projected Opening Ceremony were discussed. The next occurrence was the acceptance by His Imperial Highness Prince Arisugawa Takehito of the office of President, and by the Governor of Tokiyo and by the Head of the Sanitary Bureau of that of Guardians. The Opening Ceremony was then fixed for the 10th of November. But the absence

from Tokiyo of both the gentlemen who acted as Guardians rendered a postponement of the date inevitable, and that is how we come to be met together here to-day. I would now give some details respecting the patients, both in-door and out-door, who have been treated. During the three hundred and twenty-four days that elapsed between the 11th of August, 1882, and the 30th of June, 1883, three hundred and twenty-nine in-door patients were admitted. Each remained in hospital, on an average, for a fraction over eighteen days, and the average number in hospital every day was also slightly over eighteen. Of out-door patients there were seven hundred and eighty-three. Each received treatment, on an average, for a fraction over twenty-two days, and the average number treated every day was fifty-one. Thus the average number of patients, both in-door and out-door, treated every day was a fraction under seventy. During the two hundred and seventy-five days that elapsed between the 1st of July, 1883, and the 31st of March of the current year, three hundred and forty in-door patients were admitted. Each remained in hospital, on an average, for a fraction under twenty days, and the average number in hospital every day was a fraction over twenty-four. Of out-door patients there were one thousand one hundred and ninety-eight. Each received treatment on an average, for a fraction under nineteen days, and the average number treated every day was a fraction over eighty-one. Thus the average number of patients both in-door and out-door treated every day was a fraction over a hundred and five. The total number of in-door patients treated during the five hundred and ninety-nine days that elapsed between the 11th of August, 1882, and 31st of March, 1884, was six hundred and ninety-nine; the total number of days spent by them in hospital was twelve thousand six hundred and twenty-one; the number of days on which they received treatment was thirty-eight thousand eight hundred and twenty-four, and the grand total of days on which treatment was given to in-door and out-door patients together was fifty-one thousand four hundred and forty-five. The total number of operations performed between August, 1882, and March, 1884, was one hundred and eleven. I append a schedule of the number of members and of the amount of subscriptions at different periods:—

DATE.	MEMBERS.	SUBSCRIPTIONS.
		YEN.
July, 1882	404	26,600
August, 1882	136	32,300
September, 1882	150	36,750
October, 1882	154	38,050
November, 1882	158	38,750
December, 1882	161	39,050
January, 1883	178	42,800
February, 1883	182	43,750
March, 1883	191	44,850
April, 1883	201	45,950
May, 1883	207	46,750
June, 1883	212	48,150
July, 1883	224	49,550
August, 1883	229	50,750
September, 1883	255	59,200
October, 1883	261	60,650
November, 1883	260	60,950
December, 1883	264	61,750
January, 1884	261	60,550
February, 1884	265	60,950
March, 1884	273	63,150

Such is the history, thus far, of the Tokiyo Charity Hospital. May I make bold to entreat some of those present to give their kind assistance, and thus enable us to realize in their entirety the hopes with which we set out. It is usual, on the occasion of such inaugural ceremonies as the present, to invite the guests to partake of some elegant collation. But, to-day, in this place whose *raison d'être* is the relief of the greatest possible number of the sick poor, it is impossible for us to follow such a precedent. We trust, therefore, that you will kindly excuse us if tea and a few cakes are the only refreshments offered to you.

The GOVERNOR of TOKIYO then delivered the following speech:—YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES, AND GENTLEMEN,—Having had the honour to be invited to take part in to-day's proceedings,—an honour of which I feel myself to be but too unworthy,—I cannot refrain from expressing in a few words the gratification which I experience on this auspicious occasion. It will be universally allowed that health is the crowning gift of Heaven, the gift which of all others conduces most to human happiness. Life has no crown nor can happiness ever be complete where there are sickness and the mental anguish which sickness brings in its train,—and this, too, notwithstanding all the efforts which the sufferer may make. Hence the necessity for not delaying a single day in establishing methods for the relief of this anguish, of this pain. Now this great city of Tokiyo covers an area of nearly 10 square miles, and contains a population of nearly a million souls. It is the greatest city in the Empire, perhaps the greatest in the East. Indeed, all the cities in the world that

can be compared to it might, I should suppose, be numbered on the fingers of both hands. And what, let me ask, has this great city to show us? It has its millionaires, of course, vying with each other in the sumptuousness of their residences, in the luxury of their purple and fine linen. But look beneath the surface, and how different is the scene that meets your gaze! How numerous are those who, wandering hopelessly in their wretched hovels, can barely patch together a few rags wherewith to cover their nakedness, and scarcely know (unless it be through the assistance of the rich whose succour they implore) whether any supper will follow their scanty breakfast! The thought of all this misery haunts me day and night. Indeed, is it not one that may well move all charitable hearts to pity? There is a verse, Gentlemen, in a popular song, which says that—

“There are four hundred and four diseases,
But not one of them is so bad as poverty.”

Yes, poverty is terrible enough in itself. But it is when sickness is added to a poverty already helpless that the lowest depths of human misery are reached. An institution called the Tokiyo Municipal Hospital was set on foot a few years ago with a view of doing work in this field. Unavoidable circumstances arose to prevent its being carried on permanently. The circumstances were unavoidable. The Municipality could not act otherwise than it did. But, for my part, I have always experienced regret at what happened, and have felt that the matter could not rest there. Your charity, Gentlemen, has been moved to fill the void; your money has been liberally given, and the Tokiyo Charity Hospital is the result,—this Hospital, which His Most Gracious Majesty himself deigned to honour with his approval, and to assist by the donation of a very large sum of money. If to relieve the poor is a good action, to relieve the sick poor is doubly a good action. Gentlemen, you are doing a great work. Neither is it only that you contribute to the relief of the poor and the sick. You contribute at the same time to the carrying out of those municipal duties, some of which the Municipality can only attend to in a very insufficient manner. Such are the thoughts which I could not refrain from expressing to you. May your efforts never be relaxed, may His Most Gracious Majesty's exalted patronage be duly requited, and your own efforts meet with their full reward! May the day soon dawn upon us when there shall be no more poverty-stricken wanderers in our streets, no listless tenants of wretched hovels; the day when all the millions of our fellow-countrymen shall fulfill the highest destinies for which Heaven has fitted them, and shall enjoy the greatest sum of happiness to which human nature can aspire!

Dr. NAGAYO SENSU, the Head of the Sanitary Bureau, rose and said:—YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES, AND GENTLEMEN,—It is with great diffidence that I rise to address the company here assembled. Indeed, I cannot but feel that it is little short of presumption on the part of one who can only be reckoned among the last and least of the supporters of the Tokiyo Charity Hospital to venture to crave a hearing from so brilliant an assemblage of Princes, Councillors, Ministers, both Japanese and Foreign, and of gentlemen so much more worthy than myself. Yet I would fain say a few words on the subject of the rise and progress of Hospital work in Japan, and in particular of the claims of this present Hospital on your charitable support. While doing so, I can but trust to the importance of the subject to excuse the imperfections of the speaker. Hospitals are no new thing in this country. The establishment by the Empress Suiko (A.D. 593 to 628) of bureaux for the distribution of medicine and of food to the poor, as related in the old histories was the first form which they assumed. Later on, and during the whole of the eighth and ninth centuries, we find constant reference to these charitable government offices. In the “*En-gi-shiki*” we read that medical officers of or under the fourth rank were appointed to the charge of the Medical Bureau, and that this was the highest office to which physicians could aspire. We are also told of various sub-divisions of medical rank, and we are justified in assuming that, during the three centuries which had then elapsed since the reign of the Empress Suiko, the institution had attained to a much greater development. How vast were not the results of the Imperial beneficence during that early age when the Emperors themselves held the reins of Government in their hands! Next came the Middle Ages, when the Imperial authority was relaxed, and the Government fell into the hands of the military class. During that time, with but one exception under the rule of the Hōjō (13th century), I am not aware of the existence of any institutions for the relief of the sick or of the poor. Under the Government of the Tokugawa family, so often belauded as a time of peace and prosperity, there were indeed sanitary institutions and there

were also occasions when temporary relief was given to the poor. But there was no such thing as a permanent Charity Hospital. The reorganization of hospital work in Japan dates from the latter part of the Tokugawa régime, when the Dutch physician Pompey was engaged at Nagasaki to give instruction in the medical art. Dr. Matsumoto, Jun., now the Director-General of the Medical Department of the Army, was attached to Dr. Pompey, and a hospital was founded at Nagasaki in the year 1861. At that time relations had not yet been established with foreign countries, and this hospital was the only one in which persons afflicted with serious diseases could receive treatment at the hands of an European physician. Accordingly, not from the neighbourhood of Nagasaki alone, but from all Kiushiu and even from far-off central Japan, multitudes flocked to seek relief from their sufferings, while, on the other hand, all students desirous of medical instruction worthy of the name put their pack on their shoulders, and set out for the one place where alone their craving for science could find satisfaction. For the proof of this assertion I appeal to the number of eminent physicians and surgeons at the present day whose knowledge is derived from Dr. Matsumoto and Dr. Pompey. Such men it was who, returning to their own homes, set about the establishment of hospitals. Since the Restoration, all the provinces of the Empire have so vied with each other in working in this field, that at the present day there is hardly an important place in the Empire without its hospital. Indeed, putting public and private institutions together, we have the satisfaction of knowing that their number now amounts to over six hundred. At the same time, as it is either taxation or the local rates that support the great majority of such hospitals, the services of physicians being engaged at no small figures, medical instruction being given to students as well as medical aid to the sick, and the hospital funds being often accumulated from the proceeds of payments made for medicine and of fees for treatment, the only part which can be called “charity” consists in the fact that the services of good physicians are secured for places where before there were none. A further consideration is that, where the hospital is only attached to a medical school, the admission of numbers of poor people to treatment often leads, owing to want of funds, to nothing more than a lecture at the side of the sick-bed, while the charity of the matter is reduced to almost infinitesimal proportions. Indeed, it cannot be compared for a moment with that shown in the bureaux established in the sixth century, as already mentioned. During the last seventeen years, a thorough change has certainly been inaugurated in the manners and occupations of all classes of the population, and we seem to have entered on a new world. Many persons have fallen into straitened circumstances from this cause, having lost their former means of subsistence and failed in their endeavours to strike out a new path. A notion universally entertained by these poor folks is that Tokiyo, being the capital of the empire, is a place where it must always be possible to make a livelihood; and so hither they flock from the North and from the South, from the East and from the West. But how are they to set up in business without any money, and how are they to get food unless they have some business? On the other hand, it is equally impossible for them, without a penny in their pockets, to return to their homes in the other provinces. Hence the numbers who take to being *jinrikisha* coolies or match-vendors as a last resort. Let illness but come upon them some day, and they find themselves inextricably hemmed in by cold, hunger, and disease, and all they can do is to await death with folded hands. It was to relieve this class of sufferers that the Tokiyo Municipal Hospital was established; but circumstances caused that institution to fall thorough. At Ueno likewise we have an asylum where medical aid is given; but it is given only to the patients actually living in the asylum itself. There is also a certain amount of medical aid given gratis by the District Physicians of the City, and we also have the Benevolent Association, which makes it its duty to relieve, to some extent, the sufferings of the sick poor, and which has recently extended the field of its labours. Still, owing to the absence of an actual Hospital for the Poor, the provision for them when sick or suffering has been altogether insufficient. It was the present Director of this Hospital, Dr. Totsuka Bunkai, and the Vice-Director, Dr. Takagi Kenkwan, who, after the latter's return from Europe in the winter of 1880, being moved by these considerations at once set about devising the establishment of the Charity Hospital. Their efforts, their earnest work, resulted in the temporary opening of the Hospital at *Ten-kō-in* in Shiba in August 1881. It was there that Dr. Takagi and those working under his supervision spent their precious time, labouring within its walls at the treatment of the sick poor, and abroad at the work of inciting others

to join in the charitable undertaking. Their indefatigable perseverance has been crowned by brilliant success; high and low join in applauding them; His Majesty himself has deigned to take an interest in the matter and to support it by a gracious donation of several thousand *yen*. The result of all this is to-day's ceremony; and henceforward the institution, complete in all its parts, will worthily carry on in Tokiyo the tradition of those ancient charitable bureaux established more than a thousand years ago. So important an addition to our sanitary means must indeed redound both to the happiness of the multitudinous poor and to the glory of the enlightend Government which presides at its establishment. The relief of the sick poor is by no means the sole advantage which the establishment of Hospitals confers. There are many cases of complicated disease whose treatment can only thoroughly be learnt within their walls. Hospitals are therefore indispensable resorts where the physician may learn to master his art: they are not mere hostleries for the accommodation of patients. Clothing, bedding, everything can here be studied with a view to its object. The surgeon in attendance will sometimes be called on to grapple vigorously with disease; at other times he will learn the advantage of slowness and of allowing nature to take her course. When grappling with disease, it will be incumbent on him to take observations, to make amputations, to use drastic drugs, fomentations, or douches,—all things which can nowhere but in Hospital be used or studied to the best advantages. When, again, I talk of letting nature take her course, I by no means intend to have it understood that the doctor will sit with folded hands by the patient's bedside. On the contrary, day and night he will be vigilantly looking out for symptoms, and some scarcely perceptible turn in the illness will be instantly recognized by him as a signal for the necessity of resort to more drastic methods. The absence from a patient's bedside of a physician able to discern the value of such indications will often cause the loss of the precious instant, and with it perhaps of an opportunity which will never recur. A mere occasional doctor's visit can produce but very slight results. Such are some of the great benefits to be derived from Hospitals. Yet the world delights in saying that they are mere primary schools where the poor man serves as a *corpus vile* on which tyros may practise their inexperience; and the worst part of such assertions is that many persons of education, but without technical medical knowledge, are led to re-echo them. I appeal from these misrepresentations to the statistics of the Charity Hospitals of Europe. These European Charity Hospitals having been, for the most part, established by the help of government grants, distribute medical relief to a vast number of the sick poor. Accordingly, they have been affiliated to the Schools of Medicine, whose professors take their students with them into the wards, and lecture to them on the pathology and treatment of every case. You may, of course, if it pleases you, call this "turning the poor man into the *corpus vile* on which tyros may practise their inexperience." But as a matter of fact, the only injury inflicted on the patient is a small amount of tedium. Not only is his treatment absolutely not interfered with, but rather does he profit by the more than sufficiently minute attention lavished on him by the professor who, in his desire to shed light on the principles of medicine, investigates and reinvestigates everything, so that not a single aspect of the disease is left untouched. Accordingly, statistics show that the percentage of cures in Charity Hospitals is superior to the percentage of cures under private treatment. When this present Hospital shall have seen a sufficient number of years elapse, and complete statistics shall have been taken, I feel positive that, as in Europe, so here too in Tokiyo, the averages will be found to be in favour of the Hospital as against private treatment. Indeed, it is this conviction which has induced me to take my place (though one of the humblest) among the promoters of this institution. The objects of this Hospital being the relief of suffering and the promotion of medical science, we must all wish that it may ever more and more increase and prosper. We must also hope that the day may come when we shall take another step forward by the establishment of asylums for widows and orphans, and of institutions in which, when the father of the family is struck down by sickness, the wife may find employment suitable to her sex, and the children be provided with clothing. Thus will benefits as inestimable be conferred on the people in the future as those which in ancient days flowed from the institutions wisely established by the Empress Suiko. Such are the reflections which the present auspicious occasion suggests to me, and which I bring to a close with prayers for the health of Your Imperial Highness, of Your Excellencies, and of all the Gentlemen here present.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Theological Hall, 17, Tsukiji, on Wednesday, April 16th, the Vice-President for Tokiyo in the chair.

The Minutes of the last Tokiyo Meeting were read and approved.

The Librarian, as acting Corresponding Secretary, intimated the resignation of that Office by the Rev. C. S. Eby; and announced the election as members of the Society of J. O'Neill, Esq., Cognac, France, the Rev. D. S. Spencer, and the Rev. J. O. Spencer, both of Aoyama. The Librarian also announced the removal of the Society's Library to No. 33, Tsukiji.

The Rev. Mr. EBY then took the Chair, and the Vice-President for Tokiyo read his translation of "Notes, by Motoori, on Japanese and Chinese Art." These remarks on art of the great scholar and writer, Motoori, were more or less of a desultory nature, the Japanese author making no pretension to technical knowledge, and viewing the subject only from the standpoint of educated common sense. On the whole Motoori, is severe on the conventional admirations of his countrymen, and he also criticises Chinese art for its want of vigour and its grotesque exaggerations. For some of the conventions of the schools he has, however, a good word. Thus the plan of showing the interior of a house by removing its roof seemed to him an excellent one, and altogether he is on the side of those who think that art, while it should be true to nature in spirit, may often advantageously deviate from the path of literal accuracy.

The CHAIRMAN, in thanking Mr. Chamberlain for his paper, congratulated the Society in obtaining these notes in a readable form. They were valuable as the thoughts of such a great writer as Motoori, and were of special interest at this time in connection with the revival of art in Japan.

The Vice-President for Tokiyo having retaken the chair, Professor J. M. DIXON read his translation of Dr. Brauns' paper on the identity of the common Japanese *karasu* and the European Raven. From comparative measurements of the skeletons of the European Raven and of a Tokiyo *karasu* which he had taken to Europe with him, the German author argued at some length as to the identity of the two. The distinctions noted by Blakiston and Pryer he regarded as what might easily be due to the somewhat different conditions of life. The gregarious habits of the *hasibutogarasu* would prevent the individuals attaining the age of the solitary Raven of Europe, or the *watari-garasu* of the Kurile Islands. These two so called species he maintained were one and the same, or at most varieties, having the same characteristics physically, morally, and intellectually.

Professor MILNE, after apologising for his want of special ornithological knowledge, remarked that he had listened to Dr. Brauns' paper with great interest, and no one could accuse its author of not having examined the question which he had put before the meeting most minutely. The minuteness, however, only extended in one direction. Dr. Brauns had told us very much about the hard parts of the Japan Crow, but we had heard nothing about its soft parts. The result of the numerous measurements which Dr. Brauns had made of the scanty materials with which he worked, showed a slight difference in the size of the European Raven and the Japanese Crow, but there was no noteworthy difference in the proportions of these parts. To such conclusions Mr. Milne objected, remarking that in this group of birds on account of the great similarity in the structure of their skeletons slight differences ought to be emphasized. Among these differences there was the difference in the shape of the beak and in the ratio of the length to the breadth of the skull. In speaking of the soft parts of the bird, Mr. Milne asked the question whether a Japanese Crow had ever been taught to imitate the human voice, an accomplishment so common with the Raven. The reason that the Raven was able to talk was in consequence of its possessing certain muscles in its throat enabling it to alter the dimension of its wind-pipe. Had the Japanese Crow a similar development? Turning to the external characters of the bird, Mr. Blakiston told us that the Raven of Europe and that of Iterup (which Dr. Brauns called the *first* of the Kuriles) differed from the Japanese Crow in possessing certain peculiar feathers in the breast and having a wedge-shaped tail. Dr. Brauns apparently denied the first peculiarity, and explained the latter by saying that the Kurile Islands specimens were old birds, whilst the crows which had been collected were probably young birds. Mr. Milne considered it very improbable that Mr. Blakiston and those whose business calls them to the Kuriles should always collect old birds in the North, and only young ones in the South. If the wedge-shaped tail existed in the Northern

bird, as he believed it did, whilst the tail of the Southern bird was curved, Mr. Milne, considered that such a difference ought to be sufficient to constitute at least a difference in species, especially when we remember that in fish, it constitutes not simply a difference in species but a difference in orders. Then there were differences in distribution and in habit to be considered. The larger bird called a Raven existed in the North, whilst the bird called a Crow was found in the South. The former was a solitary bird building on cliffs, whilst the latter was gregarious, building as often in trees as elsewhere. Even the cry of the two birds were different. Finally, after pointing out other differences between the birds under discussion, the probabilities of Mr. Blakiston's determination being right were to be considered. Mr. Blakiston had made the ornithology of Japan a speciality for over 20 years, and all his birds had been compared by European authorities. On the other hand, Dr. Brauns, although a distinguished geologist, had not made birds a speciality and had only been to Japan for a short time, and although during that period he had accomplished very much that was valuable, he had in this instance as in others attained results which could not escape criticism. The Japanese considered the Northern and Southern birds to be distinct,—foreigners who see the Northern raven every year, who have shot the bird, taken its nest, and brought home the young ones, consider that the question of the distinction is beyond argument,—Messrs. Blakiston and Pryer, together with distinguished naturalists in Europe hold similar opinions,—whilst Dr. Brauns, who works with scanty materials, comes to opposite conclusions. Had Dr. Brauns or Mr. Blakiston been present it would not have been necessary to discuss the probabilities of the question, but in the absence of a special ornithologist there was no alternative. He would leave the Members of the Society to judge as to who was probably correct.

The CHAIRMAN conveyed the thanks of the Society to Dr. Brauns for his paper, and to Professor Dixon for his work of translation.

The meeting then adjourned.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

AN ENGLISH SIDE SHOW IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Persons who have attended the gatherings of scientific convocations, or the graduation ceremonies of universities; or who have been present at any of the occasions which call multitudes together for serious deliberation, have found them invariably accompanied by minor exhibitions of a more or less diverting character, the providers of which have taken advantage of the important proceedings to obtain for themselves such attention and profit as their ingenuity might secure. These subsidiary displays, well known to the public in the form of circuses, conjurers' booths, collections of natural monstrosities, disguised gambling dens, and so forth, are grouped under the general designation of "side shows." The recollection of them is not infrequently provoked by occurrences in these latitudes, and one of the incidental outgrowths of the recent debates upon Treaty Revision brings to mind such forcible suggestions of the sports in which the wayfaring Merry Andrew, assisted by his comical associates, Mistress Judy, the Doctor, Master Toby, and others, holds forth for the edification of the populace, that I trust I shall not be deemed unduly irreverent if I designate it as "Mr. Frazer's Side Show." That gentleman's own sense of the fitness of things will, I am sure, recognize the accuracy of the comparison. Many circumstances combine in contributing to the resemblance. The arena he has chosen for his display is sufficient of itself to prepare the spectator for any amount of farcical gambolling. The complimentary reference, with which he sets out, to the proprietor of the "concern" he has selected as the scene of his performance, recalls the genial flattery bestowed by Mr. Punch upon the owners of the little theatre where *he* reveals himself. The graceful allusions to a much respected ally are redolent of the ardor with which the shrill-voiced comedian proclaims his faith in the wisdom and respectability of his cherished consort Judy. And in the echo of approval which reverberates near at hand (in an editorial column) we seem to hear the familiar bark of that knowing dog who, though he is so often prominent in the entertainment, is always wishing that somebody would buy him out, and send him away. Looking at all these things

with the aid of fond memory's light, it is impossible to deny a similitude which is established by so many corroborative details.

One of the most attractive features of the particular "show" I have ventured to recall, is a species of address, or lecture, by the popular puppet, which goes by the name of "topical," and which, in prose or doggerel verse, deals with current subjects in a style which is amusing not only to those who appreciate Mr. Punch's intentional effects, but equally so to those who discover in it a quality of humor which the author never contemplated. Sometimes as a matter of policy, sometimes through inability to present his idea with logical continuity or harmonious sequence, he delivers himself of totally opposite opinions on one and the same theme. He will say, for instance, that in a Liberal Government lies England's sole hope, and presently declare that nothing but a Conservative Ministry can save the State from ruin; or insist at one point that Mr. Bradlaugh is the most injured of modern martyrs, while afterward denouncing him as the typical fraud of the century. Into similar divergent paths it suits Mr. Frazer's fancy to wander. He occupies several paragraphs in demonstrating that Japan's desire to regain her rights is a delusion; that there are "no signs of it on the smooth surface of our daily life"; and estimates that "it is a mere creation of the brain of those who assert its existence"; and, at the end of his remarks acknowledges that she is "straining" for these very rights. He admits that the Foreign Powers "are disposed to agree to the abolition" of extraterritorial jurisdiction and, after a little, explains why the Foreign Powers cannot agree to such a transaction, in the absence of proof that the laws would be properly administered here. In one moment he asserts that a particular bargain is an "ignoble" piece of work, altogether beneath the consideration of high-minded aliens; and in the next moment proceeds to give it the very closest consideration, and to show that it must not be thought of, because it is not to the advantage of foreigners. He finds it convenient to declare an entire want of co-operation between the Government and the press, since the latter is writhing under a "grinding and despotic" law, forgetting a previous assurance that the journalists of Japan comply, for the most part, with every requirement of the authorities. In the same way Mr. Punch protests that one of his victims has never asked for any dinner, and then says he has been clamoring for it all day long; avows his readiness to supply the aforesaid dinner, and immediately exclaims that it cannot possibly be granted for fear that the food will be injudiciously devoured, and, by producing indigestion, endanger the comfort of everybody concerned; professes that he is of far too lofty a spirit to dispute a claim preferred against him, and proceeds to beat the claimant about the head, because the terms are not satisfactory; and after remarking upon the comfort and harmony of his neighbor's domestic relations, immediately accuses the wife of treating the children with abominable cruelty.

Similarly in the little wooden philosopher's inconsequential vein, is Mr. Frazer's disposal of the well worn question of selfish or interested motives. He is indignant with certain writers, because they are "never tired of asserting" that the "foreign mercantile communities" are actuated by "selfish considerations," and in the same breath asks to be informed why they should not be thus actuated;—admitting, in fact, that they are selfish and interested, and implying that they ought not to be anything else. It is not likely that their privilege, in this respect, will be disputed; but if the fact is not denied, it seems unreasonable to complain of the allegation. But this is not the only drollery displayed in the same connection. Mr. Frazer says, in effect,—“Suppose we are selfish and interested; are not those who accuse us equally so? ‘Have they no interests of their own?’” Could anything be more exactly in Mr. Punch's style? Does not the air seem to ring with his triumphant squeak of “You're another?” He is always confident, when arraigned upon any charge whatever, that he can free himself from blame by showing that the advocate opposed to him is no less guilty. “You were drunk last night,” says the Policeman. “So were you,” says Punch, and expects to get away scot free. “The course of certain enemies of Japan is dictated by selfish motives,” say sundry writers. “So are yours,” retorts Mr. Frazer, and seems to think that the force of subtle and conclusive argument can no farther go.

Mr. Frazer is convinced that no general desire for national independence exists in Japan, because that sentiment is confined to a “fraction of the population.” A question necessarily arises, here, as to the significance of the word “fraction.” In the language of the counting-house, its meaning ought not, at least, to be obscure. In the vocabulary of the “side show,” it may be more difficult

to define. The fraction referred to is not, at any rate, so small as to be incapable of subdivision. Its first component part is “the official element,” according to Mr. Frazer. After the official class comes the educated class; then follow the journalists, and, finally, people inside “the precincts of the capital and the great cities.” These, be it understood, constitute a “fraction,” to whose views and feelings we should attach no weight. An inquisitive person might ask, with reasonable pertinence, where we are to look, then, for an intelligent expression of Japanese opinion. From what element shall we ascertain the ideas of the country upon a subject requiring to be largely dealt with by officials, if not from the “official element?” Through what channel are the foreign envoys to learn the nation's demands? Shall they be visited by deputations from the rural interior, or button-holed in the streets by representatives of the classes which Mr. Frazer does not name,—that is to say, representatives of the other “fraction?” Again, what part of a population is entitled to respectful attention in the examination of this topic, if not the educated part? Is Mr. Frazer acquainted with any civilized country in which the judgment of the mob ranks higher? As to the Press, Mr. Frazer rejects its unanimous utterances, because the journalists are “under the thumb of the Government, and obey its directions;” but he is aware,—or certainly should be aware,—that, whatever influence may have been brought to bear upon the Press with regard to internal discussion, no idea of inciting hostility to Western nations has ever, for a moment, been entertained. The only interference of authority has been to repress, not to encourage, the anti-foreign temper and tone of the native newspapers; and this is a fact so universally known that I am at a loss to understand how Mr. Frazer can have overlooked it. I may, however, be told that it is not the business of “Side Shows” to rely too implicitly upon definite facts; and I must admit that an extremely visionary and indefinite field of speculation is opened when we are permitted to compute, *à discretion*, the inhabitants of the “great cities of the empire.” Here are “fractions,” indeed! How many great cities are there in Japan? What constitutes a great city? Three can be named which, unitedly, contain nearly one tenth of the total number of souls in the empire. Add a few more (and there are plenty to be counted in), and the fraction will assume proportions which no experienced Yokohama merchant can pretend to despise.

But whether the Japanese people are indifferent to their national rights, as Mr. Frazer says, or are “straining” for them, as he also says; whether they are insensible to foreign pressure, as he asserts in one place, or consider it an “incubus,” as he avers in another; whether the conviction that they are wronged is entertained by a fraction or by a multitude; we must bear in mind that the said conviction is nothing but “sentiment,” attributable to “a sense of injured pride,” or to “childish vanity.” This Mr. Frazer assures us to be the case. If, however, his estimate be generally accepted as correct, it will be necessary to revise and alter the text of most of the volumes which now pass for standard histories. The American Revolution, for example, will have to be set down as an outburst of childish vanity, or possibly worse, since it was not an attempt to regain rights once possessed, but to assert new rights, never before enjoyed; among them, the right of the colonists to regulate duties, and to make their own laws operative, under all circumstances, on their own soil. Great Britain's refusal to accede to their proposals led to that remarkable exhibition of “injured pride” which had such singular, and, probably, undesirable consequences. The wars of the Swiss against the power of Austria and Burgundy must no longer be chronicled as the heroic struggles of a brave race, but as the puerile perversity of a parcel of misguided men who allowed themselves to be led away by false sentiment. Scotland's long and successful resistance to English domination must be dropped out of the category of manly and noble deeds, and take its proper classification among examples of immature conceit and petulant prejudice. This will be a dreadful blow to the traditions of the glorious past, but there will be no help for it, if Mr. Frazer's theories are to prevail. It is not unalterably certain, however, that he means to have them prevail, for, with the Protean facility which he seems to have caught from the prime favorite of the provincial side show, he presently opens a door through which doubt and disputation may enter. He admits that the people of Japan might, under certain conditions, rejoice to possess “a measure of freedom and some of the rights of freemen.” Mr. Frazer's “measure” is as indeterminate as his “fraction,” and if I were to yield to the impulse awakened by some of his curiously trivial expressions, I should perhaps ask whether he reckons freedom by the peck or by the puncheon.

But it may be set down as reasonably certain that any nation wanting a “measure” of freedom would take care that the dimensions of the measure should be large enough to include immunity from foreign interference with its laws and its taxes. Nations will endure many things from their own rulers which they will not, if they can help it, submit to from external authority, and a people at all inclined to make demands in the direction of liberty, would first cry out for relief from alien intrusion of every description. Here, however, we are brought sharply around, once more, by Mr. Frazer's additional suggestion that the Japanese probably have not the necessary spirit of independence to ask for anything,—and so, under his piloting, we are all at sea again.

In the midst of this new ocean of perplexity, we catch sight of what appears to be a foothold of solid ground, though it presently proves as unstable as the back of Sinbad's whale. “It is a sad reflection,” says Mr. Frazer, “that the only way to get rid of this alarming friction, is to abolish ex-territoriality.” But why sad? And what is the use of trying to present the most self-evident and commonplace of propositions as if it were a brilliant and brand new discovery? Of course it is the only way. The way to get rid of the friction caused by an intolerable burden is to abolish the burden. There is nothing very wonderful about that. The only way to get rid of the friction caused by slavery in America was to abolish slavery. Mr. Frazer seems to imagine that he can make the Japanese, or their friends, look ridiculous by attributing to them the statement that the sole method of lightening the pressure imposed by ex-territoriality is to take away ex-territoriality. That is what his bit of sarcasm means,—I call it sarcasm to please Mr. Frazer,—if it means anything. But it is rather straining things to call a simple truth a sarcasm, to please anybody. Undoubtedly there may be another meaning lying behind it, or underneath it, or somewhere around it, for, I observe, he reverts to his notion that the burden itself is a myth. He states that it is “the fashion” to talk of the present state of affairs as “intolerable to educated Japanese.” So it is. It is “the fashion,” also, for men's blood to run in their veins, and rather hotly, sometimes, when they live with a perpetual insult flaunting them in the face. Would Mr. Frazer kindly tell us how it would be “the fashion” for “educated” Americans or Englishmen to talk and feel, if a single foot of their native land were subject to alien jurisdiction? Are educated Japanese so differently constituted from educated Anglo-Saxons that what would be shame and degradation for the latter is matter of indifference to the former? Yet Mr. Frazer satisfies himself by saying he has discovered no evidence of discontent. Has he tried? Has he looked for it? Or has he confined his observations to the sole locality where it could not be detected? My inquiry is warranted by his avowal of disinclination, in his character of “hard-worked merchant,” to go beyond the limits of his Settlement,—to “perambulate the country,” and meet the people “face to face.” Why he should shrink from such an experience it is not easy to conjecture. He cannot suppose there is any personal risk involved. It is true that his allusion to “the spirit of feudalism” might give rise to that suspicion. He assures us that feudalism is not yet extinct, and that we find, “as of old, the strongly marked characteristics of the system, the haughty dominant spirit of the rulers,” etc. If what we find, now-a-days, in Japan, is feudalism, we shall have to alter other things in our histories besides the records of wars for independence. Imagine the idea of a feudal system in a country where not a single nobleman has power over an inch of territory, or can impose his will upon the humblest inhabitant; and the practical government of which is administered by men who, with hardly an exception, have risen from social stations as humble as those of the commoners who brought about the anti-feudal revolution in England two centuries and a half ago, or the citizens who created the American Republic. Mr. Frazer's reflections, moral and practical, on the subject of bargaining, revive so many droll parallels in figurative fiction that it is hard to decide which fits them the most neatly. The fine old fable of the fox and the grapes is pleasantly suggested by his attitude of dubious contemplation and his subsequent renunciation of a valueless object. There is also a faint reminder of the injured husband, who, on being requested to forego a *crim. con.* suit in consideration of £5,000 paid down, concluded after due cogitation that the honor of his name forbade him to compromise for less than £10,000. The possible commercial advantages to be gleaned by foreigners from the opening of this country are weighed with the most scrupulous precision; and, the balance being struck, and found, on the whole, unfavorable to foreign pretensions, we are informed that “we

ought strongly to condemn the ignoble spectacle of the Treaty Powers endeavouring to drive a bargain." It is not pronounced an ignoble spectacle until after a careful examination has been made, and the decision has been recorded that the *pro quo* demanded from Europe and America is worth much more than the *quid* offered by Japan. Then, and not till then, we are warned against "bartering away" our valuable privileges for a problematical concession. But the opportunity is not without temptations, and Mr. Frazer evidently thinks it will do no harm to go over the calculation again. The question of introducing foreign capital has to be considered. That, also, when minutely investigated, looks very much like an ignoble spectacle. There is no *quid* for the Western merchant. Or,—wait a little, is Mr. Frazer's mind quite made up? This is by no means easy to ascertain, from his subsequent remarks. He interrogates himself severely, as to the possible uses to which the incoming capital might be put, but as he arrives at no definite conclusion, he ingeniously contrives to leave the subject in a maze of confusion. He is determined, at any rate, that nobody shall know what *he* thinks about it, and so he winds up this branch of his performance thus:—"It would seem that foreign capital can best be utilized in the creation of what would enable this country at any time to enter the money markets of the world as a borrower, and not otherwise is Japan likely to obtain the aid required." I can well conceive the satisfaction with which the author of this sally laid down his pen, exclaiming, no doubt, triumphantly—"There, if anybody alive can get a meaning out of that, he can do more than the man who wrote it." He is right. Nobody can. It is the exact counterpart of one of those mixed, labyrinthine utterances with which Mr. Punch regales his hearers at intervals, intending to produce the utmost possible bewilderment in a single sentence.

It is not often, however, that Mr. Frazer has recourse to this clever device of extracting every shade and semblance of meaning from his phrases. On the contrary, as I have remarked, his method is rather to impregnate each proposition he delivers with as many different meanings as can be crowded into them,—so that, indeed, he not infrequently swings around from the positive pole of assertion to its opposing negative. Looking into the possible motives of his haughty disdain for "bargaining," I find the clue to a course of reasoning which might be brought to an extremely dexterous development. Suppose that the assumption of contempt for traffic is intended to arouse a kindred scorn on the part of the Japanese,—to stimulate them to a similar disavowal of ignoble considerations. If they can be brought to this point of magnanimity, they will perhaps be quite ready to entertain Mr. Frazer's proposal that they shall throw open the country without any recompense. Why should not they? He sees no insuperable obstacles. He gives us his word for it, that "they need not make it contingent upon the abolition of extraterritoriality." No, indeed. They can draw the bolts, throw open the doors, tear up the treaties,—that is, as much of them as is favorable to Japanese pretensions and disadvantageous to the European merchant—and immediately "confer the privileges of trade and residence in the interior,"—without compensation, or equivalent, or *quid* of any kind. Then, look you, the foreigners would be able "to determine whether or not these privileges would have any real value." Mr. Frazer may well declare that he holds bargaining in scorn. So, it appears to me, would a man who should invite a tailor to make him a coat, send it to his house, and allow him to wear it a few months, "as a tentative measure which might be instrumental in helping him to determine whether the article has any real value for him." The tailor would probably decline. And then this high-souled customer would say—"Go to; you would drive a bargain, would you? You are an 'ignoble spectacle.' You would use the fact of my wearing your coat as a 'lever' with which to get money out of my pocket. If I choose to pay you, 'after a time,' I may do it 'from a sense of what is due' to you as a well-behaving member of society, but I will never consent to 'reduce the question to the level of an ignoble bargain.'" Mr. Punch often distinguishes himself by expositions of satire which are the more bitter and scathing from their entire lack of aim; but I doubt if any of his random shots ever hit the bull's eye more neatly than this chance discharge from Mr. Frazer's armory. He leaves almost nothing for his adversaries to say. He naively and candidly admits the worst that has been alleged against his party. What they wish is to get everything and give nothing in return. "Admit us to all parts of your empire, without any conditions," they say; "that is the course for you to take. Give us our own way from beginning to end, and stop this absurd clamor about

your independence. Your business is to open your territory to foreign trade and residence; *we* will look after the tariff, and jurisdiction, and such trifles. In short, we demand not only all the *pro quo* there is lying around, but likewise all the available *quid*. As for bargaining, it is disgusting to talk about it." This is the creed of the hostile class, and Mr. Frazer is their prophet.

In taking leave of him and his lucubration, I would not have it supposed that I have exhausted the examples of relationship to the diverting "side show" which he has so vividly summoned before the mental vision. I leave a prolific field almost untouched. As I glance, again, at his effusion, my eye is caught by his curt disposition of the expedient of "mixed tribunals." He has wrought dismal havoc, in several successive paragraphs, with the pretence that Japanese judges are to be trusted; and, rightly discerning that the plan of the "mixed tribunals" cannot be overlooked altogether, he sends it skipping skyward with the single remark that it "would probably fail to remedy the evil." That is all. "Only this and nothing more." Thus, when confronted by a harder nut to crack than usual, or interrupted by an inconvenient interpellation from the crowd, the orator of the booth cries out, "That be blown!"—and, like his spectrum in Yokohama, "turns to the consideration of another matter." Then there is the pleasant device of crediting other persons with divers ideas and expressions, and straightway proceeding to demolish them. Mr. Frazer tells us just what the Treaty Powers think; what the Japanese people think; and what the foreign friends of Japan think. He puts their thoughts into words of his own choosing, after which the task of knocking them to pieces is easy. "What's that you say?" exclaims Punch,—nobody having said anything. "Oh, that's your game," continues the nimble-witted logician, rolling out a string of off-hand inventions, which he takes great delight in turning upside down. Perhaps the most apposite illustration of "side show" humour afforded by Mr. Frazer is given in the final burst of generosity with which he speaks of "conferring rights"—a collocation of words so satisfactory to him that he luxuriates in its repetition. The "rights" he mentions, and which he might be willing to see "conferred" if this country should show herself worthy of so much beneficence, are the inherent attributes of every independent State, but were temporarily surrendered, under pressure, at a time when Japan was incapable of defending them—or herself. Mr. Punch and his confederates get a passing stranger at a disadvantage, frighten him out of his wits, and pick his pockets of all that takes their fancy. When he comes to his senses, and gathers a sympathetic crowd, whose cries of "Shame" begin to change the aspect of affairs, the wily plunderer produces the booty saying, "There, I will make you a present of it;" and looks about him for the applause of mankind.

Has the time arrived when foreign observers of Japan's progress can allow their conscience and their sense of justice to be diverted by the shallow devices of a rhetorical "side show?" In common with you, Mr. Editor, and the majority of disinterested spectators, my answer is,—“not yet.”

I am, yours very truly,

ONE OF THE AUDIENCE.

Tokio, March 31st, 1884.

[We have to apologise for not publishing this letter sooner. Our space is limited, and it is seldom possible to extend our correspondence column to the length of such a communication as the above.—Ed. J.M.]

A FLAGRANT ERROR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The editor of the *Echo du Japon* has, in his number of the 7th April, an article commenting upon the subject of Treaty Revision, and has advanced the argument that, even should the Japanese Government permit foreigners to establish themselves freely among the Japanese, everywhere, it is certain that no foreign agriculturists possessed of only small means, would come to settle in our land, but that only those with large capital and who were unacquainted with the actual internal condition of the country, would bring their funds for employment here. Moreover, he says that in their agricultural ventures, they would meet with great difficulties.

The editor quotes, in support of his statement, the 15th Article of the Japanese Law of Land Tax, in these words:—"The tax upon lands that have just been cleared, will be collected from the following year, in proportion to the value newly established." He then proceeds to explain that, as the business of improving waste lands is both very long, expensive and troublesome, the legislators of all civilised countries have decreed exemption from tax for lands newly laid under cultivation, for

periods of from 5 to 10 years for moors, and of from 10 to 15 for wooded lands, according to the quality of the soil. He concludes by saying that, the Land Tax law being thus severe, there is no object for foreign agriculturists to repair to Japan.

The subject is not without interest, and I have carefully followed the whole argument and find that the editor has become possessed of a mistaken notion, due to his inaccurate translation of the article in question. The purport of the article is essentially different from the meaning his translation conveys. I will therefore give a close translation of the actual wording of the article, and trust to convince, thereby, the editor of the *Echo du Japon* that he has unfortunately been led into error.

The 15th Article of the Land Tax law reads as follows:—"Tax upon lands newly laid under cultivation and upon waste lands, will not be imposed until the year next after the expiration of the period of exemption specially determined for lands of the two descriptions herein set forth."

I am, &c.

A JAPANESE.

Tokio, April 18th, 1884.

[The *Echo du Japon* has fallen into a flagrant error. The truth is that the Land Tax Regulations, so far from imposing prohibitive conditions such as our contemporary describes, provide that a period of fifteen years—called a "hoeing period"—shall intervene between the first steps taken to bring waste land under cultivation and the imposition of a tax upon it as cultivated land. This is another example of the gross blunders circulated by ignorant people who undertake to write about Japanese affairs.—Ed. J.M.]

RIGHT, OR MIGHT?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am delighted to see the frank response of your correspondent, "Foreigner," to my inquiry respecting the attention which would probably be given to Japan's remonstrances against the deprivation of her rights, if she possessed a strong army and navy. I have no doubt that he fairly represents the honest opinion of many aliens who are hostile to this country's pretensions.

He asserts that "if Japan possessed the army and navy" in question, "it would at once be a sign, if not an absolute proof, that she had advanced in efficiency as a State to a position in which she might well be trusted with all the so-called 'inherent privileges.'"

The extent, then, to which nations may be trusted to enjoy their independence, must be measured by the degree of military and naval force they wield. A country with a large land and sea armament has a right to independence. A country not thus endowed has no such right.

I desire to be strictly accurate and just. "Foreigner's" meaning is, of course, that the possession of great material strength implies a condition of progress so high that the moral right of exercising all the privileges which belong to a perfectly free State could not be disputed. But in the absence of such strength, this right may be disputed.

Following out this doctrine, I would now ask "Foreigner" how many of the Western nations are entitled, on the same calculation, to be trusted with their inherent privileges.

To begin with, the United States of America certainly are not. The army of that Republic numbers less than fifty thousand, and the navy is virtually made up of phantom ships. All the Republics of Central and South America are similarly situated, as well as the European Republic of Switzerland.

The Kingdoms of Holland and Belgium, usually reckoned in the front rank of civilization, have not the army and navy required to guarantee their trustworthiness as independent States. Neither have Denmark, Portugal, Sweden, Norway, Spain, or Greece. Turkey, I presume, is worthy of confidence, her army numbering 600,000 when on a war footing, and her navy consisting of 170 ships. As regards England, there is room for doubt, her navy giving her an unquestionable claim to be trusted, while her army is too small to confer reliability.

The only nations in the world, concerning whose claim to independence there can be no dispute, are Germany, Russia, France, Italy, Austro-Hungary, and Turkey.

I do not see how "Foreigner" can resist these conclusions, unless he desires to have it understood that the rule he sets up for Japan is not applicable to other countries. But, on the other hand, it cannot be denied that Japan possesses an army and navy superior to several of the States which are permitted to be independent, and which are unmolested in the enjoyment of their sovereign rights. If this empire should be so unfortunate as ever to be drawn into a mortal quarrel with a country like Greece, or Portugal, or certain of the American Republics, would anybody question her ability to hold her own?

"Foreigner" will, I trust, perceive that he has not yet thrown as much light on the subject as it requires; and I, for one, shall be glad if he will clear away some of the confusion which results from recognizing the possession of a powerful army and navy as "a sign, if not an absolute proof" of moral right to exercise inherent privileges.

At the same time, it would be interesting to be told why, in speaking of inherent privileges, he prefixes the qualifying expression "so-called." They are "so-called" for the sufficient reason that that is what they are. If he can produce any authority for stating that the rights of internal jurisdiction and of tariff regulation are *not* inherent privileges in every State, I will bow to it, and apologize for giving him the trouble.

I am, Sir, yours respectfully,

LIBERTAS.

Yokohama, April 19th, 1884.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I trust the meaning of the few lines I addressed to you last week in reply to "Libertas" was more apparent to your readers than it seems to have been to your correspondent, who, in his second letter, now construes my argument to have been that "in the absence of strength the rights of Japan may be disputed." "Libertas" himself is determined to stick to his original idea of battalions and fleets being necessary to treaty revision in Japan, but I object to any inference that I share his opinion.

Following your correspondent's metaphor, I said that an efficient army and navy may be a sign of an efficient State, and that an efficient State may claim all privileges over aliens like myself in its dominions. If "Libertas" had summarised my meaning as, "in the absence of such efficiency, then rights may be disputed," he would have been correct; but in replying to it, he should, in that case, have devoted your space to prove Japan's efficiency, instead of reasserting his own proposition and repeating statements which are an insult to our common sense and a libel upon foreign nations.

"Libertas" asks the meaning of my prefix "so-called" to Japan's inherent privileges. I will endeavour to explain it; but I cannot do so unless he will remember my signature, and realize, that as a foreigner, I think of my own country first and, fond as I may be of Japan, still love my own land best. The inherent rights of man are those of liberty, property, and protection. These rights have descended to us foreigners through generations and have been the gradual result of civilization. With us they may justly be called inherent. In Japan, this inheritance is now being acquired, a future generation will probably claim them as inherent, but for the present I submit that the title is premature.

"Libertas" is wrong if he thinks me inimical to Japan. I admire the country, I appreciate the rapid progress it has made, and I would meet the views of its statesmen with every consideration; but whilst giving full justice to Japan, I do not wish to forget the inherent rights and privileges of myself as a

FOREIGNER.

Yokohama, 23rd April, 1884.

THE EDITORSHIP OF "THE TIMES."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—No little surprise has been manifested at the delay in filling the post of editor of *The Times*. Several names have been mentioned in connection with the office, but the appointment is yet unconfirmed.

I beg to offer a solution which, it seems to me, ought naturally to have occurred, before now, to this intelligent community. It is well known that the Walter family are always on the watch for competent servants, and that their range of investigation, in an emergency like the present, has no limits. Remembering this fact, and remembering also, that the particular issue of a prominent Yokohama journal which contained the intimation of its editor's desire to be bought out and sent home, must have reached London just about the date when the *The Times'* chief chair became vacant,—then we have not far to search for an explanation of the unwillingness to make a hasty selection. The mails between England and Japan may now be burdened with correspondence upon which this highly interesting question depends. For generations, the luck of the Walters has been proverbial, and if destiny should bestow upon them so rare a boon as the possession of this inestimable editorial prize, they may well rejoice in a crowning evidence of fortune's most bounteous favour.

Yours truly,

STRAWS.

Yokohama, April 20th, 1884.

THE CASE OF THE "SATTARA."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your leader on "unseaworthy ships," in to-day's issue, you refer to the British barque *Sattara* which is advertised over my signature as being "now ready to receive cargo" for a voyage homewards, as being "almost under the category" of vessels that have gone ashore and whose officers relaxed their efforts to get her off because her owners would benefit by the vessel's becoming a constructive total loss. The fact of this vessel being now ready to load cargo is by no means a proof of anything else than that her purchasers used every appliance that local knowledge combined with mechanical skill could bring to bear; and all these might have failed but for exceeding good fortune: when first taken in hand, and indeed, even when the vessel was successfully floated, the venture was by no means a rosy one, and may have been considered up to the moment of the safe mooring of the vessel in Yokohama Bay as pretty much of a "toss up."

The present owners of the *Sattara* are certainly to be congratulated on the result of their venture, but her late officers are not necessarily to be blamed in an equal ratio for not undertaking a venture that might very easily have had a far different ending.

Yours truly,

H. MacARTHUR.

Yokohama, 23rd April, 1884.

YOKOHAMA PUBLIC HALL ASSOCIATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I see by an advertisement that the Annual General Meeting of Shareholders is called for Wednesday next the 29th instant. It is no secret that building operations have been long since discontinued for lack of funds, in fact the Association cart seems to have stuck fast; and I hope every shareholder will make a point of being at the meeting, prepared to put his shoulder to the wheel, if necessary, so that we may get our new Theatre finished without more delay.

I am a member of the Amateur Dramatic Association, and, as such, am anxious to see the new house ready for next season at the latest. The A. D. A. is one of the promoters, and I believe the largest shareholder in the Public Hall Association. Now I not only speak for myself, but for a large number of my *confrères*, when I say that we are desirous of giving performances and are only waiting for a respectable place to play in. I do not wish to throw mud at the present noble structure on Main Street, but will only say that the accommodation on the stage, and behind the scenes generally, at the Gaiety, is so bad that we can no longer ask ladies to submit to the inconvenience of appearing there. (I say nothing of the defective and comfortless auditorium: that has been descanted upon often enough.) I understand further that the Choral Society—another promoter and large shareholder—has positively refused to give any more representations in the present *bijou* theatre; and that the members are only waiting the completion of the New Public Hall to blaze out into a galaxy of brilliant performances, including "Iolanthe" and "Princess Ida," to say nothing of more ambitious works. I am not much of a musician myself, but have a lively recollection of "Trial by Jury" "Pinafore," and "Patience," and for one should dearly love to see these pieces again, with the whole force of the Choral Society as chorus, in a comfortable house and upon a stage worthy of our performers.

I need not enlarge upon the claims and merits of other societies, such as the Amateur Dramatic Corps and Amateur Orchestra, from whom we may reasonably expect great things when a proper home is ready for them. I believe that the Public Hall would also be in great demand for meetings, balls, dinners, and other things,—there might even be a Bluff Library, Reading Room, Chess Club, and all sorts of et ceteras established there to the profit and welfare of us all.

I suppose the crucial point at the meeting on Wednesday will be the question of money: and I hope that the new Board then to be elected will receive such help from the shareholders that there will be no difficulty in at once resuming work. Now, I presume that the present Directors have been over-sanguine as to their powers of borrowing money on mortgage: but I am not surprised at the issue, as I think no one could be induced to advance upon a half-completed building. Get the roof on, floors laid and windows in; there should then be no difficulty in borrowing 50 per cent. of the total cost on mortgage of a completed Hall. I may be wrong, but I gathered from the reports of the Extraordinary General Meeting held in November that

the cost of building on the plans as drawn, with reasonable furnishing, would be \$30,000. I am under the impression that about half that sum has been subscribed (there is a rumour about that some defaulters have not yet taken up their shares, these should be made to pay up without further delay); and no doubt other members of the community will come forward with subscriptions when they see the project moving once more. Of course money would have to be found meantime, for current expenses, payments to workmen, builders, etc., but I should imagine that the local Banks would advance the required funds temporarily, until the building is ready to pass over to the Mortgagee. In addition to this plan, there are Debentures, Preferred Stock, with various other methods worthy of consideration; and I hold that it will be a lasting disgrace to us as a community, if the New Public Hall and its affairs be left any longer in their present unsatisfactory condition.

I am writing this as an individual who is anxious to see the New Palace of Art and Song upon Camp Hill, completed without delay; and if my humble effusion can stir up any enthusiasm in that direction, I shall feel amply rewarded. I presume our worthy President, General Van Buren, will attend the Shareholders' Meeting to set forth the views and watch over the interests of the Amateur Dramatic Association. What I personally want is to see the "Grand Opening Night" not later than the 1st of October next; followed by a constant succession of gaieties throughout the ensuing winter. I always make a point of attending all the representations given by my own Association, and by those who work in friendly rivalry with us. I am sure that many others are equally anxious to pay their dollars and take tickets for any performances which may be given when the new *locale* is ready.

Yours truly,

DRAMATICUS.

Yokohama, April 24th, 1884.

THE VIVISECTION QUESTION.

We have been requested to publish the Memorials as under, which were addressed, last year, to the Japanese Government. What response they elicited, we are not in a position to state:—

MEMORIAL OF THE SCANDINAVIAN SOCIETY.

It is a well known fact in our part of the world that the Japanese Government, with unrelenting perseverance, strives to make its country one of the happiest on earth by adding to the peculiar talents and qualifications wherewith the Japanese people are endowed by nature or which they have acquired by self culture, the profit of discoveries made in other countries. And it is further known that the Government, for this purpose, has sent young Japanese gentlemen to universities in Europe, there to follow a course of studies and take cognizance of the development of science in Europe. No one can doubt that the progress of science will profit the whole human race; but still it is an indubitable fact, that, during its evolution, science may possibly diverge into dangerous by-paths, and as it is usual, particularly in our part of the world, to praise every new scientific discovery so that it is soon generally accepted as an undoubted benefit, there is no doubt that abuses can arise, which, not counting the immediate evils they produce, extend their pernicious effects even to a distant future. For if even such an abuse after the lapse of some time be abolished, still it has usually previously given rise to other evils which remain and propagate their effects, even after the original cause has been removed.

One of those abuses which are connected with science, and which during the past half century has gained a great extension over all Europe, is what is called vivisection, or the method of making experiments on living animals, by mutilating, carving asunder, poisoning or burning, or in other ways cruelly torturing them, for the purpose of gaining knowledge of the laws for the human organisation, and so benefiting medical science. These experiments, since they have been more generally known, have called forth the strongest disapprobation, not only because they stand in direct opposition to all laws of justice and mercy, which are held obligatory by all nations, but not less because they must be considered as a foolish

attempt to try to inquire into the natural laws of the functions of the natural organs by reducing the animals to a state which is in direct opposition to the natural, and which, besides, through the influence of cruel pain, must be still more remote from the sound state of animal life. Finally, these experiments must be considered as foolish because there exists such a considerable difference between the physical condition of man and animal, in consequence whereof both poisons and medicines act very differently on the former than on the latter, and whenever any one will apply to men the experiences gained by experiments on animals, he can hardly avoid committing serious, and sometimes disastrous mistakes.

Physicians and scientific men of high standing have, besides, proved that the expectations entertained by many of obtaining useful discoveries by means of vivisection, have been wholly balked and that the medical art through experiments on living animals has been rather misled and checked than assisted in its natural evolution. Already the time seems to be near at hand when we may hope that the above-named abuse shall have altogether ceased, because in nearly every European country persons of culture, education, and high social standing have united their efforts, not only to procure a restriction of vivisection, but even to call for its total abolition, and the number of those who labour in this direction increases with every day that passes.

It is therefore with feelings of sorrow we, through the daily press, have received the information that among the young students from Japan, who have profited by scientific teaching at the European universities, several have applied themselves to the study of physiology under the direction of professors in this science who have made themselves noted for their heartless cruelty to the animals in their laboratories. And as we have been informed that one of those Japanese students has acquired such a taste for vivisection that he has published a book treating on the results of such experiments, and as from those facts it will seem probable that this man, and eventually several amongst his fellow students, will try to introduce vivisection as a method of research in Japan and make it known and accepted in that country, we have considered it as a sacred duty to inform the Japanese Government of the great and steadily increasing disapprobation which in Europe brands this method of investigation, and we have dared to entertain the hope that the Japanese Government will not suffer an abuse which well may be considered as stigmatising the civilisation of Europe, to gain introduction in a country, which in regard of kindness to animals already stands far in advance of any country in our part of the globe.

With greatest regards, we have the honour to sign as your most obedient servants, etc.

TO HIS EXCELLENCY

SANJO SANETOMI,

DAIJO DAIJIN JU ICHI II, PRIME MINISTER TO HIS
MAJESTY THE MIKADO OF JAPAN,
THE RESPECTFUL MEMORIAL

OF THE

VICTORIA STREET SOCIETY

FOR THE PROTECTION OF ANIMALS FROM VIVISECTION

UNITED WITH THE

INTERNATIONAL ASSOCIATION

FOR THE TOTAL SUPPRESSION OF VIVISECTION.

Having learned that our honoured allies, the members of the Scandinavian League against Vivisection, have prepared an Address to the Government of Japan in deprecation of the introduction of experiments on living animals into your Country, we desire earnestly to unite our English voices in the same appeal. We respectfully entreat the Japanese Government to vouchsafe attention to the Memorial of the Scandinavian League, and we emphatically endorse the arguments and statements of the said memorial respecting the inutility of Vivisection, its fictitious pretensions as a scientific method, and its brutalising effects.

The well known amiable and gentle character of the Japanese nation and the refinement of its art and manners have won for it the warm sympathy and admiration of Europe. To preserve amid such great changes as are now passing over it that gentle and merciful and generous temperament is undoubtedly a matter of infinitely greater importance to its welfare and happiness, than to make one step, or even many steps, of scientific progress. Humanity to animals is a sure measure and indication of true civilisation, and the training of the young in habits of kindness towards them, is, at this moment recognized by all English educationists as a high and important branch of moral culture. The practice, on the other hand, of inflicting torture on animals, whether for scientific or other purposes, cannot fail to harden the hearts of young men, and to render them barbarous alike to the brutes and to human beings.

We therefore most earnestly pray the noble and enlightened Government of Japan to prohibit the practice of Vivisection within the bounds of the Empire.

Signed on behalf of the United Societies.

TRANSLATIONS FROM NATIVE JOURNALS.

THE "JIRIN KOHO" AND THE ORIENTAL PROSPERITY SCHEME.

(Translated from the *Hochi Shimbun*.)

The *Jirin Koho* (*Hu-pao*), is a Chinese daily newspaper printed in Shanghai. The Chinese who reside in that port, the great emporium of the Middle Kingdom, are more thoroughly acquainted with the condition of foreign countries than are their countrymen in any other part of the Empire. As a rule, the *Jirin Koho* indulges in extremely silly and supercilious language, little caring that in so doing the ridicule of others is aroused. And yet, among those articles which comment upon the internal and foreign affairs of the country, some are worthy our attention. Notwithstanding the fact that even these articles may not unfrequently be condemned as the outcome of injudiciousness and tardy development,—characteristic qualities of the Chinese,—the deductions which we draw therefrom may be taken as a fair sample of the opinions entertained by the prominent residents of Shanghai. The issue of the *Jirin Koho* of the 20th of February, 1884, contained the first instalment of an article entitled "A Scheme to promote the welfare of Asia," the second and final parts of which were printed on the 21st and 22nd of the same month. As this article comments upon the general condition of the Orient, as well as our own relations with China—especially with regard to the Riuikiu question—we will reproduce its gist, and, by subjecting it to critical revision, endeavour to familiarize the editor of the *Koho* with our own views on the subject:—

A SCHEME TO PROMOTE THE WELFARE OF ASIA.

"The annals of ancient days are shrouded in obscurity, and we are unable to trace clearly the epochs of which they speak. Authentic history commences with the Emperor Gio.¹ Those who wish to speak of the foundation of the Middle Kingdom must, therefore, refer to the epochs of T'ò (*T'ang*) and Gu (*Yü*). It was the Emperor U² who took steps to cause the great flood to subside and to make the land habitable, although his success was limited to the area of the Nine Provinces. Europe was, at that time, a barbaric country, where men and animals herded together. To the west of Asia was a small territory in which certain tribes thronged together and founded a nation called Babylon. This was the first Kingdom in the Occident, and was founded in the sixth year of the Emperor Shian.³ But by this time the Middle Kingdom was famous for the excellence of its literature and political institutions. The first traces of civilization are thus to be found in Asia. But more than half of this continent is occupied by China, and for this reason she claims the honour of having been the first to attain power. And those who forced their way into this country, on the strength of their military prowess and personal ability, took advantage of a season of political mismanagement, brought about by a few statesmen who were so careless as to leave their doors open and their bed-chambers unguarded. Such a state of affairs may not unreasonably be considered the result of fatality; yet the Middle Kingdom must be held responsible for the betterment of its present condition, while it is the duty of those countries who owe their civilization to China to render her every assistance in their power. If China alone be unable to further the advancement of Asia, where shall she look for an ally to help her in the work? No better ally than Japan could be found; and China must place all her hopes in her neighbour. A retrospective glance at ancient history shows that the establishment of the Japanese Empire dates back to a very remote period, and that the earlier days of its existence touch what is known now as the heroic (divine) era. All the annals of this era are of a mythical nature. The coronation of the first emperor appears to have taken place in the 17th year of the reign of the Emperor Kei-ò.⁴ The first intercourse with China seems to have started during the Kan (*Han*) Dynasty. Although ceremonious and periodical visits were not interchanged, yet no spirit of hostility was ever shown by the one country towards the other. The ambitious and daring monarch Gen⁵ attempted to bring Japan under his jurisdiction, but as she resisted him, he fitted out a warlike expedition, numbering one hundred thousand troops, by way of terrifying the

disobedient nations. But this numerous expedition was so thoroughly defeated that the emperor did not venture to renew his attempt. From that day the Japanese despised him and his people, and still evince their contemptuous regard up to the present time. While Japan was still in a state of total seclusion from the rest of the world, four men-of-war arrived from the United States at the port of Uruga, in the sixth year of Ka-yei (1853), and demanded the conclusion of a commercial treaty between the United States and Japan. Their example was speedily followed by the English and Russians, who declared that they would have recourse to arms if Japan refused to entertain their requests. Despite all this, Japan still maintained the feudal system; political power was vested in the Shogun, who, holding the office of *Sei-i* ("Subjugator of Barbarians"), was served by thirty earls, and he, in his turn, served the Mikado. His great influence was a constant source of anxiety to various clans, as well as to the Mikado himself. The country was, however, so tranquil that for a long series of years no measures had been taken to protect the coast. The Shogunate was thus unable to refuse the claims of foreigners, and entered into negotiations with them against the will of the Emperor. Thus it lost its popularity among the people, while two clans—Môri and Shimadzu—fired on the foreign men-of-war, and placed themselves at the disposition of the Imperial Court. This state of affairs boded ill for the Shogunate, and political power soon reverted to the Emperor alone. The Restoration was thus effected, and all manner of decrees and proclamations were issued by the Imperial Government, which, having learned from the failure of the Shogunate how to direct its course, devoted its energies to defend the country from the aggression of foreigners. It has pursued this policy for ten years, almost entirely exhausting its revenue in so doing. Its army and navy have greatly increased in strength, so much so that those persons who refer to the most influential countries in Asia mention China first and next Japan. The task of promoting the prosperity of the Orient must, therefore, be undertaken by the Middle Kingdom, but Japan is called upon to take her part in this great task. Although this is the actual truth, it seems that most of the people of Japan are not intelligent enough to grasp this simple fact; and although those who have made themselves familiar with the state of affairs in Asia do not deny the necessity of adopting measures for the promotion of this great continent's welfare, still, from pure self-conceit, they refuse to consider the Middle Kingdom worthy to carry out this plan in conjunction with them.

Such an idea can have arisen only from the most reckless disregard to facts. However wealthy and powerful Japan may become in the future, her territory is limited to a mere dot on the seas of the Orient, not being greater than the size of one or two districts in China; while her population is not more than that of two or three Chinese provinces. Again, the revenues of Japan hardly amount to the eleventh part of those of the Middle Kingdom. If she were to properly estimate her power and best interests, she would refrain from putting any faith in distant countries, and only strive to strengthen her friendship with China, placing herself on the footing of a secondary ally. In case a foreign power should insult Japan or China, or the dependencies of either, these two nations should mutually oppose such oppression or indignity, as two brothers would each try to ward off danger from the other. But in carrying out this scheme, the sovereign power must be vested in the Middle Kingdom, and Japan must serve under her commands. Should the latter nation agree to this plan, then would foreign powers be unable to treat either of the two countries with contempt, even though they had recourse to their exterritorial rights. As we have already stated, China excels Japan in the extent of her territory, as well as in population and finance. The manufacture of arms, and the purchase of war-vessels will enable us to succeed in our enterprise. Then would foreigners no longer be able to despise us as they have done.

If the question as to which of the two countries should exercise the sovereign power were submitted to any foreign judge, even a child of only three feet in height would answer in favour of China. But if we take the popular opinion of the Japanese into consideration, we are convinced that most of them are disposed to carry out the scheme unaided, while others desire to exercise sovereign control over China. According to the literature of the Japanese, it would seem that they entertain very one-sided views on the subject, as so few of them suggest the necessity of strengthening the friendship of their country with this nation, in order to attain their ultimate desire of coöperating with us. Why do they not properly estimate their own strength? They stay within their own walls, and offer no opposition to the contempt of foreigners; indeed, they are actually in arms against us who

⁵ A.D. 1281, or in 1941 according to the era of Jimmu Tenno.

live with them on the same great continent. There is thus the greatest difficulty at present in carrying out the scheme of the furtherance of the well-being of the Orient."

The article we have reproduced above simply contends that Japan is the only country in Asia which can assist China in promoting the prosperity of the Orient. And yet, as per usual, it is distinguished by the use of supercilious and bombastic language. The editor has evidently not yet freed himself from the old custom of believing China to be more important than any other country. But it is clear from what the writer says, that he indirectly has great faith in Japan, thinking that this country will be an efficient factor in the scheme for Eastern well-being. The assertion that China ought to exercise a control over Japan as her councillor and director is based simply upon the difference of population and of area. With regard to this latter point, it is well to remember that England comprises an area of only 20,578 square *ri*, while Germany has an area of less than 36,161 square *ri*; while with reference to population, the one has but thirty-one millions, and the other forty-one millions, of inhabitants. When we compare these figures with China which has an area of 905,500 square *ri* and three hundred million inhabitants, it is easy to see that size of territory and population has really nothing to do with the political superiority of a country. For do not England and Germany exercise authority all over the globe and threaten to extend their sway to the East itself? Yet both of these countries are far inferior to China in point of extent of territory and population, and this is the case with most of the influential states in Europe. Japan is to China as are Germany and England; that is, she has an area of 24,794 square *ri*, and 36,350,000 inhabitants, —more than England and less than Germany. And there is no reason why this country should not rise still further in the world. If the editor of the *Koho* would take the trouble to question why the nations of Europe are to be feared, he would doubtless ascertain that the strength of a country depends neither on its area nor its population. We do not intend to bewilder him by any elaborate explanation of all this, but we cannot help accusing him of self-conceit. And yet, in spite of this fact, his article is worthy of praise in that he proposes to promote the welfare of the Orient in conjunction with Japan. The three leading points of the article may be epitomized as follows:—(1) Japan alone can be relied upon to further the Oriental prosperity scheme; (2) the Japanese have treated the Chinese with contemptuous disregard, to the unfeigned regret of that country; (3) under these circumstances, the difficulty of success is great. The third section of the article especially alludes to the great advantages consequent upon an intimate alliance between China and Japan, and winds up with the assertion that mutual friendship ought to be maintained, though Japan has annexed the whole Riukiu group. The text of this section runs as follows:—

"Thinking men assert that Japan is willing to promote the welfare of Asia in conjunction with the Middle Kingdom. The Japanese suppose that the insulting manner in which Western Powers treat Oriental nations is due to the fact that the relations between China and Japan are known to be strained. And yet, the people seem to be persuaded that, unless allied with China, they cannot undertake to promote the well-being of Asia single-handed. Japan still assumes that the Middle Kingdom has the habit of regarding all other nations as barbarous, and is puffed up with unreasonable pride. However desirous the Chinese may be to promote the prosperity of the Orient, they can hold no direct interchange of ideas with Japan on account of the latter's cold, unfriendly disposition. That country has quite recently adopted European civilization, and is possessed of guns and war-vessels, but there is no competent person to manage them. The country's resources have been exhausted in useless purchases, but the gilding is only superficial. The internal administration is effected by Imperial Decrees, but these are not properly enforced; Ministries are issued to the cities and prefectures, but they are not observed. Procrastination is a characteristic of the Japanese Government, although the country is forever adding to its external decorations. On the other hand, it is manifest that the Japanese have never given the prosperity of the Asiatic Continent any serious thought; and this is the reason why Japan does not ally herself with China, however eager this country may be to see her plans succeed. The Middle Kingdom has already done away with many of its ancient superstitions, and has determined to devote every energy to the improvement of its internal administration, as well as to the suppression of existing abuses. It has abandoned those principles which are inconsistent with the true advance of civilization and adopted every measure which could tend to benefit

its people. It has despatched ambassadors to many foreign lands, and entered into friendly relations with them. It has erected telegraphs in order to facilitate the transmission of messages; in short, done everything possible to further the advance of civilization. The late Ili affair^a greatly agitated the country, but it was soon settled by revising the treaties under the direction of a special envoy. Similarly, the Korean disturbance of recent years was promptly quelled by the Emperor. With regard to the Annam embroglio, it must be remembered that our envoys in France had had frequent audiences with the French Minister for Foreign Affairs, in reference to commercial relations, and had prevailed upon him to refrain from resorting to arms. Yet have the French endeavoured to carry out their plans by taking advantage of the barbarous condition of Annam. Our Emperor has felt extreme indignation at their proceedings, and has issued special decrees relating to the sending of reinforcements to Annam. It will thus be seen that our Government has taken every precaution to protect our dependencies and the sea-board. Is it, then, unreasonable to affirm that China has done all in her power to ameliorate the condition of the Orient? China has kept good faith in her intercourse with Japan, and, when the late Formosan difficulty threatened to create hard feeling between the two countries, the Chinese Government showed the greatest moderation and even paid an indemnity to Japan, in accordance with the advice of the British Minister. These matters have led the Japanese to suppose that the Middle Kingdom might be insulted with impunity, and this belief caused them to resolve to annex the Riukiu Islands. The Japanese very generally affirm that the Chinese are untrustworthy, and that they frustrate all useful schemes by treachery, but this reproach should rather fall upon themselves, for they have often and plainly proved faithless. The Middle Kingdom is truly desirous to restore the prosperity of Asia, and this in conjunction with Japan. The late Riukiu affair has interfered in the mutual understanding of the two countries, and although envoys were despatched in order to settle the question amicably, no satisfactory results were obtained. Under these circumstances, the Japanese cannot hope to carry out the scheme for the well-being of Asia. It must be remembered that a country is seldom enriched or strengthened by an increase of domain. Kiushiu for instance, one of the islands of Japan, is well cultivated, yet many of its inhabitants have fallen into idle ways and neglect their occupations. A judicious management of the territory in Japan's possession will rapidly increase her wealth, and she has no need to try to annex Riukiu on the west or Korea on the East. The reason why China claims the suzerainty of Riukiu and Korea, is simply because her policy requires the possession of these two lands. Should Japan consolidate her interests with those of China for the purpose of furthering the welfare of the Orient, there would be no question whether Korea belonged to China or whether Riukiu should be handed over to Japan. But the Japanese should not take every opportunity to possess themselves of these countries in a deceitful way. Russia is even now disposed to bring north-eastern Asia under her sway, while France has gained great power in the south-west. And so, it may be reasonably expected that not only these two, but other, Western powers will attempt to effect an entrance into Asia whenever the opportunity is offered them, or some vital mismanagement occurs in Asiatic policy. Japan alone, outside of China, may be expected to interest herself in the defence of the Orient. There is an old instance where the league of six powerful provinces failed to ward off the attacks of the people of Shin. It is not certain, therefore, that even an alliance between China and Japan would suffice to prevent the attacks of foreign nations. But if Japan does not league herself with the Middle Kingdom she may well be called imprudent, and deserves censure for neglecting to provide against future emergencies. The scheme for the promotion of the prosperity of the Orient may depend upon the solution of the Riukiu question. If China and Japan truly understood the precarious situation of Asia, they would stop all petty disagreements, and take steps to arm their countries against foreign powers. *The best plan for the attainment of this great object will be to divide the archipelago into two parts; the one a dependency of China, and the other belonging to Japan, so that the two nations may put an end to their lengthy dispute. If this is impracticable, it is better for the Middle Kingdom to show true magnanimity by ceding the whole of Riukiu to Japan and so consolidate her friendship with that country. By doing so, the former distrust will be forever done away with, and the two nations may*

^a Reference is made to the troubles with Russia regarding the boundaries of the two countries.

mutually strive to strengthen the Asiatic Continent. Should neither of these two plans be adopted, then will suspicion and distrust increase on both sides every day, and it is not improbable that the rupture of the two countries will benefit foreign nations,—who look on the quarrels of China and Japan like fishermen who watch the struggles of cormorants, by which they may profit without any effort of their own."

The article which we have translated does not, on the whole, exhibit any over-great superciliousness, but it gives a clear insight into the true opinions of the Chinese. It states that the Japanese have many guns and war-vessels, but that they are without persons to manage them; it asserts, too, that the country's revenues are expended in vain enterprises and superficial decorations, and that the characteristic habits of procrastination and conservatism are still predominant. Whether or no this be true of Japan, it certainly may be regarded as a true statement of the actual condition of China. At all events, it fairly represents the opinions of our countrymen with regard to the Middle Kingdom. The allusions the writer in the *Koho* makes to the improvements effected in his own country are, to a certain extent, correct and we have only to condemn what he says on the score of exaggeration. He assumes that the discord between China and Japan originated in the Riukiu affair, and that the reason of China's claims to the possession of the archipelago is solely based on convenience of administration. He then suggests the necessity of dividing the islands into two parts, one of which shall belong to China, and the other to Japan. If such a scheme should be found impracticable, he proposes that China should relinquish her claims upon Riukiu, in order to get rid of this political stumbling-block and consolidate her friendship with Japan. This proposition is exactly in accordance with the exigencies of the case. So far as the actual state of affairs is concerned, we do not believe that China pursues a policy of aggression, and it is evident that she only desires to maintain her national prestige by protecting Korea on the east and defending Annam on the west. The reason why the editor of the *Koho* has ventured to make such a proposition, is because he has found that it embodies the real opinions of his countrymen. If he is in truth anxious to promote the welfare of Asia, we are at liberty to express our views in reference to our intercourse with China. Although his proposition must be regarded as the real outcome of public opinion, yet there are still several points discussed in his article to which we would call the attention of our authorities.

Since steam and electricity have everywhere increased the facility of communication, the distance from one country to another has ceased to interfere with international intercourse. Nations which lie far beyond the tempestuous ocean, and which were in olden time separated from us as if by an impassable barrier, are now looked upon as our immediate neighbours. The intimacy of two countries does not at all depend upon their relative distance from each other, but rather upon the spirit of their intercourse. Are the friendly relations we have with other foreign nations equally maintained with China? In some respects we stand on a much more intimate footing with the latter than with other countries. As regards the literature and customs of our country, everyone knows that they were introduced from China. In former days we were much more intimate with her than with any other power. But the times have changed. Most of the arts and sciences studied now-a-days by the people of Japan have been directly introduced from Europe, while the higher classes have adopted Western customs with regard to etiquette, dress, and mode of living. Yet these circumstances do not warrant our maintaining a different degree of intimacy with different nations. A glance at our present condition will convince us that our interests forbid as to be on bad terms with China. We are bound to her by ties of race and language. China and Japan should live in brotherly accord, inasmuch as the loss of national prestige would tend to cast disgrace upon their common race. We do not take Chinese to be our enemies or despised neighbours; nor have we ever dreamed of seeking an opportunity to contend with China, thereby enabling other nations to take advantage of our foolish quarrels. As far as this is concerned, we heartily echo the opinion of the editor of the *Koho*. In order to be able to enter into political competition with five or six influential Western nations, we must endeavour, hand in hand with China, to strengthen the situation of our respective countries. Then should we be inferior to no country on the globe in point of area and population, though we are not yet included in the category of competitive nations. It seems that our separation from foreign lands has shut us out from all manner of alliances. This may be due to the great distance between the Orient and the Occident. The civilization of Italy, for instance,

is of quite modern date, for hardly thirty years have elapsed since her unification. Yet has this country advanced with irresistible force, and is now prepared to play an important part in the policy of Europe. If the ancient nations of China and Japan are unable to pursue an aggressive policy, it redounds but little to their credit. They both must devote their utmost energies to nourishing their national strength for future enterprises. Their mutual quarrels will not fail to make them an easy prey to more powerful countries.

We make no discrimination between our intercourse with Western powers and China; and, at the same time, we have no desire to let other nations profit by our mutual contentions. International intercourse does not include an aggressive policy as a prime factor, though the necessity of resorting to arms may now and then arise. This is true of both China and Japan. A conflict between two nations is a matter of the greatest moment, for it immediately affects the honour and prestige of the belligerents. Although the Government may occasionally be disposed to yield a step in favour of an amicable settlement, it may even then be powerless to quiet the angry excitement of the people, and thus be reluctantly forced to declare war. Intercourse with foreign nations not infrequently involves a people in serious difficulties, in which they are forced to defend their rights, even though the trouble may have originated in a very petty matter. In such times, those who are responsible for the management of the national diplomacy are called upon to exercise their powers with all due discretion. Should we declare that our suzerainty over Riukiu must be preserved intact for the sake of our national honour—just as the editor of the *Koho* asserts on behalf of his own country—the amicable solution of the question would be utterly impossible, and the two nations would be forced into declaring war.

A proverb says:—"Those who unwittingly lead others to mistrust them, stand themselves in danger." Our country simply desires to rest on a *status quo* footing with the most powerful nations of the Occident, but we sometimes fear that it is impossible to develop our strength to the requisite pitch. We have no time to enter into any dispute with China; and if our schemes for the attainment of this country's benefit are forever to irritate our neighbour, we must give them up. We hope, therefore, that our diplomatists will refrain from adopting any measures which may tend to increase the suspicions of China. Mistrust is the source of all disputes, and the true sentiments of a man cannot be learned in a day. Let us, then, exercise the greatest discretion before adopting any course, so that our motives may be clear to the world. Let China know that we truly desire to strengthen our friendship with her, and let this underlying spirit be apparent in the most trifling matters. Then, and then only, can we expect China to cast aside her old doubts and mistrust. Some people are inclined to think that peace does not tend to promote the true well-being of a country, and that unlooked-for and trying events only serve to keep the people on the alert. Yet this opinion can be held only by those who are ignorant of the true policy. Should the emergency be of but passing importance, it might indeed stimulate the people and prove beneficial, but should it be of a momentous nature and come upon us while we are yet unprepared, the result would prove contrary to our expectations: the country would be enfeebled, and other nations would profit by our weakness.

The editor of the *Koho* has, in his usual flippant style, written most amazing statements with regard to the military and naval, as well as the internal, administration of his country. He thinks it well to allow Japan to participate in the schemes contemplated by China. But what we wish our neighbour to undertake is not simply the extension of her army and navy, nor the improvement of her domestic government. The lethargy of China is due to the habits and customs of her people. If the Chinese were no longer insincere and crafty, but frank and cordial, they might justly expect to further the prosperity of Asia. Their country is large and its population great, and there may be many among the people who are of an honest and upright nature; but, taken collectively, their customs are not to be compared with those of European nations, by reason of their shallowness and deceit. The rise or fall of a people depends entirely on their own characteristics. If their habits are corrupt, even the finest instruments of war will be of no more use to them than an armour of mail to a decrepit octogenarian. Nothing is more detrimental to a nation than corrupt manners and immoral habits. Externally the evil may not be visible, but it works sad havoc within. The abuses which flourish so rankly in China are not confined to her army or navy, but are part and parcel of her people.

CORRESPONDENCE FROM KOREA.

(Translated from the *Fiji Shimpō*).

The following correspondence from Korea has been received dated the 7th inst.:—"The streets of Sōul are deserted, trade is stagnant, and prices correspondingly high. The officials of petty rank are suffering from extreme pecuniary embarrassment. The salaries of all officials in this country are very small: in fact the annual income of a petty officer scarcely covers the expenses of one month, as things stand at present. Unfortunately for them, their official emoluments were fixed a long time since, when money was not so tight and trade brisk; but now all that has changed, and yet their salaries—little enough in the first instance—remain as they were. The immediate consequence of the hard times was that bribery became prevalent among the official classes, although very secretly carried on at the outset; but now that actual poverty reigns everywhere, bribery is openly practiced, and very generally accepted as the sole means of continued tenure of office. As the Korean proverb has it, 'Only men can carry money, but horses and oxen must carry 'bundles and parcels,'"—'bundles and parcels' being the slang term for a bribe.

A good many of the Chinese shops opened last year in Sōul have shut up, owing to the fearful depression in trade. The practice of forcing bargains is very common. Should any one rashly ask the price of an article exposed for sale, the Chinese shop-keeper will follow the tentative purchaser to his own house, in the endeavor to force the article upon him, and quarrel outright if flatly refused. The Koreans, who are always being victimized by the Celestial tradesmen, feel very bitter towards this class, while they highly appreciate the attentive courtesy of the Japanese merchants. The Engineering Bureau at Sanshinto, Sōul, has been completed. This Bureau is divided into three offices, the Machinery office, the Wood office, and the Iron office. The first is a brick-building—the first of its kind ever built on Korean soil—and in it all sorts of small machines are manufactured. The second, or Wood Office, turns out wooden wares of various kinds, while the Iron Office is devoted to metal casting. A project is on foot to start a laboratory for assaying. All the machinery in this Bureau has been imported from China.

On the 31st of last month, a report reached the Government that Go Cho-kei, who had left for China on the 11th, had arrived at Nam Yang Fu en route for Korea in company with the Tai Wong-Kun and ten thousand soldiers. The authorities hereupon immediately despatched two Chamberlains, Pak Sho-yang and Yung Tai-shun, to receive the Chinese General. This sudden and unexpected return of Go and Tai caused not a little consternation in official circles, and decidedly frightened the people. All the higher dignitaries went at once to the Palace, and remained there all night. Early next morning, however, the two messengers returned—without their unwelcome guests. The rumour was a false one, and had arisen from a rather ludicrous cause. It seems that one of the passengers of a Chinese merchant vessel, which had stopped at Nam-yang, presented himself while under the influence of wine at the Magistracy, and stated with tipsy solemnity that, on the eve of his departure from Chefoo, Generalissimo Go had ordered him to report that he (Go) would leave Chefoo for Korea the following day, in company with the Tai Wong-Kun. Unfortunately, the magistrate of Nam Yang happened to be absent at the time, having left for the Capital on official business, and his subordinates, being of a credulous turn of mind, took the statements of the inebriated Chinaman at par value and immediately forward the *canard* to the Capital, where it caused great confusion.

At Pu-phyōng Fu two thousand men from the adjacent maritime districts are to be enrolled for military service. They will be trained in Japanese style, and serve as coast-guards. A special office for the coast defence has been established; but, although conscription is going steadily on, no new forts are in course of construction, neither are the old ones undergoing repairs. The magistrate of Kaisōng Fu will mobilise 1,000 men, to be drilled in Japanese fashion. Since his appointment as Commander of the troops at northern Ham-gyōng-do, Yun Ung-nyōl has trained over 1,000 men in Japanese style, and sent scores of picked soldiers to the Court at Sōul. Hong Yōng-sik (son of the Prime Minister, Hong Sun-mok), who has just been appointed commander of the troops in the southern part of the same district, has also adopted Japanese military discipline. The Chinese Consul at Sōul was refused the sale of a house which he wanted to buy in an adjacent village. He thereupon requested the Japanese Minister to buy the house for him, but in vain. The fact is that the neighbours in the adjoining houses unanimously refused to

live within hailing distance of a Chinese household.

The Koreans show a thorough appreciation of the cleanliness of the Japanese mode of living, despite their own dirty habits. Those who live near the Japanese Legation have agreed to keep their dwellings as free from impurities as possible. Mr. Okada, of our Legation, is very popular with the Koreans. When the fire broke out last year in the gunpowder storehouse belonging to the Palace, causing the destruction of so much property and so many lives, Mr. Okada gave five or six *riyo* to every sufferer: the whole gift amounting to 200 *riyo*. A large number of cherry-trees have been imported from China, and are being planted at Kang-wōn-do. Several Koreans intend starting a printing office at Sōul. The Government has ordered the house of Mei-sho to discontinue trade. The students of the Government School, attached to the T'sung-li Yamēn, left that establishment on the 1st instant, in a body, there having been hard feeling between them and the President for some time past. Mr. Shimamura, *Chargé d'Affaires*, is as popular as ever, and his advice is eagerly sought in all manner of matters.

(Translated from the *Mainichi Shimbun*).

This year's crop is a complete failure, and, among other districts, Kyōng-sang-do is especially badly off. The people live for the most part on beans, as the rice is entirely exhausted. The troubles of the people are daily on the increase, and robberies are reported everywhere without the least hope of staying them. Since the commencement of the month, the magistrates have been distributing rations of rice among the poorer classes. Pak Yōng-hyo (Senior Minister to Japan) is much grieved at his loss of influence since the Japan party have become less powerful at Court, and seriously thinks of coming over to live in Japan so soon as Min Yong-ik shall have returned. Mr. Von Möllendorff, Adviser to the King, lately forwarded three Memorials to the Government, the first of which is said to treat of the introduction of Chinese currency, and the establishment of Chinese bank-agencies. The Telegraph Office was formally opened on the 10th instant in the presence of several Japanese and Korean dignitaries. The Japanese Chamber of Commerce at Pusan has decided to despatch Messrs. Takasu and Yenomoto to Shanghai in order to report upon the state of commerce at that port. This step has been taken in order to open direct communication with Shanghai, for it is feared that foreigners will otherwise absorb the whole import of Shirtings and Mousseline de Laine, which two articles constitute the principal imports from Japan at present. If communication with Shanghai is fairly started, the Japanese merchants will be considerably in advance of their foreign rivals.

Trade at Pusan is still in a deplorable condition. A considerable quantity of rice is being sent from Japan to Korea owing to the almost universal famine, but the native buyers haggle so long over the price that the actual profits of the Japanese importers are very small. As for the beggars in Pusan, their name is legion. The Government is unable to give these paupers sufficient rice to keep them alive, and two died recently of starvation in the public streets. Female paupers often come to the Settlement, and many of them, sad to say, sell their virtue for a small bowl of rice. A similar state of affairs reigned in 1876, when famine was all over Korea, and in 1877 hundreds of paupers died of hunger within the very precincts of the Settlement. The influx of beggars this year is abnormally large.

IN THE TOKIYO COURT OF APPEAL (KOSO SHIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—TUESDAY, 22nd April, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsu Bishi Mail Steamship Company's steamer *Akitsushima Maru*. Between Johannes Frahm, Danish subject, late master of the steamship *Akitsushima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

On the opening of the Court, Mr. Rossetsu said that before continuing his argument he would request the Court to ask the Directors of the Mitsu Bishi Mail Steamship Company to request the attendance of Captain Young and his chief officer,

the next time they were in port, as he did not know the exact date upon which the ship would arrive. It would be impossible to fix the date at the present time, but as it would not occupy the Court long, he hoped that a special hearing might be arranged if necessary. Proceeding, the attorney for the appellant, said that the respondent's answer to the petition contained numerous references to the regulations issued by the Directors of the Mitsu Bishi Mail Steamship Company to the masters of their ships. No mention of these regulations, however, had been made at the first hearing of the case, and, therefore, the appellant did not have an opportunity of fully explaining why he had not carried them out in their entirety; but he, the counsel, did not see what these rules had to do with the decision of the Court, as they were not embodied in the laws of the country, but were only the regulations of a private company, by which the Court of Enquiry should not have been influenced. Referring to the trim in which the vessel was despatched, the answer of the respondent states that the appellant still further put her out of trim by filling the after-tank with water, and thereby put her down 6 ft. 8 in. or 10 in. by the stern. This might have appeared to be so with an ordinary vessel, but in this case certain cargo had been engaged which did not come forward up to the advertised time of sailing, and the vessel being a mail steamer and having to leave punctually, the Captain was obliged to fill the after-tank with water to immerse the screw. Again, in respondent's answer it was stated that the Captain ought to have taken two distinct bearings of the light before he left the bridge, which would have at once told him that he was in most dangerous proximity to the land and that the light seen was not the Shiriya-saki light. Regarding this point, any child could see that taking these bearings, although they might enable the Captain to judge his distance from the light, and the speed of the ship, would give him no information as to what light it was. In continuing, counsel referred to paragraph 13 of respondent's answer relative to giving over charge to the chief officer before he was sure of his position, and mentioned that he had stated before that the Captain was confident that it was the Shiriya-saki light. Again, looking at the evidence, it had been stated that supposing it had been the Shiriya-saki light and the vessel had been only three or four miles off it, the course that the Captain laid down would have been a safe one, whereas when he gave up charge she was 15 miles off. The evidence also showed that the Captain before leaving the deck told the chief officer to call him if any change should occur. Twenty minutes after this the light disappeared, but the chief officer did not call him. If the light had been the Shiriya-saki light it would not have disappeared, therefore the chief officer was to blame and not the Captain. That being so, the question had to be considered as to who engaged the chief officer. It was not the appellant, but the Directors of the Mitsu Bishi Company. If the Captain had appointed him he would have been responsible for him. Counsel therefore contended that the loss of the vessel was owing to the negligence of the chief officer and not the appellant. In paragraph seventeen of the answer it stated that the master disdained asking the opinions of his officers as to the position of the ship. The reason for that might be easily understood by reading the evidence given by the mate, which showed that he was not a reliable man. He had stated that his sextant had been lost three years previously, and had not been replaced, in fact, he had no instruments on board the vessel. He had not written up the log, as he did not understand how to write it up properly. It was customary all over the world that the chief officer of a vessel should have instruments and take observations every day, in fact a chief officer ought to be in the position to take charge should any unforeseen occurrence disable the Captain. This officer having been appointed by the owners of the vessel it would naturally be supposed that he should be a competent man. But although the Captain, as stated in his evidence, did not consider the chief officer a thoroughly competent man, still he said that he would trust him to navigate the vessel up to within three or four miles from the land. Considering, therefore, that the ship, instead of being 3 or 4 miles, was from 12 to 15 miles from the light, and that the Captain was confident that the light seen was the Shiriya-saki light, he was perfectly justified in handing over the vessel to the charge of the chief officer. In conclusion, Counsel stated that the sum and substance of his argument was that there were two causes to which the loss of the ship should be attributed, viz.:—That the appellant was misled by a false light of which he had no previous knowledge, but which closely resembled the Shiriya-saki light, and which light was sighted where he expected to pick up the Shiriya-saki light, and also, that although the captain had given orders to the chief officer to call

him should any change take place, he failed so to do, although he lost sight of the light within 20 minutes from the time that the Captain went below. If the chief officer had obeyed his instructions there was little doubt but that the vessel would not have been lost, and that the loss of the ship must be attributed to the chief officer and not to the master.

Mr. Ramsay requested the Court to furnish him with a copy of Mr. Rossettsu's argument, so that when he made his reply he would not be liable to error. But if he could take the reports as published in the *Gazette* and the *Mail* as correct, he was prepared to proceed at once with his argument.

The Court said that it could not guarantee newspaper reports.

Mr. Rossettsu said that he had carefully read the reports, and they were correct, in fact Mr. Ramsay need have no fear, for every point of his argument was embodied in them.

The Court thought it advisable, in order to avoid any future misunderstanding, that a copy of the record of the Court should be handed to Mr. Ramsay for translation before he replied.

Mr. Ramsay then asked the legal adviser for the appellant whether he wished to make any alterations or additions to the statement he had made at the previous hearing.

The record of the Court was then read to Mr. Rossettsu, who affixed his stamp, remarking that although he did not wish to alter anything he had said, he had not closed his case, and reserved the right to argue further on the matter after the evidence of the witnesses had been heard.

Mr. Ramsay said the only reason why he had asked the question was, that neither the respondent nor his attorney wished to take the slightest advantage of the appellant, his attorney, or legal adviser.

Mr. Rossettsu remarked that what Mr. Ramsay wished to say was that he did not wish to trip him up (*age ashi wo toritaku nai*), but he felt prepared for him at every point.

The Court then adjourned to 1.30 p.m., when the argument delivered by Mr. Rossettsu in the morning was read over to him and confirmed.

The Court adjourned to the 28th instant.

FRIDAY, 25th April.

On the opening of the Court, Mr. Uchiyama Rossettsu said that he was willing to interpret Captain Young's evidence. The Court interpreter and the interpreter for the respondent could check him, and he thought that by this means the proceedings would be facilitated.

Christopher Young stated that he was a seaman and master mariner. He had been a Captain in the Mitsu Bishi Mail Steamship Company nearly 10 years, and was well acquainted with certain portions of the coast of Japan. He knew that portion between Yokohama and Hakodate very well. Remembered going to the assistance of the *Akitsu-shima Maru* when she was stranded. The *Akitsu-shima Maru* was wrecked at a place named Odonosawa, about 15 miles south of the Shiriya-saki light. Two or three days after he arrived at the scene of the disaster, when he was standing off from the land about 12.30 a.m., he saw a light and called Captain Frahm and showed it to him saying that that must be the light he had mistaken for the Shiriya-saki light. Captain Hog and the second officer were present on that occasion. It was the 15th of October, 1883, when he saw the light. The light was about 5 miles from Odonosawa in a southerly direction, and from where he was it bore W.S.W. about 5 or 6 miles distant. The wreck bore due West about 3½ miles from him. The light could not be seen from the wreck. He considered it to be a light or old fashioned beacon light on the shore. It was a fixed light. The colour was bright white, and under the circumstances, owing to the fog and haze, it strongly resembled the Shiriya-saki light. During the past winter he had frequently seen the Shiriya-saki light owing to haze and snow have a similar appearance. He would not say that Captain Frahm was justified in taking the said light for the Shiriya-saki light, but at the time he saw it, he told Captain Frahm that under those circumstances he might easily have mistaken the light for the Shiriya-saki light. If the light had been the Shiriya-saki and the *Akitsu-shima Maru* headed E. by N. (error 11 degrees easterly), and the light bore magnetic W., the vessel being 12 to 15 miles off, the course being N.W. by W. (error 9 degrees westerly), she would have passed clear of all danger. Even if she had only been 6 miles off, she would have been safe. He did not hear Captain Hog make any remark or express any opinion when they saw the light first, as he (witness) was on the bridge and Captain Hog and the second officer were on deck. It was impossible for a master upon seeing a light to tell what light it was by taking bearings. In a typhoon or bad weather it would be impossible to get the exact leeway the ship was making by holding the log-line over the compass, but it would give

it approximately. He had sent a report regarding this light to the Mitsu Bishi Mail Steamship Co. on or about the 13th November last.

Counsel remarked that this was previous to the judgment being delivered.

Witness, continuing, said that, considering the weather the *Akitsu-shima Maru* had experienced for 48 hours and more, and considering the currents, etc., he thought the Captain was certainly not to be blamed for finding himself 20 or 24 miles out in his reckoning; he might have been 60 miles out.

To Mr. Ramsay—When the false light disappeared it was about the same distance from his vessel as when he first sighted it, that was about 6 miles, the vessel being stationary. He only saw the light one night. The colour of the light was bright white. It could not have been a bright red light; it was white. The light might have resembled a fire or the breaming of a vessel. At the time he saw the light the weather was not clear.

Mr. Ramsay—Would you kindly mention to the Court what your proceedings would have been supposing your vessel had been placed in the same position as the *Akitsu-shima Maru*.

Mr. Rossettsu objected to the question, on the grounds that unless the witness was really placed in the same circumstances he could not possibly now say what he would have done; furthermore, knowing all that has happened and being an employee of the Mitsu Bishi M.S.S. Co., he must, though unintentionally, be somewhat prejudiced.

Objection overruled.

Witness replied that in the first place the *Akitsu-shima Maru*, her engines having been stopped, was not going through the water, and when the log-line was ready, and he sighted the light bearing East he would have hove the lead, which might have probably guided him as to his approximate position. If he had not got soundings he would have put her on a N.W. course and then have watched the alteration of the light. He would ascertain the correct distance that he was off the light by the bearings and the speed of the vessel.

Mr. Ramsay—Would you yourself have left the deck after a lapse of 8 or 10 minutes after sighting the light.

Mr. Rossettsu objected on the same grounds as before.

Objection overruled.

Witness—No.

Continuing, witness said that at the time of taking the second bearing he would have hauled the ship out at once, owing to the rapidity in the change of the second bearing. As he had previously stated, the currents, etc., after extremely tempestuous weather would sometimes carry a ship 60 miles out of her reckoning. In his opinion Captain Frahm was justified in accepting that light as the Shiriya-saki light, the currents being conflicting, etc., and all the precautions he had before mentioned having been taken, viz.:—taking the bearings and carefully watching them. During tempestuous weather it was usual to take more than ordinary care in the navigation of a ship. He would estimate the leeway principally by the speed of the vessel, force of the wind, and the bearing of the wake of the vessel by the compass. He would mostly have to guess at it at night, as then he could not correctly nor nearly correctly take the bearing of the wake. Up there at that time of the year it was mostly night. During the day he would not have guessed it. He considered that some vessels might be seaworthy, even during the typhoon season, drawing 6 ft. 8 or 10 in. by the stern, but whether the *Akitsu-shima Maru* was or not he was not prepared to say.

Mr. Ramsay—Does it not prove the unseaworthiness of the vessel that though having a speed of 5 knots she would not answer her helm, although she had a wind 2 points abaft the beam.

Witness—I consider that under the circumstances a speed of 5 knots was not sufficient to bring her on her course and make her steer properly.

Mr. Ramsay—You say that the speed was not sufficient to bring her up with the helm hard down and the wind 2 points abaft the beam. Does that not prove her unseaworthy?

Witness—No, not unseaworthy.

Mr. Ramsay. The hurricane force of the wind was experienced from S.W. to W. in the case of the *Akitsu-shima Maru*. The vessel was 10 points off the wind. Hove to with the wind at W. the vessel would be heading N.N.E., making 4 points leeway she would be making E.N.E. Now supposing the hurricane force of the wind to have been experienced from the E., she would then be heading N.N.W., 4 points leeway would give her a W.N.W. course on the starboard tack, and being in close proximity to the land, would she not have been in an unsafe position?

Mr. Rossettsu objected on the grounds already stated in his first objection to such questions.

Objection overruled.

Witness—Yes, she would. The danger would have been drifting ashore.

Witness went on to say that the vessel would have been in danger supposing she were put on the port tack with the wind easterly and she heading S.S.W. with 4 points leeway. The danger would have been caused by the vessel being so high out of the water forward, but that did not prove her to be unseaworthy on account of her trim. If he had charge of the vessel and knew her to be in such trim he would not put her in that position. He would either have kept his vessel off the land when he found bad weather coming on, or if possible, have run for a port. If a vessel in good trim had been placed in such a position she might have gone ashore and no one could say she was unseaworthy. He would not take a vessel under his command to sea trimmed 6 ft. 8 or 10 in. by the stern.

To the Court—He would not do so because in a typhoon or severe weather she would be practically unmanageable.

To Mr. Rossetts—He watched the light from 12.30 a.m. to about 1.30 or 1.45 a.m. His vessel was stationary as much as it was possible to keep her. He could not say whether the light was put out or obscured by the fog, the weather being hazy at the time. At night he would have to guess the leeway, by day he would see the wake of the vessel which would be a guide, but it was more or less guess work.

This closed the examination of the witness, and the Court adjourned till the 28th instant at 10 a.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, APRIL 18TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

—represents velocity of wind.

—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 29.8 miles per hour on Monday, at 2 p.m.

The highest reading of the barometer for the week was 30.206 inches on Thursday at 9.27 p.m., and the lowest was 29.396 inches on Wednesday, at 10 a.m.

The highest temperature for the week was 69.4 on Monday, and the lowest was 39.0 on Saturday. The maximum and minimum for the corresponding week of last year were 78.8 and 48.2 respectively.

The total amount of rain for the week was 1.651 inches, against .033 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Europe,	via Hongkong, per M. M. Co.	Tuesday, April 29th.*
From America ...	per P. M. Co.	Friday, May 2nd.†
From Shanghai,	Nagasaki, & } per M. B. Co.	Thursday, May 1st.
Kobe	
From Hongkong,	per P. & O. Co.	Monday, May 5th.

* Godavery (with French mail) left Hongkong on April 23rd.
† City of Tokio left San Francisco on April 12th.

THE NEXT MAIL LEAVES

For Kobe per M. B. Co.	Saturday, April 26th.
For Europe, via Hongkong	... per P. & O. Co.	Sunday, April 27th.
For America per O. & O. Co.	Sunday, April 27th.
For Shanghai, Kobe, and Nagasaki	... per M. B. Co.	Wednesday, April 30th.
For Europe, via Hongkong	... per M. M. Co.	Sunday, May 4th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 2.30, and 4.30 p.m.; and leave Yokosuka at 6.40 and 9.45 a.m., and 12 m. and 1.45 and 4.15 p.m.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Hiogo Maru*, from Kobe:—Mrs. Hayakawa and child, Mrs. Ishikawa, Miss Hayakawa, Messrs. George Sale, Charles V. Sale, Yamada, Kondo, Yoshitomi, Yagami, Hiroto, and Shiwomi in cabin; and 80 Japanese in steerage.

Per Japanese steamer *Tokai Maru*, from Hakodate:—8 Japanese.

Per American steamer *City of Rio de Janeiro*, from San Francisco:—Dr. T. C. Thornicraft, Messrs. F. Hyller, A. Blumenthal, C. B. Bernard, J. Gillingham, K. Yamao, and G. Nagata in cabin. For Hiogo: Miss Rebecca F. Falls in cabin. For Nagasaki: Rev. and Mrs. H. Harris, Miss G. Howe and 2 children, Miss M. E. Barlow, and Miss C. B. Richards in cabin. For Shanghai: Miss Jessie A. Purple, Messrs. L. Glenat, Thos. Craven, J. Samson, Thos. Gittins, and C. Coleman in cabin. For Hongkong: Captain E. Thebaud, Messrs. Geo. MacKenzie, W. Laidlaw, and Chan Hi Hun in cabin.

Per Japanese steamer *Shinagawa Maru*, from Kobe:—H.E. Inouye and suite, Messrs. Todd, Struthers, and Fujita in cabin; and 18 Japanese in steerage.

Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—Surgeon-General and Mrs. Robinson, Mrs. Lai and child, Major Greenfield, Rev. A. Newman, Messrs. F. Medwin, D. M. Enriques, J. Loureiro, A. Savage, Rowland, H. A. Whyllie, G. H. Prichard, A. Clarke, An Yun, Sik He, Pen Wo, Huo Kum, Lai Bung Woon, Yen Sue Ping, Min Cung, Yeu Tung, and Wing Hin Hing in cabin.

Per Japanese steamer *Kosuge Maru*, from Kobe:—40 Japanese.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Mrs. Holmes, 3 children, and amah, and 9 Japanese in cabin; and 76 Japanese in steerage.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mr. and Mrs. Conrad and child, Captain and Mrs. MacDonald, Mr. and Mrs. Foss, Mr. and Mrs. Boesal, Mr. and Mrs. Matsumura, Mrs. Anderson, Misses Boesal (2),

Miss Bergner, Miss Ludwig, Miss Hoffmann, Miss Fischer, Bishop Williams, Dr. Harrell, Messrs. De Bovis, J. D. Carroll, T. C. Spooner, Yamada, Tanabe, Nonaka, Tsumagi, Nakayama, Sawara, Sonoda, Nakajima, Wakai, Numaguchi, Kobayashi, and Shindo in cabin; and 11 Europeans, 3 Chinese, and 168 Japanese in steerage. For America and England: Rev. and Mrs. L. N. Wheeler and 2 children, Mr. and Mrs. Jas. Buchanan and 2 children, Messrs. Ellwood, Wm. Bean, G. V. Fittock, and F. J. Cartuyvels in cabin.

Per British steamer *Oceanic*, from Hongkong:—Captain G. H. Chippendale, Messrs. J. A. Jefferey, Shaw, and Cheong Din in cabin; and 1 Chinese in steerage. For San Francisco: Mr. and Mrs. Young, Rev. S. B. Partridge, 2 children and servant, and Rev. A. Reidhaer in cabin; and 760 Chinese in steerage.

Per Japanese steamer *Seisho Maru*, from Kobe:—36 Japanese.

Per Japanese steamer *Shima Maru*, from Yokkaichi:—43 Japanese.

Per Japanese steamer *Niigata Maru*, from Kobe:—Messrs. H. G. Walsh, S. Caldercott, T. Sinclair, Yamada, Ohara, Inki, Hayashi, and Okamura in cabin; and 1 European and 83 Japanese in steerage.

Per Japanese steamer *Uke Maru*, from Shimidzu:—22 Japanese.

Per Japanese steamer *Horai Maru*, from Yokkaichi:—43 Japanese.

Per Japanese steamer *Onoura Maru*, from Fukuda:—23 Japanese.

Per Japanese steamer *Tamaura Maru*, from Korea via Kobe:—56 Japanese.

Per Japanese steamer *Toyoshima Maru*, from Hakodate via Niigata:—12 Japanese.

DEPARTED.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—Mr. Yagami in cabin; and 75 Japanese in steerage.

Per French steamer *Volga*, for Hongkong:—Mrs. Nicholson, Dr. Iwasa, Messrs. O. Akimoto, I. Higama, F. Yano, Kanai, E. Kato, Miyamoto, Iwasa, Kashimura, Nakajima, and Fujisawa Sada in cabin.

Per Japanese steamer *Niigata Maru*, for Kobe:—Governor and Mrs. Tokito, Miss Tokito, Messrs. J. Sato, and H. Watanabe in cabin; and 125 Japanese in steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Dr. and Mrs. Endo, Miss Howe and 2 children, Admiral Akamatsu, Rev. H. Loomis, Messrs. E. de Bavier, J. Samson, C. A. Taylor, J. F. Broadbent, A. Stewart, T. Craven, T. Gittins, L. Glenat, U. Do Wintle, U. Videau, Battake, Ikeda, and Watanabe in cabin.

Per American steamer *City of Rio de Janeiro*, for Hongkong:—Captain E. Thebaud, Messrs. Geo. MacKenzie, W. Laidlaw, and Chan Hi Hun in cabin.

Per Japanese steamer *Tokai Maru*, for Niigata:—65 Japanese in steerage.

Per Japanese steamer *Taganoura Maru*, for Yokkaichi:—Messrs. N. Nagai and R. Otani in cabin; and 50 Japanese in steerage.

CARGOES.

Per French steamer *Volga*, for Hongkong:—Silk, 82 bales for France.

Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—1,838 packages.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$53,000.00.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Treasure, \$70,000.00; for America: 22,145.00.

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain R. Walker, reports leaving Kobe on the 17th April, at 6 p.m. with moderate head winds throughout the passage. Arrived at Yokohama on the 19th April, at 6 a.m.

The American steamer *City of Rio de Janeiro*, Captain Robert R. Searle, reports leaving San Francisco on the 29th March, at 5.20 a.m. with moderate weather throughout the passage. Arrived at Yokohama on the 21st April, at 5.20 p.m. Passage, 22 days.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard reports leaving Kobe on the 23rd April, at 6 p.m. with fresh N.N.W. winds to Oo-sima; thence to port light variable winds and fine weather. Arrived at Yokohama on the 25th April, at 6 a.m.

LATEST COMMERCIAL.

IMPORTS.

The Market generally remains without much change, clearances have been good. There have been no serious complaints of the country trade from dealers, and currency has been pretty steady.

COTTON YARN.—A small business continues almost daily, buyers are not disposed to operate largely, and holders are satisfied to sell sparingly so long as prices are much below present home cost. 28/32's and 38/42's have had most attention and are rather higher.

COTTON PIECE GOODS.—There has been more demand at improved rates for 9 lbs. and 8½ lbs. Shirtings as well as 7 lbs. T.-Cloths. Fair sales of Turkey Reds have been reported and there has been an enquiry for Velvets at higher prices.

WOOLLENS.—Mousseline de Laine have been sold to a fair extent, but only small sales are reported of Italian Cloths and other piece goods. A large sale of Blankets at an extremely low figure has been reported.

White, No. 5	4.60 to 4.75
Brown Formosa	3.20 to 3.25

EXPORTS.

RAW SILK.

Our last issue was on the 18th instant, since which date there has not been so much doing, Settlements for the week being no more than 100 piculs. Business has again been confined to few buyers who towards the end have paid a further advance on a few bales of *Filatures* of \$20 per picul. The demand for *Hanks* is apparently filled for the moment, although telegrams from London report a better feeling there: and mail advices tell us that deliveries from Dock Warehouses for January and February were good, and tending towards reduction of Stock. It is not easy to account for the renewed rush after *Filatures* and *Re-reels* here at such advanced prices. In *Kakedas* there has been next to nothing done, last advices from Shanghai report *Re-reels* *Tsatlees* more plentiful there, and the outgoing American steamer will carry a fair quantity at moderate rates.

The M.M. steamer *Volga*, which left this port for Hongkong on the morning of the 20th instant had on board 82 bales (of which 25 were "Direct" shipments) all destined for Continental Europe. This vessel's cargo brings the Export to date up to 28,910 bales, against 26,083 bales last year, and 18,000 bales in 1882.

Advices from the interior report the weather as favorable for the New Crop, and hatching was expected to commence to-day in Yamanashi Ken.

Hanks.—About one-half the small business transacted has been in this class; and it is expected that these purchases, together with others made since last mail, will find their way eastwards per *Oceanic*. Prices actually paid show but little change, although dealers are naturally conservative and would like to realize an advance. Business noted has been in *Chichibu* at \$510, and *Annaka* \$515.

Filatures.—These exhibit a marked rise, a strong advance having been paid by one buyer the last two days. The total purchases do not amount to any quantity, but include *Tokosha* \$670, and *Kosho Yajima* \$650. Earlier in the week *Yamagata* was done at \$600, and *Takasaki* \$580.

Re-reels.—Holders by keeping firm have gained their point, a small parcel *Katsuyama* has been settled at \$645, while the parcel of *Tortoise*, mentioned a fortnight ago as being held for \$640, has been finally weighed up at that figure.

Kakedas.—One or two small purchases reported in sorts costing \$570 to \$550. Stock is but small; it includes one fair-sized parcel of *Chocho*, for which \$650 is asked.

Oshu and Coarse Kinds.—These still remain quite neglected, and position is unchanged.

England	2,639	4,064	3,315
Total	28,910	26,083	18,000

WASTE SILK.

Business has continued much as last advised, and Settlements for the week are about 150 picul

divided between *Noshi*, *Kibiso*, and *Neri*. A few dribbles of good quality have come in, and been taken up at full rates. There are still enquiries for qualities which do not exist.

The M.M. steamer *Volga*, which sailed hence on the 20th instant, carried 122 bales, of which 40 bales were entered for England, and the remainder for France. This vessel brings the figures of Export up to 22,767 piculs, against 22,706 piculs at same date last year, and 22,926 piculs in 1882. Arrivals have not kept pace with the sales made, and the Stock in Yokohama is yet further reduced.

Noshi.—There has not been much done, the sales reported being about 40 piculs. A little has been done in *Filatures* on the basis of \$135 for *Hagiwara*. A fair parcel of *Oshu* is held for \$150. Something has passed in Common *Joshu* at \$70 to \$75, and there are enquiries for "Good Assorted;" but reliable quality is not to be had at present. A little fine *Bushu* of Medium grade has found a buyer at \$105.

Kibiso.—About 100 piculs settled in this class, ranging from *Filatures* at \$120, to *Low Curlies* at \$25. The sales reported comprise *Oshu* at \$55, *Joshu* \$40, *Low Curlies* \$25. One parcel of *Neri* at \$11 to \$14 uncleaned.

Mawata and Sundries.—Nothing whatever to chronicle in these either in or out.

Total piculs	950	Total piculs	410

TEA.

A few piculs of forced garden musters representing the New Teas have arrived from the country, and appear to be very pure and of good quality, but we are not yet in a position to give any reliable report on the quality of the crop, as there are some irregularities in the musters now shown, besides which the produce of the best districts has not yet arrived, and samples are scarce as yet. The small daily arrivals of New Teas have been sold to various Tea firms at about equivalent of 10 dollars less than last year's prices, and they will go forward by the steamer of the 27th instant. The weather has been very changeable during the week for the growing crop. However, the producers say the crop is progressing favorably.

EXCHANGE.

Rates have again advanced during the week and show signs of still further improvement, the business transacted has however been small. Closing quotations are:—

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

YOKOHAMA: SATURDAY, MAY 3RD, 1884.

DEATH.

On the 16th March, 1884, at No. 25, Russell Square, London, JAMES ELLERTON, aged 65 years.

SUMMARY OF NEWS.

HIGHWAY robberies with violence have taken place in the neighbourhood of Kiyoto.

A PROJECT is on foot to rebuild all the bridges in the Capital (Tokyo) of stone or iron.

IT is proposed to form a Company for the purpose of exporting gold-fish to Europe.

SOME Japanese gentlemen in Kiyoto have combined to form a social club in European style.

SIX Nordenfeldt guns have been added to the armaments of the *Fuso Kan*, *Hiyei Kan*, and *Kongo Kan*.

THE opening of the new Social Club at the Rokumei-kwan, Tokyo, has been postponed till the 18th instant.

THE sum to be expended on the construction of fortifications during the approaching fiscal year is stated to be 240,000 yen.

ON the 16th ultimo about 100 acres of the

Government forest in Kawabe district, province of Settsu, were destroyed by fire.

MR. W. H. SMITH, one of the oldest and best known residents of Yokohama, died at Winnipeg, Canada, on the 21st of January.

THE auction-room of Messrs Bourne & Co. was broken into on the night of the 30th ultimo, and various goods were stolen.

A CONFLAGRATION in the village of Ogushi, Yamaguchi Prefecture, on the 17th instant, destroyed 177 houses. One woman was killed.

THE appropriation for the foreign missions of military officials is to be increased by a sum of 25,000 yen from the next fiscal year, beginning in June.

IT is stated that the Arsenal at Koishikawa (Tokyo) and Osaka have refunded 954,420 yen, being a portion of the advances made to them by the Government.

HIS Excellency Sir Harry Parkes, accompanied by Mr. W. G. Aston, is at Söul, whither he has gone to complete the treaty arrangements between Korea and Great Britain.

MR. J. CONDER, M.R.I.A., has received the Fourth Class of the Order of the Rising Sun. Mr. Conder's name is associated with the best architectural works in Tokyo.

IT is reported that the demand for hon.-spun cottons is considerably on the increase in the southern provinces, and that the cotton factories in Osaka are doing a thriving business.

A PROJECT for the construction of a railway between Osaka and Sakai, a port in the neighbouring province of Idzumi, has been officially sanctioned, and the work will shortly be undertaken.

ON the night of the 26th ultimo, a burglar effected an entry into the godown of a broker living in Muromachi, Tokyo, and made away with a sum of 8,800 yen in gold and silver.

A NEW building for the Tokyo University has been completed in Kaga-yashiki, and the University will remove there next July. The former building will be used as a preparatory school only.

A NEW highway has been opened between Kisarazu and Kanuki, in Shimosa, and another is about to be constructed from Sakai, in Idzumi, to Kokubu, in the neighbouring province of Kawachi.

THE detachment of Japanese soldiers stationed in Korea is suffering from an epidemic of typhoid fever, and it has been determined to replace them by troops from the Tokyo Garrison.

ON the morning of the 29th ultimo, a Japanese residing in Matsukagecho, Yokohama, attacked his wife and her paramour, injuring them both seriously, and afterwards disembowelled himself.

EXTENSIVE floods are reported to have occurred at the end of February in the island of Kume,

Okinawa Prefecture (Riukiu). Forty-four head of cattle were drowned, and two bridges carried away.

THE propagandists of the Monto sect of Buddhism, who went some time ago to China and Korea, have returned to Kiyoto, convinced, it is said, that their labours were a complete failure.

A FIGHT took place at Osaka, on the night of the 24th ultimo, between the police and some thieves whom they had surprised. Two of the constables were severely injured, and of the three thieves one escaped.

THE Island of Utsuro, the ownership of which was formerly considered uncertain, has been definitively declared Korean property. It is thickly wooded, and Japanese had been in the habit of going there to fell timber.

THE people in Tokushima Prefecture are said to be suffering considerable distress owing to the failure of the rice crops in that district last year. A sum of money has been granted for their aid out of the Agricultural Relief Fund.

AN association called the Union Commercial Company (*Kiyodo Shokwai*) is about to be formed with a capital of 200,000 yen, for the purpose of exporting manure from the Hokkaido to the principal rice-producing districts in the north.

ON the 29th ultimo, a broker named Tanaka made away with a sum of about 50,000 yen which he had obtained under false pretences from some Japanese merchants in Yokohama. He was arrested the following day in a tea-house at Noge-yama.

THE Spring Meeting of the Union Race Club came off at Toyama, Tokyo, on the 26th, 27th, and 28th ultimo. The racing was excellent. Several very valuable prizes were given. There were 21 events, three of which were carried off by foreign-owned ponies.

THE hearing of the appeal case, in which Captain J. Frahm, late of the M.B. S.S. *Akitsu-shima Maru*, and H.E. General Saigo, Minister of Agriculture and Commerce, are respectively appellant and respondent, is still going on before the Tokyo Court of Appeal.

DURING the religious festival held at the celebrated monasteries of Koya (about 40 miles from Osaka), during March and April, to commemorate the 1050 anniversary of the death of Kobo Daishi, no less than 326,000 pilgrims visited the temples.

AT a Naval Court held at Her Majesty's Consulate, Yokohama, on the 30th ultimo, Alexander Singleton, a seaman of the British steamer *Oxfordshire*, was sentenced to six weeks' imprisonment with hard labour for assaulting his superior officers.

THE shares of the Nippon Railway Company are now quoted at a premium of from 8 to 16 per cent. These shares are paying from 10 to 12

per cent. interest already, and they will probably pay from 15 to 20 per cent. When the resources of the Tokiyo-Takasaki line are properly developed.

THE Priests of the Higashi-Hongwanji Temple, at Kiyoto, have decided to raise ten million *yen* for the purpose of rebuilding the temple, which was destroyed by fire some years ago. They have applied to the Government for a loan of three million *yen* to be repaid in ten annual instalments.

SEVERAL Japanese gentlemen have combined for the purpose of establishing a Christian College in Kiyoto. Chief among the promoters are Messrs. Nijima and Yamato, the former of whom, when recently on a visit to the United States, received promises of considerable donations towards the work. A merchant, Mr. Tokura, has subscribed 3,000 *yen*.

THE opening ceremony of the Tokiyo-Takasaki Railway, which was to have taken place on the 1st instant, but owing to the indisposition of His Majesty the Emperor was postponed till the 5th, is now, we learn from the *Kwampo* of to-day, indefinitely postponed on account of the continued indisposition of the Mikado.

RECENT researches show that the two oldest temples in Japan, and probably the two oldest buildings in the empire, are the temple of Rengein, in Kiyoto, and that of Hôjôji, in Yamashiro. The former—commonly called *Sanjusangendô*, on account of its great length (198 feet)—was built 753 years ago, and the latter, 730 years. For wooden buildings, these are very respectable antiquities.

IN consequence of representations made by the Honorable P. Le Poer Trench, when acting as H.B.M.'s Chargé d'Affaires, it has been decided to send to the Health Exhibition, London, complete models of Japanese houses, house-fittings, and so forth. The collection will be made with great care, and will probably be found exceedingly interesting, not only from an ethnological point of view, but also as a specimen of the unrivalled skill of Japanese carpenters.

STATISTICS of the fires that occurred in Tokiyo during 1883 have been published. The figures are as follows:—86, incendiarism; 38, burning of straw; 38, kitchen furnaces; 26, playing with fire; 17, braziers; 14, lamps; 12, smoking; 8, jars containing cinders of burnt charcoal; 9, bath-rooms; 8, refuse ashes; 8, ignition of kerosene; 4, candles; 4, cinders; 3, steam furnaces; 3, Japanese lamps; all other fires originated from unknown causes. The buildings destroyed covered an area of 8,959 *tsubo* (7.5 acres).

THE Annual General Meeting of the shareholders of the Yokohama Public Hall Association was held at the Club Hotel on the afternoon of the 30th instant. The accounts showed that all the shares subscribed for, with the exception of 25½ (\$1,275), had been paid up, and that the debts of the Association amounted to \$322. The sum spent upon the building amounted to \$12,948.69, and a further outlay of \$15,000 was anticipated. The efforts of the Directors to raise this sum had, however, failed. A new Board of Directors was elected, consisting of Messrs. Fitz-Henry, Gay, Morriss, Reimers, Thomas, Kirkwood, and Langfeldt; after which the meeting was adjourned for a month.

NOTES.

It would seem that the strictures of the *Hongkong Telegraph* are not altogether undeserved in reference to an acting appointment recently made in the Hongkong Post Office, and that the Governor of the Crown Colony is responsible for the inconvenience and delay to which residents in this country have been put on account of the tardy delivery of the last English mail. Yokohama papers have frequently found fault with Mr. Lister, but generally without cause, for having put the mail on board a steamer which would in all probability have reached this port first, but which—through having fallen in with a streak of foul weather or met with hard gales—has not arrived here before another vessel sailing from Hongkong a day later. The latest case, however, does not come within that category, and we venture to say that it can in no way be satisfactorily explained, but is simply a piece of blundering. The *Nepaul*, from Singapore, arrived in Hongkong on the evening of the 10th inst., and two vessels left the latter port for Japan—the *Takachiho Maru* on the 11th for Kobe, and the *Thibet* on the 13th for Yokohama, via ports, —either of which would have landed the mail here several days earlier than the *Oceanic*, which was advertised to leave Hongkong on the afternoon of the 18th. Both the Mitsu Bishi and the P. & O. steamer have schedule time and are known to keep their dates well, consequently there can be no excuse on the score of irregularity with regard to either of these vessels. What, then could have induced the official at present in charge of the Hongkong Post Office to keep the mail in that establishment for a whole week? Echo answers—What? In the absence of Mr. Lister, the Postmaster-General, and of Mr. Travers, the Deputy, a Mr. Du Flon Hutchison, the fifth master of the Central School, has been, the *Telegraph* says, “pitchforked into a position for which he is totally unfitted.” This may possibly account for the fact that the mail was nearly a week late in being delivered in this country; but the last has not been heard of the affair, as it has already been made the subject of official correspondence with the Home authorities.

THE Tientsin correspondent of the *Shanghai Mercury*, writing on the 3rd instant, says:—Yesterday H.E. Li received the Japanese Consul. It appears that H.E. does not now use the Chinese foreign interpreter at interviews, as was customary formerly. In the afternoon, H.E. Li reviewed Li Titoo's Liu Tai troops, who carried off 6 prizes only, against General Liu's 22 prizes. To-morrow H.E. Li will review General Tang Pei Tang troops. 600 Mauser rifles and Tls. 8,000 have been sent to General Tsau' Kwo Chung to pay his recruits with and march them down. Ma Kien-tzung, generally known as Ma Taotai, has been appointed manager of the C.M.S.N. Co.; it is believed here that he published the telegram to please Li, and to laugh perhaps again at the French Consul-General.

THE *Journal des Débats* attributes the financial crisis through which the United States of America are now passing to excessive railway speculation. When specie payments were resumed, January 1st, 1880, people, believing that an era of boundless prosperity had set in, plunged wildly into all sorts of speculations. Railways were the principal favorites. Innumerable companies were formed; stocks were run up to fictitious values, and the public generally offered

themselves to be duped. In four years 35,100 miles of railway were constructed, at an average cost of \$30,000 per mile, the total outlay thus amounting to 1,050 millions of dollars. Besides this, 200 millions were spent on lines already existing, so that altogether 1,250 millions were devoted to this class of enterprise. The development of commerce and industry did not keep pace with this enormous extension of roads, and competition reduced their earnings. Finally, in 1883, their stock began to depreciate, so that in twelve months the difference of quotations, applied to the whole mass of stocks, showed a loss of nearly a thousand million of dollars. It is not likely that America will be seriously inconvenienced by the disasters these rash speculations have entailed. The elasticity of her resources is so enormous that she will probably soon recover from the momentary depression. But in the meanwhile, she offers a signal example of the financial sufferings a country may bring upon itself by excessive railway speculation.

ALTHOUGH our trade with Korea is of no great significance, says the *Bukka Shimpô*, still our marine communication with that country leaves much to be desired. A steamer leaves for the Korean ports only once or twice a month, and bankers and merchants have, as a rule, to settle their business in a few hours time after the announcement of the steamer's departure. When the *Chitose Maru* left for Korea on the 21st instant, a large quantity of goods destined for that country had to be held over for the next mail. Shippers at Nagasaki and Fusan have been not infrequently put to the same inconvenience.

THE Macao Correspondent of the *Hongkong Telegraph* writes under date of April 19th:—“I have just heard from very reliable military sources that the French intend landing an expeditionary force in Macao, for the purpose of marching on and operating against Canton. It is not definitely known from whence the troops are to come, but there can be little doubt that a portion of the forces in Tonquin will form the nucleus of the intended expedition.” It is further stated that this measure has been arranged by virtue of an agreement between the Governments of France and Portugal, and that Governor Roza has been duly instructed from Lisbon to afford every facility to the free ingress and egress of the French forces.” This statement, if true, proves that the French are about taking a long premeditated step. Debarred as they are from blockading the coast ports, the city of Canton is at once one of the most important and vulnerable points of attack. Access to the city by way of the river is almost or quite impossible, as the channel is now only 90 feet wide, and the whole river filled with torpedoes, sunken junks, and guarded by forts at short distances along the banks. The relations between Portugal and China have been strained for a long time past, and nothing is more probable than that the Portuguese Government should make common cause with France against the Chinese. Unless the French really intend landing an expeditionary force at Macao it will go hard with the Holy City, for the mere rumour of a concerted advance of the French and Portuguese troops will make the position of the Macaenses a very critical one.

To judge by the following paragraph from the *Fiji Shimpô*, centenarians are of common occurrence in this country:—“Among the mem-

bers newly admitted to the Old Men's Association in Osaka are a farmer 128 years of age, his eldest son aged 93, a second son, a mere youth of 85, a daughter aged 84, and their families, all of whom are of ripe old age. Four other members over a century old have recently been admitted." We have, since reading the above, destroyed our life-insurance policy, and have forwarded a written application for membership to Osaka.

MR. CHARLES WIRGMAN has published a Sketch Book of Japan containing forty delineations of country life. The drawing is bold, and in many instances full of talent, though at times it displays a carelessness that does not improve the effect. Some of the scenes are evidently laid in the Japan of a dozen years ago, when two swords were a gentleman's constant companions and the *yaro no atama* was not discovered to emit the sound of *yasui suikwa*. To more recent residents the book will, therefore, seem a little strange, but to those who want to know what Japan was before foreign fashions came largely into vogue, Mr. Wirgman's sketches will be very valuable. What we regret is that he has not added short descriptions of the illustrations. True the subjects often describe themselves, but this is not always the case, and besides, Mr. Wirgman's descriptions would be so many additional pictures. We believe that he would find an appreciative public for more elaborate efforts in the nature of this sketch book.

THE *Shanghai Mercury* of the 15th inst. says:—The Siamese brig *Doretta*, which arrived here from Nagasaki on Saturday last, is the first vessel which ever exhibited the "White Elephant" flag in Japan waters. There being no treaty of commerce between Japan and Siam, it was very difficult to obtain permission for the vessel to enter the Customs. The *Doretta*, after laying idle for sixteen days, received finally the special grant by the Governor of Nagasaki to discharge her cargo and to load. We understand that in about a month's time, a Siamese war-vessel may be expected in China, whence she will proceed to Japan in order to sign a treaty of commerce between Siam and Japan.

A CORRESPONDENT, writing from Kiyoto, says that there is great interest in Christianity manifested throughout the whole region, and that the Japanese predict a large increase in the number of Christian converts during the course of this year. It is further stated that, contemporaneous with these encouraging signs, there is also discernible a marked growth in Christian character among those who have already been converted. There can be no doubt that the progress of Christianity during the past few years has been signal. There are now 138 Protestant Missionaries actually working in Japan, and whereas the number of converts in 1859 was *nil*, the number to-day is 6,598. In estimating this result, it must be remembered that the greatest care is exercised before consenting to baptise a convert to Protestantism. Certain probationary tests are strictly applied, and, further, those only who live lives consistent with the faith they have embraced remain upon the roll of the Church. When, therefore, we speak of six or seven thousand converts with these qualifications, much more is meant than similar statistics under less rigorous conditions would convey. Time was of course necessary for the Missionaries to acquire such a knowledge of the Japanese

language as would enable them to mix with the people freely and speak and preach to them in the vernacular. And certainly they have made very wonderful use of their time. One need only hear their lectures and sermons to appreciate the unremitting diligence and enthusiasm they must have brought to bear upon their work. We speak here of Protestant Missionaries, not from any desire to depreciate the work of the Greek and Roman Catholic, but simply because the attainments of the latter are less familiar to us, though of their noble devotion and zeal we have seen very many examples. The story of the results they have achieved in Japan may be read in the following statistics, which we extract from the Proceedings of the Osaka Conference of 1883:—

It thus appears, that the total number of Christian converts in Japan is upwards of forty-one thousand, and that they are increasing at the rate of nearly six thousand per annum—a rate which we confidently believe will soon be doubled or trebled.

In the columns of "Religious Intelligence," in the *New York Herald*, and under the special heading of "Japanese Converts," the following remarkable paragraph appears:—

One of the most prominent men in Japan is Mr. Ito Hirobumi. He has just recently returned from a long stay in Germany, where he saw much of Bismarck and Emperor William. Mr. Ito was much impressed with the character of these men, both of whom, he says, advised him to accept Christianity for his own welfare and happiness, as well as for the good of his country. Since his return, he has formally addressed the Mikado on the subject; and such has been the influence of his report, that the chief officers of the Cabinet are becoming interested in the study of Christianity.

The same journal contains the statement that several of the highest officials and nobles of Korea, including near relatives of the King, have formally adopted the Christian religion, their conversion having taken place during a visit to Shanghai. It is furthermore recorded that the aborigines of Formosa have manifested an extraordinary susceptibility to missionary teaching. "Whole villages, it is reported, have cast away their idols, and hundreds of the natives have embraced Christianity." For announcements of this description, which are by no means uncommon in American newspapers, it would be difficult to find confirmation in this part of the world. If not without foundation in Japan's case, their grain of fact seems to be strained, in

* 4 foreign and 9 native.
1 foreign and 11 native.
2 of the first, 48 of the second, 19 of the third grade.
3 of the first, 57 of the second, 26 of the third grade.
* Kindly furnished by the Abbé Paulin Vigroux, *Pro-Vicar Apost.*

other instances, beyond all credibility, recalling the memorable report, some years ago, that the Mikado had thrown aside the religion of his ancestors, and proclaimed himself a follower of Jesus.

On the 30th ultimo, an enterprising exchange broker, yclept Tanaka, brought \$188,000 in silver from various other brokers. This sum he deposited at once in the Naruto Ginko, and obtained upon it an advance of 200,000 *yen*. However, instead of paying the brokers from whom he had obtained the silver in full, he gave each man a certain sum on account, promising to bring the balance later in the day. In this way he paid out about 150,000 *yen*, and decamped with the remainder, said to be 50,920 *yen*. The genial fellow is supposed to be hiding in China-town, although several houses have already been searched without effect. All the steamers leaving the port are closely watched, while detectives have been sent to Tokiyo, and constables are stationed on all the roads leading out of Yokohama. The wife of the enterprising Tanaka, as well as another person suspected of being an accomplice, have been arrested, and are in strict confinement.

* * *

Since the above was written, we learn that Tanaka was arrested yesterday afternoon, at half-past three. It appears that a special permit had been obtained from the Chinese Consul to search all the houses in Chinatown, but the embezzler was finally captured in a tea-house at Noge-yama.

ADMIRAL LESSOFFSKY, the news of whose death was received by the last American mail, had been at different periods of his career identified with events in the Far East. He was captain of the Russian frigate *Diana*, which was wrecked in the latest of Japan's overwhelming and devastating earthquakes, at Simoda, in 1855. At the time of China's quarrel with her northern neighbour, four years ago, he commanded the Russian fleet in these waters. He was an officer of large experience, and his reputation was high, although his opportunities for personal distinction had not been numerous. He was, however, at one time entrusted with a duty which might have made him a leading figure in a mighty conflict. It was to him that the orders of his Government were given, in 1863, to report to President Lincoln, in the event of an attempt to break the Southern blockade by British or French ships of war, and to place at the disposal of the United States the entire naval force—then unusually numerous and formidable—stationed at New York and other American ports. Circumstances did not call for this action on his part, and the secret mission of Admiral Lessoffsky, though perfectly authenticated, has yet to take its place in written history.

It will be remembered, says the *Shanghai Mercury*, that in September last a number of Chinese were sentenced to long terms at the Mixed Court, for being implicated in the cutting and robbing of the river cables belonging to the Great Northern, and the Eastern Extension Telegraph Companies. About two miles of wire were then recovered, and about three miles more were missing. The robbers who were sentenced at that time were all boatmen, and employed by a Chinaman who paid them by the day for their labour. Although the police were on the alert, they were unable to capture the principal crimi-

nal, and it was rumoured that he made his escape to Hankow. This report proved correct, for he returned a couple of days ago from that port. The police were informed of it, and Inspector Mack succeeded in arresting him in Hongkew yesterday. He confessed his guilt, gave information where about 200 more piculs of cable were stored, and mentioned also two other Chinese connected with the robbery, both of whom have been captured since. The three men concerned in the crime were brought up at the Mixed Court when the case was remanded for a week. Foreign employés of the two telegraph companies, Inspector Mack, and the principal offender, who is said to have extensive property in Hongkew, proceeded down the river in a steam launch to recover the cable, which is said to be stored at no great distance from Woosung.

THE *Mitsu Bishi Kwaisha* has able men, but poor ships; the *Kiyodo Unyu Kwaisha* has splendid vessels, but incompetent commanders. This has become a popular bye-word, but whether the saying is justified or not, we are not in a position to state. We have been fearing all along that, while the two Companies failed to act in harmony, foreigners would play the rôle of the legendary fisherman who profited so highly by the quarrels of the clam and the cormorant; and that between these two stools the coasting-trade of Japan would fall to the ground, the facility of transport be impeded, and the national finances suffer serious injury. Of late, however, we have heard on good authority, that far from being at swords' points—the two Companies stand on a footing of friendly intimacy, and are pursuing their avocation with redoubled energy, in order to promote the commerce of the sea-board and thereby benefit the whole nation.—*Bukka Shimpō*.

On the 30th of last March, says the *Mainichi Shimbun*, one Sekiya, a *shizoku* of Kanagawa Prefecture, delivered a political address at Kanazawa. In the course of his lecture, he made use of the following remarks:—"There are in our community men like cats, *namadzu* (a kind of cat-fish), dogs, and badgers. The *namadzu* has a moustache on his upper lip, and moves in every direction as it pleases him. What he vows to-day, he forgets to-morrow, and there is no trustworthy quality in his nature. The so-called badger is still more disgusting than are either cats or *namadzu*. I dislike especially the badger-in-chief. The badger of the days before the Restoration was deceitful in the extreme; but the present badger persistently declines to do what he once solemnly promised and agreed to in writing. What he said in 1872-73, he now entirely ignores." The next day the lecturer was sentenced to two months' imprisonment and a fine of ten *yen* by the Kanagawa Saibansho, on the ground that his remarks referred to the Land-Tax Regulations published in 1873, and that he had thereby publicly defamed H.E. Sanjo.

THE last new speculation in New York is in tea. With military operations going on in Tong-king and the possibility of a blockade of the Treaty Ports, tea which is not yet formed in the leaf on the trees has been sold already in millions of pounds for delivery six or eight months hence. A report quoted in their circular by Messrs. J. C. Sillar and Co. thus describes the gamble:—"The interval has witnessed some of the most extraordinary changes in the market that we have yet had to chronicle. With the ordinary number

of 'prophets after the event,' we believe that no one is bold enough seriously to lay claim to have anticipated in any approximate measure the rapid advances, the heavy blocks of tea changing hands, and the excitement steadily sustained and only shifting from one kind to another. A good business at full and somewhat advancing prices was generally and reasonably looked for. Statistics were in favour of it, the conservative policy of receivers also favoured it, and the country had not, it was judged, stocked up sufficiently heavily during the latter part of 1883 to prevent a repetition of the brisk demand during January and February to which late years had accustomed us. But we commenced the year with one factor the power of which was little realized. About the middle of January a movement was initiated on the exchange whereby Japans were rapidly pushed up, and all that was offered was eagerly taken for future delivery at constantly advancing prices. Towards the close black teas have attracted attention, and if the advance has not been quite as great as yet, it has been even more rapid."—*St. James's Gazette*.

Our Reuter's telegram, received Thursday, gives the result of the Two Thousand Guineas, but there is no such horse as "Scot," which is given as the winner, in the entries. The name intended is probably "De Soto," a chesnut colt of Mr. P. Lorillard's, by Wanderer out of Katie Pearce. There was very little betting on the race in the papers received by the last English mail, the attention of racing men being mostly engaged on the Grand National and the Lincoln Handicap. Harvester, a brown colt by Sterling out of Wheat Ear, belonging to Lord Falmouth, was quoted in the Manchester betting at 7 to 1 just before the mail left, and 6 to 1 was being offered against Superba. The second horse, St. Medard, is a brown colt by Rosicrucian out of Bonny Kate, and belongs to Mr. Gerard. It is possible, of course, that the winner may be an unnamed colt, but in the absence of certainty it is no good to attempt to give any account of his pedigree and performances.

ACCEPTING Mr. Burleigh's figures as approximately correct, the battle of Tanager is the bloodiest fight in which we have been engaged for ten years and more, with the exception of Ulundi. The following are the number of killed and wounded in recent British victories:—

BATTLE.	DATE.	KILLED.	WOUNDED.
1. Amoaful	Jan. 31, 1874	7	200
2. Peiwar Kotal	Dec. 2, 1878	22	73
3. Rorke's Drift	Jan. 22, 1879	17	10
4. Ekowe	April 12, 1879	41	...
5. Ulundi	July 4, 1879	104	...
6. Charasiab	Oct. 6, 1879	24	57
7. Sherpur	Dec., 1879	5	33
8. Ahmed Khel	April, 1880	17	124
9. Mazra	Sept. 1, 1880	29	161
10. Tel-el-Kebir	Sept. 13, 1882	54	342
11. Teb	Feb. 29, 1884	30	140
12. Tanager	March 13, 1884	100	not known

A MATCH of a kind novel in California has been made between Prince, the bicycle rider, and Anderson, the well known California mustang rider, for a stake of \$500 a side. Prince agrees with the assistance of a partner to ride more miles on a bicycle in six days of twelve hours each day than Anderson can cover with fifteen horses, changing as often as he pleases. Prince is confident of winning, as he found a similar match with Leroy in Boston rather an easy thing, but he does not reckon on the fact that California horses are better travellers and better stayers than Eastern stock, and that Anderson can outride any man east of Auckland on a long

trip. One hundred dollars a side forfeit is up already and the balance is to be put up shortly. Anderson has gone to San José for his horses, and Prince is training at Oakland. His partner in the race will be Eck, unless a better man can be got to ride. Prince is confident he can go over 1,050 miles with the aid of his partner, and Anderson says if his horses do not give out he can make that distance with ease.—*Alla*.

THE numerous friends of Baron R. R. Rosen will learn with pleasure that he has been appointed Russian Consul-General at New York. The post offers exceptional attractions and the emoluments attached to it are excellent, but it is to be hoped that these advantages will not prove finally satisfactory to Baron Rosen. A diplomat of such talent cannot be spared by his country for service in a position demanding so little exercise of his rare qualities.

THE vernacular papers have several times of late spoken of the birth of monstrosities in various parts of the Empire. A few days ago the birth of hairy twins with canine mouths was reported, and now the *Fiyu Shimbun* tells of another remarkable *lusus naturæ* in Shidzuoka Prefecture. "The head of the poor child," says the *Fiyu*, "is just like that of a serpent, its face being very long and pointed, and without ears. The arms are well formed, but scales cover the back, giving it a most hideous appearance. One hundred *yen* have been offered for the phenomenon, as an enterprising speculator intends exhibiting it in public." Barnum's agent has probably been to Shidzuoka.

MR. W. H. HUNT, United States Minister to St. Petersburg, says an American paper, died in that city on the morning of the 27th ult., from dropsy, superinduced by chronic inflammation of the liver. Mr. Hunt was born in South Carolina, but spent most of his life in New Orleans. He was educated at Yale College, studied and practised law in New Orleans, gaining a position at the Louisiana bar. He was a Whig before the war, and a moderate Democrat for several subsequent years, but ultimately joined the Republican party, and was elected Attorney-General of the State in 1876 on the Packard ticket. In 1877 he settled in Washington as a lawyer. In 1878 he was urged for the post of Collector of New Orleans, but was instead made a Judge of the Court of Claims. On President Garfield's accession to power he was made Secretary of the Navy. On April 6th, 1882, he was nominated Envoy Extraordinary and Minister Plenipotentiary of the United States to Russia.

THE C.M.S.N. Co.'s steamer *Fu-yew*, which had been ashore off the Pescadores, arrived at Shanghai on the 12th ultimo. It appears that an extraordinarily high tide enabled the vessel to float off the rocks. The diver who went down could discover no hole in the hull, but she was leaking considerably. The carpenters sent from the Old Dock, Shanghai, having battened down the lower deck hatchway of the main hold to keep the water from rising above this deck, and shores having been placed to prevent it bursting up, the *Fu-yew* made for Shanghai in company with the *Hae-shin* and the tug *Fuh-lee*, which had been sent to her assistance. On arrival at Shanghai she went into the Old Dock, and it is said the damage extends over six plates of her bottom.

THERE has just been published at Anvers, by one of the most distinguished officers of the Dutch army, a pamphlet entitled *L'armée française en 1884 et le général de Galliffet*. Emanating from such an authority, the work has attracted much attention. The author commences by analysing the European situation subsequent to the war of 1870. He asserts that the various monarchies are now grouping themselves about Germany and turning away from Republican France, and that the French army will be well advised to avoid taking any part whatsoever in political struggles. That army, he declares, in an admirable body without a head. It lacks the governing impulse as well as the unity of direction which are so perfect in the German army. Among French officers of the highest grades the one who seems to combine all the qualities necessary in the commander of a great army is, according to the writer, General Galliffet, a man who, though of aristocratic origin, is distrusted by the conservative aristocrats; who believes that a soldier is a soldier, not a politician, and who thinks it his duty as a soldier to obey any legally constituted Government that may be in power. A great deal is added of the military qualities which the general has displayed, and the brochure concludes by reminding Frenchmen that when they drag their army into politics and bring discredit on it by accusing it of lukewarmness to the Republic, they are working against France and in favour of Germany, who watches all their manoeuvres with delight, and would be charmed to see the day when political distrust should have set up a solid barrier between the country and its defenders.

THE French appear to be making the pacification of Tonquin as difficult as possible for themselves. According to *The Times'* correspondent, their treatment of the people is needlessly cruel. The Black Flags are in some respects not far removed from savages. But they indulge in their barbarous propensities at the expense of the dead, not of the living. Moreover, the Black Flags are not really Tonquinese. However stubbornly they fight, it is difficult to see why their resistance to a foreign invader should be made a pretext for inflicting upon the people of the country such barbarities as we constantly read of. That France has been obliged to employ in this campaign her most undisciplined and uncivilized forces, is a misfortune which necessarily entails some inconveniences; but seeing that the future Government of the country will devolve upon herself, one is surprised that more resolute efforts are not made to hold her troops in check. If half of what we hear be true, Western civilization has presented itself under a very repulsive aspect to the Tonquinese. The men are beaten and kicked indiscriminately out of mere wantonness; the women and children have to suffer even worse things. Not much stress ought to be laid on the conduct of soldiers during the heat of battle, yet this excuse hardly covers the murder of wounded men, or such merciless deeds as those related by *The Times'* correspondent, who says that "for days after the taking of Son-tai, Chinamen were brought in from the outlying villages by treacherous Annamese, were set up on the high bank of the river, shot, and kicked into the water." These things, if true, might worthily be ranked with the Bulgarian episodes which threw all Europe into a ferment a few years ago. According to the same authority, it

was the intention of the French to massacre the whole garrison of Bac-ninh, if steps projected with a view to intercepting all the avenues of retreat had proved effective. We cannot believe this. True, it would not have been inconsistent with much that had been already permitted, or, at least, unrestrained, but between the deliberate acts of French Generals and the irresponsible license of Turcos and Zouaves, an immense interval exists. Probably, after all these stories have been discounted, there will not remain much that might not have been anticipated. French troops have never distinguished themselves by their respect for the amenities of warfare, and the French troops engaged in the subjugation of Tonquin are not the sort of men who might be expected to improve their country's record in this respect.

IT might be discourteous to insinuate that the United States Government has no definite idea of what it intends to do with regard to jurisdiction in this region, but Lord Dundreary, who was no respecter of institutions, would certainly have classed it with the tumbler pigeons, as "a bird that don't know its own mind." It has of late given unmistakable indications of willingness to allow Japan to resume all the inherent rights of which she was deprived by the early treaties; but, as if wholly unconscious of that disposition, the Senate has just passed what is known as the "Pendleton Bill," for the establishment of a system of courts in this empire and China, similar to the system which has been for several years in operation under the authority of Great Britain. The arguments in favour of the proposed arrangement, with its corps of qualified judges and its comprehensive code, are based upon the alleged inefficiency of consular tribunals; but since the United States are understood to be prepared to deliver up to Japan, at any moment, the power of jurisdiction over Americans, the establishment of what would be an institution of merely temporary, and probably very brief, duration, in this country, seems too unnecessary and superfluous ever to be realized. For China it may be fitting and desirable; not for Japan.

AN attempted double murder and suicide took place on Tuesday about 10 a.m., at Matsukage-cho, Nichome, Yokohama. Takahashi Shidzu, a young woman of some twenty years of age, and Tachibana Toyokichi, a householder living in a cross-street of Matsukage-cho, were the chief actors in the tragedy. They stabbed each other in the neck, the woman dying shortly afterwards, but the man, although severely wounded will probably recover. It seems to have been a case of *joshi*, or "love-death."

AMONG the pictures exhibited at Uyeno are two by an Englishman, Mr. Josiah Conder, A.R.I.A., who exhibits under the name of Kiyoyei. The paintings are, of course, in pure Japanese style, the one being an Indian ink drawing representing a heron in a shower of rain, and the other, a scene from Chinese history in water colours. Both are executed with remarkable skill. The former attracted the notice of the Imperial party on the occasion of their recent visit to the Exhibition, and by His Majesty's desire was set apart for the Palace.

KITE-FLYING is at all times a popular amusement with the Japanese, but some of these monster kites are almost as costly as they are large. An

enormous specimen, worth 80 *yen*, was sent heavenwards the other day at Numadzu, Shidzuoka, while others worth from 10 to 25 *yen* are of common occurrence.

THE German bark *Oscar Mooyer*, which arrived on Monday from Formosa, made a remarkably fast passage, in fact the fastest on record, the vessel only taking 10 days from Takao to this port.

THE Services to-morrow (Sunday) at Union Church will have special reference to the anniversary of the Sunday School. In the morning the Rev. E. S. Booth will preach on the "Oneness of God in Nature and in Revelation." A collection will be made on behalf of the expenses of the school. In the afternoon at half-past three o'clock, there will be a Children's Service, with singing and addresses. Children, as well as parents and friends, are invited to be present.

SMALL-POX is raging in Amakusa, Kumamoto Prefecture, as well as in some of the southern districts. Many fatal cases are recorded, especially among children. Cases of diphtheria are reported from Uta and Ushita, Yamato Prefecture. The Government is using every means to prevent the spread of the epidemics, and it seems tolerably certain that they will not reach the Capital.

THE *Yomiuri Shimbun* says that during the thunder-storm on the night of the 23rd instant, a flash of lightning struck a house in Reiganjima, Tokiyo, and set fire to some wadded quilts stored in a godown. The flames were fortunately prevented from spreading.

DURING the week ending on the 25th instant the number of visitors to the Competitive Exhibition of Pictures at Uyeno was 16,405. The largest attendance was on Sunday, 20th instant, when the visitors amounted to 3,877. On Sundays the price of admittance is doubled, being ten, instead of 5, *sen*.

THE British bark *Guiding Star*, which arrived here last evening from Takao, made the passage under ten days, and the round trip in one month, including ten days' detention at Takao. This passage beats the *Oscar Mooyer's* best on record. When the *Guiding Star* left Takao the British bark *Channel Queen* was loading for Yokohama.

THE Italian corvette *Cristoforo Colombo*, Captain Accinni, and the German ship *Stosch*, Captain von Nostitz, bearing the Flag of Commodore Paschen, left Amoy for Shanghai on the 9th inst. *en route* to Chefoo and Japan.

A LETTER from Madrid published in the *Manila Comercio* states that Don Manuel del Palacio has been appointed Spanish Minister Resident in Japan, and that Señor Castillo y Triquero, the present Minister in Japan, has been appointed Minister Plenipotentiary at Peking.

THE British steamer *Newminster* arrived at Yokosuka on Thursday from Rangoon with a cargo of teak consigned to Messrs. Takata & Co.

THE American bark *B. T. Watson* is chartered to load a cargo of sugar at a port in the Philippines for New York direct.

THE Exchange Market tug-boat *Exchange* was sold on Monday to the Kiodo Unyu Kwaisha for the sum of \$4,000.

JAPANESE RAILWAY BONDS.

THE *Manchester Guardian* of March 4th, contains the following observations on Japanese railway bonds:—

The question as to which is the best market in which to issue bonds for railway construction—the native market or the London market—is an interesting one in Japan as well as in India. It is just now being discussed in the former country in connection with the proposals of the Finance Minister to which we lately drew attention. It is contended that native capital cannot be profitably sunk in railways, considering the rates of interest ruling in Japan. At the present time Government bonds command in Japan an unusually high price. The contraction of the currency (due to the efforts of the Government to bring the paper currency to par), and the consequent stagnation of trade and industry, have induced a diversion of capital from trade for investment in public securities. But even under these circumstances the bonds show more than 9 per cent. at the current prices, and when trade was active they could be bought to show 11 and 12 per cent. With a revival of trade, which railway construction itself may reasonably be expected to stimulate, native capital will return to the ordinary trade channels. This the Government appear to anticipate. As we have already explained it is obviously for this reason that the Government proposes to make the new bonds transferable to foreign holders. But in this case why not issue them in the foreign market at once? One reason probably is a doubt as to whether they would be marketable at all there. It is readily conceivable that foreign capitalists might be willing to accept the bonds as securities for advances made to native traders and not as investments, because in the former case there would be the additional security of the trader himself and the specific profits of the transactions with him. Still, as the bonds are to bear 7 per cent. at par, and it is anticipated that they will have to be issued at a price which will show at least 10 per cent., it is possible that foreign capitalists might be tempted after all and give a better price than native investors. The *Japan Mail*, a paper which is understood to have close relations with the Japanese Government, suggests two reasons why the Finance Minister prefers the home market. In the first place, Japan is extremely reluctant to incur foreign obligations, and an external loan would be very unpopular. The prejudice against foreign engagements is said to be increased by "the opposition to the just aspirations of the Japanese" in regard to the Treaty Revision question. Possibly this may be so; but this very prejudice, which looks like a survival of Eastern exclusiveness, is in itself of a nature to increase the distrust of foreigners as to the consequences of conceding to Japan all that she now demands. A more sound reason given for borrowing at home is that the Government can issue the loan in small quantities as the railway works progress. Thus interest on a great portion of the loan may be saved, and as each section of the new line is completed, its earnings may go far towards paying the proportion already incurred. It might prove really less costly to pay 10 per cent. on a loan issued by small instalments as the money was wanted than to pay only 8 per cent. on a loan issued in one lump at the outset. Then, of course, heavy commissions might be incurred in financing the loan abroad. This latter explanation is certainly more creditable to the civilisation and intelligence of Japan than an explanation which savours too much of the fallacies about the "balance of trade" and the "encouragement of native shipping" which Japan has apparently not yet outgrown.

The comments of such an authority on Japanese finance are worthy of attention. We do not believe, however, that in taking no steps to place the bonds on the European market, the Japanese Government was influenced by any doubt of their negotiability in the sense indicated by the *Manchester Guardian*. Japanese securities are quoted at a premium in London now, and with such an excellent record as Japan can show, it is pretty certain that bonds guaranteed by the State and bearing at least seven per cent. interest would be readily taken up by English capitalists. But there is an important point which appears to have escaped the attention of

our contemporary; namely, that the face value of the bonds is in fiat paper, and that the interest is payable in the same medium. Japanese fiat paper has appreciated with remarkable rapidity during the past two years—so rapidly indeed that the permanence of the improvement is still questioned by the public. Foreigners buying these bonds at present, must procure *Kinsatsu* at a discount of only 9 per cent. to effect the purchase, and would receive the interest also in *Kinsatsu*. This would be very well so long as Japanese paper money retains its present value, and still better if it continued to appreciate. But if it happened to depreciate, the speculation would look much less rosy. A bond whose face value is 100 *yen* and which originally cost \$84, might—if *Kinsatsu* fell to a discount of 17 or 18—come to be worth only \$76 or \$77; and instead of paying an interest of 7.6 per cent. on the first cost, it might only pay seven per cent. or even less. We do not believe that there is reason to anticipate anything of the sort. Japanese paper money may still show slight fluctuations, but that it will again suffer any serious depreciation is most unlikely, so long as the Government adheres to its present programme. When specie payments are resumed, and *Kinsatsu* circulate at par with silver, bonds now obtainable for \$84 will be worth \$92 in the market,—even on the improbable hypothesis that their selling price does not improve in the interim,—will have a face value of \$100, and will pay more than 8 per cent. interest. The total appreciation, from this cause alone, of twenty millions worth of bonds would be upwards of 1½ millions of dollars. To the Government, therefore, the question of putting the bonds on the foreign market may present aspects which seem to have hitherto escaped the public. In the first place, some doubts may be entertained as to the advisability of making such an early appeal to foreign confidence in the stability of the fiat currency. Of late years Japanese finance has been subjected by the local English press to unreasonably hostile criticism. Every policy adopted, however simple and intelligible, is pronounced vicious and disastrous should it happen to differ in any respect from the nostrums proposed by writers whose ability to take charge of a nation's exchequer remains to be established. Nobody over-estimates the area of influence exercised by such criticism. In fact we have recently seen evidence that its effects have not extended even to those home journals which chiefly interest themselves in Japanese affairs, as for example, the *Manchester Guardian*. There is nevertheless some possibility—remote, we imagine, but still appreciable—that the Japanese may be unwilling to invite a public verdict upon the results of their scheme of resumption until they can reasonably hope that their appeal will be received in a less hostile and more sincere spirit. This, of course, is matter

of conjecture. But when we remember how little Japan is practiced to look below the surface of foreign opinion, it becomes easy to suspect her of a certain timidity in these matters. In the second place—and this seems a more tangible motive—there may be an unwillingness to carry abroad any questions connected with the fiat currency until the programme of resumption, now so far advanced, is brought within certain sight of completion. The Japanese have learned, not alone the inconvenience, but also the discredit, of inconvertible paper. By a great effort—perhaps too violent an effort—they have succeeded in reducing the bulk of their fiduciary notes to easily manageable limits, and nothing now remains but to persevere a little longer in accumulating a specie reserve. If a few millions more were added to the sum already lying in the Treasury vaults, it would be possible to proceed to resumption at once with perfect confidence. Being thus on the verge of success, the Government may think it wiser to avoid any recourse to foreign money markets until success is actually achieved; until Japan can come before the world entirely freed from the incubus which has so heavily handicapped her of late years. There is yet another important consideration which has probably received due weight. It is that, if currency redemption is to become an accomplished fact in the near future, the value of these railway bonds will be greatly appreciated. Even supposing that their selling price in paper remains as at present (91 to 92), the difference between their specie value now and their value three or four years hence would be nine or ten per cent., and they would then pay interest at the rate of more than eight per cent. on prime cost. The people of Japan have the first right to such valuable securities. On them has fallen the tax of the fiat currency, and it is but fair that to them also should be offered whatever chances of profit present themselves in connection with resumption. Whether the people of Japan can afford to thus divert large sums of floating capital from the ordinary channels of trade, is altogether another question. The Government possibly thinks that any inconvenience of this nature may be avoided, since the holders of such securities will always be in a position to command pecuniary facilities at the open ports or in the foreign money markets. This is doubtless true, but to render these facilities easily accessible, the foreign public must be to some extent familiarized with the bonds as well as with the conditions upon which they are offered, and to this end the simplest plan would be to issue a certain quantity on the European markets at once. If larger commercial privileges could be granted to foreigners, Japan's railways might easily be built without any preliminary strain on her resources. But so long as Western Governments continue to oppose perfect freedom of intercourse, Japanese officials must make up their minds to accept responsibilities which do not properly devolve upon an enlightened administration.

YOKOHAMA CRITICISM.

AS an example of the just and logical treatment which any public advocate of a liberal policy towards Japan may expect to receive from the local press of this Settlement, a contemporary's criticisms upon the *Manchester Guardian's* correspondent are characteristic. We say nothing of courtesy. To look for that were a little extravagant. Moreover, the propositions put forward by the critic are so singular that the terms in which they are couched become matters of secondary consideration. It is not so startling to hear an article in a leading English journal dubbed a compound of "unequivocal falsehoods" and "extreme exaggeration," as to be assured that the intrinsic merits of a cause are destroyed by the supposed imprudence of its advocates; that "Japan's case must be regarded as thoroughly hopeless" because an injudicious friend is supposed to have exaggerated it! One might as well announce that the product of five by five can never hereafter be called twenty-five, because an arithmetical blunderer may somewhere have written it down twenty-seven. Any statement, no matter how insulting to reason, no matter how wholly lacking a grain of substance, seems to be thought suitable to this community's sagacities, provided only there be sufficient froth and bubble about it. Added to this derisive recklessness, there is a knack of linking together a host of interdependent misrepresentations and conflicting accusations, which finally assume the aspect of such a headless and tailless labyrinth of confusion that weary disgust is the result of any attempt to unravel its mazes, or to expose the utter falseness of the general impression conveyed. One asks oneself whether the columns of a newspaper ought to be devoted to publishing, and the time of its readers to perusing, a mere war of words, not more useful or edifying than an interchange of recriminations by two school-girls. Yet, as we have said, the general impression remains, and, unless it be contradicted, carries some weight with a public whose leisure is not sufficient for accurate analysis. In the case under review, the general drift of the criticism is to show that the writer in the *Manchester Guardian* denies that extraterritoriality was necessary at any time in Japan. But from first to last his article does not contain one word justifying such an inference. On the contrary, he explicitly admits an original necessity. For he tells us that without extraterritoriality "trade could not have been carried on" in China, and inferentially in Japan, to which "the same conditions were extended in 1858." Nor does he leave us in any doubt as to the reasons why "trade could not have been carried on unless Europeans were detached from the operations of the legal systems" of the country. It was because these systems "sanctioned torture and had no settled principles governing the rights

and liberties of those who lived under them." He is careful to premise all this, but he excuses himself from further allusion to it by explaining that his "present purpose" is, not to trace the origin of extraterritoriality, but to "exhibit its actual state and practical working in Japan." Now observe the methods of the Yokohama critic. So eager is he to contradict, that he begins by contradicting himself. For having explicitly declared that he will "refrain from any attempt to trace the rise of extraterritoriality in Japan," he at once proceeds to trace it, by referring the system to the "criminal laws of extraordinary severity and cruelty" exercised here in the early times of foreign intercourse. Upon the working of these laws—"crucifixions common in capital offences," "torture abolished of late years only" and so following—he dwells with wholly uncalled for minuteness, and then, having sufficiently aroused his readers' ire against a state of affairs which has long ceased to exist in Japan, he proceeds, first to blame the correspondent of the *Manchester Guardian* for having touched so dangerous a subject, and then to charge him with having made a "hypocritical excuse for shirking it." The dishonesty of criticism could scarcely be carried farther. The writer in the home journal plainly states that extraterritoriality was inaugurated in China, and extended to Japan, because the legal systems there "sanctioned torture" and were otherwise defective. His critic says precisely the same thing, though in clumsier and coarser terms, and then accuses him of "unequivocal falsehoods" and "extreme exaggerations" for not saying it!

This is enough, and more than enough to determine the case as between the writer in Manchester and his critic in Yokohama. But one is still puzzled to account for the reckless irrelevance of the latter's language. One asks oneself what connection can possibly exist between "the actual state and practical working" of extraterritoriality in Japan, and crucifixions that took place thirteen or fourteen years ago "within three miles of Yokohama," "photographs showing wretched beings suspended from the cross nude," "blood-stains clearly visible," and other ghastly details of an obsolete criminal procedure. Is it with the deliberate intention of falsely exciting his readers' passions and antipathies that a writer rakes up and publicly parades in this exaggerated and revolting fashion these relics of bygone systems? We say exaggerated, because it is just as incorrect to speak of a crucified criminal being "tortured to death with spears" in Japan, as it would be to say that a murderer is tortured to death by hanging in England. There was much less torture in the former case than there is in the latter, so far as we can judge. Crucifixion meant that the criminal was tied, not nailed, to a cross, and that two sharp spears were thrust into his heart. Death was instantaneous. There were no struggles

or convulsive jerkings for ten or fifteen minutes, nor any jumpings of executioners on the shoulders of half-strangled wretches, as there are sometimes, even now, in death by the gallows. Crucifixion was a brutal and demoralizing spectacle, but scarcely less disgusting and not at all more merciful than were public executions in England a few years ago. We are unwilling to think that matters of this sort are introduced with the intent of substituting passion for judgment, yet the thought is almost forced upon us when, reading on, we find the following statement:—"Only of late years has torture been abolished, yet even now officials are punished for continuing to apply it." A more cruelly unjust assertion never was penned. It is true that two policemen are said to have been recently punished for cruelty to prostitutes whom they had arrested. But what then? Nearly every mail brings us news of policemen punished in the United States and elsewhere for clubbing or shooting their prisoners, yet no one dreams of regarding these things as an evidence that torture is still "applied" in those countries. Only in Japan does every obligation to be just or accurate disappear. Here, if a policeman maltreats a prisoner and is severely punished for doing so, we are deliberately asked to infer that judicial torture is still "applied." Anywhere else the formulatur of such a charge would be laughed to scorn.

We have neither space nor inclination to follow this critic through the mazes of his inaccuracy and unfairness. Our readers can easily judge for themselves the bias of a writer who would have his readers infer, that, because only five of the seventeen consuls are merchants, the courts of the remaining twelve are competent and efficient tribunals; that there is no difficulty in extending Japanese quarantine regulations to foreign residents, although in the last epidemic of cholera the local authorities could not obtain Consular permission to adopt sanitary precautions in the case of an English subject; that "the ground rent payable by foreigners includes all taxation," although it is little more than half the amount paid by their Japanese neighbours; that, excluding the Chinese residents and assuming the total ground-rents of Yokohama at \$70,000, each member of the foreign community pays \$40, while, in reality, this arbitrarily excluded Chinese adult population is nearly three times that of all other nationalities, and the total ground-rents are \$60,000, not \$70,000; that foreigners' houses in Yokohama are not asylums for Japanese criminals because their owners do not deliberately house such characters, though they do refuse to permit a police measure which has been found effective and convenient in other foreign settlements, and without which the local authorities declare themselves unable to arrest criminals; that "the mining resources of Japan, including coal, iron, gold, silver, copper, and other products, have been shown by scientific reports

to exist only in imagination," when considerable quantities of all these minerals are actually obtained every year; that "the Japanese authorities will not consent to make the trifling concessions" necessary to inaugurate an efficient system of local government in Yokohama, when those concessions go to the very root of the international question Japan is striving so earnestly to solve; and finally, that "the prospective advantages of opening the country to foreign residence are believed by foreigners of long residence and great experience to be fallacious," when a memorial said to have been "signed by the entire foreign community without exception," has declared that the results of that opening would be "a great stimulus to industry, increased national wealth, and promotion of the welfare of the Japanese, in the first instance, and improvement of the commerce carried on by foreigners in the next." Our readers, we say, can judge for themselves whether criticism of this nature is of much value. We do not desire to suggest that the critic, so far as his lights go, did not desire to be fair and just. His motives, doubtless, were excellent. But his competence to weigh evidence, or to form a logical conception of an opponent's views, seems to be about on a par with his ability to avoid contradicting himself. As an obscurer of the truth he is eminently successful, though such a rôle is probably the last he would be willing to fill.

THE "MANCHESTER GUARDIAN"
ON CONSULAR JURISDICTION
IN JAPAN.

THERE may be some persons whose interest lies in the direction of perpetuating the unsatisfactory condition of our present relations with this country. To such a motive has occasionally been ascribed the curiously persistent malevolence which characterizes a section of the local English press and its correspondence. But with exceptions it is unnecessary to deal. These graceless cynics are undoubtedly exceptions. The general rule is a desire to contrive some mutually pleasant *modus vivendi*, and a willingness to concede whatever may be just and expedient. But unfortunately even those who must be accredited with a wish to be fair and courteous, seem incapable, occasionally, of doing themselves justice. They cannot, or they will not, look at the problem from a Japanese standpoint. And without so looking at it, anything like sound criticism is impossible. Writers in the home journals, perhaps because they are farther removed from irritating influences, perhaps because their minds are more judicial, seem better capable of appreciating both aspects of the questions that perplex us. Yet their very capacity is misunderstood and misinterpreted. The "Travelling Correspondent" of the *Daily News*, "Asiaticus," and a recent writer in

the *Manchester Guardian*, have all been criticised in terms seldom employed except in defence of a consciously weak and vicious cause. There is no reason to suppose, on the contrary there is every reason to deny, that these gentlemen were actuated by any other motive than a desire to promote British interests and to vindicate British reputation. Probably it would never occur to them to suspect their opponents of intentions inconsistent with a similar wish. Yet their statements are described, at this side of the water, as little short of deliberate fabrications, simply because, writing for readers in England and therefore necessarily employing general terms, they avoid particulars which would be both superfluous and perplexing. "Asiaticus," speaking of a tariff which included three rates,—five, twenty, and thirty-five, per cent.,—expressed it in terms of its mean rate, twenty per cent. This very natural expression called down upon his head abuse such as is generally bestowed on acts of deliberate immorality. The writer in the *Manchester Guardian* says that more than one half of the Consuls in Yokohama are themselves merchants without legal training," and bids his readers infer from this "the sort of justice that prevails in these small Eastern communities." His assertion, in its turn, is described as either a wanton or a careless misstatement, and he himself, as a man unworthy of trust. But why? Because five only out of the seventeen Consulates are in charge of merchants, the remaining twelve being presided over by "officials specially appointed and wholly interdicted from trading." Arithmetically this is true enough. There is more than arithmetic, however. "These consuls," adds the critic, speaking of the specially appointed officials, "with one or two exceptions, preside over courts of competent jurisdiction empowered to administer the laws of their respective countries: among the exceptions is Great Britain, which has established, distinct from the consulate, a court with two professional judges and the necessary officers, wherein the whole law of England is exerciseable." Now it seems to us that nothing penned by the correspondent of the *Manchester Guardian* is calculated to mislead so much as this statement. The impression it unequivocally, though no doubt unintentionally, conveys is that there are twelve properly equipped consular courts in Yokohama presided over by legally trained officials. This is wholly incorrect. Of the twelve courts in question, four only are presided over by gentlemen who lay claim to anything like efficient legal training. We are not aware that legal training is yet an absolutely essential qualification even in the Consuls of Great Britain and the United States. As for many others of the "specially appointed officials," it were idle to pretend that they would be held competent to occupy a place on any judicial bench in Europe. We say nothing of their abilities or integrity. These may

be of the highest order. But we do distinctly say that they are without that degree of legal training which in Great Britain, at all events, is thought a necessary prelude to the exercise of such functions. The writer in the *Manchester Guardian* speaks of the whole heterogeneous and clumsy system as it would be spoken of by any Englishman accustomed to see justice administered by English judges.

We do not desire to dwell upon this subject, because the inconveniences and anomalies of the conditions existing at present in Japan are thoroughly recognised by intelligent men, and by no one more distinctly than by the *Manchester Guardian's* critic himself. The Yokohama community fortunately needs very little law. But for the accidents of a sea-port town, we might go on from year's end to year's end giving ourselves small concern about the penal powers of Consular Courts. But there are times when we become painfully aware of the "chaos" described by the *Manchester journal*. We have, for example, no recognised Municipal laws. We never can have any, so long as we deny that the governing authority has the right to make and enforce laws. Nothing could be conceived more ludicrously irrational than the state of affairs in this respect. We have distorted the treaties into effective obstacles to our own comfort and well-being. According to the interpretation some of us put upon them, they confer on us the privilege of ignoring all Japanese local laws, but do not confer on us the power of enacting any local laws for ourselves. The Japanese are required to govern Yokohama municipally without any municipal regulations. The Consuls, whom alone we credit with authority to punish foreign infractions of law, have confessedly no authority to enforce observance of municipal law. The whole thing is a burlesque.

Whether or no the Japanese have much faith in the accessibility of justice as administered by Consular Courts is a question to which different answers will be given. The facts, however, are plain enough. One of the least disputable is, that the decisions of these most elementary Courts are virtually final, so far as a Japanese is concerned. Appeal lies to a tribunal in a foreign country. For the rest, several cases have come under our notice, several others have been described to us, where a Japanese, suffering from what he believed, and what certainly seemed, to be a grave wrong, was deterred from seeking redress by the (to him) inscrutable complications of foreign laws, their technicalities, their quibbles, and above all, by the cruel costliness of their processes. On the other hand, it would be idle to pretend that civil law as hitherto administered in Japanese Courts has satisfied Occidental ideas of justice. There has been some improvement of late, it is true, but there is room for much more.

It may, however, be confidently asserted that foreign failures of duty have been more than a set-off to Japanese incompetence. With one exception, the Treaty Powers have neglected to provide tribunals worthy to be called Courts of justice. From time to time it may happily chance that there are among the Consuls men of exceptional training and legal acumen. But the plain fact is that the only properly equipped foreign Court in Japan is that of HER BRITANNIC MAJESTY, and even there we have seen the bench occupied by officials who, whatever their moral endowments, were neither nominally nor practically qualified for the post. Consular jurisdiction, in short, is wholly unsuited to a civilized country, and the system of which it is a part has become in Japan an impediment to material progress as well as a source of mutual distrust and umbrage. It has been both useful and necessary in its time: necessary, because Japanese criminal processes could not formerly have been extended to foreigners with any show of propriety; and useful, because it has acted as a spur to reforms which, though under any circumstances inevitable, would probably under other circumstances have been accomplished much more deliberately. This is a point which Japanese will doubtless recognise. In other respects they have fully appreciated the results of their Spartan discipline, and they cannot fail to see that the patriotic energy inspired by the desire of shaking off a national humiliation has been a factor of immense national benefit. But the time has come when unvarying administration of the same drastic medicine will work, not good, but evil.

ENGLISH OPINIONS OF ENGLISH COMMUNITIES IN THE EAST.

SIX months ago the home newspapers brought us two rather startling verdicts. They were startling not less on account of the high authorities by whom they had been uttered, than on account of the opinions they embodied. Mr. GLADSTONE and General GORDON are very remarkable men. By some the former is thought too refined a moralist to deal successfully with the immoralities of international relations. By others the latter is pronounced a fanatic with a troublesome bee in his bonnet. But it is just as true now as it always has been, that the clouds and fogs of detraction and jealousy gather quickest about the loftier eminences of intellect and virtue. Among her soldiers and her statesmen England has none in whom she takes, or has ever taken, greater pride than GORDON and GLADSTONE. Jingoists and sceptics may entertain a different opinion, but fortunately the world has not yet resolved to discredit a politician because he seeks to make reason stronger than armies, or to despise a soldier because he reads his Bible. We return, therefore, to our original proposi-

tion, that a consentient verdict emanating from two such men as GLADSTONE and GORDON is not to be lightly esteemed. In the particular case to which we allude, the verdict, too, was not only consentient but contemporaneous. GLADSTONE, speaking in the House of Commons, and GORDON, writing from the West of Asia, gave utterance to precisely the same sentiment; the latter in the blunt unvarnished language of a soldier, the former in the well-weighed and polished speech of a practiced politician. What GORDON wrote was this:—

My idea is that no colonial or foreign community in a foreign land can properly and for the general benefit of the world consider the questions of that foreign state. The leading idea is how they will benefit themselves. * * * I have a very mean opinion of any colonial or foreign community's views, though I own that they are powerful for evil. Who would dare to oppose the European colony in Egypt or China and remain in those countries?

What GLADSTONE said was:—

The right hon. gentleman (Sir Stafford Northcote) says * * * great attention ought to be paid to the sentiments of the Anglo-Indian community. Well, Sir, I have had much to do for a long period with a series of questions, and I am not aware at this moment of any series of great reforms which have been brought about by the courage, and the wisdom, and the foresight of the British legislature in respect of any portion of this empire, which reforms have had the favour and support of the resident English community. I do not remember that the abolition of slavery had the support of those residents in the West Indian colonies, whose opinions, from experience and knowledge, were undoubtedly of considerable weight. I do not remember that the establishment of a responsible Government in Canada and of that new system of relations with colonial institutions which has completely established harmony where before there was perpetual discord, I do not remember that that establishment of responsible Government and that introduction of political reform were treated in the colonies by those who, up to that time, laid claim to what was called the British party and represented themselves as having a monopoly of loyalty—I do not remember that they ever received these reforms except with opposition. In 1862, the Government of Lord Palmerston re-united the people of the Ionian Islands with those of their own race, of their own religion, of their own feeling and condition; but there was a British party there, and that British party from point to point resisted everything that was proposed for the benefit of the people. Sir, it is the same thing all over the world; and it is not because these English resident communities are made up of people who are worse than ourselves. Do not let it be supposed I have any accusation to make against them; but their position is less favorable than ours for forming a comprehensive judgment. They are doomed almost to narrow modes of examining these questions, and we are compelled to look over the course of history and over the surface of the world. They each of them look at themselves in relation to persons whom they feel to be in energy and certain practical effects inferior to themselves, and there is a tendency to indulge in a spirit of ascendancy which it is the business of this House and of this Legislature, and the business of a patriotic Governor-General with wisdom and with care, but with decision, to modify and check.

It is a little remarkable that ideas so similar should have been expressed by eminent Englishmen almost at the same time and under such different circumstances. It is remarkable, too, that, of late, the question of treaty revision in Japan has elicited in England quite a chorus of opinion emphatically opposed to what the journals of this settlement used to proclaim as the only patriotic and sensible view. The *Daily News*, the *Saturday Review*, the *Manchester Guardian*, and other publications, have simultaneously become exponents of a liberal policy; a policy not opposed to every recognition of rights which are not foreign. Finally, it is remarkable that these evidences of liberality on the part of the home Press have evoked, at this side of the water, criticisms which go far to justify the verdicts of Mr. GLADSTONE

and General GORDON. Every writer who has ventured to say a word on behalf of Japan's claims to receive henceforth treatment somewhat different from the treatment she received twenty years ago, is met with a storm of hostile and sneering comment. Every writer who ventures to suggest that Englishmen ought to respect in others the instincts of national independence which they so proudly obey themselves, is accused of venal and perfidious motives, is charged, in so many words, with betraying his country and with selfishly sacrificing the interests of his countrymen. This is what General GORDON meant when he asked, "who would dare to oppose the European colony in Egypt or China and remain in those countries?" and this is what Mr. GLADSTONE meant when he spoke of persons who "lay claim to what is called the British party and represent themselves as having a monopoly of loyalty." We have always ourselves believed, and declared with what emphasis we might, that such utterances do not echo the real sentiments of the foreign community in Japan. Not that we lay any claim to that omniscience which enables some writers to assume the character of spokesmen for the whole Settlement. We neither profess to follow public opinion in these matters, nor pretend to possess any special method of gauging it. But we have a strong faith in the depth and permanence of that generosity and justice which constitute the substratum of English character, and nothing can persuade us that a policy entirely opposed to these traits is in unison with the genuine sentiments of an educated English community. It is impossible to suppose that English gentlemen can regard with any sentiment but contempt and disgust that ungainly coarseness of mood which, while openly contending that nothing should be conceded to Japan because the interests of a few foreigners are apparently opposed to concession, at the same time accuses of venality and incivism every advocate of concession. So soon as arguments of this nature become the staple of any party, it is safe to denounce that party as a disgrace to English sentiment and a subverter of English traditions. It would be pleasant to believe that the verdicts of Mr. GLADSTONE and General GORDON are mistaken. But the one spoke from a wide personal experience; the other supported his assertion by a number of unanswerable historical proofs; and, unfortunately, the records of the past few years in Yokohama contain little that can be regarded as valid evidence of a different state of affairs. The gentlemen who, whether in speeches at public meetings or in letters to our contemporaries, recently undertook to expound the sentiments of their fellow residents, displayed, with one exception, a contemptuous indifference to Japan's claims and rights. A great deal has been said about the inaccuracies of writers in the home

Press whose exactness did not extend to arithmetical fractions. But we venture to say that they have been far outdone by the self-constituted exponents of foreign opinion in Japan, who not only take no pains to consult easily accessible sources of information, but do not even concern themselves to hide their disdainful indifference to an obligation which all just men acknowledge—the obligation of learning the truth. It is, therefore, to the future that we must look for some contradiction of the above two verdicts in Yokohama's case. For our own part we await the result with entire confidence, believing fully that what Mr. GLADSTONE subsequently said of the Anglo-Indian community applies accurately to the case of this settlement:—"This Anglo-Indian community is made up of honorable and upright men. They may have their prejudices, and I think they have; but as they come nearer to the facts and look them more closely in the face, they will begin by degrees to recognise that they give to unreal dangers and to shadowy dangers an importance they do not deserve. Every step made in this direction is not only a step towards attaching to yourselves the minds of the population, but is also a step towards establishing between Europeans and natives a degree of harmony which in former times did not exist."

INDIAN CURRENCY.

ENGLAND and India being virtually one country, the fact that their monetary standards are different is an evil of great magnitude. By the action of the Latin Union silver, having been deposed from its place as an instrument of exchange, has necessarily shared the fate which overtakes all commodities in the presence of a diminished demand. During the past ten years, the gold value of the rupee has fallen 20 per cent., and India finds herself seriously embarrassed having to turn rupees received at 24d. into rupees of 20d. in order to pay the fourteen millions of sovereigns which represent her annual indebtedness to England. The Indian trader making purchases in England is similarly inconvenienced.

To correct these troubles a new monetary system has been proposed for India. Its author is Mr. CLARMONT DANIELL, and his proposal has been endorsed in terms of the warmest eulogy by Professor BONAMY PRICE. Mr. DANIELL'S scheme consists of five proposals which are thus stated:—

1. The Government of India shall coin a gold coin, in all respects identical with the £1 sterling of the currency of the realm, out of the stock of gold now to be found in India, to any amount in which the metal may be brought by its owners to the mints for that purpose.

2. These gold coins shall be declared legal tender for the payment of any sum of money due to the Government of India, at the option of the party making the payment; and in other cases they shall be legal tender for the discharge of any obligation amounting to rupees 5,000 and upwards, at the option of the party making the payment.

3. The Government of India shall from time to time declare (but not more frequently than may be necessary or convenient) the rate at which the gold coin of its currency shall be accepted as legal payment of sums contracted to be paid in silver coin; and this State conversion shall be strictly regulated by the market value of the silver rupees of the British Indian currency in these gold sovereigns.

4. The silver rupees shall continue to be legal tender for all kinds of payments, and in any amount, at the option of the party making the payment.

5. No person—the Government excepted—shall be obliged to take payment in gold of a debt due in silver which may be less in amount than rupees 5,000, unless he shall previously have agreed with his debtor to do so.

Professor BONAMY PRICE is, by profession, a resolute opponent of bimetallism. He considers that silver ought to be excluded from use as a medium of exchange because of "its inveterate tendency to perpetual change of value." Why silver should possess this "harrassing quality," or, indeed, that it does possess it, Professor PRICE takes no trouble to show. Neither do we propose to discuss that point. It is enough for our immediate purpose to note that he is a determined monometallist, and that the basis of his objection to bimetallism is as we have stated. Now this plan of Mr. DANIELL'S, which elicits such unqualified praise from Professor PRICE, is bimetallism pure and simple. The Professor himself admits that it has "a certain air of bimetallism about it," but whatever distinction he may be disposed to draw between an "air" and a fact, the public will generally agree that bimetallism, and bimetallism only, is the term applicable to a monetary system under which gold is a legal tender for all sums of 5,000 rupees and upwards, and silver, legal tender for any sum whatsoever. If that is not bimetallism, we should like to know what is. The Professor, however, thinks that "pure bimetallism, without corrections, is indefensible." His definition of "pure bimetallism" is, to be sure, a little arbitrary. He describes it as a system under which "silver would be legal tender to any amount in a fixed ratio to gold of 15½ to 1," whereas, in fact, the ratio between the values of the two metals is regarded as a mere question of detail by bimetallists themselves. Their principle is that gold alone is not competent to perform the exchange business of the world, and that by depriving it of its auxiliary, silver, a general fall of prices and serious tradal depression have resulted. But in restoring silver to its old place, they do not by any means hold that to establish a ratio of 31 to 2 between the two metals is a *sine quâ non*. Neither can we reasonably suppose that the question of ratio alone is at the root of Professor PRICE'S monometallism. He tells us himself that "for serving as a tool of exchange, silver labours under the worst of all disqualifications—unsteadiness of value;" and since he holds that "the great principle which is the essence of all sound money is, that a seller shall receive in exchange, by an act of true barter, a commodity of equal value with the commodity which he is giving

away;" and since he further holds that "the value of a medium of exchange depends primarily on its cost of production," it follows plainly that, whatever ratio might be legally established between silver and gold, his scruples to the use of the former must remain effective. What then are the "corrections" which enable this professed opponent of silver to give Mr. DANIELL'S scheme his warm support as "a bimetallism perfectly sound in principle." They are comprised in the provision that "the two coins are to stand towards each other in the currency in a ratio which is strictly to correspond with their worth as metals in the metal market." And how is this to be accomplished? By governmental enactments fixing the ratio between the two media. These enactments are not to be "more frequent than may be necessary or convenient." In other words, they are to be as few as possible. Yet if, as Professor PRICE asserts, "the value of silver never keeps quiet, but is ever on the move," the governmental enactments would surely have to be very nimble to follow the changes of such a mercurial variable, and instead of an automatically stable medium, the result of Mr. DANIELL'S system would be a currency depending for its value on constant official supervision and regulation. Evidently Professor PRICE would not endorse such an artificial and capricious system as that: there must be some other feature which enables him to hope that this perpetual governmental interference would not be necessary. Such a feature there is indeed, and, to our thinking, it constitutes the most interesting point in the whole scheme. It is that "*a tendency of the fluctuations in the rate of exchange to diminish rather than to increase would be the natural consequence of the two metals being used indifferently for each other.*" Mr. CLARMONT DANIELL says, and Professor PRICE unreservedly supports the assertion:—"It is only when they are divorced from one another by artificial currency regulations that gold and silver work in opposition. Allow them to work together in the order of their values, and these divergencies of value must necessarily diminish, and the approximation to the attainment of a staple ratio of value will be great. The altering metal will be corrected in its changes by being more largely used or else reduced in quantity by exportation, and the action of each of these forces will be to keep its value nearer to what it had been before the change. The currency will be less exposed to that kind of fluctuation which a sudden demand excites on the particular money which cannot be easily or quickly increased." This is the contention of bimetallists in so many words. They hold that the abnormal work thrown upon gold by depriving it of the assistance of silver has caused it to appreciate inconveniently, and that gold and silver, when used together, exercise a mutual restraint upon each other's tendency to

fluctuate. It would be difficult to put the case for bi-metallism in plainer or stronger terms than it has now been put by one of its leading opponents. "What greater praise," asks Professor PRICE, "can be given of any money than to have the very best metal for its determiner of value, and yet to give unlimited use of the two metals, gold and silver, without injury to the receiver. If Mr. CLARMONT DANIELL'S reform is successfully established, will there be any better money in the whole world than the Indian?" Perhaps not, but certainly if Mr. CLARMONT DANIELL'S reform is successfully established, India will have precisely such a bimetallic system as men like CERNUSCHI and LAVELAYE advocate for the whole world, and men like PRICE and LEROY-BEAULIEU have hitherto condemned.

GERMANY AND THE UNITED STATES.

IT is obvious that the relations between Germany and the United States have assumed a new and unexpected aspect, by reason of the transfer of Minister SARGENT from Berlin to St. Petersburg. Precisely what the change portends, no one can know, who is not in the confidence of the American Cabinet; and it may be some time before the secret is revealed. There is little reason to apprehend anything worse than a partial suspension of intercourse through the usual diplomatic channels. The United States Government has no cause to be dissatisfied with its present position, even if it be shown that the removal of Mr. SARGENT was demanded by the German authorities. The right of every Government to signify its disapproval of envoys from other States is indisputable. It is, however, seldom exercised, and we do not believe that any direct expression of discontent has been declared in the present instance. At the same time, Mr. SARGENT'S position has been rendered extremely uncomfortable by the violent personal attacks of Government journals in Berlin, and he has been subjected to other discourtesies almost unparalleled in international records. It may well be that the PRESIDENT avails himself of the vacancy at the Russian capital to release a trusted servant from a situation of extreme discomfort, and, by conferring a virtual promotion, to give the most effective assurance that the latter has in no way forfeited the confidence and esteem of his superiors. There is nothing humiliating in this, so far as the United States are concerned. That the result will be altogether agreeable to Germany, is a matter of doubt;—especially if the American Government shall find it desirable to leave the post of Envoy to Berlin unfilled for an indefinite period.

The LASKER incident, which for a time seemed likely to interrupt cordial intercourse between the two countries, has been

deprived of all importance by the simple and sensible course of the American Secretary of State. When last referring to this subject, we mentioned that Mr. EISENDECHER, the German Envoy at Washington, had been instructed to inform Mr. FRELINGHUYSEN that the resolution passed by the lower branch of Congress could not be transmitted to the Reichstag, and that it had consequently been sent back to the United States. In fulfilling this commission, Mr. EISENDECHER stated that he was prepared to hand over the rejected document, which, he added, "his Government could not on its own responsibility feel at liberty to retain." Mr. FRELINGHUYSEN'S reply was evidently unlooked for, and was probably somewhat disconcerting. He briefly remarked that "the PRESIDENT could not be supposed to have any wish" as to how the German Government might dispose of the document,—thereby plainly intimating that he certainly would have nothing more to do with it. Prince BISMARCK'S representative had therefore no resource but to keep it himself. "Your answer, Mr. Secretary," he said, "expresses no wish, and consequently relieves my Government from the obligation it has felt to return the resolution." It is difficult for an impartial spectator to see in what way Mr. FRELINGHUYSEN'S answer afforded the alleged relief, or how anything he might say could have the slightest effect upon any obligation under which the German Government might suppose itself to rest. In plain fact, Prince BISMARCK desired to show his feeling in the matter by forcing the document back to its original place of departure. Mr. FRELINGHUYSEN very naturally declined to assist him in doing so. For a moment, the envoy's position must have been awkward, but there is no doubt that he took the best course open to him by responding as he did. It was wiser to commit a trifling absurdity than to risk further complications. And so the document remained, and probably still remains, in possession of the German agent at Washington, to do with it what he, or Prince BISMARCK, wills. Nothing is less likely than that the latter foresaw any such anomalous termination to the transaction: although, looking at it in the light of the actual events, we may wonder at his failure to perceive,—in the language of a homely illustration,—that what was sauce for the goose might likewise be sauce for the gander. Since the German Prime Minister found it practicable to refuse compliance with the wish of the House of Representatives, it might have occurred to him that the American Minister could similarly refuse compliance with *his* wish. At any rate, the Chancellor was foiled, and by the very device of his own contriving. On the 10th of March, Mr. FRELINGHUYSEN closed his connection with the affair by sending a despatch to Mr. SARGENT, relating all that had passed, and once more blandly asserting the indifference of the U.S. Govern-

ment to Prince BISMARCK'S private feelings. "His Excellency," writes Mr. FRELINGHUYSEN, "is pleased to explain the embarrassment under which he conceives he would labor by forwarding it (the resolution) to its destination. His position and the personal convictions to which he alludes are matters affecting His Excellency alone, and upon them it is not becoming that I make any remark." As regards the refusal to convey the document to the Reichstag, in the first instance, the Secretary of State, premising that the intention of the senders was obviously courteous and friendly, remarks that the "non-transmission . . . while a matter of regret, is not one of concern, to either branch of the Government of the United States." All things considered, and as the matter now stands, it is not easy to imagine a neater or more delicately executed bit of diplomatic strategy than that employed by Mr. FRELINGHUYSEN. It may, indeed, be objected that the process was too simple to call for admiration; but that has been a common criticism, from the time when COLUMBUS made the egg stand upright to the present day.

Some surprise has been manifested, in various quarters, at the equanimity with which the Chancellor accepted the new turn of events. It appeared as if he were actually inclined to take steps toward a reconciliation. After the communication of Mr. FRELINGHUYSEN'S latest dispatch to the Foreign Office at Berlin, Mr. SARGENT received an invitation to dine with Prince BISMARCK on the Emperor's birthday, and to attend a less formal soirée at the palace, on the same anniversary. But it was also noticed that the assaults in the Government organs continued without stint, and that, while the angry references to the LASKER resolution were suspended, the endeavours to present the Republican envoy in an obnoxious light were redoubled. It was by no means unreasonable to suppose that BISMARCK concluded the LASKER game to be not worth the candle, and decided that while his prestige could not be seriously impaired by withdrawing from that particular contest, his convenience—to say the least—might be compromised by pushing it to a further and unwarranted extremity. This was a natural interpretation of the speech delivered by him in the Reichstag on the 13th of March. Ostensibly a defence of his action, it was in fact more nearly apologetic than anything that has fallen from his lips for many a year. He chose to assume that a scheme had been concocted, by his political opponents, to take advantage of LASKER'S death, and, through the unconscious coöperation of the House of Representatives, to render him, BISMARCK, the medium of glorification for his antagonists—or, as he chose to put it, to make him "his enemy's postman." The speech was distinguished throughout by the Chancellor's characteristic vehemence, not to say violence, but this was directed

solely against his adversaries at home. Toward the United States, he proclaimed the kindest sentiments; and,—which is the most remarkable feature of the entire proceeding,—he suggested that Dr. HAENEL, a Liberal leader who had been prominent in the debate, “could, if he so pleased, introduce a motion conveying the thanks of the Reichstag to the House of Representatives for its expression of sympathy.” From such a man as BISMARCK, it would appear that no retraction could be more complete. But no one will be astonished to hear that a general doubt as to its sincerity was expressed. Even if,—as to us seems probable,—he were disposed to allow that single cause of misunderstanding to be cleared away, there were others which, it was commonly declared, he would cling to with his accustomed tenacity. From this point, however, all comment becomes conjectural. We have the fact that Mr. SARGENT has been advanced from Germany to Russia, with unusually earnest assurances of the approval of his Government. Prince BISMARCK’S supporters may, if they choose, assert that the President and Cabinet of the great Republic shrank from resisting the well understood resolve of the most powerful of continental statesmen. But the verdict of the majority, if we read the omens correctly, will be that the American authorities deemed it necessary for their country’s dignity, and for their own reputation, to show that although they were not responsible for the unseemly scandal, they were ready to put an end to it by the only means at their command, and to preserve, in the eyes of the world, the decorous amenities by which the comity of nations should be regulated. There are occasions in diplomacy, as in other trials of skill on a large scale, when judicious concession is the most dexterous policy.

REVIEW.

Tungking. By WILLIAM MESNY, Major-General in the Imperial Chinese Army. Hongkong, 1884.

AN interesting pamphlet tracing the early history of the Annanese nation, and giving us one view of the present French imbroglio in Eastern affairs from its inception until a few weeks ago, has come into our hands. The writer’s circumstances enable him to see the position clearly from the Chinese standpoint, and he evidently is not prejudiced in favour of the French. He asserts and maintains the righteousness of China’s suzerain claims over Annan, making them much more tangible than we have been in the habit of acknowledging. We do not intend here either to combat or endorse his opinion, but simply to give, in a short resumé, the substance of the pamphlet, and let it speak for itself. Whatever may be thought of its conclusions, the historical and descriptive facts presented are peculiarly welcome at the present juncture of the Tongquin (or Tungking) question. The sources from which our author draws are, for ancient history, Chinese, for modern matters, both Chinese and foreign. The pamphlet was intended to be part of a larger work on the Chinese Empire, but “the ignorance of the public about Tungking made it advisable to publish these notes at an early date and in a convenient form.”

Tungking is the name of the delta of the Sonkoi or Red river, bounded on the north by the Chinese provinces of Yunnan and Kwang-Si, on the East by Kwang-Si and Kwang-Tung. The name Tungking, really our familiar Tokiyo, or Eastern capital, was first given to Hanoi, or ‘Ho-nei, when that place was the seat of royalty, but gradually extended to the whole province. In the Era of fable extending to 2,500 B.C., it was called Chiao-chih, which name it still bears in common parlance. It was afterwards called Yüeh-nan-kuo, which is the present official name of all Annan. Eleven other names were successively given to the land, until finally, in 1175 A.D., a Chinese Emperor changed the name to An-nan or Annam as it is incorrectly written, following French usage. The entire official nomenclature for various posts and officers is identically the same as that in use throughout the Chinese Empire.

Lo-yüeh-ti was probably the name of the ruler of the country 2500 B.C., or King Lo, who claimed to be the direct descendant of Lo Hsiung Shih the Divine Farmer of China, who dates back to 2750 B.C. It is recorded that Lo’s Kingdom was firmly established and well-governed, with ministers, nobles, warriors &c. Eighteen generations thus passed, when war broke out, old laws were abolished, the ancient form of Government was changed, and everything overturned by the usurper Shu Wang. Shu Wang proved a vigorous, and powerful ruler, and founder of a warlike dynasty. There seem to have existed the most friendly relations at this time between China and Annan. The Emperor T’ang Ti-yao, (2356 B.C.) sent an Imperial Envoy to reside at the Court of Nan-chiao, the country which is now divided into Annan and the two Kwang provinces. About 2255 B.C., an Imperial Minister of State was banished, on account of his misdeeds, to Ch’ung Shan, or the modern Annanese province of Jen Shêng. Subsequently troublous times seem to have broken the friendly bond, and for over one thousand years we have not a single syllable of authentic or traditional record. The two countries seemed utterly oblivious of each other’s existence, hence an immense gap in the historic continuity of the narrative.

Intercourse was revived under the Chou dynasty, for Chou Chêng Wong (1115 B.C.), King of Annan, despatched an envoy to the Imperial Court of the Chow Emperors. The ambassador presented himself as representative of the King of Chiao-chih, a lineal descendant of the old Yüeh-shang-shih dynasty and offered tribute in his master’s name with the usual ceremonies. The tribute consisted of cockatoos, peacocks, and a large quantity of ivory. Chou Kung, the famous sage, advised the Imperial Court to refuse the tribute and the resultant suzerainty over the distant state. The Court at first assented, and Duke Chou replied to the envoy, “I, as an upright statesman, dare not accept your proffered tribute, You, as an honest official owe me none.

I have done naught to deserve it
You, nothing to owe it.”

But the subtle flattery of the envoy was too much for the sage. He enumerated all the accumulated blessings poured on Annan, attributed them to the benign influences of the puissant ruler who controlled the destinies of the Chinese people, and declared that the people of Annan desired to offer this slight mark of respectful homage. The envoy’s presents were accepted. He returned laden with gifts, having secured the famous Chou Wên Wang as Sovereign of his King and Country.

In 218 B.C., in the reign of Shih Huang Ti, the First Chinese Emperor, builder of the Great Wall, and burner of the books, a Chinese expedition took possession of Tungking and established a purely Chinese military and civil organization there. Tungking was then called Lu-liang, from the hardy people living in the wooded and mountainous country. In the summer they were clad in human skins, and in the winter an extra garment of wild beast’s skin, was added. The women were not ashamed of the smallness of their breasts, the

largeness of their waists, or the natural appearance and the size of their feet. The beauties of the human form developed in perfect freedom. Everything was as it ought to be. The men were proud of their women, and the women were obedient and faithful to their husbands: in eating temperate; water their choicest liquor.

At the time of the disorders consequent on the weakness of the Great Chin’s successors, and the rise of the Han dynasty, a warrior by the name of Chao T’o seized the two Kwang provinces, fixed his residence in Canton, and proceeded to make easy conquest of Tungking. But he met with the French success of the early part of 1883: he was beaten back to Bac-ninh of to-day (then Wu-nang). Chao T’o did not give up, but having obtained for himself the patronage of the Emperor Han Wu Ti, he concentrated his wits and his strength upon the conquest of Tung-king. The story of the stratagem by which he won the now careless state would grace any Oriental romance. His conquest was complete, and the crown and Kingdom of Yüeh-nan passed from the royal house of An-yang to Chao-T’o. In 116 B.C., it was made an integral portion of China. In 30 A.D., after a long period of confusion in the Empire, an envoy from Chiao-chih was sent back accompanied by an Imperial Officer to instruct the officialdom of Chiao-chih in the Chinese system of Education, Rites, Ceremonies and general Administration. This official made himself so obnoxious that the people rebelled, and under an Annanese Joan of Arc, the Lady Chu, they drove the Chinese from a great part of the land. Chu then proclaimed herself Sovereign of Chiao-chih, and with the assistance of her sister ruled ably and wisely for years. But the Empire could brook no such insult, and in 42 A.D., the veteran Ma Yüan, then seventy years old, conqueror of Thibetan forces, &c., &c., led an expedition against the doughty ladies and their brave people. Nobly they resisted, but the better armed and more numerous Chinese gained the day and the two sisters were taken prisoners. Our author does not tell whether these ladies at that time were still accustomed to the full dress described above, or whether they tried the Cleopatra trick, or whether their attire was tampered with when they were taken prisoners. He does tell, however, that Ma Yüan did not allow himself to be fascinated by the beauty, martial prowess or voluptuous charms of his captives, but that feeling scandalized at their nakedness, he cut off the very capacious sleeves of his state dress and handed one to each of the fair sisters, with instructions to pass them over their heads down to their waists, and there fasten them. Thus Ma Yüan instituted that fashion of female dress which has lasted through long centuries, prevailing as it does to the present day. That one act of kindly charity won the gratitude of the entire nation it was his business to subdue. Thus attired the royal ladies were at once marched from his presence to the executioner; their patriotism cost them their lives, but the nuptial Tungkingese lavished honours upon their conqueror and forgot everything due to these brave women.

From this time on until modern days the essential sovereignty of China was acknowledged. At times the land became a mere province of the Middle Kingdom, at others, for a very brief space, perfect independence was claimed. The record is a very varied one, of short spaces of peace, of dark plots, mutual recriminations and quarrels among the people themselves so soon as the grip of China grew looser, from having her attention drawn to other quarters. Tungking seemed as incapable of governing herself as Ireland is to-day. Occasionally anarchy gave place to order, but this was soon succeeded by the natural state of confusion. The Annanese were never content to submit quietly to the indirect or direct rule of the stronger power; but so soon as a measure of independence was secured or permitted, civil strife and perpetual internal ferment effectually prevented the maintenance of national in-

dependence. In the nineteenth century, they are apparently no nearer a peaceful solution of this difficulty than they were at the beginning of our era. By becoming willing feudatories of China, after many years of independence, they do not appear to have improved their condition. They had put their head into a halter, and all their struggles to recover lost independence only resulted in a heavier yoke and a firmer vassalage. About A.D. 964, a brave Annamese leader secured from China autonomy for his country, but his weakly successor was deposed by one of his Ministers of State, who usurped the throne and assumed kingship. In 981, the Chinese Emperor sent a military expedition to aid the dethroned King. By a ruse, the whole of this auxiliary force was annihilated. Then the usurper, in 984, sent an ambassador to Peking with tribute and received imperial recognition and favour. He died in 1004 A.D.; was succeeded by his son Lung-yüeh, who was ousted promptly by his brother, and he, by an officer of the army, who was eventually recognized by China under the sarcastic title of "King of the peaceful south." And so it went on. Annam was a semi-independent state, but no ruler felt secure until his tribute was received and he himself recognized by the Emperor of China. In the year 1175 A.D., however, a Charter of Independence was obtained from the Emperor of China. The autonomy of 964 had suffered a total eclipse; but now the Imperial Charter was to restore it completely. Yet in 1262, we find the Annamese "Emperor" once more knocking at China's doors for recognition and confirmation. His request was granted. This was the last case of interference by the Sung dynasty. After the succession of the Mongol Tartars, the Tartar Emperors claimed suzerainty over Annam, one of whose rulers gave mortal offence to the great Khan by daring to assume the purple without his permission. Hence a series of expeditions, which met with reverses at the hands of the hardy Tungkingese, who in turn invaded China and met with reverses there. Again they appealed for recognition but were entirely ignored.

The Mongols were succeeded by the Ming dynasty, who demanded and received the submission of the King of Annam, and placed a Resident as deputy at his Capital. In 1374, an uncle of the King usurped the throne of Annam, and applied in vain for the recognition of the Ming Emperor. He abdicated in favour of his brother and craved recognition for him, but bloody usurpers found no favour at Peking. In 1378, another brother tried again and likewise failed. 1388, Li Chi-li, a minister of state, murdered the King, placed his nephew on the throne and made himself Regent. China declared that she would hold no intercourse with rebels and usurpers. By and by the Regent slew his puppet King and raised one after another to power, to serve them all alike, till finally he assumed the royal prerogative himself. In the meantime, a new Emperor had ascended the Chinese throne who consented to receive an Annamese Embassy, and to recognize the new King. But China afterwards declaring in favour of a scion of the ancient line, sent an expedition to reinstate him, and the result was that Annam a Chinese colony in 1405. Rebellions arose but were suppressed, until 1426, when the Chinese army was annihilated after a seeming success. Autonomy was again granted and all Chinese officials were withdrawn. But tribute was sent to China and the Emperor defined the authority of the King of Annam. In 1459, usurpation and regicide. Then half a century of peace, followed by repeated usurpation, suicide, regicide, rebellion, and continual civil war, ending in an appeal to China and the despatch of a Chinese expedition, in 1538, to restore order. Order was restored for a moment by feigned obedience; but the old story of civil war, deception, regicide, usurpation, went on, each successful leader invariably appealing to China for recognition, or for help, until near the close of the last century, when the refugee remnant of the royal house found a welcome in China, where an ex-

pedition was again prepared to reinstate them. The invasion, as usual, was at first successful, in restoring the King, but was subsequently defeated, and the Chinese army unmercifully slaughtered. The conquering King, however, did homage to the Emperor and received Imperial favour. On his death a usurper, assisted probably by French and Spanish pirates, ousted the rightful heir.

Thus the first contact with the French was as "barbarian pirates;" and some French officers gave assistance in fortifying towns, &c. In 1802, at the desire of Annam, China re-asserted her sovereignty. The next exercise of French influence was in the garb of Christianity. French Jesuits opposing Chinese influence, got into trouble, and France "protected" them by warring against Annam "in the interests of the Christian religion." A new King, twenty or thirty years later, again swore fealty to China, but did not continue to favour French officers and French missionaries, the former being dismissed and the latter persecuted. Another King succeeded in 1848, and again sought Chinese investiture, as well as a Chinese Protector. In 1867, the Annamese asked for Chinese aid against rebels; and these latter submitted in part, but continued to levy black mail on all traders to and from Kwang-Si and Yün-nan. In 1870 and 1871, there was trouble with the Black Flags, and China's help was obtained. In 1872-3, Chinese were again called in to aid against outside danger, but the strategic points were not occupied by troops, and the French had opportunity to begin their troubles. The Black Flags by an ambush slew Garnier and compelled the French to evacuate Hanoi. "The magnificent achievements of a handful of French adventurers were annihilated in a few hours, and Tungking, of which the French had possessed the fairest provinces, passed again under the (by the French) abhorred yoke of Hue." March 5, 1874, a treaty with France was signed; a hasty agreement, being forced on by an internal rebellion stirred up by French Jesuits for the furtherance of French aggrandizement. This treaty recognized the protectorate of France, but was obtained in a time of embarrassment and from ambassadors who did not know its real import. The sovereignty of China over Annam had been claimed by China and admitted by Annam for thousands of years, and therefore China should have been consulted in all affairs affecting the politics of Tungking. France not only did not thus consult China, but kept the treaty of Saigon a secret from the Chinese Government for over a year.

The Black Flags are not rebels, but the remnant of a band of Chinese outlaws, such as once existed in Merrie England. They settled in the mountainous border land, and the Chinese Government has come to an agreement with them, so that they are now recognized as a border clan with certain rights, and a political standing, and act as defenders of the neighbouring provinces of China. Their officers are recognized in the Chinese army; they are supplied with munitions of war by China, and have a regular subsidy from the Imperial Treasury. They are recognized subjects of China, about whom the French have egregiously blundered. France, if for a time successful, will stir up powerful and quietly inveterate enemies, who will spare no exertion till they have placed themselves in a position to retaliate. So surely as France will not forget, but will fight again for, Alsace-Lorraine, so surely will China fight for every inch already won, or that may be hereafter won, by France in Annam.

The mineral wealth of Tungking is very considerable, and needs only to be worked to become immensely profitable. But all is in Chinese hands. So also with the whole trade. French success will only alienate trade from them to other Channels, to the benefit of England and China, making Hongkong the pivot for all the trade of Tungking. If the French give trade facilities, other nations will reap the larger benefit. If France puts on a protective tariff, she will only divert the course of

trade, and a bankrupt province will be left in complete dependence on her. But much yet stands in the way of her ultimate success. The French are at present fighting in Tungking, nominally against the Annamese (who detest them for their false promises at the time of the Li insurrection, and believe in nothing but French callousness, greed, and rapacity), but in reality against Annam aided by China. Very different will the story be when China openly takes the field, as she ultimately will. She has inexhaustible resources in men and money. France cannot maintain her hold of Tungking beyond the range of bullet or the roar of artillery. Obtained and kept by unrighteous force, the revenues of the colony will be spent in military occupation, and the commercial prosperity of Tungking will perish under the necessity of maintaining an immense military force. The French were checked by the Black Flags; large re-inforcements have been sent to revenge the death of Rivière, but the taking of Son-tay was a dearly bought victory, whilst the enemy's loss was slight, the greatest number of native slain being non-combatants. Every inch of advance will be contested: the mountain tribes have still to be subdued. A force of less than 60,000 French cannot take and keep the country. Even when Bac-ninh is taken, the land is scarcely touched. "But whatever, the course of events may be," writes General Mesny, "I wish to impress on all who read this little book that Annam has been for more than 30 centuries, and still is, the Vassal and Tributary of China; that France has ruthlessly and without legitimate excuse tried to violently oust China and seize Tungking; that the Black Flags are recognized Chinese and Annamese troops, and not rebels; that the Annamese people hate the French with a bitter unquenchable hatred; that France has already met no mean foe and will inevitably stir up the bitter, patient, unrelenting hostility of China if she continues her present course of action; that French success will only put off the day of retribution, whereas a French reverse will be the death blow to their dream of a Colonial Empire in the East, and probably cause their present Republican Government to collapse; and finally, that the only benefit resulting from success will be reaped commercially by Britain and politically by China." An appendix sets forth the amount of Chinese assistance given since 1882 (when it became evident that France was determined to have Tungking), showing that very little of Chinese strength has yet been engaged, but that a large force is now at command. The author winds up his very interesting brochure thus:—"One single reverse at this moment might be sufficient to attract a hundred thousand men of the Black Flag type to Tungking, which would so disorganize the French Government Officials as to prevent their future attempts of colonization in that quarter, and so ruin the country as to make it useless and unprofitable for years to come." The only comment we have to make on General Mesny's brochure is that it seems a worthy sequel to the gallant utterances of the Marquis Tsêng. The logic of facts is stubborn. China is strong. Nobody doubts that. But until she becomes capable of exercising her strength effectually, her antiquated pretensions of suzerainty are not likely to command serious consideration.

YOKOHAMA PUBLIC HALL ASSOCIATION.

The Annual General Meeting of the shareholders of the above Association was held at the Club Hotel Wednesday afternoon, at which the following gentlemen were present:—Messrs. J. T. Griffin (Chairman), G. E. Rice (Secretary), Vivanti, Reynaud, James, Van Buren, A. Barnard, M. Kirkwood, Pinn, Townley, Prichard, Steel, Walter, Langfeldt, Reid, Gay, Thomas, MacArthur, Lindsley, Strome, Fitz-Henry, Masfen, Gribble, Wauchope, Brewer,

Hooper, Noyes, Ruyter, Litchfield, C. D. Moss, Hamilton, and Geoghegan.

The CHAIRMAN opened the meeting by saying that it had been called under article 6 of the rules, to receive the report of the directors and to pass the accounts. He thought that it would save time if the minutes of the last meeting were taken as read as they had been published.

Mr. THOMAS proposed that they should be read, and this being seconded, Mr. Rice read the report as published, with the exception of the correspondence, which was confirmed.

The CHAIRMAN remarked that the first business before the meeting was to receive the report of the directors and the accounts, which were then read as follows:—

YOKOHAMA PUBLIC HALL ASSOCIATION.
REPORT TO THE SHAREHOLDERS.

GENTLEMEN,—In presenting the statement of Accounts and Balance Sheet to date, your Directors regret that the building is still incomplete.

At the date of the last General Meeting on 23rd November, at which a resolution was passed empowering the Board to borrow money to complete the Public Hall, we were assured of financial assistance from one or two sources. Unfortunately the negotiations then pending fell through, work was stopped on the 5th December from the combined causes of lack of funds and early frosts, and since that date nothing has been done.

Your Directors have tried various methods of raising the required amount, but hitherto without success and the future course of proceedings must rest with the Shareholders themselves.

The retiring Board would say for the information of the incoming Directors that from all the investigations made there seems no prospect of raising the money required on simple mortgage of the Association property without personal security in addition. They would recommend that the matter of Debentures or Preference shares be seriously considered by the Shareholders, and think that as an alternative scheme the funds might be obtained on Personal security from the Bankers of the Association.

Placing our resignation in your hands as per Article IX.,

We are, Gentlemen, your obedient servants,
(For the Board),
J. T. GRIFFIN, Chairman.

April 30th, 1884.

STATEMENT OF ACCOUNTS AND BALANCE SHEET.
DISBURSEMENTS.

Cost of lot and ground rent	\$2,318.21	
Foundations, trenches, and well	1,002.93	
Iron work	\$ 58.38	
Carpenter's work	250.86	
Lumber	826.24	
Stonework	1,039.19	
Brickwork	\$1,596.55	7,741.22
Printing, advertising, etc.	200.65	
Working expenses	338.67	
Cement purchase	32.50	
Mr. Cappelletti	400.00	
Arbitrators' fees	100.00	
Balance in Bank	184.51	
	\$12,948.69	

DEBIT DEPENDENCIES.

Due to Brick work Contractor	673.79
Due to Mr. Sarda	468.54
	\$1,142.33

RECEIPTS.

Shareholders, 249½ shares	\$12,475.00
Donations	375.00
Interest on Bank deposit	92.69
Transfer fees	6.00
	\$12,948.69

CREDIT DEPENDENCIES.

40 Window and door frames	\$24.01
10 Hinoki logs	58.26
16,562 feet Lumber	496.80
13 Barrels Cement	32.53
2 Sample chairs	28.48
	\$ 820.08

E. & O. E.

GEO. E. RICE, Hon. Treasurer.

We certify that we have examined the above statement, with the books and vouchers of the Association, and found the same to be correct.

A. MILNE, } Auditors.
R. S. SCHWABE, }

Yokohama, 30th April, 1884.

The SECRETARY said that 249½ shares had been paid for, 25½ were still unpaid, making a total of of 275. The original list was 287, but 12 subscribers had withdrawn, most of whom had left Japan.

Mr. THOMAS said that a vote of confidence in the Directors had been passed on the 23rd November last and according to their report the work was stopped in December. He thought that they had not given a sufficient reason for not calling a meeting before, when they found they could not get along they ought to have called a meeting and explained matters to the shareholders.

The CHAIRMAN replied that they had left no stone unturned to raise money to finish the building. They had tried everybody. The reason a meeting had not been called before was that they had various schemes in train and it was only a few

days ago that they came to the conclusion that they could do no more. When they last met the Directors had promises of assistance from two quarters, and they thought they only had to get the permission of the shareholders to borrow the money, but both promises had fallen through.

Mr. WALTER wished to know what sum of money the Directors had tried to raise, and also how much more would be required to finish the building.

The CHAIRMAN said they had tried to raise \$15,000, which they thought would complete the building. That was with two stories in front and the concert room, but without furniture and decorations. They had also received an estimate from Mr. Sarda by which for \$10,000 it could be finished with a single storey in front and the main hall to be not so lofty as originally intended.

Mr. WALTER remarked that that was much more than the \$22,000 mentioned at the last meeting.

The CHAIRMAN explained that the estimate of \$22,000 was for the shell of the building alone, not calculating the price of the land, furniture, etc.

Mr. JAMES asked whether steps had been taken to collect the subscriptions from the delinquent shareholders.

The CHAIRMAN said that Mr. Durant had kindly been round and interviewed the gentlemen personally.

General VAN BUREN asked that the names should be read.

The names were then read.

Mr. KIRKWOOD wished to know whether they admitted having taken the shares.

Mr. RICE said he was under the impression that all of the delinquents had signed the subscription list.

General VAN BUREN wished to get on to the election of a new Board and therefore proposed that the report be passed. The accounts would show the new Directors how things really stood.

Mr. LANGFELDT asked whether the present Directors, if re-elected, would serve for another year.

The CHAIRMAN said that four of them declined to serve again, but Mr. Durant had expressed his willingness to do so.

Mr. WALTER, referring to the debit dependency account, said that when he was on the board of Directors, he had taken Mr. Kirkwood's opinion on the matter and it was that the Directors were liable for all debts contracted. He thought that before spending more money than they had in hand the Board ought to have called a meeting of the shareholders and have laid the accounts before them. As to the cost of finishing the building, Mr. Diack, a professional gentleman, had given it as his opinion that altogether it would cost \$40,000 to make the place complete. He considered that the Directors were wrong in going into the building business, buying bricks and mortar, etc., themselves, instead of making a contract for the whole thing. By doing it themselves they could not estimate the cost till the building was nearly finished, and the whole thing had failed by their becoming builders instead of employing a competent contractor.

General VAN BUREN said that as facts stood he did not wish to say anything about the actions of the Directors. The matter now was—was the report correct, and if so, the only way was to accept it and file it. It was not necessary for the meeting to adopt it, they need take no responsibility.

Mr. PINN seconded the motion that the report be accepted and filed.

Mr. C. D. MOSS asked whether the amount due to the brick contractor was for work already done, and also whether Mr. Sarda's account was for services already rendered.

The CHAIRMAN said it was for bricks already laid, and Mr. Sarda's account was calculated at 5 per cent. on money already expended.

Mr. MOSS wished to know whether there were any more contracts running.

The CHAIRMAN said that the contractor was

willing to supply any amount of bricks at *yen* 16.80 per 1,000, laid. The stone work was on the ground.

Mr. LINDSLEY thought Mr. Walter was wrong in his statements. If the Directors had issued tenders for the whole of the building no one would have contracted without seeing his way to make a large profit. Chinamen, if the contract did not pay them, usually chucked it up. The reason of the heavy expenditure was that so many bricks had to be put in the foundations and the retaining wall at the back. The work had been done as cheaply as possible, and the contracts could not at the present time be repeated.

Mr. WALTER explained that he did not complain of the contracts. What he wanted was that they should make more, so as to finish the building. The Directors had never been able to tell the shareholders how much the building would cost, and even at this day they could not tell them how much it would take to finish it.

Mr. LINDSLEY remarked that contracts were usually based upon the estimate of the architect. They had wanted to save the contractors' profit, and he thought they had succeeded.

The CHAIRMAN did not remember Mr. Walter giving Mr. Kirkwood's opinion that the Directors were liable for over-expenditure. Referring to the minute book, he found that several contracts had been made before Mr. Walter resigned from the Board, and the reason he then gave was, that he differed with his colleagues on Mr. Cappelletti's business. If the gentlemen had nothing further to say, he would put General Van Buren's motion.

Motion put and carried.

The CHAIRMAN remarked that the next business was to elect a new Board of Directors, which he thought had better be done by ballot as previously. He proposed that the full number, seven, be elected. They had been working with five for some time.

Mr. WALTER thought that before the election the meeting should express an opinion as to what was to be done about the building.

The CHAIRMAN said they were bound by the constitution to elect a new Board. He proposed that this be done at once, and the shareholders could then give them any instructions they might deem fit.

General VAN BUREN was in favour of adjourning the meeting so that the shareholders might be posted up in the affairs of the Association. He proposed that the new Board be elected and the meeting adjourned for a month.

The CHAIRMAN quite agreed, and said the new Board would have every facility for examining the accounts, etc. What the retiring Directors most wished to see was the completion of the building.

General VAN BUREN proposed to elect the new Board by resolution.

The CHAIRMAN thought that if it were done by ballot it might save any unpleasantness.

General VAN BUREN read the following list of names which he had drawn up, and which he hoped would meet the approval of the shareholders:—Messrs. Gay, Fitz-Henry, Langfeldt, Thomas, Reimers, Kirkwood, and Morris.

Mr. THOMAS said that the position of Director at present would be a very unpleasant one, and he did not think any one could be induced to take it. He would propose that a Committee be appointed to enquire in to the contracts, estimate what it would cost to finish the building, and see how best to raise funds, etc.

General VAN BUREN said that the Directorate would be such a committee. They would look over the plans and report at a future meeting. If things went right all would work smoothly, but if the report was not satisfactory they could resign. He proposed that the gentlemen whose names he had read be elected as Directors for the ensuing year.

Mr. LITCHFIELD seconded the motion.

Mr. THOMAS thought it best to appoint a Committee to enquire into the prospects of the Association and report to a meeting to be held next week.

General VAN BUREN said that a week would not be sufficient. By his motion the Directors would have a month in which to work and if at the end of that time their report was unfavourable they could resign if they pleased.

Mr. GRIBBLE proposed that the Directors be elected by ballot.

Mr. WALTER seconded the proposition, as it was the universal custom in Yokohama, and had been adopted at the previous meetings.

General VAN BUREN then withdrew his motion.

Mr. KIRKWOOD would remind them that the votes were calculated by the number of shares.

The CHAIRMAN then put Mr. Gribble's motion, which was carried.

The ballot resulted in the election of the following gentlemen:—Messrs. Fitz-Henry, Gay, Morriss, Reimers, Thomas, Kirkwood, and Langfeldt.

General VAN BUREN moved that the new Board be respectfully requested to call a meeting as soon as possible after making a thorough investigation, and lay before it a report and any suggestions they might have as to future proceedings.

This was seconded by Mr. BREWER and carried.

Mr. MASFEN said that it was very easy to criticise after the event. Although things had not gone as might have been wished the Directors had worked hard and he proposed the following resolution:—"That while regretting the unsuccessful result of the labours of the Directors in providing us with a Public Hall, this meeting is mindful of the untiring zeal and the gratuitous services they have rendered during their term of office, and tenders them a vote of thanks on their retirement."

Carried.

The CHAIRMAN expressed the thanks of the Directors, remarking that it had not been a bed of roses. Inimical editorials and anonymous poetry had been showered upon them. They were only sorry that they had not been able to accomplish more than they had. He then proposed a vote of thanks to the auditors, Messrs. Milne and Schwabe, which was seconded by Mr. PRICHARD and carried.

The meeting then adjourned.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

IS JAPAN A BRITISH COLONY?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Not long since the writer had a conversation with an intelligent Englishman, a resident of Yokohama, who warmly espoused the views upon extraterritoriality and treaty revision recently advanced by Mr. A. J. Wilkin. After listening for some time to that pleasant and plausible way of putting things, I ventured to inquire whether if we were in the position of the Japanese, the "inherent reasonableness" of those views would not be modified. The answer came promptly that the case would then undoubtedly appear quite different, "but," it was added, "it is impossible to discuss the question on the ground of justice to the Japanese, for we should then have to admit that we have been wrong all along from the time of Commodore Perry down to the present hour."

This answer struck me as quite significant. It was not the falseness of the position taken, for Perry's circumstances and demands were quite different from those of the treaty powers of to day; nor was it the eminently un-English position assumed,—that of refusing to do the fair thing to-day lest we should convict ourselves of having been unfair yesterday; it was the apparently utter misconception of the relation of the treaty-making powers to each other—the misconception that Japan is not an independent and sovereign nation, but (so far as Englishmen are concerned) a dependency, a colony of Great Britain. Have we not in this misconcep-

tion the real secret of the difference of opinion that exists among our by no means purposely dishonest residents on this question? The more I have thought upon the matter, the more fully have I become convinced that it is a real factor in the case; and the more natural does it appear that such a misconception should exist.

Many British subjects have come to Japan from British colonies—all come with traditions of colonial life. The presence of British troops in Yokohama for many years greatly fostered such an opinion. The continued presence of British judges, courts, &c., have the same tendencies. Indeed, as I visit Yokohama from my home in the interior where the Japanese language is the ordinary means of communication between myself and my friends, the great majority of whom are Japanese, and where I, being in the minority, naturally conform to Japanese manners and customs, and so am led to look at many of these questions in the same light that my Japanese friends do: when, I say, I visit Yokohama and see how perfectly isolated the life of the ordinary Englishman is from Japanese life and thought and higher aspirations, I am not surprised that this should be discussed as though it were a *Colonial* question. Furthermore, if anything were wanting to establish the correctness of this view, it would be found in the attitude of the Yokohama local press. Only the other day I saw an extract from a Yokohama daily which spoke of the propositions of the "Native Government"!

Scientists are right in attaching much importance to "Environment." Have we any number of men in Japan, not connected with the foreign legations, who speak the Japanese language and associate with Japanese people and yet are opposed to a modification of the extra-territorial provisions of the treaties? I know of none.

Yours, &c.,

FAIR PLAY.

April 19th, 1884.

INHERENT—WHAT?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I take the earliest convenient opportunity to acknowledge my inability to cope with your correspondent "Foreigner." It often happens, in conversation or in public discussion, that certain signs and tokens make their appearance, before which a sensible disputant will fly with all the celerity he commands, regretting only that it should have fallen to his share to evoke such amazing manifestations. They can best be likened to the colloquial achievements of very young—or perhaps very old—ladies who, plunging into debates upon all conceivable themes, are not unfrequently surprised, though rarely disconcerted, to find that a great silence has suddenly fallen about them; that

"All the air a solemn stillness holds,"

and that the countenances of the bystanders have assumed various expressions of mocking incredulity, or profound compassion, or blank dismay. The persons who alone are not thrown into confusion by the awkward turn of events are generally those who have produced the phenomena. Mrs. Malaprop, we know, never shared the consternation caused by her extraordinary flights of speech. Under these conditions, valour is the last thing to rely upon. The sole safeguard lies in dumb discretion. Possibly the gentleman who pressed political economy upon Mr. Toots acted unwisely in asking him what should be done with the raw material; but we may be sure that on receiving the answer—"Cook it,"—he retired from the field without loss of time. Not to indulge in further illustrations, I confess myself similarly stricken powerless. If there is one topic, more than another, which has been debated from all points, in this community; which has been submitted to every species of investigation; which has been so uninterruptedly forced upon popular attention as to make it familiar almost to children, it is that of the inherent rights or privileges of nations. Acquaintance with the principles, or even the phraseology, of International Law is by

no means essential to a thorough comprehension of what the phrase signifies. It has been reiterated in the local newspapers ever since the question of treaty revision was first agitated, and has been made the basis of such unceasing argument, on all sides, that no idea associated with it could by any chance be supposed to remain in obscurity. The *Japan Mail* published a leading article on the subject, with extracts from Lord Granville's despatches and "Phillimore's Commentaries," only four days before the date of "Foreigner's" last communication. And now, behold! I make an inquiry as to "Foreigner's" intent in using the term "so-called," with reference to the inherent privileges of nations, and he, undertaking to explain, proceeds to deliver his views upon—what?—the aforesaid privileges of nations? Nothing of the kind; upon the *Rights of Man*, if you please. He seems to believe,—does believe, I make no doubt,—that he has settled a question relating to the sovereign rights of States—the privileges which are recognized everywhere as fixed and inseparable attributes of *all* countries, in whatever quarter of the globe,—by stating that "the inherent rights of *man* are those of liberty, property, and protection." That is to say, these are the inherent rights of "us foreigners." The Japanese, he is careful to let us understand, have no participation in them.

I respectfully submit, Mr. Editor, that intelligent discussion, under such circumstances, is impracticable. A correspondent who announces that he will "explain" a particular thing, and who assumes that he does so by imparting his opinions respecting a totally different thing, allows himself a range of liberty to which I do not myself aspire. I may be told that a person who introduces a topic of newspaper debate is bound to carry it through; but the impossible cannot be expected from any man, and it is plainly impossible to contend with a writer who openly professes that he looks upon the inherent privileges of Sovereign States and the rights of man as identical things. A proposition so confounding could never have been foreseen, and in the face of such an obstacle it would be absurd to proceed. My original desire, in asking whether Japan's inherent rights—(it may be that "Foreigner" will now take pains to find out what these are)—would continue to be denied by European Powers if she were possessed of a strong army and navy, was to place in a new light the question whether this country's privileges were withheld as a matter of pure justice, or because of her comparative weakness. To this, "Foreigner" answered, in effect, that the possession of such a force would be sufficient evidence that Japan ought to be trusted with her "so called" inherent privileges. As a matter of course, I next invited attention to the fact that if the standard were to be thus fixed, many nations in America and Europe, now enjoying absolute independence, could not be trusted, etc.; and I incidentally inquired why the expression "so-called" was applied to rights which are admitted and recognized by every known authority on the subject. "Foreigner's" response to the interrogation concerning "inherent privileges" abundantly demonstrates, as I have said, the hopelessness of carrying the correspondence any further. If that were not sufficient, I might point out, in addition, his extraordinary assertion that he himself possesses "inherent rights and privileges as a foreigner." I have no wish to injure anybody's feelings, but what *can* one say, when one finds oneself confronted with an alien who speaks of the peculiar and exceptional liberties which he enjoys in Japan,—his immunity from native jurisdiction and his exemption from all but nominal taxation,—liberties which were expressly secured by treaties, formal compacts imposed upon this country by powerful Western Governments,—what *can* one say to an alien who speaks of these as his *inherent* rights and privileges? It is a case where language fails, and silence is the only resource.

Once again, and finally, if still further reason

were needed for withholding serious consideration from "Foreigner's" epistle, I should refer to his inability to represent with accuracy the position of the correspondent against whom he arrays himself. I do not say that he fails in this with vicious intent. On the contrary, I believe him to be as guileless as any infant, in this and all other details. But the misrepresentations are none the less flagrant. He misquotes a remark of mine, applied to the whole community of States, by inserting the word Japan and otherwise altering it so as to confine its purport to this country alone. He states that "'Libertas' himself is determined to stick to his original idea of battalions and fleets being necessary to treaty revision in Japan," whereas no such idea, nor anything resembling it, has ever been expressed by me. He accuses me of "repeating statements which are an insult to our common sense and a libel upon foreign nations," when, in truth, I made no statements whatever, in my first letter, but simply asked two or three very ordinary questions, in which "Foreigner" found nothing insulting or libellous until he discovered where his naïve reply to them had led him. He complains that, instead of responding to him as he conceives I ought to have done, I contented myself with "reasserting my own proposition;" forgetting, unfortunately, that I asserted no proposition at all, but, as just now remarked, asked only two, or at most three, questions, the answer to which, he said, was "simple." He intimates that I think him "inimical to Japan," the fact being that I have no thought on the subject, in any way. I think, as I before observed, that his first ingenuous communication represented the opinion of many on the topic in hand, who are adverse to Japan's pretensions; but that is quite a different matter,—although I do not expect him to see it. The ability to detect differences, even between expressions of totally dissimilar signification, does not seem to be one of "Foreigner's" gifts.

I need hardly say, Mr. Editor, that nothing could induce me to pursue this subject further. The notion of following up a controversy in the course of which I might have occasion to allude to Vattel or Wheaton, while my opponent would be expecting a reference to Tom Paine or Jean Jacques Rousseau, is altogether too ludicrous. I withdraw, unconditionally, from a correspondence upon which I should never have ventured if I had dreamed of the existence of a single European in this neighborhood who supposes himself to be invested, as a foreigner, with *inherent rights and privileges* in Japan, or who is unacquainted with the meaning of a phrase not only of common, every day utterance, but also vitally significant in its bearing upon Japan's struggle to regain the independence of which she is unjustly deprived.

I am, yours very truly, LIBERTAS.
Yokohama, April 30th, 1884.

TRANSLATIONS FROM NATIVE JOURNALS.

THE FATE OF THE ORIENT.

(Translated from the *Choya Shimbun*).

Dr. Lorenz Von Stein, one of the most eminent politicians in Austria, has recently published a work on consular jurisdiction in Eastern Asia, in which he strongly condemns the extraterritorial system which obtains in the East. He particularly emphasizes the fact that the extraterritoriality brought about in the Far East by the Great Powers, in imitation of the system prevailing in Turkey, though perhaps justifiable two or three decades ago, is no longer suitable to the radical changes that have nearly revolutionized the Orient of late years. He urges, therefore, that the system of consular jurisdiction should be utterly abolished, and that a juridical system on the European plan should be established. Not to speak of other countries, he

affirms that Japan is by far the most progressive of Eastern nations, and that the abolition of consular jurisdiction in this country is both just and absolutely necessary.

At first sight, these words would lead us to conclude that our national progress is, at last, universally acknowledged by foreigners, and that this fact warrants our admittance into the comity of nations, though forsooth all Asiatic countries are ever subject to humiliating insults on the score of their low development. Dr. Von Stein has advanced just views and sound doctrines, but as to the feasibility of his ideas, we have not a word to say. As matters now stand, all European Powers apply the epithet "barbarous" to every nation of the East, nor do they make the least distinction between this and other countries. The insults to which China is now perforce submitting may at any time befall us as well, and there is no telling when Japan may not be made the object of an aggressive policy. Whatever praise may be bestowed upon this country, strict justice should never be expected by Oriental nations at the hands of Europeans. There are but two means by which we can hope ever to realize our desires:—*first*, the careful development and increase of our material and national resources, and *second*, the formation of an Oriental confederation.

Let us, for a moment, direct our attention to the existing condition of Eastern nations. Ever since the subjugation of India by Great Britain, the neighbouring countries have scarcely dared to breathe, knowing their momentary independence to be as near extinction as is a flickering flame in a furious gale. That great vassal of China, Annam, is now entirely in the hands of the French, and the embarrassment of China is great beyond description; for is she not constantly confronted by the probable diminution of her territorial possessions? It needs no great insight to appreciate the piteous condition of Asia, and the black clouds of misfortune that forever frown on the horizon of her future. The world is well aware of the intentions which Russia harbours against Central Asia, for most European Powers, and England in especial, are continually troubled by their consciousness of this fact. Not long ago, the country of Merv was annexed by Russia; and the General now in command at Merv is reported to be contemplating the establishment of a military station at that place, which, if accomplished, will considerably further the plans of the Russian Government. From these and other circumstances, it is clear that the aggressive policy of Russia is as great as it is far-reaching. So soon as England's troubles are on the increase, Russia will take the final step towards the fulfilment of her schemes, and all Asia will suffer in consequence. The nations of the East must be prepared to see their fair lands, sooner or later, converted into sanguinary battle-fields. At such a moment, it is out of the question for Japan to desert the fellowship of Eastern nations in order to enter the coterie of European powers. Our country is, perchance, far different from all others in the eyes of the diplomatists of the great European powers, like England or Russia; but there is no telling what plan they would pursue against us should opportunity offer. How then can we Japanese rest idly in this false security and place implicit confidence in the words of Dr. Von Stein?

Extraordinary occasions require extraordinary measures, and we must be trebly panoplied with extraordinary determination. The abolition of extraterritoriality and the acquisition of equal rights with aliens can scarcely be brought about by ordinary means. We should rather see the treaties annulled in their entirety, than long for their revision. Treaty revision can only be accomplished when both of the contracting parties stand on an equal footing; for neither would then accept a revision that entailed any disadvantage upon the other nation. But not so with the total abolition of the treaties. We can do this at our discretion, nor would this fact admit of any interference on the

part of foreign nations. We cannot look forward to a policy of conciliation and benevolence so long as the diplomatists of Europe pursue an unjust and dishonest course of action, favoring the one at the expense of the other. To compel them to recognize our inherent rights there is but one course left open to us: an appeal to material power. Material power, so called, signifies "wealth and strength," but the material power necessary for the abolition of the treaties does not have this meaning. It is a physical and moral impossibility to adhere to an old, worn-out treaty, the revision of which was due years ago, and, at the same time, to ensure perfect liberty of foreigners by establishing European institutions in this country. Should we propose to annul the treaties, just at this present, the contracting powers would be forced to recognize our proposal, though they would all more or less oppose the idea. But to carry out this great scheme, the whole nation must be filled with a spirit of determination, and stand fast by the Government, in order to give full force to its words and power to its acts. We do not make these statements with any desire to discredit the present Government, but the necessity of fostering our material power still remains.

So much for Japan. Whatever eminence this country may attain, while other Asiatic nations are still stigmatized as barbarous and unenlightened, we cannot hope to increase, single-handed, our national prestige, or to check the aggression of foreigners. An Asiatic confederation is the one thing necessary. China, first of all Asiatic nations, deserves our confidence and good fellowship. We deeply regret the contemptuous manner in which our countrymen are disposed to speak of her, and are earnestly desirous of consolidating our friendship with the Middle Kingdom. But since France has heaped insults upon China and the Chinese troops in Tonquin have suffered complete defeat, our countrymen have more than ever been disposed to evince perfect indifference towards China. *Yet are we the more convinced of the necessity of a mutual confederation now that China has been enfeebled, and France made strong.* Should China, once for all, call all her latent power into play, smarting under the insults inflicted upon her, she would be no mean ally, and a powerful lever in freeing the East from the momentous preponderance of the West. Every country in Asia should step warily, and be prepared for the gravest emergencies. For the days are evil, and peace no longer "flows like a river."

CONSULAR TRADE REPORT OF NEW YORK.

(Translated from the *Kwampo*).

The report of the Japanese Consulate in New York on the direct export of tea, contains the following remarks:—As tea is the second great staple of Japan, the decline and rise of the tea trade bear directly upon the national finances. Knowing, as we do, that foreigners command this branch of our exports, entailing not infrequently great losses upon our dealers and growers, we have often commented upon the necessity of establishing a firm which can undertake the direct exportation of tea. The state of the trade in this city during the last two months has more than ever convinced us that the establishment of such an institution is absolutely indispensable. The tea market in this city has undergone a complete metamorphosis since November of last year, principally owing to the opening of a large and novel tea-change. This exchange was instituted in order to ascertain with accuracy the exact amount of the demand, and to supply the quantity required without loss of time, thereby securing great promptness and facility in tea transactions. The results of this innovation have been awaited with lively interest. The winter passed off, on the whole, without any great commotion in the

market; but in January quotations began to fluctuate in an alarming manner, owing to the unusual amount of speculative transactions, so much so, that the average price of tea rose 5 to 7 cents per pound. A corresponding rapid decline is sure to come sooner or later. In arguing from past experiences, we venture to predict that the Japanese merchants in Yokohama, ignorant of the goings on behind the scenes and thoroughly perplexed with the rapid rise and fall of quotations, will be subject to greater inconveniences than they were last year. Even when speculative bargains were not nearly so universal, our merchants were made the victims of foreign machinations, and unforeseen failures resulted in the discomfort of our tea-growers and dealers, while exerting a depressing influence on the trade in general. Much more will this be felt, now that speculative business has been indulged in on so large a scale. The necessity of establishing a direct export company with branches in this country is imperative, for the absolute futility of the present mode of conducting the tea trade is becoming daily more manifest.

REGULATIONS FOR THE CONTROL OF DEALERS IN SECOND-HAND GOODS.

(Translated from the *Meiji Nippo*).

On the 25th of March, a number of Regulations for the Control of Pawnbrokers was promulgated by Imperial Notification, No. 9, and will come into force from the 15th of May. Rumours pointing to legislation of this nature had been current for some time, and the public had busily discussed its probable effects. We, however, have hitherto refrained from dealing with the subject, as we felt that, pending the issue of the Regulations themselves, no exhaustive comment was possible. Our readers may remember that, on the 28th of December last, a Notification (No. 50), was issued embodying regulations for the control of dealers in second-hand goods generally, and that, in accordance with Article 23 of those Regulations, the Board of Metropolitan Police published (January 25th) a number of bye-laws in the same sense. The business of the second-hand-article dealers referred to was clearly defined as the sale or purchase of old furniture (household), manuscripts and paintings, second-hand apparel, and copper, iron, gold, or silver which had been once used. The regulations also applied to the class of dealers known as *Koma-mono-ya* (sellers of toilet, &c., articles), *Fukuro-mono-ya* (sellers of purses, pouches, &c.), tortoise-shell ornament manufactures, watch and clock makers, gold and silver smiths, gold and silver beaters, pipe manufacturers and sword-dealers. It is scarcely necessary to explain that the purpose of these regulations was not only to check theft and facilitate its discovery, but also to prevent the sale of murderous weapons to disreputable characters. It has, nevertheless, been maintained that the effects of the new legislation would be to seriously hamper the business of dealers in second-hand goods, and though this may be in some degree true, we cannot but think that the benefit to the public will more than outweigh the inconvenience to the traders. The Regulations embodied in the Notification of March 25th with regard to Pawnbrokers have been already published in these columns, so that reference only will now suffice.

It is scarcely necessary to say that Pawnbrokers stand in a not less intimate relation to thieves and burglars than any other class of dealers in second-hand goods, and that regulations for the control of the former are not less essential than for the control of the latter, if it is really desired to prevent criminals from disposing of their ill-gotten gains, as well as to facilitate the discovery of theft. The spirit and details of the new ordinance correspond, almost exactly, with those of the regulations previously issued for the control of dealers in second-hand goods. Some slight differences,

necessitated by the difference in the trades concerned, are, of course, observable; as, for example, in the case of Articles VIII. and IX., which refer to the sale of goods remaining unredeemed after the expiration of the period for which they are pledged. It is unnecessary, therefore, to comment on these new Regulations in detail. An examination of the various Articles may, however, induce an idea that pawnbrokers will lose their custom, and therefore their trade, if they are compelled to register the names and addresses of persons pledging goods; to obtain, in some cases, the seals of the pledgers and their securities, and to refuse to receive articles from untrustworthy persons without satisfactory guarantees. Some persons hold that should these restrictions impede the pursuit of the pawnbroker's profession, the lower orders of the people will be seriously embarrassed, finding themselves deprived of facilities to obtain small loans; and that thus, as a set-off to the advantages which the Regulations will confer in the matter of preventing or exposing theft, we shall have great inconvenience caused to persons in straightened circumstances, so that, on the whole, the benefits of the new legislation may be deemed problematical. We cannot share these apprehensions, or consent to regard the restrictions as unwise or inconvenient. It is possible, indeed, that the regulation with regard to the registration of names may have a deterrent effect on intending customers, since people will not be willing to give their real names when they offer articles in pawn. But it must be observed that such registration is by no means an innovation. It was universally practiced in former times, and it is also required by the regulations for the control of the eight classes of dealers in second-hand goods. In some cases, indeed, pawnbroker's receipts were made out in favour of old women, who made a business of pawning articles for other persons. This custom will become impossible under the new system, and some inconvenience may result for the pawnbrokers, if not for the public. But such a habit was obviously calculated to encourage the very abuses which these Regulations are designed to prevent. On the whole, it seems to us strictly equitable that pawnbrokers should be forbidden to receive in pledge articles offered by untrustworthy persons, or under fictitious names; and while such a restriction is by no means detrimental to fair trade, its removal would prevent the accomplishment of the object contemplated by the Regulations. Pawnbrokers, indeed, will find themselves obliged to conduct their business on lines of unprecedented strictness, and all dealers in second-hand goods will be more or less embarrassed, but that the ultimate consequences will be in any respect disastrous, we do not anticipate. The bye-laws to be published by Local Authorities in accordance with Article XVIII. may have the effect of diminishing the difficulties under which pawnbrokers will labour, and we look to the promulgation of those bye-laws for confirmation or contradiction of our views.

GREAT BRITAIN'S TREATY WITH KOREA.

(Translated from the *Mainichi Shimbun*.)

We heard some time since that a Treaty between Great Britain and Korea had been duly concluded by Sir Harry Parkes. We now learn from trustworthy sources that the question of tariff has been determined by the two countries, and that this tariff is at once more convenient and more minute than that now existing between Japan and Korea. According to the information we have received, the duty ranges between the minimum of 5 per cent., and the maximum of 20 per cent. *ad valorem*, while our Korean tariff varies from 5 to 30 per cent. *ad valorem*. The British Government did not particularly request the Korean authorities to sanction foreign trade in Sōul at once, although the Chinese had been anxiously apprehend-

ing such a proposal. For the Peking Government, with a view to enjoying a monopoly of the trade in Sōul, has frequently urged the Korean Court to refuse to license foreign trade in the capital. As for China's relations with Korea, the Peking Government contends that they are of a paternal nature, and that the Celestial Empire should by no means be treated as an outside nation. But the British Minister stipulated from the outset that whatever tradal privileges were granted to China should in like manner be enjoyed by his countrymen, weakening thus at once the overwhelming political supremacy of the Chinese. Sōul, on however small a scale it may be, is the metropolis and capital city of Korea, and a monopoly of its trade by the Chinese would simply deprive aliens of the benefits of commerce, not in the capital alone, but in the outports as well, for China might easily absorb all Korean exports before they ever reached the coast. Sir Harry Parkes, shrewd, keen-sighted politician as he is, immediately grasped the full purport of the situation, and at once frustrated the schemes of the Chinese Government by inserting in the Trade Regulations a clause providing for the opening of Sōul should the requirements of trade suggest that course; and he is even prepared to take the initial step towards opening up trade in the capital before the Chinese have had any chance to secure a monopoly.

The main point of difference between the British and Japanese treaties with Korea is in the fact that British subjects may, in accordance with the regulations, erect dwellings anywhere within treaty limits. As for judicial administration, extra-territoriality obtains as a matter of course. Cases in which British subjects are concerned, require the immediate presence of their own authorities in the Court-room; not so much as judges, but as interested arbiters, who may interfere with the legal proceedings should they deem it necessary. This judicial system is a new style of Mixed Court, for the foreign authorities watching the case may or may not be competent judges. There are several other discrepancies between the British Trade Regulations and our own, but the principal points we have touched upon already viz. :—(1) the decreased tariff; (2) the conditional opening of Sōul; (3) privilege of residence anywhere within treaty limits; (4) discretionary judicial authority of the British representatives. It is undeniable, at the same time, that our present information, however apparently trustworthy, may be at fault; but we have heard so much about the salient points at issue that the four above-mentioned particulars are pretty certain to be correct. Were our own Trade Regulations with Korea not satisfactory, the Government would surely take steps to ensure the welfare of the "most favoured nation;" yet the question remains whether our diplomatists would care to make such stipulations as the four especially enumerated. The Government ought not to imitate the example of England with regard to the judicial administration, at least, not in our opinion. It is about nine years since Japan concluded her first treaty of peace and commerce with Korea, and although we cannot entirely endorse the manner in which Korean jurists deal with criminal cases where Japanese are concerned, yet in all these nine years we have never once heard that the commerce carried on between the two countries was obstructed by misconduct on the part of the native judiciary, or that the Japanese Government has had occasion to directly interfere with the Korean Courts. They are merely selfish reasoners who urge that the condition and comfort of the Korean Government are not to be taken into consideration, but that, whenever occasion serves, the judicial rights and territorial possessions of the Hermit Kingdom should be usurped. They may argue with great plausibility that Japan should follow the example of Great Britain; but our impression is that Japan's trade with Korea will rather profit by the lenient and neighbourly way in which we treat the judicial

claims of that country. Of course, if the welfare of Japan or her commerce were at stake, some interference would be warranted; yet nine years have come and gone, and Korea has adjusted all affairs within her jurisdiction in a fair, honest, and unobstructive manner. Now, of all times, when extra-territoriality is doomed to be expelled from our own borders, we should first of all people be willing to recognize the inherent rights of the Koreans. Instead of being ready to stir up strife, the Japanese Government is eager to consolidate the friendship of the two countries, nor will our authorities rashly copy the doings of Great Britain.

LEGISLATION FOR THE CONTROL OF DEALERS IN SECOND-HAND ARTICLES.

During the past four months, regulations of a very drastic nature have been enacted by the Japanese Authorities for the purpose of enabling the police to exercise an effective surveillance over dealers in second-hand goods, it being generally understood that the operations of this class of tradespeople conduce largely to the prevalence of larceny and other cognate offences. These regulations have been embodied in two Imperial Notifications, the first issued December 28th, 1883, and the second March 25th. For the information and convenience of our readers we now publish both the Notifications, as well as the bye-laws drawn up by the Police Bureau in connection therewith:—

Notification No. 50 (Dated, December, 28th, 1883), issued over the signatures of their Excellencies the First Minister of State and the Minister for Home Affairs, and embodying Regulations for the Control of Dealers in Second-hand Articles.

Art. I.—Persons who make it their business to purchase or sell second-hand furniture and wares, second-hand books, second-hand manuscripts and pictures, second-hand clothes, or copper, iron, gold, and silver which have been once used, shall be known as Dealers in Second-hand Articles for the purposes of these Regulations, and in the same category shall be included any of the following traders who make the purchase, sale or exchange of second-hand articles a part of their business; namely, sword-dealers, dealers in, and manufacturers of, pouches and purses, toilet articles, tortoise-shell ornaments, watches and clocks, gold and silver ornaments, gold and silver leaf, or tobacco-pipes.

Art. II.—Every Dealer in Second-hand Articles must obtain a license from the local authorities of the district to which he belongs; and if in Tokiyo, from the Board of Metropolitan Police.

Art. III.—When a Dealer in Second-hand Articles sells, purchases, or exchanges any article, he must record the particulars of the transaction in his books in such a way that the police will have no difficulty in tracing the article as well as its buyer or seller. This rule must be observed even when the Dealer is well acquainted with his customer.

Art. IV.—All purchase of goods from, or their exchange with, untrustworthy persons is strictly forbidden.

This rule does not, however, apply to cases where a trustworthy person becomes security for the transaction, or where special sanction has been obtained from the police.

Art. V.—The purchase or exchange of articles must not be effected with persons under fifteen years of age; with persons suffering from mental derangement, or with servants who reside in the houses of their employers.

This rule does not, however, apply to cases where parents, guardians, employers or other trustworthy persons become security for the transaction.

Articles bearing the seal, or mark, or number, of an office, a town, a village, a school, a hospital, a temple, a company, or a firm, must not be purchased, or exchanged for other articles, unless the legality of the transaction is attested by two or more sureties.

Dealers who violate the provisions of this, or the preceding Article, may be ordered to restore the articles in question without receiving any compensation.

Art. VI.—Dealers in Second-hand Articles must

obtain permission from the police authorities when they purchase, receive in exchange, or take charge of, goods belonging to persons (whether their fellow-tradesmen or not) who have been punished for theft, or for obtaining money under false pretences, or for offences enumerated in Articles 399 and 401 of the Criminal Code.

Any person infringing the provisions of this Article shall be liable to be imprisoned for a term of not less than one month and not more more than three years, or to a fine of from 30 yen to 300 yen.

Art. VII.—Dealers in Second-hand Articles are forbidden to purchase or exchange goods in places other than their own residences, or the residences of the sellers of such goods, or the markets officially sanctioned for such transactions.

Art. VIII.—Swords, or any articles containing them, must not be sold to untrustworthy persons, or to persons who have been punished for theft or gambling. The sale of such articles by the roadside, or at stalls by the public thoroughfares is also forbidden.

Art. IX.—When dealers in Second-hand Articles desire to transport their goods to other cities or Prefectures, or when they have received goods from other cities or Prefectures, they must forward a catalogue of such goods to the police-station of the district to which they belong, and it shall be lawful for the police authorities to examine the goods and detain them after examination. Any expenses thus incurred must be borne by Dealers forwarding the catalogues.

Art. X.—When official notices are issued with regard to articles stolen or fraudulently made away with, copies of such notices must be kept by dealers in Second-hand Articles, and on them must be noted the hour, day, month and year of their receipt.

Art. XI.—If articles indicated in such notices are purchased, or received in exchange, or temporarily taken charge of, by Dealers in Second-hand Articles within one year after receipt of the notice; or if it is found that the articles in question were obtained previous to the issue of such notices and are still in the possession of the Dealers, a report of the fact must be made to the police-station. Should Dealers neglect to make such report and fail to give a satisfactory explanation of their neglect, they will be liable to the penalties enumerated in Article VI.

Art. XII.—The ledgers in which are entered the records of articles sold, purchased or exchanged, and the copies of notices issued with reference to goods stolen or fraudulently made away with, must be preserved for ten years. Should a ledger be lost, the fact must be immediately reported to the police-station of the district.

Art. XIII.—It shall be lawful for officers of police to enter, at any time, the shops of Dealers in Second-hand Articles, to inspect the ledgers and goods of the dealers, and, if necessary, to seize such goods. The Dealers must also present their ledgers for examination at the police-station, if required.

Art. XIV.—Dealers who violate any of the provisions of Articles II., III., IV., V., VII., VIII., IX., X., XII., or XIII., or who make false reports, shall be liable to a fine of not less than 2 yen and not more than 200 yen.

Art. XV.—Dealers who are punished for violating any of the provisions of Articles VI., XI., or XIV. of these Regulations, or of Articles 399 or 401 of the Criminal Code, shall be liable to be subjected to Special Restrictions by the local authorities of their district (if in Tokiyo, by the Board of Metropolitan Police), for a period of not less than three months and not more than three years.

Art. XVI.—Dealers subjected to such Special Restrictions must observe the following rules:—

1. When articles are purchased or exchanged, the name, age, and residence of the sellers or exchangers, an accurate description of the article—including any marks, numbers, figures, or other peculiarities—together with the price and date of purchase or exchange must be entered accurately in the ledger.
2. Articles must not be purchased, exchanged, or received in charge, before sunrise or after sunset.
3. When articles are purchased or received in charge from, or exchanged with, persons who are not professional dealers, such articles must be kept for five days in their original state.
4. When articles are sold or exchanged, a description of the article, its price, as well as the date of sale must be entered in the ledger. Particulars must also be entered, if procurable, as to the name, age, and residence of persons to whom such articles are sold or with whom they are exchanged.
5. The ledger in which particulars of sales, purchases, and exchange are entered, must be

submitted once a month for the inspection of the police.

6. Should Dealers under Restriction desire to change their residence, go on a journey, or take persons to lodge in their houses, they must seek and obtain the sanction of the police authorities.

Art. XVII.—Dealers violating any of the provisions of the foregoing article shall be liable to a fine of not less than three yen and not more than three hundred yen.

Art. XVIII.—Dealers who, while subjected to Special Restriction, are sentenced to fines in accordance with articles VI., XI., XIV., or XVII., shall be required to pay such fines in one sum; and in default of payment they shall be detained at the police-station for a period adapted to the circumstances of the case.

Art. XIX.—Any Dealer contravening these Regulations twice within a year shall be liable to be sentenced, by due process of law, to permanent or temporary prohibition from carrying on his trade.

Art. XX.—In the case of contraventions of these Regulations, that portion of the Criminal Code which refers to the concurrence of infractions shall not be applicable.

Art. XXI.—Should articles purchased or exchanged in contravention of these Regulations be identified as stolen or fraudulently made away with, the police authorities shall take steps to recover them and restore them to their rightful owners, whether their purchase or exchange was effected between professional dealers or not. Should the rightful owners be unknown, the articles will be carefully preserved, and after the lapse of a year will become the property of the State.

Art. XXII.—The responsibility of a dealer in matters relating to his business shall extend to acts committed by members of his family or by his employés.

Art. XXIII.—It shall be competent for Chiefs of Local Police, Governors of cities (Tokiyo excepted), or Prefects, according to circumstances, to make and enforce such Bye-laws as may be necessary for the promulgation and enforcement of these Regulations, and such Bye-laws shall be duly reported to the Minister of the Home Department.

Notification No. 5, A. of the Board of Metropolitan Police, issued in accordance with Art. XXIII. of the Regulations for the Control of Dealers in Second-hand Articles, over the signature of Osako Sadakiyo, Inspector General of Police, and embodying the following:—

BYE-LAWS FOR THE CONTROL OF DEALERS IN SECOND-HAND ARTICLES.

Art. I.—Dealers in Second-hand Articles desirous of obtaining a license must forward to the Board of Metropolitan Police a petition in duplicate bearing the signatures of the Magistrate in the case of an Urban Division, and that of the Headman in the case of a Rural Division.

Provided that, in the case of Dealers who, having been subjected to Special Restrictions for a term, abandon their calling before the expiration of that term, or live in the houses of other dealers whether with or without the intention of abandoning their calling, a license shall not be granted during that term.

Art. II.—Dealers who abandon their calling, change their names or residences, or transfer their registration to another jurisdiction, must give due notice of the fact to the Board of Metropolitan Police. Such notice may be forwarded by post, enclosed in a registered letter, if convenient.

Art. III.—All Dealers in Second-hand Articles within the police district to which they belong shall form one Corporation, with minor Corporations formed according to trade classifications, and having Directors and vice-Directors. Such Corporations may, with regard to the number of their members, be amalgamated with similar Corporations in other police districts, provided that such amalgamation shall first receive the sanction of the Board of Metropolitan Police.

Art. IV.—Dealers in Second-hand Articles must provide themselves with a sign-board, which, having been branded by the Director of the Corporation, shall be hung before their shops. In case they abandon their trade, this brand must be obliterated by the Director. The sign-board shall be 1.5 feet long by 4.5 inches wide, and it shall bear the name of the trade, the Director's brand, the name of the dealer, that of his shop and that of his residence.

Art. V.—The Director of a Corporation must provide himself with a book in which the names of the members of the Corporation, their residences, their shop-names, and their ages, shall be accurately entered, with the seal of each member affixed.

Art. VI.—It shall be incumbent on Directors to adopt measures for transmitting to the members of Corporations any Notifications published by the authorities for their control, or notices issued with reference to articles stolen or fraudulently made away with.

NOTE.—The transmission of such notices must be in accordance with special instructions which will be issued for the purpose.

Art. VII.—Dealers in Second-hand Articles are required to provide themselves with the under-mentioned ledgers, all of which—with the exception of the ledger in which notices referring to stolen articles are copied—must receive the stamp of the police station of the district.

1. A ledger for registering purchases and receipts of articles. The entries in this book must be in the first form of registration prescribed by the Regulations.

NOTE.—When the sanction of the police authorities is obtained in the cases specified in Art. VI, and in the second clause of Art. IV of the main Regulations, the corresponding entry in the ledger must have the official seal attached. The same rule applies with regard to the second and third clauses here following.

2. A ledger for registering sales and deliveries of articles. The entries in this book must be made in the second form of registration prescribed by the Regulations.

3. A ledger for registering articles received on trust. Entries in this book must be made in the third form of registration prescribed by the Regulations.

4. A ledger for copies of notices issued with regard to articles stolen or fraudulently made away with.

In this ledger must be entered the hour, day, month and year of the receipt of the notices, and due precautions must be taken to bind the ledger so that none of the copies it contains may be lost. The copies must also be arranged in the regular order of their dates.

Art. VIII.—Should Dealers in Second-hand Articles (sword dealers excepted) desire to carry on their trade at out-door stalls of any description, or to hawk their goods as pedlars, they must provide themselves with a wooden sign-board and have it branded at the Board of Metropolitan Police as directed in Article I. of these Bye-laws. Such sign-board must be hung in front of out-door stalls and carried about in a conspicuous fashion by pedlars. Further, when the duties of stall-keeper or pedlar are entrusted to servants or *employés*, their names and ages must be recorded on the board. When dealers carrying on their trade in this manner desire to abandon it, they must report the fact to the Board of Metropolitan Police, following the mode of procedure prescribed in Article I., and must apply to have the brand effaced from their board.

(Here follows a drawing of the sign-board, with a statement of its dimensions in the cases of stall-keepers and pedlars respectively.)

Art. IX.—When Dealers in second-hand furniture, iron, or copper, travel from place to place to effect purchases or sales, they must carry their wares in such a manner as to be visible to every-one.

Art. X.—When Second-hand goods are to be transported from one city or prefecture to another, or when they have been received from another city or prefecture, notice must be forwarded to the police station one day before transportation in the former case, and one day after receipt in the latter. Dealers upon whom Special Restrictions have been imposed, must forward such notices of transportation three days earlier than the time mentioned above.

Art. XI.—Goods intended for transportation to other cities or prefectures must bear the names and residences of consigners and consignees, as well as a classification of the goods themselves.

Art. XII.—Dealers contravening these Bye-laws will be punished in accordance with Police Regulations when penalties for their offence are not specified or indicated in the Regulations for the Control of Dealers in Second-hand Articles.

Notification No. 9 (dated March 25th, 1884), issued over the signatures of their Excellencies the First Minister of State and the Minister of Home Affairs, and embodying
REGULATIONS FOR THE CONTROL OF PAWN-BROKERS.

Art. I.—All persons proposing to commence business as Pawnbrokers must first procure a license from the local authorities of the district. If within the City of Tokiyo, application for such license shall be made to the Board of Metropolitan Police.

Art. II.—Pawnbrokers shall keep an accurate register of all the articles they hold in pawn. The register shall contain a fixed number of pages, and shall bear the stamp of the authorities by whom the license has been issued.

Art. III.—In this register the following information shall be embodied (in such a manner that

examination by the police shall be perfectly easy), viz., all the articles held, now or previously, in pawn, the amounts lent on them, the names of the persons by whom they were pledged, and the exact dates when they were pawned, when the pledges expire, and when they were redeemed or exchanged. In cases where the pledger of an article has been guaranteed by another person, the seals of both pledger and guarantor shall be plainly entered.

Art. IV.—It shall not be lawful for Pawnbrokers to take articles in pledge from persons whose identity is not established, unless the pledger is guaranteed by a person of clearly established identity.

Art. V.—It shall not be lawful for Pawnbrokers to take articles in pledge from persons under 15 years of age, from persons who are deranged or imbecile, or from servants who reside in the house of their employers; unless such pledgers be guaranteed by parents, guardians, employers, or other persons of established identity.

When articles bearing the seal, or mark, or number, of an office, a town, a village, a school, a hospital, a temple, a company, or a firm, are offered in pledge, two or more guarantors must vouch for the legality of the transaction: otherwise, the articles shall not be received in pledge.

Pawnbrokers failing to comply with the provisions of this Article shall be liable, at the discretion of the Police Authorities, to have the pawned goods confiscated without compensation of the amounts advanced or the interest due on them.

Art. VI.—In the event of Pawnbrokers receiving articles in pledge or for purposes of storage from persons convicted of theft or fraud, or from persons who have been convicted under Articles 399 and 401 of the Criminal Code, they (the Pawnbrokers) shall report the fact to the Police Bureau without delay.

Art. VII.—When there is suspicion that articles offered in pledge have been stolen, or when they appear unsuited to the station of the person offering them, the Pawnbroker shall, without delay, report the fact secretly to the Police Bureau, or give information to the nearest policeman on duty.

Art. VIII.—When a Pawnbroker proposes to sell articles of which the pledges have lapsed, he shall forward a list of such articles to the Police Bureau five days before the date of the intended sale.

Art. IX.—When articles of which the pledges have lapsed are sold, their sales, the prices obtained and the names of the purchasers shall be recorded in the register in such a way as to offer every facility for examination by the police.

Art. X.—A Pawnbroker, on receiving from the authorities descriptive notices of stolen articles, shall enter in a "Register of Stolen Articles" the year, month, day, and hour of receiving such notice.

Art. XI.—If within one year after the receipt of such descriptive notice of stolen goods, a Pawnbroker receive in pledge or warehouse articles of the nature described; or if he discovers that, prior to the receipt of the notice, he has received articles of the nature described, he shall report the fact to the Police Bureau without delay.

Art. XII.—Registers of articles received in pledge, of articles sold after lapse of pledge, and of notices of stolen articles, shall be preserved by Pawnbrokers for a period of ten years. In the event of a register being lost, information of the fact must be immediately given to the Police Bureau.

Art. XIII.—It shall be lawful for officers of police to enter at any time the establishment of a Pawnbroker, to examine the articles held in pledge, as well as the register, and, if necessary, to seize such articles. It shall also be necessary for a Pawnbroker to present his registers for examination at the Police Bureau when required, and in everything to obey the orders of the Police.

Art. XIV.—Any person acting in contravention of any of these Regulations, or any person falsifying a register, shall be subject to a fine of not less than 2 *yen* and not more than 200 *yen*.

Art. XV.—Any person contravening these Regulations twice within the space of one year, shall be liable to be sentenced, by due process of law, to permanent or temporary prohibition from carrying on the trade of Pawnbroker.

Art. XVI.—In the case of contraventions of these Regulations, that portion of the Penal Code referring to the concurrence of infractions shall not be applicable.

Art. XVII.—The responsibility of a Pawnbroker, in matters relating to his business, shall extend to acts committed by members of his family or by his *employés*.

Art. XVIII.—It shall be competent for chiefs of Local Police, Governors of Cities (Tokiyo excepted), or Prefects, according to circumstances, to make and enforce such Bye-laws as may be necessary for the promulgation and enforcement of these Regulations, and such Bye-laws shall be duly reported to the Minister of the Home Department.

IN THE TOKIYO COURT OF APPEAL (KOSO SHIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—MONDAY, 28th April, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsui Bishi Mail Steamship Company's steamer *Akitsushima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsushima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

The Court sat at 11.15 a.m., when Mr. Ramsay, in reply to the judge, said that he was willing that his remarks should be taken down in the Japanese language. He proposed, after concluding his address, to hand a copy of same to the Court to be compared with the Japanese translation, after which he would be prepared to sign both documents.

Mr. Ramsay, through Mr. Kataoka, then said as follows:—"As the attorney for the Respondent, who is a Minister of State, I ask the kind indulgence of this honourable Court to permit me to make a few remarks before I make any comments upon the statements made by the legal adviser of the attorney for the appellant. My reason for asking for the peculiar favour is briefly stated, viz.:—That this petition of appeal having been granted a hearing through the orders of the August Assemblage of the Daijo-kwan this most honourable Court has been authorized to investigate the same; and from the decision of this Court there is no appeal, I believe. Consequently, I would ask this most honourable Court to grant me permission to comment in full upon the statements or arguments addressed to it by the legal adviser of the attorney for the appellant. The reason I do so is that this case is of a peculiar and most interesting nature to the mercantile marine of this empire, and it will be accepted as a precedent. The Department of State, through whom certificates of competency are issued to either masters, mates, or engineers of the mercantile marine, has certainly the legal right to suspend or cancel such certificates, upon the decision of a Marine Court of Enquiry, and that they do so is beyond dispute; still, should any one feel aggrieved at such decision of the marine court, he has a perfect right to appeal to that Department of State; and the petition of appeal distinctly sets forth the reasons of the appellant for so appealing. Then such department, having duly considered the evidence as laid before the first court, together with the grievances as set forth in the petition of appeal, either confirms the judgment of the first court or rescinds a part, or the whole of same, and in case of the latter, immediately returns the appellant's certificate; and in case of the department confirming the decision of the court, such decision is accepted. It is a most unusual proceeding for anyone whose certificate has been finally dealt with by such department, to carry his case into the law courts of the land. This may doubtless arise in a great measure, owing to the expense that would be of necessity entailed by such a proceeding. But in this country what a brilliant example has been set! namely, that the administration of justice shall not be frustrated by the rejection of the appellants' petition of appeal to the Noshomusho. Hence the August Assembly of the Daijo-kwan has ordered this honourable Court to enquire into this petition of appeal of the master, for the following reasons:—Firstly, owing to the adverse decision of the Marine Court of Enquiry, by which court he was deprived of his certificate for 12 months. Secondly, the Noshomusho declined to entertain his petition of appeal on the ground that it (the petition of appeal) contained no argument which could induce His Excellency to reconsider his decision, as the case had received the fullest investigation from the Court during three days."

Mr. Ramsay here apologized for the length of his preliminary remarks, after which the Court adjourned till 2 p.m.

On resuming, Mr. Ramsay continued as follows:—"The legal adviser of the attorney for the appellant has travelled outside the borders of the case at issue, which case at issue is, namely, the appeal and the reply thereto. In the petition of appeal there is but one grievance mentioned, namely, that he, the appellant, was deprived of his certi-

ficate wrongfully, as the loss of the vessel was not caused by his wrongful act and default. There are now three more grievances set forth by Mr. Uchiyama, and which grievances are entered on the records of this honourable Court of Appeal. It is now my duty to dispose of the same and to utterly disperse them. The first grievance (new) is that in all Western countries the president was always a person who had a knowledge of the law and must be conversant with the laws of the country, and he was sure that the chief judge of the first court had no knowledge of Japanese law nor of those of England or America. That the judgment by such a person is the first objection. Mr. Ramsay is conversant with the laws of England, and of this empire, in regard to the constitution of marine courts of enquiry and the procedure thereof. It is not the practice or custom for judges learned in the law to preside invariably, for here have I, in my hand, a list of wrecks and casualties the presidents of which courts were not judges or men conversant with the laws of the country. In this list there are captains, commanders, lieutenants, harbour-masters and shipping inspectors. The presidents in these cases are conversant with the technicalities of the cases at issue. The marine courts of enquiry in this empire are constituted by order of the officers of the Noshomusho, over which department of state H.E. Saigo Tsukumichi presides. It is hardly becoming a Japanese subject to criticize the acts of a Minister of State. Mr. Ramsay's appointment (I am not speaking individually but as the respondent) to the Noshomusho was sanctioned by His Excellency, and Mr. Ramsay would certainly never have accepted the responsible position had he not felt himself fully competent to discharge faithfully and conscientiously the duties of that position. Note to first objection. In the list in my hand are recorded several names of officers of the Royal Navy and others who have presided over marine courts of enquiry. Surely one who has been an officer in H.M. Indian Navy, and who resigned his position owing to the fact of that service being abolished, and who has had previously and subsequently great experience in the mercantile marine, is fully capable of presiding over a marine court of enquiry, especially as his services have been called into requisition by the Noshomusho authorities during the absence of him who has filled the position previously. For, in all marine courts of enquiry facts are only enquired into, not those relating to law. When a judge learned in the law of the land presides (as Mr. Uchiyama would have us to believe) he invariably or almost always, depends upon his nautical assessors."

The court rose at three o'clock, when the case was adjourned till Monday, the 5th May next, when Mr. Ramsay will continue his address.

NAVAL COURT.

A Naval Court was held on Wednesday at H.B.M. Consulate for the trial of a seaman for assaulting his superior officers. The Court was composed as follows:—Russell Robertson, Esq., H.B.M. Consul, President; Walter Strugnell, Esq., Navigating Lieutenant H.M.S. *Sapphire*; and Cornelius Crowley, Master, British bark *Lucia*, Assessors. E. D. Hadley, Esq., Assistant-Paymaster H.M.S. *Sapphire*, was Clerk of the Court.

Alexander Singleton, a seaman on the British steamship *Oxfordshire*, was charged with assaulting Mr. Edwards, chief mate, and W. Frost, quartermaster of the *Oxfordshire*.

The prisoner denied assaulting the chief officer, and said that he had struck the quartermaster, but not in the way of assault.

W. Frost, quartermaster, stated that about midnight on Thursday last, just as he came off watch and was going forward, the prisoner came forward from the wheel and seeing him going below, turned round and hit him on the chin. He asked him why he did it, and he told him to see the chief officer in the morning. He then swore and cursed him for about five minutes. Witness then went below. On the following morning he went and complained to the chief officer and told him all about the affair.

To Prisoner—He spoke to him after he had struck him.

To the Court—He did not know the reason why he struck him. He had had trouble with him before. He was constantly using abusive language to him. They were at sea when the assault took place, on the passage from Hongkong to Yokohama.

James Edwards, chief officer of the *Oxfordshire*, stated that on the morning of the 25th instant about 6.30 a.m., W. Frost came to him and reported that he could not stop in the ship any longer

if the prisoner remained in the ship. He asked him his reasons, and he said that as he was leaving the bridge going off watch the prisoner struck him in the face. He enquired for what reason, but he could give none. At 8 a.m. he called the prisoner aft and asked him why he struck the quartermaster. Prisoner answered because he did not relieve him at the wheel. At 1 p.m. the same day he heard a noise, and on going on the bridge found that the third officer had hold of the wheel and the prisoner was leaving the bridge. He asked the third officer why the prisoner had left the wheel, and he said he had turned him away for using abusive language to the master. Prisoner went down the after-ladder from the bridge and he ordered him forward to shift himself. He then made use of very abusive language, telling him that "he did not want him to tell him what to do." He went down the ladder and prisoner struck him in the face. Prisoner was then put in irons, and has since been confined in the chart-room.

To the Prisoner—The third officer told witness that prisoner was swearing. He did not pull him off the ladder and shove him against the sky-light. He did not jump down the ladder on top of him.

To the Court—Prisoner struck him in the face. He was sober at the time. Witness had never raised his hand against him. He had frequently given trouble on board.

C. Jones, master of the *Oxfordshire* said—On the 25th, at 1 p.m., he was in the chart-room and heard a disturbance on deck. Going out he saw the prisoner deliberately strike the chief officer in the face with his fist. Seeing a sheath knife in his belt, he rushed down and took the knife out of his belt, when he said, "Come on, I will fight the two of you," and would have struck him had it not been for the chief officer. The other officers of the ship then put him in irons until 8 p.m., after which he was confined in the chart-room. Prisoner did not attempt to use the knife, but had uttered so many threats that he thought it better to take the knife from him.

Prisoner said he did not strike the chief officer; neither did he say, "Come on, I will fight the two of you." He did not speak to the captain. He did not use any abusive language to any of the officers. The chief-officer had hold of him, screwing his arms behind his back. He acknowledged striking Frost, but without the intention of an assault. He was desirous of making an apology to the quartermaster next day. He had no complaint to make of his treatment on board the ship.

The Court, after consulting for some time, delivered the following judgment:—The Court finds the charges preferred against Alexander Singleton, seaman of the British steamer *Oxfordshire*, of having on the 25th instant assaulted James Edwards, chief officer, and William Frost, quartermaster, respectively, of the *Oxfordshire*, duly proved, and sentences Alexander Singleton to be imprisoned in the British Consular Gaol at Yokohama for a period of six weeks, with hard labour; the Court further orders that Alexander Singleton be discharged from the *Oxfordshire*, receiving such balance of pay as may be due to him, and directs that the expenses of this Court, which are fixed at two pounds sterling (£2) be borne in equal proportions by the master of the *Oxfordshire*, as a charge on the ship, and by the prisoner, Alexander Singleton.

(Signed) RUSSELL BROOKE ROBERTSON,
H.B.M. Consul, President.

W. STRUGNELL,
Nav. Lieutenant, R.N.

C. CROWLEY,
Master Mariner, British bark
Lucia.

CRICKET.

The opening of the Cricket Ground for the season on Thursday was celebrated by the usual scratch match, The Eleven *versus* the "two twos," which brings together more of the members than any other arrangement of sides. The ground was in very good order and few Mays have commenced with lovelier weather. The 22 commenced their innings at 11.45, but, owing principally to the bowling of Mr. W. B. Thomson, had lost half their wickets before tiffin, at one o'clock, for only fifty runs. After tiffin the batsmen were more successful, and the innings closed for a total of 122 runs. The Eleven were unfortunate at the start of their innings, two wickets falling for one run, then Messrs. Kirkwood and W. B. Thomson kept together for a time and improved matters, but to Mr. Duff belongs the honours of the day; he kept wickets capitally, and made the top score of the match, not out, for which he has to thank "square leg" for missing an easy catch.

Contrary to expectation, the Twenty-two won the match, for opposed to them was the entire bowling strength of the Club. Following are the scores:—

THE TWENTY-TWO.

Mr. Harris, c. Duff, b. Thomson.....	9	Mr. Wilson, st. Duff, b. Thomson.....	7
Mr. Shand, b. Thomson ..	1	Mr. Robinson, b. Sutter ..	23
Mr. Cottell, b. Thomson ..	22	Mr. A. Vivanti, c. and b. Thomson ..	5
Mr. Kenny	0	Mr. Bing, b. Sutter.....	0
Dr. Fisher, run out.....	2	Mr. Cameron, c. Thomson, b. Sutter.....	1
Mr. Sullivan, b. Thomson..	0	Mr. Milne, b. Sutter	7
Mr. Cope, c. Sutter, b. Wheeler	4	Mr. Hamilton, not out	13
Mr. Snow, b. Wheeler	3	Mr. Glennie, st. Duff, b. Sutter	2
Mr. C. D. Moss, b. Thomson ..	1	Mr. Melhuish, b. Sutter ..	2
Mr. Boag, b. Thomson	1	b. 3, lb. 6, w. 3.....	12
Mr. Brewer, b. Wheeler ..	6	Total.....	122
Mr. C. Flint Killy, b. Thomson	0		
Mr. Wood, thrown out, Hearne	1		

THE ELEVEN.

Mr. Kirkwood, run out	9	Dr. Wheeler, run out.....	4
Mr. Strange, b. Kenny	0	Mr. Trevithick, b. Hamilton ..	9

Mr. Thomson, b. Melhuish ..	21	Mr. Moberly, b. Hamilton.....	3
Mr. Sutter, b. Melhuish ..	1	b. 2, lb. 2, w. 13	17
Mr. Duff, not out.....	43	Total.....	118
Mr. Abbott, c. and b. Melhuish	11		

NOTES FROM JAPANESE PAPERS.

It is reported that the Senate and the Sanji-in intend sending several members to foreign countries, in order to examine the various national constitutions.

In Asakusa District, thirteen bankruptcies have recently occurred, the total liabilities amounting to 18,665 yen.

During the recent festival of *Keito*, a famous saint, which was celebrated by the Honganji at Kiyoto, no less than 314,323 yen were presented to that temple by various monasteries throughout the country.

Mr. Takamatsu Choshiro, a resident of Tokiyo, went to Berlin in May, 1880, under the instructions of the Industrial Bureau, to learn the various processes of dyeing. He was taught up to December last by a celebrated dyer of Berlin, who exacted from him a written agreement, under the guarantee of H.E. Aoki, Minister to Germany, to the effect that he should not divulge the secrets of the art either to his countrymen or to foreigners.

The hotels at Nikkwo are looking forward to large profits this summer, as a greater number of foreigners will visit that place this year than in 1883.—*Fiji Shimpo*.

We hear that the decoration of the second order of *Ho-sei* has been conferred on Admiral Yenomoto by the Chinese Government.

Mr. Kusuda, a member of the Senate, has been released from service on account of his advanced years. He is the first member who has retired for this reason.—*Fyū Shimbun*.

It is reported that the Government will completely alter the organization of the Metropolitan Police Bureau in 1885-86, and considerably extend the scope of its authority.

The first draft of the Civil Code being nearly completed, the authorities propose to publish the laws respecting the taking of oaths, and to carry them into effect from the beginning of next year.

The gardens of the *Yenriyo-kwan* are closed to the public.—*Mainichi Shimbun*.

An application for permission to establish a Tea Industrial Association, brought forward by Mr. Otani and seventy other tea-dealers, has been granted by the authorities. The office of the Association is at the *Machigwaisho*.—*Bukka Shimpō*.

Every now and then the old ideas of social caste crop up in an unpleasant and forcible manner. Not long ago, the son of a *shisoku* at Nishitagawa, Dewa, thrust a spear into the body of a little *yeta* (an individual of the lowest caste), with fatal consequences. The excuse of the young murderer was that the *yeta* had struck one of his intimate friends, and thus disgraced the dignity of the old *samurai*.

Some of the adherents of the old Imperialist party contemplate establishing a large seminary at Shanghai, to which Japanese students above the age of twenty will have admission. The idea is that many young men are, just at present, anxious to go abroad, and not a few of these might be willing to enter such an institution, be they Liberals or Progressionists, thereby adding to the future influence of the Imperialist party. Our correspondent who forwards us this information says that steps are being taken to put this plan into execution.—*Choya Shimbun*.

The Chambers have voted the Tunis Convention, have voted a final credit of three and a half millions for Senegal, and have approved the Madagascar policy.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, APRIL 25TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
--- represents velocity of wind.
--- percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 44.1 miles per hour on Saturday, at 5 p.m.

The highest reading of the barometer for the week was 30.301 inches on Thursday at 10 a.m., and the lowest was 29.519 inches on Sunday, at 2 p.m.

The highest temperature for the week was 75.2 on Sunday, and the lowest was 39.4 on Wednesday. The maximum and minimum for the corresponding week of last year were 74.2 and 45.0 respectively.

The total amount of rain for the week was .106 inches, against .962 inches for the corresponding week of last year.

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Hakodate on the 26th April, at 10 a.m. with fresh S.E. winds and thick rainy weather winds veering to south with dense fog and heavy head sea to Kinkazan; thence strong west wind with hazy weather to Oginohama, where arrived on the 27th, at 7.15 p.m., and left on the 28th, at 6 a.m., with variable winds head sea and clear weather. Arrived at Yokohama on the 29th April, at 1 p.m.

Per American steamer *City of Tokio*, Captain J. Maury, reports leaving San Francisco on the 12th April, at 12.30 p.m. with variable winds and fine weather to the 22nd; strong gale from S.W. to W.N.W. and large sea on the 23rd and 24th; moderate gales from S.W. to W. and head sea on the 30th; thence to port light westerly winds and smooth sea. Arrived at Yokohama on the 2nd May, at 9 a.m. Time, 19 days, 2 hours, and 30 minutes.

LATEST COMMERCIAL.

IMPORTS.

The fine weather seems to have imparted a better feeling to the Market generally, clearances have again been good, and dealers appear more disposed to operate.

COTTON YARN.—There has been a strong demand for 28/32 which have advanced 25 to 50 cents per picul, other counts, as well as Bombays, have not been in such keen request but are very firmly held, Stocks having become much reduced of late.

COTTON PIECE GOODS.—For Grey Shirtings dealers are inclined to offer a trifling advance, but the firmness of holders has limited transactions; fair sales of Turkey Reds are reported and a few sales of miscellaneous articles.

WOOLLENS.—There is little change to notice, as transactions have been on a very small scale and for many articles quotations are quite nominal.

EXPORTS.

RAW SILK.

Our last issue was dated 25th April, since when there has been a moderate business doing; Settlements for the week are returned as 150 piculs. Buying for the *Oceanic* was completed at full rates, and since her departure, prices are even stronger

than before. Desirable parcels of Silk are very scarce, and nearly one-half the reduced Stock is held off sale altogether, the native dealers being strong holders and quite content to await developments. Markets in Europe and America are reported to be better than for some little time past, but we cannot learn that prices there are yet on a level with those which apparently are freely paid here.

During the week the trade has run almost exclusively on *Filatures*, *Re-reels* and *Kakedas*, other kinds not participating. *Hank* sorts are not offered, and it is a question if business could be put through at quotations; one large holder keeps quite aloof for the present. Arrivals have come in to some extent, the *Filatures* and reeling establishments appear to be at work again; and the total Stock shows but little change from last week's figures.

The O. & O. steamer *Oceanic*, which left for San Francisco on Sunday, 27th ultimo, carried 184 bales for the United States Markets, and the P. & O. steamer *Thibet*, which sailed on the same date for Hongkong, took 19 bales for France. These vessels bring the Export to date up to 29,113 bales, against 26,110 bales to same date last year, and 18,051 bales in 1882.

The weather continues favorable for vegetation and hatching is expected to become general in the lowland provinces within a few days.

Hanks.—No transactions during the week. A few small parcels have been taken for native use; we leave quotations unchanged, but they must be looked upon as all more or less nominal in the absence of business.

Filatures.—The principal trade has been in these and long prices are reported for good quality and well known chops. Among the transactions are *Nihonmatsu* \$700, *Utsunomiya* \$680, *Yechu* \$660, *Mino* \$640.

Re-reels.—Not much actually done, and very little Stock to choose from. A parcel *Stork* chop (*Maibash*) is held for \$650, and some *Hikone* is reported settled at \$615.

Kakedas.—One fair-sized lot of "Phoenix" has been taken at \$610. Stock of good quality is not large and firmly held in strong hands.

Oshu and Coarse Kinds.—No change to report and the Stock practically unchanged.

England	2,639	4,091	3,341
Total	29,113	26,110	18,051

WASTE SILK.

Business in this article has progressed steadily during the week. Settlements are not more than 135 piculs divided up among all classes, and generally speaking at full rates. *Filature* kinds come in slowly, and in small lots; for these dealers strive hard to obtain an advance, and in some cases have succeeded.

The P. & O. steamer of 27th April carried no Waste at all, and the Export figures are now 22,767 piculs, against 23,125 piculs last year, and 22,926 piculs at same date in 1882. Arrivals have come in more freely, and the Stock is increased to 550 piculs.

Noshi-ito.—But little has been done in this class, owing to the absence of good assorted cargo at this time of year. Among the few purchases made are *Utsunomiya fil.* at \$155; *Oshu*, \$145; *Joshu*, \$87½; *Kawamuki*, \$52½.

Kibiso.—Some few transactions reported on basis of *Oshu*, \$85; *Shinshu*, \$55; *Joshu*, \$43, \$39, \$36, \$25. In *Filatures* business has been done in *Tomiyoka* at \$127½, with *Shinshu* at \$120, and inferior at \$110.

Mawata.—The only parcel left on the Market has been taken up at \$165, and it is doubtful, if any quantity will now arrive until next season.

Sundries.—One or two sales of *Kusu-ito* at \$75 to \$65, according to quality. In *Neri* a parcel of ordinary has been taken at \$13, for a small lot *Utsunomiya fil.* \$18 is asked.

TEA.

The season 1884/85, may be considered as opened, and about 172 piculs of new leaf have been taken at an average advance of 4 to 5 dollars per picul over last year's opening rates. The first crop promises to be abundant, and it is estimated that the total yield will be about 10 or 11 per cent. more than last season's production. We have seen enough, however, to lead us to hope that some Tea districts will turn out a rather superior crop than the last, while few are likely to yield (if any) an inferior one, and as a general rule we look for an improvement in the condition and keeping qualities of the Teas. At the moment we are only able to say that, as a rule, the leaf shows an improvement in make as compared with last season's growth from the same district (*Suruga*). The quality of the liquor seems about the same as last year's, though in point of strength we think that some parcels have shown in the cup a little more flavor and pungency. The O. & O. steamer *Oceanic*, which sailed from Yokohama for San Francisco on the 27th of last month, took 51,398 pounds of Fired Tea which was distributed as follows:—7,921 lbs. for New York, 2,020 lbs. for Chicago, 1,220 lbs. for Portland (Oregon), and 40,237 lbs. for California.

EXCHANGE.

A slight advance has again to be recorded during the week, but the transactions have only been on a small scale. Quotations are:—

Sterling—Bank Bills on demand	3/8½
Sterling—Bank 4 months' sight	3/8½
Sterling—Private 4 months' sight	3/9

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.
Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.
Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.
Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylangylang, Stephmotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,
a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,
a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S
ETHEREAL ESSENCE OF LAVENDER,
a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,
a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the “JAPAN WEEKLY MAIL,” must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 10TH, 1884.

SUMMARY OF NEWS.

TWENTY-TWO prisoners escaped from the jail at Nara on the 23rd ultimo.

THE railway between Horonai and Horoma, in the Hokkaido, was opened on the 1st instant.

TWO grass plains, in Noto province, measuring upwards of 75 acres, were burnt on the 19th ult.

CONSIDERABLE distress is reported to prevail among the agricultural classes in the province of Awa.

A NUMBER of coolies have been fined for obstructing the thoroughfare at the Western hatoba, Yokohama.

THE import of foreign goods by Japanese traders to Pusan, Korea, during 1883, is placed at 677,115 yen.

THE Emperor has recovered from his slight indisposition, the nature of which is said to have been a feverish cold.

H.E. INOUE, Minister for Foreign Affairs, has been presented with the Italian Order *La Concepcion de Notre Dame*.

THE Spring Meeting of the Nippon Race Club came off on Thursday, Friday, and Saturday at Negishi, Yokohama.

A NEW journal, the *Jiyuto Shimbun*, is about to

be published in Tokiyo, in the interests of the Liberal party.

A PROPOSAL has been approved to introduce the study of the English language into the primary schools in the Chiba Prefecture.

THE railway authorities have announced that, in future, goods traffic on the Tokiyo-Yokohama line will not be suspended on Sundays.

THE deliveries of imported goods in Yokohama during April amounted to \$1,110,933, and the sales of goods for export, to \$603,120.

THE number of Japanese students attending the Theological School in Tsukiji, Tokiyo, is said to be this year double of what it was last year.

A STONE sarcophagus, containing an ancient mirror and sword, has been exhumed at the village of Kawai, in the province of Yamato.

HIS EXCELLENCY Terashima, hitherto Japanese Representative at Washington, has been attached to the Bureau of Examination (*Seido Torishirabe Kiyoku*).

HIS EXCELLENCY Admiral Yenomoto, Japanese Representative at the Court of Peking, has received the Second Class of the Imperial Order of China (*Hosei*).

THE tea-dealers of Yokohama have applied for, and received, permission to establish an association which will hold its meetings in the Town Hall (*Machigaisho*).

IT is asserted by the Tokiyo Press that during festival at *Keito* the Hongwanji, in Kiyoto, sums amounting to a total of 314,323 yen were presented to the temple.

A MEMBER of the French Legation was somewhat roughly treated by one of the Lancers forming the Imperial escort on the 2nd instant. The man has been punished.

THE works in connection with the Tokiyo harbour scheme are likely to be soon commenced, but it is thought that the dimensions of the undertaking will be largely reduced.

IT is stated that the portion of the Civil Code referring to the taking of oaths in Court will be promulgated immediately, so as to go into effect from the beginning of next year.

A DISTURBANCE occurred on board the American ship *Pactolus*, on the night of the 4th instant. One man received two revolver bullets in his body and had to be carried to hospital.

THE traffic returns of the Tokiyo-Yokohama railway (18 miles) for the month of April amount to 53,284 yen being an increase of 2,732 yen as compared with the same period last year.

A CONSIDERABLE export of gold-fish has recently taken place from Japan, the value of those sent away during the first four months of the current year being \$72,500.

A DIFFERENCE of opinion having arisen as to the

best route for the Shinano-Yechigo Railway, the commencement of the work is said to have been temporarily postponed.

IT is reported that the priests of Hongwanji, Kiyoto, have declared the necessity of considerably reducing their establishment in consequence of financial difficulties.

ON receipt of the intelligence of the decease of the Dowager Empress of Austria, His Majesty the Mikado conveyed expressions of sympathy to the Emperor of Austria by telegraph.

HIS EXCELLENCY Mori Arinori, hitherto Japanese Representative at the Court of St. James's, has been appointed to the Council of State. He will be replaced in London by Mr. Kawase.

A CONGRESS of bankers is to be held in Tokiyo for the purpose of discussing various questions in connection with the rules for the recall of the paper currency issued by the National Banks.

A PROMISING vein of gold ore has been discovered on a mountain in the district of Tsugaru, Hakodate. The place had previously been indicated by an English expert as likely to be auriferous.

FAVORABLE reports of the prospects of the tea crop have been received from the principal producing districts of Kanagawa Prefecture. It is expected that the yield will be 20 per cent. above an average crop.

THE sentences passed in 1882 on the Japanese sailors, convicted of mutinous conduct while serving in a Russian merchant vessel, have been reduced from six and two years to two years and one year respectively.

A FRACAS between the local police and the soldiers in garrison at Sendai occurred on the 27th ultimo. The police were at first considerably in the minority, and several men were wounded on both sides.

A SMALL boat, carrying a passenger from the steamship *Godavery*, was upset in the harbour on the 2nd instant. The occupants were saved with some difficulty by a steam-launch from the Custom House.

THE vernacular press is carrying on an animated controversy with regard to the recently developed taste for the literature and language of Germany. The Opposition journals largely exaggerate the nature of the tendency as well as its probable results.

THE trial trip of a steamer, the *Kinriu Maru*, built at the Imperial Government Works, Hiyogo, took place on the 30th of April, and was very successful. The steamer's speed averaged more than eleven knots, being one knot over the contracted speed.

A GENERAL MEETING of the members of the new social club in Tokiyo is announced to take place at the Rokumei Kwan on the 14th instant. The club will be open from the following day. The first body of members—i.e. the honorary members,

and active members elected by the inter-Departmental Committee—numbers 100, of whom about 35 are foreigners.

THE Local Assembly of Gumma Prefecture, one fifth of whose members are Christians, has adopted a resolution to issue no more licenses to public brothels and to take measures for the speedy closure of all such establishments at present existing.

THE Association of Tokiyo Tea-dealers has decided to establish an examining office in Tokiyo, and has invited the local associations to send delegates to a conference in the Capital, in order to concert measures for improving the quality and increasing the quantity of the staple.

THE official opening of the Tokiyo-Takasaka Railway is finally announced to take place on the 12th instant. It is said that the loss incurred by the Company in connection with the two postponements, which were necessitated by the Emperor's indisposition, amounted to nearly 4,000 *yen*.

REPORTS from the Prefecture of Yamanashi are to the effect that the unseasonable weather has retarded the growth of the mulberry trees, and that some apprehensions are beginning to be entertained of an insufficient supply of leaves. Rumours of a similar nature are always common at this time of year.

THE spring festival, *in memoriam* of Japanese soldiers and sailors who have fallen in battle, was held at Kudan on the 7th and 8th instant. A salute of 100 guns was fired on the morning of the latter day, after which the Minister of War and other high officials offered prayers before the Shrine of Yasakuni. Horse-racing and wrestling also took place.

ON the 2nd and 3rd instant four fires of some magnitude occurred; one at the village of Dekadomaye, in Niigata, destroying 41 houses; another at Takata, in the same province, destroying 48 houses; the third at Inabe, destroying 108 houses, and the fourth in the district of Nanjo, Fukui Prefecture, destroying 120 houses and killing one person.

JAPANESE educational statistics, published on the 31st of December last, show that the number of schools (common) throughout the country is 29,081, being an increase of 339 as compared with the preceding year, while the number of scholars is 3,004,137, being an increase of 396,960, and the number of teachers is 84,765, being an increase of 8,147.

THE preparation of Japanese exhibits for the London Health Exhibition is proceeding rapidly. It is in contemplation to make all the arrangements necessary for a cooking establishment, *à la Japonnaise*, so that visitors to the Exhibition will have an opportunity of learning by actual experience what is meant by a Japanese *cuisine*. A sum of 200,000 *yen* has been appropriated to cover expenses.

GLOOMY accounts of trade affairs still continue to arrive from Korea. The Japanese begin to fear that the results of Chinese machinations will be to render the country uninhabitable by foreign merchants. The Custom's revenue is said to be insufficient even to defray the salaries of the *employés*, and the Government is not

less distressed than the commercial and agricultural classes.

FOLLOWING the announcement, received on the 2nd instant, that the Oriental Bank had suspended business, came news, on the 7th, that a new corporation, the Oriental Bank, Limited, is in process of formation with a capital of £2,000,000 in £10 shares fully paid. The news has caused universal satisfaction throughout Yokohama, where the Oriental Bank had come to be regarded as an essential part and parcel of the settlement.

JUDGMENT has been delivered, in the Ministerial Court of the United States of America in Japan, in the case of Consul-General T. B. Van Buren *v.* Dr. T. H. Tripler. The Judge, the Honorable J. A. Bingham, United States Minister, ruled that the plaintiff had given the defendant probable cause to believe that the accusations made by the latter against the former were true, and decided that the alleged libel was not of a nature to justify exemplary damages. The defendant was, therefore, adjudged to pay the plaintiff a sum of \$20, with costs.

NOTES.

VERY great doings are promised at the inauguration ceremony of the Industrial Association (*Kangiyō-Shihon-gwaisha*), to-day. We have not yet learned what are the precise objects of the Association, but they have evidently reference to the promotion of industrial undertakings. The ceremony is to take place at the well known tea-house, Nakamura-ro, Riyogoku. About five hundred guests have been invited, among them several nobles, Ministers, the Foreign Representatives, newspaper editors, and officials. A *déjeuner à la Japonaise* will be provided, after which there will be day fireworks, dances by wrestlers and *geisha*, and sundry other species of entertainment. We may mention for the information of readers not posted in such matters that the "music of motion" is supposed to attain perfection in a dance by wrestlers, whose muscular training enables them to throw into their pantomime an amount of *verve* and precision beyond the compass of persons with a less highly developed physique.

THERE has been great trouble in Tokiyo for some days past. On the 7th instant it became known that the bank called Maruya Ginko had suspended payment, and that many tradesmen, as well as private persons, would be heavily hit by the failure. The President of this institution is a Mr. Kondo. He does not enjoy a specially high reputation as a business man, and indeed his position appears to have been somewhat of a sinecure. The Vice-Presidents (*Kanji*), Messrs. Hayashi and Nakamura, are, however, gentlemen well known for integrity and financial ability alike. Indeed, it would almost seem as though the high qualities of its Vice-Presidents were the proximate cause of the Bank's disasters, for while the shareholders numbered many men of great competence, their confidence in the management was so complete that little if any supervision was exercised. It is said that indications of the coming disaster were not wanting. The Bank's acceptances were not taken up over-punctually, and sometimes the payment of a draft was extended over a period of two or three days. To all these things, however, no attention was paid. The public found in the names of the

shareholders a sufficient guarantee against any mischance. At last the *coup de grace* was dealt by a well known shareholder, who suddenly transferred his shares, and withdrew a sum of thirty thousand *yen* which the Bank had on deposit to his credit. A run immediately commenced, and the crisis came on the 7th instant. The capital of the Bank is 150,000 *yen*, and its engagements are said to amount to 790,000. But though obliged to suspend, great confidence is expressed in its ultimate ability to meet all its obligations, and many persons go so far as to assert that its resumption of business is only a matter of time. Meanwhile, the fate of another well-known firm also hangs in the balance. Messrs. Maruzen & Co., whose establishments in Tokiyo are familiar to nearly all the residents, are the Bank's debtors to the amount of 80,000 *yen*, and as it will be impossible for them to realize this sum at once, their downfall is apprehended. We sincerely trust that both these disasters may be staved off. Such events, adding their influence to a commercial depression already serious, are not to be contemplated with indifference.

It is not the custom among foreigners to credit the Japanese with any large amount of commercial enterprise, yet we are disposed to think that they will develop rather startling capacities one of these five days. Already in the matter of advertising, they can afford to give their critics considerable odds. Even Holloway himself never conceived the brilliant idea of employing ladies to sell his pills. He was completely outdone by the Japanese speculator, who hired a hundred comely lasses, and dressing them in parti-coloured uniforms gave to each a knowing little hand-valise and a natty umbrella, in company with which they strolled about the streets in bands of three or four, singing out the name of a certain nostrum in a pretty contralto, and turning the heads of half the city with curiosity or a gentler sentiment. We have all seen these enchanting itinerants, and some of us have actually suspected them of being conspirators engaged to foment another rebellion or to restore the Tokugawa dynasty. They have ceased to ornament the thoroughfares now. The tax imposed on patent medicines proved too much for their employer. None the less he drove a thriving trade before these new fiscal tyrannies, though we confess that, for our own part, we never detected, nor ever met anyone who had detected, the pretty peddlars in the act of selling so much as the worth of a cash. Another specimen of splendid advertising is about to be furnished to-morrow, on the occasion of the opening of the premises where the new journal, the "Light of Liberalism," is to be printed. What form the opening ceremony at the office itself will assume, we cannot predict. The subsequent part of the programme is what interests the public more. Its chief feature, of course, will be an extensive entertainment to which the chiefs of all the Bureaux connected with the government of the city will be bidden, not forgetting editors of newspapers and doctors of hospitals. The guests will number several hundreds, and after they have partaken of whatever fare the fashionable tea-house Sumiya, in Tsukiji, can provide, they are to be amused by the discharge of 15,000 fireworks, each containing handkerchiefs, some of silk and some of cotton. Every handkerchief will bear the name of the paper—*Jiyūto Shim-bun*—and whoever is so fortunate as to pick up a silk handkerchief, will be entitled to a free

copy of the journal during one month. There are, further, in course of construction twenty thousand flower hair-ornaments for young ladies, and these will be distributed to the passers by in some of the most frequented thoroughfares. The Japanese must be supposed to understand each other's dispositions pretty well. In the eyes of practical foreigners, these vagaries look like casting a great deal of bread upon decidedly muddy waters. It is to be hoped that the return of the errant dough may not be delayed *very* many days.

A JUDICIARY Committee of the House of Representatives at Washington is engaged in discussing the propriety of granting copyright to newspapers. The evidence taken by the Committee showed that the principle has been recognised in many cases by English Courts. "There is no special statute in England," says the *New York Herald*, "for the protection of newspapers, but the doctrine of property in news has received ample recognition, and it has been held that newspapers fall within the scope of the law granting copyright to 'periodicals.'" Legislation of this nature, though certainly just, would be variously received. There are many papers which could not possibly fill their columns were extracts prohibited, and not a few which, though they might survive the excision, would have to reduce their dimensions by more than one half. In the case of the press of this Settlement, for example, the effect would be disastrous, though possibly the community might welcome any occurrence which relieved them of having to pay for the same news in three or four different sheets. In the end, the general public would be the sufferers, for by the system of exchanges now practiced, a journal is able to lay before its readers intelligence gathered from all quarters, which would be inaccessible otherwise. Nor, indeed, is it easy to agree that a newspaper has much to complain of if its articles and items are copied with due acknowledgment. This serves as a species of advertisement, and cannot fairly be called plagiarism. But the case becomes very different where no acknowledgment is made. Then, truly the law might interfere with advantage. The purpose of the proposed reform refers, however, to telegrams rather than to articles. It is held that when a journal goes to large expense to procure news by wire, its contemporaries ought to be restrained from reproducing its items until a certain interval has elapsed. This seems only fair. Newspaper work as a business ought to be governed by the ordinary rules of business. If its proprietors invest, in a particular branch of their enterprise, a larger sum than their competitors, it is scarcely just that the latter should be able to divide the resultant advantages simply by using the scissors and paste-pot. We speak as sufferers. In former years there existed in Yokohama a combination between the journals and a section of the public. Everybody contributed a trifling monthly amount, and, in return, received batches of telegrams. The arrangement was philanthropic on the part of the public, selfish on that of the journals, and not particularly satisfactory to any one except those outside the combination. It fell through ultimately; after a series of troubles which need not be recounted here. Then for some years we remained entirely without direct telegraphic news, a most benighted community. Anything might have happened in Europe—stirring events did happen—without the slightest indication to vary

the monotony of Yokohama life. This was too much to endure perpetually. When the Tonquin embroglio and the troubles in Egypt were added to the every-day chances of the times, the *Japan Mail* made an effort, more intrepid, perhaps, than sensible, and ordered telegrams on its own account. Could we have asserted an exclusive title to the news telegraphed at our sole request and charges, the enterprise might possibly have proved in the end self-supporting. But our local contemporaries took care that no right of property should be possible. One of them—the *Japan Gazette*—showed considerable reluctance about appropriating our news, but was ultimately compelled, in self-defence, to follow the example of its less scrupulous *confrères*. The result is that telegrams which appear in our columns in the forenoon, are reproduced in the afternoon by our contemporaries, and nothing remains to us but a shred of kudos. We do not complain of this. Our contemporaries are strictly within their right. But, nevertheless, the case seems to be a fair example of the grievances which the proposed legislation might properly redress. A newspaper ought to be able to keep what it pays for just as securely as a man keeps his furniture or his books. When the law takes the trouble to make this possible, there will be more room, and a better prospect of reward, for enterprise and originality.

We observe that the next *réunion* of the Society of Art Critics (*Kangwa-kwai*) is announced to take place on the 11th instant (to-morrow) at the Meiji Kwaido. The specimens exhibited will be of the *Soga* and *Ukiyo-ye* schools. The reputed founder of the latter is Hishigawa Moronobu, who flourished at the end of the 17th century, though in reality he merely followed the example of Iwasa Matahei, who, more than a century and a half before, had ventured to abandon the stereotyped canons of the art, and to copy the people and customs of his day. The school of Moronobu culminated in Hokusai, the celebrated artist of Yedo, than whom no Japanese painter has ever been more renowned for versatility and originality. Nearly every foreign notice of Japanese pictorial art has made Hokusai its central figure, though for our own part we have always thought that his abilities are over-rated. He delighted in depicting, vigorously, indeed, but roughly, figures and scenes from vulgar life, but when he attempted to produce a finished drawing his success was mediocre. Nevertheless, his productions and those of his school are full of interest for the student of Japanese art and Japanese customs. It is probable, therefore, that the next exhibition of the *Kangwa-kwai* will be at least equal to any of its predecessors, and the subject of the promised lecture—Japanese Art Education—is an additional attraction. We venture to suggest that the popularity and usefulness of these *réunions* might be much increased if Mr. Fenollosa would supplement his lecture by a brief historical sketch of the School illustrated by the specimens, and a notice of its characteristic excellencies and defects.

MR. KITAGAWA INOSAKU has been appointed Vice President of the Railway Company of Japan (*Nihon Tetsudo-gwaisha*). It is stated that the recent extensive purchases of this Company's Bonds by the Banks were prompted

by the advice of a well-known financier, manager of one of the most flourishing National Banks, who predicted that the possession of such securities would not only improve the credit of the Banks but also be a source of substantial gain to their shareholders. These predictions, we believe, have already been partly fulfilled, as the Railway Bonds which were obtained by the Banks at about 91, could now be sold at 92 or 93. As a matter of fact, they are not sold, the Banks preferring to hold them. We suspect, too, that were they put upon the home market, purchasers would not be readily found in Japan. Not that the Bonds are a bad investment: quite the contrary. But simply that the money to purchase is wanting. If the Banks desire to realize at a profit they will have to go to foreign markets, and should they be able to do so after the resumption of specie payments, they will probably net sixteen or seventeen per cent.

It is not surprising that China objects to have France as a neighbour. Never since the middle ages has a programme of aggressive aggrandisement been so openly avowed by any European Power as is now avowed by the new Republic. The most far-sighted and philosophical of French writers, instead of checking, seem bent upon encouraging, this propensity. Russia's action at Merv has furnished them with a fresh example and incentive. Since the Crimean war, the monster empire has been silently pushing forward its frontiers in Central Asia, until its outposts are now 200 leagues advanced. Even in Germany's proceedings the French appear to feel a spur, for although Germany despises regular colonies, her influence is making itself appreciated more and more in neighbouring countries. As for the English, their Egyptian doings have undoubtedly stirred up a strong sentiment of jealousy throughout France. The Parisian Press professes to believe, and it is probably right, that England will have to keep Egypt in spite of herself. Since, then, everybody is enriching himself at his neighbour's expense, the French find it just and natural that they should go and do likewise. They have the courage of their opinions. There is nothing secret about their plans. Public spirit, they say, or at least the spirit of the educated classes, supports every attempt made to extend France's colonial possessions. Africa is her chief attraction: especially Northern and Eastern Africa. Algiers, Tunis, Senegal, and Brazza's new acquisitions, all interest her immensely in her present mood. She declares, in the frankest possible manner, that her policy in Algiers ought to be modelled on the lines adopted by Russia in Central Asia. That is to say, it ought to be a policy of perpetual advance. She has 1,800 *kilomètres* of railway open, or in process of construction, in Algiers and Tunis. Pecuniarily these are losing speculations. They had cost the Treasury interest to the amount of 46,969,000 francs, up to the end of 1882, and they go on costing. By they may pay their way hereafter, and meanwhile they serve as factors in the growth of rejuvenated France. Some of these roads, indeed, are very losing concerns, notably those traversing the Sahara from Biskra to Tougganot and Ouargla; but the dream of their projectors is that they may yet be pushed so far Southward as to tap the Soudan, and deprive England of the advantages she hopes to derive by a similar proceeding *via* Suakim and Berber. At all events, the fever of advance is nothing daunted

by expense. The Chambers are now called on to vote the credits required for pushing another line towards the Soudan from the direction of Senegal, where also the word is "*en avant!*" That dispassionate economist, Paul Leroy-Beaulieu, assures his countrymen that "with perseverance and circumspection they may successfully copy in Africa the excellent example Russia has set them in Asia." A powerful nation with immense resources, a fine fleet, a strong army, a military prestige which it desires to re-establish, and a very unusual appetite for aggression, is not the sort of neighbour China may be supposed to desire. Tonquin is said to be one of the finest grain-producing countries in the East, and Yunnan is a place which has long been the cynosure of covetous eyes. China has quite enough to do to keep her body at rest. She does not want to have her extremities exposed to new sources of disturbance. It is doubtful whether France, in her present humour, would be welcomed as a neighbour by any power in the world, but to a power with so little effective vitality as the Middle Kingdom, her propinquity must assume the character of a veritable nightmare.

Miss FORTESCUE's suit against Lord Garmoyle, for breach of promise of marriage, will not be strongly contested. The noble defendant admits everything, but protests that the damages claimed,—now reduced to £30,000,—are excessive. The lady has renounced her original determination to remain in retirement pending the judicial decision, and has accepted an engagement to participate in the nightly proceedings in the "Court" which sits in Sloane Square. The terms of her contract with the managers of that establishment show that, for the present, she has suffered no material loss from the notoriety into which she has been brought. At the Savoy Theatre, her salary was three pounds a week. At the Court, it is fifty pounds,—considerably more than Mr. Irving ever received, until he became a manager. The newspapers unhesitatingly declare that the first-named sum represents the just remuneration for such talent as she possesses. Fortunately for her, the judgment she is awaiting will depend in no degree upon her dramatic capabilities, good or bad. Lord Garmoyle has gone far away from the scene of his activity as an amatorculist. When last heard from, he was at Constantinople, bearing still farther East.

THE Black Flags are now known to be a recognized unit in China's territorial army. They were not originally Taiping Rebels, as has generally been stated, but bands of outlaws with whom the Chinese Government came to terms ten years ago. Their leader holds official rank as a Chinese General, and receives from the Peking Government, not only large supplies of arms and ammunition, but also a monthly subsidy of twenty thousand silver taels, with which he is supposed to keep an army of four thousand men on a war footing. The chief stronghold of his followers is at Pao-shêng, which, standing at the junction of the Anh-si and Red River, lies just beyond the borders of Yunnan. The district is called Lao-kai, or the ancient boundary. The town is described as a fortified place, having a strong citadel built with massive concrete walls. Within the citadel lives Liu Yung-fu, chief of the Black Flags, with a picked band of 200 warriors. A number of wealthy Cantonese traders are permitted to

reside within the walls, where they carry on a lucrative commerce in imports (cotton, salt, tobacco) and exports (opium, copper, tin). From this trade Liu derives an annual income of eighty thousand taels. General Mesny says that food of all kinds is cheap and abundant in Lao-kai, and describes the exceptional care which the Black Flags take to guard their water supply. It is derived from a fine spring which bursts forth on a hillside some few hundred yards from the town, and the water is conducted thence by means of bamboo pipes. The spring is hidden from view by a thick fence of bamboos, and surrounded by a dense grove of these trees so trained as to be impenetrable. A guard of twenty soldiers is always on duty at this grove to prevent any attempt to poison the water. The Black Flags are evidently splendid troops. A French officer, who had been in the thick of the fighting at Son-tai, told *The Times'* correspondent that "a Black Flag is as good as the best European soldier." At the assault of Son-tai, "the flower of the French troops were beaten back, time after time," and it is asserted that but for the failure of their ammunition, the garrison would have succeeded in holding the place. One deed of gallantry performed on that occasion deserves special mention. "At the West Gate, where the main attack was made, the moat was full of spiked bamboos, and the approaches defended by thick log palisading and *chevaux de frise* of pointed bamboos. On this a terrific fire was opened. The whole of the top of the gateway, built of large slabs of conglomerate, was literally blown to pieces with bullets. There was hardly a square foot of the face that had not its shot mark. Half-a-dozen shells exploded in and around it and crashed through the log stockade. It seemed impossible that any creature could be there and live, yet when it came to the final assault, the Black Flag told off to stand between the bamboos and the wall was there, faithful to his post, with his cartridge belt round his waist and his Winchester repeating rifle charged to the full. With the full strength of the Foreign Legion outside, the drums beating, and the bugle sounding the charge, he stood his ground and fired as steadily as if he were at practice. He shot Melle, the leader of the storming party of the *Étrangères*, through the heart. With each bullet he brought down his man, and when the Legion broke through, he was bayoneted with his finger on the trigger. In recognition of his gallantry the French buried him under the gate when, two days later, it was blocked up—the only Black Flag who received a grave to himself; one of the very few Black Flags who received a grave at all." It is evident that troops of this sort are capable of carrying on a warfare very different from anything Europeans have been led to expect in China. Indeed, the correspondent of *The Times* speaks generally of the Tonquinese as a brave, hardy people, whose complete pacification will require "many years of a strong military occupation." Up to the present, they have only been provoked to resistance. The so-called "pirates," of whom we have heard so much since the campaign began, are said to consist chiefly of "patriotic Tonquinese or men rendered desperate by the burning of their houses and the loss of their property." Their numbers and resolution have increased so that it is "unsafe anywhere to go beyond the range of French guns. You will receive a quart of nails and pebbles from a blunderbuss out of

a bamboo thicket; half a dozen men will jump out upon you with cleavers tied on to long bamboos; or, failing that, you will be pelted with stones by the women and children. At Nam-dinh, Hai-phong, Nam-binh, and Haidzuong, it is impossible to go outside the town." To carry the campaign beyond Hung-hoa, would be to drive the Black Flags to desperation. Hitherto they may have been fighting to some extent under Chinese incentive and direction, but they have also been fighting on their own account; and in the mountain fastnesses between Hung-hoa and Lao-kai they might carry on a very protracted, if not an entirely successful, resistance. We believe, however, that France will not push matters to that extremity. Her object will now be to come to some arrangement with the Black Flags, by which they will be left in possession of their citadel and its environment; they, in their turn, guaranteeing the free navigation of the Red River. The correspondent of *The Times* appears to think that France will have no peace in the Delta until she takes Lang-son. That place is said to be the gateway through which all the Chinese troops have passed. But to seize Lang-son would be to force China's hand, by depriving her of the last condition on which she can assent to have the French as neighbours; namely, the maintenance of a neutral zone beyond her frontier. It is not likely that this fact will be overlooked. Some loop-hole must be left for negotiations. At all events, the campaign in Tonquin is over for the present. The rainy season has set in, and during the rainy season large tracts of the country are completely submerged.

THE social topic of greatest interest just now appears to be the proposed reinstatement of Baker Pasha in the military position which he forfeited some years ago. The *Standard*, it seems, has received no fewer than 200 letters from ladies urging that the erring officer should be forgiven. Forgiveness being with many women the heroic virtue, this is not very surprising; but have these ladies no fear that in their impulsive generosity they may be helping to break down the barrier which society, none too careful as a rule for female honour, has placed about their sex to protect them from foulest wrong? "It was only a momentary impulse," they say, but is that any reason for relaxing the penalty which tends to keep those momentary impulses in check? Suppose the victim had been less courageous, the yielding to that impulse would have entailed a term of penal servitude, and that, too, we suppose, might have been remitted on the same grounds. "I am mightily amused," writes to us a graceless reprobate, "at the announcement in the *Standard* the other morning that the editor has been deluged with letters from hundreds of ladies impetuously demanding the reinstatement of a certain gallant officer in the British army. They are all unanimous, it seems, not one dissentient voice among the whole two hundred. It brought to my mind the familiar couplet of Pope:—

Men, some to business, some to pleasure, take,
But every woman is at heart—

Let those finish the quotation who will."—*Pall Mall Gazette*.

A SEAMAN belonging to H.M.S. *Sapphire* sustained rather severe injuries, on Thursday evening, by being repeatedly thrown from a native pony. His head was badly cut, and he

lost a large quantity of blood in consequence. It is hardly necessary to add that the man was in an inebriated condition. "Blood Town," otherwise Honmura Road, is a standing disgrace to our Community, and the vile poisons sold in the rum-mills are the cause of endless vice and misery. It is one of the attendant "blessings" of the exterritorial system, and a constant reproach to the defenders of this pitiable condition of affairs.

THE Lasker incident has ended in Bismarck's inviting Mr. Sargent to a dinner in honor of the Emperor's eighty-seventh birthday, and in our Minister's attendance. He was also invited to a "swarry" at the palace. The dinner is the principal thing, however. In countries where a stiff etiquette prevails, a man may be let in after dinner to a house where he would never be invited to dine, and, according to foreign ideas, no better proof of Bismarck's goodwill to the United States could be given than in inviting Mr. Sargent to his table. This will we, presume, put an end to the story that Bismarck hates Mr. Sargent because of a letter written by the latter, explaining the German hostility to American pork by the fact that the Prince himself is a great landowner and pork-raiser. The moral of the Lasker incident as regards the House of Representatives is this:—Never pass resolutions, especially those relating to foreign politics, without knowing what they contain. It would have been more consonant with our notions of magnanimity and high statesmanship if Prince Bismarck had transmitted the Ochiltree resolutions to the Reichstag without comment; but he was not bound to do so even if the phraseology of the resolutions had been agreeable to him, there being no recognized channel of communication between the legislative bodies of different countries. For this reason the form of the resolution ought to have been considered with care. If the intention was what the House now says it was, viz.:—to be "a tribute of respect to the memory of an eminent foreign statesman who had died within the United States, and an expression of sympathy with the German people for whom he had been an honorable representative," it would have been well to have confined it to those lines, in which case there would have been no Lasker incident to lacerate our feelings afterwards. The original resolutions were the product of a total want of system in the matter of giving expression to the views of the House. The lesson which Prince Bismarck in his unfeeling way has taught us, will not be without its value if it leads to greater carefulness in confining the opinions which we send abroad under official seal strictly to the subject in hand. Turn it as we will, it is humiliating to acknowledge, as the House has been forced to acknowledge, that it said something more than it intended to in the first instance. If the practice of *harikiri* were in vogue, Mr. Ochiltree might well avail himself of its privileges.—*Nation*.

SYMPTOMS of what may be termed mental elephantiasis have for some time been noticeable in the English Press. The arrival of the famous white elephant Toung Taloung was heralded by a flourish of journalistic trumpets, for the "Jumbo craze" was still at fever heat, and it was thought that "Old Tongue" would probably take the place of the departed popular favorite. The *Pall Mall Budget* indulged in enthusiastic rhapsodies on the occasion of the

new arrival, and other journals were not slow to follow in its footsteps. Even Pears, that man of a superhuman genius for advertising, found it profitable to refer to the dingy spots on the forehead of Toung Taloung as a triumphant proof of the cleansing properties of his soap even in the most case-hardened pachydermata. But science has vitiated the popular taste for white elephants, now that it has been proved that "Old Tongue" is not a true albino; and so his recent departure for the New World has hardly elicited any sympathy whatever. But that the public must have some pet elephant is a self-evident fact, and items concerning the daily doings of Jumbo—even though that huge favourite is at a distance—are again at a premium. We were told, a short time since, that Jumbo was writing a book on his American experiences, in a somewhat heavy Spencerian style, with notes on elephantine society in general. Now, the news reaches us that "Jumbo is about to become a father,"—a truly gratifying announcement, for, popular prejudice does not generally place much confidence in elephantine genealogy, but inclines rather to the opinion that the lines of Bulwer Lytton are applicable to infant elephants as a rule:—

Little dancing loves we are,—
Who in the deuce is our papa?

THE appointment of H.E. Mori to the Educational Department, says the *Yiji Shimpō*, has occasioned much remark. It has been currently reported that the educational system of Japan would be modelled after that of Germany; but such a scheme, if it ever really were intended, will be considerably influenced by the appointment of H.E. Mori to the Department in question.

THE birth of monstrosities has been frequently reported of late by the vernacular press, and now the *Choya Shimbun* mentions a case of quadruplets—two boys and two girls—in Akita-gori, Akita Prefecture. With Mrs. Partington, we shall not now be surprised to hear of the birth of "quadrupeds and centipedes."

A COLOMBO paper announces the death, after a short illness, of Louis De Zoysa, Maha Mudaliyar, one of the most learned Native scholars of Ceylon, whose name is well known to European Orientalists.

THE Rev. Henry Ward Beecher's opinions on any current topic are sure to be facetious, and are often, but not always, instructive. When he says that "a tariff with incidental protection is like beefsteak with incidental strychnine," we perceive that he has hit the nail on the head. But when he says that a Presidential candidate ought to be jovial, and that jovial men are commonly "big-bellied and big-chested," and that here Senator Sherman and Senator Edmunds are found wanting, "having able heads with shad bellies," we can only say that he has added new terrors to the political arena. It is interesting, however, to know that Mr. Beecher prefers Mr. Arthur as a candidate this year, regardless of his qualifications as a story-teller or his measure around the waist. He thinks that General Sherman could be elected, although his wife is a Catholic, and that his standing by his wife under the disadvantage of her being a Catholic is very much in his favor. An alluring hint was given by Mr. Beecher to the *Herald*

interviewer that he "could name a ticket for the Democracy that would carry the country without a doubt." But he declined firmly to render the Democracy the service of naming it.—*Nation*.

THAT antiquated and highly respectable institution called trial by jury is gradually receiving blows which threaten to undermine its supports altogether ere long. All modern Governments have agreed that it fails totally at the very time when its services seem most desirable; namely, in political trials. It had to be suspended in Ireland under the Prevention of Crimes Act, and it had to be suspended the other day in Vienna when the socialists began to be troublesome. In the calmest seasons its incompetence to deal with certain classes of cases has long been recognised, and the list of such cases is gradually swelling. Able writers now declare that in applying the doctrine of liability for negligence, juries often administer not so much justice as what they consider to be equity. "They either disregard the evidence, and declare themselves not satisfied that the accident arose from the defendant's negligence; or they minimise the injury, and give damages which represent their sense rather of what the defendant can afford to pay, than of what the plaintiff is entitled to receive." When, on the other hand, the defendant is a wealthy corporation, as a railway company for example, "what they think of is not so much the precise relation between a particular injury and a particular sum of money, as the fact that an injury has been sustained, and that there is a rich company to which the law allows it to be charged." "Sympathy," says the *Spectator*, "with all the seductive reasoning it can command, clamours against justice, and not seldom gains the victory." Mr. Chamberlain's "Bill for the better Protection of Life and Property at Sea" deprives juries of another function. If the Bill becomes law, insurance cases will be tried without a jury, and with this prospect a meeting of underwriters at Lloyd's has expressed its satisfaction. Before this clause had been introduced, the Secretary at Lloyd's wrote on behalf of the underwriters expressing their "serious fears that it would be difficult to secure a verdict for the insurer who, after accepting the premium, should refuse to pay the insurance." He said, in short, that the jury's verdict would be in the direction of its sympathies, that is, for the insured. Commenting on this, the *Saturday Review* pithily observes that "a judge may be trusted to administer the law uninfluenced by sentiment." It would be difficult, perhaps, to mention a place where the abuses of the jury system are more clearly displayed than this very settlement of Yokohama. Here we often see five men empanelled to pass judgment in the case of a person with whom they daily associate, whose circumstances are familiar to them, and with regard to whom they are almost invariably prejudiced one way or another. How, under these circumstances, can the verdict of a jury be expected to satisfy the modern definition, "the decision of persons whose judgments are unwarpd by previous acquaintance with the matter at issue, or the statements of the parties in dispute"? The original function of juries was not to try a case according to the evidence, but to try a case without evidence. They preserved this function until the seventeenth century, and their decisions at the present time show that they not unfrequently re-assume their primary character.

EUROPE appears to be very busy reconstructing or adding to its navies. In Germany, on the 18th of March, the Reichstag unanimously voted a sum of 18,790,000 marks for the construction of torpedo boats and batteries. The Naval Department has also been congratulated from all sides on the rapidity with which it has created a German fleet. In 1871, the navy numbered only 48 vessels with 300 guns. It now numbers 108 ships, carrying 518 guns and over twelve thousand men. With regard to the quality of these ships, however, opinions are not favorable. The *Frankfurter Zeitung*, quoted by cablegram in the *New York Herald*, says:—"We have now vessels which, by reason of their flat bottoms and their lack of rigging, roll frightfully in a heavy sea (so that there can be no question of good shooting with their heavy guns,) which leaves very much to be desired in point of speed, while can only manage to manoeuvre fairly well when their engines are at full speed, and which, finally, draw so much water that the idea of running them into any of the Baltic ports upon occasion seems very problematical. Another new type of vessel devised by the previous naval administration is that of iron-clad gunboats, of which there are now thirteen. These are vessels of 1,100 tons displacement, each carrying a gun of the heaviest calibre behind a semi-circular armour shield toward the prow, and costing over a million marks. Intended to defend river and harbor mouths, these gunboats are nothing but a sort of floating battery. The slightest sea makes them roll and stagger in such a manner that accidental hits by them can only be counted on, and a really heavy sea sends them back at once into calmer water. But the series of doubtful achievements of the former marine administration is not yet exhausted, and when we say that the German navy possesses no corvette which makes more than fourteen knots, and no torpedo boat that makes more than sixteen knots, we have said enough, especially when it is considered that Russia, England, and even Denmark have built torpedo boats which run their good twenty knots." Germany has, therefore, plenty to occupy her in the way of naval construction. France, Russia, and Italy all seem to be better off, but are all, nevertheless, strengthening their fleets industriously. England has never shown greater activity. The Marquis of Hartington, speaking in the House on March the 18th, said that three guns of 110 tons—the most powerful in the world—four of 63 tons and three of 43 tons would be finished during the present year. During 1883, no less than fourteen vessels were launched for Her Majesty's navy, and orders were given for the construction of twelve more, the greater part of which were commenced. Besides these, there are now on the stocks seven others which were commenced before 1883. Among the vessels at present in progress, some of which are in a forward state for launching, the following are included:—a sixteen-gun screw corvette, built of steel and iron, cased with wood, of 2,770 tons and 3,000 horse-power engines; a fourteen-gun screw composite corvette, of 1,420 tons, with engines of 950 horse-power; three twin-screw steel armour-plated bar-bette ships, each of 9,600 tons and engines of 7,500 horse-power, to carry ten guns each; a similar vessel, but of less tonnage—namely, 7,390 tons, but with engines of greater horse-power—namely, 8,000, and a ten-gun double screw steel second class steam cruiser, of 3,750 tons, with engines of 5,000 horse-power. It is pleasant to

learn, also, that the prospects of the army are better than they were. Lord Hartington, speaking on the Army Estimates Bill, said that the elastic terms of the service and the bounties were inducing the men to prolong the period of their foreign service, and had attracted, during 1883, more than thirty-three thousand recruits, the largest number known in one year.

GOVERNOR BOWEN is very evidently a classical scholar. His latest address, on the occasion of laying the foundation stone of Victoria College, teems with apt allusions to the inspired utterances of Horace and Virgil. But it strikes us, as painstaking readers of his earlier addresses, that he has a sort of stock-in-trade of quotations which always reappear in his remarks at recurrent and well-defined periods. The flattering allusion to Her Majesty as the *Ta Whang Ti* of the English race, was we sadly fear, somewhat unintelligible to the Chinese auditors; especially as the title employed means "Emperor" and not "Empress," and is besides not the term usually applied to Her Majesty in diplomatic despatches. We have elsewhere read orations of Governor Bowen couched in almost identical words, but what particularly strikes us is His Excellency's fondness for quotations. It was intensely instructive to hear that Hongkong was an *επιτεχισμα* rather than an *εμποριον*,—for so Governor Bowen spoke of the island colony in his despatch to Lord Derby,—and it was a relief to the over-taxed brain to find an explanatory foot-note referring to Liddell and Scott's Greek Lexicon for corroborative evidence. But in his latest address, the learned speaker directed his remarks especially to the Chinese bricklayers, hod-carriers, and carpenters employed in erecting Victoria College, and eloquently called their attention to the great men who had risen from e'en such humble spheres, "the Boltions, the Watts, the Telfourds, and the Stevensons," and held before them the flattering prospect of ranking, at some future date, with these same benefactors of the race. We can imagine the wild enthusiasm of the Chinese artisans at hearing these cheering words, as well as their intense gratification when Governor Bowen rounded his rhetorical period with a Virgilian quotation in its native Latin. Again, His Excellency's happy allusion to "Kung Tse, or Confucius, the Aristotle of China" must have been pleasing to his audience, especially as the preamble, "And you, my Chinese friends," had prepared them for the choice tit-bit to come. On the whole, we can but regret that we were not present to enjoy the classical eloquence of Governor Bowen.

WRAXHALL, in his "Memoirs," relates a very interesting account of a duel which took place in Germany, while the Earl of Stair commanded the British army in that country, in which Lord Mark Kerr (Stair's nephew) neatly disposed of an ungentlemanly Frenchman. The quarrel grew out of misconduct at a dinner on the part of the French officer, thus:—A difference of opinion having arisen during the repast, on some point which was maintained by one of the French officers with great pertinacity, Lord Mark Kerr, in a very gentle tone of voice, ventured to set him right on the matter of fact. But the Frenchman, unconscious of his quality, and perhaps thinking that a frame so delicate did not inclose a high spirit, contradicted him in the most gross terms, such as are neither used nor submitted to among gentlemen. The circum-

stance took place so near to Lord Stair as unavoidably to attract his attention. No notice whatever was taken of it at the time, and after dinner the company adjourned to another tent, where coffee was served. Lord Mark coming in about a quarter of an hour later than the others, Lord Stair no sooner observed him, than calling him aside:—"Nephew," said he, "I think it impossible for you to pass by the affront that you have received from the French officer at my table. You must demand satisfaction, however much I regret the necessity of it." "O, my lord," answered Lord Mark, with his characteristic gentleness of manner, "you need not be under any uneasiness on that subject. We have already fought. I ran him through the body. He died on the spot, and they are at this moment about to bury him. I knew too well what I owed myself, and I was too well convinced of your lordship's way of thinking to lose a moment in calling the officer to account."

ONE of the vernacular journals announces that an addition is to be made to the treasures of the Shrine of Yasukuni, at Shokonsha, Tokiyo, in the shape of a collection of portraits in oils of all the General Officers in the Japanese Army. It is a good thing to promote the development of art, but we are decidedly of opinion that Japan would do well to postpone such projects as the above. There is in Tokiyo a certain Department where a series of full sized oil paintings of Japanese statesmen and other celebrities are reposing in deal cases. It is enough to say of them that we hope they will never be hung anywhere outside the walls of a blind asylum.

WE take the following paragraphs from the Sōul correspondence of the *Mainichi Shimbun*:—Mr. Von Möllendorff, Foreign Adviser to the Korean Government, intends travelling throughout the Kingdom, next summer, on a tour of inspection. He is expected to make strict examination into the existing system of local administration. A large number of Chinese merchants have arrived in the capital, and occupy the better portion of the streets. The Japanese, being prohibited from opening shops in Sōul, are doomed to remain at Inchhōn, where they bewail the general stagnation of trade. As matters stand, the entire foreign trade of Korea will, sooner or later, be subject to a protectionist system, and it is not improbable that the Japanese merchants will be forced to leave the country. For this reason, the absence of the Minister is greatly regretted. The Government proposes to garrison all the soldiers hitherto trained in Japanese and Chinese style, as well as the new recruits (who will number about 3,000) in a place to the north of the Amnok-gang River, which runs along the Chinese frontier. This is to be done with a view to strengthening the boundaries lying along Russian territory. Conscription is going on actively in all the eight districts. The Government further intends purchasing three or four steamships, in order to facilitate the transport of the rice received in payment of the land-tax, as frequent shipwrecks and other calamities have destroyed a large number of native craft.

Another letter from Pusan, dated April 24th, contains the following additional items:—In consequence of commercial depression, the number of foreign residents at this port is re-

duced to 1,600. The Customs' Revenue for the last month falls even more than half short of the salaries of the employés in the service. Lieutenant Watanabe will leave for Chôl-la-do early next month, on a tour of inspection. The rebuilding of the Japanese Consulate has been commenced. The Trade Regulations between Japan and Korea fortunately admit of fishing being carried on along the coast of either country. A short time ago, a number of fishermen from Tsushima, while fishing along the coast of Man-chiu, came quite unexpectedly upon large quantities of the edible nacre-shell (*Haliotis tuberculata*) and sea-slugs (*bêche de mer*). On the fourth of last month, a native of Wakasa was sentenced to a fine of 20 yen for having come to this port from Sôul overland, thereby infringing the regulations regarding the treaty limits.

A GENTLEMAN, by name Hashiba Kojiro, who resides at No. 18, Sugatacho, Yokohama, is said to have captured a somewhat remarkable animal. It is a rat with eight legs, four before and four behind. Mr. Hashiba is treating the monstrosity with great kindness, which it will probably repay.

THERE is at present in Paris no less a person than the Mahdi's tutor; and of course he has been interviewed by the *Figaro's* correspondent. The interviewer says Gemal-ed-Din (the Beauty of Religion) is a man of about forty-seven years of age, and is an Afghan. He has been a long time at the same business as the Mahdi, apparently without the same success; but at all events the Mahdi is his favourite pupil, and all the Mahdi's staff are his other favourite pupils; for in this respect he resembles the late Dr. Arnold. On the arrival of the interviewer, Gemal-ed-Din at once asked him what he would take; a piece of courtesy, by the way, which does not fall to the lot apparently of most interviewers. The conversation was carried on in Arabic, with the aid of a dictionary; and both parties got on tolerably. The tutor, it seems, is over in Paris on business connected with his pupil, who is about to set up a newspaper to spread over the Eastern world his views on politics, which are much better known in Europe, he says, than in Asia. This organ, he says, will be despatched in bales to all Mahommedan countries, and read with avidity; and in a short time there will be a grand Mussulman upheaval, ending with the conquest of the world, including America, and universal happiness for two hundred years. For the benefit of timid persons, however, it may at once be said that the conquest will be carried out with as little bloodshed as possible, and no pillage; and any one who likes to submit will be allowed to do so. About the Prophet's life the tutor says very little. The Mahdi has lived seven years at the bottom of a well—no doubt in search of truth—and has a great liking for the French. "L'Anglais, voilà l'ennemi," said Gemal-ed-Din, imitating Gambetta: and the interview terminated, for the Prophet's tutor was getting enthusiastic, and there were a good many deadly implements about.

THE March number of *Chamber's Magazine* contains an amusing article entitled "The Muse of Parody," which gives specimens of some excellent parodies on popular poems and poets. From the days of the great Cæsar Augustus

downwards, the art of parodying well-known poetical and rhetorical effusions has always been held in high favour, but there are few who can really use the art with telling effect. One of the best bits in this anthology is the parody of the late J. R. Planché on the once all-too-popular song "When other Lips":—

When other lips and other eyes
Their tale of love shall tell—
Which means the usual sort of lies
You've heard from every swell;
When bored with every kind of bosh,
You'll give the world to see
A friend whose love you know will wash,
Oh, then remember me!

Equally good is the skit on Moore's lines, "I never nursed a dear Gazelle":—

I never had a piece of toast
Particularly long and wide,
But fell upon the sanded floor,
And always on the buttered side.
I never roved by Cynthia's beam
To gaze upon the starry sky,
But some old, stiff-backed beetle came
And charged into my pensive eye.

Tennyson's "Mariana," with its melancholy refrain, has given one enterprising parodist some decidedly curious ideas:—

They lifted him with kindly care;
They took him by the heels and head;
Across the floor and up the stair
They bore him safely to his bed.
They wrapped the blankets warm and tight,
And round about his nose and chin
They drew the sheets and tucked them in,
And whispered: "Poor old boy—Good-night!"
He murmured, "Boys, oh, deary, deary!"
That punch was strong," he said.
He said, "I am weary, weary;
Thank Heaven, I've got to bed!"

Even the soothing ballads of Mother Goose order have been tampered with by mischievous poetasters, robbing them of all their original charming simplicity of composition by substituting other words which utterly destroy their pristine freshness. We have room for only two specimens, and may add that both originally appeared in an American magazine:—

Jack and Jill
Have studied Mill,
And all that sage has taught, too;
Now both promote
Jill's claim to vote:
As every good girl ought to.
Sing a song of phosphates,
Fibrine in a line;
Four-and-twenty follicles,
In the van of time.
When the phosphorescence—
Evolved brain,
Superstition ended,
Man began to reign.

THE *Yomiuri Shimbun* says that the dealers in old clothes in the Nihon-Bashi district, Tokiyo, are about to turn over a new leaf, or rather have already turned it over. Since the 1st of this month they have marked all their goods in legible and unalterable figures, and announced their intention to carefully select everything they expose for sale, as well as to desist from offering the public any more take-ins (*Kuwase-mono*). These are very excellent resolves. It is a pity that their appearance of spontaneity should be marred by the memory of the recently published regulations for the control of dealers in second-hand goods.

OSMAN DIGNA's whole relation to the revolt, and the amalgamation in him of religious, political and mercantile aspirations, says *The Times*, are hard to comprehend. A broker and trader, and principally a slave-trader in Suakim and Jeddah, he received a severe financial blow when, some six years ago, a British cruiser captured two slave-dhows full of victims, on the way to Jeddah. Osman Digna's trade then fell from bad to worse, his house property in Suakim was all mortgaged, and he became hopelessly involved. Being of no great distinction by birth, his selection by the Mahdi to lead a religious rebellion in these parts

is not in accordance with the structure of Arab society and feeling, and is attributed to the accident that Osman Digna, in one of his incursions far south for slaves, met the Mahdi, who formed a high estimate of his ability and of his influence, acquired through successful trading. If this history be trustworthy, passions for other objects than holiness are the keynote of Osman Digna's character and motives, and it is against all probability that he will cast his goods and his position into the broken balance of battle. He is no ignorant fanatic, and he cannot himself believe the myths which he multiplies in order to control his followers.

PROFESSOR E. S. MORSE's report to the Peabody Academy of Science, describing his latest visit to Japan, has been published in American newspapers. His labours in this country were devoted chiefly to the collection of ethnological material, and especially of ceramic specimens, for the institution of which he is the director. As is always the case, in such circumstances, the fullest facilities were afforded by the Japanese authorities, and Professor Morse was enabled to gather an unusually varied and interesting assortment of articles; many of them being of especial value to students of Oriental art and mechanisms,—such as the tools employed in Japanese trades, with pictures illustrating their peculiar uses; weapons of all periods; examples of admirably modelled human figures of the kind exhibited in Asakusa and elsewhere; characteristic wearing apparel, household utensils, and a host of others, equally desirable. Numbers of these were gratuitously presented to the Peabody Academy by private Japanese citizens as well as by Government establishments. Professor Morse succeeded, also, in obtaining a large supply of ethnological objects from Korea, "the first," it is believed, "ever sent from that country." The total number of his new additions to the Museum exceeds eight hundred.

ACCORDING to the latest advices received in Hongkong, it has been semi-officially denied that any treaty has been completed between France and Portugal, and that, therefore, there is no reason to suppose that the rumoured French overland expedition to Canton, *via* Macao, is correct. Yet it appears that the question has undoubtedly been raised as to the possibility or feasibility of landing French troops in Macao, and the officials of the Portuguese colony are ominously reticent on the subject. The report seems to have originated in official circles in Macao, and although H.E. da Roza has received no positive instructions as to the matter, there is every reason to believe that negotiations between France and Portugal have been privately carried on for some time past.

It is announced that the official opening of the Tokiyo-Takasaki Railway is to take place on Monday, the 12th instant, without fail. It is not yet distinctly known whether His Majesty the Emperor proposes to be present, but we presume that under any circumstances there will be no more postponements. The unfortunate shareholders may well begin to look askance at all these wasted preparations. If the opening comes off on Monday next, there will have been 4,000 invitations issued, 3,200 of which were so much waste paper; and 2,400 dinners prepared, 1,600 of which were never set before the guests. On the whole, we learn that His Majesty's indis-

position has cost the Company something like 4,000 yen. Fortunately they can afford to pay for these accidents without much anxiety.

THE "Lord Cobden" of the Paris *Temps* has been out-done, says a home paper, by the "Lord Gladstone" of M. Barodet, a Radical deputy from Lyons. But neither the *Temps* nor M. Barodet is half so funny as the *Rappel*, which rebukes M. Paul de Cassagnac and Count de Mun for having laughed at the deputy's mistake. "Do these aristocrats suppose," asked the indignant *Rappel*, "that Mr. Gladstone is a simple bourgeois, like M. Thiers or M. Guizot? Ought they not to know that he is a squire, and therefore a better gentleman than any newly created temporal peer? Moreover, by virtue of having been several times Premier, he bears the title of right honourable, and as such is on a par with marquesses, earls, and barons." The *Daily News*, whose own spelling of foreign names is sometimes extremely comic, makes fun of M. Barodet, and of Frenchmen in general, with regard to their perfectly original conceptions of English titles. Among the illustrations it gives there are two that are worth reproducing. One is that of a character in a novel by Gaboriau, variously styled "Mr. Thomas Elgin," "the Honourable Elgin," "Sir Elgin," "Honourable Sir," and "Sir Tom." The other is a detective named Piedouche, who passes himself off as an American named "Sir Francis Disney of Baltimore." The "Honourable Elgin" strikes us as being in no way inferior to the "Honourable Derby," to which we have already given our tribute of admiration.

THE fourth reunion of the *Kangwa-kwai* (Society of Art Critics) took place on the 20th ultimo at the Meiji Kwaido, Tokiyo. A fine collection of master-pieces by the great artists of the Kiyoto School was exhibited, and attracted a large number of Japanese and Foreign visitors. The building, though in general excellently suited for the purpose, left a good deal to be desired in point of light. Reunions of this sort require, however, special facilities. The *Meiji Kwaido* is perhaps the best building to be found in Tokiyo, and we trust that the Society will continue to employ it. It is not often that the public is enabled to examine authenticated and properly classified specimens of Japanese pictorial art, as it existed in its palmy days before the period of modern decadence. The following is a *resumé* of the excellent lecture delivered by Mr. E. F. Fenollosa on the interesting subject, "Can Japanese Art be revived?"—

The whole world has become interested in Japanese Art, and deeply regrets its recent rapid decline. This decline, due chiefly to the cessation of local patronage, public and private enterprise, during the last two years, has been earnestly striving to arrest. Every one has been looking forward to this second Competitive Exhibition of Paintings at Uyeno, with the expectation that it would record a decided improvement in quantity. We have been doomed to disappointment; and in view of the frequent predictions of failure on the part of foreigners, and the fear that the present agitation may spring only from a shallow enthusiasm, it is important to reconsider the question asked above.

First then, what is there distinctive in Japanese Art to revive? I speak here only of painting, as the source of all Japanese decorative design.

Art excellence is not in its nature one, any more than excellence in human nature is one. The result of moral, mental, and social education, is not the production of a standard uniformity among men, but of a more decided individuality. Similarly, perfect art ought never to repeat itself. If it be urged that nature is the same for all men, I reply that this is not true of nature as representable in Art. What we want to express in art is not scientific fact for its own sake, but some subject. But the subjects in nature, that is, its parts and aspects, are infinite; and even they do not concern the art of painting, except as expressed in artistic

form, that is, beautiful lines, shades, and colours. It is, further, easy to show that in a good painting, the two elements, form and subject, must be correlatives, that is, mutually determinative. We ought not to think of a subject or story first in terms of words, and then add pictorial form. Neither should we confine our attention to pictorial form, and leave to chance what it shall express. The two must be born together, and thinkable only in terms of one another. In this necessity of union is founded the vital distinction between schools of painting. The art of any one time and place cannot treat every subject in every possible form. It becomes powerful and perfect only as it becomes special. This peculiarity may be determined indeed, either from the side of the form, or from that of the subject; but in any case it originates in historical necessities.

We may now state the essential difference between the European conception of painting, and that dominant in the East. In Europe painting had its origin in the art of sculpture, while in the East painting had its origin in the art of hand writing. From this root all the other differences naturally spring. Thus, while in the West, the object was from the start to produce an effect of sculptural reality, in the East it was to produce as much beautiful suggestion of nature as could be realised in using the ordinary pencil. From this principle spring the chief peculiarities of Eastern painting; for example, its generalization of natural form into terms of ready pen-execution, its preservation of outlines as a characteristic beauty, its indifference to true relief and cast shadow as scientific non-essentials, its substitution in their place of delicate gradation and sparkling diversity of dark and light parts, its freedom from rules of linear perspective in reaching its artistic aim, and its conception of man as a mass of flowing drapery and not as a naked figure. Such are the limits within which Eastern painting must work, if it is really to retain its individuality.

It ought not to be difficult to distinguish this view from that held by some conservative Japanese gentlemen to-day, that the art of painting is nearly identical with the art of hand-writing. In practice this theory amounts to ignoring all quality whatever except fine pen-strokes. But in the above explanation, all other artistic qualities, while bound into union with this one, still remain as essential elements of pictorial beauty.

But can this essentially Eastern beauty be revived? It cannot be that in so few years Genius has died out in the Japanese breast. Art is like a seed, which remains unseen during the winter of hostile circumstance, but ever germinates and realizes its internal possibilities under the warmth of favorable conditions. The historical theory of the rise and fall of art, I have unfolded in a previous lecture. From it we may deduce, that the conditions necessary to a healthy growth of art, are at least those grouped for convenience under the three following heads.

1st.—Perfect freedom of variation. Unless you have a broad variety to choose from, there is little chance of being able to choose anything good. No variation, no progress, is the law of the universe. It is most important then, that originality should be consciously fostered. But in Japan the old forms hang like a heavy drag upon this freedom. Unless the unthinking conservatism of those who would do no more than preserve the old styles is broken down, Japanese art cannot begin to revive. Here, perhaps, we may find one cause of the failure of the present exhibition. Its managers and judges, I hear, in many instances have discountenanced individuality; and their peculiar regulations, such as that an artist must exhibit his work as representative of some established school, that all pictures must be of a uniform size, and that each artist must offer one rough painting and one carefully executed, tend inevitably to the same result.

2nd.—Opportunity for selection. This means that public and artist have got to be brought together in such a way that a selection of the best tendencies may be made. This is indeed what such exhibitions as the present at Uyeno are for. They are not for the sake of mere display, but to facilitate that sifting, from which the unconsciously produced good shall be consciously produced and made better. But a yearly exhibition is not enough. Extensive patronage of artists in the decoration of new buildings, private associations of artists, local exhibitions, an organization of dealers who shall mediate between artists and patrons—such things as these will have to grow up before anything else than aimless experiment can be achieved.

3rd.—Development of high taste and aim in patron and artist. The mere establishment of a rapport between the two parties is not enough. It must call out and employ great quality, in order to produce great result. It is not necessary that an artist should be scientific; but his perception of what is great and organic in things must be instantaneous. He must be in earnest. He must love his art so truly that he will always strive to do his best. No age can paint any subject well if it does not love it. The new art will not find itself, until it has incorporated into its nature the true need, the best hope, the earnest reverence of the time. Therefore in bad periods, when no one believes in or cares for anything, art is always poor. Let each artist strive to make his heart pure, and then paint whatever he loves most. It is the same with the public. It must be true enough itself to appreciate the true. Here then is an important question facing Japanese to-day. Is there any nucleus of love or interest which art can satisfy, and about which the production of the future can cluster? If not, then Japanese art cannot be revived. I believe that such exists. In the bustle of

transition it may not be clear; but honest spontaneous interest in certain subjects never dies out of the heart. An extraordinarily rich and picturesque national history lies ready at hand. The possibilities of Eastern Painting have not been half exhausted. Has any one the power and the courage to-day to strike the new keynote? If so, let him paint for himself, not for the critics, and the world will not be slow to recognize him.

At no time in England previous to the suppression of the prize ring, were such scenes enacted as are frequently reported in the American papers at present. It may be safely assumed that the ruffianism which migrated to America, combined with the native article already on the spot, has produced a race of pugs of which Deaf Burke and the Tipton Slasher and their contemporaries would be heartily ashamed. A *Despatch* Cumberland, Md., special says:—A prize fight came off at Hyndman, Pa., near the Maryland State line, at an early hour this morning, April 5th, between a Hungarian named Nickvest, formerly of St. Louis, and an unknown, alleged to be Kilrain, a Boston pugilist. The fight was arranged a short time ago, and the party left Huntingham, Pa., last night in coal cars, arriving at Hyndman at three this morning. During the trip a *melée* occurred on the train, in which several persons were injured. Arriving at Hyndman, the ring was pitched and the fight began. Fifty-three rounds were fought, with the advantage about even, when a cry of "foul" was raised. A terrible riot ensued, in which pistols and knives were freely used. The riot lasted for some time, and at the conclusion three men, including Nickvest, were stretched on the ground dead, while several others were badly wounded. Nickvest was shot through the head. No arrests were made.

Texas Siftings has some curious particulars about the late Ben Thompson, the noted desperado of that State, recently slain by a brother desperado. He is said to have killed fifteen men with his own hand, and once killed two by successive shots of a revolver, fired in opposite directions, both having him covered with their own weapons, and only showing their heads. His clothes were always fashionable, and he wore \$3,000 worth of diamonds. In 1882 he was made City Marshal or Chief of the Police of Austin, but had to take a vacation in June in order to kill a man in San Antonio to whom he owed a grudge. He killed him, accordingly, and was put in prison for it and tried at San Antonio, bail being refused. He was acquitted, of course, but he retained his office in Austin during his incarceration, and, on his return to that city, had the horses taken from his carriage, and was drawn through the streets by an enthusiastic crowd. He was unwell at the time of his death, but people remarked, "Ben is a little bilious, but he will come all right again as soon as he has killed a man." Sure enough, he soon after sought to effect his cure by killing a certain Foster at San Antonio, but Foster was too quick for him. Ben killed him, but not before he had relieved Ben himself of all further pains and aches by a well-directed shot.

THE items in Indian papers on affairs in Burmah are slightly conflicting. The following paragraphs are taken from various sources:—"The Irrawady Flotilla Company's steamer *Palow*, which was sent specially to Bhamo, single-handed, to ascertain the truth about the rising in Mogoung, has returned to Mandalay, reporting that the rebels have scattered, and the country is much quieter.—The Kachyen rising

in Upper Burmah is reported as over. The King's troops slaughtered many rebels at Modah, which dispersed the dacoits, and restored confidence—Some of King Theebaw's cousins and a Mahomedan have been caught attempting to fire the palace at Mandalay. Had the flames been seen from the city, there would probably have been a rebellion there.—The rebel Kachyens appear to be in greater force than was originally supposed, 400 having been killed in a single engagement. All their attempts to capture Bhamo have failed. Continuous fighting is going on between Mogoung and Bhamo. The latest, however, is no doubt the sequel to the attempt, above-mentioned, to fire the Palace at Mandalay. A telegram in an American paper, dated London, April 9th, says:—"One-half of Mandalay, the capital of Burmah, a city of 90,000 people, has been burned."

AN American paper says:—T. A. Matsudaira, the new City Engineer of Bradford, McKean county, is a native of Japan, and the first man of his nationality to be chosen to a civil office in the United States. He is the son of a wealthy Japanese farmer, educated in this country, and was for three years Chief Engineer of the Union Pacific in Wyoming, Idaho, and Montana. There are only two other Japanese engineers in America—S. Haraguchi, Assistant Engineer of the Pennsylvania Road, and J. Komura, a mining engineer in Montana—altogether there are about three hundred of that nationality engaged in business in this country.

REFERRING to the wreck of an ocean steamer, the particulars of which we published on Saturday, the *Alta* says:—The investigation into the loss of the *Daniel Steinmann*, with her hundred and odd victims, promises the usual result, viz., failure to fix criminal responsibility on any one. A strong tide prevailed and the Captain had overrun his reckoning ten miles. There are perils which those who go down to the sea in ships cannot avoid. One of the seven wise men of Greece was once asked who were the most numerous, the living or the dead, and replied by making the counter interrogatory, "In which class do you count the men who are at sea?"

THE *Civil and Military Gazette* says:—In Mr. Marvin's new pamphlet about Merv we find the promised information regarding the Russian Mission to Cabul in 1882. It appears that a few months ago, on his way to Baku, Mr. Marvin stayed a few days at Kertch, and there came across, quite by accident, a man, named Samuel Gurovitch, who had acted as interpreter to the Mission. Mr. Marvin learnt from Gurovitch that, early in 1882, Captain Venkhovsky, of the Russian Engineers, and Prince Khilkoff, Chief of the Trans-Caspian Railway, and Gurovitch himself, left Askabad in disguise and made their way to Merv, Bokhara, Herat, and Cabul. At Cabul, Gurovitch declared, the Amir Abdur Rahman entertained them hospitably and offered to help them to survey the road to Candahar. The story is interesting, of course; and, if true, throws some light on the various rumours that have reached India, from time to time, about the presence of Russian agents in Cabul. But without further confirmation, a story of this sort told to Mr. Marvin by a casual stranger, proves nothing; except that Mr. Marvin is at times somewhat indiscriminating. Samuel Gurovitch may have told the truth; but there is nothing to prove that he was not romancing. For the rest

Mr. Marvin's pamphlet is merely an ill-arranged summary of information already known, interspersed with the unnecessary comments of the compiler.

It will be seen from the announcement in the Official Gazette (*Kwampo*) that the Chinese Minister at Berlin replaces the Marquis Tsêng only *ad interim*. Tsêng's real successor is to be Hû King-ch'ing, a gentleman who was nominated, a few years ago, Representative of the Middle Kingdom in Tokiyo, but was prevented, by the death of his mother, from taking up the appointment. Hû has received a foreign education. He speaks English excellently and is understood to be a man of distinctly liberal views. He is also a *protégé* of Li Hung-chang, which fact furnishes another evidence that the conduct of the Tonquin negotiations has been wholly entrusted to the great Viceroy. Tsêng's removal becomes doubly significant in view of the circumstance that he does not even await the arrival of his successor from China. His warlike policy is evidently about to be completely reversed.

THE *Rangoon Gazette* publishes a translation of the royal proclamation issued at Mandalay by the King announcing important reforms in the Government of Upper Burmah. Under the old *régime* officials get no salaries, but are given tracts of land, on the revenues of which they live paying a certain proportion to the Royal Treasury. In this way persons who have benefited or who have pleased the King have become rulers of Districts which they have never seen and care nothing about, so long as money is forthcoming. Some of them are eunuchs and palace ladies. The executive duties are performed by their creatures who are valued according to their success in raising money, and who, therefore, practice extortion and oppression at their own will. According to the proclamation, all this is to be entirely changed. The country has been divided into ten districts, and a Commissioner appointed to administer each district. All the revenue is to be sent to the treasury. A civil list and a budget are being prepared, and officials will henceforth be paid fixed salaries. King Theebaw has been induced to take this step principally through the influence of the Kinwoon Mengyee, whose lieutenants the Pouk Myne and Kyouk Myung Atwinwoons are elaborating the scheme. The King is going to get out two new river steamers. No further news of the rebels.

THE death of General de Wimpffen leaves Marshal MacMahon the sole survivor of the three generals who turn by turn commanded the French army at Sedan. MacMahon exercised the chief command from daybreak, or even earlier (for the Bavarians began the attack between one and two in the morning), until six, when, wounded in the thigh, he was carried of the field. He was at once replaced by General Ducrot, the senior of the commanders of army corps; who, finding that the Prussians were turning his position, tried to evade the movement by ordering an immediate retreat to the fortified town of Mézières, where he would have found a division of fresh troops and an abundance of provisions and ammunition. Disposition had already been made for the retreat, by a road which the Prussians before long would intercept, when General de Wimpffen, who had joined the army only the day before, produced a paper from the Minister of War entrusting him, in case of accident to

MacMahon, with the chief command. Ducrot begged his successor to continue his orders for a retreat to Mézières; but De Wimpffen would not hear of such a thing, and (according to Ducrot) declared that the French were already gaining the day, and that he was about to "drive the Prussians into the Meuse." Ducrot replied that the enemy was endeavouring to surround him, and that he would be fortunate if at the end of the day he saved a portion of his army; and in the end, as everyone knows, De Wimpffen, hemmed in on all sides, was forced to capitulate. Sooner or later the result would doubtless have been the same, whether De Wimpffen, Ducrot, or MacMahon had commanded in chief. But the disgrace of having signed the capitulation had to be borne by De Wimpffen, while the honour of *not* having signed it fell to the fortunate MacMahon, who had escaped the painful necessity by a mere accident. —*St. James's Budget*.

THE following story from the Midlands, says a London paper, is too good not to be true. A large provincial town having recently launched out into the luxury of a People's Park of the approved Battersea pattern, the town council met to solemnly discuss a proposal to place a number of Venetian gondolas on the large and ornamental piece of water which graced the park. The proposal was agreed to, and it then became a question of how many should be provided. Up then rose the worthy mayor. "Gentlemen," quoth this Midland Counties Solon, "a couple will, in my opinion, be sufficient for the present needs: we may safely leave the rest to Nature!"

A VERY horrible story is told by the *Fiyu Shimibun* about a notorious "Baby Farm" at Jiusangenchō, Kanazawa, Kaga. It seems that a widow living at that place had established a sort of association, with several branch offices, which, as the *Fiyu* remarks, was little else than an "Infanticidal Association." Fatherless children and orphans were readily received by the widow and her colleagues on the receipt of a small sum of money, which was nominally supposed to defray the expense of nursing and clothing. As several children were not returned to their relatives, and most of the nurselings were stated to have died shortly after admission, the police made a strict investigation and found that no less than *sixty-five* children had been murdered either by being interred alive or by other quite as barbarous means. It is a matter of universal congratulation that the infamous widow and her colleagues have all been arrested. Hanging is far too good for them.

THE *Fiyu Shimibun* announces the discovery of a rich vein of gold ore on the side of a mountain at Tsugaru-gori, Hakodate Prefecture. The officials of the Prefecture have already sent in a report on the new mine, which will probably be opened before long. It appears that an English employé of the Colonization Department reported some time ago that gold was to be found in the vicinity, but the authorities did not, at the time, convince themselves of the truth of this report.

THE U.S. corvette *Essex* (6), Commander McCormick, arrived here on Monday. The following is a list of her officers:—Commander, A. H. McCormick; Lieut. M. R. S. MacKenzie; Executive Officer, Lieut. Wm. H. Parker; Navi-

gating Lieutenants, Wainwright Kellogg, Karl Rohrer, Corwin P. Rees, and Wm. M. Irwin; Ensigns Junior Grate, R. O. Bittler, and W. C. P. Muir; Surgeon, M. L. Ruth; Past Assistant Paymaster, Louis A. Yorke; Chief Engineer, D. P. McCartney; Passed Assistant Engineer, F. J. Hoffman; Assistant Engineer, M. Bevington; Lieut. Marines, O. C. Beryman; Pay Clerk, C. E. James. The *Essex* has a complement of 200 men.

WE regret to have to record the stoppage of the Oriental Bank, a notice announcing that fact having been posted at that institution on Saturday afternoon, in accordance with a telegram received by the manager. A message was received at the Bank yesterday from the official liquidator, and a telegram to a Yokohama firm announcing the suspension expresses the expectation of payment in full. The immediate cause of the stoppage is doubtless a run on the bank at its numerous branches consequent upon the recent depreciation of the shares. There are probably no new losses, and depositors are not likely to suffer beyond the inconvenience of a lengthened liquidation. It is to be hoped that the widespread connection of the bank will be kept together, and that, if the O.B.C. is not resuscitated, some other institution will incorporate its extensive business.

IN the United States Ministerial Court, Tokiyo, judgment was delivered on Monday in the case Van Buren v. Tripler. The following is the final paragraph of the finding of the Court:—

The case is not such as to justify vindictive or exemplary damages. No evidence was given of special damages.

I therefore assess the plaintiff's damages in the premises at twenty (\$20) dollars, and do hereby adjudge and decree that the Defendant, Thomas H. Tripler, pay to the Plaintiff, Thomas B. Van Buren, the said sum of Twenty (\$20) dollars, his damages assessed as aforesaid, and I do further adjudge and decree that said Defendant pay the costs of this suit.

(Signed) JOHN A. BINGHAM,
E. E. & M. P. of the U. S. of
America in Japan.

U. S. Legation, Tokio, Japan,
May 5th, 1884.

THE Hackney Radical Club, having, after a lecture by Captain Campbell on the subject of "Our Rule in India," passed a resolution approving of Lord Ripon's Indian policy, forwarded copies of the same to the members for Hackney. The Postmaster-General has replied, saying:—"I most cordially edorse the approval which the resolution expressess of Lord Ripon's Indian policy; for I believe that no one who has ever been Governor-General of India, has been more anxious than he has been, to promote the true interests of the people of that country."

IN the temple of Gokoku, at Otowa, there is a celebrated picture painted by Kano Tanenobu. It represents Buddha entering into Nirvana, and its dimensions are 30 feet in width by 66 feet in length. The priests of the temple proposed to send it for exhibition to the *Kiyoshinkwai* at Ueno, but the Committee was, not unnaturally, puzzled to know how such a monster painting might be disposed of. Ordinary walls do not offer spaces of 30 feet by 66. It was decided that the picture should be officially inspected before any further steps are taken.

A SHOOTING affray occurred on board the American ship *Pactolus*, Captain Bromham, on Sunday, the result of which is that a man is now lying in Hospital with two bullets in his body.

It appears that some of the crew were on shore Sunday, and two of the men met an old shipmate who is living on shore. This man went off to the ship about eleven o'clock with his two friends, and some trouble ensued, during which the captain is said to have fired amongst the crowd forward, two shots taking effect on the visitor, one in the head and the other in the arm.

A FIRE broke out shortly after three o'clock on Friday in the back premises of Mr. Witt's house, No. 133. The flames spread with such rapidity that nothing could be removed. The bowling-alley attached to Clausen's Hotel was at one time in great danger, but was luckily saved. The roof of the adjoining house caught fire in several places, but the flames speedily gave way before a perfect deluge of water. The "Relief" was first on the spot, and had the fire quickly under control. Two Chinese women are said to have been in the house when the fire broke out, and were rescued with some difficulty, owing to their being partially stupified by the smoke. We understand that the premises were insured for \$4,000, but that the policy expired the day before yesterday.

H.E. TERASHIMA MUNENORI, Minister Plenipotentiary and Envoy Extraordinary, has been appointed an officer of the Imperial Household Department; H.E. Mori Arinori, Minister Plenipotentiary and Envoy Extraordinary, member of the *Sanji-in*; Kawase Masanori, Vice-Minister of Justice, Minister Plenipotentiary and Envoy Extraordinary; Iwamura Michitoshi, the President of the Board of Auditors and of the Pension Bureau, Vice-Minister of Justice; and Watanabe Noboru, member of the *Sanji-in*, President of the Board of Auditors.—*Kwampo*.

THE Government of British Columbia has found a way to "better the instruction" of California, with respect to Chinese immigration. Nothing in United States legislation can stand beside the laws recently passed by the parliament of that province, with the view of excluding Mongolian labourers in the future, and rendering the lives of those already residing there a burden to them. Any new corner from the Middle Kingdom is liable to a fine of \$50, or, in default, to imprisonment for six months. Any person instrumental in introducing a Chinaman is subject to a fine of \$200 for each separate offence. All members of the obnoxious race now in British Columbia are required to pay a license fee of \$10 a year; and the non-possession of a license is punished by a fine of \$40. This document must always be presented for inspection to toll-gatherers on bridges and highways, and to any civil officer elsewhere, who may choose to demand it. A person who employs an unlicensed Chinaman will himself be fined \$50. All employers, moreover, must at stated periods furnish lists of those in their service; and if this requirement is evaded, or if an incorrect report be given, a penalty of \$100 is imposed. Chinese residents who desire to leave the province temporarily, can return only upon the condition of having a photograph taken, at his or her own cost, to insure identification when readmission is applied for. The exhumation of a Chinese corpse, for transmission across the Pacific and burial at home,—or for any other purpose,—entails a forfeiture of \$100. The same amount is exacted from every opium smoker, the use of that drug, excepting for medicinal purposes, being strictly

prohibited. Some doubt appears to exist as to whether the Dominion Government will sanction the enforcement of these laws; but the British Columbians are confident, and expect to derive an annual revenue of some \$200,000, through their operation.

THE *Meiji Nippo* says that there has been discovered in the district of Amerigawa, Tomiyama Prefecture, a species of earth which, for cleansing purposes, is an excellent substitute for soap, and, at the same time, possesses none of the latter's deleterious properties. This discovery reminds us of Madame Darnet whose thrifty search for a natural soap at St. Yrieix disclosed the Kaolin which afterwards supplied the workshops of Sevres.

THE *Yeiiri Shimibun* put, the amount of deliveries of imported goods in Yokohama during the month of April at \$1,110,933, and the amount of sales for export at \$603,120; the balance in favour of deliveries being \$507,813.

A LADY purchased some articles in the North-West Provinces Court some days before the Culcutta Exhibition closed, and wished to take them away. The Babu in charge said that this could by no means be allowed, whereupon the lady asked, "Then when may I take them away?" To which the Babu oracularly replied, "Not till the day of judgment."

SAYS the *St. James's Budget*:—"Some of of the marines are being mounted." So says a serious telegram from Suakim; and, indeed, without some such stroke the policy of the Government would have wanted finish. In statesmanship they have exhausted absurdities; but to realize a mythical ideal by adding a troop of horse-marines to the forces of the Crown—there is genius in that.

THE winner of the One Thousand Guineas, Busybody, a bay filly of Lord Falmouth's, is by Petrarch out of Spinaway, and was heavily engaged as a two-year-old, having been entered in ten of the principal events last season.

SHORTLY after three o'clock on Friday a man, apparently about forty years of age, was found hanging from the eaves of a house occupied by one Tsubouchi, No. 7, Nichome, Aioicho.

WE are informed that telegraphic information has been received of the death of the Dowager Empress of Austria.

THE American ship *Lucile*, Captain C. M. Lawrence, arrived on the evening of the 7th instant from New York. She came by way of Australia, and experienced moderate weather throughout the passage, which occupied 154 days.

THE American schooner *Letitia*, from San Francisco, arrived at Hakodate on the 1st inst., and sailed thence for Vladivostock on the 2nd.

THE Pacific Mail steamship *City of Rio de Janeiro*, for this port, left Hongkong on the 6th instant.

THE British barquentine *Glenury* arrived at Nagasaki on the 1st inst. from this port.

"THE HALT AND THE BLIND."

ONE cannot but feel sincere pity for those persons who find themselves obliged to halt between two opinions in the matter of treaty revision. Pulp of jelly-fish consistency is yet splendidly consistent when compared with the condition to which they are compelled to reduce their mental fibre in order to receive to-day and efface to-morrow the impressions imparted to it by every passing wind of doctrine. The memorial presented two years ago by the foreign residents of Yokohama is still fresh in the memory of the public. "Signed by the entire mercantile community," it asked for extended facilities of commerce, and declared that to permit foreigners to trade in the interior would "strike at the very foundation of the grievances of which they justly, yet vainly, complain." The memorial was published only two months ago. The journal in whose columns it appeared emphatically endorsed every word of it. Yet the same journal now says:—"With regard to throwing open the country to foreign travel, residence and trade, little benefit, immediate or remote, is anticipated from such a course. No one treats such a proposition as worthy of serious consideration, for there is certainly little to recommend it." Only invertebrates can wriggle like this without fracturing something. Half a column farther on in the very same article we are treated to another startling contortion. We are told that "the thirty-six millions of Japan only await the removal of restrictions to make a large and paying volume of trade." What restrictions? The restrictions imposed by the present treaties. This, at all events, is plain enough, for we are assured that "treaty revision on sound principles will certainly have the effect of enlarging trade." It is necessary, then, to believe, that although to remove a portion of existing restrictions would "make a large and paying volume of trade," to remove the whole of those restrictions would produce "little benefit, immediate or remote." We cannot twist ourselves around these two propositions. No mind of any stiffness could compass them both. There is, however, one statement which we can heartily endorse. It is this:—"The assertion that foreigners are not likely to benefit by revision of the treaties is pure nonsense, and deserves to be held up to common contempt." That announcement has all the rudiments of a vertebra. But how are foreigners to benefit? Not by any throwing open of the country. "Little benefit, either immediate or remote, is anticipated from such a course." The Memorial of the Yokohama merchants, to be sure, when urging the desirability of permitting trade in the interior, said:—"As we are now placed, we are compelled to remain ignorant of each other's wishes and requirements, and to submit our commercial

transactions and ourselves to the mercies of men who are the remnants of an evil past." The memorialists wanted the country opened. That is indisputable. Their memorial, too, was presented expressly with a view to treaty revision. But their sometime fellow-thinker now declares, in effect, that one of the chief restrictions they desired to see removed is absolutely immaterial. How, then, we repeat, are foreigners to benefit by treaty revision? Simply thus: it is urged, apparently, that the treaties should contain a clause permitting Japanese to charter foreign-owned ships for use in the export trade. For there is an assumption, now, that Japan has, or can speedily produce, quantities of wheat which would go abroad if there were vessels to take it. Formerly the cry was about rice. One-fourth of the whole annual crop of rice was supposed to be lying stored in the interior only waiting for an opportunity to travel Westward. And this at a time when the price of the staple in the Japanese markets was such that profitable export did not seem possible. Rice, however, is out of the running now. Wheat is the new favorite. An export of wheat to the value of four or five million dollars—that is to say, about fifty per cent. of the total present production—is talked of. This, of course, is only in prospect. For the moment, the beginnings alone of such a trade are supposed to exist. We are told that if freights were cheap, if the conditions of export were relaxed, if "restrictions disgraceful to the government" were removed "a revival of trade would set in, and tend steadily to improvement on a vastly larger basis than the volume of imports and exports can ever permit while the treaties remain as they are." In other words, the chief, if not the only, point to be aimed at in treaty revision is permission for the employment of foreign ships in non-treaty ports. We remember that, at the end of 1882, when the wind blew in the direction of denouncing the project of a new semi-official steamship company, this same critic of treaty revision admitted that, in condemning the freights charged by the Mitsui Bishi Company, he "had made no allowance whatever for loss of time in loading and various other contingencies." But it would be hypercritical to look for consistency extending over such a lengthy period as sixteen months. Besides, we are ourselves convinced that freights are too high in this country, and that Japan would derive great benefit if foreign vessels had free access to all her ports, and if—an essential hypothesis—their foreign owners were allowed to employ them in the export trade. Chartered by Japanese, their usefulness seems more than problematical. The Japanese have not yet acquired sufficient experience to engage successfully in direct trade. Their first attempts at shipping wheat, or anything else, on their own account, would probably be attended by deterrent results. For some years to come they

must work in combination with foreigners. This proposed employment of foreign ships would, in our opinion, be virtually futile if surrounded by the restrictions necessary in unopened ports. The foreigner must be able to go himself, and take an active part in, or exercise an efficient supervision over, the business in which he has a share. To his intelligence, enterprise, and experience Japan owes the greater part of the trade she possesses, and in an extended exercise of the same qualities lies the best hope of its future development. Treaty revision will be a mere fiasco if its main achievement is to confer on Japanese a privilege which they are virtually free to exercise already. At the present time any respectable Japanese, desiring to export produce directly, can charter a foreign vessel to load at a non-treaty port, with official sanction. No longer ago than the spring of last year a foreign steamer was actually so chartered by Japanese merchants, who had no connection, however remote, with the Government. There are in Japan immense tracts of land that might be brought under cultivation, and would be brought under cultivation, if the means of internal and external transport were so improved as to make Western markets accessible. But in all this, as in many other inviting enterprises, foreigners must take an active share. It will not be enough that they should sit quiet at the open ports, and wait till the Japanese themselves develop the resources of the country. If that is the rôle they contemplate, one of the inevitable consequences of the development will be the complete loss of their business. By judicious co-operation they can make themselves necessary factors in the gradual growth of which the country is unquestionably capable; by persistent isolation they can achieve only one result—their own effacement.

THE "MANCHESTER GUARDIAN" ON AFFAIRS IN JAPAN.

THE *Manchester Guardian*, in a recent article, echoes a rumour which, though wholly erroneous, was recently circulated with remarkable assurance by one of our local contemporaries. It was to the effect that the MIKADO'S Government, while leaving the foreign settlements under the protection of Consular Courts, as at present, proposes to open the country to all who are willing to submit to Japanese jurisdiction. This measure was recommended by us two years ago as an alternative to be adopted should all efforts to obtain a less inconvenient solution prove abortive. But it is obviously an alternative beset with many difficulties. In the first place, would the Treaty Powers consent to such an arrangement? It seems to be tacitly assumed by many writers that a foreigner is at liberty to do as he pleases with regard to the jurisdiction he accepts. They think that an Englishman may entrust his person

and property to the care of a Japanese tribunal in Shidzuoka, to-day, and to that of a British tribunal in Kanagawa, to-morrow. Some critics, indeed carry this singular ignorance and obtuseness so far as to ask why those who advocate a modification of extritoriality do not themselves submit to Japanese systems. They are apparently incapable of appreciating the fact that the voluntary action of a few individuals can have nothing whatever to do with international relations; and at the same time, they are so ill-informed as to suppose that an Englishman desirous of submitting to Japanese jurisdiction can do so by any process other than that of denationalizing himself. It is possible, of course, that Western Governments might consent to the arrangement described. But their consent would have to be unanimous. If the United States agreed that, in return for extended privileges of trade and residence, American citizens should be subject to Japanese jurisdiction while enjoying those privileges, Great Britain, interpreting the most favoured nation clause as she now interprets it, would at once claim the same privileges for her own subjects without the same conditions. Therefore, we say, consent must be unanimous, and unanimous consent on any point involving a radical change is exceedingly difficult to obtain. Without such consent, it is plain that individual foreigners are powerless. And rightly so, in our opinion. Interminable complications might be the result of allowing the subjects of a Treaty State to submit, here to this jurisdiction, there to that. Moreover, the practical exercise of Japanese jurisdiction over such voluntary recipients would involve processes which are obviously illegal under existing compacts, and without which any exercise of jurisdiction might be farcical. It is unnecessary to enter into these contingencies in detail. As *apis-aller*, Japanese Ministers might open negotiations upon this basis, and were there any necessity to prove the sincerity of their proposals, the plan would not be without advantages. But it would leave unremedied the many flagrant abuses attending the extritorial system as it now exists within treaty limits. Those abuses touch Japan very closely. They touch foreigners also, though in a lesser degree and any arrangement which ignores their existence must necessarily be unsatisfactory.

Our Manchester contemporary, having enumerated some of the objections put forward by conservative foreigners—as, for example, that “trial by jury is not recognised,” which is rather a benefit than a loss to the cause of justice; that “the proceedings of the courts are not published,” which is false; that “no Japanese dare comment on injustice or wrongdoing therein,” which is both false and frivolous—proceeds to announce that “the best way to develop the confidence of foreigners will be by opening up the country, so that opportunities of becoming acquainted with Japanese laws and their administration

may be afforded, and intercourse between foreigners and natives promoted.” This proposition may be regarded as a truism. But it obviously includes the hypothesis that foreigners residing or travelling in the interior should be subject to Japanese jurisdiction; and that hypothesis, as we have shown, is impracticable without the consent of all the Treaty Powers. Our contemporary, however, adds a remarkable rider. It is this:—“So long as artificial barriers exist, suspicion is only natural.” The term “artificial” is very significant. We do not quarrel with it ourselves; but we foresee grave differences of opinion with regard to the origin of the artificiality. A leading member of this community recently described these barriers in different language. He called them “a relic of barbarism;” thus echoing the tone which has been adopted during the past twenty years by foreign critics of Japan’s semi-seclusion. But neither he nor they have ever shown, or even rationally attempted to show, how intercourse with an Oriental people can be made perfect until it is placed upon the same footing as intercourse between all Western peoples. Japan is taunted because she cannot devise some method of accomplishing a feat for which the history of the world furnishes no precedent. The singularly unpractical arguments of conservative foreigners in this respect contrast quaintly with their avowed contempt for sentiment. They appear to be quite incapable of considering the problem from the Japanese standpoint; incapable of understanding that a civilized government could not be guilty of any greater betrayal of the nation’s confidence, than to permit strangers, against whom its subjects have virtually no legal remedy, to trade, travel, and reside with and among those subjects. Any European State would scoff at such a notion. It has been proposed, indeed, that passports should be issued, and that foreigners trading in the interior should give bonds for their good behaviour. But these measures—to which the term “artificial” indubitably applies—are purely preventive. Their utmost effect would be to limit, in some degree, the enjoyment of the privilege. They leave the root of the difficulty wholly untouched. Though a foreigner carried ten passports and had signed twenty bonds, he would still be justiciable at the open ports only. A Japanese suitor would still have to carry his complaint and his evidence to a far-distant place, and there submit, in sixteen cases out of seventeen, to an imperfectly equipped tribunal, presided over by an official of doubtful qualifications, and offering no practicable opportunity of appeal. Were such an arrangement proposed to ourselves, the positions being reversed, we should laugh it to scorn. If foreigners are to trade directly with Japanese in the interior, the commonest principles of right require that justice shall not be virtually inaccessible by the latter against the former’s possible

wrong-doing. There will, perhaps, be very little wrong-doing. Some persons take a pride in indulging that hope. But nobody, we presume, advocates the advisability of trusting such matters to chance. The other phase of the question—that which concerns criminal law—presents fewer difficulties; first, because it seems to be pretty generally agreed that the jurisdiction of the local tribunals must be accepted in minor cases; and secondly, because in criminal proceedings the State is the prosecutor. For the rest, no intelligent writer has ever proposed that the present medley of jurisdictions and conflicting authorities—a system which, as the *Manchester Guardian* justly observes, is “only defended on the grounds of expediency”—should be extended throughout the territories of an independent State. Where, then, does the responsibility for these “artificial barriers” rest? We find no difficulty in answering the question, or in admitting the inference, that so long as the barriers exist, “suspicion is only natural.”

MUTUAL INTERESTS.

THERE was one point of policy which HER MAJESTY’S former Representative at the Court of the MIKADO gave himself much concern to inculcate, and it so happened that within the course of eighteen months he had three exceptional opportunities of taking the public into his confidence on the subject. On his return to Japan in the spring of 1882, on his departure in the autumn of the following year, and on his arrival at his new post in China, addresses of welcome and valediction were presented to him by the foreign communities. To each address he replied in almost identical terms. On the first occasion he said:—“Those interests, whether foreign or native, are so intimately bound up together that they admit of no real antagonism, and the advancement of the one must depend upon the prosperity of the other.” On the second occasion he said:—“I have always felt that the interests of foreigners in this country were inseparable from those of the people.” On the third occasion he said:—“I am sure you will remember that it is only by showing to the Chinese that their and our interests are not antagonistic, but are mutually advantageous, and that we are not working for our own prosperity alone, that we can get them to grasp the same ideas regarding our interests that we ourselves entertain.”

It cannot be supposed that this reiteration of the one notion was accidental. Sir HARRY PARKES saw clearly that there had been gradually created between foreigners and Japanese an atmosphere of mutual distrust and apprehension; that each side seemed to the other to be pursuing antagonistic aims. Whether his own too inelastic policy counted for anything in this unfortunate result; or whether he himself

was quite capable, having regard to his training, associations, and experiences, of carrying into practice the principles he inculcated, are points we need not discuss now. It is enough that the facts were as Sir HARRY stated them. There is, probably, not one intelligent man in this community who will hesitate to endorse the proposition that the true interests of Japanese and foreigners in Japan are identical: that the prosperity and advancement of the one are involved in the prosperity and advancement of the other. As an abstract theory, this is incontrovertible. If, therefore, to advocate foreign interests is to promote Japanese, the converse must be equally true; namely, that to advocate Japanese interests is to promote foreign. Yet this simple axiom is ignored with most curious pertinacity by local writers in Yokohama. Even at this eleventh hour, when blind prejudice has begun to admit that there may be light somewhere beyond the range of its own narrow vision, we find a journal claiming in one breath to be fair and just, and in the next charging a contemporary with being "English only in name" because—and the reasons are worthy of notice—"it sets forth the Japanese version of affairs: argues in support of the Japanese as distinct from the foreign view of all questions involving difference of opinion; and exerts itself to promote the known desires of the Government." We quote this accusation not with any controversial intentions. It gives us no manner of concern. But it offers an excellent illustration of the propensity we have alluded to—the propensity which Sir HARRY PARKES, in his public speeches, at all events, laboured so hard to correct. It shows that whatever may be the professions of its author, his creed, when submitted to the test of practice, is blind and partial. He declares that "a good understanding and community of interest between Japanese and foreigners are essentials to the removal of difficulties which keep up a formidable barrier of separation between them;" he repudiates the notion that "the duty of an essentially foreign journal, avowedly published in foreign interests, is to advocate Japanese interests instead of those of its own countrymen," thereby explicitly suggesting that those interests are different; and he pretends that an English journal which "exerts itself to promote the known desires of the Japanese Government," "betrays its trust, and weakens the just cause of those with whom it is identified by ties of nation and blood." All these assertions are meaningless and irrational, except on the hypothesis that Japanese and foreign interests are not identical.

On no less an authority than that of Mr. GLADSTONE, we know that the anti-progressive section of English communities in the East always "lays claim to what is called the British party, and represents itself as having a monopoly of loyalty." Therefore, in the main, we are neither

unprepared for accusations of the above nature, nor disturbed by them. It matters very little whether this newspaper or that establishes a reputation for itself, provided the cause of justice and expediency wins. Moreover, a public recantation of faith demands a large exercise of magnanimity, and so long as our sometime opponents consent to endorse our views, they may cover their conversion by any process of recrimination they please. For a concise and accurate summary of the opinions we have persistently advocated during the past four years, we can now refer to the very article which charges us with being "English only in name." We learn from that article that, while "within the limits of Yokohama Japanese behold some fifteen different peoples, each of whom they regard as antagonistic to themselves, Liverpool, with a population of 600,000 composed of people from every land, recognises no distinction of nationality." For "this remarkable difference," we are told, "the system of exterritoriality is responsible; and few Japanese, accredited as they are with the most patriotic feelings, can understand and realise more forcibly than the foreigner the irksomeness of a condition which precludes every hope of improvement until an understanding can be arrived at, with regard to the future, satisfactory enough to warrant the Government in granting temporary concessions, calculated to remove some, at least, of the barriers now effectually separating and keeping in mutual ignorance of each other, Japanese and Foreigners." This is the sum and substance of our own contention; the gist of what we have over and over again urged since the beginning of 1881. We have long seen that the circumstances of the foreign communities at the open ports are in the last degree irksome; that they must soon become intolerable, under the present system; that there can be no development of trade nor any mutual prosperity until restrictions suited only to obsolete conditions are removed or relaxed; that the Japanese, growing daily more conversant with the foreign interpretation of independent rights, must become daily more intolerant of the distrustful isolation of foreigners and of the *imperium in imperio* they have set up here; and that the cornerstone of the whole unsightly ruin of better hopes is exterritoriality. Therefore we have urged, and do still urge—not the immediate abolition of exterritoriality; not "the cessation of foreign jurisdiction"—but some preliminary modification, some departure from the rusty groove in which motion towards better things has become impossible. If any change in this sense be contrary to foreign interests, then, indeed, we must plead guilty to having espoused the cause of Japan against that of our own countrymen. But whether we have been right or wrong, it is certain that events have shaped themselves as we predicted. Our own arguments of yesterday

are to-day in the mouths of our former opponents. From them we borrow the assertions that, "it is now but scant justice to acknowledge the progress Japan has made, particularly during the past few years," and that "a good understanding and community of interest between Japanese and foreigners are essentials to the removal of difficulties which keep up a formidable barrier between them." To build a golden bridge for a retiring foe is a prudent proceeding. If an adversary, while endorsing our views point by point, desires to preserve his reputation for consistency by continuing to abuse us, we raise no manner of objection.

RECALL OF THE MARQUIS TSENG.

A TELEGRAM published in this issue announces the recall of the Marquis TSENG, or at any rate his removal from the scene where he has so long been a prominent figure. It has always been anticipated by those familiar with China's reckless habit of sacrificing her most devoted subjects on the altar of her own fickle policy, that should the stout menaces and bold bearing of the Ambassador in Paris be found to contrast inconveniently with subsequent phases of the Tonquin embroglio, he, too, would be unhesitatingly immolated. On the other hand, it is possible that the Marquis himself may have declined to remain in Paris. No European statesman could so long have consented to occupy a post which entailed such a series of humiliations. During the past year it was his business to submit ultimatum after ultimatum, each of which was quietly disregarded by the French Government and tacitly abandoned by the Chinese, until he saw himself, at last, reduced to the condition of the shepherd in the fable whose cries of wolf had come to be treated as practical jokes. There is no reason to suppose that TSENG ever exceeded his instructions, but it is very possible that he may have made the mistake of believing in their sincerity. At all events, he will leave behind him the reputation of a bold and patriotic diplomatist, whose misfortune it was to serve a Government which neither knew its own mind nor hesitated to make Europe the confidant of its vacillations. With regard to the policy which his successor will be instructed to pursue, we can, of course, speak only conjecturally. The public has hitherto had little reason or occasion to become acquainted with the opinions entertained by the Chinese Representative in Berlin on the subject of the Tonquin complication. It will, however, be remembered that when TSENG published his celebrated journalistic manifesto, which was regarded by many as an open defiance to France, his colleague in Germany not only condemned the proceeding, but was understood to express views materially opposed to those of the manifesto. After all, how-

ever, the question is not so much what the new Ambassador thinks as what instructions he will receive from his Government. Six months ago, had we been asked to interpret the meaning of a change of Chinese Representatives in Paris consequent upon the accession of the father of the EMPEROR of CHINA to the highest position in the State, next to the EMPRESS-REGENT, we should have had little difficulty in concluding that Chinese threats were at last about to bear practical fruit. But it would appear that in the Middle Kingdom everything is destined to go by contraries to the end of the chapter. Prince CHUN, who before he reached his present eminence was always regarded as the head and front of the war party, no sooner comes into power than he recalls the one Minister who has shown himself a master of thrasonical diplomacy, and at the same time degrades and punishes the generals who failed to make good that Minister's menaces. The whole thing looks, at first sight, thoroughly unintelligible; and yet, if it were safe to solve that strange problem called Chinese statesmanship by any ordinary processes of inference and reflection, we might conclude that China's eyes have at length been opened to the error of her ways. In our opinion the pivot upon which her change of front has been made is LI CHUNG-TANG. The Great Viceroy was, until recently, perhaps the only Chinese statesman who fully appreciated the hopelessness of a struggle with France. Had his counsels been followed, it is a fair assumption that the game of brag which has ended so disastrously for his country would never have been attempted. His efforts, often misdirected, no doubt, but always earnest, to make China capable of using her strength, had taught him, by their virtual failure, the inevitable consequences of a war with a Western Power. TSENG may have possessed a similar, though differently acquired, knowledge. But TSENG made the mistake of supposing that France would not fight. That false instinct was at the root of all his bluster. And it is pretty certain that in this respect he joined issue with LI. Indeed, by those most capable of judging, it has long been asserted that whether the former's policy succeeded or failed, it must be regarded as a policy for which the latter was not responsible. Now LI HUNG-CHANG alone remains untouched, so far as the public can judge, by the storm which has overthrown his colleagues. That he was too strong to be disturbed by a political catastrophe of such magnitude as the accession of Prince CHUN to virtually supreme power, is more than we can readily believe. What seems probable is, that his disapproval of the policy represented by TSENG had been sufficiently marked to disassociate him from its disasters; and that, at the same time, the grounds of that disapproval have commended themselves to the new Cabinet. On this hypothesis, the action of Prince

CHUN and his Ministers becomes both intelligible and consistent. The punishment of the Generals and Governors who failed to carry out their instructions may be regarded as a simple measure of discipline, by no means implying an endorsement of those instructions. If the game of brag was to be abandoned, the men who had hitherto been playing it, were better out of the way, both in the field and in the Cabinet. TSENG's successor will be LI HUNG-CHANG's representative. His diplomacy will be moulded on the Viceroy's policy, and will be essentially pacific. But against this agreeable prospect we have to set the fact that Prince CHUN is not likely to accept any concession of a humiliating nature. The maintenance of concord between him and the great Viceroy probably depends on the latter's ability to secure for his country respectable terms. And thus, after all, we come back to the really vital factor—France's mood. If France has truly mapped out for herself the route indicated by recent telegrams—the seizure of Langson and Kobang and the establishment of a basis of offensive operations within five days' march of Canton—China cannot help herself: she must fight. But we do not believe that France contemplates anything of the sort. She has no desire to fight China, and though she will naturally take advantage of the presence of her troops in Tonquin to force a settlement, she will be wise enough to build a golden bridge for the retreat of her sadly discomfited opponent. It may be that China will have sense to decipher the moral of her bitter humiliation. But we doubt whether even that grain of comfort remains. At all events, so far as other Treaty Powers are concerned, they have to thank France for this,—that whatever may be the ultimate result of her civilizing influence in Annam and Tonquin, its immediate outcome has been to bring to the surface of Chinese politics the leaders of anti-progressive and anti-foreign thought.

MR. GLADSTONE.

IN spite of Mr. GLADSTONE's evident resolution to stand by his guns at the present crises of England's home and foreign affairs, public opinion appears to be gradually accepting the conviction that his retirement from the scene of his many triumphs cannot be much longer deferred. A few months more will complete the sum of his seventy-five years. Rarely, very rarely, has it been given to any man to serve his country so long and so vigorously. The wonder, is, not that his constitution has begun, at this late period, to protest against the terrible strain put upon it, but that it consented to remain so long submissive. He entered the House of Commons at three and twenty, and during more than fifty years he has unceasingly enriched that great assembly with the treasures of his genius and attain-

ments. It will be remembered how, in 1875, his temporary weariness of a struggle which had arrayed against him a host of class interests, led him to announce that he thought himself entitled to rest, and that his desire of retirement was "dictated by personal views as to the best method of spending the closing years of his life." There can be no doubt that he was sincere in this declaration. England, however, could not yet spare him to write essays on Ritualism and Vaticanism. He himself may have felt that—as Mr. BRIGHT said of him—"like an old and a noble Roman, he could be content with deserving the praises of his country though some of his countrymen should deny them to him." But his country was resolved not to lose the services of such a statesman. He resumed his leadership of the Liberals and subsequently of the Government, only to justify the criticism pronounced upon him by an eminent writer of that time:—"A great many people entertain towards Mr. GLADSTONE'S Government the same sort of sentiment as that which worthy Mr. BETRAM in SCOTT'S romance felt for the energetic revenue officer who would persist in doing his duty, instead of following the example of his predecessor, who sang his song and took his drink, and drew his salary without troubling any one." This it seems to us, exactly indicates the point at which Mr. GLADSTONE'S touch of the English mind has always been at fault; and never more at fault, perhaps, than in his Egyptain policy. EDWARD DICEY, writing in the last number of the *Nineteenth Century*, tells an anecdote admirably illustrative of the feeling entertained by the great majority of Englishmen on this subject. "In the grandest days of the Venetian Republic, in the days when the Cape route to the East had not yet been discovered, and when the City of the Lagoons was the centre of the world's commerce, a discussion took place in the State Council as to the expediency of the Republic making herself mistress of Egypt in order to protect her trade and to promote her interests in the Isthmus which then, as now, formed the highway between the East and West. The proposal was discussed for some days, and was opposed on the ground that the Republic had complications enough to deal with already; that it was more for her interest to develop her possessions nearer home; and that the cost of the undertaking might burden her finances. The non-contents carried the day, and the flag of the Lion of St. Mark was never planted on the Isthmus of Suez. The opportunity was lost, the course of trade passed into other hands and other channels, and the Queen of the Adriatic became a tradition of the past, the shadow of a great name." This, we believe, faithfully echoes what most Englishmen feel. Great empires are not exempt from the law which governs everything cognizable by human beings—a law embodied thirty centuries ago in the

Chinese proverb, "wax or wane, increase or decrease, whatever there is has but one story." England must grow or she must decay, and so long as the enterprise and energy of her people push the frontiers of her empire in this direction or that, so long must her Government be prepared to follow and support them. But Mr. GLADSTONE would restrain this practical instinct, or, at any rate, confine it within limits dictated by a morality which the world is not yet, and probably never will be, prepared to obey. He has not been inconsistent in respect of Egypt. On the contrary, whatever his enemies may say, it is his unfaltering consistency that is at fault. From first to last he has remained faithful to the dictates of a policy all the more distasteful to his countrymen in that it is based upon principles which they cannot openly denounce. His position now is almost intolerable. Fresh disasters in the Soudan would convict him of error: successes can only be obtained at the sacrifice of his principles. If the events that succeeded his great rival's accession to power in 1873 made him weary of the political arena, the events of the past twelve months, aided by his increasing burden of years, must have weaned him from every remnant of desire to continue the battle. Lord BEACONSFIELD was not less competent to advise and control the Conservatives than Mr. DISRAELI. Mr. GLADSTONE in the House of Lords, while removed from the heat of the combat, might continue to serve a party of whom none yet appears worthy to wear his mantle. Doubtless he might have been a peer long ago had he desired. But, apart from all other considerations, his fortune, never very large, had suffered considerably by unfortunate mining investments, and it was not until he succeeded to the Welsh estates of his brother-in-law, Sir STEPHEN GLYNNE, that his pecuniary ability to support a title became assured. Should he go to the Upper House, the Conservatives may discover to their cost that his influence was not only progressive but restraining, and that while he seemed to stand between them and the sunshine of power, there was lurking in the shadow of his greatness a Radicalism which had gathered irresistible momentum from his teachings without inheriting the prudence of his genius.

CHINESE COMMERCIAL POLICY.

IN the story of the protracted negotiations which took place in 1881 and 1882 between the Foreign Representatives in China and the T'sung-li Yamên, on the subject of "transit passes outward," there is an incident which strikingly illustrates the diplomatic methods pursued in the Orient as well as the processes of the Celestial mind with regard to trade.*

* The information contained in this article is taken from the diplomatic correspondence recently published in the "United States Foreign Relations."

For many years complaints had been raised not only by foreign merchants with reference to alleged failures on the part of the Chinese to comply with treaty provisions, but also by the Chinese against abuses and frauds said to have been perpetrated by foreigners under cover of treaty provisions. Proposals devised to remedy the latter state of affairs had been submitted to the Foreign Representatives by the Yamên from time to time between 1872 and 1877, but these attempts, as well as others of similar aim made by the local Chinese authorities, having been unsuccessful, rules for the issue and use of transit passes outwards were, in the end, arbitrarily introduced and enforced by the Chinese local authorities at some of the open ports. These rules, though in part unobjectionable, were deemed in some respects contrary to existing treaty stipulations, and, moreover, lacked foreign official consent. The Foreign Representatives, therefore, anxious to substitute a general, uniform, and duly authorized system for all the open ports, and seeing, as they thought, an opportunity to remove some sources of foreign complaint, submitted to the Yamên, May 18th, 1880, draft rules intended to cover all the grounds of difficulty. We propose to refer here to one only of these rules. It was a rule that, goods manufactured at an open port from native produce bought there, should not, on exportation, be required to pay any other duty or tax than the export duty. The rule was motivated by complaints that such goods had previously been required to pay inland taxes. At first the Chinese Government, while accepting, apparently, the principle of this proposal, claimed that native produce, before being submitted to any manufacturing process at an open port, ought to undergo inspection by the Custom authorities, since, in default of such inspection, "abuses would certainly arise owing to confusion caused by substituting one article for another." The Foreign Representatives, not unnaturally, finding this reason vague and insufficient, pronounced the proposed condition "neither practical nor practicable," and asserting that their own draft rule was in entire conformity with treaty stipulations, refused to alter it. The T'sung-li Yamên then suggested a modification, according to which a foreign merchant would only be required to give notice of an intention to manufacture, whereupon the Custom authorities should at once despatch, at their own cost, an officer to inspect the produce before the commencement of the manufacturing process; while, after manufacture, certain limits of time should be fixed, within which the goods must either be exported, or stored, under Customs' supervision, at the owner's charges. Thus modified the rule was pronounced, by Mr. VON BRANDT, "on the whole very satisfactory," and in submitting it for the approval of his colleagues, he wrote:—*This part of the agreement has, besides, the advantage of giving a legal*

status to the manufacturing of goods at the port out of native produce brought there under transit pass, which, until now, could be done only with the tacit acquiescence of the Customs."

A month later (July 10th, 1881), Mr. VON BRANDT, at a long conference with the Ministers of the Yamên, found himself confronted by new difficulties, the key-note of which was furnished by a casual remark of one of the Chinese statesman, to the effect that foreigners could not be allowed to compete with Chinese in the trade in native produce. It will be observed that the rule proposed by the Yamên, in both its original and modified forms, implied an obligation that all goods manufactured at an open port out of native produce should be exported. The restriction thus imposed does not appear to have previously aroused any opposition on the part of the Foreign Representatives; but Mr. VON BRANDT, made wise perhaps by the casual remark of Minister HSIA, now took occasion to lay down the general principle that a foreigner might do exactly what he pleased with *produce bought at an open port*. In the case of native *produce brought from the interior* under transit pass, be admitted the Chinese Government's right to exercise the strictest supervision, inasmuch as such produce was exempted from the payment of inland taxes under the express condition that it was intended for export, and the obligation to export could be cancelled only by the payment of two-and-a-half times the export duty as compensation to the Chinese for the loss of the inland taxes. The T'sung-li Yamên then came out boldly. It declared that the treaties did not give foreigners the right to buy Chinese produce anywhere in China *except for purposes of export*, and that, the Chinese Government being thus entitled to levy export duty upon everything purchased by foreigners, the latter were not allowed to put their purchases to any other use, or to sell them at the open ports, until they had first paid two-and-a-half times the export duty, to compensate the Government for the loss of revenue it would otherwise suffer. The Chinese Ministers added that they were willing to make a concession by not enforcing their right so far as native produce in its natural state was concerned, but that they must insist upon forbidding the sale within China of goods manufactured out of such produce until two-and-a-half times the export duty had been paid on them. The grounds of this curious contention were not absolutely unreasonable: they were that, as "Chinese had to pay taxes and duties on all commercial transactions amongst themselves within the ports, foreigners could not be allowed to compete with them on more favorable terms."

The matter having been thus reduced to a single but serious point of disagreement, Mr. VON BRANDT's correspondence with the T'sung-li Yamên was confined to the discussion of that point. About a week

later he received a *déspatch* from Prince KUNG containing the following :—

With regard to Your Excellency's assertion that native produce purchased by foreign merchants at the ports may be used for manufacturing purposes, or that it may be resold at the port in its original or manufactured state, we have to reply that no explicit statement to this effect is contained in any of the treaties or regulations for trade. Your Excellency says, in respect of this, that there is no reason why the treaties and regulations need not be followed; but we do not know which treaty or regulation it is that you say ought to be followed. The purchase of native produce by foreign merchants, if not exported, but if used for manufacturing purposes, or resold at the port, would be equivalent to allowing foreigners to do the same trade as Chinese merchants, and would be prejudicial to the business of the latter. Moreover if the goods are not exported, the duty to which they are liable will be lost to the imperial exchequer.

In reply to this, Mr. VON BRANDT expressed the opinion, on behalf of himself and his colleagues, that foreigners in China have liberty to transact, at the open ports "every kind of commercial business subject only to such conditions and restrictions as are contained in the treaties themselves, or in the rules and regulations agreed upon conjointly since the conclusion of the treaties." Pointing to a rule which provided that "native produce carried from the interior to a port may be exempted, by payment of the half duty, from all inland charges *only if bonâ fide intended for shipment to a foreign port*," he urged that this was in itself sufficient proof that no obligation existed to export native produce which had paid all inland charges, as would be the case with produce bought at an open port. And finally he quoted from the German, Belgian and Austro-Hungarian treaties an article which entitled foreigners at the open ports "*se livrer au commerce ou à l'industrie*."

But the Chinese Ministers refused to be convinced. They were willing to accept the doctrine that trade is subject to such restrictions only as are explicitly stipulated in the treaties, provided the logical converse were also admitted; namely, that only such *liberties* of trade as are specially stipulated can be claimed. They wanted to know how the Foreign Powers would feel if China assumed the position that she had a right to take any step not expressly interdicted by the letter of the treaties. They contended that a negative restriction does not necessarily include a positive privilege, and that when certain exemption from inland taxation was granted to produce *bonâ fide* intended for export, it did not at all follow that produce not so exempted might be manufactured and sold in the home markets. Finally, they declared that the expression "*se livrer à l'industrie*," simply meant "to engage in manual labour," and could not be construed as conferring the right to manufacture goods, still less to sell them when manufactured.

Thus the position taken by the Chinese Ministers was briefly this: that trade in native produce at the open ports is a branch of commerce reserved to native merchants solely; and the process of reasoning by which they arrived at their

conclusion was very remarkable. Had they adhered to the ground that, according to Chinese fiscal regulations, all manufacture of, or sale of manufactured, native produce by native merchants, is liable to certain classes of taxation, and that unless foreigners consented to be similarly taxed, they could not fairly engage in similar manufactures or sales, their contention would have been reasonable enough. But what His Excellency WANG WÊN-SHAO said was, that "if, for instance, cotton goods were manufactured at the ports from Chinese cotton, and if foreign merchants were permitted to sell such goods at the ports, then, the Chinese Government would lose, either the export duty on the cotton or the import duty on the goods manufactured from it:" while, "if these manufactories were in Chinese hands, also the foreign merchants would be losers, for the foreign article would not, of course, be able to compete with the article manufactured in China, as the latter would have paid no import duty." Lest the latter hypothesis should sound superfluously specious, he went on to explain that "the Chinese Government, desiring as little to give to the Chinese merchant an undue advantage over the foreigner as *vice versa*," had already given orders that if the Chinese cotton goods manufactory in Shanghai came into existence, the articles manufactured in it should have to pay an impost, equal to the tariff import duty on foreign cotton goods." The Chinese Government, it would thus appear, cares not a straw for the development of Chinese industries and manufactures, but is simply concerned about its own revenue. It carries the cold principles of justice to such lengths that if fiscal needs oblige it to levy an import duty on foreign manufactures, it will tax the same class of native manufactures to the same extent so as to prevent the latter from competing injuriously with the former, and, above all, so as to avoid any apparent diminution of its own income. To combat such logic as this must be a difficult task. One does not often hear now-a-days of rulers so unenlightened that their object is, not to help the nation to get what it wants at the minimum cost, but rather to obtain for themselves the maximum profit out of the people's needs.

THE ORIENTAL BANK.

We are pleased to be able to announce that a new company, the Oriental Bank, Limited, is being formed to take over the business of the Oriental Bank Corporation. The Manager here has received the following telegram :—

"Oriental Bank, Limited,—Capital £2,000,000—shares £10 fully paid. How many can you place?"

Mr. Cargill, some years since prominently concerned in the affairs of the O.B.C., has been the means of bringing about this satisfactory condition of affairs, and the public desirous of becoming interested in the new institution are requested to communicate at once with Mr. G. W. F. Playfair.

TRANSLATIONS FROM NATIVE JOURNALS.

THE LAW OF INEQUALITY.

(Translated from the *Choya Shimbun*.)

Many years ago, a certain Daimiyo of Oshiu, resident in Yedo, sent a number of ladies of high rank, graceful deportment, and elegant speech, to his country domain to wait upon his consort and her daughters, in order to keep them from acquiring the inelegant local dialect. Some time afterwards these same ladies returned to the capital in company with the family of the Daimiyo, when, to the disgust of His Highness, it was found that they had lost all their one-time polished speech and spoke the same low dialect and used the same vulgar idioms as did the common people of the Daimiyo's lands. On being asked how it came that they used such inelegant language, they replied, "Ah! Your Highness; minority is no match for majority!" Our forefathers have told us this tale, and it embodies a significant truth. Mencius, complying with his son's eagerness to acquire the T'sai dialect, engaged a scholar of T'sai to live with him; but as most of the companions of the young student were men of Su, he failed, to the great regret of the sage, to learn the language of T'sai.

Physics teach us that the effect of an applied force varies with the density of matter in the passive body. Certain particles attract each other, or exert a repellant influence over other particles of less weight and density. And even the law of gravitation teaches us that in the solar system the great rule the small, and that the planets are subject to the sun as the moon is to the earth. The same physical theory of superior force applies equally to social affairs. Because the many do indeed govern the few, so in a country just emerging from semi-civilization into intellectual enlightenment, those who hold a leading position in society and bear the responsibility of governing the community at large, should use the greatest precaution in all they do. Now, as regards the learning of the Japanese nation, it is but fair to state that the followers of Chinese philosophy and Buddhism make eight-tenths of the whole reading population; while those who prefer pure Japanese scholarship take up one and one-half tenths, and one twentieth of the intellectual class devote their time and attention to the civilized wisdom of the Occident. Take these figures for a moment into consideration. Those who now-a-days are conversant with European tongues or study scientific works through the medium of Japanese translations, may seem, to the superficial observer, to form a large portion of the public; but, in reality, they bear a proportion of 1 to 10,000 in comparison with the grand total of inhabitants. They are, in good sooth, the fixed and shining stars of our national sky. In Tokiyo there are many private and public schools attended by a fair number of students, and this fact may lead the casual observer into wrong conclusions. But stroll out into the country, and you will hardly find a single foreign book outside of the city limits. Those who understand the principles of Western civilization are, in point of numbers, far behind those who still dress their hair in the *yara* style. The disciples of Occidental learning are few and far between, while the upholders of Chinese lore are numberless. The self-same inequality exists between the idle and the progressive, the low and the high, the slavish-minded and the lovers of liberty. These social phenomena do not augur well for the future of our country, and enterprising men should not overlook these facts.

And now a most uninviting and distasteful vista opens before our eyes; a vista that discloses the true characteristics of the Chinese people. Our country is separated from China but by a narrow stretch of sea; our intercourse with her dates back to a remote period, and much of our civilization was introduced from that coun-

try. China covers an area of 4,560,000 square miles, and has 375,000,000 inhabitants, while Japan has an area of but 146,000 square miles and barely 37,000,000 inhabitants. The shilly-shally, half-hearted, manner in which China is negotiating with France about Annam, is a matter for the most profound regret. And all this is due to the universal prevalence and corrupt state of one particular philosophy, known commonly as the "Philosophy of China." This creed inculcates doctrines of patience and long-suffering, and is remarkably averse to progressive ideas. As every reader of Chinese history knows, there was, once upon a time, a great, generous, open-hearted individual yclept Long Tse-teh. When questioned by his brother, to whom he was imparting pearls of wisdom, upon the virtue of forbearance, the learned man laid down some truly remarkable rules. "Suppose," said his brother, "that one man should spit in the face of another man; should the aggrieved party wipe off the spittle and keep on smiling placidly?" "No," replied Tse-teh, "if he wiped off the spittle it might tend to irritate the spitter: rather let him wait patiently until the saliva has evaporated." Ah! China is a merciful country! Taking Tse-teh's views into consideration, it was a most brilliant and laudable stroke of policy to remain unruffled and undisturbed while France insulted the nation in the most contemptuous and open manner. But, as it happens, the world unluckily does not reason thus. Were China an European nation and did she still hold such remarkable political tenets, her sovereign would be exposed to constant contumely, and her lands devastated in the twinkling of an eye. And yet, and yet, China is regarded as the greatest of Eastern nations—the very pinnacle and roof-tree of Oriental learning. And these same Chinese teachings have been ruling the minds of our countrymen for hundreds, aye, for thousands, of years.

When European arts and Western civilization were first introduced into this country, the people were surprised with the novelty and utility of Occidental contrivances, and rapidly took up foreign teachings,—and the "Four Books" and "Six Scripts" were put on the topmost and dustiest shelf of the bookcase. Now, however, the current of national sentiment has changed its course: European arts and sciences are at low ebb, while the cumbrous philosophy of China is again rising to the surface. *We greatly fear, that in conformity with the law of inequality, our small land is being imperceptibly swallowed by the neighbouring Empire!* If our countrymen are, metaphorically speaking, undergoing a transformation into so many Long Tse-teh's, gentle and forbearing as he was, there is small prospect of our ever maintaining national independence, or competing with European Powers on a footing of equality. The science and arts of the Occident, transplanted into our native soil, are just beginning to be acclimatised, and the many buds are giving rich promise of future blossom, flower, and fruit. But some people cannot help touching things they should let alone; and even those who are influential in this our community are already at work with their pruning knives upon the helpless and tender buds of this new tree of knowledge. When we think of the future, we are filled with righteous indignation.

GOVERNMENT RAILWAYS.

(Translated from the *Fiji Shimpō*.)

Nothing is at present better calculated to increase the wealth of the nation than the construction of railways. This is a maxim which we have ever endeavored to impress on the minds of our enterprising capitalists. The excellence of railways is indeed great and universal, for it is neither limited to any one locality nor to any particular class of people. A long-continued rain in the early spring is deplored by every town resident, but is inexpressibly pleasant to the farmers, who take it to be

the earnest of a rich harvest. The sweltering heat of the long midsummer days is almost intolerable to every dweller in the city, who longs for the cool breezes and gentle showers of later seasons; but this same heat is welcomed by the peasants living in marshy districts, whose inundated and over-wet fields spring into new life under the burning rays of the summer sun. Water and heat, essential as they are to life, are not enjoyed equally by all, owing to the different occupations and pursuits of men. It is rare, indeed, that any human enterprise should benefit all classes and all communities without distinction. But the railway is an exception to the rule. It brings manifold and abundant blessings, and yet gives no appreciable cause of offence. Agriculture, commerce, political economy, the arts and sciences are all directly benefited by the railway, as is, indeed, every department of human thought and action. We can most emphatically assert that the importance of the railway more than outweighs that of any other human undertaking.

Yet this great instrument of civilization is almost as costly as it is important; it is beyond the power of acquirement of any one individual, and requires the united effort of multitudes in order to be called into existence. The people of Japan, anxious as they are to press forward in the march of civilization, have, as yet, but few railways in their country. Nothing is a surer indication of torpidity and the lack of steady intellectual progress. We are not accustomed to undertake great enterprises in combination with the many, and most people find it safest to start out alone, employing only their own immediate capital. Hence, although many wide-awake and intelligent individuals have proposed constructing railways in various parts of the country, but very few have had the courage or desire to associate with them,—for to raise a capital of three or five million *yen* requires both time and labour. And then, again, enterprises which necessitate arduous labour not infrequently prove fruitless after all. But although the great use and necessity of the lines along the Tokaido, Sanyodo, or the lines between Tokiyo and Yechigo, or Osaka, Yechizen, Kaga, and Yetchiu, are obvious to every one; still the capitalists of those districts through which the railway is to pass, the very men who would derive the speediest profits, have not sufficient zeal to set about the work without loss of time. The fact that our countrymen are unused to, and suspicious of, joint-stock corporations, is always making itself felt. To remedy this evil, we have hit upon the following scheme:—The railways constructed by the Government since 1872 cover in all nearly 70 *ri*, and have cost well-nigh 15,000,000 *yen*. We contend that the Government should transfer the older lines to the public, and construct new railways with the proceeds, and continue so doing until all the important cities and towns of Japan are bound together by a network of steel rails. There are two ways in which the Government railways can be transferred to the public:—(1) by selling them to private individuals or corporations at a fixed price; (2) by dividing the price into a certain number of shares in which any one can invest, so that the Government and people would virtually enter into partnership. The first method is simple enough, but buyers would have to co-operate in order to raise the funds necessary to carry on the work. While it is clear that such an union could far more easily be brought about than an association ready to undertake the construction of brand-new lines, it is equally patent that the present condition of the country does not argue in favour of many million *yen* being collected by a limited number of capitalists. The second method is far more practicable and satisfactory. In accordance with this plan, the right of possession of a line is practically divided into so many shares at so many *yen*. Any one desirous of holding shares need but apply to the Government; while the distribution of dividends, the election of officers, etc., would be conducted as in a private corporation. No matter

how many or how few applicants came forward, their number would not affect the working of the railways. Should all the shares be taken up, the Government could easily withdraw from interfering in the management of any one particular line. Things would, moreover, go on very smoothly, free from the confusion attendant upon wholesale disposal. Unless our countrymen cast all their hearts into the matter, and are ready to enter joint-stock corporations, there is really no way in which the construction and management of railways can be made public property.

FOREIGN PARTICIPATION IN DOMESTIC ENTERPRISES.

(Translated from the *Fiji Shimpō*.)

Without railways no country can hope to advance in civilization, nor to increase its wealth and strength. For the railway does not follow in the van of civilization, but is one of its earliest pioneers. It is not because society had become enlightened that the iron road sprang into existence, but because the railway became universal, social progress was made possible. Japan of to-day is, in many senses, in advance of Japan of two or three decades ago; yet is she by no means on an equal footing with other civilized nations of the world. Still, it is the secret and most cherished desire of the Japanese people to attain an equal rank with western nations,—if possible, to go even farther, and out-do them in intellectual development. It is plain that, were this intention harboured by one and all, it would not be long before railways were constructed throughout the country, thereby reaping the first fruits of civilization. Many do, indeed, acknowledge the necessity for rapid internal communication and transport, but few dare touch unaided the profits which lie within their very grasp. This is not so much due to the lack of enthusiasm on the part of our enterprising men, as it is to the want of people in the habit of amassing immense sums from private sources for the execution of magnificent enterprises. We have already had occasion to speak of the manner in which this lamentable blemish can be eradicated. We have urged that the lines now in operation should be transferred to private capitalists, and that, should this method be found impracticable, the general public should be permitted to actively participate in the Government railways,—either by becoming direct proprietors, or, at least, shareholders. This was not the end of our programme. The sums which the Government may raise by either of these methods should be appropriated to the construction of new lines. Thus, by disposing of the new lines so soon as they are completed, the Government might speedily bring about this civilized system of intercommunication throughout the country, nor rest until the entire work had been successfully terminated. This is, beyond all doubt, one of the most desirable and convenient means of having our beautiful country covered with a network of railways. There is, however, still another way in which this longed-for consummation may be brought about, and to this we would direct the special attention of the public.

In 1870 and 1873, our Government sanctioned the sale of public loan bonds in the British capital. These bonds were purchasable in English currency, the interest on them being payable on the same basis. All the business connected with raising the loans, selling the bonds, etc., was transacted in London. Though properly and actually representing a national debt, the loans raised in London were distinguished by peculiar characteristics, not to be found in domestic loans. Until recently, foreigners were not able to buy or hold our domestic loan bonds. In December of last year, this prohibition was annulled simultaneously with the publication of the Nakasendo Loan Bonds' Regulations, and the Regulations for Loan Bonds payable in *Kinsatsu*. Foreigners

can at present become legalized holders of the domestic loan bonds exactly as do the Japanese. This marks a new era in our financial administration. We would now ask the Government to extend still farther the spirit of confidence shown towards foreigners, and to permit them to hold shares in joint stock concerns. The rate of interest in this country is much higher than in England, and as railways yield an ample profit even when started on capital paying high interest, they would certainly bring in an extraordinarily rich harvest when undertaken with capital paying a comparatively small rate of interest. Should our gates once be opened to the introduction of foreign funds, our people would no longer complain of the tightness of the money-market, and a much-desired end would be happily accomplished. A line promising the greatest profits might at first be selected, and, should the capital turn out insufficient, millions of *yen* could easily be raised in foreign lands. We are thoroughly convinced that, were foreigners allowed to own shares of private joint-stock corporations in the interior, we might justly hope to see this fair country everywhere under the beneficent sway of the iron horse.

PUBLIC LOAN BONDS.

(Translated from the *Nichi Nichi Shimbun*.)

From time to time reports reach us to the effect that the prices of Public Loan Bonds are on the decline, that there is little demand for them, and that the general tendency of the share market is downwards. Yet pension bonds, of a face value of 100 *yen*, bearing seven per cent. interest, are actually sold for 96.30 (*yen*); bonds bearing six per cent. interest are saleable at 88.30 *yen*; ten per cent. bonds realize 114.30 *yen*; industrial six per cents are quoted at 89.20, and six per cent. bonds in exchange for *Kinsatsu*, at 99. The shares issued by banks and commercial companies also command good prices.

This rise in the value of such securities has evoked much discussion. Some attribute it to the strong confidence which the people place in the Government's financial policy; others to a development of the spirit of enterprise throughout all classes. We do not doubt that both these explanations are, to some extent, satisfactory, yet, in our opinion, they embody the remote causes only, and leave untouched the direct and principal influences which are at work. What then are these influences? We reply, without any recourse to abstruse terms—the universal stagnation of trade is the immediately active factor. "But how," it will be asked, "could a decline of commerce enhance the value of bonds? Securities of this nature possess no quality of self-adjustment: their value can only appreciate in consequence of an increased demand, as is the case with all commodities." To understand this apparent anomaly, it is necessary to remember that although some of our merchants now carry on their business with a capital less than the amount of their transactions, yet in former times operations conducted in this way were the exception: they were confined to particular branches of commerce and particular localities. To borrow capital or to employ promissory notes so as to increase the volume of one's transactions was once considered a hazardous proceeding, to be avoided by every possible means. Men were careful to confine their monetary transactions to the limits of their shops or offices, fully persuaded that no otherwise could a really safe business be done. This conviction still influences a great number of our most wealthy traders: they take a sort of pride in carrying on their commerce in the old methods. Take, for example, the case of a timber-merchant possessing a capital of 100,000 *yen*. His method of proceeding will be to lend thirty thousand *yen* to the proprietors of the forest where he gets his timber, so as to help them to keep their part of the business going, but at the same time he will store

timber himself to the value of another thirty thousand *yen*. He then sells timber on credit to brokers, retail dealers, or other customers, to the extent of thirty thousand *yen*, and by carrying on this process constantly, and all the while keeping up his stock of timber, there remains of his capital only a sum of ten thousand *yen*, which he shuts up in his desk. Sometimes, indeed, he will think that this reserve of ten thousand *yen* is insufficient. It will thus be seen that with a capital of 100,000 *yen*, the amount he actually devotes to his business is only thirty thousand. The same is true with regard to wholesale dealers in woven stuffs. They generally pay a sum of money in advance to the producers at the time of giving an order, and when they come to disburse the full cost of the goods, they deem it a disgrace to borrow money or to call in their debts from their customers, whatever the amount of those debts may be. Thus they make all their payments out of the funds they have in their safes. Consequently, if they wish to keep on hand a stock of goods to the value of, say, fifty thousand *yen*, it is absolutely necessary for them to hold a reserve fund of from ten to twenty thousand. This method of doing business is certainly solid, and has obtained for the large merchants of Tokiyo a considerable degree of public confidence; but it obviously obliges them to provide themselves with a considerably larger capital than that actually necessary for their business. Merchants in Osaka and elsewhere pursue similar methods; and, in short, it may be asserted without any risk of exaggeration, that the capital of prominent merchants in Japan largely exceeds the amount absolutely required by them.

When trade is brisk and sales are quickly effected, or when values show an upward tendency in consequence of an inflated currency, it is plain that merchants are obliged to increase their stocks in a degree more than proportionate to their ordinary clearances, and that their sales on credit will also be augmented. At such times, the reserve funds which they generally keep in their safes fall short, and it becomes necessary to make good the deficiency by obtaining loans from the banks or by pledging merchandise. The consequence is that the banks, too, do a brisk business. But so soon as the tide of commerce falls to its normal point, traders find their capital sufficient for their business and have no need to obtain monetary facilities from others. The every-day course of commerce shows that, just as a brisk demand on the part of consumers is followed, when it ceases, but a correspondingly active competition among merchants to dispose of their goods, so the eagerness of dealers to increase their stocks is generally succeeded by a desire to suspend purchases. During the past few years currency restriction has exercised its usual depressing influence upon trade. Merchants, for the most part, having on hand larger stocks than they require, and seeing that the prices of commodities generally show a downward tendency, abstain from buying as far as possible, and avoid sales on credit, not knowing what may be the value of the money they will ultimately receive from their debtors. Thus they find, in many cases, their capital superabundant, and a corresponding change in their method of employing it has taken place. The men who, with 100,000 *yen* capital, appropriated, as we have shown, thirty thousand to the producers or manufacturers, thirty thousand to the purchase of their stock, and thirty thousand to cover their sales on credit, keeping ten thousand in their safes, now reduce the three first sums by ten thousand each and hold a reserve fund of forty thousand. To let so large a proportion of their total capital lie idle would obviously be fatal, while, on the other hand, to apply it to the purchase of goods would be too hazardous. Under these circumstances they naturally turn to public loan-bonds, since, by investing in this class of securities, they can obtain nine or ten per cent. interest on their money, with the assurance of being able to realize at any moment. All this has reacted upon the

banks. They, too, find no applicants for their loanable funds, and have no resource but to convert them into Government securities. Thus, on every side, loan-bonds are in demand, and, as a natural consequence, they have abnormally appreciated, the same influence extending, in varying degrees, throughout the whole share market. These considerations are the basis of our assertion that commercial depression is the proximate cause of the appreciation of governmental securities.

REFORMS IN THE IMPERIAL HOUSEHOLD DEPARTMENT.

(Translated from the *Hochi Shimbun*.)

Rumours are current that considerable reforms will shortly be introduced into the Imperial Household Department, and that the relations between this Department and the Privy Council will undergo a change. Some are inclined to suppose that the official authority of the Imperial Household Department will be so extended as to enable it to maintain a higher status than that of other Government Departments, just as is the case with Russia. Others think that it will be made the principal administrative department, and that the guidance of the national policy will devolve upon it. Again, it is said that the proposed reforms will be postponed until next year, and that no initiative will be taken this year toward any alteration. Many other different opinions have been expressed, and innumerable statements given in the vernacular journals in regard to the Imperial Household Department, but as these opinions and statements are simply based on rumours that are circulated in the streets we can scarcely persuade ourselves to place any confidence in them. Yet, when we consider how they came to spring up among the people, we find that they are, to a certain extent, justifiable. Our countrymen are naturally disposed to love and respect the Imperial family; while the customs which have existed for thousands of years have strengthened this disposition. However broad the world may be, there is no nation which shows greater sympathy and pays greater respect to its royal family than do our people. As this is the real condition of affairs, our fellow countrymen are usually disposed to give greater attention to affairs relating to the Imperial Household than most other nations; and if this be true, it might possibly happen that, so soon as rumours became current respecting the changes to be introduced into the Imperial Household Department, they preferred to discuss the subject in hand rather than ascertain the correctness or incorrectness of their information. It may be justly stated that the discussions so brought about only evidence their loyalty as subjects of the Emperor. If the people of this country did not possess that spirit of respect and veneration for their Emperor in the high degree we have just mentioned, they would not have so sincerely interested themselves in the affairs relating to His Majesty's Household. Had they been indifferent to the matters of the Imperial Household, they would not have so anxiously discussed the subject among themselves, even though the rumours concerning the proposed changes had been true; and, more especially, would this have been the case, as they were unable to ascertain the truth of the rumours. The discussion created by the rumour may be of no significance; but it certainly proves the strong attachment of the people to their Sovereign.

Nothing could be more dubious or incredible than the rumour as it is; yet it should not be entirely ignored. When the Bureau for Constitutional Reform was established in the Palace on the 17th of March last, the public were disposed to imagine that the measures thus taken involved the intention of the Government to introduce reforms into the Imperial Household Department. Rumours quickly spread abroad, and the transfer of the Minister of that Department took place on

March 21st. The different ranks of the Chamberlains were abolished, and the office of Lord High Chamberlain was instituted. Meanwhile, His Excellency Hirobumi Ito, Privy Councillor, was appointed Minister of the Imperial Household, while His Excellency Sanenori Tokudaiji, who had long occupied this position, was transferred to the post of Lord High Chamberlain. Although various political changes have occurred during the period of more than ten years since the Restoration, the Imperial Household Department has held only the sole duty of managing the affairs of the Imperial family, independent of other Governmental Departments; and even when the Ministers of these Departments were required to perform the additional duties of Privy Councillors, the Minister of the Imperial Household alone was not allowed to discharge this dual function.

A Bureau for the preparation of the Constitution was first instituted immediately after the Restoration (January, 1868); its name being subsequently changed to *Giji Torishirabe Kiyoku*, then to *Seidoriyo*, then to *Seido Torishirabe Gakari*, and finally to *Seido Kiyoku*. Indeed, it underwent so many changes that we cannot enumerate them all here; yet it was always established beyond the precincts of the Imperial Household Department, and now, for the first time, the re-establishment of the Bureau has taken place in the Palace (March, 1884) on the occasion of H.E. Ito being nominated Minister of the Imperial Household, while retaining the rank of a Privy Councillor. These unusual proceedings did not fail to start the rumour that reforms would shortly be introduced into the Imperial Household Department. Whenever a few persons met together, the conversation turned naturally to the reforms in question. When the rumour reached our ears, we partly believed and partly questioned its correctness. Nevertheless, it was somewhat supported by the recent establishment of the Imperial Treasurer's Office (*Kurariyo*) in the Palace. According to the old system of Imperial Government, the *Kurariyo* was one of the Six Bureaux of the *Chiumusho*, which held a leading position among the eight administrative departments. The duties of the Minister of this important department were to attend upon the Emperor and to watch over his proceedings, that they might not deviate from the system of etiquette. Besides, the Minister had to examine the drafts of Imperial decrees and manifestoes; to receive petitions forwarded to the Emperor; to take charge of the national archives; to regulate the duties of the Empress as well as of the ladies and officers of the Court, and to determine their appointments and ranks. Furthermore, he had to receive the census returns, the accounts of taxation and revenue, and a statement of the numbers and names of the female ecclesiastics for the purpose of submitting them to the inspection of the Emperor. He was assisted by a Vice-Minister and an Assistant Vice-Minister, who were allowed to advise the Emperor, but not to approve or alter the latter's decision.

Secretaries, known as *Jo* (丞), were required to give work to the officials, to prepare drafts of Imperial rescripts, and to appoint officers who were to remain after the duties of the day were over; while officers, holding the title of *Roku* (録), were called upon to keep a record of all affairs the management of which fell to them, and to examine the drafts of the rescripts in question, as well as to read all official documents. (The above account is taken from the "*Shoku-kwanshi*" or "History of Official Functions.") Yet even in those days, there was an Imperial Household Department, which was itself subordinate to the Eight Departments, but whose duty was to take charge of the Treasury; to investigate the revenue and landed property of the various provinces; to report upon Government rice lands as well as the process of hulling the rice; to regulate edibles suitable for culinary purposes, and to look after other miscellaneous matters. The "*Shoku-gunsho*" or "History of

the Original Functions of Officers" states that the Imperial Household Department referred to was charged with the management of all affairs of the Imperial Court, and partook of the duties of the *Chiumusho*.

As we have stated before, the *Kurariyo* was under the control of the *Chiumusho*, which latter consisted of six different classes of officials: first class Hall-porters, second class Hall-porters, Librarians, Tailors, and Astronomers. The principal functions of the Superintendent and Vice-Superintendent of the *Kurariyo* were to take charge of the gold and silver in the Treasury, the precious stones and jewels and other costly articles, silk brocades (*nishiki*) and coloured carpets, the curios presented as tribute by the barbarian tribes, as well as the costumes provided for the Emperor, and all other things prepared by special order. The receipt and payment of money was conducted by the Senior and Junior accountants, while the price of commodities was regulated by an officer called *Kacho* (價長). Another officer, the *Tenri* (典履), superintended the manufactures of shoes, clogs, and saddles, and overlooked the different work of the tailors. (This account is taken from the "*Reigikai*" and "*Shoku-kwanshi*"). According to the "*Shoku-gensho*," it seems that the *Kura-no-kami*, or Superintendent of the *Kurariyo*, held a higher rank than the *Fu-goi*, or juniors of the fifth grade, and was generally selected from among Court nobles of the fourth and fifth ranks. He was looked upon as a prominent official in the Imperial Court. A well-known story says that the nobles who had wives of common extraction were not eligible for this post, as the position required the supervision of the manufacture of the Imperial dresses. The old *Kurariyo*, belonging to the *Chiumusho*, performed the task we have just described, but we do not know as yet exactly what will be the principal functions of the similar Bureau recently established in the Palace.

Yet, so far as we can judge by the transfer of the Vice-Minister of the Imperial Household, H.E. Sugi, to the post of its Superintendent, the new Bureau seems to undertake the supervision of weighty matters. Rumours are current, however, that the *Kurariyo* has been established simply with a view to examine Government lands, and to take some portion of them under its control as the landed property of the Emperor. Neither are we able to judge as to the correctness or incorrectness of this rumour, nor do we find it easy to determine the probable consequence of the appropriation of land to the property of the Emperor; yet the rumour pointing to the introduction of reforms into the Imperial Household Department seems to be justifiable. The establishment of the Bureau for Administrative Scrutiny (*Seido Tori-shirabe-kiyoku*), the Ministerial changes in the Imperial Household, the appointment of Imperial Chamberlains and the institution of the *Kurariyo*, all of which were effected in one or two months, have almost revolutionized the organization of the Imperial Household Department, and the loyal people of our country, who are ever disposed to direct their full attention to the affairs of the Imperial Household, are anxiously discussing the probable results of the proposed changes. This has given rise to the rapid spread of the rumour pointing to reform. Some assert that the changes will be confined to those that have already taken place; others declare that this is but a prelude to the main reform. We, too, have no definite opinion; yet we congratulate ourselves upon the fact that the enthusiasm thus displayed by our people in discussing the rumour is the outcome of their loyalty and warm interest in the affairs of the Imperial Household. As regards the truth of the rumours, we wait to see them verified or contradicted by future events.

A RIVER TRIP TO SŌUL.

We have been favoured with the following account of a visit to the capital of Korea by a gentleman who has recently returned from that country:—

We left Rose Anchorage at 1.30 p.m., on the first of a flood spring tide, and at 6 p.m. had covered a distance of 19 miles. In the Narrows, the tide was running with a force of 7 to 8 knots. On the west side of the river forts were prominent at every point and bend, and battlemented walls extended for miles along the banks. On the east side, the forts were not nearly so distinct, as they were mined from the hills inland and their flanks covered with long, thick grass. At this part of the river we passed by a strongly-built wall extending for many miles up and around some steep hills, completely enclosing a valley in which there is a large town, but which we could not see owing to the low hills lying between. At 6.30 p.m. we reached the bend where the river branches of from North to S.S.E. Wild fowl were numerous, and we managed to bag a couple of geese on the mud-flats. Soon after this it became dark, but, getting in the wake of a large passenger junk, we managed to get a tow until abreast of Ki-ou-niu. Here we made fast to a junk at anchor, spread our tent, and set the watch, having made about 31 miles without using the oars. On the following morning at 5 a.m. we cast loose from the friendly junk and started again up the river; but owing to the head tide and adverse winds we were forced to pull the whole way, a distance of 26 miles. At 11.45 we arrived at Yang-ho-to, and our boat was immediately surrounded by Korean craft full of natives. They were, however, perfectly civil, and when requested to keep off a little further did so without being told a second time. At 1.30 we went ashore and hired ponies to carry us to the capital, which was about 4½ miles distant. On the road we passed a number of Korean women, but they did not appear at all surprised to see us. The little children were, however, very curious, coming up close to our cavalcade and examining us with evidently critical eyes. In some of the villages through which we passed we were stopped for a short time, but invariably treated with great civility, despite the fact that the native dogs and horses were considerably startled at our strange appearance, and evidently thought foreigners an unpleasant innovation. The highway leading to Sōul is in a wretched condition, and mud and filth abundant everywhere. On arriving in the capital, our Korean guide conducted us at once to Mr. Von Möllendorff, who very kindly entertained us, and directed us to Mr. Halifax, at whose house we got another guide to take us on to the King's Palace. The royal buildings cover an area of some two square miles, enclosed in a strong, substantially built wall, the houses themselves being of Chinese architecture. The central palace is built on some 30 granite pillars, each about 14 ft. high, and surrounded by a moat. In the same enclosure, there was another large building, in which we caught a glimpse of what appeared to be a very dilapidated throne. Numbers of smaller houses lay in ruins on all sides, many bearing the stamp of having been destroyed by fire. Tall archways and strong gates met us on every hand, so that we would have certainly been lost in the labyrinth of ruins and remnants of past grandeur had we gone thither without a guide. In passing through the city, the stagnation of trade was quite evident, for in not one shop did we see a purchaser. We returned to the boat on foot, without exciting the least curiosity on the part of the natives. We left Sōul at 12.15, and, after making a distance of 18 miles, anchored off the village of Kon-pa-oui, the flood having set in. At midnight we made some little progress with the ebb, but had to anchor again soon afterwards off Kang-cho. At daybreak we went on shore in search

of game, but were unsuccessful. Pheasants were heard crowing all around us, while geese, duck and curlew were plentiful along the flats. Paddy fields lined the banks of the river and could be seen in all the valleys, but the hills were not cultivated at all and were covered with a sparse growth of dwarf firs. We left Kang-cho at noon, and arrived at Rose Island at quarter past three, having done 39 miles in 3 hours and 15 minutes. This speed was owing to the swiftness of the ebb, which was running somewhat over 7 knots an hour. The river traffic seemed very small, and none of the villages were in possession of any useful boats. Indeed, we passed only two loaded junks, and met two others in ballast.

IN THE TOKYO COURT OF APPEAL (KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—MONDAY, 5th May, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsu Bishi Mail Steamship Company's steamer *Akitsushima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsushima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

On the opening of the Court, Captain Ramsay proceeded with his reply to the counsel for the attorney for the appellant.

Second grievance:—"The decision of the first Court had been given in apposition, and without regard to the evidence given in that Court." This is absolutely ridiculous, for the whole of the evidence was duly and most carefully weighed and pondered over by the members of the Court, and they thus were only enabled to arrive at their decision and judgment. The third grievance, bears more on the subject upon which the appeal is to be heard, and here, upon this I must more fully comment, asking for the kind indulgence of the Court, whose patience will not be, I trust, exhausted, for this grievance must be dealt with in detail, and, I fear, minutely so. The third grievance was "that all the evidence in the Court below tended to show that the appellant was misled by a light of the same description and colour to the Shiriya-saki light, which on being first seen bore from the ship in the direct direction where the Shiriya-saki light was expected to be sighted." I am grieved to say that this is entirely incorrect, for the Master stated in his evidence distinctly his reason for preparing to take a cast of the lead (see page 6), Master's evidence, "What reasons had you for preparing to take a cast of the lead?" "Because I ran in from midnight to sight Shiriya-saki light, and had reason to believe ship's position was further north than I suppose thought she might have been in Tsugaru Straits and in soundings." How is it possible for Mr. Rossetsu's statements to be accepted viz.:—"That the light when first seen was in the exact position where the Shiriya-saki light was expected to be sighted," viz.:—bearing west magnetic; when seen? while the master had stated he supposed he might have been in the Tsugaru Straits, when he had been there, the light could not have been on that bearing West; it would have been to the Eastward of South (Master's evidence page 16). "Did you feel any certainty as to the ship's position on the 9th at midnight? No. "How then could the light be seen where expected to be made?" Mr. Rossetsu stated "that the Court, in spite of the Appellant's request that Captain Young and his officer should be summoned, who had both seen the light and had

expressed their opinion that under the circumstances it might well have been mistaken for the Shiriya-saki light, disregarded the request, thus denying the appellant an opportunity of justifying his action."

This is incorrect, for there is no such record on the minutes of the Court. Had the Master preferred any such request, most certainly the Court would have adjourned until those gentlemen had appeared to give evidence. The Master was neglectful of his own interests in not obtaining a written statement from Captain Young and his officer in regard to this light, so that he might have presented it to the Marine Court. Regarding the four reasons given by the marine Court (see *Japan Gazette* and *Japan Daily Mail*, but not on records of Court of Appeal), Mr. Rossetsu states, "They were first, error in judgment by overestimating the speed and leeway on the 9th of October. He (Mr. Rossetsu) would remind the Court that when the disaster occurred, the weather was not as calm as at present (16th April), a hurricane had been blowing; even during the day-time it was so dark that one could not see more than two or three ken" equal to 12 or 18 feet, etc. This is not mentioned on the records of this Court, of which I have a translation; but inasmuch as Mr. Rossetsu stated to the Court that "he had carefully read the reports, and they were correct, in fact Mr. Ramsay need have no fear for every point of his argument was embodied in them," therefore I have now a right to comment thereon with the sanction of the Court. Now what does the Master state in his evidence given on the 12th of November (see evidence of Master, page 5). "At midnight sea was moderating, wind being N.W. clear overhead and stars visible, could see three miles." The second officer states, page 2, "pretty clear, no stars visible, could see five or six miles, weather kind of hazy." The third officer states, page 1, "on 10th hazy, wind had decreased and smoother water. Speed $7\frac{1}{2}$ to 8 knots." The Master in his report states "Weather clear." Consequently I have now disposed of the presumptive and incorrect statement that the vessel was lost during the time a hurricane had been blowing, as this statement is opposed to, and contradicted by the evidence as above quoted. Regarding leeway. The statements made are absurd. Let me refer Mr. Rossetsu to Inman, Rosser, Norie's and Raper's, etc., works on Navigation. If Mr. Rossetsu in conversant with nautical matters, he must know that in moderate weather a manageable ship makes no leeway. As for his remarks regarding instruction given in school, it would be well for all to remember some of the instructions they had received to prepare them for their future profession and not to disregard them, primarily that of truth and correct statements. The records of the Court state, "That he (the attorney for the respondent) knew distinctly that there were four points leeway, because the appellant said so, and his mate," and so did the second mate. The Master's evidence, page 13, "At night how was leeway ascertained?" "By judgment. I could see the ship's wake about a ship's length off." Chief officer, on page 6, "what leeway making?" "Four points; judged leeway by wake." Second officer states, "Leeway, four points I judged." Here I must again remark that no attempts were made to correctly ascertain the leeway either by day or night. Mr. Rossetsu's remarks concerning paragraph two of the judgment of the lower Court, vide *Japan Mail* and *Gazette*: Imprudence in shaping his course direct for the land at a speed of 8 knots from midnight of the 9th of October. (Midnight omitted in Court's minutes.) And also for running his ship at the same speed on a N.W. by W. course immediately after sighting the light at 4 a.m. on the 10th October. Regarding this, Mr. Rossetsu's statement is correct, that every one on board (that is to say those who gave evidence) who saw the light considered it to be the Shiriya-saki light. This following is incorrect "and was picked up in the direction bearing West." According to evidence, but as was previously stated,

the Master had no idea of his position, consequently did not know in what direction to look for the light. Therefore, this statement made by Mr. Rossetsu is erroneous.

The Court adjourned to the 10th inst., at 9 a.m.

NOTIFICATION NO. 41 OF THE COUNCIL OF STATE.

TO ALL CITIES AND PREFECTURES.¹

It is hereby notified that the Governors of all Cities and Prefectures will, in future, personally nominate the *Kocho* (ward officers), and that Governors may instruct the inhabitants of all Urban and Rural Districts to elect three to five persons from each District respectively, from among whom the ward officers shall be selected.

SANJO SANEYOSHI, Prime Minister.

May 7th, 1884.

¹ The prefecture of Okinawa excepted.

THE CRISIS IN PEKING.

REPORTED SUICIDE OF PRINCE KUNG.

A rumour was current in the Settlement yesterday (25th April) that the Shansi bankers had received news of the suicide of His Imperial Highness Prince Kung. We immediately instituted enquiries, with the result that all knowledge of any such event was denied by the officials, but emphatically confirmed by the native bankers. We have no further information, and are not in a position to decide upon the genuineness of the story. There is, however, nothing impossible in it.

From other sources we learn that matters are not improving, great anxiety being felt among the Chinese respecting the movements of the French fleet.

PRINCE KUNG AND THE VICEROY OF YÜN-KUEI.

His Excellency the Viceroy of Chihli, in a telegram to the Tao-t'ai of Shanghai, emphatically contradicts the current report respecting the death of Ts'ên Yü-ying. No mention is made of the rumoured suicide of His Imperial Highness the Sixth Prince.

DESPATCH FROM THE PRINCE OF CH'UN.

Tso Tsung-t'ang, Viceroy of Nanking, in retirement, has received a despatch from the Prince of Ch'ün, expressing His Imperial Highness's wish that Tso should proceed at once to the province of Yünnan, if the state of his health permits him to do so. The reply of His Excellency has not transpired, but the missive occasioned him considerable satisfaction, which he was at no pains to conceal.—*N.-C. Daily News*.

We hear that the Central Post Office will be known in future as the Postal Department, and will be removed to a new building in Otamachi, Tokiyo.

The brokers in Yokohama have hit upon two promising schemes: (1) to apply to the authorities for permission to establish a new specie exchange, to be called the *Ginkwa Koyenjo*; (2) to petition the authorities to decrease the tax levied upon the present exchange.—*Mainichi Shimbun*.

The Mitsu Bishi Steam Navigation Company are offering four of their older vessels for sale: the *Atago Maru*, *Kagoshima Maru*, *Chisato Maru*, and *Yenoshima Maru*. The public are well aware that the Company has a large number of old ships on its hands, and it is to be hoped that the sale of these vessels will render the purchase of new steamers possible.

It is rumoured that the Privy Councillors, in their recent meeting at the residence of the Premier, decided upon an increase in the annual appropriations for all of the Government Departments, said increase to commence with the 18th fiscal year.—*Fiji Shimpō*.

[FROM THE "N.-C. DAILY NEWS."]

Peking, 23rd April.

A Decree has been issued by the Empress with regard to tax collections in the Provinces. The amount of extortion practised by provincial officials is well known to Her Majesty, who threatens severe penalties upon all mandarins, from the highest to the lowest, if any further cases of this sort are brought before her.

London, 28th April.

The evacuation of Berber commenced to-day. The majority of the troops fraternized with the insurgents.

An infernal machine has exploded abortively in the Barracks at Dublin, when at a magisterial enquiry it transpired that there were plans for a rising.

The members of the Dai Nippon Sanitary Association, numbering upward of 5,000, will hold a general meeting at the *Kosei-kwan* (the old *Meiji Kwaido*) on the 24th instant.

During the recent period of prayer-offering, no less than 450,000 pilgrims ascended Koya-san, where there is the chief temple of the Shingon sect of Buddhists.—*Choya Shimibun*.

H.E. Kawase, has been nominated Minister to the Court of St. James's.

The Chief Justices of the local Courts and Police Inspectors will hold annual meetings in future.

The War Department has refused an application to permit the establishment of an infantry drill school.

Mr. Takagi Hoko, a well-known pen-vendor of Tokiyo, will celebrate the festival of *Mo-ten*, the Chinese inventor of the pen, who lived during the Shin Dynasty, on the 18th instant. Many noted men and Chinese scholars will be present at the celebration.—*Fiyu Shimibun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MAY 2ND, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

Dashed line—represents velocity of wind.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 43.5 miles per hour on Friday, at 8 p.m.

The highest reading of the barometer for the week was 30.175 inches on Tuesday at 11 p.m., and the lowest was 29.731 inches on Saturday, at 6 a.m.

The highest temperature for the week was 74.3 on Thursday, and the lowest was 43.9 on Sunday. The maximum and minimum for the corresponding week of last year were 65.3 and 40.0 respectively.

The total amount of rain for the week was 0.643 inches, against 1.328 inches for the corresponding week of last year.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Tokai Maru*, from Kobe:—154 Japanese in steerage.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—19 Japanese.

Per Japanese steamer *Saikai Maru*, from Toba:—28 Japanese.

Per British steamer *Kashgar*, from Hongkong, via Nagasaki and Kobe:—Dr. and Mrs. Anderson, Mr. and Mrs. Thomson, Mr. and Mrs. Hobson, 3 children and 2 maids, Miss Heap, Messrs. Groom, Callaway, Billbrough, Goodison, Ket Sung, Pow Choi Chee and infant, Pow Sin, Shin Tuck Sheng, Hing Kee, Low Yun, and Pow Thong in cabin; 29 Japanese and 2 Chinese in steerage.

Per Japanese steamer *Niigata Maru*, from Hakodate via Oginohama:—Mr. Yukishita and child, Messrs. Mogami, Masaki, Towata, Hata, and Okuda in cabin; and 94 Japanese in steerage.

Per Japanese steamer *Mikuni Maru*, from Yokkaichi:—48 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—78 Japanese.

Per Japanese steamer *Hiogo Maru*, from Kobe:—Messrs. H. S. Van Buren and Niwa in cabin; and 1 European and 102 Japanese in steerage.

Per Japanese steamer *Horai Maru*, from Yokkaichi:—62 Japanese.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—18 Japanese.

Per Japanese steamer *Tsukai Maru*, from Fukuda:—16 Japanese.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—Governor Morioka, Mr. and Mrs. H. I. H. Kirchhoff, Mr. and Mrs. Lake, Mr. and Mrs. Kuga and 2 children, Mrs. Murata, Dr. J. Harris, Messrs. T. B. Glover, Wismer, S. B.

Ellis, T. C. Parr, C. Nielsen, J. MacKein, P. Peltzer, J. S. Wong, Kizu, Matsuno, Nago, Kiyoka, Kuki, Orita, Kato, Takehara, Ide Takehara, Mayeda, Kojima, Okuda, Nakayama, Matsuyama, Kawakami, Asada, Tanaka, Hara, S. Takehara, Fukui, and Ida in cabin; and 5 Europeans and 296 Japanese in steerage.

Per Japanese steamer *Okame Maru*, from Toba:—19 Japanese.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—43 Japanese.

Per Japanese steamer *Kengi Maru*, from Yokkaichi:—18 Japanese.

Per Japanese steamer *Uke Maru*, from Shimidzu:—28 Japanese.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—11 Japanese.

Per Japanese steamer *Tokai Maru*, from Yokkaichi:—70 Japanese.

Per Japanese steamer *Yechigo Maru*, from Hakodate:—40 Japanese.

DEPARTED.

Per Japanese steamer *Takasago Maru*, for Hakodate:—Mrs. Gun, Judge Machida, Judge Toriwo, Messrs. T. Hirateuka, and Mushiko in cabin; and 90 Japanese in steerage.

Per American steamer *City of Tokio*, for Hongkong:—Mrs. H. S. Greeley, Miss L. Ashton, Miss D. R. Snell, Dr. William Young, and Mr. H. Best in cabin; and 187 Chinese in steerage.

Per French steamer *Menzaleh*, for Hongkong:—Messrs. M. Hanagawa, S. Sugimoto, Y. Sonoda, M. Takei, T. Takashima, and C. Kaji in cabin.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Mr. and Mrs. Ivers, infant, and servant, Judge Midzuno, Judge Hatano, Judge Ito, Judge Matsuoka, Judge Okayama, Dr. A. R. Platt, Captain N. Pratt, Messrs. Stover, C. Brass, J. G. Walsh, J. T. Wood, F. D. Cooper, J. F. Calder, Colgate Baker, W. C. Barrett, Shun, Shimada, Gotsugi, and F. Hamada in cabin.

Per Japanese steamer *Tokai Maru*, for Yokkaichi:—Mr. C. Fujisawa in cabin; and 62 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, for Kobe:—Judge Takagi, Dr. Bailey, Messrs. H. V. Love, Storror, A. Suwa, F. Doi, M. Makino, N. Ando, H. Watanabe, Y. Sakurai, and T. Shida in cabin; and 145 Japanese in steerage.

CARGOES.

Per French steamer *Meusaleh*, for Hongkong:—Silk, for France, 126 bales.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Treasure, \$55,100.00.

Per British steamer *Kashgar*, from Hongkong, via Nagasaki and Kobe:—Sugar, 12,943 bags; Cattle, 31 head; Sundries, 2,699 packages. Total, 15,672.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—Treasure, Yen 25,528.75.

REPORTS.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Hakodate on the 2nd May, at 10.15 a.m. with light variable winds, thick and rainy weather to Oginohama, where arrived on the 3rd, at 1.15 p.m., and left on the 4th, at 6 a.m. with light variable winds and fine weather throughout the passage. Arrived at Yokohama on the 5th May, at 11 a.m. Passed Company's steamship *Takasago Maru* on the 4th May, at 12.15 p.m.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 5th May, at 6 p.m. with light variable winds and fine weather throughout the passage. Arrived at Yokohama on the 7th May, at daylight. On the 6th May, at 3.30 a.m. passed the steamship *City of Tokio* off Oo-sima, and on the same day, at 10.15 a.m. Company's steamship *Nagoya Maru* off Cape Sima.

VESSELS ON THE BERTH.

Benvenue, for New York via Amoy—Quick Despatch.—Mourilyan, Heimann & Co.

City of Rio de Janeiro, for San Francisco—16th May.—P. M. S.S. Co.

Claymore, for New York via Amoy—Quick Despatch.—Smith, Baker & Co.

Hiroshima Maru, for Shanghai and ports—14th May, at 6 p.m.—Mitsu Bishi M. S.S. Co.

Kashgar, for Hongkong via Kobe and Nagasaki—11th May, at 4 a.m.—P. & O. S. N. Co.

LATEST COMMERCIAL.

IMPORTS.

A quieter feeling has prevailed throughout the Market without any marked alteration in quotations, and there have been three days holidays for the Races at the end of the week, consequently the volume of business has been rather small.

COTTON YARN.—The demand for 28/32s continues and a further slight advance has been paid; 2 fold 42 have also been dealt in at higher rates but all other counts, as well as, Bombays have been rather dull of sale.

COTTON PIECE GOODS.—Grey Shirtings seem to be coming into demand but dealers are not disposed to pay the equivalent of present home rates so long as they can obtain occasional lots at their own prices. Turkey Reds and Velvet are rather firmer on small sales.

WOOLLENS.—Moderate sales of Mousselines and small sales of Italians are reported but heavy goods are scarcely saleable.

COTTON YARNS.

KEROSENE.

Business during the past week shows the sale of about 32,000 cases Devoe and Comet at quotations. The Lucile has arrived with 51,222 cases, making present Stock about 679,500 cases sold and unsold Oil.

	PER CASE.
Devoe	\$1.71½ to 1.72½
Comet	1.69
Stella	1.60

SUGAR.

No change to note in prices, business dull and retail transactions only have to be recorded. Buyers freely offer \$3 for Brown Formosa, but holders refuse to part at that figure.

EXPORTS.

RAW SILK.

Our last issue was of the 2nd instant since which date there has been very little business doing and the Settlement list for the week is practically a blank. True, sales of about 40 piculs have been recorded; but as rejections are not less than 60 piculs there is actually an increase of Stock on the week's trading, to say nothing of a few fresh arrivals from the interior.

Holders maintain their firm attitude and in fact both sides have taken up a post of observation pending reliable news as to the "new crop" in this and other countries. Here, the reports from the nearer provinces are favorable; the worms in some districts, have safely passed the second stage and vegetation is abundant. The latest news from North China is on the whole fairly good; there are some rumours of trouble in one or two districts, but apparently these do not amount to much and the worms generally would seem to have passed through the early stages in safety. From Europe

there is nothing disquieting up to the present, and at the moment everything promises well for a good *raccolta*.

The M.M. steamer *Menzaleh* which left this port for Hongkong direct, on the morning of the 4th instant carried 126 bales, all entered as going to France. This vessel's cargo brings the Export to date up to 29,239 bales against 26,419 bales at same date last year, and 18,607 bales to 9th May, 1882.

Buying for the next P. M. steamer does not appear to have begun in earnest yet; it remains to be seen whether or no holders will be able to obtain the high figures which they are now disposed to ask. We leave all quotations unchanged in the absence of business, merely premising that they must be considered as more or less nominal; some dealers persistently keep their stock off the market until they see which way the crop balance will incline.

Hanks.—There have been no purchases whatever; and the only thing recorded beyond some light arrivals has been the rejection of 17 piculs belonging to a lot settled some weeks ago. A portion of last month's purchases were shipped to France by last week's steamer but no new transactions have been entered upon.

Filatures.—The small business passing has been in this class on the basis of *Utsunomiya* (Oshu) at \$680 with *Sekini* (Joshu) at the same price. A parcel of Medium Shinshu at \$630 has been returned again. Some dealers have a most extravagant idea as to price and ask rates which are quite prohibitory: a fair sized parcel *Tokosha* was hawked round at \$720, but finding no buyer the owner now professes his willingness to reduce the price \$10 per picul.

Re-reels.—Nothing actually done in these: one parcel *Takasaki* supposed to be fine size, was taken in at \$605 but rejected on inspection, \$650 is asked still for a few bales *Stork* and *Turtle* chops.

Kakeda.—No transactions, and the Market is much as last advised. Some of the good parcels are beginning to be shown once more, and it looks as if holders would not be quite so intractable should an offer be forthcoming.

Oshiu and Coarse Kinds.—Nothing done either for the internal trade or Export; position remains absolutely unchanged.

Export Tables Raw Silk to 9th May, 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	17,104	13,523	9,459
America	9,406	8,774	5,743
England	2,639	4,122	3,405
Total	29,239	26,419	18,607

WASTE SILK.

Business in this department has not been large, and the sales for seven days are not more than 110 piculs. Stimulated by the short Export, as compared with recent years, buyers are in the field, for some classes of good Waste, but are unable to find what they require. *Filature* sorts continue to arrive in small parcels, and in these some business has been put through at about previous rates; on the other hand ordinary *Noshi* and *Kibiso* of good quality is quite absent from the Market.

The M. M. steamer *Menzaleh* of 4th instant, had on board 34 bales of which 9 were cleared for England and the remainder for Marseille. The Export figures now stand as under, viz:—22,878 piculs to date against 23,456 last year and 24,037 in 1882. Arrivals have been about on a par with settlements; and the Stock, although changed as to details, gives the same total as last week.

Noshiito.—A little done in *Filatures* at \$155, \$145, \$135, \$125 according to quality. In reeled *Noshi* nothing much has transpired; there are enquiries for *Joshu* but nothing good can be found in the Market at this late period of the season.

Kibiso.—A few small purchases reported on basis of *Utsunomiya* filature at \$125 and Medium *Joshu* at \$31. The stock has increased somewhat but consists of mixed undesirable lots.

Mawata.—Nothing to note; and it seems that we must reckon this class (in company with *Pierced Cocoons*) as a dead letter for the remainder of the season.

Sundries.—About 30 piculs *Neri* settled at \$8, \$11, \$14 and \$15 (uncleaned) for a very mixed assortment. In other kinds, no transactions.

Pierced Cocoons	2,201	3,201	4,163
	22,878	23,456	24,037

Exchange.—The foreign Banks are closed for Race holidays, but quotations are firm at last week's rates:—LONDON, 4m/s., Credits and Documents, 3/9; NEW YORK, 30 d/s., 90½; 60 d/s., 91; PARIS, 4 m/s., fcs. 4.75; 6 m/s., fcs. 4.77½. *Kinsatsu* have weakened, and after touching 109 leave off at about 108½ per \$100.

Estimated Silk Stock 9th May, 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	550	Pierced Cocoons	—
Filature & Re-reels	230	Noshi-ito	100
Kakeda	130	Kibiso	340
Sendai & Hamatsuki	100	Mawata	—
Taysaam Kinds	10	Sundries	110
Total piculs	1,020	Total piculs	550

TEA.

Arrivals of New Crop Teas are now taking place rapidly and the Stock this morning is estimated as 1,250 piculs. A good number of musters have been shown, chiefly of near country kinds and these cannot be considered as superior in hand to last season's crop as many parcels show traces of the inferior leaf call *bancha*. Apparently the weather was not favourable during the time of picking and curing the leaf. The consequence is that the Teas lack, in great measure, the nice small hard twisted leaf usually pertaining to first crop growth, and are not so even in leaf as they should be. The important districts, Ise and others, are not yet represented by musters, but arrivals are said to be taking place to-day and possibly musters may be put on the Market this afternoon. The aggregate receipts since our last Market Report are 4,625 piculs against 2,400 piculs in the previous year. Total Settlements from 2nd to date footed up to 3,375 piculs as compared with 1,810 piculs at corresponding date, in 1883. There are now seven steamers advertised for New York, calling at the usual ports. Rates of freight at present are undecided. The next Pacific Mail steamer, which leaves on the 16th instant, will take Tea at 5 cents. per lb. gross to the Eastern States and Canada and 2 cents per lb. gross to San Francisco. The Market is now active, and prices are firm as undernoted.

QUOTATIONS.

Fine	\$29 to 30
Finest	31 to 33
Choice	34 to 37
Choicest	39 to 43

EXCHANGE.

Owing to Holidays there have been few Settlements made during the week. Quotations however close firm, with a probability of higher rates when business is resumed.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work on the Nile Tributaries in Abyssinia, says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S**OLD BROWN WINDSOR SOAP,**

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers.

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

YOKOHAMA: SATURDAY, MAY 17TH, 1884.

DEATH.

At New York, on May 10th, JOHN FOGG TWOMBLY, President of the China and Japan Trading Company, Limited.

SUMMARY OF NEWS.

IT is reported that Korea is about to conclude a treaty with Russia.

THE arrival of the new season's teas is considerably later than usual.

A METEOROLOGICAL observatory is in process of erection at Sakai, in Fukui Prefecture.

A MINERAL spring has been discovered in the district of Shibata, Prefecture of Miyagi.

A BURGLARY with violence took place in a wine-shop, Furocho, Yokohama, on the 13th instant.

THE number of Japanese houses in Kobe is said to have increased by 3,262 during the current year.

MR. JOSE DA S. LOUREIRO has received his *ex-equatur* as Consul-General for Portugal in Tokiyo.

A CLASS for the study of foreign languages has been opened in the Law School of the Judicial Department.

THE Graduation Ceremony was held at the Imperial College of Engineering, Tokiyo, on the 14th instant.

A CONSIDERABLE land-slip is reported to have

occurred, on the 28th ultimo, in the district of Akumori, Shina.

A TOKIYO Journal states that gambling by female professionals is becoming prevalent in the province of Yechigo.

TWO cases of cholera having occurred in Tokiyo, stringent measures have been taken to prevent any spread of the disease.

IT is stated that the next annual appropriation for the Postal Bureau will be 300,000 *yen*, instead of 250,000, as heretofore.

MR. KAWASE, the new Japanese Representative at the Court of St. James's, is expected to set out for his post towards the end of June.

IT is stated that the new Commercial Code will be published in September and that it will come into force from the beginning of next year.

A LARGE reservoir is about to be constructed at Koishikawa, Tokiyo, for the purpose of supplying the city with water during the hot weather.

THE weather during the week has been exceedingly variable. On Tuesday and Wednesday the cold was almost equal to that of early March.

A SCHEME is on foot to construct a railway from Kanagawa to Hachioji. The Prefect of Kanagawa is interesting himself actively in the enterprise.

NINETEEN convicts escaped from the Shiogama jail, Miyagi Prefecture, on the 11th instant. A jailer was severely wounded in trying to prevent their escape.

THE Nippon Race Club had the "off day" of its Spring Meeting on the 13th instant. There were four events, two of which were won by Mr. "Hugo."

TWO monuments are to be erected to the memory of the famous Minister Ii Kamon-no-kami. The monuments are to be at Ueno, Tokiyo, and Noge, Yokohama.

THE traffic receipts on the Tokiyo-Yokohama railway for the week ended 11th instant, were 12,566 *yen*, against 10,700 *yen* for the corresponding period last year.

THE brokers in Yokohama, who suspended business pending the investigation of certain questions connected with the recent case of embezzlement, have again resumed operations.

A VIOLENT hurricane is reported to have visited the coast of Idzu, on the 20th ultimo. A ship of 300 koku burden was blown up on the beach far beyond the reach of the tide.

THE *Official Gazette* announces the appointments of H.E. Tanaka Fujimaro to represent Japan at the Court of Rome, and of H.E. Kuki Takakazu to be Japanese Minister at Washington.

A SUM of 4,440 *yen*, which had been collected by the Tanaka Bank in the district of Agumori,

province of Shinano, was stolen on the 2nd instant. The thieves have not been discovered.

AN attempt to sell spurious tea, made from the leaves of a shrub possessing deleterious qualities, has been discovered. All the persons engaged in the enterprise were arrested and are now awaiting trial.

THE editor of the *Fiyu Shimbun* has been fined 10 *yen* for failing to republish from the columns of the *Government Gazette* a correction of a Notification which he had previously copied from that journal.

THE health of this Majesty the Emperor is not yet fully restored. His Majesty unfortunately suffered a slight relapse in consequence of attending a meeting of the Privy Council before having entirely shaken off his cold.

THE Protestant Missionaries of Kiyoto, Kobe, and Osaka, have unanimously addressed to the Foreign Representatives in Tokiyo a memorial urging that in the pending revision of the treaties greater liberality should be shown to Japan's claims with regard to extraterritoriality.

A PRIVATE bank in Tokiyo called the Maruya Ginko has suspended payment. The liabilities are said to be six hundred and ninety thousand *yen*, and the capital one hundred and fifty thousand. The chief sufferers are the medical gentlemen of the capital, with whom the bank was a favorite on account of the name of the great scholar, Mr. Fukuzawa, being included among its promoters.

A NEW newspaper called the *Fiyuto Shimbun*, or Light of Liberalism, has been started in Tokiyo. The proprietors celebrated the birth of the journal on the 11th instant at an entertainment to which a large number of guests were invited. The proceedings were very animated, and an immense number of fireworks were sent up containing handkerchiefs on which the name of the paper was inscribed.

AN association called the *Kangiyo-shihon-gwaisha*, or Company of Capitalists for the Promotion of Industry, held its inaugural ceremony at the large tea-house, Nakamura-ro, in Tokiyo, on the 10th instant. The object of the Company is to lend money to persons desirous of engaging in agricultural enterprise, and for this purpose a sum of ten million *yen* has been subscribed by the shareholders.

THE new Club in the *Rokumei-kwan*, Tokiyo, was opened on the 14th instant, under the presidency of His Imperial Highness Prince Kita Shirakawa. The Governor of Tokiyo, Mr. Yoshikawa, was unanimously elected Vice-President, and the following gentlemen were appointed as a Committee of management:—Major Tajima, Captain Kurōka, Messrs. Hayashi, Saito, Nakagawa, Katsu Inouye, the Honorable P. le Poer Trench, Baron Zedtwitz, Mr. Malenda, and Mr. W. H. Stone.

THE telegram brought news on the 13th instant

that a treaty of peace had been concluded between France and China. There were four conditions. First, that France is to have the full right of establishing commercial relations with Yunnan, Kwangtung, and Kwangsi. Second, that China surrenders to France the protectorate of the whole of Tonquin and Annam, and definitely abandons all responsibility within their limits. Third, that France does not demand an indemnity. Fourth, that the Chinese forces immediately evacuate Tonquin.

A SALE of Railway Bonds to the value of five million *yen* has been notified by the Minister of Finance. This is the second instalment of the loan of twenty millions for the construction of the Nakasendo Railway. The Bonds are issued at 90. A guaranty payment of ten per cent. of the face value (100 *yen*) is required to be made at the time of application, and the remainder of the purchase money is to be paid in two instalments, the first on or before July 30th, and the second on or before August 30th. All applications must be forwarded to the Bank of Japan, its Branches or Agencies, before June 10th. It is thought that these bonds will not be subscribed for as readily as the last, the interval between the two issues being so short.

NOTES.

ON Saturday afternoon last the large tea-house, Nakamura-ro, at Riyogoku, Tokiyo, presented a very busy scene. The grounds were tastefully decorated with lanterns, and in the river lay several barges containing an ample supply of fireworks. The occasion was the inauguration of the *Kwan-giyo-shihon-gwaisha*, or Association of Capitalists for the Promotion of Industry, a company which has been in gradual process of formation during the past five years, and which now numbers about two thousand shareholders and has a capital of ten million *yen*. The Japanese profess to think that a prominent fault of their national character is a love of starting projects with a great display, and afterwards allowing them to dwindle down to insignificance and inanition. They recognise that the rule of permanently successful enterprises is to develop from small beginnings, whereas here the tendency is a large beginning and a very diminutive sequel. The founders of the new company, resolved that this should not be their fate, seem to have gone almost to the other extreme: for during all these years their steady and rapid growth has attracted so little attention that their magnificent opening ceremony on Saturday took the public by surprise. Five hundred guests were invited to take part in the affair, and from noon till three o'clock, the stream of arrivals was incessant. The whole of the immense tea-house was thrown open, but with the exception of some rare old pictures hung in the alcoves, and a tastefully composed collection of the emblems of happiness, prosperity, and longevity, no attempt was made to decorate the interior. It was worthy of note that among all this large assembly not more than half-a-dozen wore foreign clothes. Everything was purely Japanese. Even the naval band, which was in attendance, confined itself, for the most part, to Japanese airs, and among the viands which were served at four o'clock in great profusion, the only alien was beer. About two hours after noon the fire-works commenced, and continued until half-past three o'clock, after which short addresses were delivered by the

promoters of the Company, and then the huge crowd of guests arranged themselves round the rooms, or in double lines down the middle, to partake of soup, *sashimi* and boxes of rice with condiments, the whole washed down by quantities of *saké*. Fifty dancing girls acted as cup-bearers, and though assisted by a large staff of servants as well as by some twenty of the hosts, their post was no sinecure. Until dinner was served, a very tolerable degree of order was preserved; but when the lights were lit everybody seemed to do just as he pleased, some organizing *geisha* performances, others urging the wrestlers, of whom a number were present, to show their skill as dancers, and others dancing on their own account, or exercising their lungs by cheering the fire-works. Altogether it was as merry a meeting as Tokiyo has witnessed for a long while, and not the least interesting part of the affair was, that while the merchants were disporting themselves up-stairs, their wives, seated to the number of thirty or forty, in a room below, were eating their soup and watching the fire-works or listening to the band in the most demure fashion imaginable. The official element was very small; Admiral Yenomoto, the Governor of Tokiyo, the Postmaster-General, the Chief Judge of the Supreme Court, the Inspector-General of Police, and three or four Secretaries of Departments, being the only representatives of the Government. The foreign guests, too, were very few—not more than twenty in all—and though three or four of the Ministers had been invited, they were unable to be present. The chief object of the Association is to further Agricultural industry. The promoters, seeing that there are still large tracts of land in Japan waiting to be brought under cultivation, but not likely to be reclaimed unless the people are offered monetary facilities on terms altogether different from those prescribed by the Banks, conceived the idea of forming a company whose chief object should be to lend capital to active, enterprising persons, who have no better security to give than their own qualities and the land they reclaim. With regard to the purpose to which the land is applied, no restrictions are admitted, everything that comes within the category of agriculture being allowed. Loans are either made in the ordinary fashion—i.e., for a fixed period during which interest only is paid,—or they are made in the form called *Nen-wari-shō-kwan-Kashitsuke*—i.e., for a period of not less than five, and not more than ten, years, during which half-yearly payments at the rate of fifteen per cent. and upwards, per annum, suffice to discharge both interest and principal. The liability of the shareholders is limited to the amount of their shares, which are 50 *yen*, and anybody, except a foreigner, may become a shareholder. The directors say that five years' experience has amply demonstrated the usefulness of their enterprise, and indeed there can be very little doubt that an united effort of such a nature, and such magnitude is certain to assist immensely in developing the large resources Japan possesses. The people have not hitherto concerned themselves much about the reclamation of land. Until the markets of the West were opened to them, they had little inducement to grow crops or multiply products which were in excess of home consumption. But things are different now. It is time that the export trade should begin to show some capability of reaching dimensions worthy of

the country and its population. Apart, too, from its excellent purpose, this Association is interesting on account of the evidence it furnishes that money is more abundant in Japan than we have been accustomed to suppose. It is evident that under existing circumstances, what the Association must be prepared to lend is cash, not merely credit, as would be the case in Europe or America were a similar company formed. That a number of merchants and capitalists can be found competent and willing to apply ten million *yen* to a scheme which, however good, is not by any means as remunerative as some other varieties of investment, argues with much force in favour of the theory that the people's stores of money are not by any means exhausted.

IN corroboration of what "a missionary" writes about the quiet but rapid progress of Christianity in the East, we have just been informed that in Takasaki, the terminus of the railway now opened, tapping the interior of the country, there is already a large and influential Christian church, planted by native pastors, entirely self-supporting, and their new church building, erected by Japanese funds, will be opened on the 16th inst. It might do some of our readers good to take an initial trip on the new railway that day, and be present at the opening of the new church. Then, as an evidence of the indirect influence Christianity is exercising on the moral development of the country, we learn that in the provincial assembly of the same Prefecture (Gumma), out of 40 members eight are Christians. And one of the reforms they have already accomplished is a deathblow to public brothels, that curse and scourge of Japan. No fresh blood is allowed now to enter those institutions which are in existence, and a period of six years is given them to "put their house in order", for after that time the existence of the public nuisance is to be forbidden by law. We learn also that in Nagasaki, where utter indifference reigned for years, a current has set in towards Christianity, one church alone reporting an increase of a hundred or more within the last few months.

WE have had occasion to observe before now that were we to correct all the false renderings and misrepresentations published about writings contained in the *Japan Mail*, our time and space would be completely occupied with the task. We prefer, therefore, to repose confidence in the intelligence of our readers. But it is really very quaint to be charged with "asserting at one time that the Government do not desire absolute jurisdiction over foreigners," and at another, that "foreign opposition to the total abolition of extraterritoriality is suicidal." When it comes to putting words into a writer's mouth for the purpose of convicting him of self-contradiction, something shrewder and less palpably manufactured than this might be devised. These accusations, however, are not important. As we have already said, if those who have adopted our opinions, still think it expedient to keep up a semblance of opposition, they are welcome to their pastime. We do not work to prove ourselves right, but to make the right win. *Non opus est verbis, credite rebus ait.*

The Times, in reviewing George Elliot's Essays, a collection of which has been recently published, says:—"There can be little question that

in her later years her writings took their colour from the character impressed on them by intimate association with a mind that was more philosophical than imaginative. *Middlemarch* and *Daniel Deronda* are leagues apart from her *Adam Bede* and her *Silas Marner*; the great novelist had been loosening her hold upon her wonderful magic wand, or, as we might almost say, she had tried to change it. We admired the brilliancy that dazzled us while it kept our faculties on the strain, but we missed the sense of those gentle and simple human sympathies, which, by inspirations that seemed well nigh divine, touched us with the pathos or the humour of realism. *Adam Bede* and *Silas Marner* will live and breathe so long as the English language is written; while we suspect that her latest novels, if they must always rank among the classics of fiction, will be rather held in respect than read with pleasure." We do not know how it is with our readers, but to our thinking the greatest of George Elliot's novels is *Silas Marner*. Indeed, we doubt whether the English language possesses any work of fiction worthy to rank above it. We should as soon think of comparing *Daniel Deronda* and *Silas Marner* as of preferring a flower of muslin and paper, however exquisitely formed, to a newly gathered bunch of violets and primroses.

ONE of the facts brought out in the investigations of the Committee appointed to enquire into the Star Route Prosecutions is that a lawyer in New York, enjoying a good practice, considers himself poorly paid if he only receives \$100 per diem and his expenses. Mr. Bliss, one of the leading counsel for the prosecution in that case, brought a bill of \$59,532 against the Government, \$8,000 of which he has not yet received. It was shown in evidence that the District Attorney of the United States, whose salary is \$6,000 a year, charges from \$100 to \$500 a day for his services, and that a successful barrister thinks the former rate decidedly unremunerative. Considerable as these figures seem, it is certain that many an English lawyer derives a much larger income from his business. We have known a case of a leading practitioner at the Indian bar, whose fees amounted to a minimum of \$60,000 a year, and sometimes as much as \$100,000.

OUR office, says the *Yiji Shimpō*, with mournful significance, lately had the misfortune to sue a newspaper agent in Osaka for the sum of 180 *yen*, representing the cost of papers sent him for several years past. After being repeatedly pressed for payment, he was declared insolvent. On examining his personal effects, they were found to be worth altogether 42 *sen*, consisting of an old hat, a tobacco-pipe, and a well-worn cushion. And, more by token, we have had to pay the costs of the suit. The woes of a newspaper office are by no means insignificant.

THE *London Daily News* has the following:—"The National Health Society has made use of the Foreign Office to get some valuable information as to foreign legislation against the use of arsenical and other poisonous colors in wall-papers and textile fabrics. In response to a circular from Lord Granville, our representatives at the European courts and at Washington have made careful inquiries on the subject, and their reports are issued as a parliamentary paper of fifty pages. There is a curious variety in the reports, some of the countries possessing the most

careful legislation, while the laws of others take no notice of the matter. In the United States there is no federal law on the subject at all, and from thirty-three out of forty-six states and territories to which Mr. West addressed questions, answers have been received that there is no state legislation or municipal enactment dealing with poisonous pigments. A similar reply comes from Switzerland. There is no federal law on the subject, and in fourteen out of the twenty-five cantons of which the Swiss confederation consists there are no local laws. In eleven others laws do exist, but they differ greatly in stringency and accuracy of detail, and present nothing valuable. In Belgium there is a complete absence of any decrees on the subject; the restrictions in the penal code which apply to the sale of poisonous substances refer only to those used for food. In France, too, the regulations which exist have to do only with articles of food, but the Minister of Commerce has issued a circular in which he cautions manufacturers as to the responsibilities they might incur in the event of accidents arising from the use of poisonous dyes. In Spain and the Netherlands no special enactments forbid the use of arsenical colors; but in the latter country two articles have been inserted in the new penal code which inflict severe penalties upon persons who sell anything which they know to be dangerous to life or health without warning the receiver. In Italy the municipal regulations as to the use of unhealthy coloring matters have to do chiefly with food, and it is proposed to deal with them as regards manufactures in the sanitary code. It is perhaps natural to look to Germany and Russia for the most complete legislation on such matters. The habit of these governments to regulate everything that is done comes out curiously in this connection. In Germany the police have power to enter places of business, take samples of the goods exposed for sale, and examine the materials of which they are composed. Most elaborate regulations are made as to any manufacture in which poisonous substances are used, and a special order was issued in May, 1882, forbidding the use of arsenic colors in paper hangings, and the use of both copper and arsenical colors in the fabrication of articles of apparel or of toys. In Russia, not only is the manufacture of such articles made penal, but the importation of wall-papers, toys, muslins, and other materials containing poisonous pigments is forbidden, with the exception of small ornaments. The Medical Council, too, has issued instructions to tradesmen as to the tests for these poisons."

GENERAL SIR O. CAVENAGH presided at the Royal United Service Institution, when Major Bucknill, R.E., lectured on a means by which artillery fire in foggy weather or in absolute darkness might be made automatic. The lecture was largely composed of an explanation of the technical arrangements for firing the guns automatically, and electricity was the means by which the operation was to be conducted. The guns in a fort would be "laid" in the day-time at a causeway, bridge, or defile which was a long way beyond the outposts, and which it was desired to protect from the enemy at night. The lecturer suggested that it would be easy to reel out a mile of field telegraph cable, terminating at the bridge or causeway in a "circuit closer," under the surface of the ground, the other end of the line being led to a suitable position for a couple of guns, and connected, in continuous

circuit, through the electrical gun tubes of a firing plug, with a portable firing battery. In this way, if the guns were carefully laid at a previous time on the bridge, as soon as the enemy attempted to cross, the circuit closer would cause the fire of the distant guns, and the passage of the bridge would be denied to the enemy except at a loss nearly equal to a passage attempted in open daylight. The relaying of the guns in the dark might be carried out, direction being obtained by pickets having white luminous paint, and elevation obtained by certain sights recommended by Captain J. K. Scott. The lecturer pointed out that like means might be adopted for protecting the channels of rivers in the darkness, and preventing vessels from doing what the Confederate vessels did in the American war, in running past the Federal forts and batteries at night. He also described an automatic pistol and alarm, designed to fire at a distance of 50 yards from a picket and prevent surprise in a night attack. The lecturer stated that experimental trials for sea forts could be made without any special votes to meet the cost, as the stores were in the service, and the labour could be incorporated with the annual exercises of the Royal Artillery and the Royal Engineers.

THE so-called "champion wrestler of Japan, who is at present on a visit to the United States, has just scored an easy victory over Mr. Edward Bibby, "one of the best catch-as-catch-can wrestlers in the world." It is scarcely necessary to say that Matsusada Sarakichi does not at all answer to the description given of him by the New York journals. He is not the champion wrestler of Japan. He is not even a wrestler of budding reputation. He is essentially one of the tyros whose performances serve to fill the gaps between sterner struggles in the *Dohiyo*. That he has a very respectable allowance of muscle, and that he knows how to employ it, are, however, facts which a New York mob practically ascertained. It would appear that a Japanese dressed in the costume of his country is a somewhat uncommon object in the great city, and when Matsusada visited the Bowery, a crowd of curious people soon collected about him. It was a much more demonstrative crowd than the good-humoured assemblages which a foreigner sometimes attracts in Japan. In fact the athlete found it necessary to defend himself vigorously. He commenced operations by butting "a burly longshoreman" in the face, and damaging him so severely that extensive repairs in hospital were found necessary; after which, he seized another truculent individual, and lifting him bodily off the ground, banged him twice or thrice against a lamp-post. Of course when these performances were over he had to fight his way back to his hotel, where the landlord, assisted by a shot-gun, saved him from further molestation. Sarakichi's abilities as a wrestler were not long left unchallenged. He agreed to meet Edward Bibby at Irving Hall, and wrestle for a purse of \$500 and the receipts of the house. The contest was conducted according to English rules, of which the Japanese knew nothing. He was thrown three times in seven minutes. But he did not consider his defeat decisive, and challenged Bibby to another tussle, *more Japonico*. The match came off on the 9th of March, before a large crowd, the betting being three to two against the Japanese. After all the money offered at these terms had

been taken up, Sarakichi's backers turned round and laid odds against Bibby, so that a good round sum depended on the issue. Of the contest itself, the following description is given by a New York journal:—

When the men jumped upon the stage they were enthusiastically applauded. Bibby was as round and rosy as a baby. He moved quickly and was all smiles. The Jap smiled too. His high-cheeked, almond-eyed face looked like that of a Japanese doll suddenly endowed with life. There was nothing presumptuous in the smile; it was childlike and serene. The air of perfect satisfaction never deserted him through the night. At the very outset there was a misunderstanding. The Jap could not understand a word of English, and there was no one at hand who could interpret for him. Pop Whitaker, the master of ceremonies, advanced to the front of the stage and said:—"Gentlemen, we are trying an experiment. I am sorry to say that the distinguished foreigner on my right cannot understand a word I say, but he should nevertheless receive the fairest show in the world. The men are to wrestle in a way that is new to all of us. The rules for to-night are that if any part of a man, except his feet and hands, touch the floor it shall be considered a fall. An elbow or a knee or a shoulder touching earth is a fall, remember." Then he retreated and called, "Time." The men sprang from their chairs into the middle of the stage. They moved like cats. The Japanese rose to his full height, stretched out his arms, clinched his fingers, bent over backward and roared with the mighty roar of an angry bull. Then he dropped his head forward as though his neck was broken and screeched like a frenzied owl. The muscles stood out all over his body in huge rolls and bunches, and the sinews of his neck and arms were like whipcords. The muscles played up and down under his shiny skin. Bibby stood with his legs well apart and his hands outstretched, watching the Jap with amazement. Then the Oriental stamped his bare feet like pile-drivers, rubbed his hands on the floor, and without an instant's hesitation shot head-foremost at his rival. He went forward as if shot from a catapult. His head caught Bibby on the shoulder and the Englishman was knocked westward. He fairly flew through the air coming up heavily against the ropes. If the ropes had not been around the ring Bibby would have gone out of the window and over toward Fourth Avenue. As it was, he hung on to the ropes, while the Jap jumped into the middle of the stage and waved his hands victoriously. Then he turned toward his seat, when Bibby who had recovered himself, sprang forward and seized the Jap from behind. The Jap had evidently considered the bout ended, and was about to sit down when caught by Bibby. He clung to the post which ran up from the corner of the stage and looked appealingly at the judges. During a tremendous uproar the judges forced Bibby to drop his hold. The Englishman was very angry, and would have broken Sarakichi's back if he could have done it. Sarakichi evidently considered butting Bibby into the ropes as a well constituted fall.

No one could be heard above the uproar until Edward Plummer, a well-known sporting man, ascended to the stage and addressed the crowd:—

"Gentlemen, let us have fair play. That bout was won by Matsada Sarakichi. [Storm of hisses.] In Japan men wrestle on a round platform nine feet in diameter; this platform is on four posts at a considerable height from the floor. The two wrestlers ascend to this platform and begin the match. If one of them knocks the other off the platform he wins the bout. I wish also to correct the rule about elbows and knees. That is not right. If the hands touch the floor it is a fall—don't forget that. If a finger touches the floor it constitutes a fall."

On this, Sarakichi, who seemed to divine what was going on, came forward, and illustrated it graphically by touching his little finger to the floor, and then, in pantomime, making a fall. At this juncture a Japanese merchant, who has a store on Broadway, came forward and explained matters to Sarakichi. The Japanese then announced they must adhere to the rule, and constitute a fall on the hands a regular fall. A half hour was wasted in protesting and wrangling, and then the men faced one another again, after agreeing to consider the first fall off. They were both very much in earnest. Once more the Jap shot forward, but Bibby was ready for him. The Englishman lowered his head, and the two athletes came together like goats. Both recoiled. Then, before Bibby could pull himself together, the Jap dashed forward again. Bibby braced himself for another butting match, but instead of butting him the Jap seized the Englishman by the back of his head, and by a terrific effort yanked him forward.

Bibby, taken entirely unawares, shot head first to the floor on his face. The Jap smiled. After being sponged off again the men flew forward like bantam roosters. Once more Bibby was pulled forward, but he saved himself from a fall by clutching the ropes. There was a struggle which made the men glisten with sweat, and once more Bibby went to earth, as if hit by a pile-driver. The Jap grinned. At this point the men who had wagered their money on Bibby grew wild. It was with the utmost difficulty that the crowd could be kept in order. The match was for the best three falls out of five, and two had already been decided. Things began to look blue for Bibby's backers. The

Englishman himself was in anything but an amiable mood. He still wore his stereotyped smile, but was as angry a man as could be found in New York. The Japanese was now giggling. The referee called time and they sprang forward. The Jap once more tried to butt, but Bibby's blood was up, and he was ready for him. As the Jap came at him Bibby lowered his head and dashed forward. He got lower than his antagonist and butted him partly on the face and partly on the chest. He loosened the Jap's teeth, set the blood flying from his nose and made him pant for breath. The Jap butted again, but once more Bibby got in on him. The cheering in favor of the plucky little Englishman was deafening. Then Sarakichi gathered himself together and dashed forward again. Bibby acted as if he had been caught in a cyclone. He was knocked half way through the ropes, and before he could gather himself together, was yanked forward once more and sent sprawling on the floor. He didn't know what had struck him. The Jap roared with delight, danced around the stage, and then joined his friends."

It has been claimed that explosive cigars are manufactured by a Chicago firm especially for the 1st of April. Believing that such an invention could have originated nowhere but in the fertile brain of O'Donovan Rossa, a *Herald* reporter called upon that great man yesterday and asked him if he could give the public any information on the subject. "Why, of course I can," replied O'Donovan, "and as the *Herald* reporters are always so truthful and report me so accurately, I will tell you all about it. The cigar was designed in this office. It is filled inside with gunpowder and dynamite, and the moment a man lights it—whiz-bang!—and away he goes. It will blow his face off inside of thirteen seconds, and it is the grandest invention ever conceived by the brain of man." "Did you invent it?" asked the reporter. "Well, I won't say that," answered Rossa, "but I will tell you one thing. We have sent a dozen boxes of the cigars to Mr. Gladstone. At the next Cabinet meeting he will, of course, hand them out to his fellow hounds, and, as all the Cabinet smoke excepting Sir Charles Dilke, the latter will be the only member of it alive this time Saturday night." A reporter asked Mr. Straiton, of Straiton & Storm, if such a cigar could be manufactured. "No," said Mr. Straiton, "it is impossible. To make a cigar you have to moisten the tobacco, and this, of course, would destroy the explosive effect of the powder. I am positive no such cigar could be made."—*New York Herald*.

In a recent *Punch* there is one capital joke. A bishop is depicted travelling in a third-class compartment, from a sense of duty, in company with a "pitman." The collier "warrants he is only a poor curate." The bishop says, "I once was, my friend, but—" "Ah! I see," breaks in the collier, "that wretched drink!" This actually happened not long ago to the Bishop of Newcastle. One can fancy the feelings of the Rev. Ernest Wilberforce, the eloquent and persistent advocate of total abstinence, at being sympathized with by one of his gentle flock upon having ruined himself with intoxicating liquors.

SOME very interesting Roman sepulchral discoveries have been made lately at Mayence, in the carrying out of considerable excavations and earthworks required for laying the Ludwigsbahn Railroad around the city. Close to the Neuthor the workmen came upon a place of considerable extent, evidently assigned to the sepulchre of civilians. A number of large and small stone coffins were found at irregular distances from each other, the intervening spaces having been occupied by wooden coffins, as is proved by the fragments and the nails which were found. One stone coffin bore a plate, which seems to have previously served as the "head-

stone" of a former grave, and all the indications suggest that the place had been used at successive periods as a place of burial. Most of the graves that were opened contained skeletons of women and children, with which lay bracelets, rings, needles, censers for burning incense, etc. There was one metal coffin, in which lay a woman's skeleton, but without any inscription or ornament. In the children's graves there were toys and other objects, generally of beautiful workmanship, such as little bracelets, glass and earthenware utensils, etc. There was a little polished goblet of singular beauty. One stone coffin (the inscription on which contained some mistakes) held the body of a woman dressed with lime for the purpose of preservation, having the back hair arranged in a long plait of eight strands, woven with great elegance, and the clearly discernible remains of a cap. The hair is now red, but most probably was once black. There was in the coffin a stone needle-case, ornamented with gold bands, two bone dice, a wooden casket with bronze mountings, the key of which was in excellent preservation, and a bronze ring. As to other objects found in the place, a small bronze figure of a dancing Bacchante, three black earthenware water vials, beautifully painted and bearing the following inscriptions: "Vivas mi," "Bibe," "Dos," were especially deserving of notice. A quantity of silver and bronze coins were found, ranging from the time of Hadrian to the end of the third century.

We are requested to state that the next Mitsu Bishi Mail steamer to Shanghai will be the *Genkai Maru*, instead of the *Tokio Maru*, and that the departure will be made on Thursday, the 22nd inst., at 6 p.m., instead of on the date previously announced.

THERE were but fourteen American exhibitors at the Calcutta World's Fair, and six of these were manufacturers of patent medicines and three manufacturers of sewing machines. There was one exhibit each of shade rollers, cotton-bale compressors, plows, harvesters, and pumps. This is a sorry showing for a nation of fifty million people. When we take so little interest in foreign international expositions, how can we expect that one in San Francisco, or any other city of the United States, will be generally recognized by the countries whose efforts in this direction we ignore.—*Alta*.

THE lighting of H.M.S. *Colossus* has been entrusted by the Admiralty to the Anglo-American Brush Electric Light Corporation, whose engineers and electricians are to have entire control of the whole work. Brush incandescent lamps will be used, and the current will be supplied by three "Victoria" dynamos, as specially constructed by the Corporation for incandescent lighting.

AMONG the curiosities at the Patent Office, says the *Washington Letter*, is a model of an invention patented by Abraham Lincoln, May 22, 1849, and probably whittled out by Lincoln's own hand. The invention is for carrying river steamboats over shoal places, especially destined for Mississippi steamers. It consists of two bellows-shaped appliances placed at either side of the boat under the guards, and inflated by means of poles projecting up through the upper deck. The idea was never put into use to any extent, the boatmen preferring the old-fashioned method of "sparring" the boats over the shoals.

So long as Mr. Terashima held the position of Minister to the United States, says the *Fiji Shimpō*, he spent all his leisure time in studying the constitution of the country. He gave much thought to the future constitution of Japan, and spent hours in his library. This, in connection with the fact that he rather neglected the usual round of social duties, caused considerable remark among the fashionable circles in Washington. Even his private means suffered somewhat in consequence, and it is therefore a matter for congratulation that he has recently been appointed to the Imperial Household Department as well as to the *Seido Torishirabe Kiyoku*. In this capacity, Mr. Terashima may be of great assistance to H.E. Mori in the consummation of the latter's elaborate scheme. Shortly after Mr. Terashima had returned from the United States, a certain dignitary called upon him, and expressed great appreciation of, and admiration for, his arduous investigation of the American constitution. "Shortwitted as I am," Mr. Terashima is said to have replied, "I failed to gain a perfect knowledge of the American constitution, though I did my best to understand it. But I learned one thing, and that is, that no one can hope to understand America in its true light who spends but two or three years in the country." We cannot vouch for the truth of this report, but it serves, at least, to teach those a lesson who believe that the Japanese are better acquainted with foreign affairs than they are with their own.

THE United States of America are evidently becoming ashamed of the ruffians who, living under the protection of the Stars and Stripes in the land of liberty, concoct fiendish schemes for the destruction of innocent lives. President Arthur has called the attention of the Government law officers to the necessity of vigorously executing the statutes against the secret shipment of explosives, and the *New York Herald* suggests that America should take the lead in proposing "an extradition clause by which those who engage in dynamite plotting shall be refused safe refuge in the United States, and shall be given up on the proper demand of any European Government which enters into such an agreement." There may be some shadow of excuse for harbouring the political refugees of another State, but why any such consideration should be extended to dynamiters it is difficult to see. In the last explosion at the Victoria Station, the ladies' waiting-room and the refreshment bar were wrecked, and there can be no doubt that had the affair been better timed, several women and children would have lost their lives. It is impossible to imagine that the concoctors of these devilish outrages can be aiming at any result with which human beings could sympathise. Not the least remarkable part of the story is that the capitals of Republican States seem to be the favourite haunts of the dynamiters. New York, Paris, Berne, and Geneva, are their headquarters. In Paris these plotters of treason and murder cannot be touched by the police unless dynamite, or some other explosive, is found on their premises; and the action taken by Challemlacour in preventing the extradition of Byrne has given them fresh confidence. The Paris Prefecture of Police is, nevertheless, lending every assistance in its power to the English authorities. Two or three Inspectors and Commissaires and a score of agents have been placed at the disposal of English police officers who are engaged

in watching the movements of suspected Irishmen. The task ought to be easy enough, for the dynamiters do not hide their lights under a bushel. At the banquets held in Paris in honour of St. Patrick's day, the speeches contained hints that more explosions would soon occur in London, and a man called Patrick Casey openly advocated the use of dynamite. As usual, Mr. O'Donovan Rossa has been making himself conspicuous. It was proved that the pistols used in the infernal machines which were found in the London railway stations had been made by Remington and Sons, of New York, and enquiries showed that twelve such pistols had been purchased by a stranger shortly before the attempted outrages. A newspaper reporter called on Mr. O'Donovan Rossa and asked him whether he had any idea who this mysterious stranger was. "Yes," replied the apostle of dynamite, "I know who he is, but I won't tell. But if you wish an interesting piece of news I'll give it to you. In less than four weeks the Suez Canal will be no more. It will be blown—""Higher than a kite," interrupted Mr. Patrick Joyce, the secretary of the Fenian Brotherhood, who sat in the adjoining room. "What's the use in blowing up a few railroad stations that England does not care for. The proper way to hurt England is to touch her pocket, and the best way to do that is to ruin her commerce. So, after we have blown up Windsor Castle—""And both houses of Parliament," chimed in Mr. Rossa. "And Dublin Castle," said Mr. Joyce. "And Marlborough House," said Mr. Rossa. "Don't forget Marlborough House—""We then intend," continued Mr. Joyce, "to turn our attention to the Suez Canal. And when that's gone I think England will be ready to admit there is something in the 'resources of civilization.'" "I assure you, sir," said Mr. Rossa, "if I would only tell what's going on in this office at the present time the whole British Empire would tremble." All the detectives in the world won't catch them. Look how easily they passed through Castle Garden with all of Pinkerton's men watching for them. Yes, they are certainly here, and, what's more, they are on business. You will soon find out what that is." Mr. Rossa is probably more mad than mischievous, but it might be well if his own account of himself were accepted just by way of showing that self-proclaimed murderers are not always counted heroes.

A SIGNIFICANT *contretemps* occurred the other day at Keelung between the officers of the French frigate *Volla* and the Chinese. It appears that on the 13th ult. as some of the officers were walking on shore, they evinced a disposition to examine some of the forts. This the Chinese objected to, whereupon the Frenchmen withdrew, and began sketching the fort from a short distance. As this was also regarded by the Chinese as a breach of privilege, the latter made strong protestations against it, on which the officers returned to their ship in great anger. The next day the Captain of the *Volla* ordered some coals to be purchased. The Chinese, however, irritated at the events of the day before, and probably not feeling disposed to provide the French ship with material which was likely to be used against themselves, refused to comply with the requisition; whereupon the Captain threatened that if the coals were not delivered by 8 a.m. on the following day he would immediately bombard the town. At the same time, he demanded an apology for the

alleged insult to the officers on the day before. The Chinese, being unable to do otherwise, acceded to both demands.—*N. C. Daily News*.

THE *New York Nation*, in a paragraph written by a gentleman who has visited Japan, pays skilful homage to "The Loyal Ronins," which, as our readers are doubtless aware, was translated, some time ago, by Mr. Saito Shuichiro, the translation being "dressed" by Mr. Greey. The critic is decidedly ingenious. He is evidently incompetent to pronounce, of his own knowledge, a verdict upon the fidelity or excellence of the version which the authors have given of Takeda Idzumo's celebrated drama. But, by a convenient stretch of veracity, he succeeds in bestowing a suggestive mead of vicarious praise. "Besides the honour," he says, "of further retranlations of his version into German, Italian French, Swedish, and Spanish, Mr. Greey has been honored with the thanks of the Mikado, and Mr. Saito has been appointed to a secretaryship in the Foreign Office in Tokiyo; after assisting our Minister, General Foote, during his first experiences in Séoul, Corea." This is decidedly ingenious. The expression "his version," while not absolutely asserting the thing that is not, leaves the reader to draw the inevitable inference that Mr. Greey translated, or at any rate assisted to translate, the original; whereas, he had probably no more to do with the actual translation than the editor of the *Nation* himself. The paragraph, as it stands, leads as to suppose that retranlation into five European languages and the thanks of the Mikado were the immediate results of Mr. Greey's share in the work, while Mr. Saito's reward was a Secretaryship in the Foreign Office. We have had occasion before now to comment in strong terms on the disingenuous, if not absolutely dishonest, nature of the panegyrics bestowed by American newspapers on the literary labours of their countrymen in Japanese fields, and in this particular instance, it may safely be asserted that nobody would condemn the clap-trap of the *New York* journal more than its objects themselves. It is very possible that they may have sent a copy of their work to the Mikado, and that His Majesty may have expressed his pleasure; but we venture to assert that the story of Mr. Greey receiving the Imperial thanks for his labours as a translator is a pure myth. Certainly Mr. Saito's appointment as Secretary of the Foreign Office was not even remotely connected with his translation of "The Loyal Ronins," and it may be safely predicted that his experience of American puffing devices will not be likely to tempt him again into the field of foreign literature.

A SINGULAR exhibition of fidelity on the part of a house dog was witnessed in Stapleton, S. I., on the occasion of the death of Mrs. Walter Odell, wife of a tradesman in that village. A Scotch terrier, named Fido, had been a pet with Mrs. Odell for the past twelve years. During the two months that Mrs. Odell was sick, Fido remained continually beside her bed. After her death the dog persisted in lying beside the coffin, and followed the casket to the hearse. When the funeral cortège reached the grave Fido was there, having followed the hearse, and watched the interment of his mistress' remains. After the funeral Fido returned home and took up his former position beside the bed that had been occupied by Mrs. Odell. The dog from that time refused to eat and gradually grew weak, and was evi-

dently irritated at any efforts to disturb or feed him. At times the animal moaned in a low tone. Two days ago Fido came across a pair of shoes that had belonged to Mrs. Odell and had been thrown out of doors. These he carried to his self-assigned post, near the bed, and placing them on the floor, laid his paws and head across them. In this position the dog remained several hours. During Monday night Fido roused the household by his whining, and Mr. Odell, who was also very much attached to the animal, went to the room where the dog was. It was apparent that the animal was in great distress, and at three o'clock on Tuesday morning, exactly one week to an hour after Mrs. Odell's death, Fido suddenly ceased his whining, looked up, rose to his feet, barked quickly and wagged his tail as if pleased, then instantly dropped his nose on his late mistress' shoes and died.—*New York Herald*.

THERE is scarcely any subject about which so many misleading statements have been published as the subject of torture in Japan. Some people seem determined to believe that torture is still applied, and others are so careless as to pretend that it was only abolished two or three years ago. There is no ignorance so hopeless as the ignorance that remains ignorant within easy reach of knowledge. Any foreigner who pleases can obtain access to a Japanese police station and make himself thoroughly acquainted with the methods of the *procès-verbal*, as it has been practiced since 1876. What he will see is a quiet conversation, conducted without any semblance of violence. It fact, the whole *raison d'être* of torture disappeared years ago, when it was finally decided that confessions should thenceforth cease to be necessary for conviction. The whole system of Japanese criminal procedure, and the treatment of prisoners, are now in entire accord with European civilization. It is not unnatural that the public should be slow to arrive at absolute credence on such a subject. The Japanese might have expected that, and ought not to complain of it. But what they have reason to complain of is the unreasoning statements published from time to time by the local English press. A few days ago one of our contemporaries asked the public to infer that torture is still "applied" in Japan because two policemen had been sentenced to five months' imprisonment with hard labour, and a fine of 15 *yen*, for ill-treating some prostitutes. The curious part of this affair was that the same journal, when originally publishing the same news, made the following comment:—"This exemplary punishment affords the best evidence of the resolve of the Government to suppress practices which, existing in however slight a degree, must inevitably reflect upon the administration of Justice in this country." The practices in question were kicking and cuffing—practices not generally included in the category of judicial tortures. But the injustice and inconsistency of the writer in this case were not so remarkable as the apparent anxiety of another English journalist to prove that "the taint of torture still lingers in the judicial practice of Japan." A foreigner, whose cook had been arrested on a charge of gambling, complained to the police of inconvenience caused by the man's detention. The answer was that, "if the accused would confess, his case could be quickly disposed of." This, the public was informed, must be regarded as a proof that "when there is no evidence, or not sufficient evidence to

justify a conviction, culprits are kept in prison during the pleasure of the authorities;" and the question was asked, "what is a resort to such a system but a species of torture?" Probably not one person in Yokohama was deceived by such a transparent subterfuge. An ample stock of malevolent ingenuity is required to manufacture evidence of the use of torture out of the simple and perfectly natural statement that a case demanding further investigation would be accelerated by the confession of the culprits. We have never been able to explain the animus underlying these aspersions, but of the mistakes into which it betrays those it inspires, interesting instances are sometimes afforded. A short time ago, for example, one of the vernacular journals of Tokiyo published an extraordinary story to the effect that the Headman of a remote village in the province of Higo had prevented the people from cutting down a pauper who had hanged himself, the grounds of interference being that before disturbing the body the authorities must be notified. This incident afforded an excellent peg whereupon to hang some abuse of Japan. It could "scarcely redound," we were told, "to the much-vaunted 'civilization' of the natives of this country." It was said to be "probably unique as an instance of servility," and was described as "a stretch of abject slavishness such as we hardly expected to meet with even in the land of *Dai Nippon*." How astonished the writer of these good-natured comments would have been could he have known that, almost at the very time he was penning his sarcasms, a precisely similar event was occurring in England. At a village called Hollington, a man was drowned in a pond, and the evidence elicited at the coroner's inquest showed that the body had been allowed to remain in the water nearly an hour in the presence of a number of spectators, who thought it would be wrong to touch the corpse until a policeman had seen it. What would our Yokohama critic have said of the "much vaunted civilization" of the "natives" of England, their "unique servility" and their "abject slavishness," had fortune cast his journalistic lot in the little village of Hollington? Assuredly, if we desire to know the truth about Japan, it behoves us to remember Locke's maxim:—"The best way to come to the truth is to examine things as really they are, and not to conclude they are, as we fancy of ourselves, or have been taught by others to imagine."

It appears that wherever there is surplus moisture a large eucalyptus will prove of great service, and a group of them will dispose of a vast amount of house sewage. But where there is water which it is not desirable to exhaust, as in a good well, it will be wise to put the eucalyptus very far away. The owner of Bay Island Farm, Alameda County, recently found a curious root formation of the eucalyptus in the bottom of his well, about 16 feet below the surface. The trees to which the roots belong stand 50 feet from the well. Two shoots pierced through the brick wall of the well, and sending off millions of fibres, formed a dense mat that completely covered the bottom of the well. Most of these fibres are no larger than threads, and are so woven and intertangled as to form a mat as impenetrable and strong as though regularly woven in a loom. The mat when first taken out of the well was water soaked and covered with mud, and nearly all that a man could lift, but when dry it was

nearly as soft to touch as wool, and weighed only a few ounces. This is an excellent illustration of the way in which the eucalyptus absorbs moisture, its roots going so far to find moisture, pushing themselves through a brick wall, and then developing enormously after the water is reached. It is thought that one of the causes of the drying up of wells is the insatiable thirst of these vegetable monsters.

A LONG and elaborate article in the *New York Herald*, upon the Japanese colony in that city, opens with the remark that "it is a significant fact that among all the nations of the world whose people have made the United States their home, it may be exceptionally recorded of the Japanese that not one has been convicted of a criminal offence in an American court." As if oppressed by a necessity for qualifying this praise, the writer continues by assuming that "now and then there may have occurred instances of undue familiarity with our native 'blue ruin' on the part of the Japanese sailors who frequent the Pacific coast," but, he adds, "the page is clean whereon is written any transgression of the law above the grade of a mere misdemeanour." The reporter need not have feared to stand by his original statement. Japanese sailors do not "frequent" the Pacific coast, nor any other coast, to begin with. The few specimens that have visited other countries than their own, have generally been crews of war vessels, and their behaviour, wherever they have landed, has been without reproach. European and American naval officers have been heard to express doubts as to the efficiency of Japanese Jacky, because his language allows him no facilities for swearing, his prejudices are opposed to "looting," his appetite for strong drink is not inappeasable, and he enjoys, when on leave, many things better than fighting. The *Herald* commentator might have omitted his possible exception, in recording the general good conduct of the Japanese abroad. During the twenty years of their travel and residence in Europe and America, only four instances of dereliction, on the part of any of them, have been known to occur. The most serious was that of the unfortunate *chargé* in France, and his offence, it is well understood, had many points of extenuation. The lapse of a brother diplomatist, in another country, was rather ludicrous than criminal, and was held to be sufficiently punished by the forfeiture of the round sum he was compelled to pay for his release from the snares of a clever adventuress. The third misdemeanour was an assault, under circumstances of considerable provocation, the perpetrator of which was exempted from the usual processes of justice, as a tribute to the high reputation of his people in general. The fourth was a freak of what is technically termed "malicious mischief,"—a species of social forgery involving the reputation of several ladies. It brought more discredit upon the Japanese name than any other act of his countrymen in foreign parts, but the offender found a partial excuse in his professed ignorance of what was due to the weaker sex, and escaped with no worse consequences than a smart personal chastisement. These cases, about which there has never been any concealment, are the only shadows on an otherwise blameless record, extending over a score of years. Regarded collectively, as the *Herald* observes, the Japanese "command the highest respect—that which has been exacted by in-

telligence, sobriety, industry, and an observance of the social virtues." The author of the article from which we quote speaks especially of the reunions at the club-house in Sixth Avenue, near Twenty-first Street, where he has met hundreds of representatives of this empire, and never encountered one who was not "the embodiment of good taste, and the *beau ideal* of a gentleman;"—"well read in everything but New York politics," and always familiar with current literature, especially that which relates to material progress, in mechanics, agriculture, etc. "He converses like a well-educated gentleman, and is better posted on practical subjects than half of our own people." In addition to their social qualities, the Japanese are extolled for their ready business faculties, and for the unblemished credit which they enjoy everywhere. It is agreeable to find so complimentary an estimate in a journal which no one can look upon as other than impartial and disinterested. The *New York Herald* would perhaps be surprised that the nation to which these objects of its eulogy belong is regarded by a very active and argumentative body of foreigners in the Far East as incapable of exercising the inherent rights and privileges of an independent State.

RICHARD HENGIST HORNE, a poetical and philosophical writer who enjoyed a high reputation forty years ago, has just died in London at the age of eighty, having outlived nearly all the English men of letters of the first half of this century, whose early steps in their career it was his pleasant fortune to encourage and assist. He entered the field of authorship about 1837, and continued publishing with great activity for ten or twelve years, after which he turned to other occupations. His most memorable composition was the epic poem "Orion," the first edition of which—to show his indifference to pecuniary rewards, and his estimate of the popular appreciation of ambitious literature in 1843,—he insisted on selling at the price of one farthing. His only production of importance in later years was a collection of Mrs. Browning's letters in 1877,—he having been on terms of intimate friendship with that gifted lady. Much of his life was spent in adventurous wandering,—in India, Mexico, and Australia. Although he continued to write industriously to the last, he has withheld his works from publication, the only exception in recent years being an imitation of the ancient "miracle" or "morality" plays, entitled "The Good Samaritan," which, by a strange coincidence, appeared in *Harper's Magazine* simultaneously with the announcement of his death. This is a style of composition in which he took much satisfaction. He left many specimens, which will undoubtedly be published by his executors, together with numerous other manuscripts.

MRS. MARY A. MILLER, whose application for a license to navigate a steamboat has been a theme of newspaper talk the past winter, is not the first woman who has served successfully as mistress of a ship. *Harper's Weekly* tells of Mrs. Capt. Patten, of Bath, Me., who while her husband was lying ill in his berth, navigated his ship around Cape Horn and up to San Francisco, although his timid first officer wanted to stop at Valparaiso for assistance: of Mrs. Capt. Abbie Clifford, of the brig *Abbie Clifford*, who after her husband had been washed overboard, brought the vessel safe into New York Harbor

from below the equator; of Mrs. Capt. Reed, of the *Oakland*, of Brunswick, Maine, who was a practical navigator of celebrity; and of Miss Janet Thomas, who often used to navigate her father's ship, who is now teaching a school of navigation in New York, and who was in part author of "Thom's Navigator," a book of authority among mariners. The cases are all of recent date. To them the Leavenworth (Kan.) *Times* adds the case of Mrs. Capt. John Oliver Norton, of Edgartown, Mass. Her husband commanded a whaling vessel, and she frequently went with him into the Arctic waters. On one of these expeditions all the boats were out, leaving on board the captain and just enough of the crew to manage the vessel. A whale was noticed off to the starboard, and the captain and men were puzzled how to get it. It was the woman who solved the problem and settled the fate of his whaleship. Going to the wheel she prevailed upon her husband to leave the ship in her charge, with two disabled men, while he and his men went after the whale. He did so. The woman managed the ship all day until night, when the boats returned, that in command of her husband having captured the biggest whale ever seen in those waters. When the ship put in home, the New Bedford owners made the "woman commander" a handsome present.

ALTHOUGH but two cases of cholera have as yet been reported, and only one of these two in the capital, the Board of Health is already enforcing the strictest sanitary precautions. The public thoroughfares are under the special supervision of sanitary officials, and scavengers are busy in the more thickly populated districts. In the one fatal case reported up to date, Midzumo, a man of 53 years of age, was the victim. Though there does not appear to be much probability of an outbreak of this terrible scourge, it is better for all to be on their guard.

No recent phenomenon has more puzzled astronomers than the remarkable appearances of the atmosphere as observed after sunset and before sunrise during the past five months. These brilliant glows have been seen in all parts of the habitable world. They were first noticed on the 28th of August, and they may still be seen, both morning and evening, when the state of the atmosphere is favorable. It is well known, in fact, that on any clear day the matter by which the appearance is produced may be seen around the sun, extending to a distance of twenty or thirty degrees. The phenomena have been ascribed:—1. To watery vapor in the atmosphere. 2. To meteoric matter through which the earth has been supposed to be passing; and, 3. To the volcanic eruptions of Java and Alaska. The first conjecture has been disproved by the spectroscope. The second may be said to be rendered improbable by the long continuance of the glows. The earth crosses the meteoric streams of August and November in a few days at most, but the present phenomena have already lasted more than five months. The volcanic hypothesis is received with most favor, and we must either accept it or admit that the true explanation remains to be discovered. In the last number of the *Sidereal Messenger* I have briefly stated some objections to this theory, as follows:—"No similar results—at least to any great extent—had been known to follow volcanic eruptions. If the matter started from Java on

the 26th August, its rate of motion through the atmosphere till its appearance in Brazil was 109 miles an hour. Or, if we assume that the appearance in South America was derived from the Alaska outburst, we have the additional improbability that results of a character before unknown following volcanic eruptions in opposite hemispheres at nearly the same time. Again, what force could have maintained this volcanic matter at so great an elevation during a period of several months?" In short, no explanation yet offered is free from serious difficulties.

SHORTLY before one o'clock on Friday morning a fire broke out in a Japanese house occupied by a tobacconist, named Ishiwatari, at 95, Nichome, at Motomachi. The flames soon spread to the adjoining buildings in every direction, but as there was little or no wind, and owing to the prompt arrival of foreign and native engines, it was extinguished after 70 houses had been destroyed. Men from the *Sapphire* and *Essex* were landed, and assisted to prevent the fire from spreading by pulling down the adjacent houses. The fire is said to have originated by the upsetting of a kerosene lamp used in the kitchen, and two men are reported to have received injuries during their exertions at the scene of the conflagration.

A TRUTHFUL geographer and historian, in a special letter to the Press from the neighbourhood, tells us that Sarawak is a deadly dull place. From his account we should say it must be. He tells us that it rains there every day, the rainfall being as much as 200 inches in the year. Then there is, he complains, no society. A Yankee on a "prospecting" expedition once asked the only settler on a bit of land he had bought on speculation what sort of place it was. "Very good, stranger," said the settler, "but we badly want two things—water and good society." "Why," answered the visitor, "that is exactly what is wanted in —," a place we never refer to. At Sarawak they can console themselves for the want of society by the superabundance of water.

MR. OKI MORIKATA, the Governor of Kanagawa, entertained a number of foreign officials, including some of the Ministers, on Monday last, at the building formerly known as the Imperial Lodge, at Iseyama. After tiffin, which commenced at half-past twelve, some Japanese dancers were introduced, the performance lasting till five o'clock, when the guests departed.

AMONGST the passengers who departed on Wednesday by the Mitsu Bishi Mail steamer *Hiroshima Maru*, was His Excellency Sanjo Saneyoshi, First Minister of State, who goes to Hiogo, en route for Kyoto, to collect material for a report upon ancient Court ceremonies.

MR. JOSE DA S. LOUREIRO, lately appointed Consul-General for Portugal to Japan, has received the Imperial recognition of H.M. the Mikado, to whom the Minister for Foreign Affairs forwarded the report of Mr. Loureiro's appointment. —*Kwampo*.

A RECENT return shows that the number of mutes in Tokiyo is 615; that of blind persons 2,108, and that of deaf persons 289; the total of the three classes being 3,012.

THE Pacific Mail steamship *City of Peking*, for this port, left San Francisco on the 13th instant.

VAN BUREN v. TRIPLER.

THE legal records of this Settlement fortunately contain few cases similar to that recently tried in the Ministerial Court of the United States, Tokiyo. We refer to it with considerable reluctance: so much so, indeed, that its unedifying details should certainly not receive further publicity in these columns, had not partial and unjust statements in other quarters made it a duty to place the truth plainly and simply before our readers. In order to understand the circumstances out of which the case arose, it is necessary to go back to the years 1864 and 1866, when, by Conventions between the Japanese Government and the Treaty Powers, certain portions of the foreign Settlement were reserved for public buildings, such as town-halls, post-offices, consulates, jails, and so forth. It was provided that the lots thus reserved should be given over in trust to the Consuls, who were bound to put them to no other uses than those specified in the Conventions; and it was further enacted that "the Japanese Government might annul the title-deed of any portion of the land in the Consular lot that might be used for any other purpose than Consular residences and offices, that being the special object for which the grant of the said land was made by the Japanese Government." In view of these international stipulations, there could be no manner of doubt that the acquisition of any part of this Consular lot, or its occupation, whether for building or other purposes, by a private person would be wholly illegal. Upon the conclusion of the above Conventions, a portion of the Consular lot was appropriated for the use of the United States. On this portion the Japanese Government agreed to construct certain premises, which should serve as a Consulate and jail for the United States, the Government of the latter, on its side, undertaking to pay, in addition to ground-rent, an annual sum amounting to ten per cent. of the total cost of construction. Under this arrangement the yearly rent ultimately reached the figure of \$1,536.40, being made up of two items, viz., ground-rent, \$175.40, and percentage on aggregate cost of buildings, \$1,361. With regard to the period of tenure, no definite arrangement seems to have existed, except in the case of the jail, which the Government of the United States was bound by contract to hold for a term of ten years at least, that is to say, until April 22nd, 1883. The cost of the jail having been \$6,000, its rent represented \$600 of the whole annual payment. Things remained thus for some time, until the Japanese authorities, finding themselves embarrassed by the question of repairs, and being moreover anxious, as it appears, to terminate this anomalous phase of their international relations, proposed that the United States Government should enter into final possession of the premises on

payment of a sum of \$5,000. The proposition was transmitted to Washington by Consul-General VAN BUREN, who strongly recommended its acceptance. But the Department of State declined to entertain any such idea, on the grounds, first, that the proposal should have come through the United States Representative in Japan; and secondly, that the acquisition of property in foreign countries was against the national policy of America. The Japanese authorities, however, were not satisfied. During the course of the next few years, their desire to surrender their functions as landlords became so strong that, in the beginning of December, 1880, they again asked Consul-General VAN BUREN to move his Government to purchase the premises. The Consul-General, according to the evidence given by him in Court, declined to act in the matter, alleging, as his reason, the decision of the Department of State that any such proposal must be forwarded through the United States Minister, and that its acceptance would be a violation of America's foreign policy. Still, from some unexplained cause, the interviews continued. Whether the Japanese authorities hoped to alter the fixed channels of official communication with the American Government, or whether they fancied that this point of national policy might be waived in view of pecuniary temptation, they went on formulating proposals, until finally they asked the Consul-General himself to become the purchaser, declaring that they were willing to part with the buildings for the sum their materials would fetch as lumber, namely, 2,547 *yen*, or, at the then rate of exchange, 1,535 Mexican dollars. It must be confessed that the offer was very tempting. We have said that the annual rent paid by the United States under an agreement which could not terminate before April, 1883, and which was virtually interminable so long as the Conventions remained unaltered—the annual rent was \$1,536.40 in gold, or \$1,690 Mexican dollars. Out of this sum, ground-rent amounting to \$175.40 was payable each year to the Local Authorities, so that what the latter proposed was to sell to the Consul-General, for \$1,535, a property which brought in an annual return of \$1,514.60. General VAN BUREN availed himself of the chance. He seems either to have been ignorant of the Conventions or to have strangely misinterpreted them. It was plain that he could not purchase the property in his official capacity. The decision of his Government was directly opposed to that. If he bought at all, he must buy as a private citizen. In other words, he, as a private gentleman, must acquire property expressly set apart by international Conventions for public use only. That he perceived this difficulty is not apparent. On the contrary, the only theory consistent with the hypothesis that he acted in good faith throughout, is that he wholly confused his private and his official characters.

Here were certain buildings erected by the Japanese Government under contract with the United States Government for the purposes of a Consulate and jail. That the Japanese Government, without the consent of the Department of State at Washington, should sell these buildings to a private citizen while they were actually in use by American officials, would plainly have been *ultra vires*, as well as a breach of faith. But that they should sell them to the United States Consul-General to serve their original purpose thenceforth as heretofore, was altogether a different matter. Whatever General VAN BUREN thought of the Conventions, he ought to have seen that he could buy the buildings only for official purposes, and therefore only in his official capacity. The rent paid by the United States Government was not fixed on general principles: it was determined with reference to the cost of these special buildings, and so long as they could be maintained in a habitable condition, the American Government had an inalienable right to occupy them for Consular purposes. They could not possibly be sold to a private person as movable chattels, because their removal would have deprived the United States of a Consulate internationally contracted for; neither could they be sold to a private person as fixed property, because they stood upon ground internationally set apart for public use only. Unfortunately, General VAN BUREN failed to apprehend these issues. Indeed, he carried his confusion of mind so far that while professing to act wholly in his capacity as a private citizen, he nevertheless went through the form of consulting the United States Government as to his proceedings. It was, in truth, a very perfunctory species of consultation, and it elicited an equally perfunctory acknowledgement. The Consul-General simply informed his Government that the Japanese Authorities, being desirous of divesting themselves of all such properties, had "proposed to him to become the purchaser of these particular buildings;" that "he supposed no possible objection to his making such purchase could exist," and that "as no legal obstacle intervened, he should accept the proposition, of course always reserving the buildings for Consular occupation and receiving the same rent as heretofore paid." This despatch, dated December 1st, 1880, concluded with the words "trusting that my course may meet the approval of the Department"—a phrase, which is difficult to reconcile with the theory of a purely private transaction. The approval, however, was not awaited. On the 16th of the same month, the Governor of Kanagawa wrote *officially*, offering to sell the buildings to the Consul-General for 2,547 *yen*. On the following day, the Consul-General accepted the offer by letter, and declared his readiness "to pay the money at any moment when the conditions of the purchase should be agreed upon and con-

veyance papers received," adding "I shall be pleased to know that the papers will be speedily prepared." The result was that by the 18th of the following month (January), the Consul-General was able to report the conclusion of the transaction. These points are worthy of note, as showing that the purchase was affected without awaiting instructions from Washington, whereas General VAN BUREN stated in Court that "he decided not to entertain the Japanese proposition until he had communicated with the Department of State;" that "he wrote to the Department that the Authorities had offered him the buildings and were determined to get rid of them, and that if he heard no objections from the Department within a reasonable time he would complete the purchase;" and finally, that "he heard nothing from the Department to the contrary and completed the purchase." As a matter of fact, so far from waiting "a reasonable time," or completing the purchase *after* hearing nothing to the contrary, his letter to the Governor of Kanagawa, quoted above, shows that he hastened the transaction, and virtually concluded it long before his first despatch could have even reached Washington. Altogether this part of the affair appears to have been singularly loose and disingenuous. It was loose, because, while informing the Department of State that he had "*agreed* to use the buildings as before for Consular purposes and upon the same terms," he contented himself with saying to the Japanese, "I *suppose* it will be of course *understood* that the buildings are always to be occupied for Consular purposes;" thereby substituting a supposition of an understanding for an agreement, while in the deed of sale itself no words were inserted which could possibly be construed as pointing, however remotely, to such an agreement or understanding. It was disingenuous, because, while securing for himself an extraordinary profit, and while afterwards acknowledging that he "bought the property to make money out of it," the account he gave his Government was, "I have assumed their (the Japanese) obligations as to repairs, &c.; this course has been pursued with all their properties occupied by foreigners, they giving as a reason for their determination to part with them the constant trouble and expense they are put to in making the necessary repairs." What the Department thought of these things is not known. The despatches reached Washington within a few days of a change of Administration, and the only reply they elicited was an acknowledgment from a Third Assistant Secretary that despatches, numbered so and so, had been received.

All these facts were brought out in evidence, oral or documentary, at the recent trial in the United States Ministerial Court. The case was an action for libel laid by Consul-General VAN BUREN against Dr. T. H. TRIPLER, who, as was proved by the

witnesses for the prosecution, had publicly charged the plaintiff with "getting the Japanese to sell him the Consular buildings in an underhand way;" adding, that "he had no right to buy them," that "it was contrary to law," and that "he had swindled the Government." These defamatory words were uttered in the Yokohama United Club, and their proximate purpose was to prevent Consul-General VAN BUREN's election as President of that institution. That the occasion was wholly inopportune, and that the utterances were, to all appearance a mere ebullition of vindictive malice, there can be little question. Public opinion must unanimously condemn the conduct of the defendant in this respect. But that the plaintiff's action exposed him to injurious reflections, is equally certain. In the first place, his purchase of the Consular buildings in his capacity of a private citizen was wholly illegal, while in his capacity of a public official, it was still more reprehensible; in the second place, the terms of the purchase seemed such as to confer an extravagant benefit upon the purchaser at the cost of the American Government, whose trustee he was. It is a well recognised principle of law that proof of probable cause goes far to justify a libel. In the case under consideration, there certainly was probable cause, and the Judge, after a lucid and exhaustive review of the facts, ruled that exemplary damages ought not to be given. It was shown in evidence that, nearly three years after the sale in question, the defendant had impeached the conduct of the plaintiff directly to the Department of State at Washington, and had received a reply stating that the Department was aware of the intention of Mr. VAN BUREN to become the owner of the buildings occupied by him as Consul-General of the United States, and did not oppose a transaction into which he entered as a private citizen and at his own risk." Whether, under any circumstances, the Department would have been willing to acknowledge the error of its previous silence, the terms of this reply show that the nature of the transaction was wholly misapprehended. As a private citizen General VAN BUREN could not possibly be the proprietor of premises standing on the Consular Lot, and if the Japanese Authorities sold the property to him in that character, they were guilty of a direct breach of the Conventions. In view of the letter of the Department of State and the ruling of the Judge in the Ministerial Court, the only course open to the officials of the Kanagawa Prefecture is to resume possession of the premises without delay. So far, however, as Dr. TRIPLER is concerned, his action in appealing from the Judgment of the Department of State to that of the bar-room of the Yokohama United Club was, to say the least, undignified. The defence in the Ministerial Court was clumsily conducted; so much so, indeed,

that the ends of justice would probably have been defeated, had not the evidence for the prosecution, by travelling beyond the lines laid in the complaint, conferred on the defendant a right of similar latitude. This, however, did not help to smooth the difficulties of the Judge's task, who, in addition to holding the balance between a plaintiff more disposed to bluster than to reason, and a defendant who had not quite made up his mind what to plead, was in a manner required to pronounce upon matters of an international character. Altogether, it was most unfortunate that the affair was made public. General VAN BUREN was under no necessity to vindicate his character. He himself admitted that the libel could not seriously injure him. But of the disclosures made in Court, the same can scarcely be said. For, although there is nothing to show that he did not intend to act in a straightforward and just fashion, it is impossible to think that the reputation of the American Civil Service will be improved by such revelations. Another, and a still more regrettable result of the affair, is the disgraceful attacks it has prompted two local journals to make upon the impartiality and honour of a gentleman whose name, throughout a long and unsullied career, has been associated with every thing that is upright and large-hearted. It does not redound to the honour of journalism in this part of world that the issue of a libel suit should have been made the occasion for utterances at least as defamatory as, and far more cowardly than, the slanders which formed the subject of complaint. There are some calumnies so miserable that to treat them with any seriousness is an insult to reason. No one will make the mistake of supposing that the United States Minister can be reached by such defamers, but it must be confessed that this feature alone was wanting to complete the obloquy of a very discreditable case.

A VALUABLE OPINION ON A POPULAR QUESTION.

IT is no small pleasure to those who have steadily advocated the adoption of a liberal policy towards Japan, to find that public opinion is at last declaring itself emphatically in favour of their views. The memorandum of the foreign Missionaries, published in our correspondence column, is a document of undeniable value. Outside official circles, there is no body of men so conversant with the language of this country and so familiar with the disposition of the people as the Missionaries. We might, indeed, justly extend this verdict. For though in point of scholarship and research the members of the English Civil Service have won distinction as honorable to themselves as it is a source of pride to their countrymen, their circumstances to a great extent preclude them from enjoying that free and general

intercourse which is essential to a true appreciation of national character. To the Missionary, whose life of noble devotion and acts of pure charity invite confidence as they promise sympathy, the hearts and thoughts of the Japanese are laid bare in a manner not possible under different conditions. He sees, as few others can see, the true attitude of the popular mind, while, as a man of high attainments and large philanthropy, he is capable of appreciating, not only the proper jealousy of his countrymen on behalf of privileges which constitute the basis of personal freedom, but also the equally proper eagerness of the Japanese to recover rights which concern their national independence. Considered from this standpoint, the weight attaching to any unanimous expression of Missionary opinion can scarcely be over-estimated; while, at the same time, the obligation to express that opinion is also established. There are, unfortunately, many phases of international policy which cannot safely be submitted to the dictates of abstract morality. Practical statesmen, especially the statesmen of a country like Great Britain, which sends out, every year, to all parts of the World, thousands of enterprising, strong-handed and stout-hearted men, intolerant propagandists of their own civilization and untiring architects of universal prosperity—the statesmen of such a country are often compelled to sacrifice abstract justice to expediency; often obliged to recognise that to recede from a position originally unwarrantable may entail results far more disastrous to the interests and happiness of both sides, than the worst consequences of maintaining it. Happily, however, Japan does not come within the category of these cases. Foreigners formerly found it necessary for themselves, as it was certainly beneficial for her, to occupy a special status carrying with it exceptional privileges. But they have never claimed any shadow of title to make that status permanent. Still less have they acknowledged any desire to treat Japan as a conquered country, and to impose upon her conditions inconsistent with her national independence. It has always been frankly confessed that the earliest opportunity, reconcilable with prudence, should be seized to remove invidious distinctions between Japanese and foreigners, and to sweep away, simultaneously, from the path of free intercourse, the barriers set up by those distinctions. The only question was—had that time come? Some answered, yes: others, as emphatically replied, no. Two things, however, were admitted by both parties to the controversy; namely, that the relations between foreigners and Japanese had become highly unsatisfactory, and that the development of mercantile prosperity demanded some radical change. Exclusiveness does not conduce to the growth of trade. The seclusion to which foreigners were condemned in

the treaty ports necessarily contemplated a limited commerce. If commerce was to increase beyond that limit, the seclusion must be proportionately relaxed. On the other hand, so soon as the seclusion was relaxed, some different arrangement with regard to jurisdiction became inevitable. On this score the time for a system more liberal had unquestionably come; since even if Japan's claims to equal treatment were ignored, it was yet certain that there had grown up, little by little, about the foreign settlements an environment which was strangling trade and placing their inmates at the mercy of a band of monopolists. Nevertheless, the Conservative section of the community could not bring themselves to trust Japan. They persisted in believing, or professing to believe, that she was unworthy of any measure of confidence; that all her progress was as hollow as her professions. They complained loudly enough of their sufferings, but, at the same time, rejected the only feasible remedy; and some of them did not hesitate to publish statements distinctly calculated to create, on Japan's side, the very sentiments of hostility which they suspected her of entertaining. Never, therefore, was there a moment when intelligent men were under a greater obligation to speak out, or when their testimony promised to be of larger public benefit; and we cannot but congratulate the Missionaries upon their resolute, though moderate, action.

There is also another, and to our thinking a much more important, aspect of this affair. We refer to the effect it must produce in disassociating Christian propaganda from traditions which were at the root of all Japan's anti-foreign feeling in former years. It is matter of history that the first reception accorded to Western visitors in this country was hearty and hospitable. Japan's earliest foreign treaty—that with England in 1613—threw the whole empire open to British commerce, and betrayed a spirit of liberal friendship as admirable as it was rare in those days. That this spirit might have been fostered and preserved, there can be no manner of doubt. But religious intrigues interfered. The Japanese, partly by the evidence of what they saw with their own eyes, partly in obedience to what they were taught by foreigners themselves to believe, ultimately came to think that their national independence was threatened, and that the expulsion of alien schemers was the only alternative to the loss of their country. They expelled the foreigners, and from that time forth the people ceased to distinguish between peaceful traders and the ambitious *bateren* (*padres*) whose plottings and squabbles had threatened to become so mischievous. It would be extravagant to assume that Christianity's reputation has yet been entirely disassociated from the evil memories of those times. But unquestionably this action of the Missionaries will go far to vindicate it. Japan has now an indisputable proof that the Protestant Missionaries

are foremost in their desire to acknowledge her progress and to obtain for her the recognition it deserves. She can now see for herself that whatever reluctance there may be in other quarters to accord her the autonomic rights of civilized independence, the pioneers of Christianity, so far from sharing that reluctance, have publicly recorded their protest against it. It is an open secret that the Missionaries of the South are not alone in this matter. A similar memorial has been forwarded by their *confrères* in Tokiyo, and we trust that considerations of official etiquette will not be allowed to preclude the advantages which its publication would confer. Christianity will be brought much closer to the national heart by these practical evidences of sympathy, and unless we greatly misjudge the disposition and desires of the leaders of Japanese thought, that result will appear to them far more valuable than any political capital their country may make out of these memorials.

CIVIL CODES AND COMPETENT TRIBUNALS.

BY those who oppose any modification of existing judicial arrangements in Japan, it is constantly urged that she does not yet possess any "reasonably sound and just codes of civil law, or competent tribunals for their administration." Of late the advocates of change have been repeatedly challenged to deny this fact, and their apparent silence is construed as an evidence of inability to reply. There are, however, limits to the perseverance of the most resolute controversialist. For our own part, when an opponent, or, to speak more correctly, a professed opponent, adopts our arguments, if not the very language in which we have habitually couched them, we are quite content that he should claim them as his own, or even taunt us with reluctance to discuss them. Presumably, the main object to be achieved is unanimity, and it really makes very little matter who said this or who said that, provided all agree that what is said is right. That is happily the position towards which this interminable question of treaty revision is now, at length, advancing. A practical consensus of opinion exists, and we are convinced that a short time will suffice to complete the agreement. To accelerate that result, by no means to invite controversy, it may be well to say a few words with reference to this somewhat threadbare argument about civil codes and competent tribunals.

In the first place, we must do ourselves the justice of denying that we have ever attempted to assert the efficiency of Japanese civil codes and courts *from a foreign point of view*. Nothing could be more explicit than our expressions have always been upon this point. Quotations from a dozen articles, written at different periods

during the past three years, might be cited in support of this fact. One, however, will suffice. It was repeated a month ago in these columns. Perhaps its repetition again to-day may be more successful:—"We cannot conclude this article without once more protesting against the utterly erroneous statement that the total abolition of extritoriality has been demanded by the Japanese Government or advocated in these columns. Extritoriality is a parasite fatal to the vitality of progress in this country, but unfortunately for Japan, as well as for her foreign visitors, it is a parasite which cannot be at once shaken off. Even if the Japanese possessed what they do not yet possess—satisfactory codes and an efficient judiciary—something would still be due to the strong feeling of reluctance entertained by so many foreigners to forego the protection of their own courts." In the face of this assertion we are puzzled to see how we can be fairly charged with being "ashamed to stultify ourselves" by an admission that Japan does not yet possess satisfactory civil codes and competent tribunals from a foreign point of view; and above all, how it can be truthfully pretended that this journal "has urged the wisdom and justice of the demand for the cessation of foreign jurisdiction." No such demand has been made. No such demand has ever been endorsed by us. "The extent of Japan's proposal"—we again quote from our own columns—"is a first modification of existing conditions, to be followed gradually and at long intervals by larger measures, and she is understood to be willing to surround that modification with the most ample guarantees." On the other hand, we cannot but think that too much importance is attached to this question of codes and courts. It is not essential that a country should have civil codes. The laws of England are not codified; neither are those of the United States. Yet that fact would certainly not be recognised by the British or American Governments as constituting in any sense a reasonable plea for the exemption of aliens from native jurisdiction. It will of course be replied that in both these countries the law rests upon a basis of precedent which affords guidance even more valuable than codification, and which, so far as we know, is wanting in Japan. This is true; but how much is included in that little phrase, "so far as we know!" Ignorance is the foundation of half the trouble. We are virtually unacquainted with Japanese laws, and our experience of their practice has inspired complaints, some of which are, doubtless, well founded, while others may be traced to that prejudice which is inseparable from the presence of personal interests. To any argument based on the difficulty of becoming acquainted with their legal systems and principles, the Japanese might justly reply that the same is true of English law, whose intricacies and obscurities baffle even Englishmen.

There is, indeed, no country in the universe where steps are taken to render a knowledge of the law accessible by strangers: yet the Japanese Government is constantly asked how it can venture to propose the assumption of any judicial authority over foreigners until it has first made them acquainted with the laws it intends to administer. It has yet to be shown that we have a right to demand of Japan more than is expected of any other independent State. If the possession of sound and just civil codes and competent tribunals were regarded as a necessary precedent to the exercise of jurisdiction over aliens, how would it fare with the South American Republics, whose judicial institutions, whose systems of Government, and whose political integrity, are not worthy, in many cases, to be named in the same breath with those of Japan, and which, nevertheless, are not more fettered in the matter of jurisdiction than the greatest and most advanced of European nations? There must be some degree of international trust in these matters. It may be difficult for foreigners to become acquainted with Japanese laws and processes, but it is not difficult for them to see that there exists on the part of the judicial body in Japan a general desire to do their duty uprightly and honestly according to their lights, and that their application of the law is never disfigured by wilful partiality or corruption. There is here no hostile feeling against alien nations or individuals, but, on the contrary, a general and earnest desire, on the part of both rulers and ruled, to assimilate the laws and institutions of the country to Western types; and there is, moreover, a national religion which is neither intolerant, fundamentally hostile to Christianity, nor in any way opposed to a community of law with the Christian nations of the West. These are all points which deserve fair and due consideration. We avoid any mention of Japan's inherent rights, not because they are unworthy of respect, but because they are beyond the immediate purpose of this discussion. It is a constant habit with foreign writers to discuss those rights as visionary, and to call the spirit which prompts their assertion romantic. Yet if they took the trouble to look below the surface, they would see that the mainspring of Japan's restlessness under this continued distrust, is her consciousness of her own feelings and mental attitude towards the outer world. She has buried the sentiments and abolished the conditions which formerly justified the restraints of extritoriality, and she is deeply hurt by the ungenerous indifference of her treaty friends to her altered mood and earnest efforts. Speaking, however, from the Foreign standpoint, it may be reasonably and logically urged that, because the lives and properties of foreigners are not specially safeguarded in many countries far less worthy of perfect autonomy than Japan, there is no reason why the safeguards which

happily exist in Japan should be hastily abandoned. We entirely endorse that contention. We have always endorsed it; and what is more, the position assumed by the Japanese Government is in no sense opposed to it. At this eleventh hour, no one interested in the subject can pretend ignorance of Japan's proposals. She does not ask for the immediate abolition of extritoriality. That fact cannot be too clearly repeated. She only asks for a modification commensurate with some part of the progress she has made; and an understanding that so soon as she can establish a valid title to assume larger responsibilities, the Treaty Powers will be prepared to discuss a further change. On the other hand, she is ready to grant additional tradal facilities; in fact the only limit she sets to her willingness in this respect is that sufficient arrangements must be made for the control of the persons enjoying those facilities. Foreign prejudices, apprehensions, distracts, call them what one may, will not be disregarded in any measure proposed by Japan. She may feel, probably does feel, that much more is expected of her than is at all consistent with the scanty confidence reposed in her. But she has, we are persuaded, quite good sense enough to see that it is only by justifying those expectations she can hope to win fuller confidence. We are ourselves convinced that what she asks is considerably short of what might safely be accorded, but every reform, to be sound and permanent, must be measured, not by the instincts of its promoters, so much as by the disposition of its recipients.

PEACE BETWEEN FRANCE AND CHINA.

THE amicable adjustment of the long pending trouble between France and China, is confirmed by fuller telegrams from London, and by more detailed information, dated at Tientsin, May 12th. The latter is to the effect that instructions in a pacific sense were sent by the Cabinet at Paris to Captain FOURNIER, and that the negotiations between that officer and LI HUNG-CHANG were speedily brought to a satisfactory conclusion. We say "satisfactory," because any issue that puts an end to all prospect of open warfare between France and China must be welcomed by the public; but so far as the latter Power is concerned, the only congratulation which can be honestly offered to her is that had she persisted in her shilly-shally policy, she might have gone to pieces literally, instead of preserving her nominal integrity at the cost of a shattered prestige. The terms of peace were signed by the Viceroy LI and Captain FOURNIER at the former's residence on Sunday last. The conditions are four. First, that the French Government is to have the full right of establishing commercial relations with the pro-

vinces of Yunnan, Kwangtung and Kwangsi. Second, that the Chinese Government is to surrender to France the protectorate of the whole of Tonquin and Annam, and definitively abandon all responsibility within their limits. Third, that the French are not to demand the payment of any indemnity by China. Fourth, that the Chinese forces are immediately to evacuate Tonquin. The surrender, in short, is about as complete as it could be. Probably the only salve remaining to China, in her own eyes, is that she escapes a pecuniary payment, though, in truth, an indemnity was not needed to complete the measure of her discomfiture. That she has been obliged finally to renounce her romantic and unreal claims of suzerainty over Tonquin, is rather fortunate for her than otherwise. If a similar fate befell her everywhere, it might help to inspire a policy of practical common sense, and to teach her that her sway within her own borders is too unsubstantial to cast an appreciable shadow beyond. Nevertheless, her title to interfere in Tonquin had one valid basis. The history of modern international relations incontrovertibly establishes the principle, that when a river affords to an inland State, or to a portion of an inland State, the only convenient means of access to the ocean, the right of that State, in regard to the free navigation of the river, becomes fully equal to the right conferred by the actual possession of the territory through which the river flows. Such a right China unquestionably possessed, and does still possess, in virtue of the fact that the Red River is the only convenient outlet between Yunnan and the Gulf of Tonquin. Her new treaty with France deprives her of nothing in this regard, except in so far as it transfers her right to the custody of a powerful and unscrupulous neighbour. The other conditions speak for themselves. The only comment they suggest is that Chinese professions will be regarded, for many years to come, as the idlest of empty words. She has badly prefaced her propinquity to a people whose pastime it will be to teach her that respect is due only to those who know how to command it. The memory of this campaign of menaces and its farcical sequel will not help to restrain the aggressive propensities which France has of late developed so strongly. A year ago the Cabinet at Paris declared that it proposed to accomplish exactly what it has now accomplished. Each step of the accomplishment elicited a new threat from China, and now, after a negotiation lasting only three days, she has quietly endorsed the whole proceeding. Few countries have had the misfortune to add such a humiliating episode to their history. The Peking Government cannot even console itself with the hope that it has purchased a new lease of peaceful existence. On the contrary, it must see clearly enough that it is about to enter upon a period of perpetual unrest. Apart from the fact that there can be no quiet for

China with France as a neighbour—above all when the former's mood is so yielding and the latter's so masterful—grave complications can scarcely fail to crop up in connection with this very treaty. If commercial relations are to be established with Yunnan, the Black Flags must first be disposed of. At present they virtually command that trade from their stronghold in Laokai, and China's ability to dislodge them is very doubtful. We confess that the difficulty of disposing of this obstacle appears to us very considerable. Then again, what is to be understood by "the full right of establishing commercial relations" with the three provinces named in the treaty? No foreign country at present possesses the "full right" of trading with any part of China, and it may very well happen that the French settlers interpret this clause after a fashion entirely new to their neighbours. On the whole, China will find that the measure of repose she is to enjoy henceforth at French hands will be of a very Procrustean nature. She has shown herself wholly incapable of self-help, and she will probably learn ere long the full import of having given the world that information.

THE ILBERT BILL AND EXTER- RITORIALITY.

ON several occasions, attempts have been made by our local contemporaries to establish an analogy between extra-territorial privileges in Japan and the conditions which the Ilbert Bill was intended to modify; while in the story of Lord RIPLEY'S measure, in the agitation it excited, in the opposition it aroused, and in its partial defeat by emasculation, parallels and examples apposite to Japan's case have been ingeniously indicated. Laggard foreigners in Japan have been urged, by one journal, to adopt the resolute tactics of their militant compatriots in India, and by another, the gallant sound of this tocsin has been echoed in tones of solemn warning to the Japanese, who are bid remember that such agitation by Englishmen is well nigh omnipotent to quench the impertinent aspirations of "natives" who are unduly avaricious of independence, and especially of exercising control over freemen. An some length has also been copied from *The Times*, in which the unreasoning opposition to the Ilbert Bill, so painfully prominent in the writings of the late editor of that journal, is shown in its least defensible form. We are told that "the same sufficient reasons exist in Japan against Englishmen being made subject to the native courts here:" a "striking resemblance" is discovered between the case in this country and the assumed fact that the Ilbert Bill "was never asked for by, nor interested, the masses of the Indian people;" and we are assured that "the same motives which have been operative with the Imperial Government for the modification of that measure should also

be allowed to prevail against the *limitation*, or the abolition, of extraterritoriality here." Without touching the arguments which have special reference to the Ilbert Bill, it may not be amiss to draw attention to one or two points of similarity as well as of dissimilarity between the case in India and that in Japan.

The first and most noticeable difference between the two is, that the "Imperial Government" referred to above, namely, that of Great Britain, has no right whatever to legislate for Japan. India is a dependency of Great Britain, and as such is subject to the legislation of the British Parliament; Japan is a country which has not lost her independence by conquest or by any other means. Her relations with Great Britain, as with other States, are regulated by treaties and international amenities. We do not by any means intend to animadvert upon England's conquest of India, for we believe that India owes to that conquest her present peace, prosperity, progress, and all her best hopes. But the fact, nevertheless, remains, that for every political advance made by the people of India, the consent of a Parliament sitting in London has to be obtained, and that they are ruled on despotic lines by a government whose fundamental principle at home is popular freedom. On the other hand, the extraterritorial privileges conferred by the treaties, convey to those enjoying them no permanent title as against the sovereign independence of Japan. It may be granted that they were once not only necessary to foreigners, but of immense value to Japan herself, yet it remains also equally true that when they cease to be necessary they become a galling insult to a land whose independence should be untrammelled. Japan has not to appeal to some foreign Power for permission to legislate in any sense which she judges necessary. Her own Government is the sole fountain of internal reform, and while she seeks aid and light from every quarter, she hews out for herself her own political destiny. She asks leave of no over-lord to inaugurate reforms and to clothe her people, as they advance, with popular rights and liberties. The consequences are not far to seek. England has spent large sums on schools and colleges in India, with the result of developing natives whose command of the English language and literature is equal to that of Englishmen. To these highly educated men the Civil Service is partially open, and they are found equal to the demands of the most responsible posts. But they have not been trusted and taught to trust themselves as the Japanese have been taught by their independence. Take one example: English capital and governmental help have given India thousands of miles of a railway system, extending year by year and developing the resources of the land. Yet up to the present time no native engineer has been trusted to run

a train without a foreigner at his elbow. They have not been trusted, and they do not fully trust themselves. But what have we in Japan? A short time ago there was a rumble of dissatisfaction among foreigners at the news that foreign engineers on the trains were to be partially replaced by Japanese. Lines would not be safe, we were told; terrible accidents would occur, and so following. Now, however, a Japanese engineer runs the train, and the passengers are as safe as ever: accidents occur no more frequently than before. Japanese survey their routes, build their roads, run their trains, absolutely without foreign guidance. They did not need to be taught to trust themselves. In India a splendid educational opportunity has ripened many talented natives into rivals of Englishmen in high places of trust. A short time ago, on the occasion of the temporary absence from Calcutta of the Chief Justice, the senior Puisne Judge, Mr. ROMESH CHUNDER MITTER, was not passed over by the Viceroy, but was appointed to officiate temporarily as Chief Justice of the High Court. This elicited, at first, many murmurs from Europeans, yet, among the numerous hostile critics of the proceeding, not one ventured to impugn Judge MITTER'S conduct while acting in that high capacity. But so soon as it was proposed to relieve a certain number of these properly qualified judges from the ban of being "natives" and to trust them as European judges in cases never so trivial, there was raised a hue and cry, which cowed even the Imperial Government of Great Britain! Well might Liberal writers recall the words of Lord LAWRENCE to Sir ERSKINE PERRY:—"If any thing is done, or attempted to be done, to help the natives, a general howl is raised, which reverberates in England, and finds sympathy and support there . . . Every one is, in the abstract, for justice, moderation, and such like excellent qualities, but when one comes to apply such principles, so as to affect anybody's interests, then a change comes over them."

Here we naturally find a point or two of similarity with the case of this country. In Japan and India alike, contact with British civilization has wrought a marvellous advance. The last forty years have produced as great a change in India, as two centuries produced in Great Britain herself. Recognizing the reality of this change, large-hearted statesmen in India as well as the bulk of disinterested men in England, ask for more liberal treatment of the natives commensurate with the advance they have made. The tendency of years has been in this direction. To foster progress and then to adapt politics to that progress, has been the guiding principle of English rule. In Japan also the politico-moral advance of Europe has sown its seeds, and the harvest of national social progress is already ripe. To the changed condition of modern Japan, the treaty-

relations of the Western powers must likewise be re-adjusted. As in India, here also every social and moral advance is hailed with applause, but every proposal to bring politics into unison with the new exigency is treated as the suggestion of disloyalty and treachery, should the process of adaptation seem to affect foreign interests, however so little. As Lord LAWRENCE puts it, "a howl is raised," which reverberates around the world, and the aid of the Imperial Mother is invoked. In India the question is of justice in the removal of anomalies which once were necessary but have now become, in the opinion of many able judges, obsolete and unnecessary; a question of expediency in gradual leveling of barriers which separate races and foster prejudice by giving undue prominence to anachronistic privileges. The very same terms may be used to describe the case here, though the details must differ as the political situation differs. In India, progress in the direction indicated by the Ilbert Bill is inevitable, and the question is whether the Government shall, by slow and tentative measures, gradually lead the onward movement into permanent success, or whether it shall wait to be forced, by irresistible circumstances, into some future hasty reform, which would largely fail of its real object, and, above all, leave behind it the ill-effects of agitation and of hope deferred, culminating in lasting umbrage. There is much like this in the Japanese question. Shall we stave off as long as we possibly can the inevitable restoration to Japan of her real rights, or shall we not gradually retire from an anomalous position, and as rapidly as possible give back gracefully what eventually must be surrendered? Many other points of similarity could be pointed out, but we will refer to one only. *The Times* declares, in its prejudice, that "the natives" did not desire the Ilbert Bill, only a few of them, and we are told that this is the case in Japan with regard to the question of extraterritoriality. Nothing could be farther from the mark in the latter case, at all events. The representative men in Japan demand this reform, and behind them stands the mass of educated and thinking people silently awaiting the result. The attitude of the thoughtless and illiterate classes in any land is surely not the criterion by which to gauge a nation's aspirations.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

VAN BUREN v. TRIPLER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Those who have had the inclination and the leisure to follow the proceedings *in re* Van Buren v. Tripler to their conclusion, must have felt relieved when the judgment was rendered, and there was an end of a case which had ceased to be interesting except to the most morbid taste for scandal and sensation. Private differences are at no time an attractive theme for public comment,

however much factitious interest they may derive from the position of the parties, and from an ingenuous simplicity which insists upon entrusting its private woes to the four winds. Still, the liveliest sympathy will tire in time, more especially when the "affair," which began with fair prospects of becoming a tragedy, degenerates into something very like a farce. Unfortunate occurrences of the kind in question, after the first nine days' wonder, cease, as a rule, to raise a ripple of interest beyond the circle of those immediately interested. It sometimes happens, however, that the controversy is enlarged, and that the original question is lost to sight in aspersions upon the motives and actions of innocent third parties. This is exactly what has happened in the present instance, and in this I find the only excuse for alluding to a topic concerning which silence would, under ordinary circumstances, be the dictate of good feeling not less than of good taste.

Two of your local contemporaries have seen fit to comment upon the trial of the cause in question and the judgment rendered, in a tone which it is difficult to fitly describe in moderate terms. No doubt the *Herald* and the *Gazette* have the right to express their own opinions upon this topic, and to draw their own conclusions, provided always they are careful, when they do so, to observe the canons of legitimate criticism. But when they travel out of the record and openly condole with the plaintiff because the Court was *personally* inimical to him, they are guilty, to put it as mildly as possible, of a grave impropriety. Against such an imputation as this, the gentleman who presided in the case does not need any defence. A charge so manifestly untrue falls of itself. But do not the *Herald* and *Gazette* see that its reflex influence upon the person whose cause they advocate is anything but flattering? Where did they obtain their knowledge of the *personal bias* upon which they predicate so much of their argument? Certainly not from the Judge of the Ministerial Court, for it has yet to be said that he is in the habit of confiding his private opinions to the *Herald* and *Gazette*, or, indeed, of making them in any manner a topic of public comment. The simple truth is that these papers have recklessly and without cause made the charge that an officer, whose high character and great abilities are recognized wherever he is known, violated his judicial oath to gratify a personal spite. Certainly neither the *Herald* nor the *Gazette* would have dared to indulge in such assertions with reference to any other official than one whose position precludes him from seeking redress. The reflection that it is possible, in this instance, for them to do so, may add to their feeling of security, but should not on the whole be conducive to their self respect. Yokohama does, indeed, seem to have become "a slanderer's paradise" when the professed organs of public opinion give such undeniable proofs of the truth of the title.

I have refrained from any comment upon the action which gave rise to the strictures of the *Herald* and the *Gazette*, for the reason that fair-minded persons who carefully read the proceedings will perceive that the judge in the case performed a delicate and distasteful duty with tact and discretion, and rendered a judgment in accordance with the law and the evidence. Doubtless every one was not satisfied with that judgment, but it has yet to be discovered that suits at law are, as a rule, productive of universal happiness, or liable at any time to create even a temporary Millennium.

Yours respectfully,
Tokio, May 12th, 1884.

REVISION OF THE TREATIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Kindly do us the favour to publish the enclosed Memorandum on the proposed Revision of the Treaties, which has been signed by every Protestant Missionary in this neighbourhood.

Believe me, yours very faithfully,

CHAS. F. WARREN,

Chairman of the Committee.

Osaka, May 6th, 1884.

Memorandum on the proposed revision of the Treaties, prepared in accordance with a resolution adopted unanimously at a Meeting of the Osaka and Kobe Missionary Association, held at Kiyoto on Tuesday, April 22nd, 1884.

The Osaka and Kobe Missionary Association having discussed the question of extraterritoriality in connexion with the proposed revision of the Treaties, the undersigned desire to place on record a formal expression of their opinion, that the time has arrived when substantial modifications should be made in those provisions of the existing Treaties which give exceptional privileges to the subjects and citizens of the Treaty Powers, and which are

considered by the Japanese Government and people to be an infringement of their just and sovereign rights as an independent nation. The circumstances under which Japan was brought into Treaty relations with Western Powers were clearly exceptional, and, in the interests of both Japanese and foreigners alike, exceptional arrangements were undoubtedly necessary. But the lapse of twenty-five years has placed us in such a widely different position, as, in our opinion, to require that at least some of the exceptional provisions of the existing Treaties should be modified, and that concessions should be made to any just and reasonable demand of the Japanese Government in this direction. The interests created under the existing Treaties certainly demand the most careful consideration of those to whom they are entrusted; but, in our opinion, the difficulty of safeguarding those interests ought not to stand in the way of a speedy revision of the Treaties, such as shall be both just in principle, and a generous acknowledgement on the part of Foreign Nations of the real progress Japan has made since the present Treaties were framed.

Osaka, April 28th, 1884.

ARTHUR W. POOLE, Bishop of the Church of England in Japan.

CONVERTS TO CHRISTIANITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A note in your daily issue of the 1st inst., calls attention to some items culled from the "Religious Intelligence" of the *New York Herald*, referring to matters in Japan, Formosa, and Korea; said note affirming that "for announcements of this description it would be difficult to find confirmation in this part of the world." It sometimes happens that news has to travel almost or quite round the world before some of us become aware of what is passing at our very doors. If secular papers in "this part of the world" took as much trouble as those of America to gather "Religious Intelligence" instead of waiting for it to come begging for insertion, a good many facts would come to light that would be no less astonishing than those recorded by the *New York Herald*, with the advantage of having none of the colouring which paragraphists, ignorant of the country, are apt to give to information from a far-off land.

It is an open secret that many of the Japanese Ministers, though not "converts," in the usual acceptance of the term, are decidedly favorable to the spread of Christianity. The Emperor is not kept a recluse, he reads the newspapers, he converses on all matters pertaining to his Empire. It is not, therefore, improbable that some of His Majesty's Ministers may have said a good word to him for Christianity. This, of course, is conjecture, but by no means incredible. But as to the story of Korean dignitaries and others becoming Christians in Shanghai, the thing is very probable, for that is just what is going on in Japan to-day. Just one year ago, a Korean General, highly connected, a member of the embassy in Tokio, embraced the Christian religion, and was baptized by a Japanese pastor. He was, I believe, the first Korean convert to Protestantism on record. Since then, others have been earnestly enquiring. A number of Korean young men, sent by the Government, were placed in a Mission School. They embraced the Protestant Faith. Their superior officer objected. They resigned their connection with the Korean Government until the official in charge gave them full religious liberty. That official himself has begun to take an interest in Christianity. These are only items out of history now being made "in this part of the world," in confirmation of "such announcements" as appear in American papers. And then as regards the report from Formosa, the

only error of the *New York Herald* is that it says hundreds when it ought have given *thousands* as the number of natives who, within the past few months have cast away their idols and resolved to become Christians.

Yours, &c.,
A MISSIONARY.
Tokio, May 9th, 1884.

THE NAKASENDO RAILWAY BONDS.

NOTIFICATION NO. 57 OF THE FINANCE DEPARTMENT.

In accordance with the Act of the Nakasendo Railway Public Loan Bonds published by Notification No. 47 in December, 1883, new Bonds to the amount of five million *yen* in face value have been issued, and the regulations for the same have been set down as follows:—

REGULATIONS FOR THE ISSUE OF THE NAKASENDO RAILWAY BONDS.

Art. I.—The denominations of the Bonds to be issued shall be fixed by the Finance Department according to its convenience.

Art. II.—The issue price of the Bonds shall be 90 *yen* per 100 *yen* of the nominal value.

Art. III.—Persons desirous of buying the Bonds shall apply to the Nippon Ginko, its Branch Offices or Agencies, on or before the 10th June, 1884, stating the amount of the bonds and the price of the same at which they require to buy, and giving their names and addresses.

NOTE.—Agencies shall be advertised by the Nippon Ginko.

Art. IV.—Applicants for the Bonds shall make a guaranty payment of ten *yen* per 100 *yen* of the nominal value of the Bonds to the office, where they apply for them.

Art. V.—When the guaranty payment has been made by the applicants, the Nippon Ginko, its Branches or Agencies, shall give to the applicants receipts for the amounts paid in. These receipts for the guaranty payment shall not be sold or purchased.

Art. VI.—As the Finance Department will announce, through the Nippon Ginko, the amount of the Bonds to be furnished to each applicant, on or before the 10th July, 1884, the amount of the guaranty payment made shall be deducted from the value of the Bonds purchased, and the remaining sum shall be paid in two instalments of equal amount. The first instalment shall be paid on or before the 30th July, 1884, and the second instalment on or before the 30th August, 1884. The second instalment may, however, be paid simultaneously with the first.

Art. VII.—The Nippon Ginko, its Branch Offices or Agencies, having received the payment of the said instalments, shall furnish the provisional certificates in exchange for the receipts of the guaranty payment and the cash. These provisional certificates shall not be sold or purchased, but may be mortgaged with the Government or the Nippon Ginko.

Art. VIII.—Bonds will be delivered through the Nippon Ginko in exchange for the provisional certificates.

Art. IX.—In case the instalments are not paid when due, as set out in Article VI., the guaranty payment made under Article IV. and the first instalment, if paid, shall be forfeited.

Art. X.—Should the receipts for the guaranty payment or the provisional certificates be lost, the owner of the receipts for the guaranty payment or the provisional certificates so missed, shall at once report the matter to the office where they were obtained, stating the marks and numbers of such documents, and giving names and addresses.

Art. XI.—The causes of the loss of the receipts for the guaranty payment or the provisional certificates must be testified by the owner and the written testimony authenticated by two witnesses, to the Nippon Ginko, its Branches or Agencies, and new receipts or certificates will be granted therefor. The missing documents will thereupon be advertised in the newspapers and declared null and void.

Art. XII.—The interest on these guaranty payments and instalments shall be paid at the rate of 7 per cent. per annum. On sums paid on or before the 15th day of the month, interest shall be counted for the latter half of the month; on those paid on the 16th of the month or after, interest shall be reckoned from the following month.

Art. XIII.—Interest on the guaranty payment and the instalments, and not exceeding the half year's amount of the coupons, shall be paid when the Bonds are exchanged for the provisional certificates.

The above is notified.

MATSUKATA MASAYOSHI,
Minister of Finance.

13th May, 1884

THE GROWING TASTE FOR GERMAN LITERATURE.

(Translated from the *Nichi Nichi Shimbun*).

Persons who are disposed to comment on the subject of learning appear to regret that the students of the present day have shown a tendency to relinquish the study of English literature by substituting that of Germany. Yet such a change is a matter of common occurrence in society, and need cause no surprise. In our issue of the 21st April, we published an article entitled the "Change in the Study of Literature," for the purpose of rectifying the erroneous conceptions of our thinking men. One of our contemporaries, the *Hochi Shimbun*, which is recognised as a journal supported by the Reform Party, seems also to be interested in this subject, and has published a series of articles, extending over three days, commencing with the 12th of April. Reading them carefully through, however, we find that they not only disagree with the principles of sound argument, but the deductions made are contrary to existing facts. It is not a matter of great difficulty for any intelligent man to refute them; yet broad as is society, it is not altogether unlikely that some persons have been misled by them. It may not, therefore, be without advantage to discuss the statements of the *Hochi Shimbun*. With a view to entering upon this task we will take the trouble of dividing the *Hochi's* article into appropriate subdivisions, and then point out its errors separately, so that our statements shall be as clear and succinct as possible.

In the first part, our contemporary asserts that the tendency of the present revival of Chinese literature is not at all accidental, but that this state of affairs is only the reaction from the sudden and universal zeal displayed some time ago in the adoption of Western science.

The second part states that it is a matter of surprise that the promoters of German literature have considerably increased, and that, although Germany claims superiority in medical science, she has not made so great progress in philosophy, chemistry, physics, and art; while she possesses very little knowledge of politics, economy, and law, compared with her other acquisitions.

From what data has the editor of the *Hochi* been enabled to deduce such assertions? How could he allow himself to draw such conclusions without furnishing any conclusive proofs, since failing proof his assertions are idle? What may have been the ideas that actuated the writer, we are at a loss to understand. Yet it seems that he intended to inculcate the belief that because Germany has advanced far in certain philosophical sciences, she is backward in politics, economy, and law. If this is his contention, we cannot help saying that he proves himself sadly ignorant of the actual state of affairs, as well as of the first principles of sound argument. *Science, whatever form it may take, aims at investigating universal principles and applying them to particular purposes. The process of such investigation is called "philosophical research."* All sciences, therefore, must come under the category of philosophy. Most of the abstract sciences, such as politics, economy, and law, are based on philosophical deductions. Nations which are well-grounded in philosophy must also be familiar with the science of government, political economy, and law. *The assertion that a nation has but little acquaintance with politics, economy, and law, because it is thoroughly familiar with philosophy, is logically equivalent to the statement that ignorance in one direction is the result of scientific progress in another.* However pertinacious and eloquent the editor of the *Hochi* may be, he cannot possibly hope to insist upon such a senseless proposition. Yet he has declared that "the Germans who have long lived under the oppression of an absolute despotism, are really unable to employ their tongues in criticising the actual policy of their country, because they would be subjected to severe proscription and punishment for so doing; and that, therefore, both their literati and scholars are equally forced to confine their study to pure scientific principles, and never dare extend their investigations to the politics, economy, and law, adopted by their Government." Their researches into these sciences are invariably based on reasoning alone, and consequently deviate in most cases from practical rules. The result is that, on more than one occasion, they have spoken of Republicanism as the most enlightened form of government. . . . The investigation of practical phenomena on the part of the people, by enjoying freedom of speech and exercising the right of participation in the management of political affairs, can alone lead them to appreciate the authority of their sovereign, and the necessity for

a hereditary nobility, in order to consolidate the strength of their country. But if they were to confine themselves to their libraries and arrive at this decision from logical principles alone, it is not altogether unlikely that they would forget the authority of their King, and eventually propose to overthrow the nobility." Whether the German Government is despotic or not, or whether the researches of scientific men are limited to pure and simple abstract principles, we cannot venture to state. But how is it possible to assert that those who devote their energies to the investigation of logical principles are always disposed to recognise Republicanism as the best system of administration? And that those who direct their attention to practical researches are always conscious of the honour due to their sovereign and the usefulness of the nobility? How can it be pretended that a nation which clings to logical rules is generally extravagant and cunning in argument; while a people less disposed to attach importance to such rules is usually moderate in its political discussions? It is true that England, which the editor of the *Hochi* regards as pursuing a most prudent and unbiased policy, displays the utmost enthusiasm in the practical study of politics, economy, and law, granting to her people the freedom of speech and the right of administration. Yet in the days of Cromwell, she adopted the Republican form of Government; while of late her men of erudition and other prominent personages have argued the necessity of abolishing the House of Lords, and of limiting the privileges of the nobility. On the other hand, we have not heard that the tranquillity of the German Empire was ever seriously disturbed by a clamour for a Republican system of administration, nor have we even been informed that its literati or men of distinction expressed a desire to do away with the nobility. The *Hochi*'s editor has clothed his article with unwarrantable hypotheses, in utter disregard of facts, and no demonstration is necessary to show the errors into which he has fallen.

In the third section, he states that the "people of Germany do not enjoy liberty of speech . . . The students of politics, economy, and law are thus unable to pursue their studies with reference to practical phenomena; and they must confine themselves to their libraries, content with the investigation of scientific principles only. Their propositions, though abstruse, do not agree with their practice, while their judgment, though profound and philosophical, does not produce the anticipated results when actually exercised in the field of facts." How could the writer allow himself to make such whimsical assertions, disregarding the logic of realities?

Should we admit the accuracy of such an argument, it would follow that persons who are acquainted with the science of government must necessarily pursue careers as Ministers of State or members of a political assembly, and that those familiar with the principles of political economy must settle down as financial, commercial, or agricultural officials, or promoters of other practical enterprises; while the investigators of legal matters must needs become judges or barristers. With the exception of the various practical men whom we have just enumerated, it would appear that all other persons who, in the quiet of their libraries, indulge in meditation and philosophical thought, must expect to see the fallacy of their judgments so soon as they attempt to put them into execution. Should history prove that politics, economy, and law were originally studied and brought to perfection by philosophical and deep-thinking men, then must the editor of the *Hochi* perforce conclude that these sciences are but the shadows of imaginative castles in the air, and utterly at variance with all practical rules. Locke is recognised in England as the most prominent among men of erudition. But did he ever participate in the management of political affairs, or take the leadership of a political party in Parliament? Did Adam Smith ever pose as Minister of Finance, or did he ever open a shop in order to carry on trade on a large scale? Did Austin occupy the position of a senator or a judge and help to frame or enforce the laws of his country? These personages never took part in practical administration, but, hid from the outer world in their studies, spent all their time in meditation and mental research. Now, the *Hochi*'s assertion that the want of practical experience on the part of German literati proves their insignificant knowledge of politics, economy, and law, is the exact reverse of the truth, for this very fact indirectly shows their progress in these important sciences. Intelligent as is the editor of the *Hochi*, however, he will certainly not be so stupid as to willfully insist upon his preposterous arguments, now that he sees that what he wrote was completely erroneous. If he declares that the progress of German literature is confined to purely scientific principles, which do

not exactly correspond to practical undertakings, and that, therefore, Germany is not thoroughly familiar with politics, economy, and law, it is simply because he is unacquainted with the German tongue, and so fails to measure the extent as well as the depth of his own theories. Since the days of Puffendorff, Alberche, Zeckendorff, and Leibnitz, those great German scholars of the 17th and 18th centuries, the investigation of politics and law has been carried on in the most masterly style, and the results obtained have served as an infallible criterion to men of erudition. Towards the commencement of the 19th century, Savigny, Niebuhr, Darlman, Gneist, Lau, and Rossel, made themselves conspicuous by their literary attainments, and having undertaken scientific researches with untiring energy, succeeded in rendering the most abstruse scientific principles clear and intelligible. During the past thirty or forty years, Germany has always been pointed out as the home of art and literature. Scientific men in Germany have striven to investigate the minutest principles of science, and adapt them in like ratio to the progress of society, so that theory and practice might proceed *pari passu*; thus preventing the possibility of those abuses which invariably result from social arrogance and prejudice. The universities at Berlin, Leipzig, Heidelberg, and Bonn, as well as many others, give the key-note to the education of the world.

In the fourth and fifth sections of his article, the editor of the *Hochi* intimates that "German literature seeks to attain civilization in the future, while Chinese literature looks for enlightenment in the past. The former aims at making itself the source of national wealth; the latter strives to convert the country to the old standard of morality. These two literatures differ as widely in their respective qualities as do water and fire . . . If the two were allowed to compete with each other, the superiority of either would at once be decided; but if they are to be so arranged as to be independent of each other, the superior qualities of the one must be kept in abeyance, in order to protect the inferior qualities of the other. . . . With regard to their efficiency, they should be regarded as two distinct literatures: the old and new. German literature aims at a new method of development; while Chinese literature praises the excellence of ancient culture. That these two literatures of so different natures must be allowed to maintain mutual independence, may be expressed by antiquarians as a proposition suitable to their usual mode of thought; but such views ought never to be entertained by scientific men who endeavour to govern the country on the strength of literature alone." So strange is the argument of the *Hochi*, and so unenlightened is the language it uses. To search for the truth amid the multiplicity of propositions and contradictions is the only way in which civilised societies can make any progress. Where intolerance of dissent forms a criterion, and where discussion is restricted, there lies the germ which eventually gives rise to the barbarity of barbarous nations. If the *Hochi*'s assertions are to be credited, it would be necessary to prevent two propositions of different natures from existing side by side, even for a single day; and to utterly abolish all undertakings which do not agree in principle, in accordance with the example furnished by the Chinese Emperor Shiko;¹ and, finally, to carry on the administration of a country on the basis of the uniformity of popular sentiment. Such propositions could never come from the lips of scholars familiar with true scientific principles.

No demonstration is needed to show that the discrepancies between Chinese and German literature are not so serious as the editor of the *Hochi* supposes. Although the latter aims at introducing a new method of development, as he justly points out, yet it does not forbid us to make researches into ancient principles, so as to compare them with those of the present day, and to prescribe for the future by reason of the conclusions arrived at. It even admits the necessity of making such researches, for the sake of scientific culture. How the prominent members of our society could persuade themselves to encourage the growth of Chinese literature, we do not pretend to understand; but we presume that their ideas originated from a belief in the necessity of investigating the culture of the past. Although Chinese literature cannot be directly recognised as synonymous with our own literature, yet its introduction into our country can be traced back to more than a thousand years ago. It has given colour to our ideas and materially changed our customs. Our constitution as well as the system of our Government, the mode of living as well as the style of dress, were completely reformed by the study of the Chinese classics. The study of Chinese literature is, in reality, nothing but an investigation of our own social changes. It is, then, not a matter

of surprise to see our countrymen spending much of their time in the study of that same literature, especially at present, now that their civilization is advancing with such irresistible force. That Europeans and Americans spare no time in studying the literature of Greece and Rome is due to the fact that all the sciences of the present generation have originated in these two literatures, and that, above all, the permanent and fundamental principles of philosophy and law can only be acquired from the works of the great thinkers of Ancient Greece and Rome, which clearly show successive alterations in the system of administration and in the mode of social organization. The study of the two literatures referred to was never considered as a supererogatory pursuit, nor was it undertaken as a mere pastime, as the editor of the "*Hochi*" affirms. Does he not assert that the principles of modern literature ought to be adopted conjointly with those of the past, and that it is absolutely indispensable for scientific men to devote their energies to the study of the former, without disregarding the latter? The most prominent members of our society attach great importance to Chinese literature, but this may have simply arisen from their desire to investigate the customs of the ancients. So far as the present state of affairs is concerned, no one seems willing to adopt the literature of China to the extent of obstructing the progress of other sciences and arts. Should the editor of the *Hochi* endeavour to direct his attacks against those who persistently cling to Chinese literature, his words would be much like shooting forth a volley of arrows in a place where no enemy is to be found. The assertion that, because German literature postulates a new mode of culture while Chinese literature seeks to encourage the customs of the past, these two literatures cannot be judged by the same standard, is simply the outcome of his ignorance of the fact that a literature can either be rejected or adopted at will, and that its investigators may form what opinions they please. It is scarcely necessary to show how his argument can be refuted.

In the seventh section, he uses somewhat allegorical language:—"A hen may raise a duckling, but will be surprised to find that the latter takes to the water. It is a pity that the hen is such an ignorant fowl. Things ought not to be adopted or their growth encouraged until their actual qualifications have been ascertained; for the growth of them will as much astonish the people as the duckling amazes its foster-mother. That Chinese literature is not able to promote or maintain the morality of a society may be proved by the fact that Chinese are characterized by base, unfaithful, and contemptible actions. . . . Whereas German literature certainly does not tend to moderate popular sentiment, and this is shown in the fact that the Germans are generally vehement and of violent temperaments." That Chinese literature fails to maintain the morality of the Chinese people can be plainly seen from their duplicity and disloyalty; but this does not prove that it is equally inefficient to support the morality of the Japanese people, for the degraded character of the Chinese cannot, from a logical point of view, affect the value of their literature, and it is impossible to infer that the adoption of their literature will equally tend to demoralize our own people. Refraining for a moment from carrying on our argument with reference to logical principles, and turning our glance solely to facts, we find that the moral, as well as the intellectual, development of the Japanese was entirely, if not principally, effected by the adoption of ancient Chinese literature, or Confucianism. Yet the people of our country are not so false and crafty as are Chinese. Not only is this true, but their morality is also not so many degrees lower than that of Europeans and Americans, and we may confidently assert that the progress made by them in the past is a gift they have successfully obtained from the study of the Chinese classics. This literature, then, possesses more than sufficient power to promote morality, although it may be unfit to maintain the morality of the Chinese. As regards the statement that the inability of German literature to moderate the current of social sentiment may be verified by the vehement and uncontrollable temper of the Germans, we are extremely surprised at the writer's ignorance of the truth. This statement might be true, were history untrustworthy; but, so long as history is authentic, it is certain that the epithets of ferocity and vehemence are not applicable to the Germans. Have the people of Germany ever risen in rebellion, or offered desperate resistance to their King and killed him on the scaffold? Have they ever fallen into a state of anarchy by adopting revolutionary creeds? Have they ever divided their country into two parts in the interest of self-profit; or have they taken up arms, and killed their brethren, in internecine combat? The events to which we have just alluded are those which generally result from the

extreme ferocity and barbarity of a people. The history of England and France makes sad mention of such events, but we fail to find them in German annals. Does the editor of the *Hochi* still desire to insist upon the ungovernable temper of the Germans in spite of such historical proofs? The encouragement of Chinese literature with a view to maintain social morality, and the study of German literature for the purpose of moderating popular sentiment, ought not to be compared with the story of the hen and her adopted duckling, but must be looked upon as operations which will enable us to reap a rich harvest in the future.

In the same section, the writer says that "in the event of the death of the present Emperor and the great statesmen of Germany, the spirit of the people will suddenly be roused, and a reign of confusion and disturbance ensue, which will be in strange contrast with the present peaceful state of affairs. Even now, socialists are scattered all over the Empire. . . . Some of the discontented classes have emigrated to America, despite the many thousand miles." The editor of the *Hochi* is, it seems, disposed to ascribe the spread of socialism to political mismanagement, but nothing can be more preposterous than such an assertion. *Socialists, and political parties of a similar nature in Germany, have never expressed themselves dissatisfied with the administration, but rather with the present style of social organisation.* The introduction of reforms into the administration will by no means mollify them; they aim rather at the dissolution of modern society, and ask that wealth and rank be equally divided among all men. *The disastrous results of the growth of socialism are universal in the 19th century, and are not at all confined to Germany. This may be clearly proved by the fact that England, France, Italy, and Spain have recently suffered from calamities brought about by the employment of dynamite.* Without taking these circumstances into consideration, the editor of the *Hochi* has endeavoured to demonstrate the discontent of the German people, and has thus fallen into serious error. The increasing number of emigrants to America is due to the difficulty of making a living surrounded by so dense a population, as well as to two or three other causes. This can by no means be taken as a proof that the people of Germany are utterly dissatisfied with the present mode of administration. The eighth section states that "the present tranquillity of the German empire and the strict obedience of the people to its despotic government must be attributed to the fact that the Emperor exercises extraordinary power, while his Ministers have acquired world-wide renown. Such a state of affairs can never have resulted from the mere peace-loving temperament of the people, as inspired by their literature." In speaking of the tranquillity of Germany, the editor has attached great importance to the names of the reigning Emperor and his Minister—Wilhelm and Bismarck—and repeatedly speaks of them in his article as the "experienced Emperor" and the "intelligent Minister." The Government of Prussia was firmly founded in the days of King Frederic and his direct predecessor. At a later period, it was considerably strengthened by the famous ministers Stein and Hardenburg; it has now attained unrivalled strength, but neither have Emperor Wilhelm nor Reichskanzler Bismarck been the principal factors in its improvement. The Prussian people look upon their government with feelings of profound reverence, nor do the trials and wars of the country depend so much upon the existence of Wilhelm and Bismarck as the editor of the *Hochi* conjectures. *German literature is, moreover, extensively adopted. Saxony, Baden, and Bavaria, as well as other confederated states, have all been noted for their men of erudition. It is not always necessary to go to Berlin in order to find intellectual culture. The peace or the troubles of the German Empire have not the least connection with German literature. Nor can the death or life of Emperor Wilhelm and Minister Bismarck affect the condition of that literature.* But the editor of the *Hochi* has obstinately asserted that "the despotic government of Germany has been instrumental in injuring her literature." Such assertions can hardly be allowed to pass without comment. Do the German people actually suffer from oppression or despotism? This question can easily be answered by those who have made themselves familiar with the inner workings of her institutions. A proverb says that the *freedom of Europe sprang from a German forest*, and this is sufficient to prove that the people of Germany have not suffered from tyranny as have most other nations. Freedom is the inherent property of the Germans, and many European nations, which now enjoy full liberty, are the descendants of this great land. *If Prussia had sustained so tyrannical an administration as the "Hochi's" editor declares, she would have been unable to maintain a system of independent municipality which is the very ground-*

work of liberty. That she could maintain this system undisturbed, is a conclusive proof of the steady growth of freedom.

Yet in the ninth section, the writer states that "French literature was at one time so earnestly encouraged in Germany that her King himself engaged the services of French professors, and struck up a warm friendship with them. Voltaire, Rousseau, and Montesquieu were held in high esteem and the sciences they had mastered were studied by many. . . . This may be the reason why German literati are disposed to uphold the opinions entertained by the revolutionary party in France, speaking as if they themselves were Voltaire and Rousseau. If German literature is to be adopted, we must expect that French culture will simultaneously find a way to the hearts of the people." In saying that a certain German King once engaged a number of French scholars with whom he had intimate relations, the writer evidently alludes to King Frederic, who was a famous patron of *belles-lettres*. Many of the prominent literati in his day received favours at his hands. As a poet, Voltaire succeeded in attracting the notice of Frederic, who was particularly fond of versification. This is the sole reason of his friendship with Frederic. Those who comment upon the cultivation of French literature in Germany can only allude to the traces of Frederic's fondness for that literature. The introduction of French literature by Frederic seems to have arisen from no other cause than that from which we have just mentioned. *In his reign, the system of independent municipality took deep root, and each of the cities and towns had its own particular government. Even his extraordinary ability failed to concentrate all political power in himself; and as, at that time, France had succeeded in carrying out the policy of centralisation to the fullest extent, just after the fall of Louis XIV., King Frederic endeavoured to reform existing customs by the introduction of French ideas.* With what other hope could he have imported the vague ideas of Voltaire and Rousseau? Patience and moderation are characteristics of the German people. They may have a *penchant* for conservatism, but none for revolutionary schemes. The French, on the contrary, are vehement in their opinions, and reckless in action. Therefore, it is but natural that the two peoples—Germans and French—should be irreconcilable enemies. The assertion that many of those Germans who have pursued the study of French literature are disposed to advocate the revolutionary cause in France, as if desirous of doing as much as did Voltaire and Rousseau, is entirely erroneous and unfounded. If such assertions were not purposely made by the editor for the promotion of this country's interests, we should say that they were the outcome of childish credulity. French literature is not highly appreciated in Germany, and its adoption together with German literature in our country need not be feared nor regretted.

The argument of the editor of the *Hochi* may be epitomized as follows:—First, that German literature has not yet made satisfactory progress in politics, economy, and law; secondly, that it is confined to mere logical investigation, a process which does not correspond with practical operations; thirdly, that those who cultivate it may become violent in temper and immoderate in character; fourthly, that Chinese and German literature cannot run parallel to each other, as the one aims at revolution and the other at conservatism; and lastly, that both the encouragement of Chinese literature for the maintenance of social morality, and the adoption of German literature for moderating popular sentiment, will doubtless produce exactly contrary results, as the introduction of the latter literature involves the adoption of French ideas. If the above propositions are carefully examined with reference to facts, as well as to logical principles, it will be clearly seen that they are mere castles-in-the-air and totally unsubstantial. Not one of them is true, as we have conscientiously demonstrated. If the editor of the *Hochi* regrets the growing influence of German and Chinese literature in our country, he wastes his sympathy on unrealities. Yet he actually asserts that those prominent men in our country who urge the necessity of encouraging German literature, are only impelled by the desire to promote their own selfish interests. This criticism is nothing but a libel, and ought never to have been expressed. We do not wish to waste our time in discussing such scurrilous statements. As we are not directly concerned in examining the merits of Chinese literature, our comments can neither promote nor impede our personal interests. Yet that we have directed our criticisms to these two literatures is simply because we wished, on the one hand, to arouse the editor of the *Hochi* from his silly dreams, and, on the other hand, to prevent the general public from falling into the errors he entertains.

IN THE MINISTERIAL COURT OF THE UNITED STATES OF AMERICA IN JAPAN.

Before the Honorable JOHN A. BINGHAM, Envoy Extraordinary and Minister Plenipotentiary.

THOMAS B. VAN BUREN V. THOMAS H. TRIPLER.
SLANDER.—\$5,000 DAMAGES.

JUDGMENT.

Opinion and judgment of Hon. John A. Bingham, Envoy Extraordinary and Minister Plenipotentiary of the United States of America in Japan, before whom the above cause was brought and tried.

The plaintiff, who is the United States Consul-General at Kanagawa (Yokohama), alleges in his petition in this case, that the defendant, Thomas H. Tripler, is a citizen of the United States, resident at Yokohama, Japan; and that the Defendant, on the 31st day of December, 1883, and on other previous days, at the then Yokohama United Club in Yokohama, in a certain discourse concerning the plaintiff, in the presence and hearing of divers persons, did, maliciously and falsely, speak and publish of and concerning the plaintiff the following false, scandalous and defamatory words; that is to say: "He" (the plaintiff meaning) "went into the Kencho, and in an underhand manner got them" (the Japanese authorities meaning) "to sell him" (the plaintiff meaning) "the Consular buildings" (meaning that the plaintiff, in an unfair and improper manner, that is, by unfair and improper statements or representations, induced the Japanese authorities to sell to him, the said plaintiff, the buildings occupied as offices of the United States Consulate-General and for the use of the Court and jail attached thereto) "for twenty-two hundred yen." "He" (the plaintiff meaning) "had no right to buy them" (meaning the Consular buildings aforesaid) "at all,"—it is "contrary to law" (meaning that the plaintiff in making such alleged purchase, had violated law). "He has swindled the Government" (meaning that the plaintiff, in making such alleged purchase, had defrauded the Government of the United States, of which plaintiff was and is an official, and that the plaintiff had been thereby guilty of a criminal offence). "The Department of State has been informed of it, but has taken no notice; but old Frelinghuysen will not be there for ever, and when he goes we will get him out" (meaning that an accusation had been prepared by defendant, or some other person, accusing the plaintiff of the alleged illegal act on his part, heretofore referred to, and forwarded to the Department of State of the United States of America, at Washington; of which, said Department had taken no notice whatever, &c.)

The petition concludes with the general allegation that, by reason of the grievances complained of, the plaintiff has been brought into public scandal, and has been greatly injured in his good name, wherefore he prays that defendant may be adjudged to pay to the plaintiff \$5,000 damages and costs of suit.

To the plaintiff's petition, the defendant made answer, first, a general denial that he spoke and published of and concerning the plaintiff, the alleged defamatory words in the petition set forth; and second, "That, at the time of the alleged grievances set forth in the petition, he did speak of and concerning the plaintiff, that he the said plaintiff had improperly purchased, as Consul General, the buildings and premises now occupied by him, the said plaintiff, as Consular offices and his residence, that he, the said plaintiff, had no right to buy them at all, and that the said purchase and occupancy were contrary to law, all of which said statements are true, and all of which said words the said defendant had a right to say of and concerning the said plaintiff. Therefore the defendant prays that the petition be dismissed," &c.

Testimony on the part of the plaintiff;

G. H. Prichard testified in substance, that on the 30th or 31st December last (at the Club House in Yokohama), he heard defendant say that the General had in an underhand way purchased the Consular buildings, that he had no right to do so, that it was contrary to law, that the General had gone to the Kencho and bought the buildings in an underhand way, and had swindled the Government. On cross-examination, the witness said that this conversation was on the occasion of the election of a President of the Yokohama United Club, between 6 and 7 p.m., that Mr. Beato heard part of the conversation, also that Mr. Douglass, Mr. Stewart, and Mr. Walker heard all the conversation; that defendant asked witness not to vote for the General. He also stated, I meant to say, that the defendant did say Consul-General Van

Buren was a swindler and that he had swindled the Government.

Mr. Beato testified on behalf of plaintiff to the following effect: that defendant said the General had bought the property for nothing, for a small price, and is swindling the Government, that the price was 2,200 yen, that he had got the Kencho to sell him the property for nothing; that Mr. Prichard and others were present at the conversation.

Mr. Walker testified to the effect that he heard defendant say in the Club House that the defendant had written to the Secretary of State, that the General had bought the Consulate; that he thought it was not generally known; and that the General was charging too much rent for it; that Mr. Beato was present and could hear the conversation, which took place about 9 or 10 p.m.; that defendant asked him, witness, to vote for Dr. Fisher.

It is proper to be noted that no testimony was given in the case which proved the utterance by the defendant of the following words charged in the petition, to wit:—"That old Frelinghuysen will not be there for ever, and when he goes we will get him (the Consul-General) out."

The plaintiff having rested his case upon the testimony of the three witness aforesaid, the defendant called Mr. Osborn, who testified, in substance, that he is engaged in the Kanagawa Kencho, and has to do with ground rents and the transfer of lands; knows location of U.S. Consulate in Yokohama; that the land is owned by the Japanese Government, and is rented by the United States, as witness believed; that he served notices for the ground rent to the U.S. Consulate-General. He has no means of knowing who owns the buildings, they formerly belonged to the Japanese Government before they were sold to General Van Buren as a private citizen, the title of Consul-General was presumed to be put in the document (the title-deed). The transfer to Mr. Van Buren was made in 1880; could not state what was paid for the same by him. The ground rent is \$27 97-100 per hundred (100) *tsudo* annually. He further testified that the lot 234 is owned by the Japanese Government, and that it is rented to the United States Government, and that the buildings were sold to General Van Buren as a private citizen.

Mr. Uchiyama Rossetsu testified in substance, that he is a practitioner in the Japanese Courts of law, that about September last, under instructions of Mr. Litchfield (of defendant's Counsel), he enquired into the title of the Consulate, and gave Mr. Litchfield information as to the purchase of the buildings, and reported to him correctly the information which he (witness) had obtained: that he had obtained information in whose name the Consular buildings are registered; also the date of the transfer of the buildings, and the purchase price of the buildings, and the official character of the purchaser.

In reply to questions by plaintiff, the witness further testified, that in December last, at the time of the election for President of the Yokohama United Club, he first learned and was so informed by defendant that the information which he had obtained (above-mentioned) was for the use of the defendant, and that defendant at the same time in said conversation with witness "referred to the action of General Van Buren in the matter as a swindle upon the Government." Witness further testified for Defendant, that the name he gave to Mr. Litchfield as the name of the purchaser was General Van Buren, and that the information obtained by witness was that the purchaser was described as General Van Buren, Consul-General.

The defendant, Thomas H. Tripler, being duly sworn, testified on his own behalf to the effect that he is a member of the Yokohama United Club, that there was an election for President of the Club which closed on the 31st December last; that plaintiff, Mr. Litchfield, and Dr. Fisher were the candidates; that he opposed the election of plaintiff and favoured that of Dr. Fisher; that he had some conversation at the time with Mr. Prichard in the hall of the Club about the candidates, in which Mr. Prichard favoured the election of the plaintiff; that defendant then told Prichard he did not see how he could vote for Van Buren on the ground he took in regard to the property of the Club and his hostility towards its members; something was also said about Consular matters. Witness further said the General had got the Consular buildings very cheaply. He did not tell Mr. Prichard that the plaintiff had gone to the Kencho and got them to sell the Consular buildings in an underhand manner, nor that he had bought them for 2,200 yen.

He, witness, did say the plaintiff had got the ground for nothing; that it could not be held by a private individual, but he, witness, did not say that the plaintiff had swindled the Government, on that or any other occasion.

The witness did employ a person (Mr. Litchfield) to obtain information as to the transfer of

the buildings, and received information on that subject, and as to whom the buildings had been transferred, and that they had been transferred to General Thomas B. Van Buren, as Consul-General, and officially as such Consul-General; according to that information the gaol and all the buildings, out houses, etc., as they stand on the lot, were sold to him for 2,547 yen; the land was given him for nothing; that no purchase money or upset price was paid for the land.

In reply to plaintiff, the defendant testified among other things, that he did say the plaintiff had improperly purchased the buildings, and to the effect, that the purchase and holding were contrary to law. The witness also used the words, that the plaintiff had no right to buy them at all.

The defendant then put in evidence written testimony as follows: A certified copy of an official letter of plaintiff, as Consul-General, to Mr. Hay, Assistant Secretary of State, dated the 1st day of December, 1880, and numbered 483, in which letter the plaintiff said, "the Japanese authorities are now making an effort to get rid of all properties similar to this (the U.S. Consular jail and buildings) and have verbally proposed to me (the plaintiff) to become the purchaser of these particular buildings. I (the Consul-General) suppose no possible objection to my (his) making such purchase can exist, on the part of the Government, and as no legal obstacle intervenes, I (he) shall accept the proposition, of course, always reserving the buildings for our Consular occupation, and receiving the same rent as heretofore paid. Trusting that my (the Consul-General's) course may meet the approval of the Department.

I have, etc., etc.,

(Signed)

THOS. B. VAN BUREN,
Consul-General.

Defendant also put in evidence a certified copy of the letter of Mr. Payson, Third Assistant Secretary of State, which is as follows:

"No 224 Department of State,
Washington, January 13th, 1881.

Thomas B. Van Buren, Esq.,
Consul-General of the United States,
Kanagawa.

Sir,—Your despatches numbered 476, 477, 478, 479, 480, 481, 482, 483, 484, 485 and 486, the last dated Dec. 7th, have been received.

I am, Sir, etc., etc.,

(Signed)

CHARLES PAYSON,
Third Assistant Secretary."

The Defendant also put in evidence a certified copy of the official letter of the Plaintiff No. 500, dated January 18th, 1881, to the Assistant Secretary of State, the Hon. John Hay, in which the Plaintiff, referring to his No. 483, informed the Department that "the Japanese authorities have conveyed to me (the Plaintiff) the Consular and Jail buildings, I (he) agreeing to use the same as before for Consular purposes and upon the same terms. I (the Plaintiff) have therefore assumed their obligations as to repairs, etc.; this course has been pursued with all their properties occupied by foreigners, they giving as a reason for their determination to part with them, the constant trouble and expense they are put to in making the necessary repairs. Sincerely hoping and believing that my (his) action will meet the approval of the Department, I have, etc., etc.

(Signed)

THOMAS B. VAN BUREN,
Consul General."

The defendant also put in evidence copy of letter of Mr. Payson, 3rd Asst. Secy. of State, dated March 5th 1881, acknowledging receipt of Plaintiff's despatch No. 500 by its number only.

The defendant further put in evidence a certified copy of a letter of Governor Nomura Yasushi, addressed to plaintiff, under date 16th December, 1880, wherein the Governor stated:—"In view of the constant trouble to you and me by the repairs required for the buildings on lot 234, Foreign Concession, which for years have been leased to your Government as Consulate and gaol, I (the governor) have the honor to propose to sell you (the plaintiff) the buildings fences, &c., for the sum of yen 2,547.

I have, &c., &c.,

(Signed)

NOMURA YASUSHI,
Kanagawa Kenrei.

The defendant also put in evidence a certified copy of the plaintiff's reply to the Governor's letter, dated 17th December, 1880, wherein the plaintiff, acknowledging the receipt of said letter, and reciting the proposition so made by the Governor, to sell to him (the plaintiff) "the buildings fences, &c., for the sum of 2,547 yen," plaintiff said, "I accept the proposition and will be ready to pay the money at any moment when the conditions of the purchase shall be agreed upon and conveyance papers prepared; I suppose it will be of course understood that the buildings are always to be occupied

for Consular purposes unless otherwise expressly agreed upon by convention between the Imperial Japanese and other Governments, and that I (plaintiff) shall pay to the Kencho no other charge than ground rent I (the plaintiff) shall be pleased to know that the papers will be speedily prepared." I have &c., &c.

(Signed)

THOMAS B. VAN BUREN,
Consul-General.

The defendant also put in evidence the original title deed executed by Governor Nomura Yasushi to the plaintiff, in Japanese, and the original official translation thereof in English, both dated 28th December, 1880. Certified copies of which originals were, with the consent of both parties, filed and made part of the record in the case; and which deed certifies that "the main buildings with outhouses, goal, gates and fences &c. standing on lot two hundred and thirty four (234) Foreign Concession, at present occupied by the United States Consulate-General, have, by mutual agreement, been sold and are hereby transferred to T. B. Van Buren Esq., United States Consul-General, in consideration of the sum of two thousand five hundred and forty seven yen, the receipt of which I (the Governor) hereby acknowledge."

(Signed)

NOMURA YASUSHI,
Kanagawa Kenrei.

Defendant also put in evidence an original, receipt dated 5th of February 1884 under the seal of the Kanagawa Ken for the sum of Mexican dollars 175.40 paid by the U.S. Consul-General for ground rent due on Yokohama lot No. 234, for one year, from 31st January, 1884, to 31st January, 1885, a certified copy of which original is, with the consent of the parties, filed and made part of the record in this case. The defendant also put in evidence an official copy of the Annual Report of the 5th auditor of the Department of the Treasury of the United States for fiscal year ending June 30th 1883, showing, on page 30, that the rent of the prison in Kanagawa, (Yokohama) for the said year, was \$600.00.

The defendant also put in evidence an original letter, dated November 24th, 1883, from the Hon. John Dairs, assistant secretary of state, addressed to the Defendant, of which letter the following is a copy:—

"Department of State, Washington.

Washington, Nov. 24th 1883.

T. H. Tripler, M. D.

Yokohama, Japan.

SIR,—In reply to your letter of the 5th ultimo, in relation to the purchase by General Van Buren of the buildings occupied by him as Consul-General of the United States, I have to say that this Department was aware of the intention of Mr. Van Buren to become the owner of the property and did not oppose a transaction into which he entered as a private citizen and at his own risk.

I am, sir, Your obedient servant,

(Signed)

JOHN DAIRS,
Assistant Secretary."

The defendant further put in evidence a paper of Mr. Geo. E. Rice, by him duly certified as Vice and Deputy Consul-General, to the effect that the yearly rental paid by the U. S. Government for the premises occupied by the Consul-General, is \$1,536.40, which includes ground rent, rent of jail and rent of Consular buildings.

The defendant here rested his case.

Thereupon the plaintiff called Mr. Percival Osborn, before examined by the defendant, who on his oath further testified in reply to questions of plaintiff, that since he was on the stand before, he had received permission to tell all he knew about the circumstances of the sale of the Consular buildings; that he had looked up some things and posted himself, that he was sent on several occasions to General Van Buren (sometimes alone), and asked him if the Government would not buy the buildings, or whether he would not buy them; he qualified this by saying, "I (the witness) am not certain. He (plaintiff) said the Government was unwilling to own any property, and it was useless to ask them. After several conversations, how many, witness did not recollect, there were several letters, the price was communicated to General Van Buren by letter, and was accepted. The date of the conversations, and who made them, I (the witness) forget. Do not recollect whether other sales were made about that time."

The plaintiff, having been duly sworn, testified on his own behalf (the defendant objecting) in substance as follows, that some years ago he received a proposition from the Kencho, to have the United States Government purchase the buildings at an estimate of \$5,000, which he communicated to the Department and advised the purchase very strongly. The reply of the Department was, that the offer should come from or through the Minister, and afterwards advised plaintiff that it was against the policy of the Government to purchase property abroad.

In the latter part of 1880, certain Kencho officials came to plaintiff's office, and stated that the Japanese authorities were anxious to part with all properties leased to foreign Governments; that the expense was large, and the buildings decreasing in value; that the authorities were determined to offer the buildings occupied by plaintiff as Consul-General for the appraised price of the materials, and wanted to know if plaintiff would send the proposition to Washington; the plaintiff replied he would not; the Government had once informed him that any such offer should come from the United States Minister; that he (plaintiff) told them they might send their offer through the United States Minister, or the Japanese Minister in Washington; but plaintiff said he preferred to have nothing to do with it. We had (he thought) two or three interviews on the subject at intervals. Don't remember the date. Finally urged plaintiff to buy the buildings individually to which plaintiff replied that he knew of no legal objections of any kind to his doing so, but he would prefer before giving an answer to examine the law and regulations; that he did examine the Statutes and Regulations, and could find nothing opposed to such a transaction. At another time they asked the witness (the plaintiff) to purchase as soon as possible. Witness replied, "submit the matter and price to me (the plaintiff) in writing."

"They did so make an offer in writing, which is in evidence. I accepted by letter, which is in evidence, and advised the Department of State by letter, in evidence. I have since that time receipted to the Government of the United States in my own name, not officially; and the accounts have been paid by the Treasury Department and approved by the Department of State."

"It is proper to say that the offer was made to me individually, and that the property was purchased by me individually, and is clearly so understood by both parties and the Department of State. The title to the lot is held by the United States."

In addition to this ground rent, which is part of the \$1,500, I have estimated the yearly repairs at about \$400, and pay about 150 yen a year for keeping grounds in repair; \$288 insurance on the furniture and buildings."

I (plaintiff) bought this property to make money out of it. Could I rent these premises for commercial purposes, I could double the rent. I (plaintiff) do not know who the Kencho officials were who had conversations with me, except Mr. Osborn. Any private individual has the right to own property on that lot (No. 234)."

When the foregoing testimony given by plaintiff in person was concluded, the testimony of both parties was closed.

Having thus summarized all that he deems material of the evidence which was admitted and made part of the case, the undersigned, in accordance with the request of the defendant's counsel and with his duty as well, takes judicial notice of the conventions and agreements entered into by the Government of the United States and the Governments of other Powers, with the Government of Japan in relation to the occupancy of lots in Yokohama for Consular and other public purposes.

In the officially published volume of treaties and conventions concluded between the empire of Japan and foreign nations, pp. 234-240, is recorded the convention of December 19th, 1864, between this Government and the Governments of Great Britain, France, the United States of America, and the Netherlands.

This convention, Art. VI., declares that lot No. 2, in the plan annexed, is actually assigned for Consular residence and offices. By the Convention of December 29th, 1866, *ibid* pp. 241-248, between Japan and the four foreign Governments named above, it is provided, Art. III., that three (3) New blocks on the East side of Centre-street, Yokohama, and the Consular lot, shall be reserved for the occupation of Foreigners; and by Art. IV. it is provided that one of these new blocks shall be reserved for public buildings required by the Foreign Community and approved by the Consuls, such as Town Hall, Public Rooms, Post office, etc. Art. XI. declares that these lots reserved for public buildings, &c., as provided in Art. IV. &c., shall be given over to the Foreign Consuls in trust, and by deeds to be approved by the Foreign Representatives; and the Foreign Consuls shall provide that these lands shall be used for no other purposes than those provided in this agreement; and in the event that these conditions be infringed, and on the failure of the Foreign Consuls to correct such infringement, the Japanese Government, with the concurrence of the Foreign Representatives, may reenter and take possession of that portion of said lands upon which the infringement may have been committed. On the same principles it is further provided that the Japanese Government may annul the title deed of any portion of the Consular lot. That said lot, No. 234, became a Consular lot for the

use of the United States, and was for that purpose, together with the buildings thereon, leased to the United States for many years previous to the date of the purchase, and at the time of the transfer of said premises to the plaintiff, is shown by the letter before referred to of Governor Nomura to the Consul-General; and it is also shown by the official letter of the Kenrei of Kanagawa, Mutzu Munemitsu, dated April 22nd, 1872, addressed to Mr. Mitchell, then U. S. Vice-Consul at Kanagawa, that a contract for a jail had been contracted for by the Kenrei with the U. S. Government, to be erected on said lot 234, for which an annual rental of 10 per cent. on the cost thereof, was to be paid by the United States, with a condition that the jail could not be returned to the Japanese Government within a period of ten years, and then only in my opinion upon the election of the United States Government. I consider it my duty to take judicial notice of this letter, inasmuch as a copy thereof was transmitted to me by the plaintiff as Consul-General, with his official note of date March 14th, 1875, and remains on record in this Legation, and furnishes evidence of the annual rental contracted by the U. S. Government to be paid for the use of the jail, etc. It remains for the undersigned to consider and decide first what words in the petition, charged to have been falsely and maliciously uttered by the defendant of and concerning the plaintiff, have been proved as therein laid. The whole testimony justifies the conclusion that all the words charged in the petition are substantially proved by the preponderance of the evidence in the case, except the two charges following:—"The Department of State has been informed of it, but has taken no notice; but old Frelinghuysen will not be there for ever, and when he goes we will get him (the plaintiff) out." There is no evidence whatever in the case which proves this allegation as laid, or that even tends to prove it. The following charge laid in the petition is also excepted, it not having been proved as laid, to wit:—"He" (the plaintiff meaning) "went to the Kencho and in an underhand manner got them" (the Japanese authorities meaning) "to sell him" (the plaintiff meaning) "the Consular buildings for twenty-two hundred yen." It is to be noted, that by plaintiff's witnesses testimony was given of words not charged in the petition as follows:—"That defendant did say Consul-General Van Buren was a swindler;" that the "General had bought the property (the Consular buildings and jail) for nothing," and is "swindling the government;" that "he (defendant) thought it was not generally known, that he (the General) was charging too much rent for it." It has been held, and, it is believed, correctly held, that, "if the plaintiff prove words not laid in the declaration tending to show malice, the defendant may, under the general issue, repel the malice and in mitigation of damages prove these words to be true, even though in themselves actionable." 1st *Hilliard*, p. 384, sec. 9.

The defendant, having justified in his answer the speaking by him at the time of the alleged grievances, of and concerning the plaintiff, as to the following words:—"that he"—(the said plaintiff) "had improperly purchased as Consul-General the buildings and premises now occupied by him" (the said plaintiff) "as Consular offices and his residence;" that "he" (said plaintiff) "had no right to buy them at all, and that the said purchase and occupancy were contrary to law, and all of which said words are true," &c, it is important to enquire whether this plea of justification is proved. It cannot be doubted that the words spoken by the defendant, as confessed in his answer, and also the words laid in the petition, so far as proved or admitted in this case, were spoken exclusively concerning the purchase of these buildings made by the plaintiff in December, 1880, and related exclusively to the date of said purchase. Was the plaintiff on the 17th day of December, 1880, when he concluded the contract with Governor Nomura for the purchase of these buildings, or on the 28th December, 1880, when the governor executed to the plaintiff the title deed therefor, which transferred said buildings to plaintiff as his private property, absolutely, and without limitation or condition, authorized by law to make said contract and take to himself said buildings as his private property and occupy the same in his own right? It cannot be questioned that at the dates aforesaid of the purchase and transfer of said buildings, the United States Government held the same together with said lot No. 234; exclusively for its own use for consular purposes and for prison purposes, and subject to the conditions, prescribed in the conventions of 1864 and 1866 between the Japanese Government and the Governments of Great Britain, the United States, France, and the Netherlands, hereinbefore referred to. It must be concluded, that without the consent of the United States first obtained, the plaintiff had no legal authority to conclude said contract of purchase or to take to himself absolutely

and unconditionally, as he did, said transfer of the said Consular buildings and jail as his private property and for his own profit, or, as he stated in his testimony, "to make money out of it." That no authority for this transaction of the plaintiff had been conferred upon the plaintiff, and that no consent had been given thereto by the Government of the United States at or before the transaction, is clear upon the facts in the case, as shown by the evidence on record.

Mr. Osborn testified that he was in the service of the Governor in the fall of 1880, when he called upon the plaintiff and enquired of him, if the Government of the United States would not buy the Consular buildings and jail; thereby implying that the Governor's agent was instructed that the sale of the buildings should be made, if at all, to the United States Government. The plaintiff, as appears by his own testimony, entertained the same opinion, when the offer was first proposed in 1875, to sell the buildings to the United States Government, which offer he communicated to the Department of State in that year, and was by the Department instructed that the "offer should come from or through the Minister." The plaintiff further testified that, in the latter part of 1880, certain Kencho officials, whose names are unknown to him, came to the plaintiff's office and stated that the Japanese authorities had determined to offer the Consular buildings and jail for the appraised price of the material, and wanted to know if the Consul-General would send the proposition to Washington. From which it is apparent that the Japanese authorities still were of the opinion, as in 1875, that the sale and transfer of the buildings should be made to the United States Government. It was not until the officials had asked if the plaintiff would send the proposition to Washington for the sale of these buildings at the appraised price of the materials, and had received the answer of the plaintiff that he would not send the proposition to Washington, and added that the Government had instructed him, on a former occasion, that the offer should come from the United States Minister, &c., nor was it until after two or three interviews had been had on the subject between them and plaintiff, that, "they finally" as plaintiff testified, "asked me (plaintiff) whether I individually would buy them (the buildings)." "I (the plaintiff) said I knew of no legal objections of any kind to my doing so, but that I would prefer before giving an answer to examine the law and "regulations." It further appears in the plaintiff's testimony that in a subsequent interview when they (the Kencho officials), again urged the matter upon me, (the plaintiff) I (he) stated to them, I would make the purchase and would write at once to the Department of State the fact of the offer and my (his) intention, and ask the Department's approval; and further, plaintiff testified, "I did so write to the Department as shown by letter to the Department of State in evidence" (see letter of plaintiff to the Department of State, December 1st, 1880). The question arises, why should the plaintiff write to the Department of State his intention to make this purchase and ask the Department's approval of such purchase, if, as plaintiff now alleges, he had a legal right to make the purchase individually and for his own exclusive benefit? As the plaintiff further testifies, "they then (the Kencho officials) at another interview shortly afterwards (that is shortly after the above statement was made to them by plaintiff that he would make the purchase, etc.), urged upon me, (the plaintiff) to complete the purchase as soon as possible, giving their reasons that concerned themselves not me (the plaintiff). I (the plaintiff) told them to submit the matter and price to me (him) in writing." "They did so make the offer in writing, which is in evidence" (see Governor Nomura's letter to plaintiff dated December 16th, 1880). "I (plaintiff) accepted the offer by letter, which is also in evidence, and so advised the Department of State, which is also in evidence," (see plaintiff's letter to Governor Nomura, dated Dec. 17th, 1880, and plaintiff's letter to State Department, of date, January 18th, 1881). It is to be observed that in his letter to plaintiff the Governor offers to sell to the plaintiff "the buildings on lot 234, foreign concession, which for years have been leased to your (the Consul-General's) Government as a Consulate and gaol. I (the Governor) have the honor to propose to sell you (the plaintiff) the buildings, fences, etc., for the sum of yen 2,547," and it is also to be noted, that in plaintiff's reply, of date, Dec. 17th, 1880, he says "I (the plaintiff) accept the proposition, and will be ready to pay the money at any moment, when the conditions of the purchase shall be agreed upon, and conveyance papers prepared. . . . I (plaintiff) will be pleased to know that the papers will be speedily prepared." The papers were prepared. The deed of sale and transfer was executed December, 28th, 1880, and the receipt of 2,547 yen (the consideration paid) was therein acknowledged.

This deed sells and transfers the buildings absolutely and unconditionally to plaintiff as his private property, and by its terms excludes the conclusion, that it was understood or intended to be understood by the contracting parties, "that the main buildings, outhouses, gaol, gates, fences, &c., standing on lot two hundred and thirty four (234)," and sold to the plaintiff as aforesaid, were to be occupied for Consular and prison purposes by any foreign State, save at the pleasure and election of the plaintiff. The parties to this transaction are in my opinion estopped by the express terms of the title-deed from assuming that any right of the United States for the use of the buildings for Consulate and prison purposes was thereby saved or assured to the United States. Inasmuch as the defendant served due notice on the plaintiff that on the trial he would demand of plaintiff the production of the originals or authenticated copies of the correspondence of the plaintiff with the Kencho, and also of the correspondence of plaintiff with the State Department, relative to the transfer of said buildings and also of the deed or deeds of transfer by the Kencho of the buildings to the plaintiff; and as an order was made accordingly by the undersigned for their production by plaintiff in court, it is but just to conclude that the plaintiff has furnished all the correspondence, by copy or original, had by him with the Kencho officials or with the Department of State concerning the purchase of, and the transfer to him of, the property, and also all deeds, or copies thereof, of said transfer. It is also to be noted that plaintiff's sworn statement makes no mention of any other written agreement or contract with the Governor for the sale and transfer to him of the said property. Manifestly these buildings on the Consular lot No. 234, are as much a part of the lot of land as is the ground on which they stand, and therefore it results that the plaintiff had no more color of right to purchase the buildings as his private property and for his exclusive benefit than he had to purchase the land itself.

Upon the evidence thus furnished and of record, I find that the defendant was justified in uttering and publishing, as pleaded by him, the words specified and alleged to be true in his answer, to wit: "He (the said plaintiff) had no right to buy them" (meaning the consular buildings aforesaid) "at all" and that "the said purchase was contrary to law."

Of the words not included in the defendant's plea of justification, and which are charged in the petition, it is my opinion that only the first and third charges in the petition are actionable *per se*. Have they, the first and third charges, been proved as laid and as the law requires? The other words before noted herein by me, which are not specified or charged in the petition, but testified to by plaintiff's witness, do not at present call for special consideration.

The words laid in the petition which remain to be considered are, 1st, "He" (the plaintiff) "went to the Kencho, and in an underhand manner got them to sell him the Consular buildings for twenty two hundred yen." In my opinion this charge, as stated in the petition, is not proved as laid in the petition and as the law requires. The price therein alleged, 2,200 yen, was only sworn to by one witness, (and he expressed doubts as to the amount), and it is positively denied by the testimony given by the defendant that he stated in conversation any price.

2nd. The words, "He" (the plaintiff) "has swindled the government," are, in my opinion, by the preponderance of evidence proved to have been spoken as laid, and are actionable *per se*; and that they were spoken of plaintiff, and concerning the purchase made by plaintiff of the Consular buildings and gaol. The circumstances of the speaking are to be considered. It was at the time of the Club election, wherein the plaintiff and others were candidates, and the other two witnesses of plaintiff were electors. The words, it seems, were addressed to Mr. Prichard, and partially heard by Mr. Beato and Mr. Walker. The defendant was opposing the election of plaintiff and favouring that of Dr. Fisher. The witness, Mr. Prichard, favored the election of plaintiff. The fact that only on that occasion, and in the heat of the controversy as to the merits of the candidates, is it shown that the defendant spoke any of the words as charged in the petition; and the further fact that those utterances were made three years after the purchase of the property by plaintiff, seem, to some extent, to rebut the presumption of malice. It is held that the defendant may prove under the general issue that the words were spoken on a justifiable occasion, without malice or under circumstances which induced him erroneously to make the charge complained of, believing it to be true. 1 *Hilliard*, p. 314, sec. 9.

The truth ought to be admissible in evidence to explain the intent and not in every instance to justify it. 2 *Kent*, p. 26. Damages can be given only for the words charged in the declaration, and proved as therein laid. 1 *Hilliard on Torts*, p. 314.

If the plaintiff prove, as I have before stated, words not laid in the declaration, tending to show malice, the defendant may, under the general issue, repel the malice, and in mitigation of damages prove these words to be true, even though in themselves actionable. 1 *Hilliard*, p. 314 sec. 9.

A select man having said in good faith, "the Plaintiff has put in two votes," it was held that the charge for slander could not be maintained when Plaintiff's own conduct was such as to induce the Defendant to believe it to be true. 12 *Pickering* p. 163.

If the statements are true, they are not libellous, however malicious. So, although untrue, if made in good faith, believing, or having probable cause to believe them true, the burden of proving a want of probable cause is upon the Plaintiff. 1 *Hilliard on the Law of Torts*, p. 335, sec. 16.

In the case of Howard vs. Thompson, in the Supreme Court of New York, reported in 21st *Wendell* pp. 320-326, wherein Howard, plaintiff, complained that while he held the office of Inspector of Customs and keeper of the Public Stores of the United States, the defendant falsely libelled him by addressing certain letters to the Secretary of the Treasury, charging that the plaintiff had been guilty of fraud in the execution of his trust as such keeper, &c., the record shows that the question was raised by defendant on the trial, that until plaintiff showed want of probable cause, defendant was entitled to non-suit; and that a complaint addressed by a citizen to the proper tribunal against another, from motives of ill-will towards the Plaintiff, subjected the complainant to an action of slander unless it be apparent that the complaint was not without probable cause. The Supreme Court held in this case, that where the letters were addressed to the officer having the power, and with whom rested the duty to remove, if the charges assigned were by him found to be true and were directly forwarded to him, there was not the least doubt that they were as much without the doctrine of libel as an indictment, and cited the case of *Rex vs. Baillé*, 2 *Espinasse's N. P.* 91. The complaint in this case was that a printed book which contained an account of the abuses of Greenwich Hospital, and treated the officers of that institution with much asperity, had been distributed among the Governors of the Hospital.

On motion for a criminal information Lord Mansfield stopped the prosecution on the point that such a proceeding did not amount even to a publication. He put his ruling on the ground that the distribution of the book had been confined to persons, who were, from their situation, called on to redress the grievances complained of, and had the power to do it.

The Supreme Court of New York further held that actions for petitions or remonstrances addressed to the appointing power, being *quasi* for malicious prosecution, will not lie where it comes out on the whole evidence that there was probable cause, and added, "it will never do to say that where there are circumstances raising a strong suspicion of official misconduct, the friends of the officer, or persons indifferent alone, shall come within the protection. It is important that others more ready should be equally favored. There is no reason, if they bear actual ill will to the plaintiff, why this should remove from them what would be of itself a complete shield to the rest of the community."

The plaintiff (Howard), say the Court, "admits that he took the timber entrusted to him as keeper of the public stores, and converted it to his own use in building a dwelling house. The defendant saw or was informed of the fact. Admitting, say the Court, for the present, that the plaintiff had a right thus to convert the timber, can it be said that his conduct was so entirely pure on its face as to raise no misgivings in the minds of his neighbors? They knew him for a public trustee, and saw him converting to his own use a portion of what he had in charge. "At any rate," say the Court, "whatever may be the general merit of the plaintiff, and however innocent he may be in this particular, we cannot hold the defendant criminal for thus communicating (to the Secretary of the Treasury) "what the plaintiff has been so unfortunate as to give him (the defendant Thompson) probable cause for supposing to be true."

Upon this ruling and upon the other authorities herein cited, it seems to me clear that the letter of defendant to the Secretary of State, which the plaintiff (Thomas B. Van Buren), after the testimony of both parties to this action had been closed, offered as evidence in the case, and to the admission of which as evidence therein the defendant (Thomas H. Tripler) objected, was properly rejected at the trial by the undersigned as evidence in the case, inasmuch as the letter, upon all the facts in the case, comes within the rule of protected communications; and, if admissible, could only be received in chief as evidence of written defamation (which is not charged in the petition), as it contained nothing to rebut or impeach the testimony of the

defendant. The evidence upon the whole case shows that the plaintiff's acts which had come to the knowledge of the defendant, gave the defendant probable cause for believing all that the letter contains to be true as therein stated, and justifies the conclusion that the defendant did in fact write the letter to the Secretary of State in good faith upon probable cause and believing the statements therein to be true, and for the information only of the Secretary who had the power to enquire into and correct the wrong done to the Government, if upon enquiry he should find wrong to have been done by the plaintiff in the premises. It is proper to further state that there is no evidence that the defendant, when he wrote the letter, had any information whatever that the State Department had any knowledge of the purchase of the premises by the plaintiff, nor is there any evidence that at the time of the alleged speaking of the words in December last, the defendant had any information that the Department had authorized or approved the purchase so made by the plaintiff.

It appears from the testimony that, at the time of the alleged speaking of the words by the defendant in December last, the defendant had knowledge that the entire property had, for years previous to the sale thereof, in December, 1880, to the plaintiff, been held by the United States Government in its own right for Consular and jail purposes, and that the plaintiff had, in December, 1880, purchased the property, and had paid therefor two thousand five hundred and forty-seven (2,547) yen.

It was publicly known (and I deem it my duty to take notice of the fact), that at the date of this purchase in December, 1880, yen were selling as merchandise in Yokohama at one hundred and sixty-six or more yen for one hundred Mexican dollars. As the title deed certifies that the consideration of the sale was two thousand five hundred and forty-seven (2,547) yen, and acknowledges the receipt of two thousand five hundred and forty-seven yen, it is presumable that the purchase money was paid in yen, (especially as no testimony was given to the contrary). It results that the yen so paid for the premises were equal at the time of purchase to fifteen hundred and thirty-five (1,535) Mexican silver dollars.

It also appears that it came to the knowledge of the defendant, before December last, that the United States held this property subject to the conventions of 1864 and 1866, and that it could not be sold or held as private property for private use. It further appears in testimony that from and since the 1st January, 1881, plaintiff has been receiving from the United States Government as rental for said lot and buildings, then and still occupied by him for United States Consular and jail purposes, the sum of fifteen hundred and thirty-six and 40/100 (\$1,536.40) dollars annually, which sum it is presumed, in the absence of testimony to the contrary, is paid by the Government in gold, and which, at the current rate of exchange at Yokohama, is equal to sixteen hundred and ninety (\$1,690) Mexican silver dollars, thus reimbursing the plaintiff in one year the purchase-money so paid by him, and also the ground rent by him paid, one hundred and seventy-five and 40/100 Mexican silver dollars (\$175.40) annually, less (20) twenty dollars Mexican.

It has been hereinbefore shown that all the words proved to have been spoken by the defendant of and concerning the plaintiff, as laid in the petition, have been justified in defendant's answer, and the speaking thereof is in my opinion justified by the testimony and proved to be true for reasons hereinbefore stated, except the words, "He has swindled the Government of the United States," etc. These words last mentioned, have, in my opinion, by the preponderance of the evidence, been proved to have been spoken by defendant in December last of and concerning the plaintiff and the purchase so made by plaintiff of said property, and have been strictly proved as laid, and as the law requires. The defendant did not justify as to these words. I therefore find upon the evidence that the defendant is guilty of the charge last above mentioned and as laid in the petition.

The only question that remains is to consider the measure of damages under all the circumstances, and in the light of all the facts in the case, as proved. I hold the law to be that under the general issue the defendant may prove in mitigation of damages that he spoke the words under circumstances which induced him erroneously to make the charge complained of believing it to be true, and especially when the action of the plaintiff in the matter of which he spoke had been such as to induce the defendant to believe that the purchase made by the plaintiff of the property which was rightfully held by the United States Government was unlawful and a fraud on the Government.

Can it be said that the purchase by the plaintiff of this property for a mere nominal consideration, which the plaintiff made in December, 1880, and which at that time he had no right or color of

right to make, not having the consent of his own Government in the premises, and as it clearly appears the plaintiff could not rightfully acquire the same as his private property under the conventions of 1864 and 1866, and by reason of the rights therein of the United States Government—was not calculated to induce the defendant, who had knowledge of these circumstances, to believe that the said transaction, on the part of the plaintiff, was fraudulent as against the United States Government? It cannot be doubted in my opinion upon all the facts proved in the case, that although the defendant has not pleaded justification as to this charge, the fact that plaintiff was so unfortunate in this transaction as to induce the defendant to believe that he had wrongfully, unlawfully, and for his own gain, as an agent of the United States, defrauded the Government thereof in the purchase thus made by him, however innocent the plaintiff may be in this particular, must have great weight in determining the damages in the case.

It must be conceded that the plaintiff had, as shown by all the testimony, given probable cause to induce the defendant to believe that this accusation, made by him as charged, was true, and that the case is not such as to justify vindictive or exemplary damages. No evidence was given of special damages.

I therefore assess the plaintiff's damages in the premises at twenty (\$20) dollars, and do hereby adjudge and decree that the defendant, Thomas H. Tripler, pay to the plaintiff, Thomas B. Van Buren, said sum of twenty (\$20) dollars, his damages assessed as aforesaid, and I do further adjudge and decree that said defendant pay the costs of this suit.

(Signed) JOHN A. BINGHAM,
Envoy Extraordinary and Minister Plenipotentiary
of the United States of America in Japan.
United States Legation,
Tokei, Japan, May 5th, 1884.

IN THE TOKYO COURT OF APPEAL (KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two
Judges Assisting.—SATURDAY, May 10th, 1884.

In the matter of a Marine Court of Enquiry into
the loss of the Mitsu Bishi Mail Steamship Com-
pany's steamer *Akitsuishima Maru*.

Between Johannes Frahm, Danish subject, late
master of the steamship *Akitsuishima Maru*, by
his attorney P. Frahm, of No. 149, Bluff, Yoko-
hama, Appellant; and the Kwansen Kioku of
the Noshomusho, by its Minister H.E. Saigo
Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appel-
lant, and Captain G. E. O. Ramsay for the
respondent.

Mr. Ramsay, resuming his address, said—Here I must quote from the translations of the minutes of the Court (page 3)—“The appellant states that he looked at the light for eight or nine minutes” (true, as it is evidence), “and saw it in the same direction as he expected the Siriya-saki Light, that is in the West. The chief mate stated, at the same time, that he also believed it to be the Siriya-saki Light, and the distance of the Light to be 10 to 15 miles; and that the third officer made the same reply.” This is true only as to the light, but inexplicably incorrect in regard to distance: see third officer's evidence, page 2. “What distance off?” “About four miles.” To Captain Frahm—“How did you estimate the light to be four or five miles off?” “By guess.” I would state, in the same manner as the master and chief officer. The master's report states 18 miles distant: the chief officer 10 to 15 miles, and the third officer four and four to five miles. From the Court's minutes (translation page 3, 24th line), can Mr. Rossetsu be considered to be in possession of his senses when he states—“That the three Judges altogether put on one side the evidences of the four respectful witnesses (viz.: Captain, chief officer, and third officer, three in number) and made out the judgment from the evidence of a mere seaman. It is too absurd altogether. I can only say his brain was enveloped in darkness equal to the imaginary darkness in which the *Akitsuishima Maru* was. Then he continues, “This is the chief objection to the said judgment.” This statement made by Mr. Rossetsu is a wilful perversion of the truth, and he is worthy of being rebuked for endeavouring to bring into this honourable Court of Appeal such an accusation against the Marine Court of Enquiry. Here I would state that the summing up and the judgment of the Marine Court of Enquiry was translated into the Japa-

nese language for the perusal and consideration of the officers of the Noshomusho, the head of the Department being H.E. Saigo Tsukumichi, who, after due consideration, approved of the same and affixed his seal. In regard to the third reason given for the judgment, as stated by Mr. Rossetsu, “neglect of duty in leaving the bridge and deck when so uncertain of his position and distance from the land when the ship was steaming full speed towards it.” Mr. Rossetsu has stated that “if he could show that the appellant was justified in concluding that the light was Siriya-saki, and therefore he could go to rest without fear, this reason for the decision would fall through.” He (Mr. Rossetsu) has not endeavoured to prove this point as yet; consequently I cannot remark thereon, as I presume he is desirous of commenting on Captain Young's evidence as given on the 25th April, to prove the point above. At this point the legal adviser of the attorney for the appellant refers to the reply to the petition of appeal: good. Mr. Rossetsu referred to the respondent's answer, which stated that no bearings had been taken by the compass (page 9, reply to Petition). Mr. Rossetsu states:—“But the evidence of the appellant and his officers went to show that bearings must have been taken, for they unanimously agreed that the light bore West.” On this point, what does the evidence state? (See master's evidence page 9). “Bearing not taken on account of funnel.” Nor were any bearings taken thereof either before or after the ship was on her course, and for the neglect of which by the master, the vessel was lost. Referring to the evidence of the chief officer, page 4. “The light disappeared, I judged, W. by S. $\frac{1}{2}$ S., distance about 12 miles.” The bearing I must here state was not taken by the compass, but arrived at by judging, i.e. guessing. Refer to page 7—cross-examination of master. “I ascertained the bearing by bridge compass.” By Captain Frahm—“that would be $4\frac{1}{2}$ points on port bow.” “How could you possibly take a correct bearing having a weather cloth between the compass and the object?” “I took the bearing as correctly as possible.” “How much is your bearing likely to be incorrect?” “I do not know.” Hence the bearing was only judged. Page 13, master's evidence:—“This screen would be about 6 points on each bow.” Page 12. “What height was compass screen amid-ships?” “It was attached to a pole compass in middle of bridge, about two feet on each side of the pole; it was 6 feet from bridge to deck, being about 2 feet above the compass.” This disposes of bearings of the light being taken by compass. Is any master of a ship justified in navigating his vessel entirely by a compass so situated as to render a correct bearing of a light or object being taken from right ahead to 6 points on each bow, a matter of impossibility? Certainly not; yet Johannes Frahm did, and result was the vessel being wrecked. Mr. Rossetsu referring to respondent's answer (page 1). “The appellant never attempted to ascertain his position at any time after losing sight of the land on the morning of the 9th October; that the vessel had not been navigated at all, but allowed to take her own course, and that everything had been done by guess,” is unquestionably true; for, firstly, refer to the log book; there is nothing to be found there to enable anyone to work out the position of the ship. Secondly, refer to the Master's evidence, page 8. “What use is a log-book?” “To show a record of the ship's proceedings.” (Which this does not.) “Who is responsible for the log-book being correctly kept?” “The Captain is, together with the chief officer.” Page 5. “How was ship's position ascertained at 5.30 p.m. on the 9th?” “By my own calculation and the log.” (Yet there is nothing recorded in the log.) Page 8. “How often was ship's dead reckoning worked up?” “I worked it up every day myself. I gave it to the chief officer every day at noon, for him to enter it in log book.” Here I would most emphatically state that it is a matter of impossibility for anyone to work up his ship's position by dead-reckoning. For the dead-reckoning is always ascertained from the course steered, distance run, leeway, and set of current, taken from the ship's log-book, and none of these points are filled in at all, excepting a few courses. Hence it was impracticable for the master to work up her position at any time, as he seldom, if ever, saw the log-book (p. 8). Page 14. “As you ignored the ship's log-book, what record have you of the ship's courses at all, or of her movements?” “None but my chart.” Here it must be admitted to be beyond dispute a fact that the master never worked up the ship's position at all by dead-reckoning, for he ignored the log-book, and had no record of ship's courses steered at all. Mr. Rossetsu referring to the respondent's answer also continues:—“But the Court must remember that for 40 hours previous to the catastrophe, neither sky nor land could be seen, therefore no observation could be taken; consequently the only way the captain could

judge of the ship's position was by estimating the speed of the ship, the leeway, and the courses steered.” This, I would remark is the correct method to adopt to lose a ship. In order to ensure her safety nothing on board of a ship must (in reference to navigation) be left to chance, which has been done in this case habitually. In regard to no observations for 40 hours previous to the catastrophe, viz., wrecked at Odonosawa 4.45 a.m. Oct. 10th, 1883, which would be at 12.45 p.m. of the 8th Oct., i.e., 12.45 p.m. 8th Oct., to 4.45 a.m. on the 10th of Oct., is 40 hours.

Refer to evidence to see if this assertion is borne out. Master's evidence page 4. “When was Miako Head bearing West?” “3.45 p.m. and 5 miles off last on 8th October.” This is one observation. Page 11. “Did you keep the N.N.W. course until land was sighted?” (this was on the morning of the 9th.) “Yes, until 6 o'clock. Then steered W.N.W. magnetic course.” This is evidently and plainly the second observation or bearing of the land $22\frac{1}{2}$ hours before the wreck occurred.

Consequently Mr. Rossetsu is again in error in his statement. It has been stated in the *Japan Mail* (and stated by Mr. Rossetsu to be correct to the Court, so that I need have no fear in accepting that as his statement) “That for 3 days previous” (to the catastrophe) “they had been unable to take an observation.” That would be 4.45 a.m. on the 7th of October. Now by the log-book and the master's evidence (page 4.) Kinkasan bore West, distant 3 miles at 4 a.m. Oct. 8th. So here are most distinctly set forth three observations within $48\frac{1}{2}$ hours, and two observations taken within 40 hours of the loss of the vessel, the last one being as previously stated $22\frac{1}{2}$ hours before she was lost, yet the legal adviser of the attorney for the appellant would wish this most honourable Court to believe that no observations had been taken; it is absurd, and his statements are opposed to facts, and to the evidence taken before the Marine Court, copies and translations of which are in this Court's possession, I believe. The legal adviser of the attorney for the appellant states further: “Previous to 5.30 p.m. on the 9th of October, the weather had been so tempestuous that the Captain was unable to get to his cabin, where his charts and instruments were kept, but the weather slightly moderating at that time he was enabled to procure the chart, and after considering the foregoing points, judge of the ship's position.” Yes, but by guess work, having no record or anything to guide him, and disdaining to consult his officers. Again I must refer to the master's evidence as taken before the Marine Court of Enquiry. Page 5. “How long had you been on the deck?” “For 48 hours I had no rest at all; the greater part of the time I was on the bridge; left the bridge to consult the charts and barometer and to take my food.” Here is Mr. Rossetsu's statement entirely dispersed as to the Captain's inability to get to his cabin during the tempestuous weather: and in order to make the dispersion entirely complete so that he cannot have a leg to stand on, I here bring to the notice of the Court that the officers of the ship were enabled to keep their regular watches throughout; to do so, it is evident that they were enabled to get from their cabins to the bridge and back again. Mr. Rossetsu further stated “that the Captain thought he was in the Tsugar Straits, whereas the vessel was wrecked near a place called Odonosawa 15 miles South of Siriya-saki. This showed that the master was from 20 to 24 miles out of his reckoning. When, however, the dirty state of the weather is taken into consideration, and also the strong variable currents that exist on that coast, it was not surprising.” I would ask the Court to bear in mind that the position of the ship had been ascertained by bearings of the land, viz., twice on the 8th and once on the 9th of October, in the morning, $22\frac{1}{2}$ hours only, before the vessel was wrecked. It is peculiar that he should have been so much out in his reckoning as 20 to 24 miles, had it (the reckoning) been properly kept and checked, but not surprising truly, inasmuch as no reckoning was kept; hence the ship correctly ascertained her own position on the 10th, much to the master's surprise. At this point Mr. Rossetsu read an extract from the *Japan Gazette*, the pith of which was recorded in the translated minutes of the Court “that the steamer *Kiwa* had been carried away 40 miles in 12 hours by the current when she was going towards the Tsugar Straits, therefore it is nothing that the *Akitsuishima Maru* should have been 20 to 24 miles out of her position, when the darkness and stormy weather is taken into consideration.” Why will not the legal adviser of the attorney for the appellant confine himself to statements of facts, which statements when made should bear the strictest investigation as to their truthfulness. Again have I to ask the Court to take most emphatic notice of my remarks on his statement, viz.:—That the *Kiwa* was not going towards the Tsugar Straits, and that she has never

done so; that when the *Khiva* experienced this current of 40 miles in 12 hours she was approaching Omae-saki (a point more than 500 miles distant from the bones of *Akitsushima*) and bound for the port of Yokohama, and not, as stated by the legal adviser of the attorney for the appellant, for the Tsugar Straits. Are these erroneous statements made to mislead this Court of Appeal in order to frustrate justice being properly meted out? I trust not.

Mr. Ramsay here asked permission of the Court to hand in a document from Mr. J. Ricketts, the Agent of the Peninsular and Oriental S.N. Co., certifying that the steamship *Khiva* had never passed through the Straits of Tsugar, nor had she been bound there. This he wished to do to substantiate his statement about the current.

Mr. Rossetts objected on the ground that Mr. Ricketts should have appeared and given his evidence in person.

Mr. Ramsay explained that it would only prolong the proceedings, as Mr. Ricketts would simply confirm what he had written.

Mr. Rossetts withdrew his objection.

Mr. Ramsay, continuing his address, said in reference to the Mitsui Bishi Mail Steamship Company's instructions. Mr. Rossetts states:—"No mention had been made at the first hearing, and, therefore, the appellant did not have an opportunity of fully explaining, why he had not carried them out in their entirety; but Mr. Rossetts did not see what these Rules had to do with the decision of the Court, as they were not embodied in the laws of the country, but were only the Regulations of a private Company, by which the Court of Enquiry should not have been influenced." Master's evidence (page 3). "Is this the log-book of the *Akitsushima Maru*?" "Yes." Therefore the log-book was put in as evidence. Page 3. "Produce your deviation card?" "Card left on board ship. There is no space for it in the log-book." Will this Court refer to the log-book, it being, I believe in the possession of the Court. Now I would point out the fact that there is space for it on the inside of the cover. Page 3. "Hand in your night order-book?" "I have never kept a night order-book, I was always there myself." Page 4. "At noon on the 9th of October, what was the ship's position?" "Not worked up at all." These quotations are made from the evidence, so that the Court may see the reason for the Marine Court of Enquiry arriving at their decision. For it is said, at page 4 of summing up, "Here we would remark upon the irregular manner in which the navigation of the ship has been apparently habitually conducted. The log-book has been kept very irregularly, as it shows no record of speed per hour, error of compass, or barometrical readings; neither is there any account of ship's position at noon, bearings, and distance at noon. The Marine Court did not take into its consideration the master's neglect in disregarding his owners' instructions; it was outside the province of the Marine Court to do so."

The Court adjourned to the 16th instant at 9 a.m.

MONDAY, 12th May, 1884.

Captain Young, of the M.B.M. steamship *Taka-sago Maru*, appeared for the purpose of signing the testimony given by him on the 25th April, when the court allowed Mr. Uchiyama to put the following additional questions:—

Mr. Uchiyama—Are you acquainted with Johannes Frahm, the appellant?

Captain Young—Yes.

Mr. Uchiyama—Has he ever been with you?

Captain Young—Yes, about 7½ years ago he was with me on the *Genkai-maru* as first officer.

Mr. Uchiyama—Do you consider him a competent seaman?

Captain Young—Yes.

Mr. Uchiyama—What do you think of him as a master?

Captain Young—Perfectly able and sober.

Mr. Uchiyama—Do you consider him an energetic and careful man?

Captain Young—I do.

Mr. Uchiyama—From your knowledge of him, do you think he would have left the deck of the *Akitsushima-maru* if he had not felt confident that the light he saw was the Shiriya-saki light?

Captain Young—Certainly not.

Mr. Uchiyama—Is he a man likely to have done so from carelessness or laziness?

Captain Young—No.

Mr. Uchiyama—Considering that the *Akitsushima-maru*, after losing sight of the light ran for about 2 miles before striking, would not the master have had plenty of time to save the vessel, if the first officer had done his duty and at once called him after losing sight of the light?

Captain Young—Yes, he would have had plenty of time.

The Court adjourned till 9 a.m. on the 17th inst.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MAY 9TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 37.3 miles per hour on Friday, at 4 p.m.

The highest reading of the barometer for the week was 30.207 inches on Tuesday at 9.27 p.m., and the lowest was 29.723 inches on Sunday, at 6 a.m.

The highest temperature for the week was 77.5 on Sunday, and the lowest was 46.0 on Tuesday. The maximum and minimum for the corresponding week of last year were 73.9 and 44.2 respectively.

The total amount of rain for the week was 3.245 inches, against 1.262 inches for the corresponding week of last year.

Kowyeki Maru, Japanese steamer, 63, Okuma, 16th May.—Yokkaichi, General.—Kowyekisha.

Shima Maru, Japanese steamer, 270, Toyoshima, 16th May.—Yokkaichi, General.—Kiyodo Unyu Kwaisha.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Mr. John Duus and 3 Japanese in cabin; and 109 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, from Kobe:—Mr. and Mrs. K. Nakauchi and child, Messrs. Wolff, Busch, Drummond, Marians, K. Ikeda, and H. Kawada in cabin; and 1 European and 29 Japanese in steerage.

Per American steamer *City of Rio de Janeiro*, from Hongkong:—Messrs. J. L. Pereira, R. Oishi, C. Miyagawa, and Chow Pae Sang in cabin. For San Francisco: Dr. and Mrs. J. G. Kerr, Miss Kerr, Messrs. Fung Pak and Chung Lung in cabin; and 732 Chinese in steerage.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—Admiral Akamatsu, Mr. and Mrs. B. J. S. Brinkworth, Mr. and Mrs. Mitchell, Miss F. Mitchell, Miss M. Mitchell, Dr. and Mrs. Bentley, Mrs. Fairfax, Mrs. Simms, Mrs. Toyna, Messrs. F. Brown, Foss, J. R. Elliott, Loomis, A. Boumann, Walber, J. F. Broadbent, Fukuda, Ekoshi, Sakurai, Yamagata, Ito, Nakano, and Ishikawa in cabin; and 1 Chinese 160 Japanese in steerage. For San Francisco: Captain A. H. Morse and Long Ye You in cabin. For Liverpool: Mr. J. Ambrose in cabin.

Per Japanese steamer *Sukune Maru*, from Hakodate:—30 Japanese.

Per Japanese steamer *Uke Maru*, from Shimizu:—20 Japanese.

Per Japanese steamer *Tokai Maru*, from Kobe:—5 Chinese and 80 Japanese in steerage.

Per Japanese steamer *Totomi Maru*, from Niigata via Fushiki and Kobe:—Messrs. Robertson, Bouet, and Lefevre in cabin; and 70 Japanese in steerage.

DEPARTED.

Per British steamer *Kashgar*, for Hongkong via Kobe and Nagasaki:—Lieutenant and Mrs. T. H. James, 2 children, and nurse, Mr. and Mrs. Legge, Mrs. J. P. Reid, child, European maid, and nurse, Major E. Moureal, Major Greenfield, Major Cumming, Mr. Caldecott and servant, Mr. Ah Cheong and servant, Messrs. Loureiro, Sinclair, C. W. Philipps, F. S. Goodison, S. Samuels, and Tien Suen in cabin; and 13 Japanese and 3 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—H. E. Sanjo, Mr. and Mrs. Shimadzu and family, Mrs. and Miss Shimadzu, Rev. and Mrs. Harris, Mr. and Mrs. Namura, Mrs. A. Anderson, Mrs. Sato, Mrs. Kobayashi, Mrs. Namura, Mrs. Oda, Mrs. Fujisawa, Mrs. Midzuno, Miss Mailes, Miss C. B. Pritchard, Miss M. E. Brokan, Miss Takashima, Judge Imai, Judge Kojima, Judge Nishioka, Colonel Harada, Dr. F. Robertson, Messrs. A. D. Abraham, K. Takashima, Sekiguchi, Morimoto, Y. Tanaka, K. Otsubo, Matsuzaki, and Katsuda in cabin.

Per American steamer *City of Rio de Janeiro*, for San Francisco and Europe:—Rev. A. C. Pearson, Mr. and Mrs. O. J. Humphreys, Dr. and Mrs. J. G. Kerr, Miss Kerr, Captain A. H. Morse, Messrs. L. B. Ellis, F. W. Degener, Böning, A. W. Billbrough, R. A. Weed, H. M. Smyth, J. Ambrose, Ling-y-you, Fung Pak, and Chung Lung in cabin; and 5 Europeans and 726 Chinese in steerage.

CARGOES.

Per French steamer *Volga*, from Hongkong:—4,776 packages.

Per American steamer *City of Rio de Janeiro*, for San Francisco:—

REPORTS.

The Japanese steamer *Takasago Maru*, Captain C. Young, reports leaving Hakodate on the 8th May, at 10.30 a.m. and arrived Oginohama on the 9th, at 2.15 p.m. Left Oginohama on the 10th, at 6.15 a.m. with light to moderate and foggy weather throughout the passage. Arrived at Yokohama on the 11th May, at 1.45 p.m.

The American steamers *City of Rio de Janeiro*, Captain Robert R. Searle, reports leaving Hongkong on the 6th May, at 3.30 p.m. with fine weather to Oo-sima thence to port strong breeze and heard sea. Arrived at Yokohama on the 13th May, at 5.30 a.m. Passage, 6 days and 4 hours.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 11th May, at 6 p.m. with strong N.N.W. winds and rain to Omai-saki; thence to port fresh S.E. to N.E. winds and clear weather. Arrived at Yokohama on the 13th May, at 11.30 a.m.

LATEST COMMERCIAL.

IMPORTS.

General dullness has come over the Market of late, and buyers are disposed to limit their operation as much as possible.

COTTON YARN.—Nearly all demand has ceased, and though prices are quoted unchanged they are quite nominal and to effect sales lower rates would have to be taken.

COTTON PIECE GOODS.—An enquiry for Grey Shirtings to arrive at rather higher prices is the only feature of note, and sales of all goods have been on a very small scale.

WOOLLENS.—Prices remain nominally as last quoted with very little demand except for special order for Mousseline de Laine.

Brown Formosa	3.20 to 3.25

EXPORTS.

RAW SILK.

Our last issue was dated the 9th instant, since when there has been actually nothing done in this Market, and the Settlement list has been a veritable *tabula rasa* for eight days. There have been some arrivals from the interior of good *Filatures*, but none have been taken by foreign buyers, and the Stock-list is somewhat increased thereby.

Buyers have maintained a complete reserve, and sellers have been obliged to weaken considerably. Dealers opened the ball by asking exorbitant prices, but the crop news proved too good for them, and they finish by touting for offers—so far without success. Reports from the provinces speak well of the New crop in Japan: in some districts the worms have progressed beyond the third stage, and new *Cocoons* are looked for in Yamanashi Ken, by the end of May. Advices from the Tsatlee and Taysaam districts of North China have distinctly improved in tone, and there is every prospect there of a much larger crop than last year. The worms were expected to pass through the critical period between the 15th and 17th of the present month, and within a day or two we may learn that the crop in China is assured. Advices from Europe, where the rearing is advanced to about the same point as in Japan, report all well.

So far as we can make out, there has been no buying at all for the *City of Rio de Janeiro* which left port this day. One Japanese dealer, disgusted at not finding a purchaser, has sent forward his parcel of 17 bales, in hope of meeting with better luck on the other side, and the balance of the steamer's cargo consists of old purchases made a month ago, and held over one or two steamers. Enquiry for Europe does not exist, and it looks as if the trade must perforce stand still at least a week or two longer. We leave quotations unchanged, but all nominal, and it is difficult to predict at what point things will settle down until some actual business is done.

The P. & O. steamer *Kashgar*, which left for Hongkong via ports, on Sunday, the 11th, took no Raw Silk at all. The P.M. steamer *City of Rio de Janeiro*, which sailed to-day, carried 116 bales for the States, 17 of them being sent forward as direct shipment. The Export now stands at 29,355 bales, against 26,780 bales at same date last year, and 18,963 bales on 16 May, 1882.

Hanks.—Holders, who have so persistently held their Silk off sale for so long, have at last consented to show their goods, and sample bales have traversed the Concession in various directions. Nothing has come of it; and the would-be sellers begin to realise that they have overstood the Market.

Filatures.—A few lots of really good silk have come down from the mills, but dealers have not succeeded in placing them. They commenced by asking extreme rates *Nihonmatsu*, \$730; *Tomiyoka*, \$720; *Tokosha*, \$710; but before the steamer left the owner of the first-named filature professed his willingness to take \$700; the *Tomiyoka* parcel was shipped off "direct"; while the holder of the *Tokosha* is left lamenting. Buyers refuse to make a reasonable bid, for even these favorite chops, until the "crop" question is decided.

Re-reels.—One parcel of *Stork* chop found its way into a foreign godown, but apparently in error, for the lot is reported to have gone out again before inspection. A few boxes "Five Girl" have come in, but no price has been mentioned on either side.

Kakeda.—About 100 piculs good Silk placed on the Market "for an offer;" but the owner will not at present listen to the low range of prices which buyers talk about.

Total	29,355	26,780	18,963

WASTE SILK.

Business in this department has much fallen off, buyers complaining of the poor assortment on offer, and Settlements for the week are not more than 30 piculs. The few purchases made have been all confined to one hong and comprised a mixed lot of *Oshu* sorts. *Filature* sorts are still enquired for, but nothing tempting is forthcoming. The Export is again reduced compared with recent years, the deficit in *Pierced Cocoons* being very marked.

The P. & O. steamer *Kashgar*, which sailed on 11th instant, had on board 36 bales all booked for France. The Export is now 22,985 piculs, against 23,831 piculs last year, and 24,080 piculs at same date in 1882. Stock is somewhat increased by arrivals of common grades, but the choice of decent Waste is very limited.

Pierced Cocoons.—A few piculs common *Tama* have come in, but without finding a purchaser.

Noshi-ito.—Nothing done beyond a small parcel Mixed *Noshi* at \$85.

Kibiso.—About 20 piculs changed hands on basis of \$117 for some inferior *Filature* and \$49 for a parcel of Common *Oshu*.

Sundries.—One small lot *Neri* (fil. Utsunomiya) settled at \$17, with *Tegara* at \$80, and *Kusuito* at \$60.

Pierced Cocoons	2,201	3,201	4,103
Total	22,985	23,831	24,080

Exchange.—Quotations are reported as being irregular, some Bankers offering 3/9 for "Bank" others offering to do "Private" at same price. Rates are about as follows:—LONDON, 4m/s.,

Credits 3/9; Documents, 3/9½; NEW YORK, 30 d/s., 90½; 60 d/s., 91½; PARIS, 4 m/s., fcs. 4.75; 6 m/s., fcs. 4.77½. *Kinsatsu* have fluctuated slightly ("no Market" has been reported for several days), but close nominally at last week's quotation.

Estimated Silk Stock 16th May, 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	550	Pierced Cocoons	13
Filature & Re-reels	260	Noshi-ito	152
Kakeda	130	Kibiso	350
Sendai & Hamatsuki	115	Mawata	—
Taysaam Kinds	10	Sundries	115
Total piculs	1,065	Total piculs	630

TEA.

Business now is in full swing, and purchases for the interval reach 9,470 piculs, as compared with 9,660 piculs at the corresponding date in 1883. Receipts have been specially heavy, the aggregate foots up to the large figure of 12,390 piculs, against 12,700 piculs at the same period last year. Prices are now about the same as they were in 1883 at the same date, although at the close the Market is weak, and it would be safe to say that the present quotations are a little lower than last season's at the same time. On the whole, we now consider the crop about equal to last season's at the same quotations. The general character for the class of Teas grading Choice and Choicest (in our judgment) is not so good in leaf as the preceding year, as some parcels show carelessness in their manipulation. The cup quality may be considered good. Fine and Finest are the best Tea yet produced for its value. The drawings and make are all entirely satisfactory for these grades of Teas. There have been several parcels of Tea purchased during the week as low as 22½ to 23 dollars of satisfactory liquor, but very undesirable in hand. The cargo of the Pacific Mail steamship *City of Rio de Janeiro*, which sailed for San Francisco on the morning of 16th inst., took 898,311 lbs. of Tea, which is distributed as follows:—410,351 lbs., for New York; 337,722 lbs., for Chicago; 15,158 lbs., for Saint Paul; 9,276 lbs., for Detroit; 58,787 lbs., for California; and 67,012 lbs., for the Canadian Market. The following is a list of various grades of Teas settled in Yokohama during the week:—Good Medium, 1,275 piculs; Fine, 3,515 piculs; Finest, 3,330 piculs; Choice, 905 piculs; and Choicest, 445 piculs, making a total of 9,470 piculs settled. Settlements to date are now 12,890 piculs, against 11,484 piculs in the previous year. Total receipts are 17,105 piculs as compared with 15,111 piculs in the preceding year. Estimated Teas in Stock at this port are:—4,200 piculs, against 3,600 piculs in 1883. The steamships *Glenavon* and *Pembrokeshire* have been circulated for New York, via Suez Canal, and the usual ports, at 70 and 65 shillings respectively, with promised despatch by the end of this month, and they will be followed by the steamships *Mosser*, *Benvenue*, and *Claymore*, with quick despatch for the same destination. The Market closes weak, and following are the quotations now ruling:—

QUOTATIONS.

Good Medium	\$23 to 24
Fine	25 to 26
Finest	28 to 31
Choice	32 to 37
Choicest	39 & up'ds,

EXCHANGE.

A moderate amount of both Private and Bank Bills were placed for the mail and rates have been well maintained throughout the week, closing steady at the following quotations:—

Sterling—Bank Bills on demand	3/8½
Sterling—Bank 4 months' sight	3/9
Sterling—Private 4 months' sight	3/9½
Sterling—Private 6 months' sight	3/9½
On Paris—Bank sight	4.68

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878.
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevel, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER, a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION, a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S ETHEREAL ESSENCE OF LAVENDER, a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR, a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.
KEATING'S POWDER.

KILLS BUGS,
FLEAS,
MOTHS,
BEETLES,

THIS POWDER is quite HARMLESS to ANIMAL LIFE, but is unrivalled in destroying FLEAS, BUGS, COCK-ROACHES, BEETLES, MOTHS IN FURS, and every other species of insect. Sportsmen will find this invaluable for destroying fleas in their dogs, as also ladies for their pet dogs.

THIS ARTICLE has found so GREAT a SALE that it has tempted others to vend a so-called article in imitation. The PUBLIC are CAUTIONED that the tins of the genuine powder bear the autograph of THOMAS KEATING. Sold in Tins only.

KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.
KEATING'S WORM TABLETS.

A PURELY VEGETABLE SWEET-MEAT, both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children. Sold in Bottles, by all Druggists.

Proprietor—THOMAS KEATING, London.
January 4th, 1884. 20in.

CLUB HOTEL.

No. 5B, BUND, YOKOHAMA.

THIS ESTABLISHMENT, recently opened as a FIRST-CLASS HOTEL, is pleasantly situated on the Bund facing the Bay, in the central part of the Settlement, close to the Consulates and Public Offices, and affords the very BEST ACCOMMODATION to Travellers.

The Cuisine is under the direction of an experienced Chef, and the Wines and Liquors are of the BEST QUALITY obtainable.

The Tariff, which is STRICTLY MODERATE, can be obtained on application to the Lessees,

HEARNE AND BEGUEX.

Yokohama, March 15th, 1884. 1y.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 24TH, 1884.

MARRIAGE.

At No. 66, Bluff, Yokohama, Japan, May 19th, 1884, by the Rev. Nathan Brown, in the presence of General Thomas B. Van Buren, U.S. Consul-General, WILLIAM LANE MERRIMAN to Miss IRENE CARPENTER. St. Louis, Mo., and Napa City, Cal., papers please copy.

DEATH.

On the 19th inst., ALICE HARRIET EVA, wife of WILLIAM MONTAGUE HAMMETT KIRKWOOD, Esq., H.M. Crown Advocate in Japan, and daughter of the late Hugh Darby Owen, Esq., of Bettwys Hall, Montgomeryshire, and Prestbury Lodge, Gloucestershire.—(By Telegram).

SUMMARY OF NEWS.

A TIGER, brought from Korea, is being exhibited in Tokiyo.

THE publication of the *Choya Shimbun* has been suspended.

A COURT of Compromise has been established in the Bonin Islands.

THE health of His Majesty the Emperor is nearly quite restored.

TOKIYO and Yokohama were visited by a heavy gale on the 18th instant.

THE Nobles College (*Gakushi-in*) has been made a Government institution.

Two shocks of earthquake were felt in Yokohama on the 19th instant.

THE Conference of local Police Inspectors, re-

cently held in Tokiyo, was brought to a close on the 17th instant.

THREE men have been arrested in Akita Prefecture for attempting to forge *Kinsatsu*.

AT the Foreign Exhibition of Boston eleven Japanese exhibitors received prizes.

A SLIGHT fall of snow took place in the district of Saku, Shinano province, on the 14th instant.

MR. TARO ANDO, Japanese Consul at Hongkong, has been appointed to the Consulate at Shanghai.

THE Yokohama Brokers have decided to establish an exchange in the Third Ward of Bentendori, with a capital of 17,000 *yen*.

IT is stated that preliminary arrangements have been completed for the construction of a railway between Shidzuoka and Shimidzu.

SOME of the Tokiyo journals comment, in very desponding terms, on the commercial depression prevailing throughout the country.

A BUREAU of Financial Supervision has been established in the Finance Department, to take entire charge of the national incomings.

THE total value of the goods exported from Japan to the port of Ninsen in Korea during 1883 is stated to have been 120,042 *yen*.

THE remainder of the students who were expelled from the Tokiyo University last year for insubordinate conduct have been readmitted.

THE idea of constructing a railway between Hachioji and Karuizawa, in the Prefecture of Kanagawa, has been abandoned in favour of a tramway.

A NEW steamer, the *Famashiro Maru*, built for the Union Steam Navigation Company (*Kiyodo Unyu Kwaisha*), left London for Japan on the 19th instant.

A JAPANESE who shot an American woman under circumstances of great brutality in Ogden, U.T., on April 20th, was taken from jail and lynched a few hours afterwards. The woman died the following day.

THE site of the former police station at Sakai-cho, Yokohama, was put up for public sale on the 17th instant. The highest tender was 8,140 *yen*, and the lowest 3,750 *yen*.

A FIRE broke out on the morning of the 22nd instant, on the premises of Messrs. Strachan & Co., No. 63, but was extinguished before any serious damage was done.

WITH a view to a further reformation of the prison system in Japan, a general meeting of the chief jailers of the various prefectures is shortly to be held in the Capital.

A DISPUTE has occurred between the Prefect and the Local Assembly of Kagoshima Prefecture

with regard to financial matters. The difference has been submitted to the Council of State.

A REVIEW of the Imperial Body Guard and other troops will shortly take place on the plains of Narashino in Shimosa. Field Marshal His Imperial Highness Prince Arisugawa will be present.

A CLASS for special instruction in naval architecture has been opened in the Tokiyo University. The Science of Marine architecture has hitherto been taught chiefly at the Engineering College (*Kobu Dai Gakkō*).

IT is reported from Osaka that the first effect of the recently issued Regulations for the Control of Pawnbrokers, was to cause a general closing of pawnbrokers' shops throughout the city, and that some inconvenience was thereby entailed.

MESSRS. KAWASE AND OKURA have been appointed President and Manager, respectively, of the new Central Tea Industrial Association in Tokiyo. The Association has issued a number of temporary rules, the gist of which is that the objects of the scheme are to promote improved methods of manufacture, and to acquire and circulate information.

A TELEGRAM from London stating that depositors of the Oriental Bank will probably receive 17s. 6d. in the £ is believed to be erroneous, as, under the worst possible aspect of the Bank's affairs, its assets suffice not only to cover all its liabilities, but also to recoup the shareholders in great part. It is believed that the telegram alludes to the amount which will be paid over immediately, the remaining half crown to be paid when the Bank's assets are realized.

THE ceremony of bestowing prizes on the exhibitors at the Competitive Exhibition of Japanese Paintings in Tokiyo, took place last Tuesday (20th instant), in presence of His Imperial Highness Prince Arisugawa, and several Ministers of State. One gold, thirteen silver, and thirty-two copper medals, as well as 153 certificates of merit, were awarded. Among the recipients of certificates of merit was Mr. J. Conder, who exhibited under the name of Kiyoyei. H.E. General Saigo, in addressing the exhibitors, said that, while in point of special excellence the exhibition was inferior to that of last year, its general merits were superior. The recipient of the gold medal was Mr. Morisumi, an artist of Kiyoto.

THE Annual General Meeting of the Yokohama General Hospital was held on the afternoon of the 21st instant. The accounts showed a deficit, at the close of 1883, of \$1,594, against which there were, however, exceptional assets amounting to \$889.57, received during the course of the current year. The report of the Committee was of a discouraging nature. It showed that receipts were falling off, and that the task of supporting the Hospital during the current year promises to be very difficult. A Committee was appointed consisting of Messrs. Wilkin, Gay, Townley, W. B. Walter, Irwine, Des Pallières, Rickett, Schlippenbach, Fraser, and Reynaud.

NOTES.

THE course of events at Khartoum, and indeed throughout the Soudan, has been extremely difficult to follow, owing to the disjointed nature of the telegrams which contain our only information. It will be remembered that, on March 16th, Gordon considered the attitude of the rebels in his neighbourhood sufficiently threatening to demand some decisive action, and that he accordingly ordered a sortie which ended in his troops sustaining a severe defeat. He had every reason to expect a totally different result. The forces menacing the city numbered, according to his own estimate, only two thousand. They were, moreover, badly armed and without discipline. On the other hand, the troops engaged in the sortie were also two thousand strong. They consisted of Bashi Bazouks and drilled Soudanese, and they were supplied with the best modern weapons, Remingtons and bayonets. But neither arms, discipline, nor numbers had much to do with the result, as will be seen from the following account by *The Times*' correspondent:—"As our men drew near the rebels, the latter began to file away to the right of our line, disappearing behind the sandhills. This supposed retreat commenced at twenty minutes to ten. At half-past ten all had disappeared behind the sandhills. The enemy's rear was covered by about sixty Arabs, mounted on horses and camels. Our line still advanced, and the artillery fired two shells at the retiring rebels. Our horsemen having entered the woods at the foot of the sandhills, we saw to our astonishment the five principal officers of our force, who had been riding a little ahead, dash back, breaking through their own ranks. At that moment the rebel cavalry shot out at full gallop from behind the sandhills on our right. Their appearance was the signal for a disgraceful *sauve qui peut* on the part of our men, who broke up and rushed back without firing a shot. The sixty horsemen, who were only armed with lances and swords, dashed about cutting down the flying men. I saw one Arab lancer kill seven Egyptians in as many minutes. He then jumped off his horse to secure a rifle and ammunition, when a mounted Bashi-Bazouk officer cut him down. The rebel infantry now appeared and rushed about in all directions, hacking at the men disabled by the cavalry charge. This slaughter continued for nearly two miles, our men not stopping to fire a shot. Then the Arabs halted, and an officer rallied some of our troops, and they commenced a dropping but harmless fire at the enemy, who seemed content not to advance, but treated us with the greatest contempt, some riding quietly on camels in front of our muzzles. This continued till midday, some of our men dropping from stray bullets fired by the Arabs. The rebels then drew off to their old position, carrying a lot of rifles and cartridges and one mountain piece." In this disgraceful affair—a repetition of what had invariably happened whenever Egyptians fought against Arabs in the Soudan—the loss on the rebel side was only four; that of the Egyptians two hundred. The two black Pachas—Hassan and Said—who led the sortie, are supposed to have acted with preconceived treachery. "There is," *The Times* correspondent says, "no lack of evidence that when they galloped back Said Pacha rode towards a gun and slashed through the brain the sergeant in charge, who was in the act of laying the gun. At

the same time Hassan Pacha cut down two artillerymen." Subsequently the same authority writes:—"Surviving Soudanese say that the two Pachas charged into the square; the soldiers, recognizing them, opened their ranks, and through this gap the rebel horsemen, following closely behind, entered. This tallies with what I saw and with the report—a hundred times confirmed—of the Pachas cutting down the gunners. When the Pachas came to see General Gordon after the battle he offered them refreshment, which they refused. General Gordon's secretary, divining the reason, drank, and seeing this they helped themselves. Evidently they suspected that their treachery was discovered. Another suspicious fact is that the written orders were to attack before daybreak. They disobeyed these orders and attacked at ten o'clock. A night attack would have been successful." Gordon does not appear to have been much disconcerted by this mishap. He executed the two Pachas, and a week later we find him definitely abandoning the policy of conciliating the Soudanese, concentrating all available troops at Khartoum, mounting Krupp guns on lighters so as to shell the enemy's camp from the river, and declaring that all traitors found in the Egyptian ranks should be instantly shot. Meanwhile he received the Mahdi's rejection of the Sultanship of Kordofan, and an insulting message recommending him to become a Mohammedan. Simultaneously with the receipt of this news Admiral Hewett started (March 31st) for Abyssinia, to negotiate, if possible, the operation of Abyssinian troops in the Southern Soudan, while a survey of the Upper Nile was commenced with the view of ascertaining to what extent a gun-boat flotilla would be capable of acting upon the river. Just at this time, too, rumours began to be circulated to the effect that the resources of the Mahdi were exhausted, and that a rebellion against him was probable. In England the Opposition did not let the opportunity slip. Sir Stafford Northcote moved (April 3rd) that the honour of England was pledged to secure the safety of Gordon, but the Government succeeded in staving off any definite statement of policy. Two days after this debate, despatches reached London giving a very gloomy account of affairs at Khartoum. The partisans of the Mahdi were said to hold the entire command of the Nile between that place and Shendy, while from Sennaar an appeal for help had elicited a answer from Gordon that the best thing the Governor could do was to try and arrange a capitulation. As for Gordon himself, whether he looked, or did not look, for military assistance from England, there appears to have been no certainty, beyond Lord Hartington's statement that no application for such assistance had been received. To add to all this trouble, fresh dissensions now arose in the Egyptian Cabinet. Nubar Pacha had perpetual difficulties with his English colleagues, and the absence of any distinct declaration of policy on the part of the British Government helped to foster the discontent. At first it seemed as though the mixed administration could not possibly work any longer, but in the end a compromise was effected, the main feature in the arrangement being a limitation of the powers of Mr. Clifford Lloyd, Under Secretary of the Interior, with whom the obstruction had originated. Just at this time (April 10th) communications were restored with Khartoum—they had been inter-

rupted for some days—and a despatch from Gordon, dated March 30th, reached Cairo. From this it appeared that 250 mutinous Bashi Bazouks had been disarmed; that skirmishes had taken place, generally favorable to the Egyptians; that the town was well supplied with provisions, and that the rebels—whose number was estimated at 2,000—had received six guns from the Mahdi. Shortly after the receipt of this despatch, Colonel Coetlogan arrived at Cairo, and explained that Gordon would probably try to hold out until May, when the rising Nile would enable him to reach Sennaar. Colonel Coetlogan also declared that the sending of troops to Khartoum could only be effected at enormous sacrifices. He confirmed the previous rumours of the Mahdi's growing unpopularity, ascribing it to the heavy taxes the latter was obliged to levy and to the insufficiency of pay and supplies for his troops. On April 11th, news came that the rebels were besieging Shendy, and that a portion of the Berber troops had gone to the relief of that town. Shendy and Berber, it will be remembered, are places on the Nile below Khartoum. Did they fall into the hands of the enemy, the route to Korosko would be effectually blocked. The next intelligence was much more hopeful. Gordon, writing on April 8th, said that Saleh Pacha, who was coming down the Blue Nile with 500 horsemen and 57 boat-loads of grain, was safe and sound; that internal dissensions in Kordofan had compelled the Mahdi to abandon his expedition against Khartoum, and that there was no immediate cause for anxiety about the condition of affairs at Kassala and Sennaar, both of which places had been reported as in imminent danger. On the evening of the day (April 16th) when this news reached London, Sir William Harcourt, in a speech at Derby, took occasion to repeat the Government's disavowal of any intention of annexing Egypt. Twenty-four hours later, another despatch from Gordon transmitted a report that the Mahdi had twice been defeated with heavy loss by the Tegeba tribes, and that he was now as completely hemmed in as Gordon himself. After this, disquieting rumours were again circulated. The *Figaro* published a story that the garrison of Shendy, attempting to escape to Berber, had been attacked by the Arabs and massacred, 2,000 men and 500 women and children being the victims. A telegram from the *Standard's* correspondent at Cairo, dated April 22nd, also stated that Gordon had indignantly remonstrated with Sir Evelyn Baring at the manner in which he had been abandoned by the British Government, and declared his determination to cut himself entirely adrift from those who had deserted him. This news, it will be remembered, was sent eastward by Reuter, but it probably deserves no more credence than the many similar protests previously attributed to Gordon. At all events, the rumoured massacre of the Shendy garrison proved a gross exaggeration. Telegraphic information from Berber, dated April 25th, said that the loss of the refugees and soldiers was only slight. It appears, however, only too true that Shendy itself was in the possession of the rebels at the end of April—a circumstance which adds largely to the improbability of a successful retreat from Khartoum. Our continuous telegraphic news via America ends here; the last item being a declaration of Hussein Pacha, Governor of Berber, that he and the garrison of that place would die at the post of duty. This was dated at Berber, April 25th,

and three days later a Reuter's cablegram informed us that the evacuation of Berber commenced on the 28th of April, and that "the majority of the troops fraternized with the insurgents." If this be true, Hussein's bravado was a very empty business. At all events the situation, so far as latest telegrams explain it, is this:—Shendy and Berber, on the line of retreat from Khartoum by the Nile, are in the hands of the rebels; Khartoum itself "completely invested" (May 10th); and a motion is pending in the House of Commons, condemning the want of support to Gordon and the delay in rescuing him from his position. It is well to remember that communications with Khartoum have been interrupted frequently before, and that the fall of the town has been reported four times. We find it difficult to believe, too, that Berber has been evacuated without a struggle, more especially when we recall Gordon's last despatches, dated only ten days before the reported evacuation, in which the dissensions in El Mahdi's camp were described. The latest, however, is the Reuter's telegram dated London, May 18th, stating that refugees say Gordon is safe.

SENATOR MORGAN, of Alabama, has introduced a bill, prepared by the California Silk Culture Association, authorizing the establishment of a silk culture bureau in the Interior Department, and in connection with it presented a memorial from the same organization, all of which were referred to the Committee on Agriculture. Senator Morgan asked to have the memorial printed, as in one respect at least it was a remarkable document, and there being no objection, the request was granted. He read part of the memorial to show its extraordinary character, and commented at some length upon it. The portion read was a paragraph in which the California silk culturists expressly state that they do not want Congress to impose a duty on raw silk, because they believe with American brains and improved machinery a superior article can be produced in this country, and that they can compete with the foreign article without protection. Senator Morgan said that this frank statement was very different from the statement of the promoters of other industries, who ask protection from Congress before they start business, and in the last Congress Senator Morgan said he had offered an amendment to the Tariff Bill, imposing a ten per cent. ad valorem duty on raw silk, believing that industry ought to be encouraged. He now was certain that he was wrong. As this was the first infant industry which had petitioned Congress and not asked for protection, he begged the Committee to give the memorial early and favorable consideration. The memorial is the same as presented to the House by General Rosencrans, and is signed by Mrs. E. B. Baker, President, and Miss Sallie Heath, Secretary, both of San Francisco.—*Alta*.

THE Austrian method of sending condemned criminals out of the world is a little uncommon. The *Daily Telegraph* gives the following account of the execution of Sponga and his comrades, the murderers of Chief Justice Majlath:—

Sixty persons were allowed to witness the execution, which took place in a small court-yard inside the prison. Three posts, about eight feet high and four feet apart, were erected in the centre. At the top of each post was a small hook, and at the bottom a pulley. The three men were brought out at seven precisely, and placed each with his back against one of the posts. They were not blindfolded. Each of them was attended by a priest. In front of them the troops and spectators formed an irregular semicircle, while in the

centre stood the judges of the last Court of Appeal, in ordinary morning dress. Some little time was occupied by the reading of the sentence, a most unnecessary formality which had been gone through already in presence of the three criminals the previous day at the Court of Appeal. On a signal given by the Public Prosecutor the execution was then proceeded with.

Sponga, who was placed to the left, was the first to suffer the penalty of the law. Two steps were placed at the foot of the post, which the convict was bidden to mount, his hands being then pinioned to his left thigh. He looked pale, but kept his nerve and asked pardon of the Majlath family and of the authorities. A screen of wood was put between him and the two others, after which the chief executioner mounted a ladder, and taking out of his pocket a rope with a loop at both ends, passed it round the culprit's neck, and, securing a knot under the left ear, tightened it. Meanwhile one of the assistants tied his feet together with another rope, and passing it through the pulley kept the other end in his hand. The chief executioner then gave the signal, and with the aid of another assistant the convict was lifted by the rope attached to his neck about six inches and hung on the hook at the top of the post. The attendant holding the rope attached to his legs simultaneously pulled with force, while his chief placed his hands on the criminal's mouth and eyes. Death ensued in about two minutes, not, as some accounts state, in seventeen.

The execution of the others then took place in the same way. The man Pitely, who was the principal author of the crime, had a ruffianly countenance, beetle browsed and of sallow complexion. In his case death resulted in half a minute. The last of the three, by name Berecz, was a big, shambling fellow, with a Newgate slouch, an eagle nose and an Oriental cast of countenance. He lost his nerve and had so be supported to the stake. He kissed the crucifix and called upon the Almighty to curse his judges. The president of the Court of Appeal thereupon ordered the drums to play, so as to drown his voice. Death with him was instantaneous, but his face, unlike that of his accomplice, was fearfully distorted. The principal priest in attendance then knelt down, and the spectators, with uncovered heads, listened to a short prayer for the souls of the departed. Within fifteen minutes three doctors had successfully examined the bodies with stethoscopes, and declared life to be extinct. The bodies were left hanging half an hour, and then removed to a dissecting-room.

THE apparent increase of insanity in the United Kingdom during the past two decades has assumed startling dimensions. The following table is given by Mr. W. J. Corbet, in a recent essay on the subject:—

DATE.	NO. OF INSANE.	POPULATION.	RATIO OF INSANE PER 1,000.
1862.....	55,525 ...	29,197,737 ...	1.81
1872.....	77,013 ...	31,842,522 ...	2.41
1882.....	98,871 ...	34,788,814 ...	2.84

The English Lunacy Commissioners have always endeavoured to refer this increase to causes apart from any hypothesis of an actual growth of the malady in the Three Kingdoms. Their stock argument has been that the introduction of a new and humane system of State aid had, and still has, the effect of preventing any concealment of insanity, and of causing the asylums to be entered by persons who would otherwise have remained unnoticed or been looked after in a rough and ready fashion by their friends. The difficulty about this contention is that the improved system came into operation in 1849, and that there are as yet no symptoms of a stationary point being reached. Even supposing that thousands of lunatics were hidden away here and there throughout the country at the time when the Government came to their relief, thirty-seven years ought to have sufficed to correct all abuses of that nature. Nevertheless, the number of afflicted persons goes on growing. The Report of the Commissioners for 1883 shows, that in England alone the number added during that year was 1,923, whereas the annual average for the preceding decade had been only 1,643. Meanwhile the burden upon the funds of the country is becoming enormous. Seven millions sterling have been spent upon asylums, and the yearly outlay for the support of lunatics is £1,500,000. On the other hand, the contrast between things as they are now and as they were before 1849 is almost incredible. Since that

time "stately structures have been erected of noble architectural design and vast proportions, and furnished with every modern appliance for convenience, comfort, and even luxury. Amusements, theatricals, concerts, out-of-door and indoor occupation and exercise, games of all sorts, Turkish baths, everything in short that sympathy for human suffering could suggest, has been generously provided at an enormous and constantly increasing expenditure of public money." But before that time, "female as well as male patients were chained to the walls, covered only with a blanket formed into something like a gown. One man was kept confined in chains for fourteen years without the smallest interval of liberty. Stout iron rings were riveted round his arms, body and neck, the latter being made to slide upwards and downwards on a massive iron bar inserted in the wall." Seventeen or eighteen per cent. of the patients in asylums were "almost invariably in irons": they were allowed, in many cases only food, straw and fire, but no blankets or dress. Outside the asylums, the method often resorted to was thus described:—"When the man is out labouring in the fields for his bread, and the care of the woman of the house is scarcely sufficient for the attendance on the children, if a strong young man or woman becomes insane, the only way they have to manage is by making a hole in the floor of the cabin, not high enough to stand up in, with a crib over it to prevent the lunatic getting up. The hole is about five feet deep, and they give the wretched being food there, and there he dies." To appreciate the meaning of these accounts, it is necessary to remember that the horrors described took place within the memory of Englishmen still living. But whatever allowance may be made for the effects of altered systems in preventing concealment, or for the accuracy of improved statistical methods, it is impossible to escape the conviction that mental derangement is on the increase in the United Kingdom. The explanation of this is not less startling than the fact itself. Intemperance and irregularity of life are said to predominate largely over all other exciting causes, including, of course, hereditary transmission, which is only a vicarious effect of immoral habits. Something must doubtless be ascribed to the wearing speed at which the world now travels, but Mr. Corbet thinks that the grand *origo mali* is an increase of dissipation, drunkenness, and moral depravity, for which most unhappy state of affairs he holds Materialism and Free-thought mainly responsible.

At a recent meeting of the Royal Society, Professor Huxley, President, in the chair, Professor Elgar, of Glasgow University, read an important paper on the subject of the stability of ships, the main object of which was to exhibit the manner in which the stability of a ship varies with changes of load and draught of water such as merchant ships are liable to. The paper presented a method of constructing cross curves of stability for this purpose, and was illustrated by examples derived from prismatic bodies and from actual ships. The author demonstrated in a scientific manner the important proposition first enunciated by him in *The Times* of September 1st last—viz., that excessively light draught is dangerous in like manner with, and for the same reason as, excessively deep draught with its consequent low freeboard. Professor Elgar corroborated from his own experience the statement made by

Sir Edward Reed in *The Times* a few days ago respecting the multiplied losses of ships carrying homogeneous cargoes, in consequence of their insufficient stability. The President described the paper as of great practical as well as scientific interest, and conveyed the thanks of the Society to Professor Elgar for it. At the request of the President, Sir Edward Reed offered some observations upon the paper, which he greatly praised, and explained that while in France and elsewhere great progress was being made in the study of this branch of science, the most lively interest in it had also been aroused in this country by recent events, the paper which had just been read constituting a very considerable advance in what might be called the English mode of treating the subject. He strongly recommended the publication of the complete paper in the *Transactions* of the Royal Society.

In a lecture recently delivered by Mr. C. Pfoundes, F.R.G.S., on the "Art and Literature of Old Japan," there seems to have been unusually many points of interest. The lecture was given before the Nottingham Arts Society, which is well-known throughout the United Kingdom. Mr. Pfoundes said there were special reasons why the art and literature of Japan should be coupled together. Of the literature of Japan there was little or nothing known to the outside world, and even in Japan the foreign residents were generally unacquainted with the book-lore of the country. The Japanese standard authors were, however, nearly equal to English writers, and the amount of literature in Japan was enormous. In speaking of the art of Japan, the lecturer remarked that the Japanese were more painstaking than the English, and followed nature in every detail. In touching upon the pottery of the Japanese, the lecturer spoke in highly eulogistic terms of the various porcelains peculiar to this country. Mr. Pfoundes then gave some interesting information concerning the habits and customs of the Japanese, as well as the literature and art of the feudal days. The lecture was well received, and met with a hearty vote of thanks. There is a Japanese proverb which says "*Shiranu wa Hotoke*," or ignorance is bliss. We trust for Mr. Pfoundes' sake that his English audiences may long be able to regard him as a *Hotoke*.

On Wednesday, at half-past two o'clock, the yearly Graduation Ceremony took place in the Main Hall of the Imperial College of Engineering, Tokiyo, H.E. Sasaki Takatsura, Minister of Public Works, presiding, supported on the right by Mr. Takeda, the Director, on the left by Dr. Divers, Principal of the College, and the staff of Professors and Instructors. The seats on the platform reserved for distinguished visitors were occupied by Their Excellencies Fukuoka, Minister of Education, the Hon. F. R. Plunkett, British Minister, Mr. Davidow, Russian Minister, and by others of the foreign diplomatic corps. After a few words from the Director, Dr. Divers addressed the students at some length, expressing satisfaction with the work that had been done in the College during the past year. Students who had gone to Europe, he remarked, had not found that the education they had already received was inferior to that given in European Technical Schools. They felt that the institution in which they had been educated was quite abreast of the age, and that it put them

on an equal footing with any set of European students. The smaller number of graduates this year (twenty-two) was due to a special cause. In the year 1878, students were, for the first time, required to pay the expenses of their board, a measure which reduced very markedly, especially at first, the number of eligible candidates. To one thing he would refer as of special interest. A rule had been passed since last May, that only those who put in a certain number of attendances at Gymnastics would be eligible for prizes. This rule was framed in view of the great disinclination shown on the part of many students to take a sufficient amount of exercise. Cases of overwork resulting in death had been too frequent, and it was considered advisable to repress in every way an ambition that would gratify itself at the expense of bodily health and strength. Two students who would otherwise have been prizemen had been disqualified under this rule. Among the changes to be referred to in the College Staff were:—the retirement of Mr. Conder from active duty as Professor of Architecture, and his appointment as Honorary Professor of Architecture; the appointment of Mr. Shida Rinzaburo to the chair of Physics, and of Mr. Fujioka Ichisuke to that of Electrical Engineering; and the departure of Messrs. Oshima and Nobechi, instructors in Civil Engineering, to the United States of America, where they are now actively engaged in railway work. H.E. Sasaki then presented the diplomas to the graduates in turn, and thereafter the professors distributed the prizes in their respective departments. The whole ceremony occupied about an hour. Notwithstanding the inclemency of the weather, a good number of visitors were present in the body of the hall, and the galleries were also filled by a mixed audience. In the evening the Minister entertained the Staff of the College and the Graduates at a banquet in the magnificent hall of the College.

* * *

The following are the names of the Graduates and the marks they obtained:—

POST-GRADUATE CERTIFICATE.

NAVAL ARCHITECTURE.—Kondo Motoki, Graduate in Mechanical Engineering.

GRADUATION.—TOTAL MARKS 320.

CIVIL ENGINEERING.—Kume Taminosuke, First-class Diploma, 240.2 marks; Yoshimoto Kamesaburo, First-class Diploma, 237.4 marks; Furukawa Sakajiro, Second-class Diploma, 127.2 marks; Ogawa Togo, Second-class Diploma, 110.9 marks.

NAVAL ARCHITECTURE.—Fukuta Mumanosuke, First-class Diploma, 213.5 marks; Sugitani Yasuichi, Second-class Diploma, 179.9 marks; Aoki Kio, Second-class Diploma, 137.7 marks.

TELEGRAPHY.—Aoki Daizaburo, Second-class Diploma, 141.6.

CHEMISTRY.—Shimose Masachika, First-class Diploma, 204.5 marks; Kawanami Torataro, Second-class Diploma, 138.9 marks; Shidzuki Iwaichiro, Second-class Diploma, 108.8 marks; Hosokawa Toshishige, Second-class Diploma, 107.5 marks.

MINING.—Ohara Junnosuke, First-class Diploma, 211.0 marks; Otsubo Ichiro, Second-class Diploma, 161.5 marks; Saito Seikichi, Second-class Diploma, 150.1 marks; Shimada Kenroku, Second-class Diploma, 140.8 marks; Mamiya Igajiro, Second-class Diploma, 132.9 marks; Abe Masayoshi, Second-class Diploma, 130.4 marks; Hidakaitaro, Second-class Diploma, 125.4 marks; Kasahara Washitaro, Second-class Diploma, 124.8 marks; Yamaguchi Shiro, Second-class Diploma, 110.8 marks.

ARCHITECTURE.—Yoshizawa Tomotaro, Certificate, 92.7 marks.

SIR JOHN POPE HENNESSY, who abolished the flaying alive of Chinese criminals in Hongkong, finds congenial work in the Mauritius, where there appears to be ample room for remedial

measures bearing upon the cruel punishments which are inflicted for minor offences and breaches of prison discipline. The *Merchants' and Planters' Gazette*, referring to His Excellency's speech at the closing of the Legislative Session, says:—"Turning to our prisons, the Governor said that he has had some experience in other parts of the world in prison discipline but had never seen anything so objectionable as obtained here, where prisoners have had to endure cruel punishments both illegal and unjust. This condition of things, he averred, prevailed despite the protest of the local press and the wishes of the Downing-street authorities. Lord Kimberley, for instance, had put on record his regret that in 40 cases out of 59, flogging had been administered for insignificant prison offences. Another despatch had been received by the local government containing these words—'I notice the large number of stripes administered.' And now let us ask what was done in reference to such admonitions? Absolutely nothing, we fear, calculated to check the practice. Indeed, we have heard it alleged that members of prison committees knew nothing of such rebukes—knew nothing of even the views expressed by the Secretary of State. Then on whose shoulders rests the responsibility for making a State secret of such a matter? The government of the day, of course. It was Sir Edward Coke who declared that corporations could not commit treason, nor be outlawed nor excommunicated; for, said this learned man, they have no souls. The government of a Crown Colony is often very similar—many to blame; no one held to be responsible. Indeed, the gentlemen forming the prison commission inquiry, declared that the objectionable practices under reference were 'not contrary to the prison-laws,' although repugnant 'to the most elementary principles of justice.' The verdict of the gentlemen forming the commission is thus recorded:—'As regards the prisoner Seechurn, we have strong reasons to believe that the flogging he underwent on the 24th of July last in the gaol of Port Louis was, if not the direct cause of his death, at least its determining cause. The particulars of this deplorable case, as well as those of several others into which we have examined, will be given at full length in our final report which we are not yet in a position to submit.'" The *Gazette* concludes:—"We are glad to note that Sir John Pope Hennessy paid a well-merited compliment to the liberal policy of our Imperial Government in appointing a Mauritian to the post of Chief Justice of our Supreme Court." What would they say to this in Hongkong, where, when magistrates were scarce through death vacancies and other causes, Sir John nominated Mr. Ng Choy, a clever Chinese barrister, who had been called to the Bar just previously, to a seat on the Bench of the Police Court, temporarily and without any emolument, and the appointment raised a howl of derisive wrath amongst his enemies?

THE following from the Athenæum Club is too good not to be true. A well-known bishop—well, never mind what bishop, possibly one who had voted recently with the Sabbatarians in the House of Lords—found to his dismay on quitting the club that his umbrella had disappeared from the hall. "Dear me, how very unpleasant! I cannot find my umbrella; it must be lost." "Oh no, my lord," quoted a bystander, "not lost, but gone before."

ALL manner of athletic games are becoming very popular. The *yawara* or *jiu-jitsu*, a once favourite mode of wrestling, is coming rapidly into vogue, together with single-stick or quarter-staff. The common *sumo* is quite different from the *yawara*, as the former is chiefly an exhibition of physical strength and muscular power, while the latter depends rather on the agility and dexterity of the wrestler. In olden times, the *yawara* was a favourite pastime of the *samurai*, and was much practiced as conducive to muscular suppleness as well as a means of self-defence in contests at close quarters. In point of fact, the *yawara* has a good bit of the noble science of the P.R. in it, consisting as it does in a knowledge and display of rapid passes, half blows, half falls. Each disciple of the art is carefully taught the most vulnerable parts of the human body, and the manner in which to inflict or ward off fatal blows. An exhibition of this sort has been going on for some little time in the arena at Isezakicho. The combatants frequently throw one another in excellent style, some of the fallen ones measuring their length on the ground five or six feet distant from their rivals. That hard blows are given with downright good will was amply demonstrated the other day when one stalwart fellow was knocked completely senseless. Instead of attempting to bring him around by ordinary means, his fellow athletes kept on striking him in what appeared to be a rather heartless manner, but which was really intended to restore his senses. At last, the master of ceremonies brought back his consciousness by a prodigious thump in the small ribs, thereby proving his intimate knowledge of the anatomy of the human frame. The art known as *shime-ai*, "mutual strangling," is one of the favourite branches of the *yawara*, and consists in squeezing one another's gullets till one of the combatants is forced to relinquish his hold. On the whole, the *yawara* is well worth seeing.

ONE of the most praiseworthy features of the South Kensington Museum is the encouragement it gives to art students of all classes. This year an exhibition of the work of students in the various schools of art throughout the Kingdom will be held under the auspices of the Science and Art Department. The exhibits will consist of carvings in all materials, furniture, decorations, metal working of all kinds, jewellery, goldsmiths' work, pottery, glass, &c. In textiles the following will be included: Point, pillow, and machine-made lace, drawings and photographs of such as may have been executed; woven damask in linen and cotton, plain or in colours; silks, ribbons, trimmings, &c., including furniture and dress fabrics; mixed woven fabrics for dresses, shawls, scarfs, &c.; printed fabrics; carpets and tapestry, curtains, table-covers, &c. The name of the manufacturer, of the school of art, and of the student, will be published. The purpose of the exhibition is to show the improvement in quality, design and execution, that has been made in consequence of the establishment of art-schools.

THE opening of the new Social Club in the *Rokumei-kwan*, Tokiyo, took place on the 14th instant. A committee of organization, appointed in March, had drawn up rules and elected a nucleus of members in whose hands the Club was finally placed on the 14th. These members numbered 102, of whom 42 were

foreigners, including the Corps Diplomatique and the staff of the various Foreign Legations. The active members only, to the number of 75, of whom 32 were foreign, were present at the opening. The chair was taken at 3.30. p.m. by His Imperial Highness Prince Kitashirakawa, when the Governor of Tokiyo, Mr. Yoshikawa, who had acted as president of the Committee of Organization, spoke as follows:—

YOUR IMPERIAL HIGHNESS, YOUR EXCELLENCIES and GENTLEMEN,—It seems proper to state briefly the circumstances which led to the establishment of the Tokiyo Club, and the duties which the Committee of Organization have had to perform preparatory to the opening of the institution to-day. The idea of establishing a Club in Tokiyo with a view to the promotion of social and friendly intercourse between Japanese and Foreigners, originally suggested itself to His Excellency Inouye, Minister for Foreign Affairs. The *Rokumei-kwan*, being then on the verge of completion, appeared to His Excellency a suitable place for the purpose he had in view. Steps were accordingly taken with that object, and a Committee of Organization, consisting of Messrs. Nakai, Katsu Inouye, Nakamura, San-no-miya, Saito, and Stevens, was formed, over which I was asked to preside. Entirely sympathizing with the intention of His Excellency Inouye, I willingly acceded to the request, and after several meetings, general rules and bye-laws were drafted. Then, in the name of His Excellency Inouye, the Ministers of Departments and others were asked to select and nominate five gentlemen from each office to constitute the originators of the Club. Subsequently, the gentlemen thus nominated met the Committee, and after discussion, adopted the draft of the General Rules and Bye-laws. By the provisions of those Rules the President of the Club is to be a Prince of the Blood. It would of course have been proper, in the strict order of things, that the post of President should have been offered to one of their Imperial Highnesses by the members of the Club. But having regard to the exceptional circumstances inseparable from the inception of such a scheme, and with the view of avoiding unnecessary delay, I, in my capacity of Chairman of the Organization Committee, ventured to pray His Imperial Highness Prince Kitashirakawa to accept the office, and His Highness was graciously pleased to consent. Application for permission to lease the *Rokumei-kwan* was also made by me, for the same reasons, to the Minister for Foreign Affairs, and was granted on conditions which I have here by me, and which are open for the perusal of the members. And now, while expressing the great pleasure it gives me to be present at the first meeting of the Tokiyo Club under the Presidency of His Imperial Highness, it only remains for me to respectfully place my resignation of my functions in the hands of His Highness, and to beg that the Committee of Organization may be relieved.

His Imperial Highness, the President, then spoke as follows:—

GENTLEMEN,—I have accepted the Presidency of the Tokiyo Club with very great pleasure. I heartily sympathise with the motives which prompted the Minister for Foreign Affairs to take steps for the establishment of the Club, and I indulge the hope that the members will support Mr. Inouye's idea, and endeavour by every means in their power to promote that social and friendly intercourse which knows no distinction of race or class.

His Excellency Inouye then proposed that the Governor of Tokiyo, Mr. Yoshikawa, be nominated Vice-President of the Club, and the proposition having been duly seconded and put to the meeting, was carried unanimously. The members then proceeded to elect a Working Committee, and, a ballot having been taken, the following gentlemen were declared duly elected: viz., Messrs. Hayashi, Katsu Inouye, Nakamura, Saito, Major Tajima, Lieut.-Commander Kurōka, Baron Zedtwitz, the Honorable P. Le Poer Trench, Messrs. Stone and Malenda. After this, the Honorable P. Le Poer Trench proposed a vote of thanks to the Committee of Organization, whose labours, he said, must have been very considerable. He felt persuaded that it was quite unnecessary for him to say anything in support of a vote which must commend itself to every one present, and which, he was assured, would be carried with unanimity. Mr. Yoshida seconded the proposal, which, on being put to the meeting, was carried by acclaim. Mr. Yoshikawa, the Vice-President, then rose and said:—

On behalf of the Committee of Organization, I thank Your Imperial Highness, Your Excellencies, and gentlemen, for your kind expressions. Fully conscious as I am of my inability to discharge satisfactorily the functions

of Vice-President, the unanimity with which you have elected me to the post leaves me no choice but to accept it. I therefore waive my own feelings in deference to the wishes of the members, and I beg to assure you that however inadequate my efforts may prove, I shall spare no pains to prove myself worthy of the trust you have reposed in me.

This speech, and the others delivered in Japanese, were translated into English with remarkable accuracy and fluency by Mr. Saito, Private Secretary to the Minister of Foreign Affairs. The President then declared the meeting dissolved and the Club opened.

SAYS the *Fiji Shimpō*:—An English gentleman, a resident in this country of many years' standing, recently received a letter from a friend at home,—a common experience enough, but for the fact that it contains these words:—"I suppose you have learned much of the condition of the country in which you have dwelt for so long a time, and I look forward with delight to hearing from you all about the many wonderful things you have seen. Please send me a photograph of the Japanese *negro*." The ignorance of foreigners with regard to the condition and people of Japan has often given us pain, but this is really too bad. Probably the writer thought we were *all* blackamoors. No wonder that extraterritoriality is so difficult to abolish.

TRULY, the lines of Japanese usurers are not cast in pleasant places. The *Mainichi Shimbun* records one of the most determined murders we have ever heard of, the victim of which was a notorious money-lender living at Isshiki-mura, Yurugi-gori, Sagami (Kanagawa Prefecture). It seems that this unfortunate usurer, Tsuyuki Usaburo, had made himself particularly obnoxious to the peasantry by the manner in which he pressed them for payment of their debts. Some time ago, a number of the malcontents formed a league with the intention of slaughtering every member of the Usaburo family. Fortunately the police got wind of the matter, and succeeded in foiling the plans of the conspirators. Despite this warning, Usaburo took no notice whatever of the matter, and went about as usual without taking the least precautions. However, he refused to advance any further sums to the villagers, and they, having no means to save themselves from starvation, chose rather to die by the law than from the pangs of a lingering death. On the 15th instant, eleven of the conspirators, hearing that Usaburo had gone on a visit to Oiso, followed him thither, each armed with a naked sword. They traced their victim to a house which they forcibly entered; and then literally hacked the unfortunate man to pieces, cutting off both legs and stabbing him in innumerable places. The adopted son of Usaburo, who was present at the time, shared the same fate. Immediately afterwards, the murderers went to the police station, and voluntarily gave themselves up. It is stated that the conspirators number two or three hundred in all, and that they were about to set fire to the dwelling of Usaburo, but were prevented by the police who proceeded to the spot so soon as the murder was reported.

No less than thirty representatives of the Tea Industrial Association, established according to the instructions of the Home Department, held meetings in the Yamashita Bazaar, Tokiyo, from the 2nd to the 14th instant. The principal resolutions passed may be epitomized as follows:—A Central Tea Corporation shall be established in Tokiyo, and shall undertake to facilitate communication between tea dealers all

over the country; this Corporation shall collect minute information on the foreign tea-market, and shall reply to all manner of questions submitted concerning the manufacture of Japanese tea; the Corporation shall, finally, do all in its power to stop the manufacture of spurious teas, and endeavor to put an end to all malpractices.—*Choya Shimbun*.

THOUGH the relations of the United States with Eastern Asia have lately attracted much attention and are likely to become more important every year, it may not be generally known that there is already a substantial colony of Japanese in the American Republic. According to the *New York Herald*, this small community is eminently respectable, and stands out in sharp contrast to the larger Chinese settlement. The Japanese, who are most numerous in New York, Boston, Chicago, and San Francisco, have gained the goodwill of their neighbours by intelligence, industry, sobriety, and a strict observance of the social duties. They follow avocations which, as a rule, are useful to the general community, being mostly merchants in tea, silk, porcelain, lacquer work, toys, and native articles. They have a native bank, with branches and a considerable capital, and their business is conducted chiefly on European or American principles. In New York City the Japanese have a club of their own; they can usually speak English well; and in dress, deportment, and habits they adapt themselves easily to the standards of their adopted country. It is noted as a sign of their disposition to make the best of their new surroundings that they take a lively interest in the politics, literature, social life, and commercial development of the United States. That such a colony, in constant communication with the home country, should have some influence on the progress of an enterprising people is natural enough. On the other hand, its existence opens up important possibilities in a complex civilisation like that of the United States, although limited by the fact that the labouring classes in Japan do not readily emigrate, probably because there is no such pressure of population with regard to employment as forces them into exile from a country to which they are said to be peculiarly attached. That the character of these classes would not be likely to arouse the animosity which has been shown against the Chinese is argued from the favourable reputation of the Japanese sailors who visit the American ports, and from the statement that no native of Japan has ever been charged with a criminal offence in the courts of the United States.—*Manchester Guardian*, April 1.

In the last number of the *Fortnightly Review* there is an imaginary conversation between an Englishman, an Irishman, and an American on the subject of "Assassination and Dynamite." The writer, Mr. W. Dillon, while denying that a majority of the Irish in America, much less of the Irish at home, are favourable to a policy such as that pursued at present by the Invincibles, nevertheless admits that "a very considerable number of Irishmen in America, who have never taken and have no thought of taking any part whatever in a dynamite campaign, will be found to excuse such a policy in conversation;" and that "even among these (and they are the majority) who cannot fairly be said to sympathise in any sense with dynamite doctrines, the prevalent feeling is one of indifference, or,

at most, of a somewhat languid disapproval." In the imaginary dialogue, the Irishman, as might be expected, lays much stress on the cruelties perpetrated by landlords, and confesses his inability to distinguish between the stabbing of a landlord and the murder that is done when "a poor fever-stricken woman is thrown out to die on the road-side;" thus frankly avowing himself a disciple of the doctrine that two wrongs make a right. He has also a good deal to say about the glamour that history has thrown over the memory of tyrannicides; about the difference between blowing up people of one's own country and sinking ships or burning towns that contain alien enemies, and about the tacit approval which England herself has always given to the opponents of despotism, whatever form their opposition took. The practical Englishman disposes of these and cognate arguments in a very simple fashion. He quietly reminds the Hibernian that his doctrines involve some very perplexing conclusions. For without attempting to defend England's attitude of apathy, if not of approval, towards conspirators against foreign governments, it is plain that if Ireland's right to regard England as a foreign oppressor and to shoot or shatter Englishmen be admitted, there will be few, if any, places in the world free from the horrors of civil tumult. Frenchmen in Alsace and Lorraine might murder every accessible German, and a band of Red Indian Invincibles might proceed to dispose of the members of the United States Administration. But, perhaps, the most convincing argument advanced by the Englishman is a reference to the effect this dynamite policy, if pursued with success, must have upon the future Government of Ireland herself. "If England," the hard-headed Saxon observes, "were to haul down her colours, surrender to dynamite, and leave Ireland free, you (in Ireland) would certainly have your extreme section, who would be for confiscating the property of the landlords, and, it may be, for establishing some form of socialism or communism. If this section failed to bring the body of the people to their views by argument, it would naturally occur to them that there was another way more effectual than argument. Experience had show that some hundred men could impose their will upon an entire nation by means of dynamite. Why should not they do likewise? And so you would exchange the tyranny of England, as you are pleased to call it, for something that would be a real and terrible tyranny—the tyranny of the few over the many, enforced by an organized system of intimidation and murder."

It is not generally known, says the *Whitehall Review*, that the late Duke of Albany was all his life subject to the fits one of which appears to have been the immediate cause of his death. This was the chief secret of that feeble health which always prevented him from taking much share in the many amusements in which his brothers excelled, and to which, with a curious irony of fate, he was especially attached. He was very fond of shooting, riding, and, indeed, all bodily exercises; but his physical strength did not allow him to gratify these tastes very much. In compensation, his mind was richly endowed, and he found his delight in the study and aims which made him one of the most cultured princes that England has ever known. One of the strongest ambitions of the late Duke was to earn distinction as a public speaker, and

to attain this end he always devoted the greatest care and thought to the preparation of his public speeches. It is inexpressibly melancholy to think that this honourable ambition, which would so surely have been realised—which, indeed, was in a measure already realised—is now among the noblest of the many noble memories that he has left behind.

COMMERCIAL depression is a favourite topic with the vernacular journals at present. The *Yiji Shimpō* and others have devoted much space to the discussion of the best remedy for this universal stagnation of trade, and, latterly, the *Bukka Shimpō* has had much to say on the same subject. The latter journal treats of the question in the light of a dangerous epidemic, which only "skilful financial physicians" can stay. The recent panic in Wall Street, says the *Bukka*, as well as the reported heavy failures in Europe and China, cannot fail to have a depressing influence on this country. The speculations in the American tea-market will certainly affect the sale of tea in this country; for, now that the market is so uncertain, even a brisk demand will not send up quotations. The banks of Japan are treading on perilous ground, and the late disastrous failure in the Capital proves the total instability of many corporations. Appearances are, and have been, deceptive; mercantile associations that seemed to do a lucrative business and enjoy an enviable notoriety in foreign countries are, in reality, in great pecuniary distress. The epidemic is spreading throughout the land, and matters look well-nigh hopeless. The disease is a most infectious one, and the stagnant condition of trade furthers its rank development. The sad scenes of a great panic may be at our very doors, and it needs wise heads and steady hands to avert the imminent crisis.

IN H.B.M Court for Japan, on Thursday, John Weser sued John Carroll, as part owner of the *Ada*, for \$50.00 and the tenth share of an otter skin. The case had been adjourned from the 11th January for Captain Hardy's evidence as to the skin in question. The defendant said that Captain Hardy, who was the managing owner of the *Ada*, had not been in Yokohama since that date; he had told him everything had been settled. Captain Hardy had made him a present of the skin, which he valued at about \$150.00. The plaintiff said that Captain Hardy had picked the skin out of the catch before sending it home and, according to the account sales of the other skins, he valued it at £33 or about \$170.00. His Honour remarked that the only point now in question was regarding the skin, and he did not see how Captain Hardy could make presents out of the catch. The case had been adjourned for five months, and he did not feel justified in making a further adjournment. He thought the only way would be for the defendant to pay the money and recover the amount from Captain Hardy on his return. He then gave judgment for plaintiff for \$65.00 and costs.

THE colonists of Victoria, if at first disappointed in their desire to have yet another peer, at their head, will find that in Sir Henry Brougham Loch, K.C.B., the Colonial Office has made an appointment which cannot fail to be popular. His departure from the Isle of Man, where he had so long reigned supreme, will be greatly regretted. Since the days when he quitted

"John Company" to enter the service of the Crown, Sir Henry Loch has rendered some most important services to the State, but none greater than those he rendered in China as the right-hand man of Lord Elgin, whose special missions he accompanied in 1857 and 1860, bringing home the treaty with Japan, signed at Yedo, in August 1858, and also Lord Elgin's despatches, including the ratification of the Treaty of June 1858, and the Convention which brought our last China war to a close.—*Whitehall Review*.

ALTHOUGH Christian Missionaries have expended large sums in founding their religion in this country, says the *Fiji Shimpō*, yet their converts have mostly belonged to the lower orders of the populace. We now hear that they will direct their energies towards proselytizing the upper classes, hoping thereby to have greater influence over the people at large. To this end, they intend holding intimate intercourse with leading politicians, whether in the Government or retired from service, and hope to reap golden opinions from the intellectual members of our community.

A HOME paper, referring to Dr. Dennys' invention, the company to work which has just been formed, says:—Fresh evidence is continually coming up as to the efficacy of the newly invented anti-fouling paint. The steamer *Ceylon*, which recently made a voyage round the world, was painted with one coat of Dennys' paint at Hongkong, in February 1882, and the report of her commander, made after a survey in August 1883, an interval of more than eighteen months, states that the paint remained "perfectly smooth, clean, and absolutely free from any marine growth." Surfaces protected by other paints have only lasted six weeks in the waters of the Straits of Malacca, which are well known to be as bad for fouling as any in the world. This new paint has stood tests of over twelve months in five different parts of Singapore Harbour, and has been found on inspection to be absolutely clean. For vessels, therefore, trading in tropical seas the discovery is invaluable.

GOVERNOR CRITTENDEN, who has often been accused lately of never doing any wise thing, has improved his reputation according to a story told by Patti to a *Post-Dispatch* reporter the other day. She was at the time describing the favorable reception of her singing of "Home, Sweet Home." She said:—"Now, every one seemed so pleased when I sang it that it made me feel good to see them. Were they not pleased? Such a funny thing happened in connection with—I'll tell you—your Governor—Crittenden I think his name was—yes, Governor Crittenden came to see me after that night, and what do you think he did? Well, he kissed me. He said:—'Mme. Patti, I may never see you again, and I cannot help it,' and before I knew it he threw his arms around me and was kissing me." The diva laughed heartily and merrily at the recollection of the incident. "Is that the privilege of Governors, only, madame? asked the susceptible reporter. "Now, it wouldn't do, you know, to have everybody washing my face, but an old gentleman, and a nice looking old gentleman—I think he was nice looking—but the truth is, he kissed me so quick I didn't have time to see, and especially when they do not give me time to object, what can I do?" The *St. Louis Globe-Democrat* proposes the impeachment of Governor Crittenden "not for kissing Patti (men who are not Gover-

nors would do that if they got a good chance), but for kissing and telling. "To kiss is human," adds the *G. D.*, "but to kiss and tell is diabolical." So far as the public in this part of the country has been informed, it was not Governor Crittenden who told, but Patti. But if it was really the Governor who first took the outside world into confidence about the transaction, we fully indorse the impeachment proposition.

HOWEVER variable may be the grade of intellect in different individuals, says the *Choya Shimbun*, it is certainly not fair for a few to pass lives of ease and luxury while the many about them live in penury and extreme distress. The aborigines of Saru and Shiraoi in the Hokkaido, who, until recently, passed quiet hard-working lives as fishermen and farmers, have been driven from their occupations in a wholesale manner. The ever-increasing immigrants, added to the employment of machinery and all sorts of industrial inventions, have completely outbid these poor fellows, who are at the verge of starvation. Many have been forced to enter into the service of the new comers, but even there misfortune follows them, for their hard taskmasters often refuse to pay their little pittances. They have no means of redress, and live at the mercy and charity of their employers. Nothing can be more woebegone and pitiable than their present condition, and it is high time that somebody did something in their behalf.

THE somewhat foolish young ladies and gentlemen who call themselves Esoteric Buddhists, and to whom literature means only the "Light of Asia," "Mr. Isaacs," and the writings of Mr. Sinnet, will not be very greatly pleased, says a home paper, by a passage in a recently published letter of Henri Martin's. Henri Martin is writing to a friend on questions of belief, and says, "If we are not agreed on all points, we are so at least, I believe, on this one, that the soul is an indefectible activity; and we leave the opposite hope to those lazy Buddhists." Indeed, it is high time that the foolish mania for Anglo-Buddhism should pass away like æstheticism and agnosticism. We can imagine how Dr. Johnson would have spoken if Boswell had informed him of some English friend of his who professed Buddhism. "Sir, no Englishman is a Buddhist. Your friend is not a Buddhist. Your friend is an ass."

SEVERAL extensive conflagrations are reported from the provinces. On the 19th instant, a fire broke out at Shichiken-cho, Mito, Ibaraki Prefecture, destroying 549 houses, including the local Post Office, the bank, and several schools and ward-offices. Five persons were seriously injured and one killed. Another fire consumed 110 houses at Kashiwazaki, Niigata Prefecture, on the 18th instant. A third conflagration occurred at Akitagori, Akita Prefecture, in which an assaying house, three official residences, and 55 private dwellings were reduced to ashes.

ONE of the funniest criticisms I can remember on a dramatic hitch, says "ATLAS" in the *World*, was delivered in the Queen's Theatre in Dublin years ago. A very portly Mephistopheles in some *Faust* extravaganza had to "go home." The dramatic devil was, like Hamlet, "fat and scant of breath," and as he sank through a small circular trap—a sort of "converted vampire," to be technical—he stuck. The demons below tugged at his crimson legs in vain; the mortals

above tried to stuff him down: all useless. And then, over the delightful Dublin din that rose from the whole house, came a still small voice, "Well, boys, that's a comfort, anyway—hell's full!" Then they dropped the curtain.

THE weather report of Saturday at 10 a.m. gives notice of an area of low barometer in the Sea of Japan, with a general fall of pressure and rise of temperature. With a southerly wind, this was followed, as expected, by a stormy day at this port, and a heavy gale which lasted all night, culminating at two o'clock this morning in occasional gusts of wind that approached typhoon force. A heavy gale was experienced at Nagasaki; readings are reported much lower in the Inland Sea, and the depression has extended and deepened.

THE *Fiyu Shimbun* has evidently a *penchant* for monstrosities. Another "what is it" is reported from Onegaidzuka-mura, Kawabe-gori, Hiyogo Prefecture. The happy mother, yclept Nunota Ino, gave birth to an infant without arms or legs, shaped, so says the *Fiyu*, like a—Heaven preserve us—large bottle! Speculators are already in the field; none but capitalists need apply.

IN the U.S. Consulate-General on Monday, R. Coy, R. G. Groves, and Francis Berry were brought up on remand from the 17th instant, and charged before General van Buren with having assaulted Alexander Cameron. The complainant wished to withdraw the charge as he wanted to join his ship. His Honour, after reading the prisoners a severe lecture, discharged them.

AT the Boston Exhibition, which closed on January 12th, some \$24,000 or \$25,000 worth of Japanese exhibits were sold. Among those to whom prizes were awarded we note the following:—The Finance Department, Tokiyo Manufacturing Company, Bizen Porcelain Company, the Koransha, the Shippo Company, and Messrs. Haibara Naojiro, Namikawa Sobei, Marunaka, Tsubouchi, Saito, and Matsushima.

THE German bark *Erl Kœnig*, and the German brig *Minerva*, both from Takao, arrived here on Sunday, and report fine weather during the voyage till arriving on the coast of Japan, where strong gales and high seas were experienced. The *Minerva* sustained some damage to bulwarks and boats.

A FIRE broke out on Thursday morning about three o'clock on the premises of Messrs. Strachan and Co., No. 63, but was got under before any serious damage had been done. It is stated to have originated in the Chinese cook-house.

MR. TARO ANDO, for several years Consul at Hongkong, has been appointed to the Consulate at Shanghai. Mr. Ando was deservedly popular in his former post, and we congratulate him upon his promotion.

WE note the arrival of Sir George Phillippo, Chief Justice of the Supreme Court of Hongkong, who is on leave.

THE British bark *Sattara*, from this port on the 12th inst., arrived at Kobe after a passage of four days.

THE Pacific Mail steamship *City of Tokio*, for this port, left Hongkong on the 21st May.

*HIS IMPERIAL HIGHNESS PRINCE
ARISUGAWA'S NEW PALACE.*

THE residence of His Imperial Highness Prince ARISUGAWA, at Uragasumi-ga-seki, Tokiyo, is now nearly completed. His Imperial Highness is to be sincerely congratulated upon having adopted solid material and modern arrangements in his Palace. The word "foreign" can scarcely be applied to such structures, for since Japan has elected to shape her habits and institutions upon Western models, residences of this nature form an essential part of the national property. The styles adopted by European builders can all be traced back to a Turanian source, and so long as these styles are modified in this country to suit climatic necessities, room being, at the same time, allowed for the display of national art, we do not see why the results should be considered other than modern Japanese buildings.

The Palace is a two-storeyed edifice, in a modification of the so-called "Italian Renaissance" style. The south side, towards which the principal salons face, has a deep stone colonnade with a central flight of stone steps. The entrance façade has a wide carriage porch, above which is a central pediment filled with finely executed carvings. The cornice has but small projection and is without a parapet, matters which rob the style of some of its dignity, but which are to be regarded as necessary concessions to climatic considerations. Altogether, the effect of the building is at once stately and unostentatious. It must be pronounced incomparably the most successful architectural specimen Japan has acquired in recent times, and unless we are much mistaken, its features are sufficiently pleasing to wean some of the most stubborn of Japanese conservatives from their resolute faith in wooden structures.

The internal arrangement consists of a suite of rooms facing south and west, disposed around a large central hall with a grand staircase. Of these apartments the principal are reception, drawing, ball, and dining rooms. For exceptional occasions there has been provided, upon the north end of the façade, a special dining room of very ample dimensions, in addition to the ordinary state dining room. It is separated from the other rooms by a wide hall. Very noticeable is the delicate execution displayed in decorative features, such as marble chimney pieces, plastered cornices, and centre flowers, all of which are from the hands of Japanese plasterers and masons after original designs furnished by the architect. In the ball-room the plaster work of the walls and ceilings is truly admirable, on account both of its wonderful technique and of the graceful novelty and appropriateness of the designs. The decorations are raised in the form of white arabesques and frets upon a pale celadon coloured ground. In the centre

of the panels thus formed upon the walls, are medallions cast in plaster of Paris, representing the principal Japanese flowers arranged according to the four seasons. The pillar of the arched bay and the spandril over it are decorated in a similar way with musical instruments, masks, and ancient dancing gear. All these decorations, as well as the birds in the frieze above, are essentially Japanese both in motive and composition, yet so far from appearing of incongruous application to a *soi-disant* European building, their harmony is not less remarkable than their beauty and interest. The subjects, we understand, have all been executed by students trained in the manipulation of modern art materials at the Art School which formerly existed in the Department of Public Works. In justice to these most promising students, it ought to be stated that the school where they received their training was broken up, and its place taken by another institution designed for the encouragement of ancient art, before they had enjoyed an opportunity of applying their new knowledge to the decoration of any national work. It is difficult to escape the conviction that the Government erred greatly in this matter. Circumstances upon which we do not desire to dwell—circumstances apparently beyond the reach of Japan's control—made it seem advisable, if not necessary, to close the pictorial section of the Art School, though it had already given earnest of a success worthy of more persevering effort. But the sculptural section was a different affair. That might have been preserved from the complications which disturbed its sister sections, while it presented possibilities of a more appreciable nature; possibilities of which we are regretfully reminded by the excellent achievements of its pupils in the case under consideration. If it be admitted, as it is admitted even by the stoutest opponents of European imitation, that the future success of Japanese art is to be found in different motives, different ideas, and different sentiments from the ancient, it is not going very much farther to assert, that new materials and a new manipulation, more solid, permanent, and impressive, may also be employed. It was in this direction that the school of sculpture might have led, and was rapidly leading, Japanese students. Extensive patronage of artists in the decoration of new buildings is universally granted to be a necessity for the encouragement of decorative art, and since the leaders of thought in Japan have agreed that buildings of the old style are neither expedient nor suitable to the altered ideas of this country, we fail to see why oil, marble, and plaster should be tabooed as materials for artistic purposes. Certainly the results obtained at Prince ARISUGAWA'S new Palace will go far to expose the error of those officials who, in obedience to illogical advice, or impatiently yielding to the pressure of

unfortunate accidents, barred a route which promised to lead their countrymen to permanent and rapid success.

The furnishing of the building was entrusted to a young Japanese gentleman, Mr. KATAYAMA, some of whose selections, improperly exposed by a London dealer, and erroneously described as for the EMPEROR'S Palace, were severely criticised by the *Pall Mall Budget*. That the criticism was wholly unjust is proved now that the furniture is in its place. The carpets and curtains, those crucial tests of taste, are perfect in their tones, and present no glaring contrasts or unbecoming garishness. The same may be said of all the furniture. It is at once luxurious and handsome; comfort not being sacrificed to style or style to comfort.

We cannot close this brief notice without a reference to the methods which it is evidently in contemplation to pursue in laying out the grounds that surround the Palace. The miniature landscapes and delightful variety of scenery which constitute the charm and the peculiarity of Japanese gardening, are evidently to be produced exactly as though the building were in Japanese style. The effect is already excellent. We alluded on a previous occasion to the curiously mistaken notion that some incongruity exists between European edifices and Japanese gardens. Possibly the origin of this misconception is to be found in the fact that many of the so-called European buildings in the capital are wholly incapable of adapting themselves to any species of garden whatsoever. The only accessory that could become them is a good high screen. But with a worthy representative of Western architecture the case is quite different. Such a building presents no feature in any degree incongruous with Japanese landscape gardening, and it would be most unfortunate if the progressive enthusiasm of the Japanese led them to sacrifice to a mistaken notion one of the most admirable outcomes of the nation's æsthetic cults.

VAN BUREN v. TRIPLER.

A CORRESPONDENT, signing himself "Fairplay," takes exception to certain conclusions based by us upon the published evidence in the case of VAN BUREN v. TRIPLER. His letter, while apparently intended to be of a controversial character, nevertheless dismisses an important factor in the problem by two peremptory assertions; first, that "no part of either"—the Convention of 1864 or that of 1866—"has been violated" by the transfer of the United States Consular Buildings to General VAN BUREN, and secondly, that "the Conventions contain no provisions which bear in the slightest degree upon the issue in the late action." Grouped about these comprehensive denials are sundry ques-

tions and inferences, but the main contention of our correspondent is so distinctly asserted that we have no difficulty in separating it from its setting. It is this; that although the ground defined by the Conventions as a Consular Lot cannot, so long as those Conventions remain in force, be occupied by buildings destined for any other than public uses, the actual ownership of the buildings themselves is not at all limited by the Conventions. To this general proposition we assent, and our assent carries with it the admission that, *subject to the stipulated proviso*, a private person may own buildings upon the Consular Lot and may receive rent for them. Thus, if circumstances recommended the erection of a Portuguese Consulate on the Consular Lot, and if—to follow our correspondent's analogy—neither the Portuguese nor the Japanese Government was willing to undertake the business of building, it would, in our opinion, be strictly legal that a third party should contract for the building, should own it when completed, and should receive rent for it from the Portuguese Government. So far, therefore, as the Conventions are concerned, there is nothing which forbids the United States' Consul to become the proprietor, in his private capacity, of an edifice standing on the Consular Lot and used as an United States' Consulate, *provided* that—and the condition is vital—he is distinctly bound to apply the building to no other purpose. We are aware that there may be differences of opinion with regard to the method of securing this condition against abuse; but we desire to defer the consideration of that point for a moment. The question which presents itself here, in the logical sequence of ideas, is—when General VAN BUREN, “as a private citizen and at his own risk,” purchased the buildings standing upon lot No. 234, did he enter into any agreement to preserve them for Consular uses only? No trace of any such agreement is to be found in the documentary evidence submitted to the Ministerial Court. The title deed executed by the Governor of Kanagawa in General VAN BUREN'S favour does not set any limit to the purchaser's rights. By it the buildings in question were sold and transferred absolutely to General VAN BUREN without any condition whatsoever attached. Only in a letter previously written by him to the Governor of Kanagawa, we find the words, “I suppose it will be of course understood that the buildings are always to be occupied for Consular purposes.” Thus the Conventions were safeguarded by nothing more tangible than a *supposition* of an *understanding* voluntarily suggested by the purchaser himself.

It may, indeed, be urged that, as a transaction between the Kanagawa Prefecture and a private individual could not over-ride an international Convention, the conditions of the latter must necessarily have been understood as applying to the sale. But the obligations imposed by the Convention

of 1866 will not suffer such careless treatment. The eleventh article of that document distinctly defines “Consular residences and offices,” as the “special object” for which the grant of the land was made by the Japanese Government. To sell to any private person the right of occupying a portion of the land, without providing that the purposes of the occupation shall consist with the Convention, would be, in our opinion, a flagrant disregard of international agreement. To make this clear; suppose the case of a private individual applying to the Kanagawa Prefecture for permission to erect buildings on a portion of the Consular Lot, and even accompanying his application by a statement that the buildings should be used only for Consular purposes. Can it be pretended for a moment that the Prefect would be justified in entertaining such a proposal, unless he had the written assurance of some Consul that the buildings were to be so used, and the written guarantee of the applicant that they should be put to no other use? Nevertheless, we are asked to believe that this was done, and legally done, when the buildings on lot 234, together with the right of occupying the lot, were acquired by General VAN BUREN “as a private citizen and at his own risk.”

Our correspondent will pardon us if we say that it sounds like legal quibbling to separate, so completely as he separates, the ownership of a building from the uses to which it is put. Under ordinary circumstances, ownership includes the right to dispose of the thing owned according to the owner's convenience. If the law limits the purposes to which certain land shall be applied, it cannot be lawful to sell buildings occupying that land without providing that the manner of using them shall be within the limits.

But—it may further be urged—the purchaser in this case was himself a Consul; nay more, was actually occupying, and does still occupy, the buildings for Consular purposes. That is true. But did he buy them in his Consular capacity? If so, then, perhaps, the transaction did not require to be guaranteed by stipulations of the nature referred to above, since, according to the Convention, it rests with the Consuls, “to provide that the land shall be used for no other purposes than those indicated” in that document. The title deed, executed by the Prefect of Kanagawa, “sold and transferred the buildings to T. B. VAN BUREN, Esq., United States Consul General,” within whose competence it certainly lay, *ex officio*, to see that the transfer involved no breach of the Conventions, then or subsequently. This view, however, carries with it the hypothesis that the purchase was effected by General VAN BUREN in his official capacity—a hypothesis which, for our part, we cannot consent to entertain, for reasons that will immediately become apparent. Our correspondent, indeed, appears to entertain it, for he quotes, in

support of his argument, a provision of the United States Consular Regulations, thereby evidently implying that the transaction took place under those Regulations. If so, its details ought to have been consistent with them. Now the provision quoted says three things: first, that the selection of offices and the amount to be paid for office rent are entrusted to the Consular officer; secondly, that “the actual expense of rent, within the statutory limit of twenty per centum of the salary, is allowed him for that purpose;” and thirdly, that “all arrangements and obligations respecting the leasing of premises, the amount and terms of payment or otherwise, are made by the Consular officer, the Government assuming no responsibility therefor.” Does “Fairplay” desire to apply these provisions to the case under review? If so, we fear that he rather mars than mends the cause he undertakes to advocate. For the sum annually paid by the United States Government, both before and since the transfer of the property to the Consul-General, is \$1,536.40. This is not “the actual expense of rent,” as the Consul-General's statements in Court show; and certainly it considerably exceeds twenty per centum of his salary. Are we, then, to suppose that while the purchase was effected under the discretionary power conferred by these Regulations, their provisions were entirely ignored in the matter of rent? It is necessary to observe that the original arrangement with regard to the Consulate was not governed by the terms of the Consular Regulations. The original arrangement was that, in addition to the ground rent which was fixed by Convention, the United States' Government should pay ten per cent. of the cost of the buildings. Whether this payment exceeded or fell short of the limit named in the Regulations, does not appear to have been considered. Our correspondent denies that the buildings were “internationally contracted for,” but we fail to apprehend the force of his denial, seeing that the ground was set apart by international Convention, and that the buildings were constructed by the Government of Japan under agreement with the Government of the United States. One result of the agreement was that the latter Government paid nearly twice as much rent as the maximum laid down in the Consular Regulations, and it cannot, we presume, be disputed that, so soon as the Consul-General, acting under the Regulations, voluntarily assumed the obligations and responsibilities hitherto borne by his Government, he was bound forthwith to bring the charge for rent into conformity with those Regulations. But the charge for rent remained unchanged. We must therefore conclude that the Consular Regulations had nothing to do with the arrangement, and that the purchase was effected by General VAN BUREN not in his official, but in his private, capacity.

However disposed we may be to take "Fairplay's" view of the case, the evidence before us refuses to shape itself into any form other than one of the two following: namely, that the sale of the buildings was made to a United States' official acting under Regulations which he failed to observe; or, that the sale was illegal, because it not only transferred to a private citizen property in which the United States Government had an interest, without the previous consent of that Government, but also because the provisions of the Conventions were not protected in the transfer.

ADVICE NOT EASY TO FOLLOW.

INTELLIGENT Orientals, whether Chinese or Japanese, probably derive a great deal of diversion from the perusal of articles and essays in the local press at the various open ports. The advice given to Eastern countries by foreign writers so little tallies, in many instances, with the conduct the advisers themselves pursue, that the effect must be decidedly grotesque. This is notably the case with regard to military preparations. Japan, for example, is constantly accused of imprudence and folly because she spends money upon ships and forts. She is reminded that she has no aggressive enemies; that nature has made her position virtually impregnable, and that her wisest course would be to devote her whole energies to developing her commercial and industrial resources, leaving armaments to take care of themselves. Theoretically this is all very commendable. But the trouble of it is that Western States just as favorably circumstanced as Japan, and possessing a much larger experience of the reliance that can be placed either upon foreign forbearance or international law, take the best possible care to be prepared for the most remote contingencies. The fact is, that whatever progress the world makes in civilization, its confidence in bullets and bayonets remains unshaken. The conduct of every civilized Power endorses the old principle that to expect no safety is the only way to be safe. It is asking a little too much of any Eastern people that they should be wiser than we are ourselves. If we show plainly that we cannot trust each other, there is no apparent reason why they should trust us. The *Fiji Shimpō*, speaking recently of the Tonquin embroglio, said that, after all, France might ultimately prove herself China's benefactor by rousing her to some active consciousness of the great world beyond her borders, and teaching her, amongst other things, the necessity of better modes of self-defence. The *North China Daily News* moralizes upon these deductions, and after sneering a little at Japan for assuming of the rôle of mentor, goes itself and does likewise. The advice of the Tokiyo journal is described as by no

means good. Armaments and munitions of war, we are told, are not essential factors in advanced civilization, and China is said to be "in a tight place" to-day, not because she has been niggardly of her expenditure on war-vessels, firearms, and torpedoes, but because the money devoted to these purposes has been misapplied and wasted. After all, it comes pretty much to the same thing whether a nation refrains from appropriating its money in this way, or whether its appropriations are squandered. The upshot in either case is that effective armaments are not forthcoming. As for China, we may be tolerably sure that her present mood is not over well adapted to receive the advice tendered by our Shanghai contemporary. Peaceful reforms are all very well, she will think, but if her warlike reforms had been a little more substantial, her future repose would be better assured to-day. Up to the present, her integrity has been preserved wholly by her isolation. Now, for the first time in her history, she is to share her fool's paradise with a companion who regards her with the utmost contempt, and whose dreams of Eastern empire have become almost delirious. Decidedly this is a badly chosen time to reproach her with the "maladministration of her provinces, with wretched and disgraceful roads, with utterly wrong financial principles, and with a barbarous coinage." She may awake to the necessity of building railways and instituting a civil service whose members will be content to serve their country a little and not themselves altogether. But if these necessities come home to her torpid comprehension, it will be by the routes which the *Fiji Shimpō* indicates. There is supposed to be a particular point of endurance beyond which even the trampled worm declines to be an unprotected sufferer. China ought to have reached that point. If she has any pulses at all they should be beating pretty fast to-day. Her statesmen generally get the credit of seeing as far ahead as most people. But there is a science of retrospect as well as of prescience. The Cabinet at Peking will have to stop burning its records if it intends to have any more records to burn. It will have to look back a few years and measure the rate of that aggressive advance which has pushed France's borders to the very gates of China's Southern provinces. There is no apparent reason why that advance should be checked at the Northern confines of Tonquin, any more than it was checked at the Southern. In their present humour, the French respect nothing but strength capable of making itself felt. A year ago, they may have had doubts about the wisdom of recklessly testing the Middle Kingdom's powers of endurance. To-day they can have no misgivings whatsoever on the subject. China herself must appreciate this thoroughly. However elastic her code of national dignity, she cannot but feel that it has been stretched so far

as to make her an object of pity. People no longer wonder at her patience, but rather compassionate her helplessness. Sympathy, not contempt, is the sentiment awakened by the spectacle of a mighty Power so paralysed by the selfish fears of its rulers as to be at the mercy of every courageous depredator. No, in truth, this is not the time to preach peace. Eastern observers must be sensible of the three great shadows stealing silently and steadily on over every land not included within the pale of Christendom: the shadow of England, the shadow of Russia, and the shadow of France. Unsubstantial shadows they have hitherto been, so far as China and Japan are concerned; but that can be said no longer. France is at China's doors now, and whether she will keep out or no depends chiefly upon the degree of satisfaction she derives from the successes she has already obtained. If those successes seem sufficient to compensate her for what she lost actually in 1871 and potentially in 1882, she may remain quiet. If not, then she will scarcely hesitate to win further honours at the expense of a Power so ready to be brow-beaten. Unquestionably the *Fiji Shimpō* is right. If China rouses herself at all, the first business of her waking moments must be with the arts of war not of peace.

THE RECENT NEWSPAPER CONTROVERSY IN TOKIYO.

THE reputation of Japanese journalism will not gain much by the recent discussions of the Tokiyo press on the relative merits of German and English literature. Without desiring to disparage the writers' critical ability, we may be permitted to doubt whether their education fully qualifies them for the judicial functions they seem disposed to assume. At all events, since the question at issue is one which neither Germans nor Englishmen pretend to be competent to decide for themselves, we must decline to follow the *Nichi Nichi Shimbun* and the *Hochi Shimbun* into the details of their very patient and very superficial essays. What strikes us as most remarkable is, not that the essayists should have engaged in an impracticable controversy, but that they should have fallen into the strange error of supposing the national mind to be at all concerned about such problems. There is not the remotest probability that the Japanese public are seriously bent upon altering their linguistic studies as a preliminary to the perusal of German literature. Between the frivolous speculations of a few essayists, and a determined impulse of national sentiment, there is a long interval. These ripples of literary excitement give us no trustworthy indication of the set of the general current. What is happening now in Japan happened a dozen years ago in England with less reason. The great achievements of Germany in the field of philosophical and

scientific research, supplemented by the unparalleled evidences she gave the world of her ability to unite theory and practice, naturally made her the cynosure of all eyes, and changed the indifference of European nations into a feeling of almost enthusiastic admiration. Englishmen, amongst others, began to grapple with her language and to borrow largely from her systems. It will never be known, though it may easily be conjectured, how many a foreign student devoted years to the mastery of her unmusical and little-used tongue, in the hope that it might be his lot to recognise and make public something of the secret of her success. Japan did not escape this contagion altogether. It would have been unfortunate for her if she had. But just now there is a special reason for the fancy she is suspected of betraying. Her statesmen have decided, and rightly we think, that if she is to have a Constitution modelled on Western lines, she can borrow most safely from the German polity, since in that polity there still survive many of the monarchical, not to say despotic, elements which the people of this country have long been accustomed to associate with governmental efficiency. In addition to this general character, there are other advantages—notably that of accessibility—which recommend German systems to Japanese reformers. Wisely or unwisely, however, the choice has been made after much deliberation, and that it should have been followed by results such as those discussed by our Tokiyo contemporaries, is perfectly natural. It is proper and reasonable that many Japanese students, recognising in Germany the source from which their country is to obtain the inspiration of her most important reform, should devote themselves to the study of the German language. Personal ambition, apart from any love of knowledge for its own sake, would suggest such a course. German statists have been engaged, it is true, to assist directly in the work of administrative reform, and their superintendence will enable Japan to dispense with much of the original research which she would otherwise have been obliged to undertake. The same may be said of the lengthy visit to Germany paid, during the past two years, by one of the leaders of Japanese progress. The practical experience acquired by His Excellency ITO and the members of his suite during that visit, is worth a dozen years' abstract study. None the less, the simple fact remains, that, after twenty years of gradual preparation, Japan is about to make the fundamental principles of German political institutions her next stepping-stone towards Western civilization. We believe ourselves that there will remain for her still another step to take; but that is matter of opinion. She has resolved that her great stride shall be *viâ* Germany, and it is inevitable that the impulse of this determination should make itself felt among her reading men.

It would be so anywhere. Patriotic Japanese must want to know what it is their country is about to assimilate: ambitious Japanese must discern paths to office and distinction in familiarity with the standards she has set herself. The literature of Germany and its relative merits have no place in the prospect; while the nature of the German language and the advisability of acquiring it for its own sake, or of substituting it for English in the syllabus of national education, are wholly irrelevant points. The plain facts are that Japan is going to borrow administrative models from Germany, and that those who take an interest in the work, or who hope to have a share in accomplishing it, are turning their attention towards the language and literature of Germany. There could be no greater error than to suppose that the movement implies any conflict between German and English as the foreign language of Japanese educational systems.

We should have deemed it scarcely worth while to note this distinction between practical reality and trivial speculation, did not the question present another, and a more interesting, aspect. It has been asserted that this recent leaning towards Germany is an indication of the fickleness and instability of purpose which some writers profess to regard as a trait of Japanese national character. We have our own doubts as to the sufficiency of the data that exist for a trustworthy analysis of Japanese national character. Even if our acquaintance with her were doubly intimate, it would still be necessary to remember that we observe her under conditions absolutely without precedent. Waiving the question of competence or incompetence, however, nothing within the range of our actual experience or observation seems to support this charge of mutability. During the past fifteen years, that is to say, during the whole period of our close association with her, Japan has followed the same path without change or wavering. If her progress has been too rapid to imply permanency, it has not been too rapid for the motives that impelled it, or for the circumstances that facilitated it. It is difficult, indeed, to suppose an *excess* of rapidity in such a matter. Had the Japanese been a barbarous people, living below any acknowledged standards of refinement and principle, their versatility in adapting themselves to a wholly different order of things might justly have been counted a symptom of levity. But they possessed a civilization in many respects of the highest type, an intelligence trained to appreciate the good, and an ambition too keen to make recognised inferiority endurable. Under these conditions, the impetuosity of their progress is neither inexplicable nor suspicious. It has, at all events, betrayed no sign of reaction during the course of fifteen years: indeed it had long ago carried the nation beyond the point where any sensible re-

gression was possible. But with regard to this recently developed taste for German systems, and its perfectly natural accompaniment—an extension of the study of the German language and literature among certain classes—it cannot, with any semblance of reason, be construed into an index of national inconstancy. The Government never adopted English models, or French models, or American models whereon to frame its polity. German models are its first choice. If their selection makes the language and literature of Germany fashionable in the eyes of those whom the choice actually or potentially affects, that result is simply what we might have expected. It would have happened anywhere.

AWAJI.

The Island of Awaji, situated at the Eastern entrance of the Inland Sea, can be easily reached by small native steamer from Ōsaka, four hours, and from Kōbe (Hiōgo), two hours to Kariya, which is the nearest port touched at. The steamers, after calling at Kariya, continue on to Shidzuki, 40 minutes, and to Sumoto, the capital, 40 minutes. Awaji may also be reached by sailing or rowing-boat from Akashi or Maiko-nohama near Kōbe, the distance across the strait at its narrowest part being only 28 *chō*, and the passage one which is constantly made.

The chief distances on the island are as follows:—

		RI.	CHŌ.	KEN.
East Coast	{ Kariya to Shidzuki ...	3.	10.	29
	{ Shidzuki to Sumoto ...	3.	13.	28½
	{ Sumoto to Yura	2.	17.	4
Southern Inland Road	{ Sumoto to Nakasuji ...	1.	28.	47½
	{ Nakasuji to Fukura ...	3.	27.	42½
or				
Straight across from Shidzuki to Fukura, without going round by Sumoto		4.	00.	37
Western Inland Road	{ Fukura to Koenami ...	2.	10.	37½
	{ Koenami to Minamidani ...	3.	22.	20
	{ Minamidani to Gunge..	3.	00.	48½
(or from Fukura to Gunge <i>viâ</i> Minato and Kawakami about a <i>ri</i> less.)				
West Coast	{ Gunge to Tsukue	3.	20.	40½
	{ Tsukue to Iwaya	2.	29.	11
	{ Iwaya* to Kariya	2.	19.	27½

DISTANCES BY SEA FROM AWAJI TO THE MAINLAND.

Iwaya to Akashi in Harima	1.	23.
Yura to Kada in Kishiu	2.	30.
Fukura to Muki in Awa (Island of Shikoku)	3.	02. 10

A trip to Awaji is much to be recommended during the spring and autumn or in mild winter weather, the climate being moderately warm, the scenery picturesque, and the roads fairly good. *Jinrikisha* can be obtained all along the East coast and on the Southern Inland Road, for 2 or 3 *ri* along the Western Inland Road, and also occasionally in other places. Where there are no *jinrikisha*, coolies can be hired to carry luggage. The best inns are those at Sumoto (Maruhachi), Fukura (Tobimatsu), and Gunge (Shinkuma). The others are rather poor, but every village offers accommodation of some sort. The tourist who wishes to explore the island thoroughly is recommended to land at Kariya, and make the round in the order described below. This will take three or four days, according as steamer hours, weather, &c., may fit in. Persons pressed for time can see the prettiest part of the scenery, which lies on

* Properly speaking Iwaya is at the North-eastern extremity of the island. But this division of the roads is practically the more convenient.

the East coast, by taking the steamer from Kōbe to Sumoto, and returning next morning.

HISTORY.—The island of Awaji is mentioned in the earliest Japanese legends as the first result of the marriage of the creator and creatrix Izanagi and Izanami, when they set about giving birth to the various islands of the Japanese archipelago. It is also related that in very ancient times the water for the Imperial Household was brought over from Awaji in boats; and the beauties of the harbour of Yura have been sung by poets from time immemorial. Coming down to historical days, the unfortunate Emperor Junnin was exiled here in A.D. 764, having been deposed by his predecessor the Empress Kōken, a sort of Japanese Messalina, who added to her other excesses a wild desire for the Imperial power, which was not properly hers, and who, having once abdicated in favour of Junnin, wished to re-ascend the throne. Junnin endeavoured to escape from Awaji, but died there in the following year, probably as a victim to assassination. During the Middle Ages, the lordship of the island and of different portions of it passed successively into the hands of several feudal chiefs, and finally of the Hachisuka family and of their dependants, the Inada. The whole island now forms part of the Prefecture of Hiyōgo. The Castle of Sumoto (which place has long been considered the capital) was constructed in the middle of the 16th century by Ataka Fuyuyasu, a scion of the Miyoshi family.

The scene as the steamer approaches Kariya is most picturesque,—delightful little coves and peaceful nooks, pine-trees on the strand, small valleys stretching up towards verdure-clad hills, and in the distance the hazy outline of Senzan, the highest mountain on the island, and of the high land beyond. This style of scenery, ever varied in its details, continues all along the East coast to Sumoto and Yura; and *jinrikisha* bowl one rapidly over the well kept road. It will generally be found best to spend the first night at Sumoto. Those having another day to spare may turn off inland shortly after leaving Shidzuki, and go to Sumoto *via* the top of Senzan. *Jinrikisha* can be engaged as far as Futatsu-ishi, 1 *ri* 24 *chō*; but it will probably be more satisfactory to walk the whole way,—taking some 6 hours. The country is everywhere pretty. The actual ascent is about a *ri* in length. Half way up is the temple of Kō-shin-ji, which commands a fine view in the direction of Kōbe. Thence to the top the path lies through a wood of cherry-trees, oaks, firs, etc., some of the firs presenting a very curious appearance, the soil having worn away from their roots, and left the latter poised high above the level of the surrounding ground. From the summit of Senzan itself there is but little view, owing to the trees which crown the mountain and which from most parts of the island give it a peculiar square-topped appearance. The temple on the summit is called Sen-kō-ji. It has a fine new solid gate and belfry, but the *hon-dō* or main edifice and the three-storeyed pagoda are old. Its foundation is said to date from the year 901, when a hunter named Chiūda having shot at and hit a stag (another version says a boar), discovered that it was in reality an image of the merciful divinity Kwannon which he had thus sacrilegiously injured. He thereupon assumed the garb of a Buddhist monk and the Buddhist name of Jakunin, and raised a shrine to Kwannon on the spot where the incident had occurred.

On the way down on the side towards Sumoto, that town comes in sight to the left, with Kishiu and the islets of the Ki Channel beyond it, while to the right are the mountains of Awa in Shikoku. From the base of Senzan to the Aiya waterfall, and thence to Sumoto, the path leads mostly across a fertile plain. Those not desirous of visiting the fall, which, though a pretty place for a picnic, is by no means extraordinary, can go straight to Sumoto from the base of Senzan, the distance being stated to be 50 *chō*.

The former castle of Sumoto no longer exists, and in its grounds a court-house and a prison have been erected. The production for which Sumoto is chiefly noted is a sort of marmalade made out of an excellent variety of orange resembling the Seville orange, and called *naruto-mikan*. It is sold in boxes with another sweetmeat, not pleasant to the European taste, composed of acorns, cinnamon, and sugar, and the two sweetmeats together are known by the name of *uki-hashhi*, i.e. "floating bridge," in allusion to the story of Izanagi and Izanami mentioned below. Another preserve special to Sumoto is the *biwa-no-oto*, or "sound of the lute," which is made of plums. Foreigners will perhaps be inclined to think that it stands to the palate in somewhat the same relation as Japanese music does to the ear. The interest on the Southern Inland Road leading from Sumoto to Fukura is mainly archaeological. There is a curious mound called Onogoro-jima, i.e. the Island of Onogoro, at a short distance from the village of Yagi or Yōgi, where the path to it diverges to the right from the main road, and soon leads to a dry river-bed where it is necessary to alight from the *jinrikisha*. A very early Japanese tradition, preserved in the "*Ko-ji-ki*," tells us that the creator and creatrix Izanagi and Izanami, when they were about to set to work to produce the Japanese archipelago, "stood upon the Floating Bridge of Heaven, pushed down the jewelled spear and stirred with it, whereupon, when they had stirred the brine till it went curdle-curdle, and drew the spear up, the brine that dripped down from the end of the spear was piled up and became an island. This is the Island of Onogoro." Several islets on the coast of Awaji contend for the honour of being this first-fruit of creation, and this inland claimant may well, by the ignorant country-people, be supposed to have been once itself an island, standing up as it does prominently from the surrounding rice-field flats. In reality there would seem to be little doubt as to its being the funeral mound of some very ancient prince, all memory of whom has passed away. There is a small shrine on it dedicated to Izanagi and Izanami, temporarily replacing a larger one blown down in 1882, and at the southern end of it a stone called the *sekirei-ishi* or "wagtail stone," with reference to a detail of the creation legend for which Vol. III, Part I, Appendix pp. 69-70 of the "Transactions of the Asiatic Society" may be consulted. A hole has been scooped out on the western side of the mound by women who mix fragments of the earth with water, and drink it as a charm to ensure easy delivery. Almost within a stone's throw is a clump of reeds called *ashi-wara-koku*. *Ashi-wara-no-kuni*, i.e. the Land of Reed-Plains, is an ancient name for Japan. But the country-people, mistaking *ashi*, "a reed," for *ashi*, "the foot," have invented a story to the effect that this is the spot on which Izanami first set foot when he came down to earth. The tourist is not recommended to go out of his way to see this very unremarkable clump of reeds. After visiting Onogoro-jima, the *jinrikisha* are rejoined, and the hamlets of Ōyemami and Koyemami passed through. The latter is marked by two or three very fine pine-trees. The pine-trees of the whole island, however, are those which form an avenue lining the main road for a distance of 50 *chō* just at this part of the journey. In order to enjoy the sight of them it is worth while turning into the main road as soon as the avenue is seen to the left.

By this time the mountains have drawn in a good deal, and we arrive at the village of Igano, where, at the establishments of two men called Mimpei and Sampei, the potteries for which Awaji is noted are carried on. Strangers can easily gain admittance and inspect the manufacture of this scarcely beautiful ware. It is made in red, white, two shades of blue, but chiefly in yellow and in green.

The next object of interest on the road is the funeral mound of the unfortunate Emperor Junnin, already mentioned. Being 202 *ken* in length and 72 in breadth, while the whole is surrounded by a moat and covered with a dense grove full of singing-birds, this mound forms a very prominent object in the scene. It is commonly known as *Tennō no Mori*, i.e. "the Emperor's Grove." It is not permitted to climb upon it or upon that of Junnin's mother, Tayema Fujin, which lies 8 or 10 *chō* away from it in a south-westerly direction.

After leaving these mounds, a *jinrikisha* ride of about half-an-hour brings us to the little seaport town of Fukura, where it will probably be best to spend the second night. The lion of the place is the violent rush of water through the Naruto Channel, which separates the islands of Awaji and Shikoku and connects the Inland Sea and the Pacific Ocean. It is a truly grand sight, especially at spring-tides, when no junk can attempt the passage; and it should certainly not be missed. Boats are furnished at a reasonable charge by the proprietor of the inn at Fukura, and the expedition, which takes from four to six hours, is attended by no danger, passengers being rowed or sailed out under the shelter of the coast to within easy view of the strait, and being able to see the whole panorama either from the boat or from some rocks on which it is usual to land. The best time of all is said to be the 3rd day of the 3rd moon, Old Style (some time at the end of March or in the first half of April), when the people of the neighbouring districts on both sides of the channel take a holiday and go out in boats to see the rush of the briny torrent. The breadth of the channel is estimated at 18 *chō*; but some rocks in the middle divide it into two unequal parts, called respectively Ō-Naruto and Ko-Naruto, i.e. the Greater and the Lesser Naruto. The Greater Naruto being on the Shikoku side, that side would probably afford an even finer sight than is to be obtained from Awaji. Looking from the boat, if on the Awaji side, the province of Awa in the Island of Shikoku is seen in front; to the right of it stretches the long line of Shōdzu-shima, well known for its granite quarries; while further right, in the extreme distance, are the mountains of Harima on the mainland, the little island of Yejima sticking up in front of them like a cocked-hat. The rocks on the Awaji side are tilted up at a considerable angle, and are here and there lined with pine-trees which give them an appearance somewhat resembling that of a *kake-mono* in the Chinese style. For soft winning beauty, however, neither this nor any part of the Western Coast, excepting towards the north, is comparable to the Eastern Coast of the island. On the way back the boatmen may suggest landing at Kemuri-shima and at Susaki, the two islets in Fukura Harbour; but it is hardly worth while to do so. Kemuri-shima is the high thickly wooded islet, Susaki the low sandy one. At the summit of the former is an insignificant shrine dedicated to Kwannon.

On leaving Fukura it is best to take *Kuruma* to Minato, a distance said to be $2\frac{1}{2}$ *ri* of 50 *chō* each, but more probably $2\frac{1}{2}$ ordinary *ri* of 36 *chō*. The first part of the road leads near the Mound of the Emperor Junnin, but turns off to the left, skirting the Western side of the valley. The prettiest part of the ride,—for *jinrikisha* can be taken,—is along the embankment of a small river flowing some feet above the level of the surrounding plain, over which a fine view is commanded, with Mount Senzan marked by a clump of trees on its summit and the mountains of Harima in the extreme distance. The *jinrikisha* must be exchanged for coolies at the dirty village of Minato, remarkable only for a temple dedicated to Kwannon and resembling a small fortified castle. Hence it is possible either to walk along under the shadow of the pine-trees by the beach (locally famous under the name of Kei no Matsu-bara), or else to strike inland. A *ri* is saved by adopting the latter alternative, and the whole distance over the hills from Minato to Kawakami can be done by a fair walker in $2\frac{1}{2}$ hours. The views are of the coast of Harima, of Shōdzu-shima, and of the mountains of Awa behind Shōdzu-shima.

The village of Kawakami is also known as Tenjin, from the name of a temple,—formerly a very fine one,—which it contains. There is fair accommodation at the Tamaya if it is too late to push on further. Hence to Gunge is a 3 *ri* walk. Before reaching Gunge, it may be worth the while of those who wish to see the largest Shintō temple on the island to turn aside a few *chō* from the main road to visit what is called Ichi-no-Miya, or “the First Temple,” in the village of Taga. The Government has spent money on the place, and the buildings have recently been renovated in the style of “Pure Shintō.” The deity worshipped is Izanagi. The third night will probably best be spent at Gunge. From Gunge onwards, the whole way to Iwaya and Kariya, the road leads by the sea. Insignificant at first, the view gradually gains in beauty. The path mounts; little promontories stretch out into the sea; pine-trees extend their fantastically contorted shapes toward the waves; to the left lies Shōdzu-shima, and ahead and to the right the already often mentioned but ever varying outline of the blue mountains of Harima, and in the faint distance the snow-capped Tamba range. After the hamlet of Murotsu, the screen of hills forming the backbone of Awaji itself folds back a little from the strand, giving the green upland glimpses of field and valley which make the Eastern side of the island so charming.

From Tsukuye sailing boats are frequently to be found starting for Akashi on the mainland, the fare at present being 10 *sen* per head in a boat calculated to hold a dozen or twenty people. In fine weather, this is a very pleasant way of concluding the journey, the passage averaging a couple of hours, and the views being delightful. The whole horizon is alive with the white sails of junks going up and down the Inland Sea. Those to whom a sea journey is pleasant only in proportion to its shortness will do best to cross to Maiko-no-hama from Matsuo, a hamlet at the northern extremity of the island, not far from the lighthouse.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

VAN BUREN v. TRIPLER.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Your editorial comments in your weekly issue of the 17th inst., upon the judgment of the U.S. Minister in the case of Van Buren against Tripler, strike me as being so unfair to General Van Buren that, as an impartial observer and one who knows something of the merits of the case, I feel in duty bound to remove, so far as possible, the wrong impression they may have made. In the first place, I find that you have no hesitation in pronouncing the action of General Van Buren in the purchase of the buildings used as a U.S. Consulate as a violation of law, but I fail to find a reference to the particular provision of law which you affirm has been so violated. The same absence of reference is observable in the judgment.

In the next place a general mention of the “Conventions of 1864 and 1866” is made in both papers, and we are informed in a perfunctory way that those Conventions have been violated in the transaction between the Kencho and the purchaser of the buildings. What particular provision of either has been thus broken, however, is not pointed out, and this for the very good reason that no part of either has been violated.

The position you take up is even more assertive than that of the judgment. You say, the buildings “Could not possibly have been sold to a private person as movable chattels because their removal would have deprived the United States of a Consulate internationally contracted for; neither could they be sold to a private person as fixed property because they stood upon ground internationally set apart for public use only.” To the first assertion I have to say that it has nowhere been shown, neither do I think it can be, that the buildings referred to were ever “internationally contracted for”; but if so, I think I am safe in saying that nothing in that contract compelled the Japanese authorities to keep them on the lot for all time, or the United States on the other side, to continue to pay rent all the time they should be kept there. By giving timely notice there is, in my opinion, not the slightest doubt that the Japanese Government could, while the buildings were its property, have removed them at its will. The lot would still have remained a lot for the use of the United States as a Consular lot, or in the event of its non-use as such by the United States ceasing to pay rent for it, it would then have become a lot for “public uses,” it being on the block dedicated to such uses.

As to your second proposition, it appears to me utterly illogical. Why cannot a “private person” be the owner of the buildings and receive the rent, because they stand upon “ground set apart for public uses?” What has the ownership to do with the “use”? I cannot understand of what importance the ownership is, or can be, to any person except the owner himself. Suppose when the Kencho authorities erected the buildings they had contracted with a builder and agreed that he should own the buildings and receive the rent, do you mean to say they could not lawfully have done so? If you do so assert, show me the legal, or even the logical, prohibition. Suppose, again, that the Japanese Government had refused to put up the buildings at all and the United States Government declined to do so, it being against its policy to own property abroad, and under such circumstances the United States Consul or any third party had put them up at his own expense and received the rent, would that have been an improper or unlawful act? If so, why? The buildings of the Russian Consulate were erected by a third party and are owned by him. Is this improper or unlawful?

Please do not refer me vaguely to the Conventions. The Conventions contain no provisions that bear in the slightest degree upon the issue in the late action. The only prohibition in either of them is against using the buildings upon the Consular or public lots for other than Consular or public purposes, and the only penalty for a breach of this provision is that the Japanese Government may re-enter upon the lot misused. The Conventions speak of deeds of these lots, but I question if deeds have ever been given for any of them. However that may be, it does not affect the position I assume. As to who may erect the buildings, who may own them, who may receive the rents, who may remove them, the Conventions make no mention. If they do either directly or inferentially, have the kindness to point out the words.

On examination of the United States Consular Regulations, I find the following provision as to the rental of offices:—“The selection of office rooms and the amount to be paid for office rent are entrusted to the Consular officer. The actual expense of rent within the statutory limit of twenty per centum of the salary, is allowed him for that purpose, but all arrangements and obligations respecting the leasing of premises, the amount and terms of payment or otherwise are made by the Consular officer, and the Government assumes no responsibility therefor.”

General Van Buren acted throughout distinctly within his rights; there was, in my opinion, and in that I believe of every one else acquainted with the law and facts of the case, nothing whatever improper or unlawful in his purchase of these buildings, and he is most distinctly their lawful owner.

I am, sir, your obedient Servant,

FAIRPLAY.

Yokohama, May 19th 1884.

AN EXPLANATION.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—I am sorry to waste your space in making explanations, but you will no doubt allow me to correct a misapprehension which may arise out of the *Japan Herald's* Editorial note of the 16th inst., in which, with the taste characteristic of that paper, I am accused of prevarication and Jesuitical disingenuousness. A note in the *Herald* of the 7th of April gave publicity to a rumour that Tokio Missionaries were taking concerted steps to obtain exceptional facilities for purposes of propagandism. A few days later, I denied the rumour emphatically. I here reiterate the denial with equal emphasis, and declare the rumour with all its implied contents an entire misapprehension.

The *Japan Herald*, by confusing two entirely different things, namely, the general question of Treaty Revision and the probable results of the same for special interests, fabricates against me charges which, while in thorough keeping with their setting, may be left to the judgment of men who can distinguish between disinterestedness and selfishness.

The *Japan Herald* also credits me with the authorship of an Editorial in the *Mail* which I never saw or heard of until it appeared in print. Yours, &c.,

A TOKIO MISSIONARY.

Tokio, May 20th, 1884.

[The article referred to was written by the editor of the *Japan Mail*.—Ed. J.M.]

NOTIFICATION NO. 32 OF THE FINANCE DEPARTMENT.

It is hereby notified that a Revenue Bureau has been established in this Department, in accordance with Notification No. 45 of the Council of State, said Notification providing for the organization of the *Shiusei-kwan*, or Superintendent Revenue Office. The Bureaux of Inland Revenue and Customs Revenue and all the branches of the former are herewith abolished.

MATSUGATA MASAYOSHI,
Minister of Finance.

May 20th, 1884.

THE OSAKA CONFERENCE.*

The Report of the proceedings of the Osaka Conference contains 468 closely printed pages. The information given in this volume, in that it comes direct from the Missionaries themselves, is thoroughly trustworthy, and may be looked upon as a full account of the condition and prospects of Protestant Missions in this country, as they appear to those who are actually engaged in the work of Propagandism. The Report bears the marks of having been drawn up with the greatest care. Some of the papers are full of valuable suggestions, offered by men who have made the subjects they were asked to treat their special study.

After a sermon by the Rev. J. H. Ballagh, we are furnished with a long historical account of Protestant Missions in Japan, which includes a short sketch of the founding and progress of the various missions, now flourishing in this country. The information given in the earlier part of this history has been drawn from sources which are not easily accessible, and a number of facts have been collected and arranged which were known but to a few, and which, were it not for this Report, might have been lost sight of altogether. The period embraced extends from 1859 to 1883. We are informed that the following Missionaries were, among Protestants, the first to reach this country:—Rev. J. Liggins, Rev. C. M. Williams (now Bishop), Dr. Hepburn, Rev. S. R. Brown, Dr. Simmons, and the Rev. G. F. Verbeck. These all arrived in Japan in 1859.

The first day of the Conference was wholly occupied in listening to the sermon and the History of Protestant Missions. On the second day, the subject chosen by the Committee was "The Special obstacles to the Reception of the Gospel in Japan." It seems to us to be at least an unfortunate feature of these essays that they should have treated of Buddhism, Chinese literature, and modern European literature as so many obstacles to the progress of Christianity. To any unbiassed mind it is evident that the influence of Buddhism, as well as that of Chinese and foreign literature, has been far more helpful than hurtful to those Japanese who have already accepted Christianity. One is inclined to ask whether the fruits of Christianity in a country like this, where all these preparatory influences have been at work, do not compare favourably with those produced in countries like Africa or New Zealand. Christian Missionaries come here and find a number of moral and religious terms well known and tolerably well understood. They find that the idea of future life, the idea of moral responsibility, the idea of a God,—in fact all the great essential ideas of morality and religion are quite familiar to the native mind. Numbers of Christian precepts have been taught for centuries: the importance of self-denial, self-sacrifice, benevolence, justice, obedience to lawful authority, and a long list of other domestic and social virtues have been excellently inculcated, and, in a fair number of instances, admirably illustrated in the lives of the ancestors of the men and women whom the Missionaries have come to instruct; and the question that suggests itself—is it the right way to begin propagating a new creed by laying so much stress on the points of difference between what, it is hoped, will be superseded, and that which it is believed has power and capacity sufficient to enable it to embrace within itself and bring to their consummation all forms of religion and morality? One is constrained to ask how can the Japanese be expected to do any thing but hold by what they have till they find something better. And would not the time spent in trying to prove a negative, viz., that Buddhism is not a religion worthy of their confidence, be much better spent in bringing into prominence those well known and indisputably excellent characteristics of Christianity

still wholly unfamiliar to so many of the Japanese.

To Dr. Gordon's three charges, first that the Buddhist has no adequate conception of God, 2nd that he has no adequate view of Sin, and 3rd that he knows of no salvation except by his own exertions, an intelligent Buddhist convert, if he did not make out a "tu quoque" case, as he probably would,—since a Christian would find it hard to prove either that his conception of God is adequate or his view of Sin all that it ought to be, or that his own exertions have not an immense deal to do with his salvation,—an intelligent Buddhist, we say, would be sure to reply, "even supposing that what you say about the nature of the theoretical Buddhism taught in this country is correct, you cannot deny that the power of Buddhism as a civilizing, controlling, and regenerating influence has been something very considerable. Were an impartial history of the reforms it has worked amongst our people to be written, it would show results of which you Christians would be proud and over which you would rejoice as much as we. Why, then, in a day like this when the burning question is religion or no religion—when the danger is, not that men will change one formula for another or one moral teacher for another, but that they will drift away into that worst of all kinds of scepticism, where not only all creeds but all moral standards are dispensed with and inclination becomes the sole guide of life—why, at such a time, do you seek to overthrow the good and the bad together, and to discredit a force which is really working in the same field with you, though under a different standard? It need scarcely be remarked that Dr. Gordon's reference to the immoral lives of Buddhists proves nothing against Buddhism. No religion can fairly be held responsible for conduct which is in direct opposition to its teaching.

We have the same fault to find with Mr. Waddell's paper. It professes to treat of Chinese literature as an anti-Christian influence, but actually discusses Confucianism alone as such. The charges brought against the Chinese classics are too numerous to be reproduced and criticized one by one in this short review. It is sufficient to say that they all rest on two fatal assumptions. The first is that the Chinese writers claim a kind of infallibility in teaching. They are spoken of as though, like Shaka, or Mahomet, or Christ, they had looked upon themselves as the founders of a religion, whereas they claim no such authority. The second assumption Mr. Waddell makes is, that on all the points he adduces for comparison with the teaching of Confucianism, the Christian Church has drawn up a set of dogmas, which, being absolutely true, are therefore ultimate and incapable of any alteration or development whatever; and that the descendants of the authors of these dogmas have nothing to do but place implicit confidence in the decisions reached by their ancestors. 'The test of truth,' the relation of 'the Natural to the Supernatural,' 'the nature of the Divine Being,' 'the origin of man,' 'the nature of man' and 'his future destiny' are spoken of by Mr. Waddell as though they were questions which have been settled for all time. He seems to deny that any aspects of these questions have been illustrated and explained by the Chinese sages in a way which, on the whole, is more of a help than a hindrance to the teaching of Christianity.

Of the three papers which treat of the obstacles to the progress of Christianity, the last, on Modern Anti-Christian literature, is in our opinion, by far the best; and it is so, perhaps, because the author did not tie himself down to the line of argument suggested by the words in which the subject for the day was expressed. Dr. Green's paper is, on the whole, a fair statement of the real amount of opposition to Christianity afforded by modern European and native literatures. Many of the works he mentions are distinctly anti-Christian and written by men who intended them to bear that character. There is nothing either bigoted or narrow in the way Dr. Green deals with the

subject allotted to him, and the antidotes suggested by him are well worthy the consideration of all who are engaged in Missionary Work.

The paper which followed the three already alluded to was by Dr. Maclay on "Missionary Itinerating." The reverend gentleman belonging, as he does, to a denomination which has given special attention to this subject, was able to write a paper displaying a minute acquaintance with the difficulties that have to be encountered by the Missionary Itinerant in this country. He gives some valuable hints as to the best mode of propagating Christianity outside treaty limits.

This paper naturally led to a lengthy discussion bearing on the present passport system. Some missionaries maintained that it was absolutely wrong to preach Christianity out of treaty limits under existing regulations. Others said that they felt no such scruples of conscience in the matter, and argued that if the preaching of Christianity in the interior were in opposition to the wishes of those who grant passports, it was for them to say so. On the principle that those who make laws are the best judges of their intent and bearing, so the silence of the Japanese authorities on this subject might be taken as an indication that preaching in the interior, if not in accordance with the letter of the conditions on which passports are granted, is also not in opposition to their spirit.

Two papers by native pastors, with reference to the special obstacles to the progress of Christianity, were read on the evening of the second day.

The first of these by the Rev. T. Matsuyama, was a re-echo of the papers noticed above.

The second, by the Rev. J. I. Ise, was far more practical and to the point—making it clear that the greatest opposing influences are not such as are produced by presumably deficient systems of morals or by so called "false religions," but are such as are found in all times and all places alike. Bigotry, temporizing, sophism and especially the shortcomings of Christians themselves. These are the great obstacles to the spread of Christianity. On the third day, several papers were read on 'Education.' Among these, that by the Rev. T. S. Tyng is the most elaborate and thoughtful. It deals, after a very thorough fashion, with a number of questions bearing upon educational work, considered as a Missionary Agency.

Two papers on the education of women were contributed by lady Missionaries.

The first of these is theoretical and the second practical, so that, in a certain measure, the one is a complement to the other.

The self support of the native Church was discussed on the fourth day, and the way in which foreign money ought to be employed was a question that elicited a variety of opinions. The two papers prepared by Messrs. Leavitt and Meacham were in direct opposition to each other. The former strongly condemning the use of foreign money in any case whatever, and the latter arguing that, though the entire self-support of the Native Churches is the ultimate goal to be reached, to refuse to use any foreign money from the beginning would be to act in an unnecessarily strict manner, and that such a course, if generally pursued, would tend to retard the progress of the Native Church. The papers read by Mr. Knox, as well by Rev. T. Sawayama and Rev. T. Kanamori, all presented different aspects of the question, and helped to make the discussion of this subject as thorough as its importance demanded.

After the discussion on the subject of the day was closed, a paper was read bearing on the best mode of studying Japanese. This was presented in the form of a Report of a Tokiyo Committee, who were asked to recommend a course of study for the benefit of newly arrived Missionaries. We cannot say that the Report reveals any indications that those who drew it up possessed any very special knowledge of the subject they undertook to treat. Perhaps, as is often the case when Committees prepare documents, one man's wisdom was counter-

* Proceedings of the General Conference of Protestant Missionaries held at Osaka, April, 1883. R. Meiklejohn & Co., Yokohama.

acted by another man's folly. The order in which the books to be studied are to be taken up seems to be unintelligible; e.g. the study of the newspapers (the *Nichi Nichi Shimbun* is mentioned), which involves a knowledge of the Chinese character, is recommended to be undertaken before the easy Kana New Testament is examined. The Report contains little that is not familiar to all who have studied Japanese for a few years, and omits mentioning altogether some very important points connected with the study of both the written and colloquial languages.

The subject discussed on the fifth day of the Conference, was Medical Missions. The first paper read was Dr. Palm's, entitled 'The position of Medical Missions.' It is characterized throughout by liberal sentiments and enlightened views. Medical Missions,' says its author 'strike at that kind of piety which consists in despising or neglecting the body, and by practically exemplifying that man is to glorify God in his body and in his spirit, which are his. They are also the corrective to the narrowing tendency of that kind of Evangelism which preaches as if the chief end of man was to save his soul.' The author gives it as his opinion that 'Japan is not a field for which medical Missions are specially adapted,' for the simple reason that she is not in special need of Medical assistance. "Government" he says, "is doing so much in this direction, that it seems to me that our Missionary Societies would act more wisely in sending the few well equipped Medical Missionaries at their service—few, that is, in comparison with the wants of the world—to India, and Africa, to places where the people are destitute of surgical and medical assistance."

The remarks of other medical men, which were made during the discussion, entirely corresponded with this opinion. Dr. Berry, however, thought that the work of training medical students should, in the future, be looked upon as the special function of Medical Missionaries in Japan.

Papers read by Dr. Berry and Dr. Taylor were not on the special subject for the day. The first, that of Dr. Berry, bears the title of 'Missionary Health, Vacations, and Furloughs.' The second was on the Effect of Missionary Work on the Worker. These two papers are second to none in point of interest, and they both bear marks of being the fruits of painstaking research. They are both illustrated by elaborate tables of statistics, in which the most minute matters of detail are tabulated, and compared. Dr. Berry's paper and the accompanying chart should be in the hands of all health seekers in this country.

The only two remaining essays which need be noticed in this review were prepared and read by two of the Senior Missionaries. The first was on 'The Preparation of a Christian Literature' by Dr. Nathan Brown. This paper contains some valuable suggestions, but it also contains a regular tirade against the study of Chinese. Young Missionaries who wish to escape the trouble of mastering such a difficult language will doubtless hail this verdict with delight. The author quotes Dr. Verbeck as being on his side in this matter, and, we are afraid, the statement is correct. The words culled from the 'Chrysanthemum' as Dr. Verbeck's, appear scarcely worthy to be regarded as a serious discussion of the question, nevertheless, in the light of advice given to Young Missionaries by an advanced student, they are, in our opinion, unfortunate and dangerous. The opinions expressed by Dr. Nathan Brown were criticized by Mr. Denning who, among other things, said it had always seemed surprising to him that so few Missionaries had devoted themselves to the study of Chinese. "The number of men who had taken up the study earnestly might be counted on one's fingers. Some said that the Chinese language would pass away and hence there is no use in studying it. If this were brought about, he ventured to think that it would not be in his life time, and he would not lose the opportunity of reaching

thousands of intelligent men of this generation, because he entertained a faint hope that, in thirty or forty years' time, some radical change in the language of this country would be accomplished. Our duty to the present generation was plain, viz., to make ourselves masters of the language in which all their first class books are written. To posterity should we leave the work of studying the language of the future."

Dr. Hepburn, in his paper on "The Principles of translation into Japanese," advocated the literal translation of the scriptures, and thought the version known as the 'Yokohama translation,' on the whole, a satisfactory rendering of the original. He condemned those Chinese versions which simply aim at giving the sense of the original, and said that they are not to be regarded as the Word of God. Messrs. Green, Tyng, Denning and J. J. Gulick opposed Dr. Hepburn's views, whilst Messrs. Waddell and Maclay supported them.

Papers entitled—'Should the number of Foreign Missionaries be increased?' by the Rev. C. F. Warren; 'Preaching to the Heathen: Its matter and methods,' by the Rev. Walter Denning; 'On Sunday Schools: How best to conduct them,' by the Rev. Julius Soper, brought the conference to a close. Want of space compels us to pass them without special notice, but we may say that the views expressed in Mr. Denning's essay commend themselves as a liberal and intelligent definition of the methods of far-sighted propagandism.

YOKOHAMA GENERAL HOSPITAL.

The Annual General Meeting of the above institution was held on Wednesday afternoon (by kind permission) in the Chamber of Commerce Rooms, to receive the report of the Committee and other business. The following gentlemen were present: General J. B. Van Buren (in the Chair), A. J. Wilkin (Hon. Sec.), J. Rickett, A. O. Gay, W. B. Walter, F. Townley, C. H. Dallas, J. M. des Pallières, J. R. Morse, J. P. Reid, J. A. Fraser, O. Keil, T. Walsh, J. Reynaud, T. Rose.

The CHAIRMAN said that a meeting of this character, however largely attended, did not seem perfect without the presence of Sir Harry Parkes. He felt happy to fill the position of Chairman and proposed that the report of the committee be read. He regretted to say that the report did not show by any means a prosperous state of affairs. There was one peculiar feature about it, one that was extremely gratifying; that was that the ladies had with their accustomed generosity come forward and given their assistance to aid this philanthropic enterprise. If it had not been for their assistance the Hospital would have had to be closed. The appeal for the Hospital was a very strong one. This institution or a similar one could not be done without in Yokohama. He knew that the various calls upon the pockets of the members of the community were numerous, but on looking into them, they were for pleasure. Poverty and disease had to be dealt with practically, and these were calls which must be met. He knew how cheerfully these calls had been met previously and hoped they might be so now. It was to be regretted that some disparaging remarks had been made about the management of the Hospital. It was for those who had made them to come forward at this meeting and state what was wrong, that the matter might be discussed. A suggestion had been made that by getting permission from the Governments who had Hospitals, to allow poor people of other nationalities to be treated in them the General Hospital might be done away with. He would make no comments on this suggestion, but could only say that it was absolutely necessary to keep the Hospital running for the current year and even if the trustees elected now, thought that some arrangement would be better, still as the negotiations would take time, it could not be closed this year. He thought that an institution of this kind should

not be allowed to rest on the support of the ladies and a few of the community. He was of opinion that a permanent fund might be raised. Of course every one knew that if an epidemic occurred there would be no difficulty in raising funds, but they ought to have a permanent fund for the maintenance of the Hospital under ordinary circumstances. It was not his opinion only, but that of several other persons with whom he had conversed, that this could be done. The usual method when money was wanted was to go to certain charitable people who were sure to subscribe, and to no one else. He had been told by several that no one had visited them to solicit subscriptions, and people generally did not come forward until asked. There were plenty of people in Yokohama with fixed salaries, and he believed that if they were properly approached, they would give a small monthly subscription, no matter how small. Many persons would give one dollar a month who could not afford a donation of ten dollars. From these subscriptions a permanent fund could be made, whether enough to defray expenses he could not say, but he thought it would go some way towards it. He then called upon the Hon. Secretary to read the minutes of the last meeting.

Mr. WILKIN read the minutes of the last General Meeting, which were approved. He then read the report of the Committee for 1883.

Mr. DALLAS read the accounts for 1883.

YOKOHAMA GENERAL HOSPITAL.

The committee herewith submit their report, and a statement of Accounts for the year 1883, accompanied by the report of the surgeons.

The position of the institution has been a source of increasing anxiety to your committee: the number of paying patients shows a further heavy decrease, and meanwhile establishment expenses continue, and there are certain items of expenditure which must remain about the same, whether the number of patients be small or great.

The patient list shows that the number treated was only 86 as against 137 in the year 1882, and the number of days was 2,559 as against 3,880 in the year 1882. As a consequence, the cost per head per diem has risen to \$2.71½ against 2.06 in 1882.

Of the above, there were charity patients 17 against 19 in 1882, and days 697 against 561 in 1882. About 100 prescriptions were also dispensed gratuitously.

What would have become of the unfortunate individuals thus treated and assisted without the Hospital, it is hard to say: indeed not only for them, but as much for those who do pay, there can be no question but that the Hospital is an absolute necessity.

As already intimated, however, the financial position is for your committee an exceedingly unpleasant one, and the Hon. Treasurer has of late been without the funds requisite to meet the liabilities of the institution by about \$1,000.

The committee have sought in vain for some method by which the whole establishment might be placed on a footing more in accordance with the present requirements of the place. The buildings and the scale of the whole compound are far too large for the altered circumstances of the present time, but it seems impossible to adapt them to these altered circumstances without first incurring a heavy outlay.

In November, the committee felt it incumbent upon them to put before the medical officers a statement of the position, accompanied with a representation to the effect that it was impossible to continue to pay them the same rate of salary as heretofore. And in reply the medical officers kindly proffered to accept a reduced fee of \$25 each per month, commencing with this year, until the exchequer was in a better position, excepting in the case of the prevalence of any epidemic.

A reduction was at the same time arranged in the accountant's fee.

In accordance with what passed at the last annual meeting, a gratuity of \$250 was tendered in May to Dr. Mère.

The services of this gentleman during the past year again demand the best acknowledgments of the committee.

The subscription list unfortunately shows a considerable falling off, notably in respect to the Latin portion of the community, but the committee have the pleasure to acknowledge sundry handsome contributions which have been especially acceptable:—viz., The sum of frs. 1,000 has been received from the French Government through J. Jouslain, Esq., the French Consul. The large sum of \$659.40 in January of this year, being half nett proceeds of the Ladies Charity Ball, through Mrs. Hannen.—\$230.17, being full nett receipts of the first, and one-third nett receipts of the second, of two performances given by the French Amateurs through D. Fitz-Henry, Esq.

The Loftus Troupe also gave a benefit for the hospital, and have recently forwarded \$60 as the result thereof.

Your committee concurred, in February last, in an application to the Kenrei, made by N. J. Hannen Esq., for the widening and levelling of the road on the eastern side of the Hospital, on condition that a reduction in ground rent should be made, equivalent to the area, say about 36 tubsoes, taken off the compound, and that the Hospital should be put to no expense.

It should be added that some expenditure for repairs to the buildings and fences is absolutely necessary.

The committee have now to tender their resignation, but they would, in conclusion, make an urgent appeal to the community to provide the funds necessary to relieve the Hospital from debt and to maintain it during the current year.

For the committee.

A. J. WILKIN.

PATIENTS IN HOSPITAL FROM JANUARY, 1ST TO DECEMBER, 31ST 1883, WERE AS FOLLOWS:—

	1ST CLASS.	2ND CLASS.	3RD CLASS.	4TH CLASS.	CHA- RITY.	TOTAL.
Remained from 1882.....	0	0	5	0	0	5
Admitted during 1883.....	4	16	40	4	17	81
	4	16	45	4	17	86
Number of days of 1st Class.....						11 days.
Number of days of 2nd Class.....						200 days.
Number of days of 3rd Class.....						1,612 days.
Number of days of 4th Class.....						39 days.
Number of days of Charity Class.....						697 days.
Total						2,559 days.

Cash in hand	\$183.55
Do. to collect from patients (exclusive of \$299.75 considered doubtful).....	580.25
	763.80
Deficit.....	\$1,013.87

The CHAIRMAN asked whether any gentleman had any remarks to offer about the report and accounts.

Mr. W. B. WALTER said there was one item in the receipts which showed a considerable falling off, and although it might be inconvenient to the Hospital, still the public would congratulate themselves upon it. That was the reduction in the number of patients. He thought that this reduction arose from the absence of any epidemic during last year and also that fewer men-of-war had visited the port. He would suggest that if the compound and buildings were too large for present requirements, that steps be taken to reduce them. As the compound was adjoining the Convent, he thought that the new Committee might make some mutual arrangement with the Convent authorities to take over part of the ground, of course reimbursing the Hospital for it. Regarding the deficit, it appeared that during the year they had received \$1,000 more than they could have expected from the regular sources. He had heard that at present there was great delay in admitting patients; this arose from persons having to write to the Committee, after getting a Doctor's certificate, for an order for admission. It appeared to him that it should be sufficient if a subscriber or any respectable member of the community wrote direct to the officer in charge, and if necessary enquiries could be made afterwards. He was also given to

understand that the charge for native patients in the 3rd class was \$1.00 per day, whereas at the Noge Hospital it was 55 to 60 sen. It seemed to him that it would be better to take them in at a reduced rate rather than let the place lie idle. Foreigners would rather send their employes to the General Hospital, and even if it only covered expenses it would be better than having the place empty. As to the complaints about the items of expenditure, he had heard nothing about them, but hoped that if there were any that some one would bring them forward that they might be discussed. He thought that the ground-rent was very heavy, and would suggest that an application be made to the Government to reduce it. He believed that if the missionaries were to interest themselves in the Hospital they might bring a good many Japanese patients, which would increase the income.

Mr. WILKIN said that some two years ago application had been made to the Government for the reduction of the ground-rent and it had been refused. The ground was held under such conditions that it could not be used for any other purpose, half of it being in the name of the Netherlands Trading Co. The difficulty was that previously, when there were a good many patients, the wards were spread about over the compound, and they could not give up any portion without going to great expense in replacing them on a smaller scale. Of course if they wished, the Kencho would take the ground back, but they would give nothing for it. The falling off in the number of patients, which was principally in the Russians and Chinese, he attributed to the absence of Russian men-of-war and to the fact that the Chinese now had a Hospital of their own. It had been agreed to that if they had sufficient Japanese patients the charge would be reduced to 75 cents per day, giving them Japanese food. The food would cost 30 cents a day, then there was milk and beef tea, etc., and with the extra labour and attendance it was doubtful whether 75 cents would pay. The reduction could only be made on philanthropic grounds. As to the admission of patients, all accidents were admitted at once. It had been found necessary to get a Doctor's certificate, as a cholera patient had been taken in; it was also necessary to get the sanction of the committee as they had to be guaranteed from loss.

Mr. W. B. WALTER said, in regard to the reduction of ground-rent, it appeared to him that there was a large piece of ground now used as a garden, which might be handed over the Convent. As to the admission of patients, there ought to be no delay. He had heard of people finding difficulty in getting hold of a committee man and a Doctor.

Mr. WILKIN said they would have to surrender the ground to the Kencho, who would not agree to any transfer as it was granted for a special purpose.

Mr. TOWNLEY thought the only saving would be in ground rent.

Mr. WILKIN said that would only amount to 50 or 60 dollars a year.

Mr. GAY said that to remove the buildings and put them up again would cost from 800 to 1,000 dollars. The ground was simply lent to them, and they could not follow Mr. Walter's suggestion. It would be an ungracious thing to ask the Kencho to allow them to transfer ground lent to them. The question had been discussed by the Committee repeatedly, and they saw no way out of it.

The CHAIRMAN remarked that Mr. Walter had reiterated his wish that if there were any complaints they should be brought before the meeting. Complaints had come to him from various sources. One was that the Accountant's salary might be saved. Another that the nurses' salaries were too high, whilst the Doctors say that a great deal of their time is taken up through the incompetency of the nurses. Again, some say that the Doctors should give their services free. But he did not see why a Doctor, who gives a great deal of his time and his skill and experience, should not be paid. If those

who sat still had to pay in proportion to the loss of time that the Doctors sustain they would find it out. He thought the Committee might give some explanations on these points so that the public might understand them.

Mr. WILKIN said that some years ago a commission was appointed to look into some abuses, and it was decided that it would be wise to employ an accountant. At one time the accounts were kept in his office, and the work was not light. They had a very good and reliable steward now, but he did not think it advisable to do away with the accountant. (Mr. Wilkin then read a list of the staff and their salaries). He thought that if things remained in the same state as at present they might discharge one or two of the Japanese servants. He was not prepared to say that the Doctors should not be paid. This was a different place to others, where a Doctor got a reputation from his Hospital practice. The pittance paid them was very small, being altogether only \$600 a year.

Mr. WALTER said it seemed to him that matters were not so bad after all; there was \$230.17 and \$659.40 which had not been put into the accounts. As to the closing of the Hospital, if it was no longer required it would be better to get rid of it and, with the returns, found a ward in another Hospital. He did not think that desirable, as the next year might not be so healthy, and if in the next 10 or 20 years the population increased they might be sorry that they had done so.

The CHAIRMAN stated that the German Hospital had no authority to receive any but German paying patients. The only thing would be to induce the Governments of the three nationalities to allow anyone who could pay to be admitted, and of course with the fund realized from the sale, everyone could pay. At all events, it would be necessary to run the Hospital for this year.

Mr. DALLAS thought it might interest the meeting to hear the expenses for the first three months of this year. The ordinary expenses were \$1,700, the ground rent and insurance, which both fell due in this quarter, brought the total up to \$1898.10. The amount received from patients was \$909.90, showing a deficit of \$988.20, which had to be made up from charity.

Mr. TOWNLEY calculated that the community would have to find \$7,000 during the present year. Part of that would come from the patients, but the rest must be found somehow.

The CHAIRMAN said there being no objection, the report would be accepted and filed. The next thing was to elect a committee.

Mr. RICKETT proposed, and Mr. FRASER seconded, that the late Committee be re-elected, and, if necessary, enlarge their number, as they have the power add to their number.

Mr. GAY proposed that on this occasion the Committee be ballotted for.

Mr. W. B. WALTER seconded the amendment, which was carried.

The following gentlemen were then elected:—Messrs. Wilkin, Gay, Townley, W. B. Walter, Irwine, Des Pallières, Rickett, Schlippenbach, Fraser, and Reynaud.

General VAN BUREN declined to serve, as he was in ill-health and should be away from Yokohama most of the summer.

Mr. GAY proposed a vote of thanks to the Chairman, which was seconded by Mr. WILKIN and carried unanimously.

The CHAIRMAN thanked them for their kindness, and said he had no further remarks to add to what he had said at the opening of the meeting. He hoped things looked brighter now so many well-known gentlemen had been elected to the committee. He would remind them of his suggestion that every one in Yokohama should be called upon to subscribe.

The meeting then adjourned.

TRANSLATIONS FROM NATIVE JOURNALS.

THE RELATIONS BETWEEN THE CONSTITUTION AND JUDICIARY:

(Translated from the *Nichi Nichi Shimbun*.)

In every country there are three distinct legislative powers: the Legislature proper, the Executive, and the Judiciary. The affairs of the Legislature are conducted by the National Assembly, and those of the Executive are managed by the officers actually engaged in the Government; while judicial matters are adjusted by independent judges. This is the universal organisation of a civilized government. The public is doubtless well aware that the powers as well as the functions of these three administrations must necessarily differ in accordance with the nature of the constitution and the system of government adopted by different nationalities. Yet it is generally believed that the judicial section alone is organized in every country on the same principle, and invested with the same power, despite the difference of governmental systems or constitutions. Such a misconception may have arisen from the fact that, although our scientific men have constantly directed their energies toward investigating the advantages or disadvantages connected with legislative and executive organizations, they have not attempted to attract the attention of the public by making elaborate comments upon the nature of the judiciary. Briefly, and as a matter of fact, the judicial functions go no farther than deciding upon both civil and criminal cases in conformity with established law. Affairs which require the management of judicial officers are, therefore, of a comparatively simple nature. The advantages or disadvantages that may follow upon the manner of their adjustment have no apparent connection with the constitution or system of government, exactly contrary to the case with the executive and legislative bodies. Yet it would be a great error to under-rate the operations of the judiciary, nor is it reasonable to assert that its power, however indirectly it may be exercised, cannot affect the administration of a country.

Despite the simplicity of the judicial functions, a reckless limitation of the power of judicial officers can scarcely fail to be productive of disastrous results. The utmost attention should be given to the relations between the judiciary and the constitution. A country must be possessed of a constitution in order to define its system of government and to limit the various administrative powers; it must establish a code of laws, both civil and criminal, to protect the welfare and rights of its people. The constitution and the code of laws must be so arranged as to coöperate with one another; yet, as the regulations relating to the judiciary are likely to be framed at different periods, it is not altogether improbable that some of them may be incompatible with the spirit of the constitution. In this case, what course should judicial officers pursue in applying the laws? The constitution is, beyond all question, the basis on which all the laws of a country rest, and must therefore be rated higher than ordinary codes. If the judicial officers in question desire to adhere closely to the constitution in discharging their functions, they must regard all ordinary statutes as comparatively invalid. Their legitimate duty seems to lie simply in carrying out such laws as are already established, without criticising their propriety or impropriety, advantages or disadvantages. To doubt the efficiency of the laws, or to question whether they are not contrary to the spirit of the constitution, is to encroach, apparently upon the functions of the legislative officials. Is it, then, advisable that judicial regulations should be conscientiously observed despite their incompatibility with the constitution? Then must the constitution virtually come under the control of ordinary codes, and the object of maintaining it as the basis of all laws will

be lost sight of. If so, the country cannot profit by the possession of a constitution. A glance at the condition of foreign countries shows that in cases such as those to which we have just alluded the judicial authorities are called upon to conform to the constitution, and, at the same time, to exercise their discretion in subordinating the ordinary codes to it. Dr. Storey, writing on this subject, says that there are two important reasons for establishing the central power of the judiciary in a country: namely, to enforce the authority of the government, and to define the limits of such authority, as well as the power of the law itself. The function of explaining the laws presupposes investigation as to whether they correspond with the spirit of the constitution or not, and implies a right to denounce them as invalid or inapplicable when they fail to agree with the constitution. As the constitution is the first code of a nation, judicial officers are under an absolute obligation to observe it in preference to all other laws, especially those which may conflict with its purport. Otherwise, the power of the legislature and the executive may, possibly increase to an indefinite extent. Hamilton, too, wrote that the legislative body perform the task of compiling the laws, but that they are not to be allowed to act as judges for determining whether such laws are compatible with the constitution or not. The courts of justice must stand between the people and the legislature, so as to be instrumental in enabling the latter to exercise its authority within proper limits. It is, therefore, within the functions of these courts to undertake the definition and limitation of the law. Judicial officers ought to regard the constitution as the foundation of a country, and, acting in strict accordance with it, must exercise the codes so as not to conflict with it. From the above statements we may infer that the judicial officers in America consider it expedient to denounce as invalid all such laws as are incompatible with the true import of the constitution, even though they are framed by the legislature. In England, however, whatever laws are framed by Parliament must be obeyed. When we consider why her system of administration differs so widely from that of America, we perceive, in accordance with the statements of learned men, that as the Parliament of England does not only frame the laws, but also has a right to revise them, the judicial officers have no right to pass criticisms upon the statutes of the country. But in America, the constitution is compiled by the people themselves, while the legislature is only invested with power to organise the laws; and the judicial officers are therefore called upon to attach greater importance to the constitution, which embodies the sentiments of the people, than to all other codes which may emanate from any one particular section of the Government. It seems, however, that such assertions are not wholly justifiable. The English have never attempted to deny that the constitution is the grand basis of their administration; and, if this be true, there is no reason why Parliament should enact inferior laws with the express intention of modifying a superior constitution. In case revision is deemed necessary, steps are taken to open the subject, and to carry on formal discussion for that purpose. To enforce any law incompatible with the constitution, simply from the belief that it is the outcome of the desire of the Parliament to reform the constitution, is directly opposed to the *raison d'être* of a legislature. The difference of the systems of administration, in the cases of England and America, is not wholly to be ascribed to the unlimited power of the former's Parliament. The maintenance of a different system in England must simply have originated in the belief that she can promote her national interests more effectually in this manner than by adopting the American policy.

A part of the value of a constitution lies in its immutable nature; it is not so easily changed after it is once established. The advantages that the people may derive from ordinary codes are chiefly due to the fact that they can frequently revise them as

they see fit. If, when these two kinds of laws, the one alterable and the other unalterable, conflict with each other, the judicial officers should choose to enforce the latter kind as the more trustworthy, the constitution would eventually lose its inexorable character. The legitimate functions of the judiciary are confined to carrying out the laws which are already established, and occasions may often occur when the nature of its decisions give evidence of indirect modifications of the law. Yet, if, by extending its authority, we allow it openly to criticise the nature of the laws, it may probably be enabled to oppose the power of the legislature, and thus create the germ of a serious political agitation. It is, beyond all question, extremely difficult to define the relations between the constitution and the judiciary. The advantages or disadvantages attendant upon the limitation of judicial authority are therefore as serious as those which the executive and legislature may produce in society by confounding their functions. It is to be hoped that our thinking men will consider this subject with all due earnestness.

POLITICAL PARTIES IN ENGLAND.

(Translated from the *Meiji Nippo*.)

English reformers are different in character from those of our country, and the Conservative Party is dissimilar to ours. Yet, whenever the Reform Party gain the ascendancy in Parliament, our thinking men do not hesitate to declare that the general course of events in this world of ours tends towards reform; whereas a loss of prestige on the part of the Conservatives in England is, they assert, a conclusive proof that every nation on the globe is ready to do away with old-style administration. These opinions are nothing but the outcome of a party's desire to increase its own influence by deceiving the general public into a false conception of the political parties in England. The rise of reform and the fall of conservatism in Parliament are nothing but results brought about by every-day events. How can they, then, be made to have a universal significance? In England there are events peculiar to the country, and that same rule holds good in Japan. The rise and fall, the prosperity and decline, of political parties in England cannot affect the interests of our people. A glance at the actual state of affairs in England will show that political changes are consummated with striking rapidity.

When Lord Beaconsfield, that most able Minister, took active part in the Cabinet, he met with a rival in Mr. Gladstone, although the latter was unable to oppose him successfully. Outside of England, D'Israeli was confronted by Gortschakoff in Russia, and Bismarck in Germany, both of whom were renowned for their talents. But these two statesmen found it impossible to rest in peace so long as the name of D'Israeli rang in their ears. His fame had spread all over the world, and the influence of the Conservative Party had been felt throughout England. We have heard that, prior to his great success in the Cabinet, it rarely happened that the leader of a political party openly attacked the members of an opposite party outside Parliament. But, after D'Israeli had obtained great political power in the Cabinet, the influence of the Conservatives increased like the light of the morning sun, and they adopted the policy of extending the national prestige over all the countries of the globe. All attempts at opposition were ineffectual. Meanwhile, the Liberal party failed to attract the attention of the people, and its leader, Mr. Gladstone, perceiving that it would be impossible to restore the influence of his party by ordinary schemes, devoted his energies to criticising the policy of his opponents in public places, outside the precincts of Parliament, and not simply in the form of election orations. Ever since that time, the delivery of political addresses by the leaders of a political party, without reference

to place, has become a matter of ordinary occurrence. These proceedings no longer excite surprise, and this anomaly is the direct result of the predominance of the Conservative over the Liberal party. From these circumstances it may plainly be seen that the Conservatives of England had, at one time, remarkable influence. But the policy of foreign aggression adopted by Mr. D'Israeli rendered it necessary to impose a heavy tax upon the people,—so heavy that they finally found themselves unable to bear it. The consequence was a gradual decline in the influence of the Conservative Party, and even their able leader became unable to maintain his position. At last, he was obliged to give way before the harangues directed against him in Parliament, and the Cabinet came under the control of the Liberals in 1880, five years ago.

Thus, the Liberal party having triumphed over the Conservatives, Mr. Gladstone attained the end for which he had striven so many years, and was made Prime Minister. At that time, the influence of the Liberals had increased with as great rapidity as when the Conservatives first held the Cabinet. The growth of the power of the former was faster than the rising of the morning sun. In the House of Commons there were 236 Conservatives as against 354 partisans of the Liberal party, the majority being largely in favour of the latter. Moreover, the great leader of the Conservative party had resigned office and died shortly afterwards. The death of this statesman did not fail to weaken the influence of the Conservatives still further, while the prestige of the Liberals Party proportionately increased. It is true that the death of Beaconsfield was sincerely regretted even by his opponents, for they had lost their greatest and wisest statesman. Yet, the fact that they have been able to maintain the influence of their party up to the present day must be directly ascribed to his decease. When an insurrection broke out in Egypt, the year before last, under the leadership of Arabi, the Government of England dispatched a formidable force for the purpose of quelling the rebels. The Conservatives thereupon lost no time in severely criticising the policy of their opponents, urging that the proceedings of the latter did not agree with the principles they professed, and that the policy of foreign interference laid at their door. But the Conservatives were not able to carry out their plans on account of their numerical weakness, while the triumphant return of the English army after the complete repression of the revolt in Egypt consolidated the power of the Government to such an extent that the people were led to suppose that the Conservatives would never again be in the ascendant.

The Liberal party in England has truly enjoyed a period of overwhelming influence, and yet it has shown symptoms of decline in the last twelve months. This may be due to the fact that Parliament refused last year to pass the bills submitted by the Government for the revision of taxation and taking of oaths. Various journals in England have asserted that the time is ripe for the introduction of alterations in the Cabinet, and the Conservatives have taken decisive advantage of these circumstances. In the House of Commons, there are at present 242 Conservatives against 332 adherents of reform. These numbers show that the Conservatives have increased by twenty-nine votes since the time when the Cabinet came into the hands of their opponents. The Conservatives are thus gradually growing in power. The recent Soudan affair may be instrumental in augmenting the influence of their party; and on the 12th of February last, Lord Salisbury in the House of Lords, and Sir Stafford Northcote in the House of Commons, raised a motion attributing the disturbance in the Soudan to the mismanagement of the Government. Lord Salisbury's motion was accepted, but Northcote's motion was rejected by a very small majority. The adoption of the one, and the rejection of the other, only for the want of a few more supporters, plainly shows that the Government party has no

longer any great amount of influence in Parliament. The bills lately submitted to Parliament for the extension of the right of suffrage, have been vehemently discussed by both Conservatives and Reformers; the one party hailing them with the utmost enthusiasm, and the other endeavouring to reject them with equal energy. They have passed the House the first and second readings, and although we are unable to conjecture the result of the third reading, it is not altogether unlikely that the Conservative party will again come into office. In short, the influence of the present Cabinet is on the wane. Such rapid changes in the course of political events are indeed wonderful and worthy of earnest consideration.

IN THE TOKIYO COURT OF APPEAL (KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—SATURDAY, May 17th, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsui Bishi Mail Steamship Company's steamer *Akitsuishima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsuishima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

On the opening of the Court, Mr. Ramsay handed in a diagram showing to what extent the screen obstructed the taking of bearings by the bridge compass.

Mr. Ramsay resuming his argument said:—"But the extracts made from that book, and mentioned in the reply to the appeal, are to prove to the Court that the master had not navigated his vessel to insure her safety, but had ignored the most ordinary and simple rules of navigation, and by doing so he caused the loss of the vessel." These quotations are also to prove to the Court that the owners of the vessel had taken every precaution to ensure the safe navigation of the ship, and by not regarding them he, the master, Johannes Frahm, caused her loss. On the 10th instant I perceived (and doubtless it was to all perceivable) how greatly Mr. Rossetsu was taken aback by my quotation from the *Japan Daily Mail*, viz.—"That no observation had been taken for 3 days." He politely drew my attention to the fact that it was not mentioned in the *Japan Gazette*, but I showed him that it was in the *Japan Daily Mail*. Here I must apologize to the Court for not giving precedence to its minutes in reference thereto. The reason I did not do so is obvious, viz., that Mr. Rossetsu only had before him the *Japan Gazette*, and to which he made frequent reference. Now, fearing he might repudiate the correctness of the report as it appears in the *Japan Daily Mail*, I will now quote from the minutes of the Court page 5, "The respondent has made several quotations from the Mitsui Bishi Mail Steamship Company's regulations in his reply, especially the one respecting the log book." These Mr. Rossetsu states are of little importance and unworthy of notice. "When a man meets with such stormy weather as this for 3 days, and such that the seas were breaking on board, that no one could enter his room," etc. These remarks have been previously refuted. At that time (on the 10th instant) I disproved the erroneous statement that no observations had been taken (see page 14 of my statement). Now I am compelled, alas! to cauterize the wound then inflicted, by now disproving the statement regarding the seas breaking on board and preventing any one entering his cabin. From October 10th at 4.45 a.m. to October 7th 4.45 a.m. would be three days. Now what was the weather during that interval of time? Refer to log book. "Sunday October 7th 8 p.m. Wind N.N.E. wind and sea moderating. Midnight, fresh N.N.E. wind, sea moderating. October 8th, 4 a.m., Fresh N.E. by E. wind and cloudy weather, sea moderate, Kinakan W. 3 miles. 8 a.m. same wind and weather. Noon: same weather, wind hauling more Easterly, set trysail, p.m. Increasing wind and sea, Wind East. 3.45 p.m. Miyako Head, West, 5 miles off last, 5.15 in all sails, 6.30 in all awnings. Wind East and increasing to a gale." (This is the first record of the wind being heavy, i.e., of a gale) "8 p.m., Helm hard a-port, ship not coming to the wind. Heavy gale, strong squalls, high sea, wind

at S.E." There is no record of leeway or speed throughout, consequently, as from statements made by master, I assume leeway to be 4 points; the ship would be heading N.N.E. + 4 points leeway, she would make a N.N.W. course (safe course). "October 8th, midnight, same weather. October 9th, 0.30 a.m., moderating a little, clearing up; off relieving tackles. Wind S. by W. ship's course E.N.E. 2 a.m. course N.N.W. wind S. by W." No distance by log. The ship now was under control. "4 a.m. course N.N.W. wind S. by W." No distance stated. "Fresh breeze and clear weather" (what about the darkness so that no one could see more than 12 or 18 feet ahead?) "Moderate high sea. 5 a.m. course N.W. Began to blow hard in heavy squalls." 6 a.m., Saw the land bearing W.N.W. course then W.N.W." ship was then manageable. Evidently could see a great many miles off, if only could see 12 or 18 feet it must have been the master's intention to run his ship on shore, as the land bore W.N.W. at 6 a.m., and at that hour he steered W.N.W. But such was not his intention, consequently the land was far distant. "8 a.m. heavy S.W. gale" (wind being off the land) "clear weather. Moderate rough sea, taking heavy sprays over fore and aft" (not seas tumbling on board, as Mr. Rossetsu would lead this Honourable Court to believe, so as to prevent entrance to cabins). "9 a.m. helm hard a starboard, relieving tackles on. Increasing gale from S.W. Noon, blowing a typhoon, clear weather, ship labouring heavily and shipping seas over." (First record of seas coming on board). "Wind S.W. heading N.N.W." No distance at noon and no position. "4 a.m. continued heavy gale from West" (wind still off the land), "making 4 points leeway, 5.30 p.m. wind West, on starboard tack. Not lying well to the sea now. Shipping quantities of seawater, 8 p.m. continued gale, wind N.W." No distance. "9 p.m. wind N.W. moderating, sea going down. Midnight moderate fresh wind and clear weather. 10th October. a.m. course N.N.W. 4 a.m. light N.W. wind and hazy weather." Now I have entirely and most completely disposed of Mr. Rossetsu's unjust statement. "That for 3 days seas had been breaking on board so that no one could enter his room." Regarding the trim: on the Court's records page 6. Mr. Rossetsu states "the respondent says that the ship was not in trim when she left the port of Yokohama, so that the appellant neglected his duty in not having her in trim." Mr. Rossetsu has stated to this Court, and has affixed his seal to his statements so that they are now unalterable, viz.,—"At the time she left Yokohama, her draft forward was 6 feet, and aft it was from 8 to 10 feet which is the proper trim for her." The master stated distinctly that the vessel was "forward 10 ft. 4 in. and aft 17 ft. 2 in." (page 10 master's evidence). Consequently Mr. Rossetsu's statement is in error. Forward 4 ft. 4 in. and aft 9 ft. 2 in. and 7 ft. 2 in. If Mr. Rossetsu's statement is correct, the master's was wrong and he (the master) did not speak the truth and nothing but the truth, in the Marine Court, as he was cautioned to do. But he did speak the truth, consequently it is the legal adviser of the attorney for the appellant who has not made a correct statement in regard to this matter. For the information of the Court I will here give the dimensions of the *Akitsuishima Maru*, viz.:—length 308 feet, breadth 32 ft. 9 in., depth 24 ft.

Mr. Ramsay then handed to the Court a plan of the *Akitsuishima Maru*, showing the internal arrangements, including the position of the ballast tanks, and also the trim in which she was in when she left Yokohama.

Mr. Ramsay then continued—Now I here state it would have been impossible for this vessel to stand upon the draft mentioned and subsequently affirmed to by Mr. Rossetsu in affixing his seal. It is incomprehensible why Mr. Rossetsu has made so many erroneous statements to this Court, statements which are opposed to the evidence. Consequently he has compelled me to enter fully upon the case at issue in the interests solely of the respondent. Mr. Rossetsu's remarks on the respondent's statements regarding the fourth paragraph of the Petition of Appeal (see pages 5-6 reply to petition), are absurd and opposed to facts; for it is evident to any one with the slightest ideas of navigation, that after the first bearing had been correctly taken by the compass, and allowing an interval of time to elapse, and closely watching the light during that interval, then to have taken a second bearing would not have given the master the name of the light, but would have assuredly told him he was in most dangerous proximity to the land, and that the light seen was not the Shiriya-saki Light. He, the appellant, never even took one bearing, still less a second; owing to the neglect of which he caused the loss of the vessel. No prudent man would thus have acted, but would have taken his bearings correctly, and never would have guessed

at them. Nor would any prudent man after encountering such tempestuous weather as the *Akitsu-shima Maru* experienced (only for a few hours, from 9 a.m. to midnight) have accepted the light as that of Shiriya-saki after watching it only for 8 or 9 minutes, viz., from 4 a.m. to 9 minutes past 4. But Johannes Frahm then left the deck, 16 minutes after which the light, disappeared; and 20 minutes after the disappearance of the light, the poor unfortunate *Akitsu-shima* found a correct position for herself at Odonosawa: for which the master must be held responsible. Mr. Rossettsu states further. "The appellant in his evidence in the former Court said that he could trust the mate up to 3 or 4 miles off the shore, or danger. "In this case" (continues Mr. Rossettsu) "the ship was 12 miles from the shore." The master in his report stated 18 miles, the chief officer in his evidence 10 to 15 miles, the 3rd officer 4 to 5 miles. How was it possible for the vessel to be 12 miles off? Mr. Rossettsu further states, "We have to consider a fact concerning this subject (i.e. of the mate). The captain was not allowed to get his mate but the company appointed him without consultation." Every large Steamship Company appoint their own officers without consulting the captain; but the captain has the privilege to ask for another officer in the room of the one with whom he is dissatisfied. Here do I hold in my hand a list of chief officers who have been appointed to the *Akitsu-shima Maru*. Since the time Captain Frahm took command of her, 4½ years ago, to the time of her loss there were no less than 16 men appointed within a period of 3½ years. The last one was Mr. Werner, who was chief officer at the time of the wreck. He was, I have every reason to believe, especially applied for by Captain Frahm in October, 1882.

In support of this Mr. Ramsay asked permission to hand in a letter from the Mitsui Bishi Mail Steamship Company and also one from Mr. Werner.

Mr. Rossettsu objected to Mr. Werner's letter on the ground that he ought to be called to acknowledge his signature, in which case, he would desire to examine him.

Mr. Ramsay said he did not wish to unnecessarily prolong the proceedings, and would withdraw Mr. Werner's letter. Mr. Ramsay continued:—In the 17th paragraph of the Petition of Appeal, Mr. Rossettsu remarks, "the Captain thought him (the chief officer) an unworthy person to consult with." Then he said, first, "the Captain may act without any other person's opinion if he thinks proper." Undoubtedly he can; but by so doing we know that the result was the loss of the ship. No prudent man would thus act; but would consult with his officers as to the ship's position when under similar circumstances, i.e., having encountered such tempestuous weather, and thus he would ensure the safety of his vessel. Mr. Rossettsu, "Secondly, no fault can be attributed to the Captain, if he does not consult with the chief officer; for the mate said (according to evidence) that he never reckoned the longitude and latitude; and to the question, whether he had a sextant, he replied that he had not had a sextant for 3 years: and he replied to the question of the log book, that he could not write neat enough to make correct entries in the log book. Such being the character of the mate, it is very plain that he is not a person worthy of his position. As it is, I have a great objection to blame the appellant, as the respondent does, for his neglect to consult with such an officer." The statements here made by Mr. Rossettsu are incorrect and tend to prejudice the future prospects of Mr. Werner. He certainly did contribute, I am grieved to say, to the loss of the ship, and for which he has been sufficiently censured, by having his certificate suspended for 6 months, but why Mr. Rossettsu should seek to show to the whole mercantile marine community of this empire that Mr. Werner was unfit for his position I know not, for I verily believe that he is perfectly and truly competent to perform his duties as chief officer, providing he sails with a master of different calibre to that of Johannes Frahm. Now, here again has Mr. Rossettsu fallen into error in his statements, viz., with regard to the log book, "that he could not write neat enough to make correct entries in the log book." This is a perversion of recorded facts; refer to chief officer's evidence and therein no such statement can be found. But Mr. Rossettsu's remarks refer to the third officer, not to the chief (see third officer's evidence, page 1, in answer to query of the marine court, viz., "Have you entered the courses steered correctly in the rough log book?" "The chief officer always filled it in for me, as I cannot write English very well.") Now why Mr. Rossettsu should seek to disparage the character of the chief officer so as to strengthen the cause of the appellant, is to myself incomprehensible. The chief officer, holding a chief mate's certificate of competency, granted by the Noshomusho, is assuredly sufficient proof

that he was competent to discharge the duties of that office; the second officer, Mr. Hans Moldt, held a certificate of competency as master, granted by the Noshomusho, he, also, the master did not consult; and as the master, Johannes Frahm, so utterly ignored the competency of his officers, he must be held responsible for the loss of the vessel, as before handing over charge he did not point out on the chart the supposed position of the ship; but with imprudent and incomprehensible haste, left the deck and ship in charge of his chief officer, he never having taken any bearing of the light before so doing, but simply gazed at it for 8 or 9 minutes. And now he would fain make everyone believe that the loss of the vessel was caused through the neglect of duty by his chief officer, and also owing to the false light, which light he did not attempt to verify as that of Shiriya-saki. (Records of Court.) "In conclusion" says Mr. Rossettsu, "I shall make two principal objections to the said judgment, viz.:—1st. That the ship was lost by the existence of Shiriya-saki light where it ought not to be." Was ever such an absurd objection, does he think the light had the power of transporting itself to another part of the coast? Yet he (the legal adviser of the attorney for the appellant) has solemnly sworn to this statement being correct, on the 22nd of April, 17th year of Meiji. Second objection. "The chief officer, a person appointed by the company, neglected to call the captain when he was required to do so." Why so? Because, I can only assume, that he, the chief officer, observed the master so entirely ignoring his responsibilities in regard to the safe navigation of the ship, that he (the chief officer) thought he might also disregard the master's instructions to call him, for a space of 20 minutes or more: result, the master neglected his duties, inasmuch as he never attempted to verify the light or his position by bearings, and consequently he lost the ship through his neglect of duty. Here I pause only for Mr. Rossettsu to comment on Captain Young's evidence, as given before this most Honourable Court on the 25th of April, and on the 12th instant, before proceeding any further with my remarks. I trust I have the sanction of the Court to do so. Now I would most distinctly state that my remarks have not been made in a spirit of vindictiveness, but only to vindicate, i.e., to justify, the procedure taken by the Noshomusho in this case.

Mr. Uchiyama here rose and remarked that Mr. Ramsay's statements regarding the record of the Court, which mentioned that he had stated that the ship was lost by the existence of Shiriya-saki light where it ought not to be, were childish. It was absurd to imagine that he (Mr. Uchiyama) could have said that the light had walked down the coast and taken up another position. What he had said was that the vessel was lost by the existence of the false light where Shiriya-saki was expected to be. Mr. Ramsay must have known that it was a simple clerical error made by the Secretary when writing down the substance of his (Mr. Uchiyama's) opening address.

The Court then adjourned till the 21st instant at 9 a.m.

WEDNESDAY, 21st May,

On resuming, Mr. Uchiyama said that before replying to the statements made by the attorney for the respondent he wished to make a few observations regarding the evidence given by Captain Young, of the *Takasago Maru*. He said he would not at present argue on the evidence in detail, as it was his intention to refer to it frequently in rebutting the statements made by Mr. Ramsay; his remarks with regard to the same would therefore be of a general character. Captain Young was a gentleman well known in Japan, and there could be no denial of the fact that he had given his testimony, to be best of his knowledge, in an impartial manner. The brunt of his evidence, counsel contended, was decidedly in favour of his client, and clearly supported the points he wished to prove. Nevertheless, Captain Young, like every one else, was human, and therefore his answers to some of the questions put to him by the respondent could not possibly be received in evidence; and he contended that some of the questions were such that had Captain Young had time for consideration, he certainly would have refused to answer. He referred, for instance, to the questions put to him by Mr. Ramsay as to "what he would have done if he had been placed under the same circumstances as the appellant," &c. With regard to answers given on this point, the Court, he was sure, would agree with him when he said that Captain Young, although involuntarily, must have been prejudiced when replying thereto. In support of this contention, he would state the following three grounds:—First, it was impossible (as he had already remarked when objecting to the questions put by Mr. Ramsay) for any human being to be able to say what he would

have done under circumstances that had passed, unless he had been present and undergone the same experience. Captain Young's answers must therefore have been purely supposititious and not fit to be received in evidence. As an instance, he would mention to the Court that a few months ago armed robbers broke into his (Mr. Uchiyama's) house. He (Mr. Uchiyama) discharged his revolver twice at them, thoroughly in earnest and with the most intense desire to hit them, but he was sorry to say that he took very bad aim, and the bullet only grazed the hilt of one of the robber's swords. Now, was there any one in Court who could truly and without any doubt stand up and say "what he would have done under the circumstances." His second reason for maintaining that Captain Young's answer must have been prejudiced, was that Captain Young already knew the result of what had been done, namely, the stranding of the *Akitsu-shima Maru*; and his third reason was that, being still in the employ of the company that owned the *Akitsu-shima Maru*, the Mitsui Bishi Mail Steamship Company, he would naturally be guarded in any statement he might make as to "what he would have done under the circumstances," &c., because no one, after the happening of an accident, would be willing to admit that he would have acted in exactly the same way as the captain of the unlucky ship. Mr. Uchiyama therefore contended that the respondent's questions as to what Captain Young would have done under the circumstances, and the answers thereto, must fall to the ground since the witness could really not say what he would have done under the circumstances. In continuing, counsel said that if Captain Young's evidence was dismantled of the supposititious answers, he would ask what remained? Why, that the appellant, Johannes Frahm, was a competent, energetic, and sober seaman, a good master, and one who would not have put the ship in any danger through carelessness or laziness, and that if he had not been fully convinced that the light he saw was really the Shiriya-saki light he certainly would not have left the bridge to go below; that the light seen closely resembled the Shiriya-saki light and might easily have been taken for it; and that if the first officer had done his duty and called the captain, there would have been plenty of time to save the ship. The evidence of Captain Young, therefore, Mr. Uchiyama maintained, gave the appellant three strong and impregnable points, while it gave nothing whatever to the respondent.

For the present he would not further comment on the evidence of Captain Young, but would refer to it at times, in connection with his argument. With regard to Mr. Ramsay's statements, he would only touch on the most important points, a rather difficult matter considering that he was at a loss to discover any bearing that title, and make the proceedings as short as possible, so as not to rob the Court of its valuable time. He was there, however, to do justice to his client, and as the opposing party had gone into voluminous and unnecessary details he must, to some extent, ask the forbearance of the honourable Court. He would commence with the remarks made by Mr. Ramsay on the 28th April. In reference to the first grievance of the appellant, "that the Court of inquiry was not properly constituted," the respondent remarked "that it was not the custom for judges learned in law to preside invariably," &c., at the same time presenting a list which he said "contained cases in which harbour-masters, captains, commanders, &c., were the presidents, that is, men not learned in the law." This assertion of Mr. Ramsay alone showed that he was entirely unfit to take charge of such a Court, as he (counsel) would prove. In support of this opinion, and to show how such a Court should be constituted, he would refer the Court to the *Merchant Shipping Act, 17 and 18 Vict. c. 104, section 241*, which read as follows:—

If the Board of Trade or any local marine board has reason to believe that any master or mate is from incompetency or misconduct unfit to discharge his duties, the Board of Trade may either institute an investigation or may direct the local marine board at or nearest to the place at which it may be convenient for the parties and witnesses to attend to institute the same, and thereupon such persons as the Board of Trade may appoint for the purpose, or, as the case may be, the local marine board, shall, with the assistance of a local stipendiary magistrate (if any), and if there is no such magistrate of a competent legal assistant to be appointed by the Board of Trade, conduct the investigation, and may summon the master or mate to appear, and shall give him full opportunity of making a defence either in person or otherwise, and shall for the purpose of such investigation have all the powers given by the first part of this Act to inspectors appointed by the Board of Trade and may make such order with respect to the costs of such investigation as they may deem just; and shall on the conclusion of the investigation make a report upon the case to the Board of Trade; and in cases where there is no local marine board before which the parties and witnesses can conveniently attend or where such local marine board is unwilling to institute the investigation, the Board of Trade may direct the same to be instituted before two justices or a stipendiary magistrate.

In following Mr. Ramsay's remarks regarding harbour masters, &c., he (Mr. Ramsay) had said they were not learned judges. How had he proved that statement? Where did the list that he had presented to the Court show that the presiding gentlemen were not learned in law? He (counsel) would give an example showing thoroughly that Mr. Ramsay was mistaken. He referred to the Harbour Master of Hongkong, and to show his title he would hand to the Court a copy of the *Hongkong Directory*. What did it say? "H. G. Thomsett, R.N., harbour master, marine magistrate," &c. How, therefore, was Mr. Ramsay to prove that the harbour masters, lieutenants, commanders, &c., mentioned by him, were not men learned in the law? He, Mr. Uchiyama, would go further and quote an entirely new case, a case which could not be said to be out of date. It was reported in the *London Shipping and Mercantile Gazette* of the 4th April, 1884 (handed into Court.) This was an enquiry, Mr. Uchiyama said, into the loss of the *Rose*, better known as the *Daphne*, and was a case very similar to the present. It was his intention to again refer to it further on, but in the meantime he wished only to say that the president of that Court was simply styled in the report, "Mr. Rothery, wreck commissioner." Now if Mr. Ramsay had seen this report he would most likely have also quoted Mr. Rothery as being a "wreck commissioner," and therefore a man not learned in law, but luckily everybody well knew that Mr. Rothery was a Queen's Counsel, a man who not only knew law but a great deal of it. These cases, Mr. Uchiyama maintained, sufficiently showed the shallow ground on which the attorney for the respondent based his arguments as to the construction of marine Courts of enquiry. Continuing, counsel said he would shortly refer to the respondent's statement of the 5th May. The respondent, referring to the appellant's second grievance, "that the decision of the first Court had been given in opposition, and without regard to the evidence produced" merely said that it was absurd, and that the evidence was taken into consideration. He said he would show how that was done. Speaking of lee-way, every witness had stated that, even if other vessels might not make so much, the *Akitsushima Maru* would, under the circumstances, make 4 points lee-way. What did the Court do with all this evidence? It merely threw it aside, and the president, Mr. Ramsay, took upon himself to say that, although the evidence was to the effect that the vessel did make that amount of lee-way, he did not believe it. Referring to the evidence given as to the false light, every one of the witnesses testified to it, but what does the Court do? Takes no notice whatever. Is that not in direct opposition to the evidence? Third grievance:—That the evidence in the Court below tended to show that the appellant was misled by a light of the same description and colour as the Shiriya-saki light which, on being first seen, bore in the exact direction it was expected to be seen, and that in spite of this evidence being adduced, and in spite of the appellant's request that Captain Young, the master of the *Takasago Maru*, and his chief officer, who had also seen the false light and stated that owing to its appearance it might well, under the circumstances, have been mistaken for the Shiriya-saki light, they were not called, thus depriving the appellant of the opportunity of justifying his actions. Regarding his (Mr. Uchiyama's) statement that the appellant in the Court below requested Captain Young and his officers on watch when the false light was seen, to be summoned to give evidence regarding the light, Mr. Ramsay said that no such request had been made. His words were "there is no such record on the minutes of the Court. Had the master preferred any such request, most certainly the Court would have adjourned until those gentlemen had appeared to give evidence." Now, who took down the record in the lower court? Mr. Ramsay. Counsel remarked that he did not wish to say that Mr. Ramsay was telling an untruth, but he appeared to have a very short memory, and therefore to show that the record of the Marine Court of Enquiry was incomplete, he would quote from the newspapers, a proceeding that throughout the trial Mr. Ramsay had been very fond of doing, but which he (Mr. Uchiyama) was not partial to; but which in the present instance became a necessity. The first paper he would hand into Court was the *Japan Weekly Mail* of the 17th November, 1883, which on page 703, at the end of the first day's proceedings, stated as follows:—

Captain Frahm asked the court whether it would kindly request the attendance of the captain and officers in charge of the deck of the *Takasago Maru*, who saw the same light as that referred to subsequently to the wreck of the *Akitsushima Maru*. The court, after promising to consider the matter, adjourned till 9 a.m. next morning.

To corroborate this evidence, Mr. Uchiyama said he would also hand in a copy of the *Japan Gazette*, which contained the following:—

Captain Frahm here asked the president if, in case the Court should consider his statement regarding the light required corroborating, he would kindly request the directors of the M.B.M.S.S. Co. to order the captain or officers who saw the light to attend and give evidence.

The president said he would take the matter into consideration.

The court was then adjourned till 9 a.m. 13th.

Continuing, he said that, so as not to give Mr. Ramsay a chance of saying that the evidence on this point was still incomplete, he would like to call, if the Court did not object, Mr. Eyton, who was in Court, and who had reported the proceedings of the Marine Court of Enquiry for the *Japan Gazette*.

Mr. Ramsay objected to Mr. Eyton giving evidence, on the ground that there was no mention on the records of the Marine Court of Enquiry of Captain Frahm having made the request, and further, that the gentleman who had reported for the *Japan Daily Mail* was not present.

Mr. Uchiyama said Mr. Ramsay's remarks showed the arbitrary manner in which he not only wished to conduct the present case, but also the way in which he had evidently managed the other, as, although he knew very well that the gentleman who reported for the *Mail* was dead he wished to call him from his grave. He (Mr. Uchiyama) would have no objection to Mr. Ramsay calling the editor or manager of the paper if he desired.

The Court ruled that as the witness was to testify to facts that he had personally seen and heard, it would allow him to be called.

Mr. Ramsay then asked to be allowed to see the copy of the *Mail*, after reading which he withdrew his objection.

Mr. J. L. O. Eyton to Mr. Uchiyama—I am the reporter for the *Japan Gazette*. I was present at the Marine Court of Enquiry held on the 12th, 13th and 14th of November last, in the case of the *Akitsushima Maru*. Mr. Ramsay took down the record on behalf of the Court. I distinctly remember Captain Frahm requesting the Court, at the close of the first day's proceedings, to call Captain Young and his officer, to give evidence on his behalf regarding the false light. I heard Mr. Ramsay say, in reply, that the Court would consider the matter.

In continuing, Mr. Uchiyama said that, after hearing this evidence, Mr. Ramsay had no leg to stand on. Referring to Mr. Ramsay's statement in which he said that he (Mr. Uchiyama) had reminded the Court that "when the disaster occurred the weather was not so calm as at present (April 16th), a hurricane had been blowing, even during the day-time it was so dark that one could not see 2 or 3 ken ahead," &c., he would state that the words "when the disaster occurred" were not spoken by him, and not mentioned in the records of the Court, and he begged the Court to refer to them. This was done, and the words mentioned by Mr. Ramsay were not found. Mr. Uchiyama then said his remarks did not refer to the time of the disaster, but to the 9th of October, the previous day, therefore he (the counsel) had made no statements contrary to those of his client or the log book. Referring to Mr. Ramsay's remarks on the 10th instant, in which he stated that the light could not have been 12 miles off, as stated by Mr. Uchiyama, since the evidence on that point was contradictory, the master saying about 18 miles, the first officer from 10 to 15, and the third officer from 4 to 5 miles, the appellant's counsel contended that as the statements of the captain and chief mate were very similar they must be taken in preference to that of the third officer, who differed so widely. However, he would mention that in making his statement he had taken the average of the three witnesses, which was between 11 and 12 miles. But, even supposing the estimate of the third officer to have been correct, the course laid down by the master was a proper one. This was fully upheld by the evidence given by Captain Young, who said that had the light been the Shiriya-saki light, the course would have been a proper one, and would have taken the vessel clear of all danger, even although the vessel had been but 5 or 6 miles off it.

The Court adjourned till 9 a.m. on the 24th instant, when Mr. Uchiyama will conclude his address.

It has been discovered that, in some districts, the same postage stamps are used several times in succession, as two or three washings will readily remove the black obliterations of the Post Office.

We understand that the *Kwasoku* intend holding a meeting in order to prevent the frequent occurrence of bankruptcies among members of their class.

Mr. Tarui Tokichi, a well-known Communist residing in Nagasaki, is engaged in publishing several works on Socialism. The authorities are said to have privately instructed the police to ascertain if he intends distributing these publications among the public, as this would tend to disturb the national tranquillity.—*Fiyu Shimbun*.

NEW RACE PONIES.

The steamship *Glenavon*, Captain Donaldson, which arrived here on the 16th instant from Shanghai, brought over a batch of a dozen China ponies for the Nippon Race Club. About half the number ran as griffins at the recent Shanghai meeting, with the result that most of them will be able to start as maidens at the Autumn meeting here. In the three days' racing at Shanghai Spring only two of the lot were winners, Isis and D.D., the former winning the Taotai's Cup and the latter the Roadster's Stakes. Two others were among the placed ponies, Samurai, second in the Jockey Cup, and Huntsman second in the Kiangsu Plate, and others were winners on the "off day." The ponies were landed here in capital condition, and were drawn for in the afternoon at Mr. Jaffray's yard, and came "out of the hat" in the following order:—

HUNTSMAN (white) 13.0—Ran second to Nectar in the Kiangsu Plate, mile and three-quarters, carrying 10st. 12lb.; race won in 3.51½; fastest time on record at Shanghai, same distance, done by Prejudice, Spring Meeting, 1882, 3.50. Started in the Race Club Cup, three-quarters; and Yangtsze Stakes, two miles; not placed.

ISIS (grey) 13.1—Won the Taotai's Cup, one mile, carrying 12st. in a field of six; time, 2.10½. Started in the Shanghai Derby, mile and a half; and the Chau-Shang-Kuik Cup, one mile; not placed.

MODERATO (dun) 13.1—Started in the Jockey Cup and Shanghai Stakes, once round; and the Yangtsze Stakes, two miles; not placed.

PROMISSORY NOTE (black) 13.0—Started in the Roadster's Plate, once round; not placed.

ALLEGRETTO (grey) 13.1—Started in the Tsatlee Cup, one mile; the Manchu Stakes, mile and a quarter; and the Cathay Cup, mile and a half; not placed.

SOOTHSAYER (grey) 13.0—Started in the Griffins' Plate, three-quarters; Manchu Stakes, mile and a quarter; and Concordia Cup, mile and a half; not placed.

PIZZICATO (dun) 13.1—Started in the Kiangsu Plate, mile and three-quarters; and Consolation Cup, once round; not placed.

CACHUCHA (skewbald) 13.1—Started in the Griffins' Plate, three-quarters; Manchu Stakes, mile and a quarter; and Shanghai Derby, mile and a half; not placed.

JESSAMINE (grey) 12.3—Started in the Spring Cup, three-quarters; Great Northern Plate, seven furlongs; Criterion Stakes, one mile; Shanghai Stakes, once round; and Cathay Cup, mile and a half; not placed.

OLD BAILEY (grey) 13.2—Started in the Manchu Stakes, mile and a quarter; and Cathay Cup and Concordia Cup, mile and a half; not placed.

D.D. (grey) 13.1—Won the Roadster's Plate, once round, in a field of ten, carrying 10st. 12lb.; time, 2.48½.

SAMURAI (grey) 13.0—Ran second in the Jockey Cup, once round, carrying 11st., beating six others; time for the first mile, 2.9. Started in the Griffins' Plate, three-quarters; Manchu Stakes, mile and a quarter; and Concordia Cup, mile and a half; not placed.

Allegro, winner of races in Hongkong and of the Great Northern Plate at Shanghai Spring, and stated to be amongst this lot of ponies, remains in Mr. Bill's stable in Shanghai.

A dispute has arisen between the *Kenrei* and Local Assembly of Kagoshima Prefecture with regard to the financial administration of the prefecture. A petition has been forwarded by the latter to the *Sanji-in*.

A treasury will shortly be built for the *Nippon Ginko*, at an estimated expenditure of 60,000 yen.

The ceremony of conferring prizes on the exhibitors at the Exhibition of Paintings at Ueno, will come off on the 20th instant. The Princes of the Blood, will be present.

Mr. Nagai, Assistant Secretary of the Home Department, has been ordered to attend the Medical Congress at Denmark, and also to investigate the sanitary systems of France and Germany on his way home.—*Mainichi Shimbun*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, May 18th.

THE SAFETY OF GENERAL GORDON.

The Secretary of State for Foreign Affairs, in reply to a question in the House, stated that refugees report General Gordon safe.

THE PANIC IN WALL STREET.

The panic in New York is subsiding. Fisk and Hatch have suspended payment.

London, May 19th, 5 p.m.

Mid. Uplands Cotton, 6½d. Yarns, price very firm. Shirtings, price very firm. Silk, 3d. per lb. lower and dull.

London, May 20th.

THE NEW SHIPPING BILL.

Mr. Chamberlain has introduced the new Shipping Bill.

AFFAIRS IN EGYPT.

The Premier, in reply to a question in the House, said that the Government will adhere to the original basis of the Conference.

[FROM THE "N.-C. DAILY NEWS."]

London, 6th May.

THE OPPOSITION MOTION ON THE SOUDAN QUESTION.

The debate on Sir Michael Hicks-Beach's resolution has been fixed by the Premier to take place on the 12th instant.

Peking, 7th May.

The Viceroy of Chihli has been invested with full powers to conduct final negotiations with the French, and the aspect of affairs at present is pacific.

Hsü Ching-ch'êng, a scholar of high literary attainments, formerly nominated to Japan, is Imperially appointed Ambassador to France, in the place of Marquis Tsêng, whose post is to be temporarily filled by Li Fêng-pao, Chinese Ambassador at Berlin. Ma Kien-chung is also to proceed to France as Vice-Minister.

8th May.

Li Hung-chang has memorialised the Empress, strongly urging the necessity of making peace with France. On receipt of the Memorial, the Empress called together the Prince of Ch'un, Prince Po (the son of San-ko-lin-sin), Têng Ch'êng-hsiu, Liu En-pu, and others—twenty-eight in all—to deliberate upon the subject. Their decision was unanimous in condemnation of the proposal of the Viceroy.

Peking, 8th May.

The following appointments were gazetted this morning:—

Wu Ta-ch'êng, to assist in the duties of Superintendent of Trade for the Northern Ports.

Chên Pao-chên, to assist in the duties of Superintendent of Trade for the Southern Ports.

Chang P'ei-lun, to assist in the coast defence of Fukien. All these officers are accorded the right of direct address to the Throne.

A SPLIT IN THE OPPOSITION.

London, 9th May.

There is an open breach between the Marquis of Salisbury and Lord Randolph Churchill, the latter wishing to reorganize the Conservative Party on a popular representative basis.

THE ORIENTAL BANK.

The Oriental Bank depositors will probably receive 17s. 6d. in the pound.

10th May.

The solution of the Oriental Bank difficulty is maturing. A scheme is in preparation to form a new Bank and Estate Company in order to take over the property in Ceylon and Mauritius.

TROUBLE IN ZULULAND.

There has been a rising in Zululand. The British Resident has been attacked, and has asked for assistance.

London, 10th May.

THE BREACH HEALED.

The political difference between Lord Randolph Churchill and the Marquis of Salisbury has been arranged substantially in accordance with the views of the former.

T'ung-chou, 11th May, 11.30 a.m.

THE EMPRESS AND LI HUNG-CHANG.

The Empress has replied to the Memorial of Li Hung-chang, thoroughly approving of the views therein expressed. Her Majesty only urges him to have due regard to the *prestige* of China, and to ward off all dangers or calamities from the State.

[FROM THE "HONGKONG DAILY PRESS."]

London, 13th May.

THE BRITISH GOVERNMENT AND AFFAIRS IN THE SOUDAN.

In the House of Commons, in the debate on Sir Michael Hicks-Beach's resolution, Mr. Gladstone said that the Government, in undertaking the rescue of General Gordon, could not, without consideration, overlook the fact that an expedition might involve much loss of life and a heavy expenditure of money, but that nevertheless all possible means would be employed for his protection.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MAY 16TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—represents velocity of wind.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 45.0 miles per hour on Monday, at 3 p.m.

The highest reading of the barometer for the week was 30.127 inches on Saturday at 10 a.m., and the lowest was 29.479 inches on Monday, at 6 a.m.

The highest temperature for the week was 76.0 on Sunday, and the lowest was 46.0 on Tuesday. The maximum and minimum for the corresponding week of last year were 78.8 and 48.2 respectively.

The total amount of rain for the week was 0.647 inches, against 0.266 inches for the corresponding week of last year.

Per British steamer *Arabic*, for Hongkong:—Mr. and Mrs. C. J. Lindsay and 2 children, and Mr. and Mrs. John Odell in cabin.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Mr. and Mrs. Hunt, Mrs. Sugiura and son, Miss Cobden, Dr. Harris, Captain Fukui and 3 officers, Messrs. J. D. Carroll, H. Gribble, J. Ralder, J. Ziegler, H. MacArthur, P. C. Julbert, C. J. Strome, W. E. Drummon, G. Sale, Mayeda, Nanjo, Itakura, Fujisaki, Obano, and Sato in cabin.

CARGOES.

Per French steamer *Volga*, for Hongkong:—Silk, for France, 20 bales.

Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—Sugar, 4,582; Yarn, 946; Sundries, 2,524.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Treasure, \$224,000.00

REPORTS.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Hakodate on the 14th May, at 10 a.m. with moderate S.E. winds high sea, and rainy and foggy weather to Cape Okiori; thence fresh S.W. breeze and clear weather to Oginohama, where arrived on the 15th, at 0.30 p.m., and left on the 16th, at 6 a.m. with fine weather throughout the passage. Arrived at Yokohama on the 17th May, at 10.35 a.m.

The British steamer *Arabic*, Captain Pearne, reports leaving San Francisco on the 26th April, at noon with fine weather and smooth water throughout the passage. Arrived at Yokohama on the 18th May, at 3.30 p.m.

The British steamer *Breconshire*, Captain J. Thomas, from Hongkong, reports having experienced strong wind and heavy head sea up to the 18th May; thence strong N.W. gale and high beam sea to the 20th, 21st, and 23rd; thence hard gale and high mountainous confused sea to Sagami.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Hakodate on the 20th May, at 10.30 a.m. with strong S.W. winds accompanied by hail and rain squalls to Siroya Saki; thence same winds and fine weather to Oginohama, where arrived on the 21st, at 12.30 p.m., and left on the 22nd, at 6 a.m. with light northerly wind and cloudy weather which at noon increased to a fresh gale with much rain to Inuboye; thence to port light northerly wind and clear weather. Arrived at Yokohama on the 23rd May at 11.30 a.m.

LATEST COMMERCIAL.

IMPORTS.

Dealers report all the country Markets inactive in consequence of the attention required by the crops as usual at this season of the year.

COTTON YARN.—A few small sales of Bombays have been reported at a slight reduction, but for English spinnings there has been hardly any enquiry, and quotations are nominal, the firmer tone of the Manchester Market having meantime strengthened holders.

COTTON PIECE GOODS.—The business in all articles has been extremely small without any change in prices.

WOOLLENS.—Considerable sales of Mousselines have been reported, but there has not been much done otherwise.

EXPORTS.

RAW SILK.

Our last issue was of the 16th instant, since which date there has again been nothing done, and the Settlement list is once more a total blank. Arrivals have come in to some extent, chiefly *Filature* and *Kakeda* sorts; the Stock now standing at 1,140 piculs.

The situation remains much as last advised, but more intensified. Buyers hold persistently aloof, and are strengthened in their position by the continued good news anent the crops in this and other

countries. Advices from home side show declining Markets there; in Europe prices wilt under the influence of favorable weather for the new *récolte*, while in New York the recent financial troubles have more or less affected the views of purchasers there. Crop reports all round are good. In Japan all goes well; the worms have safely passed the fourth stage in some of the lowland provinces, and cocoons are expected towards the end of the month, with hand-musters of New Hanks by the 10th of June. Advices from Italy report all well there; and the latest news from Shanghai informs us that in spite of threatened *pebrine* there will be about 60,000 bales available for Export during the season 1884-1885. All these things combined make dealers very anxious, and some of them show a marked desire to realise. In some cases they have reduced their asking prices considerably; in others they simply ask for offers, but, so far, without eliciting any response.

There would appear to have been no buying at all for the last French mail steamer: the native dealer mentioned last week (as having sent 17 bales to New York) again appears as chief shipper, sending the fine size of his *Filature* to Lyons. We have reduced some quotations and withdrawn others, but with actual business in hand could undoubtedly purchase at lower rates.

The M.M. steamer *Volga*, which left this port for Hongkong direct on Sunday, the 18th inst., carried 20 bales for France (17 being on Japanese account). The Export to date now stands at 29,375 bales, against 26,973 bales last year, and 19,713 bales at same date in 1882.

Hanks.—Nothing to report; the parcels in Yokohama are held in strong hands, and dealers refuse to sell at very low prices, asserting their willingness to wait the final result of the crops both here and in Europe. We have withdrawn quotations in this class, it not being likely that business will result before the new staple arrives.

Filatures.—Some further supplies have come in, but no sales have been effected. Some holders are getting very uneasy, and, while reducing their asking prices considerably, profess their willingness to report still lower offers. *Nihonmatsu* now asks \$680, *Tokosha* \$660, and others in proportion.

Re-reels.—No fresh arrivals of any consequence: there are a few bales of *Stork*, *Tortoise*, and *Five Girl* chops, but they fail to attract attention.

Kakedas.—Stock increased by some few piculs: buyers talk of low prices, but holders do not press their goods, although they profess themselves anxious to sell at a reasonable figure.

England	2,639	4,179	3,449
Total	29,375	26,973	19,713

WASTE SILK.

There has been rather more done in this department, and Settlements reach the moderate total of 150 piculs. Buyers again enquire for certain descriptions which do not now exist; and prices for anything decent are well maintained. The Export falls off; demand from home Markets is reported to be good, and consumption increasing; so that native dealers are firm in their demands, and generally succeed in getting what they ask.

The M.M. steamer *Volga*, which sailed on the 18th instant, carried 92 bales for Europe. These shipments bring the Total Export up to 23,291 piculs, against 24,057 piculs last year, and 24,714 piculs at same date in 1882. Arrivals have been on a fair scale for the time of year, and the Stock is now 650 piculs.

Noshi-ito.—About 40 piculs have found buyers on the basis of \$85 for Ordinary *Foshu* Assorted. A few bales *Tomiyoka* Filature are on the market; but the price asked is beyond the ideas of purchasers altogether. There are enquiries for Medium *Filatures*, but none to be found.

Kibiso.—Settlements are returned as 90 piculs, embracing *Oshiu* at \$108½; *Koshu*, \$85; *Foshu*, \$33 and \$28. A few *Filatures* done on the basis of \$117½ for second quality.

Mawata.—Unexpectedly, about 90 piculs have come in from the interior. These have not been sampled as yet, but are understood to be worth about \$170.

Sundries.—Nothing done except in *Neri*; of this 20 piculs have been settled at from \$11 to \$14 uncleaned.

Sendai & Hamatsuki	100		Mawata	90
Taysam Kinds	10		Sundries	100
Total piculs	1,140		Total piculs	650

TEA.

There has been an increasing activity in our Tea Market within the last five days, and purchases, since our last Market Report are reported as 13,780 piculs, the great bulk being Teas grading Fine and Finest kinds. During the first two days of the interval there was a tendency to lower prices for parcels with no specially attractive quality, but in consequence of large purchases on the 19th instant, a firmer Market for all descriptions has resulted, and our previous quotations for all grades are repeated and fully maintained up to the 22nd instant. Since that time receipts have been more liberal and the Market has now become easier. The total settlements as given below will show how active the Market has been during the interval now under review. Receipts from the country during the six days of the past week were only 12,150 piculs as compared with 14,101 piculs during the preceding year in 1883. On the 17th inst., we had Tea in Stock estimated at 5,500 piculs, and on the 21st inst. only 1,500 piculs, against 4,300 piculs in 1883. Last Thursday receipts from the country (most of which were kept back on account of inclement weather) were 5,300 piculs, and in consequence of these heavy arrivals, we have now a Stock on hand of 6,300 piculs as compared with 3,600 piculs at the corresponding week last year. The following is a list of various grades of Tea settled in Yokohama, during the past week:—Medium, 440 piculs; Good Medium, 3,080 piculs; Fine, 4,200 piculs; Finest, 3,765 piculs; Choice, 1,835 piculs; and Choicest, 400 piculs, making in all settled for the week 13,780 piculs purchased. The next Pacific Mail steamer, which is advertised to leave for San Francisco on the 30th inst., will take Tea at 4 cents. per lb. gross to the Eastern States and Canada. The freight to San Francisco will be the same. The Market closes steady, and following are the quotations now ruling:—

QUOTATIONS.

Medium	\$18 to 20
Good Medium	22 to 23
Fine	24 to 26
Finest	27 to 30
Choice	32 to 36
Choicest	39 & up'ds.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878.
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR, a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

YOKOHAMA: SATURDAY, MAY 31ST, 1884.

SUMMARY OF NEWS.

AN Accountants' School has been established in the War Department.

It has been decided to carry the Nakasendo railway from Ogaki to Yokkaichi.

THE railway between Sekigahara and Ogaki was opened for traffic on the 25th instant.

THE Conferences on Treaty Revision will commence at the Foreign Office, Tokiyo, in a few days.

A SCHEME for illuminating the streets of Kiyoto with electric light, at an estimated cost of 50,000 yen, is nearly matured.

THE draft of the new Commercial Code is said to have been completed, and submitted to the *Seido Torishirabe Kiyoku* for revision.

RECENT statistics show that the total number of temples in Tokiyo is 3,325, of which 234 are Shinto and the remainder Buddhist.

MR. SHIODA, formerly Assistant Vice-Minister of the Foreign Office, has been appointed an attaché of the *Seido Torishirabe Kiyoku*.

WEDNESDAY, the 28th instant, being the anniver-

sary of the birthday of Her Majesty the Empress, various celebrations took place at the Palace.

THE Financial estimates for the fiscal year 1884-5 make the revenue 75,982,969 yen, being an increase of 376,910 yen as compared with last year.

SEVERAL prominent Japanese residents of Yokohama have decided to establish a branch of the Central Private Sanitary Association at that place.

A MEMORIAL addressed by the British Missionaries of Tokiyo and Yokohama to H.B.M. Minister on the subject of treaty revision has been published.

A NOTIFICATION has been issued by the Council of State making it illegal to catch seals or sea-otters throughout the Hokkaido without special permission.

A SILVER mine has been discovered near the village of Tsugido, in the province of Yamato, and a copper mine, near the village of Hanagi in Bitchiu.

MR. GEORGE DOMONEY, a well known store-keeper of Yokohama and Kobe, committed suicide at the former place on the morning of the 27th instant.

APPLICATIONS for the second issue of railway bonds are said to be coming in rapidly. Nearly three millions (yen) have been taken up in Tokiyo, and the amount subscribed in the provinces is reported to be four millions.

A PHILANTHROPIC association, called the *Kiyofu-kwai*, has been organized in Kiyoto, and will commence operations by providing employment for indigent criminals on their release from prison, and support for deformed children.

THE shareholders of the Tokiyo Rice Exchange, having suffered some losses owing to injudicious transactions in public loan-bonds, have elected a new board of directors consisting of Messrs. Shibusawa, Yonekura, Okura, Masuda, and Hayashi.

IT is stated that the Korean Government has established a hospital for the treatment of patients in Western fashion at Tong-nai Fu, and that the dispensary will be under the superintendence of a Dutch employé of the Japanese Hospital at Nagasaki.

A NOTIFICATION of the Council of State sanctions the issue of convertible bank-notes by the Bank of Japan. The notes are to be of seven dimensions, viz., one yen, five yen, ten yen, twenty yen, fifty yen, 100 yen, and 200 yen, and are to be exchangeable for specie at the Bank of Japan or any of its branches.

H.E. HOSOKAWA, President of the *Genro-in*, two members of the same body, six members of the *Sanji-in*, and Mr. Terashima, an attaché of the *Seido Torishirabe Kiyoku*, have been appointed a Committee for the compilation of the regulations concerning companies, corporations, and the like. Ten members of the *Sanji-in* have been appointed a Committee for the compilation of the Commercial Code.

NOTES.

UNDER the very sensational heading of "A Japanese murdered by an American Mob," the *Fiyu Shimbun* reverts to the recent unfortunate episode at Ogden, U.T., in very strong terms. "The *San Francisco Bulletin*," says the *Fiyu*, "reports the murderous uprising of an American mob at Ogden, on the 20th of April. It seems that a Japanese who had been in the employ of a restaurant in that city got into a dispute with the proprietress of the house, and, in a fit of uncontrollable fury, shot four times at the woman. He was immediately arrested and imprisoned, but—without any semblance of a trial, and without waiting for a sentence—a mob broke into the jail where he was incarcerated and hanged him at once. What will our countrymen say to this? In Europe and America, as well as in our own country, it follows as a matter of course that persons undergoing a preliminary judicial examination—regardless of the nature of the crime they may have committed—are not, nor can they be, regarded as criminals until they are sentenced by competent tribunals. Such suspects are not at all to be confounded with actual convicts. Yet did American citizens not only unlawfully break into a jail in which a Japanese suspect was incarcerated, but forcibly hanged him in open defiance of the law. We cannot call this deed by any name other than that of deliberate murder. Had such an event taken place in this country, there is no telling how the severe representations of the British or American Governments would have embarrassed our Courts. Think only of the sequel to the murder of Richardson at Namamugi. The ruffianly deed of one single man involved the Japanese Government in a situation of the gravest responsibility. For what the mob did at Ogden the United States must be responsible, and our Government ought not to delay in taking up the matter. Japanese subjects resident in the United States are under the direct protection of that Government. Did not Japan send an expedition of 3,000 men to that island of savages, Formosa, simply in order to chastise the insular barbarians for having killed certain seamen from Riukiu? Intelligent human beings dare not take life with impunity. The present instance calls for a far stronger remonstrance than did the Taiwan affair, inasmuch as the people of the American Republic boastingly call themselves the most civilized nation of the globe. Thirty-five million Japanese look towards the proceedings of their Government with the keenest interest." We recognize in this paragraph the unfortunate outcome of a somewhat violent criticism which the Ogden episode evoked, a few days ago, from one of our local contemporaries. While no law can defend the action of the mob at Ogden, the *Fiyu Shimbun* is utterly at fault in drawing a parallel between this event and the memorable Richardson murder. In the latter case, the life of a peaceful, unoffending man was taken, while the present instance offers an example of speedy retribution for a horrible crime. Both a

undeniably illegal, but surely the hanging of the Japanese at Ogden was attended with extenuating circumstances. The *Yiyu* has evidently overlooked the fact that the woman shot died the next morning from her wounds. As an interesting fact, we are permitted to mention that two legal gentlemen who have just passed through Yokohama, were in Ogden the day after the Japanese had been lynched. They heard a full and clear statement of the case, and are of the opinion that the murder was of the most cold-blooded and horrible description. The Japanese had been for some time in the service of the restaurant, and seems to have been a sturdy and stubborn fellow. For some reason or other he was discharged, and this led him to resolve to revenge himself. Entering the room of the proprietress of the establishment, he fired five shots at her, all of which took effect. At first she attempted to run for help, but the murderer followed and brought her to the ground. The shots attracted the attention of the passers-by, the police were called in, and the Japanese arrested without much trouble. And now it would be well to remember that Ogden is an out-of-the-way place in a thinly populated district, where only a few years ago the Vigilantes, a sort of mounted constabulary, were the sole dispensers of law and justice. In the very heart of the region where even horse-stealing, until recently, was a capital offence, a murder of a most aggravated type was committed. In the days of 1848-58, "Judge Lynch's" law was the sole standard of justice; prisons there were not; desperadoes abounded. There was often a mere farce of judicial investigation in case of crime, and still oftener no investigation at all when the crime was of a serious description. Immediate execution, either by hanging or the ubiquitous revolver, was almost the sole punishment in the legal code. Happily these are things of the past, although certain of the south-western States still preserve their pristine contempt for anything approaching a civilized Court. The spirit of those days has by no means died out, despite forcible modifications. There can be no possible question but that, had the murderer in this case been an American, an Englishman, or of any other nationality, exactly the same fate would have befallen him. That he was a Japanese had absolutely nothing to do with the actions of the mob; and this is a point which cannot be too much emphasized. Nothing can possibly do away with the illegality of the deed, but it was vastly different from the Richardson episode. Justice too often miscarries in the United States, and the citizens of the Republic are doubly disposed to take matters into their own hands for this reason, especially "out West." The great Cincinnati riots were but the outcome of a flagrant miscarriage of the law. Rough men have rough codes, but they frequently touch the truth, for all that. In the Western States, the population outside of the immediate urban districts may very justly be designated "rough," and their legal instincts, or rather their discrimination between right and wrong, have a touch of the prehistoric nature. A wrong is not the worse settled, in their judgment, for being attended to at once. That the *Yiyu Shimbun*, or any other representative of the vernacular press, should express indignation at the Ogden affair is but natural, but it is more than unwise to stir up the public by illogical deductions and faulty parallels. The question rests solely in hands other than those of the

public at large, and it is to be hoped that the regrettable occurrence will not lead to a diplomatic controversy.

PROFESSOR M. KONDO, the well known scholar, has compiled a dictionary of the Japanese language, which is now in process of publication. It will be issued in five volumes, containing in all 1,400 pages. Judging by the specimen page which now lies before us, the dictionary promises to prove an important auxiliary to the labours of the *Kana no Tomo*, a society formed, as our readers will doubtless remember, for the purpose of gradually abolishing Chinese ideographs from every-day use in Japan, and substituting for them the simple Japanese syllabary. The dictionary may be said to be wholly in phonetic spelling, for though the corresponding Chinese character is given under each word, the explanations, the words themselves, and the occasional rules of syntax are entirely in *Kana*. The work is to be called "*Kotoba no Sono*," or the garden of language. It will be published by subscription, the number of subscribers being limited to 700 and the price being two *yen*. The prospectus directs intending subscribers to forward, before the last day of this month (May), a sum of one *yen* to the office of the publishers, Messrs. Midzuhaya, Nihon-bashi, Honcho, Sancho, and to pay the remaining *yen* in five monthly instalments of 20 *sen* each during the following months. The money may, of course, be sent in one sum if convenient. It is difficult to judge the merits of such a work from two or three specimen pages, more especially as those forwarded for examination are not well selected for the purpose. Mr. Kondo's name, however, is sufficient guarantee that the dictionary will take high literary rank, and we do not doubt that it will prove most valuable as a means of facilitating the study of Japanese. Something of the sort was much needed. Hitherto we have had no pure *Kana* dictionary, but only books giving the Japanese sounds and meanings of Chinese ideographs, or *vice versa*; and the result has been that the mass of the people have been virtually without a serviceable lexicon of any sort. We regard it as in the last degree improbable that Mr. Kondo's venture will lack support, though it is more than likely that a great many persons will be disappointed in their attempt to obtain a copy of the first edition.

ACCORDING to a recent contribution to the French Academy of Sciences by M. Grandidier, the existing maps of Madagascar are very erroneous. The island really consists, as shown by the author's explorations, of two distinct parts; the eastern region, which is occupied by a massive mountain chain, and the western region, which is flat. The mountain chain covers three-fifths of the island, and rises rapidly to a height of 1,500 metres, and presents on the top the aspect of a sea of mountains with narrow glens between and the beds of dried-up lakes. The middle plateaux of the island shown by the charts has no existence. After traversing these highlands for forty leagues or so, the traveller abruptly descends into the western plain. The watercourses take their rise much nearer the eastern than the western coasts of the island. A band of forest country several leagues wide completely encircles the island near the coasts like a belt, leaving herbaceous plants and groves of woodland to cover the space between it and the sea. Another belt of timber runs parallel to

this. The region of highland country inclosed by this forest tract, that is to say, about two-thirds of the surface of the island, is denuded of trees, and covered only with thick grass; the plains on the west and south are strewn with clumps of trees. The general belief that immense forests completely clothe the island of Madagascar is therefore very wide of the truth. —*Engineering*.

PARTICULARS have reached us, says the *Yiyu Shimbun*, of recent outrages at Kanragori, Gumma Prefecture. It appears that, on the 15th instant, a gang of gamblers who infested Miyogi-yama made a raid on a small village at the base of the mountain. They entered nearly all of the houses in the village, and carried away all the rifles, spears, swords, and other weapons they could find. Towards midnight, a band of some 200 desperadoes fired on the village of Kambara, and then fled up the mountain. Early next morning they broke into the residence of one Okamura, at the village of Nibu, discharged their guns at random, despite the remonstrances of a few constables, and afterward set fire to the house. Having done this, they retired uttering loud shouts. The police force of the nearest stations soon reached Miyogi-yama and captured four of the ring-leaders, whereupon the mob dispersed. It is supposed that the severity of the local usurers had much to do with the outbreak, for no less than thirty villages had vainly petitioned the Court to stand between them and a notorious money-lender named Okabe. Many of the residents in the vicinity have since been declared bankrupt.

THE development of silk manufacture as a domestic industry in Switzerland has been marked, and accounts for the persistent efforts making in Tennessee, Kansas, California, Louisiana, New Jersey, Pennsylvania, and other States of the Union to develop a similar industry here. A recent report says that not less than 60,000 persons are engaged in the industry in Switzerland, "and most of them in their own homes." Two years ago statistics showed that Zurich alone had 33,000 looms, of which 3,000 were power looms. At Basle the ribbon industry occupies 6,300 looms, with 12,000 workmen. About 10,000 of the looms working for Zurich are in other cantons. The total silk production of Switzerland is valued at about \$17,000,000. Less than one-third of the product comes to the United States. —*Bradstreet's*.

THE Government, as will be seen by Notification No. 16 of the Council of State, has at last prohibited the hunting of seals and otters throughout the Hokkaido. This step had long been expected. The only pity is that it was not taken long ago, while there were still some seals and otters to preserve. The result of all these years of inveterate and unrestrained poaching is that the animals have been completely driven away from many of their favourite haunts. It will be interesting to observe what measures the authorities propose to adopt for the enforcement of their prohibition. They have a difficult task before them if they intend to employ gunboats to police the northern coast against the fleet of swift little schooners whose owners have long been carrying on their plundering trade with impunity, and will now regard a Japanese proclamation with the most supreme indifference. Probably the best plan the Government could

pursue would be to farm out the whole district, and let the farmers adopt their own precautions. Under any circumstances there will be no little difficulty in preserving the fisheries, and unless the Government intends to be more resolute and spirited about this matter than it has hitherto showed itself in every case where foreigners were concerned, the Notification of the Council of State had better not have been published at all.

THE change in the Nakasendo Railway scheme, as announced by Notification No. 17 of the Council of State, is important, in that it appears to indicate a resolve, on the part of the Government, to refrain from granting any more railway concessions to private persons. It is known that a line from Ogaki to Yokkaichi was projected, some time ago, by an association of local capitalists. Such a road would, beyond all question, have proved highly profitable, and the difficulties of construction are very trifling. Rumour said that the necessary funds were forthcoming, and that the concession had been applied for, but whether or no the project had been carried so far, it is now evident that the Government means to keep this branch of the main line, and probably all the other branches too, in its own hands, so far at any rate as the construction is concerned. Foreign experts, almost without exception, are known to have counselled that plan, and there can be no doubt that it presents many advantages.

MR. HENRY GEORGE, says a London paper, in the observations he made at the farewell "ovation" given to him by his admirers in the metropolis, said that "the two most absurd things which had struck him in England were the gates near the Euston terminus, maintained by the Duke of Bedford, as he believed, for the purpose of making people lose their trains, and that gilded cage in the House of Commons in which ladies were kept." It must be admitted that as regards the private gates and bars in the metropolis and the accommodation for ladies in the House of Commons, there is some room for improvement; and it is probable that before many years have passed arrangements will be made for placing these matters upon a more comfortable footing. It is, however, on the whole satisfactory, and to the credit of this country, that before leaving it after a highly critical visit, Mr. George should thus place on record the fact that he has been able to find no greater absurdities in it than the gates near the Euston Station and the ladies' gallery in the House of Commons. If these are our principal grievances, there is not much ground for grumbling, and the evils complained of may probably be remedied by less drastic methods than those involved in a land nationalization scheme.

At the conclusion of a lecture recently delivered in the Meiji Kwaido, Tokiyo, by the Rev. C. S. Eby, the lecturer, told his audience that among other consequences of a course of lectures concluded a year before in the same place, he had received a number of letters from Japanese students asking him how the international policy of Christian nations could be reconciled with the moral principles which he and his fellow-teachers preached; principles of which the whole spirit was professedly contained in the maxims, "Love your neighbour as yourself, and do unto others as you would they should do unto you." Mr. Eby said that, while desirous to avoid, as

far as possible, any incursion into the domain of politics, he felt that to evade these questions would be at once unfair to the cause he represented, and discourteous to his enquirers, who, as thinking men, had a valid title to compare the results of the morality they were asked to accept with the precepts it inculcated. He proposed, therefore, to state briefly, and with whatever measure of impartiality he could command, the aspects of this international problem as they present themselves with reference to Japan's case especially. Taking up the subject in the sequence of his lecture, the speaker then continued as follows:—

And now, such being the fundamental principles of Christianity, principles which aim at uniting man to man, family to family, people to rulers, nation to nation, by bonds of love and mutual help—it is a proper question to ask, do these principles actuate any class of people? do they lie at the basis of political law? do they guide international intercourse? The answer cannot be given in simple, "yes," or "no." You see, Christianity is not a body of political or international laws, but works through individual hearts and lives. As individuals increase who are inspired by the Christ-like spirit, society will become guided by these principles; gradually they will mould the laws of the land, and last of all will become the basis of international intercourse. Now there are myriads of people whose lives are guided by these principles; in many places society is guided by them, but not perfectly, because of so many individuals who are otherwise minded. There are some nations whose laws are very much assimilated to these principles, but there is not yet a perfectly Christian nation in the world. The whole thing must work up gradually like leaven until the mass is leavened.

It would take a long lecture to explain the facts which show how Christianity has already wrought as a moulding social and political factor in the world's development, while as yet that development is imperfect. I will give to-day only one or two instances, to show. 1. That so-called Christian nations are not yet really Christian. 2. That they are, nevertheless, elevated by Christian principle, which is leading them to still higher developments. One of my critics, for instance, tells me that Spain is the most Christian country, and that she forbade all books nearly but the Bible. Now the fact is that Spain, for many years, has borne the name Christian, but it is a strange mistake which says that the Bible was the only book free in the land. The truth is that for centuries, and until a very few years ago, the Bible was the book above all others that was absolutely forbidden in Spain. It was forbidden in Spain just as it was forbidden in Japan, and people who were found to have a Bible in Spain were treated by persecution, imprisonment, and death, precisely as in Japan. Now we cannot call Spain a Christian country during those years. Again, my critic refers to England's conquest of India, 100 or 80 years ago. A great many mistakes are made about the facts of that conquest, and whether it was right or not I am not going to discuss. But I want to remind you of one thing, that when England took charge of India, for a long time no Christian missionary was allowed to come to the land. The native religions were sustained, the only object was gain; and hence, while Christianity was kept out, you cannot surely charge the acts of those men to Christianity. It was the protest of Christianity that improved the Government of England in India and turned the conquest of selfishness and of politics into civilization and blessing for India, for no intelligent Indian would now wish to go back to what his country was before England came. Thus, you see, no nation has yet become wholly Christian.

But now let me give you an instance or two of cases where Christian principle has completely conquered the claims of selfishness in a nation. Your newspapers generally take it for granted that foreigners can be treated with only from the standpoint of self-interest and not from that of justice. But you are greatly mistaken, because your intercourse has been mostly with merchants whose great aim is of course to make money, but who do not represent the foreign people as a whole. Now for the illustration. When the continent of America was discovered, there were rich fields to be cultivated, rich mines to be worked, but no people to do the work. The American Indians were too weak and were insufficient. So the Europeans, who had opened America, imported strong negroes from Africa and made them slaves. For a long time the slave trade went on; millions of men were removed from Africa to the mines and fields of North and South America. No one thought it wrong for many years. At last the Christian Church, growing more like Christ, claimed the black man of England, denouncing the trade in men and women as sin. England was gaining hundreds of millions from it, but in obedience to the new conscience rising in the nation, she threw away the profit, and stopped the trade; other nations followed her example, and they placed men-of-war on the shores of Africa to prevent purely selfish men from carrying on the trade.

Nor was that all. As soon as the trade was stopped, the Christian conscience began to tell them that it was wrong to hold the slaves as property: the black men who were held as cattle must be made free men and brothers, and in response to this cry of England's better conscience, the Government paid \$75,000,000 to buy the slaves to set them free: not an act of selfish gain, but simply as a moral duty. Since then, every man of every race under the British flag is free. Other nations followed again. And in the great civil war of 25 years ago, in the United States of America, the vital inspiration of all the North was that it was an opportunity to kill slavery in the great Republic. They poured out the blood of a million men and untold treasure to set free slaves whose price was estimated at \$2,000,000,000.

Again, you tell me of England's supporting the trade in opium. But you must remember that Christian England is fighting by pen and platform, spending tens of thousands of money every year to put a stop to it. And its death is

only a question of time. England's conscience will soon make it cease. And now as regards treaty making and international intercourse with Japan. I am sure, since I tell you that I sympathize with Japan in this matter, you will listen to me quietly when I say a word or two to show that your greatest weapon to obtain what you desire is a little patience. I want to show you some of the difficulties in the way—difficulties which I believe, however, can be overcome. First of all, let me remind you that all your talk about international justice, etc., is entirely of Christian origin. What was there in the East of international law before foreigners came? China claimed all the nations of the Earth as tributaries, and I read in one of your Japanese books that the only use of the stars is to guide the ships of all the nations of the Earth, who if they knew their duty would bring tribute to the Emperor of Japan as the proper Lord of the whole earth. In the old times of the Roman Empire "might was right," and international intercourse meant conquest. If it had not been for the influence of Christianity in the West, which has become so strong within the last 200 years, all the East, China and Japan, would to-day be mere conquered provinces of some powerful European nation. Such was old international intercourse. But Christianity has taken the war of conquest mostly away, so that when a nation, as France in Annam, seeks a pretext to extend her territories by war, the rest of the world say "shame!" But the selfishness of men has not been cured, and instead of conquests of war, men to-day make conquests of commerce. They make treaties so as to gain as much money as possible. Against this you protest in Japan; against this the Christian world protests; and by patient protest and argument the right will gain the day and commerce will also become Christian, on the principle of reciprocal benefit.

And now just one word about exterritoriality.

As you find it necessary to-day to have exterritoriality in Korea, you all allow that it was also needed in Japan when Japan was first opened. The question simply is, if we look at it from a point of justice, have the circumstances in Japan so changed that exterritoriality may be wholly or partially removed? If so, Christian justice demands the removal. And I believe when England as a nation is shown the facts which make a just claim, England will not hesitate to accede to every just demand. Let me tell you a thing or two about England.

(1) What England does she does thoroughly. You know that England is the only nation which has law courts, consulates, &c., sufficient to carry out fully the stipulations in the treaty.

(2) England is conservative at home, does not make changes quickly, but when sure that a change is wise, she makes the reform once and for ever; no going back with her; and so in Japan, she is only waiting to look at every side to be sure which is right, and then what she does will be well done.

(3) Japan has given the world a problem to solve that is quite new in the world's history. No nation has ever changed so quickly. Remember, 25 years is a very small fraction of time in the history of a nation; other nations have taken centuries to do what you have done in decades. Of course you have had advantages which no others had. But the usual fate of nations that have changed so rapidly is extinction or decay. I do not think that is to be the experience of Japan, but the whole world asks, "Can Japan have become so permanently fixed in the modes of civilization as to have exterritoriality removed from foreign freemen? Many say it is impossible. It is not wonderful that England especially—whose interests in the East are equal to those of all other nations put together—should hesitate a little and ask for proofs. The hesitation of England arises, not from Christianity, but from caution. The present Government of England has shown in Afghanistan, in Africa, and elsewhere, that it wishes to act on the golden rule of national justice. And I believe England will soon satisfy the Japanese that that is her policy here.

Much depends on the young men of Japan. Even if England should give everything your Government desires, as I trust she may; that will not make Japan a great and civilized nation. Japan of ten years from now will be what you, the young men of to-day make it. If you grow in intellectual and moral and spiritual strength, Japan will grow stronger and better as the years go on. If you trust to commerce and intellect alone, to the neglect of moral and spiritual development, you will destroy both yourselves and your nation, which God forbid!

THE *Nation* says:—The riot in Cincinnati has, at all events, had the effect of stimulating the work of reforming the criminal procedure. The monstrous rule which enables the prisoner to exclude from his jury any one who has read about his crime in the newspapers, and has formed an opinion about it, has been abolished. The prisoner's twenty-three peremptory challenges have also been cut down to six, and the State's increased from two to four. In other words, the rights of the community in the prosecution of crime begin to be recognized. A blow should also be struck at technical objections. Most failures of justice occur through these. Judges ought not to be compelled to order new trials on points which the full bench does not consider to have any bearing on the merits of the case. The rapidity with which "goelism," whether practised by mobs or individuals, affects manners, was curiously illustrated by the performances of a man in Cincinnati on Monday week, who tried in vain to catch a street car after dark. Failing to overtake it or

to attract the attention of the conductor, he took out his revolver, and fired two shots at it. He probably reasoned somewhat in this way:—"The management of these car companies has long been intolerable. They run too few cars, and their conductors are negligent and insolent. This fellow is not looking out for passengers as he ought to be, or he would have seen me. Complaining of him at the office, even if I knew his number, would do no good, for they are all thieves together. The courts, too, are corrupt and sluggish. I must therefore revoke the powers which I have delegated to the officials of this State and city for my protection, and must stop this car in the natural way in which cars were stopped by primeval man before states were founded." So bang, bang went his pistol. It is a pity, almost, that he should have been arrested before the conductor and the passengers had dissolved *their* connection with the State, and begun to pepper him in self-defence.

Among other interesting items in the Korean correspondence of the *Fiji Shimpō* we note the following:—The Japanese Legation was removed to the residence of Fu-Yeiko on the 22nd of last April. It is a truly a magnificent edifice, covering an extensive tract of land, and second only to the King's Palace. On the 28th of last month, the Japanese *Chargé d'Affaires* had a very pleasant interview with the King, and was treated with signal courtesy. As a special favour, Mr. Shimamura received permission to inspect the Palace Gardens,—a privilege never before granted to any foreign ambassador, not even to the representative of China. The present King of Korea is a most assiduous student, and held to be a wise politician. He employs his whole time in serious occupations, and has the name of a just ruler. The six Japanese military students are making remarkably rapid progress in the Korean language. Two volumes, on the calendar and physical geography of the Hermit Kingdom, have been published by Mr. Takai and others, all residents of long standing and thoroughly familiar with Korean and Chinese literature. Since official bribery has become so common an occurrence, the Government has done all in its power to punish the acceptors of bribes. The usual method is to deprive the offender of all official rank and emoluments, and to scourge him well. The Governor of Chung-chhōng-do and another high official have already smarted under the rod. The Government will shortly commence the coinage of new specie, under the supervision of Mr. von Möllendorff. This gentleman will spend the summer months in China, in order to avoid the heat of Sōul; but rumour hints that his departure will be for good and that he intends resigning, as the late Ministerial changes and the rapid decline (?) of Li Hung-chang's popularity have made Mr. von Möllendorff's situation more irksome and unpleasant than ever.

THE *New York World* of the 19th ult., says:—The Newspaper Copyright bill was reported adversely in the Senate yesterday by Mr. Sherman, from the Library Committee. Nevertheless the bill was ordered to be placed on the calendar by a vote of the Senate. The news thieves who live by stealing the property of their neighbors will rejoice at the adverse report of the committee. It seems to promise that they will be enabled to continue their dishonest busi-

ness without the fear of the punishment awarded to other robbers. We do not know by what process of reasoning the committee concluded that the property a man has bought and paid for is not his own but may be appropriated by others. This is what their report means. It is not pretended that there can be property in news which is common to all. But a person might as well intercept, open and steal the contents of a telegraphic despatch containing news addressed to some other individual as steal the matter out of the owner's paper before the latter has had the advantage of his own publication. We wish we could hope that the Senate would yet pass the bill.

THE Italian papers are full of the praises of the new histrionic star, Sra. Leonora Duse-Checchi. From all accounts this talented young actress—she is but twenty-four years old—has taken the most critical audiences in Italy completely by storm. Up to the present, the Italian stage has been ruled by such famous actresses as Marini, Pezzana, and Tessero; but Sra. Checchi has signally triumphed over all rivals. Dumas' "Princess of Bagdad," with Pezzana and Tessero in the leading rôles was a dismal failure a few months ago; but the new *diva* has achieved most remarkable success in the same piece before almost the same audience. In Victorien Sardou's "Divorçons," "Dora," "Fedora," and in Dumas' well-known "Femme de Claude" Sra. Duse-Checchi has exhibited marvelous histrionic talent, and earned the title of the "Sarah Bernhardt of Italy." The great *artiste* is the only daughter of a strolling actor of little or no fame, and passed her early years in misery and want. Gifted with remarkable powers, she has also remarkable peculiarities, for she never appears on the stage without having three long pins thrust through her hair,—somewhat after the fashion of the Japanese—and is said to be morbidly superstitious. With all this, she appears to be extremely nervous and ever doubtful of her own successes, although her recent triumphs have more than established her claim to the first rank among actresses.

IF, as recent telegrams indicate, M. de Lesseps's opponents are determined to worry him, even in the law courts if they are not successful otherwise, the distinguished Frenchman may find his own countrymen more troublesome than his English customers. However, the board of directors are wisely following a firm policy in deciding, as they have, to definitely abolish at once all the special pilotage dues. If M. de Lesseps can propitiate his customers he need not fear a few noisy shareholders who exhibit a fondness for law. The opposition which is coming to a head again in regard to his other canal may have a more disturbing effect on M. de Lesseps, for it appears that negotiations are proceeding for the right to construct the Nicaragua Canal. The Suez Canal may have its internal troubles, but it has no competitor nor any likelihood of one, but on the Isthmus of Panama M. de Lesseps, for a blessing, has no *pouvoir exclusif*. Is it possible that a factious majority of smaller shipowners are giving trouble for the mere sake of making themselves heard? Something of the kind was talked of when MM. de Lesseps were here arranging terms of working the Suez Canal, and now the organ of the ship-owning class protests against deputing more than four or five owners to meet Mr. Chamberlain

at the proposed conference, lest their "little peculiar standpoints" will be put forward so much and so numerous as to give their arch-enemy a handle against the shipowning class as a whole. They are solidly against the new bill, but when it comes to suggestions for its alteration opinions vary widely.—*Pall Mall Gazette*.

A JAPANESE named Itakura died in Yokohama on the 27th instant from eating a poisonous fish. This fish, known popularly as the *fugu*, is sold privately to a considerable extent, and the price demanded is exorbitantly high. Several deaths occur annually from eating *fugu*, which is a favourite dish with Japanese gourmands. It seems that the poisonous qualities of the fish vary greatly with the season of the year, although certain parts are held to be always fatal. A similar, if not the same, fish is well-known along the Southern coast of China, and greatly feared by the natives, who believe that its appearance in their nets is a sure sign of ill-luck. The fish is known in Siam and India, and is found in most of the warm Eastern seas.

THE vernacular journals teem with correspondence from Korea, most of which, however, is of very little interest. The fact remains that the Hermit Kingdom is in well-nigh desperate commercial straits, and that the Government is totally unable to contrive a remedy for the present distress. The growing popularity of the Japanese is said to be a thorn in the flesh of the Chinese authorities, who seek, by fair means or foul, to impress the Koreans with their own overwhelming superiority. The Chinese troops in Sōul keep night and day at their target practice, and an uneasy feeling is abroad that they will take advantage of the small number of Japanese soldiers in the Legation. The year before last, the Japanese guard at the Legation numbered 500 men, but it has since been reduced to only one hundred and twenty. The *Shun-pao* of the fifth of last month had a paragraph headed "Recent Affairs in Korea," strongly condemning the present inclination towards Western civilization. "Ever since last November," says the *Shun-pao*, "has the Korean Government been under the influence of the Japanese. It has been publishing, evidently prompted by Japan, an official gazette once every ten days at the Printing Bureau, of which institution Kim Mansik, Vice-Minister for Foreign Affairs, is the President. This journal eulogizes Western civilization and expresses contempt for China, while it cannot speak too highly of the Japanese. The Chinese in Korea are very indignant at all this." Although this cannot harm the Japanese to any great extent, it certainly proves that the Chinese bear them no over-great goodwill,—at least, so far as Korean affairs are concerned. Sham pictures have been posted on convenient walls in Sōul caricaturing the Japanese in the employ of the Korean Government.

ONE of the most popular of our London doctors, both in his profession and in society, is by nature exceedingly enthusiastic. Some little time ago he was much pleased with a certain aerated water, and by his assiduous recommendations of it to his patients and friends he secured for it quite a little celebrity, which it certainly justly deserved. The doctor acted solely in the interests of science and of humanity generally, and of course expected no recognition of his services from the company whom he

had so ably assisted. To his surprise, however, there came one morning a letter from the company full of the most effusive thanks. His recommendation had done them so much good, every one was patronising their beverage, and they "ventured to send him a hundred—". Here the page came to an end. "This will never do," thought the doctor before turning the leaf; "it is very kind of them, but of course I cannot accept anything." Here he turned the page, and found that the completed sentence did not run quite as he expected. The company "ventured to send him a hundred more circulars for distribution among his friends."—*Whitehall Review*.

THE following circular, signed by the local agents of the P. and O., the Messageries Maritimes, the "Blue Funnel" "Glen," "Castle," "Shire," and "Ben" lines of steamers, has been issued to the Shanghai shippers:—"Dear Sir,—To those exporters who confine their shipments of tea and general cargo from China to Europe (not including the Mediterranean and Black Sea ports) to the P. and O. S. N. Co.'s, O. S. S. Co.'s, Glen, Castle, Shire, and Ben Lines, and to the steamers *Oopack* and *Ningchow*, we shall be happy to allow a rebate of 5 per cent. on the freight charged. Exporters claiming the returns will be required to sign a declaration that they have not made, nor been interested in, any shipments of tea or general cargo to Europe (excepting the ports above-named) by other than the said lines. Shipments by the steamships *Albany*, *Pathan*, and *Ghazee* on their present voyages from Hankow will not prejudice claims for returns. Each Line to be responsible for its own returns only, which will be payable half yearly, commencing 30th October next. Shipments by an outside steamer at any of the ports in China, or at Hongkong, will exclude the firm making such shipments from participation in the return during the whole six-monthly period within which they have been made, even although its other branches may have given entire support to the above lines. The foregoing agreement on our part to be in force from present date till the 30th April, 1886."

THE London *Spectator* has an excellent article on the recent riots in Cincinnati. It describes the method of "squaring" a jury by bribing one of their number, who can then be either sentimental or conscientious. If, by some ingenuity, the Counsel for the defence can succeed in showing that "the victim had affronted or wronged some woman connected with the murderer," his rôle is easy, for his fellow-jurors are only too ready to sympathise with the alleged excuse. Failing this, or any other specious trick of evidence, the juror who has received a consideration can always plead a conscientious objection to capital punishment, when "he is held by his fellows to be a fanatic rather than a perjurer," and the twelve just judges agree to bring in a verdict of manslaughter. Doubtless the good folks of Cincinnati thought that some hocus-pocus of this sort had been going on, but it is difficult for outsiders to see how the *Spectator's* theory of bribery comes in,—involving, as it does, a large preliminary payment to a crack criminal lawyer,—considering that the offenders whose cases were the proximate cause of the disturbance were a precocious office-boy who confessed to having murdered his employer, and a negro who killed a whole family in order to sell their corpses as subjects for dissection. At all events, justice had seri-

ously miscarried; and the people of the United States, remarkably law-abiding as the masses have hitherto proved themselves, are evidently resolved to show their teeth if gross abuses disfigure their judicial systems. The *Spectator* gives an interesting table, showing that "Murder is the cause of death":—

In England.....	to 237	per 10,000,000
In Belgium.....	to 240	per 10,000,000
In France.....	to 265	per 10,000,000
In Scandinavia.....	to 266	per 10,000,000
In Germany.....	to 279	per 10,000,000
In Ireland.....	to 294	per 10,000,000
In Austria.....	to 310	per 10,000,000
In Russia.....	to 323	per 10,000,000
In Italy.....	to 504	per 10,000,000
In Spain.....	to 533	per 10,000,000
In the United States.....	to 820	per 10,000,000

The *Spectator* concludes its article thus:—"Rioting is a bad thing, but it is difficult to despair of a community in which the working-classes will take up arms to secure sterner and more exact justice, and die before soldiers' rifles, under the inspiration of the cry that murderers shall be hanged. There must be something in such a people unfavourable to crime, and we will not despair yet of seeing the law made a terror to evil-doers, even though the evil-doers have money on their side. In Cincinnati, at all events, the people have become conscious of the great truth that the temptation of democracy is money-getting, and they may act on their new knowledge, and make bribery what it ought to be,—high treason against the State."

SPEAKING of German trade in Cochin China, the *Annales de l'Extrême Orient* has the following:—"One can justly state that French Cochin China is almost totally unknown in France. The reports of the German Consul at Saigon, as well as the blue book recently published by the Minister for the Colonies, more than amply prove this statement. The imports, although principally in the hands of British and Belgian merchants, are mostly of German manufacture. The German Consular report states, for instance, that the export of rice—which is destined to play no unimportant rôle in the future—is entirely under Chinese management; but it is certain, nevertheless, that Bremen vessels carry the rice out of the country to its chief destination, Russia. German ships have far more to do with French Cochin China than the whole merchant-fleet of France, and it is high time that this matter should receive the earnest attention of the authorities. The annual export of rice alone averages ten thousand bags."

THE Commercial School of Yokohama, says the *Mainichi Shimbun*, was established in March, 1882, and is a most important institution as far as the education of the sons and employés of the local traders is concerned. Until a short time ago, it was attended by large numbers of students; but since the publication of the Conscription Regulations the School has ceased to be of such great attraction. The founders of the establishment are now about to apply to the Government for permission to make it an official institution.

AMONG the passengers by the last French mail steamer from Yokohama, says the *Hongkong Daily Press*, were three Japanese police officials who are bound for Marseilles; they are Messrs. Y. Sonoda, Chief of the Police Cabinet of the Prefecture of Tokio; Mr. Ogawa, Chief Adjutant of the Second Division of Police of that prefecture, and S. Sugimoto, Chief Adjutant of

the First Division. These officers are on their way, under instructions from the Japanese Government, to France and England, to study the method and working of the police forces of those countries, with a view of re-organising the Japanese police force. Yesterday morning these officers, accompanied by Mr. G. Hirabe, of the Japanese Consulate, went over the Central Station, and Chief Inspector Horspool, explained to them the arrangements of the force. In the afternoon a visit was paid to the Gaol, where Mr. Falconer, the Acting Superintendent, showed them everything that was to be seen, and gave every explanation.

A MODERN writer, in expatiating upon the American custom of placing one's feet on some convenient mantel-piece or window-sill considerably above the level of the rest of the body, says that it embodies "that perfect ease which is the concomitant of so graceful a position, that utter disregard of things sublunary, and that subjective selfishness which is so often to be found in the best of characters." *Experto crede*.

THE Derby of 1884 has resulted in an unusual occurrence, a dead heat between St. Gatien and Harvester, Queen Adelaide third. The latest quotations received here would be seven weeks before the race, and in these days of post-betting there is not much done by the pencilers so long before the race. The three placed horses, however, were amongst the few animals backed so early as the Craven week, when Queen Adelaide, with the pride of place, was quoted at 10 to 1, whilst 100 to 7 could be had about Harvester, and St. Gatien found supporters at 1,000 to 25. Although the latter appears to be something of a "dark horse," it is not at all likely that he started anywhere in the "forties," but it will be some time before we shall be enlightened on that point.

ACCORDING to the *Kwampo*, the appointment of Hu King-ch'ing, Imperial Reader at the Hanlin College, as Minister to France, Germany, Belgium, Holland, and Austria, is confirmed by an Imperial Decree dated the 4th day, 4th month, 10 year of Kwang-hsü (April 29th, 1884). Hu King-ch'ing is promoted to the second rank of nobility. Li Fong-pao will represent the new Minister until his arrival. The *Peking Gazette* of the 4th instant announces that the Court places great confidence in T'so T'sung-tang, who has proved faithful and loyal. Some time ago his resignation of the Governorship of the two Kiang was accepted on account of his suffering from an eye-complaint, but now that he is restored to health he will be required to repair to Court.

A CORRESPONDENT of *St. James's Gazette* writes:—"The following statistics, which I gather from a recent issue of an American journal may perhaps prove interesting when considered in connection with the riots in Cincinnati. During the year 1883 there were 1,517 murders reported in the United States. In the same year there were only 93 legal executions, though there were 118 lynchings. Of course bare statistics are often fallacious; but the fact is significant that only one person out of every eighteen of those who kill a fellow-creature meets with the death which, by American law as by English, is laid down as the legal punishment for the offence. The fact that executions by the mob exceed by 25 per cent. those by law is still more significant: show-

ing that it is not only at Cincinnati that the public take the law into their own hands. Another piece of statistics may be worth quoting. In 1882 there were 1,206 reported murders; in 1883, 1,517. Does not this appear to show the criminal classes in America are becoming reckless through impunity?"

DESPITE of all successes in Tonquin, the Ferry-Waldeck-Rousseau Cabinet is far from having an easy life. Paris is quiet enough, and the Republican Party is largely in the majority; but in Anzin, Arrondissement Valenciennes, there are disturbances which may possibly have a disastrous effect throughout France: disturbances which menace the peace of no less than 32,000 inhabitants. Ever since 1717, Anzin, a well-known mining district, has been under the management of one rich, influential Company, superintended, in its turn, by six all powerful directors. In 1810, this Company had completely bought up all the land around Anzin. The present directors recently ordered the miners in the employ of the Company to keep all tunnels, shafts, subterranean roads, etc., of the mines in perfect condition, to assist in cleaning out all passages choked up by accumulated debris, and to bear full responsibility in managing all the underground machinery and other matter. All this was to be done without increase in wages. The very natural answer to this arbitrary demand was a widespread strike, in which even the *bourgeois* and a large portion of the inhabitants of the neighbouring districts took part. Yet this has failed to disturb the tranquillity of the six potentates; indeed, they seem rather pleased with the strike than not, and appear to have no objection to letting matters run on as they are for some time to come. It seems that there have been certain secret associations among the miners which the Company has ever viewed with distrust, the dissolution of which will be demanded before the terms of a peace can be concluded. Besides this, the strike offers a fitting opportunity to get rid of some oldish miners who would shortly have come in for well-earned pensions. The matter has already been brought before the Chamber, but there is no possibility of interfering from the simple reason that the Mining Company is well-nigh autocratic. The articles of the sale of the land to the Company in 1810 completely exclude any forcible attempt to set matters to rights. And what complicates the difficulty is the fact that the six directorial despots are known to be Monarchists, while the working-classes of Anzin are Republicans as a matter of course. The fear of Royalist intrigues has reached an acute stage in the Chamber, and it is only too evident that the partisans of the Princes have a stronghold in Anzin.

THE wonderful sunsets of last autumn and winter still remain an unexplained phenomenon. The supposition that they were caused by volcanic matter carried into the upper strata of the atmosphere after the terrible outbreak at Krakatoa, has been considered untenable, inasmuch as the particles could not, under any conceivable circumstances, have spread over such an immense area in so short a time. A similar fate has befallen the hypothesis of the earth's passage through clouds of meteoric dust. That, too, is impossible, for the simple reason that the phenomenon continued for months, and that such an immense accumulation of cosmic matter is out of the question. Another theory

has now been propounded by Mr. R. J. Ellery, of the Melbourne Observatory. It is that the atmospheric shudder, caused by the Krakatoa earthquake, though conveyed rapidly through the higher and more tenuous regions of the atmosphere, affected the lower strata sensibly in its passage, and so altered their mechanical structure that light, transmitted through them, underwent unusual and remarkable changes. It is known that, at the time of the eruption, barometric pressure was spasmodically affected all over the world, so that the universality of the phenomenon presents no difficulties under this hypothesis, and the same may be said of its duration.

It is probable that the Conferences on Treaty Revision will commence at the end of next week, that is to say, about the 6th or 7th proximo. Some delay is said to have been caused by the fact that the majority of the Foreign Representatives had not received their instructions. In fact Her Majesty's Minister is supposed to be the only one of the whole number who was ready to proceed to business two months ago—a point which deserves to be noted, as Great Britain has hitherto enjoyed the reputation of being the chief obstructionist. Of course the probable results of the Conference are beyond the legitimate range of newspaper speculation, but we are disposed to think that most of the difficulties have been successfully disposed of, and that the whole affair will be brought to a conclusion without any considerable loss of time.

A CORRESPONDENT has called our attention to the fact that by speaking of the annual rent at present paid by the United States Government for the buildings of the Kanagawa Consulate as nearly twice the maximum sum specified in the Consular Regulations, an erroneous impression is conveyed, inasmuch as that rent includes a special appropriation of \$600 for the jail. We note the correction for what it is worth, but at the same time observe that it goes to emphasize our previous statement; namely, that whatever may be said of the Consulate itself, the jail certainly was held under conditions which forbade its transfer either to a private individual or to an irresponsible official without the previous consent of the Department of State.

MUCH consternation continues at Mandalay. Small-pox has broken out in city and palace. The Queen's second daughter has died from it. Great scarcity of food is reported. Dacoities are rife. An extensive dacoity was committed in Mandalay itself by thirty men, who got away with Rs. 8,000 of plunder. The troops sent against the Shans are dying from fever and starvation, and deserting. The Kachyens are retaliating for the merciless slaughter of defenceless women and children by indiscriminately butchering all whom they come across. The butchery reported is awful. The Kachyens have mustered in great force again, and driven all the Burmese troops into Bhamo.

THE Central Ohio Butter and Egg Packers' Association is grieved, nay, it is indignant. A short time ago, it made the startling discovery that half the eggs sent into New York during a certain season of the year came from Europe, and this dreadful discovery was speedily followed by a demand for the rectification of the customs' tariff. By a strange oversight in the tariff—for who would have expected eggs from Europe?—

eggs actually come free. The Association with the long name indignantly denounces this unwarrantable oversight, speaks somewhat heatedly of the "infernal activity of the pauper hens of Europe," and calls upon Congress to protect at once this important "home industry." "The United States," says the *Pall Mall Gazette*, "are suffering already from the hostility of European Governments to the American pig (*Sus familiaris*), and that the European hen should beat the American hen is a thing not to be borne. With Indian wheat at 32s. a quarter and eggs coming from Europe, American farmers will soon be complaining of agricultural depression. Really, the world seems upside down."

M. FERRY, the French Premier, and Vice-Admiral Peyron, Minister of Marine, attended the sitting of the Committee of the Chamber of Deputies on the 9th ult., charged to examine and report upon the Madagascar Credits. The Premier informed the Committee that in pursuance of instructions, Admiral Miot, in addition to Tamatave and Majunga, already occupied, will install the French forces at other points on the north-west coast over which the protectorate now extends. The object of this occupation is to affirm by force the rights which France holds under existing treaties, and for its accomplishment it will only be necessary to increase the present number of troops to a limited extent by means of reinforcements to be sent from the garrison of Réunion and from the Colonial Militia. The Minister of Marine gave particulars of the expenditure attendant upon the maintenance of a naval division in the Indian Ocean, and stated that a credit for covering the cost of executing the contemplated operations would be submitted to the Chamber on its reassembling after the Easter recess.

WITH regard to the proposed canal between Osaka and Lake Biwa, says the *Jiyu Shimbun*, Mr. Tanabe, an attaché of the Finance Department, reports that the canal, if completed, will not entail such losses upon Shiga Prefecture as the inhabitants are disposed to believe; but that, as the land through which the canal is to pass is very swampy and full of marshes, its bed will have to be made entirely of bricks, at a cost not less than 120,000 yen. The authorities are reported to be much concerned about this statement, as the work of cutting the canal is, in itself a most expensive matter. The complaints forwarded by the people of Osaka and Shiga are, however, proved to be unfounded.

THE Russian annexation of Merv, writes a correspondent of the *Cologne Gazette*, has aroused immense excitement in India. The native press is said to be very wroth at the expected despatch of English soldiers to Southern Afghanistan. The *Patrica*, the most prominent Calcutta newspaper, says:—"No Indian will be willing to give a single farthing towards an Imperial garrison in Afghanistan. The neighbourhood of the Russians is no misfortune to us, but a blessing. It will teach our rulers to be just towards us, which at present they are not. At present the English Government ignore the fact that bonds of friendship can only be established on a basis of mutual esteem, and we are still treated as belonging to an inferior race. Friendship on our part is therefore out of the question. We hope that the approach of the Russians and

more frequent intercourse with other European races will change all this; therefore, we are opposed to all measures which tend to maintain a native Power between India and Russian Asia. We want to let our Government know that we long for the neighbourhood of Russia. If it does not suit England, let the mother country, with its soldiers and finances, keep Russia away; but let her not ask us to sacrifice either men or money."

ACCORDING to several American commercial journals, the import of manufactured silk into New York this year started fairly well, the total receipts up to the end of February being considerably in excess of last year. Still the amount of silk is not nearly so large as it was, 1883 showing a decrease of over one million dollars. The following table, compiled by the Silk Association of America, proves that the receipts up to the end of February, 1884, were slightly larger than those during the like period in 1883; nearly 25 per cent. less than those in 1882; 20 per cent. less than in 1881; and 25 per cent. less than in 1880:—

1884.....	\$3,153,778
1883.....	\$3,020,149
1882.....	\$4,253,948
1881.....	\$3,863,579
1880.....	\$4,844,995

WE regret to have to record the suicide on Tuesday morning of an old resident in Japan, Mr. George Domoney, the well-known storekeeper of Yokohama and Hiogo, having cut his throat at the Water-street establishment. Mr. Domoney, who recently came up from Hiogo, is said to have been much disturbed by losses in business recently discovered, and this is stated to have unhinged his mind and to have been the cause of the unfortunate occurrence. The deceased was found on that morning, shortly after four o'clock, not quite dead, but with the jugular and windpipe severed, and death occurred a few minutes after. An inquest was held in the afternoon, before Russell Robertson, Esq., H.B.M. Consul and Coroner, and Messrs. C. H. Dallas, F. O. Eustace, and R. A. Wylie, jurors. After hearing the medical testimony of Dr. Eldridge and Dr. Wheeler, and the evidence of several witnesses, the Coroner summed up, and the jury returned the following verdict:—"That George Domoney died at No. 17, Yokohama, between the hours of 3.30 and 4.30 a.m. on the 27th May, 1884, from hemorrhage resulting from a wound in the throat, inflicted by his own hand in a moment of temporary insanity."

A RECENT census gives the total number of inhabitants in the Capital at 1,191,601. This population is divided among the different wards as follows:—Kojimachi, 45,980; Kanda, 105,473; Nihonbashi, 91,092; Kiyobashi, 92,878; Shiba, 86,228; Azabu, 39,956; Akasaka, 23,883; Yotsuya, 23,373; Ushigome, 36,218; Hongo, 49,973; Koishikawa, 32,743; Shitaya, 58,563; Asakusa, 95,457; Honjo, 69,991; Fukagawa, 48,319; Yehara-gori, 78,837; Higashi-tama-gori, 43,753; Kita Toyoshima-gori, 70,930; Minami Adachi-gori, 34,569; Minami Katsushika-gori, 63,486.—*Fiji Shimpō*.

So rare are favorable reports from Korea than we are disposed to give the following correspondence of the *Fiyu Shimbun* special prominence:—It is stated that all the commercial firms established by the Government are in a thriving condition. The English Language School, established under the supervision of the

Commercial Bureau, is attended by a large number of students, many of whom are conversant with Japanese. The present superintendent is an Englishman. The graduates of the School will be sent all over the Kingdom in order to teach the people Western science and civilization.

IN the Chancery Division Dr. Ager, the publisher of a book of words for telegraphic messages, applied to Mr. Justice Kay for an injunction to stay the P. and O. Company from publishing these words. The defendants had purchased for the sum of five guineas a copy of Dr. Ager's work, and they had printed and issued to their agents and servants a number of books marked "private," which contained the same words, or substantially the same words, as those in Dr. Ager's code, but with explanations in the margin showing the particular meanings which the defendants attached to the words. The defendants argued that as their book was given away to their own agents or correspondents only there had been no infringement of copyright. His lordship held that the case was made out, and granted the injunction.—*L. & C. Express*.

THE Nagasaki correspondent of the *Fiji Shimpō* speaks in very gloomy terms of the financial depression prevalent, and seems to think that the place is worse off than any other of the five ports. Most of the foreign firms, he writes, have been closed owing to the fearful stagnation of trade, and the number of foreign residents is rapidly diminishing. Only one establishment does any business worth mentioning. In the Japanese town, small *articles de luxe*, of which there is a large quantity on hand, find no sale at even half their original value.

IN the third ward of Shirokane, Shiba, Mr. Suda, a well known horticulturist of Tokiyo, keeps a silk-worm nursery to which the people of the capital generally look for indications of the season's crop. This year the eggs raised were obtained from Shinshiu, and Mr. Suda reports that the condition of the worms is very encouraging. The most advanced have already entered their third stage, and will probably enter their fourth by the end of this month. Their proprietor prophesies that the silk crop this year will be exceptionally good throughout the country.

THE Shanghai papers to hand by last mail give particulars of the prosecution, on a charge of fraud, of Mr. Benjamin, the well-known speculator. The published report of the proceedings shows that the accused is alleged to have misappropriated 10,000 cases of kerosene hypothecated to the Hongkong and Shanghai Bank. The godown keeper is said to have absconded, but it has been stated that he did not leave Shanghai at all, and that the detectives are confident they will be able to produce him.

THE Ladies' Purse, presented by the Japanese ladies of Tokiyo, which was originally intended to be an item in the programme at the late Toyama Meeting of the Union Race Club, but was held over till the opening of the new course round Lake Shinobadzu, at Uyeno, to give *éclat* to that event, will be a valuable prize, no less than *yen* 800 having been already subscribed.

THE U.S. frigate *Trenton* arrived at Nagasaki from Hongkong at noon on Saturday last, having on board the Korean Embassy which recently

visited the United States. We believe she leaves for Coréa on Tuesday next, and after disembarking the Ambassador and his *suite*, she will return here again. It is reported that Admiral Davis is shortly expected from Hongkong, in order to meet the *Trenton* on her return from Coréa, when he will hoist his flag on board of her.—*Rising Sun*, May 24.

THE *Kana-no-Kwai*, an Association for the universal employment of the Japanese syllabary, has hitherto been divided into three factions, much to the dissatisfaction of certain members, who feared that the Association would have to be dissolved. Happily, the three parties have now amalgamated, and publications of the Association will be issued jointly. New rules are to be framed without loss of time.

FOR "victims of connubiality," these two cases deserve the palm. An elderly lady (aged 72) of Yechigo recently celebrated her *seventy-eighth* marriage ceremony; while a farmer, hight Magoyemon, living in the same happy prefecture, has just led his sixty-eighth blushing bride to the altar. We can imagine the gleeful smiles of the family undertaker.

THE Fire-god has been signally successful in the last few days. On the 23rd instant, 300 houses were destroyed at Oyama-mura, Nishitagawagori, Yamagata Prefecture. On the following day, a fire broke out at Nekota-mura which soon spread to the village of Jiuzen. Over 130 houses, including two monasteries, were reduced to ashes.

THE renowned MSS. in the collection at Seville, Spain, popularly known as the "Indian Archives," have just been thoroughly catalogued and put in order. Among other invaluable documents, one was found containing a list of the names of all those who took part in Columbus' first voyage of discovery.

A PASSENGER by the *City of Tokio* was robbed on board that vessel just before her departure yesterday of a small valise containing money and valuables to a considerable amount. He unfortunately exposed its contents in taking out some dollars to make a payment, and shortly after the robbery took place.

WE note that one or two German journals have been giving considerable space to the description of the University of Tokiyo and the manner in which the students apply themselves to Western arts and sciences. The increasing taste for the German language and literature is dwelt upon with decided satisfaction.

THE Financial Estimates for the 17th fiscal year have been published by Notification 54 of the Council of State. Both revenue and expenditure are put at 75,982,969 *yen*; being 376,910 *yen* in excess as compared with the previous year.—*Kwampo*.

THE *Fiyu Shimbun* states that a telegram has been received in the Capital to the effect that H.I.H. Yamashina-no-Miya sustained a slight injury while alighting from a railway car in New York.

THE Manager at this Port of the Oriental Bank Corporation has received the following intimation:—"New Oriental Bank progressing satisfactorily—strong support promised—will telegraph shortly."

A JOURNAL THAT WILL NOT SEE.

AMONG those who have undertaken to discuss the subject of extra-territoriality in Japan, there is not one more distinguished for obdurate obtuseness and persistent misstatements than the *Hongkong Daily Press*. It is not very apparent why that journal should interest itself in the matter at all, except in so far as the foreign communities in China were once inspired by a not unnatural, though wholly groundless, apprehension that any concessions made to Japan might be converted into a precedent for corresponding demands on the part of the Peking Government. This idea has long since been exploded. It could only be entertained on the supposition that the circumstances of the two empires had continued the same ever since the commencement of their foreign relations, and to dispel such a supposition the most rudimentary acquaintance with the facts of the case was alone needed. But since our Colonial contemporary is evidently relieved from the incubus of this nightmare, it was not extravagant to hope that he would have brought to bear upon the subject a mind sufficiently undisturbed to apprehend its outlines, at least, with some semblance of accuracy. So long as any admission of Japan's claims carried with it the agitating contingency that Englishmen in China might be subjected to the action of brutal and demoralizing codes, one could not but sympathise in part with the emotion of the *Hongkong* critic and even with its somewhat eccentric consequences. The coolest judgments are often warped by selfish caloric. Now that these immediate fears are removed, however, we really have a right to expect some approach to accuracy and fairness, instead of a ponderous contribution to the history of errors and absurdities. Why will not writers who are either too incompetent or too careless to master the very elements of this subject—why will not they be good enough to let it alone? What possible benefit can they obtain for themselves or confer upon the public by ventilating statements which do not even approach the truth, and devising arguments which can only have the effect of obscuring the issue? The *Daily Press* has been assured repeatedly and in the most explicit terms, during the course of the past three years, that the Japanese Government has never asked for the immediate abolition of extraterritoriality. It has been similarly assured, in direct reply to reiterated misstatements, that such a step has never been advocated in these columns. Did its editor take the trouble to read our articles before interpreting them, not only would he have failed to discover a single passage warranting that construction, but he would also have found many passages plainly setting forth the impossibility and inexpediency of any drastic or sudden measure such as he accuses us of recommending. It would be quite as correct

to assert that he himself advises the rendition of the island of Victoria to China, as it is to pretend that the *Japan Mail* advocates, or has ever advocated, the complete and immediate submission of foreigners to Japanese jurisdiction. Yet he now calmly comes forward with an announcement that we "argue as though the abolition of extra-territoriality were an event that ought to take place at once, instead of at some date in the not very immediate future." What recourse is there against such flagrant misrepresentation? In the intercourse of every-day life, it is generally possible to terminate a discussion by simply declining to pursue it with an opponent who persists in distorting one's contentions until they bear no resemblance to the original. But the *Daily Press* will not be content with such significant silence. Lacking a real adversary, it sets up dummies for itself, and knocks them down with an assiduity that would be admirable were it not so profitless. Nor does the farce stop there. Our Colonial contemporary would persuade his readers not only that he is tilting with a real foe, but even that the combat is forced upon him. "Some time ago, we were drawn," he says, "into a discussion on this same subject." That is really a pretty fancy. In future, men who slander their neighbours and are called to account for the crime, will be able to complain that they are "drawn into a discussion." For our own part, we can assure the *Daily Press* that we shall never think of discussing Japanese subjects with it again. Indeed, the only object we ever had in view was to correct the extravagant absurdities ascribed to ourselves. If at any time we entertained a doubt of the fruitlessness of engaging in controversy with one who manufactures his opponent's propositions as well as his own arguments, we should be effectually deterred by our contemporary's last display of logic. A writer who cannot avoid contradicting himself half a dozen times per column, will scarcely be suspected of ability to follow the sequence of another's ideas. He commences his last essay by announcing that the statesmen of Japan will not ask for any radical change immediately, but that "they look forward to the time when it will be possible." He next announces that "the Japanese view of the case finds its expression in the *Japan Mail*;" and he then goes on to accuse the *Mail* of advocating the immediate abolition of extraterritoriality. Thus we are at once the exponent of the Japanese view and the advocate of a wholly different view. A still more startling proposition follows. It is that the inherent right of every independent State to subject every one with its borders to the operation of its laws, "falls to the ground and need not be further discussed," so far as Japan is concerned, because she herself ignores that right in Korea's case; because her request to have it partially recognised in

her own is based on the progress she has made in the last twenty years; and because it is still ignored with acknowledged propriety in China's case. It would be equally logical to say that a man forfeits the right to be heard in his own defence because he cannot exercise it satisfactorily until he has learned the language of his accuser. We do not think that Earl GRANVILLE'S definition of a free nation's "inherent rights" will be much affected by the inability of the *Daily Press* to distinguish between the expediency of exercising a right and the fact of its existence. Even this, however, is less obviously absurd than our contemporary's endorsement, in one breath, of the statement that "nothing practical has been done by Japan," and his admission, in the next, that she promulgated excellent criminal codes more than three years ago; that "the world has looked on with wonder and approving sympathy while she has been rapidly travelling along the road of progress," and that "every year brings nearer the time when she will be entitled to claim the abolition of all invidious distinctions between herself and Western nations." Is it absolutely impossible for the *Hongkong Daily Press*—since it will persist in drawing itself into these discussions—to appreciate the simple facts of the case; namely, that Japan does not pretend to be ready for the complete abolition of extraterritoriality, but only asks for a slight modification of it, commensurate, in some sort, with the progress she has made; and, above all, such a modification as will permit the removal of commercial restrictions which are gradually becoming unendurably irksome to both foreigners and Japanese? If our Colonial contemporary is incapable of comprehending these simple bases of argument, then we may be permitted to hope that he will altogether avoid drawing himself into the discussion hereafter. If ever silence was golden, it is when speech consists only of perversions and misinterpretations.

ENGLISHMEN AS THEY ARE REPRESENTED.

IT is in many respects fortunate that the English Missionaries of Tokiyo and Yokohama have consented, and obtained consent, to publish the Memorial addressed by them two months ago to Her Majesty's Representative in Japan. Did no other consideration recommend this course, the reason advanced by our correspondent in forwarding the Memorial would be quite sufficient. If ever a cause was discredited and disgraced by the fashion of its advocacy, the cause of the Yokohama Conservatives is in that plight to-day. The reluctance of foreigners to forego the protection of their own laws is a perfectly natural sentiment; a sentiment in many respects praiseworthy, and certainly deserving of the utmost respect. To set forth that sentiment in such a way that its justice,

as well as the danger of ignoring, it should have been fully recognised, was a task demanding no high qualities of rhetoric nor any subtlety of logic. But it was, at the same time, a task which, before everything, required to be performed in such a way as to give the least possible salience to the selfish aspects of its incentive, and the least possible offence to the legitimate susceptibilities of those who, from motives at least equally admirable, laboured to obtain a corresponding recognition of their own rights. The Conservative champions, however, completely misapprehending their rôle, have succeeded in associating it with everything that is intolerant, arbitrary, and unfair. Were the cause they advocate judged by the aspects under which they have persistently presented it to the public, it must long ago have been buried under the obloquy of their prejudice and injustice. From first to last their one device, iterated and re-iterated with a reckless monotony that resembles the babbling of anility, has been to brand every semblance of opposition with the stigma of venality; to assure the world, in terms of almost eager distinctness, that being themselves incapable of obeying any impulse save that of selfish greed, they are necessarily incapable of interpreting otherwise any action or aspiration of their neighbours. The most venomous insects in the lowest orders of creation are endowed with this peculiar instinct that, in their blind fury, they will sting themselves to death rather than remain inoffensive. Precisely analogous to their mood is the desperation of men who do not hesitate to expose their own depravity in the hope that its shadow may fall, however obliquely, on their opponents. It has been most unfortunate for the Conservatives that their cause found such championship: most unfortunate, too, for all foreigners in Japan, because, whatever may be the measure of the discernment and goodwill of the Japanese, it is impossible that this incessant shower of mud can have left Western character entirely unsoiled in their eyes. In a greater or less degree they must have learned to regard the foreign Conservative mood as the outcome of nothing worthier than race prejudice: a mood bred of insolent conceit; so illiberal that it sees an object of suspicion and dislike in everything Oriental; so partial that it distorts into wholesale disabilities the most trivial failings; and so invidious that it depreciates into fitful fancies evidences of the most earnest and patient pursuit of reform. We have been recently told, by men whose opportunities of judging are exceptional, that the mischief is as yet only skin deep, and that its traces may easily be removed by judicious treatment. But that it does exist, there can be no doubt. The Memorial which we publish to-day describes it, in very plain terms, as "a feeling of bitterness towards foreigners" which is gradually springing up, and it is certain that, unless we mean to deal with it

as the custom of the Occident has hitherto dealt with everything inconvenient in the Orient, we must extend to it some degree of appreciative consideration. Happily for the reputation of foreigners and for the growth of a better order of things, one of our local contemporaries has recently perceived the wisdom of discussing these questions in a fair and sympathetic spirit. Without failing to set forth, in moderate but firm language, the legitimate and proper reluctance of foreigners to surrender privileges which they have long been accustomed to regard as essential to the peace of their every-day existence and to the security of their properties, that journal has also shown that it recognises the merits of the Japanese case, the incongruity of existing conditions, and the mutual advantages to be secured by a discreet advance to meet the inevitable. For this unquestionable service to the cause of its nationals; for this well-advised effort to prove that the basis of foreign Conservatism is prudence and discretion, not pure selfishness and blind suspicion, our contemporary's reward has been a gross accusation of venal treachery. The Missionaries have been scarcely less fortunate. No sooner did they raise their voice in the cause of justice and liberality, than they, too, were charged with seeking to promote their own ends at the expense of their countrymen. Nay more, one of their number was deliberately accused of "Jesuitical disingenuousness" because he denied that they were seeking to obtain any *special* privileges for themselves, whereas their accuser *suspected* that their action was motivated by a desire to obtain *equal privileges for all alike*. It is plain that in this Settlement no reputation is safe from foul calumny. By some effort of depraved ingenuity, the characters of the most upright and honorable men are vilified and begrimed. The Memorial of the British Missionaries is now before the public, who can see for themselves that it does not contain anything resembling, however remotely, a request for extended privileges, still less for exceptional privileges; that it is simply an expression of opinion prompted by unselfish obedience to the dictates of justice, and that its signatories are at least as solicitous on behalf of the privileges their countrymen enjoy, as they are sensible of the dangers, disadvantages, and unfairness of attempting to make those privileges permanent. It is not to be supposed, for a moment, that the motives of the Missionaries will suffer anything in their countrymen's eyes by the invidious accusations preferred against them; nor is it necessary, we trust, to disclaim any idea of defending them against such traducers. But indifference may be carried beyond the limits of prudence. The same unsightly virulence which has poisoned the Conservative cause and hidden its legitimate aspects under a cloud of slander and resentment, now seeks to discredit the Missionaries in the eyes of the

Japanese nation by attributing to them the intriguing and unscrupulous propensities which disgraced the Jesuit propagandists of the middle ages, and laid the foundation of Japan's hostility to foreign intercourse. Is any phase of Western character to escape this gross misrepresentation? Must foreigners be always depicted as merchants careless of everything but gain; as politicians influenced wholly by selfish prejudice; as religious teachers who proselytize by unpatriotic cunning, and as men impervious to the impulses of generosity and justice? Will it be wonderful if the Japanese people ultimately consent to accept as unerring the repulsive character which foreign Conservatism unceasingly receives at the hands of its self-constituted champions?

A CANARD.

IN its issue of the 10th instant, the *Echo du Japon* published a story of which the following is an epitome:—The Belgian Minister, having had in his service for two years a trustworthy Japanese, named SASAKI MATSUGORO, whom he employed as a watchman at the Legation, deemed it wise that the man should carry an arm, and for that purpose sent him to purchase a revolver. The Minister knew that in 1872 a regulation had been issued forbidding Japanese subjects to purchase fire-arms from foreigners without observing certain conditions, "but he believed that as a foreigner, and above all as a diplomatic agent, he could cause to be purchased, at a foreigner's, a revolver which he intended for his servant." He, nevertheless, desired SASAKI to report the possession of the arm to the proper authorities. SASAKI did so; whereupon his revolver was confiscated, and he himself fined 50 *sen*, though he offered in evidence a receipt, in order, from the shop where the weapon was bought, and a written statement of the Belgian Minister's authorizing the purchase.

These are simple facts. The *Echo du Japon*, having premised that "the independent press of Yokohama has often drawn its readers' attention to the inconveniences which Japanese jurisdiction would entail for foreigners," and having observed that, "to give a revolver to a Japanese in such a fashion that the possession of the arm shall be regular and legal, is not an easy matter even for a diplomatic agent, from the moment the local authorities conceive the fantasy of opposing the proceeding," concludes with the following comments:—"In all civilized countries there are laws and regulations relating to prohibited arms, but the possession of an arm is no-where interdicted. We know, moreover, many Japanese who possess fire-arms, notably those who are sportsmen. Many of them have received these arms as a gift. How is that SASAKI MATSUGORO, because he is in the service of a Legation, is treated in an exceptional

fashion? By the assistance of their laws and their regulations, the Japanese authorities can condemn some according to their will and fancy, and give immunities to others. If that goes on, Japan, in a few years, will possess a curious monument of jurisprudence."

The singularly inconsequential nature of these comments must immediately strike the reader. We are told, first, that the Belgian Minister, knowing the law, nevertheless thought that, as a foreigner and a diplomatic agent, he might authorize a Japanese to violate its provisions: next, that he endeavoured to give a revolver to his servant in a "regular and legal" way; next, that the servant was treated exceptionally because he belonged to a Legation; next, that the Japanese authorities condemn and acquit according to their own fancy; and finally, that they thus indulge their fancy by the aid of laws and regulations. This patchwork of contradictions and incongruities is in excellent keeping with the notion that a foreign Representative, desiring to arm his watchman with a pistol, could devise no better method of procedure than to send the man to buy a revolver, on his own account, at FARSARI'S shop, and afterwards to report the fact at the office of the local government. If the Belgian Minister thought it expedient that his watchman should be armed, what was simpler than to give the man an order upon some foreign store for a revolver, and then direct him to carry the weapon when on duty? There would then have been no necessity to consult the Japanese authorities at all.

We note these points, not for the purpose of controverting our contemporary's statements, but to show the recklessly indiscriminate nature of the stories trumped up by a section of the local foreign press with the object of discrediting Japanese administration. There can be no mistake about the bias in this case. Apart from the obvious inconsistency of the items of the story, its extreme improbability, and the writer's confused criticism, now of the law, now of its administration—apart from all these, the following phrase alone would be enough to betray his animus; "this is what happens nearly always to those who desire to satisfy the Japanese authorities." It is no tenough for him to have discovered, as he imagines, an instance where the law was purposely perverted to the prejudice of a foreigner. He goes on to invest that single instance with a typical character, and bids his readers believe, not only that there is a definite disposition to treat them with injustice on the part of Japanese officialdom, but that their very efforts to conciliate will only expose them to additional insult.

We confess that, having regard to the names with which it is associated, we had hoped to avoid the necessity of commenting on this ridiculous *canard*. But as a

considerable time has elapsed since its publication and as it still remains uncontradicted, we deem it advisable to place the truth before our readers.

In January, 1872, a law was promulgated, forbidding any Japanese subject to become the possessor of a fire-arm without giving notice to the local authorities and observing certain formalities. This law was supplemented, six months later, by a Notification, providing that Japanese traders, desiring to purchase arms or munitions of war from foreign merchants in the open ports, must apply for official sanction and follow a prescribed course. Whether good or bad in themselves, these regulations were presumably dictated by considerations with which foreigners have no concern. A short time ago, it was brought to the notice of the Kanagawa Police that the man SASAKI MATSUGORO was secretly possessed of a pistol. The information was given under a provision (embodied in Notification No. 282 of 1872) by which a reward is promised to any person who brings such irregularities to the notice of the officials. Cited before the Magistrate, SASAKI had no excuse to offer, nor anything to show except the receipt of the foreign merchant from whom he had obtained the weapon. He said nothing whatsoever about being in the employ of the Belgian Minister. If he is attached to that Legation, the indispensable formality of registering his name at the Foreign Office has never been observed. Under these circumstances, the Magistrate could only comply with the law. The pistol was confiscated, and SASAKI was fined fifty *sen*. To this day the police declare that they have no knowledge of the man's employment by the Belgian Representative, or of the latter's alleged connection with the purchase of the revolver.

It would scarcely be worth while to speculate by what process these simple facts were twisted into the curious tale related by the *Echo du Japon*. Such trivialities do not deserve discussion for their own sake. But this community may just as well know the sort of fictions which are publicly advanced, from time to time, as valid evidence of the incompetence or partiality of Japanese administration. We do not profess any implicit faith in the excellence of Japanese systems. It would be strange if they did not still retain traces of old-fashioned defects. But we find no stronger testimony in their favour than the detractions of the *Echo du Japon*, and other similar snappers-up of baseless trifles. During the current year, three charges have been preferred against the police, of which this history of our French contemporary is the third. The two others were put forward as proofs that judicial torture still exists in this country. They were, first, that two constables had been imprisoned and fined for beating a prostitute; and secondly, that a foreigner, whose cook had been incar-

cerated for gambling, learned, on enquiry at the police station, that the man's case could be disposed of at once if, by confessing his fault, he obviated the necessity of procuring further evidence. Those who have not followed the vagaries of the local press may find it an interesting problem to divine how these occurrences were construed into examples of judicial torture. MARTIAL says there is nothing more contemptible than a bald man who pretends to have hair. He had probably never encountered a journalist who, under the pretence of exposing abuses, disregards the first principles of honesty and justice.

THE U.S. CONSUL AT SHANGHAI.

THE resignation of his post of Consul-General at Shanghai by Mr. O. N. DENNY, an official who deservedly earned great popularity in that Settlement, appears to have been due to one of those circumstances which have brought so much discredit on the American Civil Service. Mr. DENNY's resignation runs as follows:—

UNITED STATES CONSULATE-GENERAL,
Shanghai, Oct. 6, 1883.

TO THE PRESIDENT,—I respectfully tender my resignation as Consul-general to China on account of the partial and illegal instructions of the Hon. Secretary of State relative to the occupation and rental of consular premises at Shanghai. With great respect, I am, Mr. President, your obedient Servant,
O. N. DENNY.

In forwarding a copy of this laconic and very out-spoken document to the Secretary of State, the Consul-General refers that official to a despatch previously addressed by him (Mr. DENNY) to the Third Assistant Secretary, Washington. The despatch is long and somewhat difficult to unravel. According to the United States Consular Regulations, a Consul is required to make all the arrangements for leasing a Consulate at his own discretion, receiving from the Government an allowance for rent not exceeding one fifth of his salary. This provision does not, however, seem to extend to the jail and court-house. For such buildings, when required, a separate appropriation, of virtually indefinite amount, is made; and we may reasonably assume that the Consul does not accept any personal responsibility in connection with them. This being so, considerable latitude evidently exists. A dishonest official can easily contrive that the special appropriation for these buildings shall cover the rent of the Consulate also, so that the regulated allowance for the latter shall be an "unearned increment" to his salary. We believe that, to guard against abuses of this nature, the Regulations require either that the Consul's residence shall be wholly separate from the offices, or that, if attached, a portion of the latter's rent shall be paid by him. But this provision also must be difficult to carry out. At all events, we gather from Mr. DENNY's despatch that his predecessor, Mr. G. F. SEWARD, when entering upon the duties of his office in Shanghai, contracted for the erection of

Consular premises, including a residence, under a ten years' lease at an annual rental of \$3,523.80, the whole of which sum was charged to the Government on account of the jail and offices alone. Whether these buildings originally belonged to Mr. SEWARD or no, does not distinctly appear; but that they are now his property may be inferred from Mr. DENNY's statement that by their continued occupation as Consular premises, Mr. SEWARD is enabled to "pocket \$1,123.80, annually, more than offices and a jail would cost" elsewhere in the Settlement. When Mr. DENNY came to Shanghai, he found that these buildings, for which the Government was paying an annual rent of \$3,523.80, *plus*, we presume, an allowance amounting to one-fifth of the Consul's salary, were not worth altogether more than \$2,000, according to expert testimony. It seems, however, that this might have been condoned had not Mr. SEWARD, having himself lived rent-free at the Consulate, demanded an additional \$1,200 per annum from his successor for the portion of the buildings used as a residence, thus bringing the total rent of the premises to \$4,723.80. At this point Mr. DENNY objected. Regarding the whole thing as a gross job, he telegraphed to Washington that if Mr. SEWARD's demand were insisted on, he should have to transfer the Consulate to other and cheaper quarters. At first the Department of State supported him, though with some show of reluctance. But he presently received a telegram from Mr. SEWARD, who was still in China, asking him to defer any decisive step until they met: when it was arranged that Mr. DENNY should continue to occupy the premises at the old rate pending the result of a personal application of Mr. SEWARD to the Secretary of State. What the exact purpose of this application was, we cannot tell, but at any rate it appears to have been unsuccessful. Subsequently, however, Mr. SEWARD took a different course. He procured from one of the Under-Secretaries of State a "violent instruction" directing Mr. DENNY to continue to use the buildings as a Consulate. Against this Mr. DENNY appealed directly to the Secretary of State, and—to use his own words—"exposed the fraud which Mr. SEWARD was trying to perpetrate." After this he heard no more of the latter's pretensions until the winter of 1882, when, during a visit to Washington and in the sequel of certain occurrences at the Department of State, he resolved "to break the grip which Mr. SEWARD seemed yet to have upon a Consulate which, while in it, he never lost an opportunity to dishonour." Returning to Shanghai, he contracted for new and more commodious buildings in a better situation, at a rental of \$2,400 per annum for the offices and jail and \$1,000 for the residence—thus saving the Government a clear \$1,123.80 yearly. But when the plans and specifications of these premises were forwarded to Washington, the then

Secretary of State, Mr. FRELINGHUYSEN, caused Mr. DENNY to be informed that no other arrangement than that already existing would be allowed, so long as Mr. SEWARD's lease of the former premises remained unexpired. Under these circumstances, Mr. DENNY resigned his appointment.

Looking at this matter by the light of the facts set forth in the Consul-General's despatch, the action of the Department of State is very difficult to appreciate. It is easy to understand that the Government may have been justly unwilling, if indeed they had any right, to leave Mr. SEWARD saddled with the unexpired lease of a Court-house and jail in Shanghai. Even though the buildings belonged to that official himself, and were erected at his own risk, he may have been able to satisfy the Department that, at the time they were erected, equally advantageous terms could not have been obtained under any other arrangement, and that, were the premises vacated before the expiration of the original lease, he would personally suffer for having assumed a risk on the Government's account quite as much as on his own. But that any similar consideration should apply to the residence is inexplicable. The Regulations explicitly exonerate the Government from all responsibility in this respect. The Secretary of State appears to have constituted himself, in some sort, Mr. SEWARD's agent. He did not hesitate to take into consideration the fact that the residence could not conveniently be let to an outsider so long as the rest of the premises remained in Consular occupation, and to decide for that reason, that the Consul-General should continue to use the buildings as before. Even to this Mr. DENNY was willing to assent if the rent of the residence had been reduced to a reasonable figure, but Mr. SEWARD's influence appears to have carried everything before it. He was able to persuade the Department to *order* his successor to become his tenant, and we cannot wonder that Mr. DENNY rebelled against such treatment. There is something decidedly farcical about a disavowal of responsibility on the part of a Government which does not hesitate to assume responsibility when the pecuniary interests of a favorite are at stake. It may transpire, of course, that Mr. DENNY's version is partial, but the facts, as he states them, are perplexing.

THE SOUDAN.

THE telegram of the 22nd inst. announces the solution of Her Majesty's Government to send an expedition of ten thousand men, in the autumn, to GORDON'S relief, unless he has escaped before then. The *Pall Mall Gazette* is the authority for the rumour, which, after all, may be simply a forecast of what the Government will be compelled to do should not a satisfactory solu-

tion of the Soudan problem have been obtained in the interim. By "autumn" may be understood October. Before that time it would be virtually impossible for English troops to cross the burning deserts. The terrible effects of the heat upon General GRAHAM'S forces after the battle of Tamanieb settled this question, if, indeed, any doubt had previously existed. It is known that, at the end of March, great pressure was brought to bear upon the Cabinet, to induce them to despatch a cavalry expedition from Suakim to Berber. Then also, the *Pall Mall Gazette* was the foremost advocate of this course. General STEPHENSON, however, the Commander-in-Chief of the British forces in Egypt, strongly advised the Government not to think of sending English soldiers even as far as the First Cataract (Assouan) during the hot season, and his advice was approved by all the authorities consulted. Any attempt of the sort could only have ended in disaster. This difficulty made the situation doubly painful, since it placed GORDON practically beyond the reach of aid during a period of five months. Meanwhile, what the Government could do, it did. English officers can go where English soldiers cannot, and accordingly Captain CHERMSIDE was sent to try and open the route from Suakim to Berber by negotiations. He carried with him £10,000 to distribute among the friendly tribes. To what extent his mission was successful the telegrams have not informed us. Another important step taken was to order a survey of the Nile, with a view to ascertaining the feasibility of sending a flotilla of gunboats up the river. The last news which reached us of this operation was dated March 29th, when Captain MOLYNEAUX and his assistants were said to be making good progress with the work. There is no doubt that a military expedition to Khartoum would be one of the most difficult undertakings ever contemplated by English troops. Berber is the key of the situation. Once there, it is easy to reach Khartoum by steamer. But the trouble is to get to Berber. There are two routes: one, up the Nile; the other, *via* Suakim and Sinkat. The former is a steamer route as far as Korosko. From that point southward, however, the Nile makes an immense bend, and its navigation is obstructed by a number of rapids, so that, instead of following its course, caravans prefer to strike across the desert (of At-moor) by a road which meets the Nile again at Aboo Hammed. This stretch of desert path is 250 miles long; it includes a distance of 100 miles, throughout which water can be obtained at one place only, and even then it is too brackish to be drinkable by man. The other route is, therefore, considered the more available; though from Suakim to Berber, a distance of 288 miles, it may be said to traverse a continual succession of deserts. Those who remember the events of the Abyssinian Expedi-

tion, will understand the meaning of moving an English army across such a country. General WOOD, shortly after the annihilation of HICKS' force, estimated that fifteen thousand Anglo-Indian troops would be required to crush the Mahdi, and that the cost of the campaign would be twenty millions sterling. Subsequent events have not been of a nature to convict that estimate of exaggeration. If our latest telegrams are trustworthy, Berber is in the hands of the rebels. Its loss will add incalculably to the difficulty of relieving Khartoum, since it is the point at which both the routes from northern Egypt converge. On the other hand, it will be observed that the sending of this expedition is to be contingent upon GORDON'S movements, and GORDON'S movements depending, as they do, on "what he chooses himself and what God, in his good providence, directs," are a somewhat shifty basis of forecast. According to latest reports, he proposed to remain at Khartoum till May, when the rising of the Nile would enable him to carry the garrison off without difficulty. But we are now at the end of May, and no intelligence of any attempt to evacuate the place has reached us. In the meanwhile, Shendy and Berber having been occupied—it is said—by the rebels, the line of retreat is intercepted. If this be really the case, GORDON will probably have to maintain himself as best he can until the expedition, now projected, reaches him six months hence. When he was consulted with regard to the advisability of sending a British force to relieve Tokar, he said that the announcement of such an intention would probably do as much good as its execution. If he was right then, his words ought to have even more meaning now, after the crushing defeats of OSMAN DIGNA. There is always a hope, too, that dissensions among the rebels themselves may arrest their progress. It is difficult to believe in the complete fusion of such heterogeneous elements as the numerous tribes throughout the Soudan. But if neither the prospects of encountering an English army, nor divisions in the hostile camp, open a route of retreat from Khartoum, England may be doomed to six months' suspense while GORDON and his rabble garrison stand at bay against an enemy constantly growing in strength and resolution. Whatever may be the value of the MAHDI'S authority now, its influence was certainly paramount a month ago. On the 15th of April, there was published in London a letter of his, circulated throughout the Soudan some time previously, in which he commanded the tribes to push forward the siege of Khartoum, and to blockade all the roads. So well were these instructions obeyed that *The Times* correspondent, writing from that city on April 7th, said:—"The town is now the centre of an enormous rebel camp. Our Krupp ammunition is rather short. The situation is critical. The rebels have

frustrated an attempt to send a steamer to Berber. General GORDON will probably be driven to retreat by Central Africa." Khartoum, however, has excellent defensive capabilities. It stands on the west bank of the Blue Nile, about a mile above the latter's junction with the White Nile. Lying thus within the angle formed by the two streams, it is protected on the south by a parapet and ditch which passes from bank to bank of the rivers, forming with them a right-angled triangle whose apex is their junction. The site of the town being a little lower than flood level, two dikes, from 15 to 20 feet high, have been constructed to protect it. When at their lowest point the streams are from six hundred to eight hundred yards wide, but when in flood their width increases largely. The river frontage of the town is about one and a half miles; its depth inwards from the river, about a mile. Above and below it, along the banks, are small plantations and gardens, but with the exception of these the country round is quite barren. With General GORDON in command, such a place could hold out a long while. But it would seem that for the first time in his life GORDON has found, in the Egyptians, soldiers who are absolutely incapable of fighting. It is therefore, almost extravagant to hope that he can defend the town until October. One thing is apparently certain: namely, that he has failed to come to any understanding with the MAHDI, and that being the case, whether he succeeds in retreating from Khartoum or no, the Government is pledged to relieve the place. The policy announced by Earl GRANVILLE two months ago was, that the Red Sea littoral, from Kosseir to Ansley Bay (South of Massowah) should become an English dependency; that the frontier of Egypt proper should not extend beyond Assouan; that ZOBEL PACHA, or some other ally of the MAHDI, should be appointed Viceroy at Khartoum, under an engagement to maintain the trade routes between that place, Berber, Korosko, and Suakim, and that the MAHDI should be named Sultan of Kordofan, with sovereignty over the regions of the White Nile, Darfour, and Bahr Gazelle. But the MAHDI evidently declines to become a party to these arrangements, and England must, therefore, either change her policy in deference to his wishes, or compel him to be tractable. GORDON'S retreat will not solve the problem, if he leaves behind him a defiant enemy; but, on the other hand, a stout resistance on GORDON'S part, and the certain prospect of English armed intervention, may so augment the MAHDI'S reported loss of popularity and prestige that he will be incapable of maintaining an aggressive attitude. The fates were not kind when they devised such a problem for the Liberal Cabinet.

REVIEW.

The Eastern Pioneer of Western Civilization, and the Recognition her Efforts receive. By the Rev. C. S. EBY, B.A., Tokiyo.

THE force of example is not without influence upon writers of history. It is much less trouble to follow the track indicated by a predecessor's researches, than to re-group the facts he deals with and remodel the inferences they suggest. For this reason, perhaps, since no other is immediately apparent, the story of Japan's early and later relations with the outer world has generally been told in a manner that does little credit to her liberality or ingenuousness. Thus, to take an example, it has frequently been asserted that her treaty-making period was disfigured by duplicity: that she deceived the foreign diplomatists as to her polity, and barred their path with obstacles which would never have existed but for her own contrivance. Heusken's diary, only recently given to the world, shows how erroneous are these impressions. It shows that from first to last the statements of the Japanese were accurate and open; that they concealed nothing of the true condition of their Government or their own sentiments, and that had their candour been reciprocated, most, if not all, the subsequent troubles might have been avoided. The author of the pamphlet now before us happily declines to accept any of the ready-made verdicts recorded by others upon these subjects. He prefers to be instructed by the facts themselves. This alone gives his essay much interest, and that interest is heightened by the circumstances which impelled him to enter upon the task of research. Having, in the spring of 1883, designed and carried to completion a scheme of public lectures connected with the work of Christian propagandism, he found himself, at their close, placed in a somewhat awkward dilemma. For the men who listened to these lectures were shrewd enough to see that the principles preached did not accord with the practice of Christian nations, and that the discrepancy was especially notable in the attitude assumed by European States towards Japan. "Why," they asked, "why do Governments professing a faith of which, as you tell us, the fundamental doctrines are charity, justice, and brotherly love, ignore these doctrines in their treatment of Japan, by refusing to admit our nation to terms of equal fellowship with theirs, or to accord us any measure of the trust to which all men are entitled until they have proved themselves unworthy of it?" Questions of this nature were embodied in letters and sent to Mr. Eby, who, on his side, saw that to avoid replying would be both unworthy and dangerous. Hence his investigations, and hence the pamphlet now before us, in which are stated, graphically and concisely, the conclusions he reached and the data they are based on. As an Englishman, he does not hesitate to state frankly whatever errors his country's policy presents to his eyes, nor will English readers of his essay value it the less for this candour. There is sweet too, as well as bitter. The author thus describes the sequel of his researches:—

The result on my own mind is that I rise from the study with a higher opinion than I ever had of Great Britain and her foreign diplomacy. Not that I hold her faultless or her Representatives infallible, but, taking it all in all, I would not exchange England's record in Japan for that of any nation in treaty relation with this country, and my personal esteem for her late Representative Sir Harry S. Parkes, has been supplemented by a new admiration for his rare talents as a fearlessly honest and straightforward diplomat. For

many reasons I should regret exceedingly to have written a word that would tend to wound one whom I esteem and honour so highly. Both Sir Harry and the noble-hearted Lady Parkes (whose lamented death cast a gloom over many here), have left behind them in unnumbered hearts and homes, of both foreigners and Japanese, a cherished memory, fresh and fragrant with gratitude for deeds which characterize, not the diplomacy of politics, but that of Christian sympathy—deeds which have lightened the sorrows and enhanced the joys of many, by timely but unostentatious beneficence. The records of my own life in Japan in its occasional contact with the British Legation, of sympathy and care in a time of peculiar affliction and bereavement, of a wreath over a grave in the land of the stranger, of liberal support in efforts to do good to the Japanese people, furnish but one short chapter in the unwritten volume of these quiet deeds of goodness. In all my intercourse with the Japanese, and in making special inquiries on the subject of this paper, I have yet to meet the first person *who knew* Sir Harry, and had an ill-tempered word to say of him. The execration which has been, and still is, heaped upon his name by young Japanese, arises solely from his political conservatism, which Japan will judge less harshly when looked at in the light of riper history.

The verdict recorded in these words will certainly be endorsed by history. Those who knew Sir Harry Parkes find difficulty in separating the record of his public services from the untiring benevolence and staunch integrity of his private life. Here, however, it is sufficient to note that his name is intimately associated with all the best phases of Japanese progress. It was not only that he helped to initiate, but that he never tired of watching and assisting, the reforms which have gone far to win for Japan the respect and confidence of Western Powers. Yet the performance of these very functions was not without injurious influence on his political conduct. In his eyes the Japanese remained, from first to last, always the same children he had seen grow up and in whose education he had taken so large a share. He never could believe that it was time to take them out of their swaddling clothes and treat them with something of the consideration due to persons coming of age. In the future, after the indignation this usage naturally created shall have given place to calmer reflection, the Japanese will recognise that he was their benefactor throughout. But it is not while the pressure of obdurate discipline is still fresh that men's moods are most discerning. Unfortunately, too, the harsher elements of Sir Harry Parkes' policy were rendered doubly unsightly by the undisguised malevolence and rancour of writers who thought it wise to vindicate his prudence by blackening the character of everything Japanese. Thus openly referred to a basis of distrust and dislike, his exacting attitude showed few redeeming features to Japanese eyes, and we cannot wonder that while those who knew him and appreciated his motives had nothing but respect and esteem for his qualities, Young Japan, less familiar with the good he had wrought and less dependent on foreign assistance, remembers him only as a statesman who resolutely opposed the consummation of the people's most earnest aspirations. In the pamphlet before us, all this is evidently appreciated, and the author's conclusions are largely strengthened by his discrimination. At the outset he wisely observes that "in order to have sufficient data from which to deal with the question of international intercourse, especially in the phases now agitating Japan and the Treaty Powers, it is a matter of great importance to get at the root of human nature as exhibited here, to get an idea of the essentials of the national character with which we deal." To effect this the writer goes back to the days of Japan's first contact with foreign nations. He shows that "the necessary conditions for true civilization had been planted as far back as the days of Iyeyasu,"

and that the estrangement and isolation which followed the country's first experience of foreign intercourse were the outcome, not of any innate incivility or moroseness on Japan's part, but of the repellant features that intercourse itself presented. Amongst other evidence adduced in support of this view, the first treaty between Japan and England, in 1613, is quoted in full, and we cannot refrain from transcribing it here, as a specimen of the simple, straightforward and liberal spirit which the negotiators of those times brought to bear upon their work. The document is in the form of a Royal Warrant rather than a treaty, and runs as follows:—

1. We give free license to the subjects of Great Britain, viz., Sir Thomas Smith, governor, and the company of the East Indian merchants and adventurers, forever to come safely into any of our ports of our Empire of Japan, with their ships and their merchandize, without any hindrance to them or their goods; and to abide, buy, sell, and barter, according to their own manner with all nations; to tarry here as long as they think good, and to depart at their pleasure.

2. We grant unto them freedom of custom for all such merchandizes as either now they have brought, or hereafter shall from hence transport to any foreign port; and do authorize those ships that hereafter shall arrive and come from England to proceed to present sale of their commodities, without further coming or sending up to our Court.

3. If any of their ships shall be in danger of shipwreck, we will our subjects not only to assist them, but that such part of ship and goods as shall be saved be returned to their captain or cape merchant, or their assigns. And that they shall or may build one house or more for themselves in any part of our Empire where they shall think fittest, and at their departure to make sale thereof at their pleasure.

4. If any of the English merchants or others shall depart this life within our dominions, the goods of the deceased shall remain at the dispose of the cape merchant; and that all offences committed by them shall be punished by the said cape merchant according to his discretion, and our laws to take no hold of their persons or goods.

5. We will that ye our subjects trading with them for any of their commodities, pay them for the same according to agreement, without delay or return their wares again unto them.

6. For such commodities as they have now brought, or shall hereafter bring, fitting for our service and proper use, we will that no arrest be made thereof; but that the price be made with the cape merchants, according as they may sell to others, and present payment upon the delivery of the goods.

7. If in discovery of other countries for trade, and return of their ships, they shall need men or victuals, we will that ye, our subjects, furnish them for their money as their need shall require.

8. And that without other passport, they shall and may set out upon the discovery of Jesso or other part in or about our Empire.

This document was accompanied by the following letter, which does equal credit to its writer's head and heart:—

TO THE KING OF GREAT BRITAIN.

Your Majesty's kind letter sent me by your servant, Captain John Saris (who is the first that I have known to arrive in any port of my dominions) I heartily embrace, being not a little glad to understand of your great wisdom and power, as having three plentiful and mighty kingdoms under your powerful command. I acknowledge your Majesty's great bounty in sending me so undeserved a present of rare things, such as my land affordeth not, neither have I ever before seen, which I receive not as from a stranger, but as from your Majesty, whom I esteem as myself. Desiring the continuance of friendship with your highness, and that it may stand with your good liking to send your subjects to any part or port of my dominions, where they shall be most heartily welcome,—applauding much their worthiness in the admirable knowledge of navigation, having with much facility discovered a country so remote, being no whit amazed with the distance of so mighty a gulf, nor greatness of such infinite clouds and storms, from prosecuting honourable enterprises of discoveries and merchandizing,—wherein they shall find me to further them according to their desires. I return unto your Majesty a small token of my love (by your said subject) desiring you to accept thereof, as from him that much rejoiceth in your friendship. And whereas your Majesty's subjects have desired certain privileges for trade, and settling of a factory in my dominions, I have not only granted what they demand, but have confirmed the same unto them, and under my broad seal for the better establishing thereof.

From my Castle in Suruga, the fourth day of the ninth month, in the eighteenth year of our Dairi, according to our computation. The highest Commander in this Kingdom of Japan.

MINA-MOTO-NO (IYEFASU.)

It will be observed that Iyeyasu does not sign

himself King, Regent, or Prince, but only "the highest commander in this Kingdom of Japan," the same character in which his successors, nearly two and half centuries later, re-opened intercourse with the outer world, and which they have so often been wrongly charged with concealing or misrepresenting. It will further be observed that absolutely unrestricted privileges of trade, travel and residence were granted to Englishmen in Japan—privileges which might have continued uninterrupted until this day, but for the intrigues, dissensions, and short-sighted greed of the new settlers. Not the least interesting point in the warrant is the clause relating to jurisdiction. The power of inflicting punishment for offences committed by English residents was left to the Cape (chief) Merchant, and the persons and property of the traders were to be exempt from processes of Japanese law. This arrangement, impracticable as we of later times know it to be, was evidently dictated simply by considerations of convenience. People thought less in those days of the rights of the subject than of the ease of the ruler. Moreover, Iyeyasu, since he retained the power of revoking these privileges at any moment—a power which he afterwards exercised in part—could afford to sanction arrangements of a tentative nature. We can imagine how a ruler of his stamp would have acted in presence of the farcical complications and disabilities which a medley of seventeen jurisdictions has brought about in these civilized times. But, indeed, Iyeyasu was too enlightened a ruler for the age in which he lived. The broad foundations of international amity which he sought to lay, served only for the erection of an unsightly edifice of treachery, plotting, and fraud. Japan withdrew her proffered hand of friendship, and retired once more into a seclusion from which so little tempted her to emerge. We thus arrive at the "second period" treated by Mr. Eby; namely, the period of treaty making. Into the details of this we need not follow him. They have already been sufficiently discussed, though seldom in a spirit so impartial and moderate as he displays. It is impossible, indeed, to hide the overwhelming influence which self-interest exercised upon the conduct of Western nations towards Japan. They worked for themselves, not for her, and from first to last their practice conformed to the doctrine, "the end justifies the means." But in effect they had no choice. The first step involved others, which, though indefensible when considered severally, were necessitated by their antecedents and condoned by their consequences. Western civilization is essentially militant. It advances by a series of aggressive steps, but then—it advances, conferring solid benefit on all in its path. But Western civilization must in the end be true to its own principles. Otherwise it assumes a barbarous aspect. We cannot force our intercourse upon a nation under the plea that seclusion is savage, and then set limits to that intercourse under the plea that it is not convenient to ourselves to extend it. The very same suspicion and distrust which formerly induced Japan to hold aloof from European nations, are now at the root of the latter's refusal to associate with her on equal terms. Seldom, if ever, in the lifetime of a generation has any story of international relations been disfigured by such an exact reversal of positions. Yet it cannot be denied that there is much excuse for the apparent illiberality of Japan's treaty friends in this matter.

The conditions which now prevent the complete opening of the country were once necessary for the protection of foreign life and property, and prudence forbade that they should be lightly altered. The time, however, is fully ripe for an initiatory change. As Mr. Eby justly says, "the people cannot look upon these conditions but as a perpetual reminder of their inferiority, a galling proclamation of barbarism, not to object to which would show a servile spirit that does not characterize Japan;" while, at the same time, they justly rebel against being condemned to a state of semi-seclusion fatal to their material progress and disgraceful to their intelligence. Of the nature of the proposals the Government has made with a view to moving out of this narrow groove, Mr. Eby gives the following account, "obtained from sources which he knows to be trustworthy":—

1. At first, neither a complete removal of extraterritoriality, nor a complete opening of the country to every right for foreigners. This in the interest of both foreigner and native.

2. That for a definite period, say for five, eight, or ten years, as fixed by treaty with the Powers, the jurisdiction of Japanese courts over foreigners shall extend only to misdemeanours and delicts, leaving "crimes" as at present.

During that time the country shall be open to foreigners for travel and trade, but not for permanent residence, nor for the holding of property, excepting in such places as now have settlements, which settlements would be so enlarged as to take in the whole of the City or Prefecture, in which such settlement exists, for permanent residence and for the holding of property, but such property should be held under Japanese property law.

3. That even in misdemeanours and delicts, in all cases where foreigners come under Japanese jurisdiction, there shall be foreign judges and magistrates appointed, foreign lawyers allowed, so that the real decision shall still be in hands of foreign judges.

4. Where commercial codes, civil codes, marriage laws, &c., do not yet exist in Japan, or are not yet remodelled according to Western principles, the principles of foreign laws shall be applied and administered by the foreign judges before mentioned; thus leaving the foreigner in as good a position as at present, and if this applies to the plaintiff also, in a better condition.

5. That when the Japanese codes shall be completed on Western principles, and the modes of procedure shall have become assimilated to those of the West and normal in their working, the jurisdiction of the Courts of Japan shall extend to all cases; the assistance of foreign judges still being retained if the Powers think necessary, for a further period, with the prospects, of perhaps, not engaging new ones, but of allowing those already appointed to serve out a lifetime, in the hope that native judges will then be fit to have full control of the judiciary.

6. That police laws, press laws, right of religions, &c., being matters of detail, shall as rapidly as possible be assimilated to the usages of Western law, but where these are still imperfect, the foreigner still to be under his own national usage.

7. Foreigners shall have special rights of appeal, and of course always, as in all lands, the protection of their own Consuls and Ministers in case of hardship.

These proposals appear to us to be rightly stated, with the exception of the fourth and sixth, which, in the form here given, look somewhat impracticable. The position taken by the Japanese Government, so far as we know, is—that while with regard to civil law, commercial law, marriage law, etc., the present Japanese statutes, pending their codification, should be applicable, the Government would guarantee that their application should not conflict with the principles upon which similar laws are framed in Europe; and would undertake, for the better carrying out of this guarantee, to employ European judges, who, sitting with Japanese judges, but in the majority, should virtually govern all decisions in cases where foreigners were concerned. It would, of course, be impossible to promise adherence to the forms and processes of different European systems: the principles alone are all that any country can be expected to observe, and these would be amply and easily guarded by the assistance of foreign Judges. We note this point because, though Mr. Eby is doubtless sensible

of its importance, his language leaves something to be desired in point of clearness. As for the Japanese proposals which he first has been the means of making public, we scarcely think that any comment of ours is necessary. Mr. Eby discusses them very fully, and to those that take an interest in a question so important to all foreigners living in Japan, we strongly recommend his analysis. We conclude this notice of a valuable contribution to the solution of a difficult problem with one or two extracts, which may be taken as fairly representing missionary opinion on the subject.

As soon as extraterritoriality ceases to be necessary, it becomes a nuisance to foreigners as well as an injury to the land. At the time of its inception it was an unpleasant necessity with negative advantages in preventing greater unpleasantnesses; but now, the necessity having passed away, the unpleasantness of the situation becomes a source of positive evil. To be just, we must look at these results from a Japanese standpoint. The removal of extraterritoriality means to Japan to-day the opening of her country to the perfection of modern civilization. The retention of extraterritoriality means the retention of fetters which stay her feet, close her country, prevent her progress, her entrance into the comity of nations. Over against these national interests we place the fears, the suspicions, of a handful of foreigners. Cannot their lives and their property be secured without putting a nation into fetters?

The rulers of this nation, the thinking people of this land, believe that a crisis has come. The nation cannot go back. If we do not give way, a new national evil is apprehended. And those of us who know enough of the language of the people to have conversed with them widely on the subject can well appreciate the apprehension. Those of us who have heard the *Hatamoto* and *Samurai* tell tales of the olden times, when they, two-sworded, sped through the land thirsting for foreign blood, as of some old strange dream; who have watched the unfolding spirit of the student and the press; who have chatted by the wayside with packhorse boys and plodding peasants in paddy-fields, and on these subjects, know full well the shallowness of the assertion that this agitation is confined to a few, is but the outcome of advice of unprincipled foreigners, as has been stated by two Yokohama merchants of long experience in, but with little knowledge of, Japan. These matters are matters of a nation's earnest discussion, away into hidden hamlets and mountain fastnesses. Everywhere the school has gone, the press has gone, national questions have gone, and a spirit of umbrage has gone.

We cannot refrain from earnestly protesting against a policy that would treat Japan as China must be treated while opposed to Western civilization, or Corea, now newly opened to the West. We believe that Japan's spirit and progress and pledges are such as entitle her to some place among civilized nations. She ought not to be condemned to a sort of isolation, rejected from the comity of Oriental nations as having abandoned all that the Orient held dear, rejected from the comity of Western nations as not yet having reached the height—not of the average Western nation—but as not yet being equal fully to the ripest and the best. We believe that the time has come when further continuance of this present state of affairs will not only be a material and social loss for the Japanese nation, but will give rise to a national moral and political wrong, that will cast a lasting stigma upon England's policy in the Orient and hinder the progress of not only the Eastern Pioneer of Western Civilization, but, indirectly, that of all the peoples of the Far East.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

FLATTENED.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—This is sad—likewise instructive. Each breeze which sweeps across the Bay "brings to our ears the clash of resounding arms." What may be termed the underlying theme of the Yokohama journalistic concert is that old Kilkeny refrain, "Aitch! thought there was one cat too many." Governed by this general principle, the particular melodies may be anything or everything, no matter what, provided only there is no cessation in the music. Now the lurid glare of battle centres about the Ogden lynching case. Perhaps your amicable and estimable contemporaries are qualified to pronounce an immediate and conclu-

sive judgment upon everything American—perhaps they even know where Ogden is; be that as it may, there can at least be no doubt of the earnest vigour with which they have thrown themselves into the strife. We outsiders are not so much concerned with the merits of the dispute as with its results. These afford an illustration of the contact of ponderous substances travelling rapidly through space in opposite directions. One of your A. and E. C. aforesaid has, in the euphemistic language of the day, "sat down" upon the other, and now the places which knew the victim will know him no more—at least in his original shape. Even the verdict "didn't know it was loaded" will not suffice to unflatten the flattened. All that can be said is, that the *Gazette* should have known better than to deliberately get under *Herald* rhetoric. How could anything mortal be expected to survive this, for example:—

"This crime,—for crime it is, as much as any of the murders which it is intended to revenge,—though some elements of excuse are occasionally urged—has, of late, especially, been alarmingly frequent in the United States, and is,—at the present moment,—one of the greatest blots on American civilization," &c., &c. Unquestionably,—for this statement,—as anyone can see by reading it,—though some perverse individuals may doubt the fact, and offer some particles of reason in support,—has all the elements of probability to recommend it,—and may be, for the time being,—at least for the present moment,—regarded as settling the whole matter,—notwithstanding the howl which may be raised,—and doubtless will be,—by those purchased individuals, whose advocacy of anything is always just ground for suspicion to those who are in a position to weigh their motives exactly,—and to estimate at their true worth those ebullitions of uncalled for and lachrymose sympathy.

"If so, why not? Wherefore, stand by!"

When the echoes of the fray reach far off Ogden, the journalist who directs the destinies of that portion of the globe, while perhaps he may not be able to grasp all the subtleties of the logical lucidity which led to the catastrophe I have noted, will doubtless be fully able to understand the result. His comment upon the fate of the *Herald*, couched in the weird pithiness of the West, will probably be, "Mashed Dictionary."

Yours respectfully,

Tokio, May 23rd, 1884.

X.

MEMORIAL TO HER MAJESTY'S MINISTER.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The comments which have been made respecting the action of Tokiyo missionaries regarding the question of Treaty Revision render it advisable that the whole of the facts should be published. I am happy to say that "considerations of official etiquette" do not stand in the way, but full authority having been granted, I take pleasure in transmitting to you the only document prepared and presented by Tokiyo missionaries on this subject.

It may not be amiss to review at the same time, the steps which led to this, and only this, action. During the latter part of the past year, the moderate demands and the guarantees proposed by the Japanese Government, with a view to the gradual abolition of extraterritoriality, began to attract attention, and became a topic of conversation among the missionaries. The general feeling was in favour of making all possible concessions to Japanese wishes, seeing that we are in Japan, and that, theoretically at least, her rule ought to be complete within her own territories. The matter was brought up in the Council of the Evangelical Alliance, by a somewhat enthusiastic member, who proposed a united petition to the diplomatic corps on the subject. A committee was appointed to make inquiries and see what was the best course to pursue. The result was that the feeling in favour of the Japanese proposals was strengthened, but at the same time it also transpired

that people of one nationality could not well address the Minister or Ministers of other nations. The question of making a public statement, such as that of our Osaka brethren, did not occur to us, and the Council of the Evangelical Alliance simply left the matter in the hands of the missionaries of the different nationalities. The missionaries hailing from the United States, felt that their Minister and their nation were already committed on the right side of the question, so that there was no need of any special presentation on their part. The British missionaries felt that Her Majesty's Representative, who was about to arrive in Japan after an absence of eight years, would no doubt be glad of every expression of opinion that would aid him in obtaining an understanding of the views held by various foreigners in the country. With the object of furnishing this information regarding the views of British missionaries on the subject of Treaty Revision, a meeting was called, and a deputation appointed to wait upon His Excellency. The deputation expressed the sense of the meeting in the following document, which, although not intended for the public, contains nothing to prohibit its publication, and certainly will need to be very much twisted to be construed into a request for special privileges for missionaries,—a thought which never entered the minds of these concerned.

I am, &c.,

A TOKIYO MISSIONARY.

Tokio, 24th May, 1884.

TO HIS EXCELLENCY

THE HON. F. R. PLUNKETT,

HER MAJESTY'S ENVOY EXTRAORDINARY AND MINISTER PLENIPO-
TENTIARY IN JAPAN.

SIR,—As much discussion has, of late, taken place in the newspapers, and also in private circles, in regard to the desire expressed by the Japanese for some modification of the extra-territorial clauses of the treaties between Japan and the Foreign Powers, and as the question is one that affects the interests of every British subject who expects to live for any length of time in this country, a meeting of British Missionaries, residing in Tokio and Yokohama, was called in order to elicit their views in regard to the subject. The meeting was held on Saturday, 22nd inst., at No. 18, Tsukiji. There were present the Rev. Messrs. Waddell, White, Hopper, Lindsay, Davidson, Eby, and MacDonald, and Mr. J. A. Thomson, of the National Bible Society of Scotland. (These gentlemen represented five British Societies.)

It was felt that the immediate and entire abolition of extra-territoriality would be premature, but the meeting was unanimous in the opinion that the progress that Japan has made should be recognized, and that some modification of existing conditions should take place. The question, at once, arose as to the extent to which modifications could be made without sacrificing the interests of foreigners concerned.

We had learned, from various sources, of proposals which were said to have been made by the Japanese, or which they were willing to make, viz., that the treaties should be modified so as to give foreigners the right to travel (without passport) through the country and to trade, without the right of residence. Nevertheless that a larger area than at present, in which foreigners could reside and hold property, would be conceded—that in all minor cases, misdemeanors, delicts, foreigners should come directly under Japanese law, but that such law should be administered by foreign judges—that in all cases in which Japanese law might yet be imperfect, foreign precedent should be followed—that every case in which a foreigner would be concerned, requiring adjudication before the Courts, the hearing and decision thereof should rest with a foreign judge, or judges: such judges to be nominated by the Foreign Powers, but appointed to office, and paid by the Japanese Government—that this arrangement should continue for a definite term of years, say 5, 8, or 10, with the understanding that if it worked satisfactorily, this plan of partial

jurisdiction should, on ample guarantees being made to the Foreign Powers, give place to an arrangement involving the entire abolition of extra-territoriality.

The meeting was of the unanimous opinion that a workable plan on the line of these proposals could be formed, that the rights of foreigners could be conserved, and the wishes of the Japanese met, inasmuch as it would give them partial jurisdiction, and although it placed them on trial, it would afford the hope that at a fixed time in the future extraterritoriality would be abolished, and they would be able to exercise the rights of an independent nation. A deputation, consisting of Messrs. Waddell and MacDonald, was appointed to present these views to His Excellency the British Minister.

We desire to assure Your Excellency that we do not undervalue the privileges which we enjoy as British subjects, and if it were a matter of choice merely, we should prefer to remain entirely under British jurisdiction. But we cannot ignore the claims which the Japanese urge, and if some modifications could be made that would meet their wishes, and at the same time guard our rights, we feel that our preferences should be waived.

In our opinion the time seems to be ripe for a change of this kind. We are aware that any modification of existing conditions may imply inconvenience to individuals in adjusting their affairs to the altered circumstances; even loss, in some cases, might be sustained (e.g. the opening of Tokio, would diminish the value of property in Tsukiji); but we feel that considerations of this kind, which relate only to the individual, should not be allowed to check the aspirations and retard the progress of a whole nation. Every movement of the world in the way of progress has impinged uncomfortably somewhere, but nevertheless, it is desirable that the world should move.

This question, moreover, has not come suddenly upon us. Every one who knows anything of the spirit of the Japanese people, and who has noted the progress that the nation has made, must have been convinced that the abolition of extra-territoriality was a destiny unshunnable, only a question of time, and in taking up his residence in this empire, it must have been with the conviction that the present state of things could not be perpetuated.

It has been suggested that the desire for modifications in regard to the extra-territorial clauses is but a patriotic sentiment, limited to a few; but we have reason to believe that it prevails much more widely than we might thus be led to suppose, and furthermore, that a feeling of bitterness towards foreigners is springing up with it, in consequence of what the Japanese conceive to be their rights as a nation being withheld.

Believing that the time is ripe for some modification of extraterritoriality, we venture to express the hope that Your Excellency, in concert with the Representatives of the other Foreign Powers, may be able to devise some plan by which the desire of the Japanese may be met, and at the same time, the rights and liberties of foreigners secured.

We have the honour to remain, yours with respect,

(Signed) HUGH WADDELL.

(Signed) D. MACDONALD.

Deputation appointed by the Meeting
of British Missionaries.

Of all Christian missionaries in Kobe, Osaka, and Kiyoto, the American pastors appear most active, and have converted a considerable number of Japanese. It is said that steps are being taken in America to raise a fund for the furtherance of their efforts. Mr. Mutsu Munemitsu called on a certain missionary in Kobe on the eve of his departure for America, and had a long conversation with the latter on subjects connected with Christianity. It is generally believed that Mr. Mutsu's foreign tour has much to do with religious affairs. —*Fiji Shimpō*.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Chamber of Commerce, Tsukiji, on Wednesday, May 21st, Dr. Divers in the Chair.

The Minutes of the last Tokiyo Meeting, having been published in both the daily and weekly editions of the *Japan Mail*, were taken as read.

In the absence of the Corresponding Secretary, the RECORDING SECRETARY for Tokiyo intimated the election of the Hon. F. R. Plunkett as a member of the Society.

Dr. WHITNEY then read a paper entitled "Notes on Medical Progress in Japan."

In considering the history of Medical Progress in Japan, the writer of this paper divides the subject into five portions, corresponding to five important periods of Japanese Medical History. In the first period, embracing the mythological age, the treatment of disease, it appears, consisted in the use of charms and the employment of the simplest remedies, which it is said was originated by *Ó na muchi no mikoto*, the Great-name-possessing Deity. The second period covers nearly nine hundred years from the middle of the second century B.C., during which time Chinese and Korean medicine was introduced, as well as Buddhism and various useful arts. The third begins with the establishment of the University, which occurred toward the close of the eighth century, and extends to the middle of the sixteenth century. The University and Medical Department, it seems, were thoroughly organized, and, although the latter was not a part of the University proper, yet its students received, if we may judge from the account of the seven years' course of study then pursued, a thorough and systematic training in Chinese medicine, and enjoyed equal rank and privileges with the students of the University. Chinese medicine, as then taught, was embodied in works consisting chiefly of numerous dissertations and philosophical deductions based upon incorrect notions as to the anatomy of the human frame and the relation of its various viscera with one another and with the different phenomena of nature. The fourth period from the middle of the sixteenth century and the appearance of the Portuguese in Japan to the Restoration in 1867, embraces the most important portion of the medical history of the country, during which occurred the revival of both the Japanese and Chinese schools, and the introduction of Western medicine and its subsequent adoption at the Court of the Shōgun in the appointment of a physician educated in Western science to the position of physician to the Court. Western medicine, it seems, played no unimportant part as a factor in the temporary success of the Portuguese missionaries, who, accompanied by two physicians, were sent out by Philip II. of Spain and Portugal to teach Christianity to the Japanese. These physicians were received and cordially welcomed by Nobunaga, who granted them among other privileges the use of some 7,500 acres of public lands on the slopes of Ibukiyama, in the province of Omi, for the purpose of cultivating medicinal plants. Later, a Charity Hospital, conducted by foreign and native physicians, was established, which added much to the influence of the priests and the religion they taught. After reviewing the theories of several of the most important schools of medicine of the seventeenth century, the paper gives in detail some of the circumstances attendant upon the translation into Japanese of a Dutch work upon Anatomy by Mayeno Riyotaku and Sugita Gempaku, which translation was published by Sugita in about the year 1775, and was the first work of the kind published in Japanese. The patient, persistent, and successful efforts of Sugita and his co-workers, who, actuated solely by the desire of benefitting their fellow-beings, laid the foundation of a school of Western Medicine, entitles them to a foremost place in the grateful remembrance of their country,

and also to a place among the benefactors of their race. The principal events following the introduction of Western Medicine were: the introduction of vaccination into Yezo in 1824, from Russia, by a Japanese fisherman; and at Nagasaki, in 1848, by Dr. Monike, a Dutch subject, the establishment of an "Institution of Vaccination" at Yedo in 1858, and of a Medical School at Nagasaki in the year preceding. During the fifth period, which begins with the first year of Meiji (1867), a number of hospitals and medical schools had been established under foreign direction, and the medical Department of the University of Tokio thoroughly organized. The medical and sanitary laws of the empire, of which a brief account is given in the paper, show the determination of the Government to establish a high standard of medical education by the thoroughness of the examinations, and also to protect the lives of the people by the enforcement of wise regulations regarding public health. Candidates for licenses to practice medicine are required to have pursued their medical studies for a period of at least three years before being eligible for final examination, and apothecaries, dentists, and midwives are also required to follow a fixed course of study, and pass satisfactory examinations before being licensed to practice. Vaccination is compulsory. Medical examination of prostitutes is regularly made in the chief cities and towns of the empire, and suitable provision is made for the free treatment of the sick. The paper concludes with further brief references to medical affairs of the present day, including Hospitals and Colléges, the Army and Navy Bureaux, the Medical literature of the present time, Medical mission work, and a mention of the most prominent Japanese physicians and surgeons of the day, as well as of such foreign medical men as have taken prominent places in medical teaching or practice in Japan.

The CHAIRMAN, in thanking the author in the name of the Society for his valuable historical paper, drew attention to the comparative freedom from superstitious rites in the ancient Japanese treatment of disease. In the subsequent development of the art, the great event undoubtedly was the translation by Sugita and his co-workers of the Dutch book on anatomy. Since then the progress had been simply determined by the rapidity with which Japan had assimilated Western ideas. The present system by which the Government controls, by means of its licence laws and well-ordered laboratories, the sale of drugs and medicines, was highly commendable.

Dr. WHITNEY subsequently mentioned the very perfect control which the Government exercised over the sale of opium—which was, so far as he knew, quite unique amongst the legislative measures of civilized nations. All the opium sold in Japan was retailed by the Government to the druggists, who were obliged to give twice a year a full account of their sales. Also, the purchaser had to present a written certificate signed by a licensed doctor or dealer in drugs.

The meeting then adjourned.

TRANSLATIONS FROM NATIVE JOURNALS.

THE TARIFF QUESTION.

(Translated from the *Keizai Zasshi*.)

It has been universally believed for some time past that the Government is carrying on negotiations to the effect that foreigners should be permitted to reside and trade in the interior of the country, and that Mixed Courts are to be established in which suits affecting both Japanese and foreigners will be tried. As a compensation for these privileges, it is said that our authorities intend raising the tariff duties to an average of 10 per cent. We have already expatiated on the

undeniable advantages of mixed residence, and have frequently expressed our hope that the Government would carry out its plan without loss of time. Mixed residence is earnestly desired by all classes of foreigners, and the right to permit it rests entirely with us; but we must use the power conferred by this right carefully, and extraterritoriality must be abolished as an off-set to whatever concessions we make. It were, indeed, a shortsighted and fatal policy, should we give up the sole privilege we can still grant to aliens before they have renounced the present extraterritorial system. For, so soon as foreigners pitch their tents in the interior, intercourse between them and our countrymen would become free and more intimate, and appeals to the law would undoubtedly be of more frequent occurrence in consequence. And, in this case, were Foreign Governments to have great influence in and over the Mixed Courts established by our authorities, the position would be almost unbearable. And moreover, although we are not certain whether the Government will grant foreigners the right of acquiring land, yet, if this be done, taxes will have to be levied on the land in their possession. Nor is this the only tax to be levied upon foreigners, so soon as they have settled in the interior. Should, therefore, any one fail to pay the legal tax, the Government would be forced to request the Mixed Courts to interfere in the matter. How irksome and trying such a course would be needs no demonstration. We do not share the apprehension entertained by some political critics that, should foreigners be permitted to acquire land in the interior, more than half of our arable territory would pass into their hands. There is a limit even to the resources of aliens, and the fact that they held landed property would not go for much. Yet it would be in the highest degree impolitic were we to concede all these rights to foreigners before they, on their part, had abolished extraterritorial malpractices. It would be decidedly more to our liking could we sanction mixed residence without any hope or desire for compensation on the part of foreigners; but so long as matters stand as they now do, we must perforce indemnify ourselves for every privilege granted to aliens.

Some controversialists argue that, because all manner of taxable productions are already overburdened with imposts, the land-tax, in especial, should by no means be increased; and that if Foreign Governments express their willingness to accede to a higher tariff, mixed residence should be at once sanctioned, without attempting to do away with extraterritoriality. There could be no falser argument. The right of jurisdiction is the first and most important object to be restored to this country, and though the right of a tariff is not to be left out of consideration, its full possession is only a matter of secondary importance, and not the one great pinnacle of our desires. Should we not be able to obtain both simultaneously, we must rather give up the tariff than forego our judicial rights. Why should the Customs' duties not be increased? As we have pointed out again and again, the plan best calculated to maintain the future well-being of this country is to make Japan the centre of Oriental commerce. Free trade is a great factor in the attainment of this end, but if it proves impracticable for the moment, there is no way but to lessen our Customs' duties as much as possible. The restoration of the right of determining the tariff forms no part of this country's weal.

England was the first to adopt free trade, and the result of its working more than amply testifies the grand benefits of the system. America, still adheres to its protectionist groove, but the dawn of free trade already reddens her political horizon. The best example of the blessings of free trade is offered by the Australian Colonies. New South Wales and Victoria were both infant colonies a short time ago, and alike in all points, except that in the former free trade flourished, and that a protectionist system existed in the latter. Questions

having reference to social matters are, unlike scientific affairs, often of a difficult and puzzling nature, and this difficulty is frequently experienced in comparing the respective merits of different trade systems. The fact that these two Australian colonies worked each on a different system of trade, though alike in all other respects, attracted the attentive interest of the political economists in Europe and America. Let us look at the results. In 1880, New South Wales had 2,500 manufactures, employing 3.7 per cent. of the population; the Customs' revenue of this same year had increased from £850,000 in 1870 to £1,300,000; finally, the total exports and imports in 1870 amounted to £19,000,000, against £29,000,000 in 1880. The case was different with Victoria. Despite the much larger population, the percentage of individuals employed in manufactures was only 2.3 in 1880; the Customs' revenue had not materially increased since 1870; and the census, deposits in the local saving-banks, statistics of marriages, etc., all went to prove that the progress of Victoria was far slower than that of New South Wales. The *London Economist* asserted that the number of people employed in Victorian manufactures was far too small in comparison with those engaged in other pursuits. The manufactures of Victoria, though under the protection of the administration, have drawn no profit from this protection. And what is more noteworthy, the Customs' revenue of New South Wales, where free trade obtains and duties are light, have been and are steadily increasing; while in Victoria, where high duties are levied on imports and exports, the revenue shows no material increase. This, however, need not be a matter for surprise; for the experience of every country proves that heavy duties depress commerce and impede the advance of international intercourse. Turning to our original theme, we may fairly conclude, that these facts postulate a decrease rather than an increase in our tariff, and they show, also, that the contentions of those who would alter the tariff in connection with treaty revision are a mere waste of words.

The decisions of our Cabinet are unknown to the outer world, and we, as laymen and private individuals, have no means of ascertaining what principles underlie the negotiations carried on between this Government and Foreign Powers. And so we can but devoutly trust that the Government will not pursue the policy with which it is popularly accredited. Whatever steps may be taken as to jurisdiction, it is of the first importance that the Customs' duties be left as they are, or, better still, materially decreased. Our country, if it would rank with the strong nations of the world, must use the weapon of commerce with caution and deliberation; and, would we see our people and manufactures flourishing, we must base our national commerce on the grand rock of free trade.

THE MARUYA GINKO AND THE ORIENTAL BANK.

(Translated from the *Nichi Nichi Shimbun*.)

That the Maruya Ginko in Tokiyo, and a branch of the Oriental Bank in Yokohama have, one after the other, suspended payment is one of the most remarkable events that have lately occurred in our commercial community. The Oriental Bank has its head office in London, with branches in India, China, and Japan, and is well known the world over. We were lately informed that the Bank referred to had failed to realize satisfactory profits, and that the strict nature of its organization and the difficulty of obtaining official sanction for certain projects had, in some respects, deterred it from issuing notes and from continuing business on the unlimited liability plan. We also heard that a proposal was recently made to convert the Bank into a limited liability company, but that after the proposal had been fully discussed in Parliament, it was unfortunately

rejected at the third reading. Had this proposal taken a form applicable to Banks in general, it might have passed through Parliament, but its rejection seems to have been grounded on the assertion that if a special privilege were granted exclusively to the Oriental Bank, this precedent would affect the organization of other Banks. The directors of the Oriental Bank, too, appear to have anticipated that their proposal would not pass through Parliament without alteration, but they had no idea that it would be entirely rejected. Since they thus failed to obtain sanction for their proposed reforms, they forthwith determined to dissolve their corporation, to re-organize a Bank of limited liability under the same style, in conformity with the regulations for the formation of commercial companies, so that the creditors as well as shareholders of the Bank would reap equal advantage. In this spirit, all payments were suspended. It is, therefore, evident that the steps taken by the Oriental Bank in Yokohama are due to the instructions received from its chief office. Later telegrams announce that measures are being taken to persuade capitalists to become shareholders in the new Oriental Bank, Limited; and although we do not know what will be the limit of the Bank's liability, there can be no doubt that the new institution will sooner or later be established. Again, the suspension of the Oriental Bank was not due to bankruptcy, but is simply ascribable to the fact that the directors desire to carry out measures for liquidation. Accordingly, we are inclined to believe that no loss is likely to ensue for any of the creditors of the Bank. Yet, the sudden stoppage of such a large concern, whether on account of bankruptcy or the adoption of measures for liquidation, is certain to affect the transactions of commercial communities to a considerable extent, and London merchants may have suffered more or less. Nevertheless, any unpleasant consequences of this suspension do not appear to have been felt in Yokohama. Although our Government has entrusted its foreign remittances to the Oriental Bank in Yokohama, it appears that the balance of payments in favour of the Government does not exceed six *yen*, and that as its foreign loan and interest had just been paid by the Bank, the amount due by it on account of its deposits will be only 200,000 *yen* or 150,000 *yen*. With regard to these deposits, it must be remembered that when our Government some years ago issued silver *yen* for circulation in Eastern ports, it invested a sum of five hundred thousand *yen* each in the Oriental and the Hongkong and Shanghai Banks, and that, therefore, a certain amount still remains due from the former Bank. As regards the deposits of foreigners, too, the amount seems to be less than we supposed, although we cannot tell precisely what it is. The amount due to the First, Second and Mitsui Banks together does not exceed ten thousand *yen*, and although it appears that a certain company has to receive a deposit of sixty thousand *yen*, the grand total to be paid to the Japanese will be less than two hundred thousand *yen*. And so, the suspension of the Oriental Bank, though it has some peculiar aspects, it is not likely to seriously affect the welfare of either foreign or native merchants.

On the other hand, the suspension of the Maruya Ginko in Tokiyo threatens to bring about formidable results. The relation it bears to its creditors is as close and intimate as that of the Oriental Bank is free and unhindered. The Maruya Bank is a private institution with a capital of 150,000 *yen*. Whether its capital was paid out or what amount it holds as a reserve fund, we do not know; yet it seems certain that its capital and reserve fund together do not, as the public justly supposes, nearly approximate double the amount of its nominal capital. Rumours are current that, although the Bank had to receive the sum of 550,000 *yen*, it had to pay out 650,000 *yen*, and that on account of this deficiency, it was unable to continue doing business, and was finally obliged to suspend payment. No-

thing can be stranger than these rumours. Unless the Bank has unexpectedly sustained considerable losses, it is impossible that its debts should exceed the amounts due to it. The Bank might have looked upon all the doubtful loans it had contracted as so much loss. Had its accounts been settled in this way, the amount of its debts might have become greater than the monies due to it. Nevertheless, that its accounts had reached something like 600,000 *yen*, while it possesses a capital of 150,000 *yen* only, is a conclusive proof of the activity with which it carried on business. In regard to the classification of its accounts, we are informed that as its organization partook of the nature of a Savings Bank, the principal portion of the monies entrusted to its care consisted of the educational funds of scholars, and of deposits made by officers, physicians, literati, and other prominent members of society. If this be true, it is plain that the depositors will be the immediate sufferers, no matter whether the suspension of the Bank may have arisen from complete failure or merely from a temporary ill wind. Should the creditors agree to grant sufficient delay for liquidation, the shareholders of the Bank will be able to hold a conference to settle its accounts and to pay, if necessary, their own monies for its debts, so that no loss may be entailed upon the creditors. But if the creditors refuse to grant such delay, it may possibly happen that, as the Bank is a private institution of unlimited liability, some of its shareholders who are under the obligation of paying the Bank's debts will be required, if solvent, to pay several tens of thousands of *yen*, even though they hold only one or two shares. This was the case with a certain English gentleman, who, holding but one single share in the Glasgow Bank, was obliged to pay upwards of 1,200,000 *yen* out of his private purse when the concern became bankrupt. Thus the failure of the Maruya Bank is likely to produce serious results.

We hope in behalf of the Bank, its shareholders, its creditors, and society at large, that no results of a disastrous nature will ensue. We have lately heard that the Bank has entrusted the adjustment of its affairs to a certain prominent person in the capital, who possesses a high reputation for virtue and talent. It may, therefore, be supposed that some judicious scheme will be devised for the benefit of shareholders and creditors, so as to avert total bankruptcy, if possible, and, if not, to dissolve the institution by paying off the debts by composition. Honesty and his good reputation will certainly enable the liquidator to attain his end without any serious difficulty. Properly speaking, a bank owes its maintenance to public credit, and therefore its inability to resume business after suspension does not end there, but the consequences of such inability seriously affect society at large. We earnestly hope that both the Maruya and Oriental Banks will not be dissolved.

THE PROFLIGACY OF JAPANESE WOMAN.

(Translated from the *Hochi Shimbun*.)

Profligacy is the source of great evils. It ruins a family as well as a nation. This is only too well proved by the history of every nation, ancient and modern, foreign and domestic. Legends, romances, and poetry show the inevitable consequences of licentiousness. The horrible nature of such evils is well familiar to all men. Although we do not desire to comment upon this great curse in detail, yet we cannot help saying that the conduct of our women tends to impair the national reputation. That ancient sage Sorai says in one of his works:—"Profligacy is not considered a shameful act, and its abuses have reached an extreme limit." This statement may well be applied to the social condition of to-day. If we do not take some energetic steps towards amelioration, this corruption will so greatly increase that our

national honour will be jeopardized. It seems that our nation has already gained more or less notoriety for social corruption. We dare no longer remain indifferent to such a state of affairs.

Even though the dissolute conduct of our women is highly reprehensible, some persons might still be disposed to silently ignore it were it confined to districts where foreigners could not easily penetrate. But indifference becomes impossible when we perceive that our women are disposed to emigrate to Yokohama, Hiogo, Nagasaki, and Hakodate, and many other localities where foreigners are settled, and that there they pursue their profligate trade without any sense of shame,—nay, even with a certain pride. Yet even this wide-spread prostitution might be tolerated; but it is a shameful fact that Japanese women have gone to foreign countries across the wide ocean, and have made themselves notorious for extreme licentiousness. Our patriotism forbids us to keep silence any longer, however much we dislike to approach the subject. The whole matter is unspeakably sad. Europe and America are separated from us by broad oceans, and a journey to those continents is not easily undertaken even by men. There may not be many women who have gone thither as prostitutes, but in some ports of Korea, China, and Russia, where there are small congregations of Japanese settlers, there are already many profligate females. It is true that Korea enjoys a lower degree of civilization than Japan, and is therefore inferior to the latter in point of customs and manners, as well as in the national constitution; yet it cannot be denied that, so far as their women are concerned, the former is not far behind us. Even the prostitutes and *geisha* of Korea do not behave themselves in an unbecoming manner, but endeavour to attend upon distinguished visitors with grave composure. It is said, however, that since Japanese harlots went over there and set the example of open prostitution, the native females have been astonished at the growing popularity of these women, and endeavoured to compete with them by lowering the price of their wicked deeds. All shame upon our women of low birth, so licentious and contemptible that they have not only managed to corrupt the customs of this people, as well as to demoralize our youth, but have also gone to Korea, and, taking advantage of the intellectual superiority of our nation, have induced her women to follow their example. That Chinese are immodest and libidinous is a fact well known to all, and so disgusting is their conduct that many hold one and all in extreme contempt. We have lately heard that the behaviour of Japanese women in Shanghai and other Chinese ports is even worse than that of the Chinese themselves, and that the native residents of these ports point a scornful finger at them. Alas! the licentious conduct of our women is more than sufficient to ruin our national "honour." But these ignorant and villainous women have not contented themselves with prostitution in their native land, and, plying their foul trade in trans-Pacific countries, have aroused the contempt of the Chinese against us. Who would not sorrow over such a horrible state of affairs; those, especially, who prize the reputation of our people? The latest correspondence received from Vladivostock says that the Japanese settlers in that port number 400, of whom three-fifths are males and two-fifths females. We were surprised at this great number of women, but in the latter part of the letter we found the following statement:—"The women are chiefly prostitutes, and mistresses of foreigners, while a few only are married to Manchurians. Most of the men keep houses of ill-fame; some are employed as waiters in these dens, and others as servants of foreigners. The females leave their houses both day and night, jest coarsely in the public thoroughfares, and talk with intoxicated sailors and natives in a most noisy and impertinent manner. It is too disgraceful a sight to be borne with patience. There are women who wear tawdry apparel and keep their hair undressed, women with

demoniac faces distorted with vice who infest the wine-shops and go about partially nude: these are prostitutes bought by Manchurians from their masters. The poor women who, scantily dressed, take foreign children in *jinrikishas* to the public gardens and through the streets, are the wives of Japanese settlers and the mistresses of foreigners. Those who stand by the road side at night, and pull the sleeves of passers by, are Japanese women who lead the most wicked and fearful lives. As this is the actual state of affairs, the profligacy of Japanese women forms a constant topic of conversation among the residents of Vladivostock. They are vituperated, despised, and denounced to such an extent that we can hardly keep our patience. Europeans have even intimated that the shameless women of Japan seem to be the chief articles for export, and they have refrained from making acquaintance with Japanese women, whether of high or low class, as they despise them all without discrimination." Is it not truly astonishing that Japanese females of low birth should have so dreadfully lowered our national honour and prestige?

Although these shameless women have not yet undertaken to ply their trade outside of Russia, Korea, and China, they will probably extend their nefarious enterprise to Europe and America. Above all, as San Francisco is not far distant from our country, and is the home of a large number of Orientals, that port is most likely to be attacked by bands of Japanese prostitutes, and if these harlots once reach America, encourage prostitution, and serve to demoralize the citizens, the Republican Government will not remain indifferent to such abuses, but will speedily publish a number of regulations to prevent the influx of Japanese women of ill-fame, just as it forbade Chinese immigration. That Chinese were forbidden to immigrate to America is a disgrace to the Empire, and if a similar step is taken against our female immigrants we shall feel extremely humiliated. And even though Japanese women of ill fame were not prohibited from immigrating to America, how would that country speak of us? Our country's fair name and honor would suffer terribly. The Japanese prostitutes in Russia, Korea, and China are already numerous enough to cast opprobrium on this country, and how much more would this be the case should they ply their evil trade in America or Europe? The situation is one of the greatest delicacy and danger. We regret it deeply, and have endeavoured to show that even the actions of shameless women can endanger our national prestige. It is to be hoped that those who take an interest in the welfare of this land will direct their utmost attention to these facts. As regards the methods of doing away with the existing abuses, we shall express our opinions at some future time; but, for the present, we earnestly request the public to give the matter their grave consideration.

THE SETTLEMENT OF THE FRANCO-CHINA DIFFICULTY.

(Translated from the *Nichi Nichi Shimbun*.)

On the afternoon of the 12th instant we received a telegram announcing the amicable solution of complications between France and China. The telegram in question is said to have been received by a certain trustworthy commercial company in Tokiyo from its branch office in Shanghai, and to have been despatched from that port at 3.30 p.m. Accordingly, we are disposed to think that it is worthy to be believed to a certain extent, if not in its entirety. We published it in our issue of the 13th instant. But as the telegram referred to gave but the simple announcement that the *difficulties between France and China were settled*, we were, at the moment, unable to ascertain the nature of the treaty concluded. According to another telegram from London, dated 12th inst., and received in the capital on the 13th, it seems that the *two countries have signed a treaty of peace which pro-*

vides that the French protectorate in Tonquin and Annam is to be acknowledged; that the provinces of Kwangtung, Kwangsi, and Yunnan are to be opened to trade, and that France will renounce all claim to an indemnity. A third telegram, received on the 14th instant, states that Captain Fournier, having received special instructions from the Cabinet of his country, opened negotiations with Li Hung-chang, and signed the following treaty at Tientsin:—

Art. 1.—The Chinese Government shall open up Yunnan and the neighbouring provinces to French trade.

Art. 2.—The Chinese Government shall recognize the right of France to protect Annam and Tonquin.

Art. 3.—The frontiers of Tonquin are to be settled by natural boundaries.

Art. 4.—A commercial treaty between France and China shall be signed as soon as possible, and the latter country shall grant the former such terms as become a friendly Power.

Art. 5.—The Chinese troops must be withdrawn from Tonquin.

Art. 6.—The French Government shall renounce all claim to a pecuniary indemnity.

The above stipulations are said to have been signed at the Viceroy Li's residence, on Sunday, the 11th instant.

This treaty enables France not only to take possession of the whole of Tonquin and Annam, but also to oust China permanently out of her claimed suzerainty over these two provinces. The Middle Kingdom must withdraw her troops from these provinces and abandon all relations with them. The French are no longer to meet with opposition in carrying on trade relations with Yunnan and the neighbouring provinces. The enthusiasm displayed by the French in occupying Tonquin has evidently arisen from their desire to establish trade with Yunnan, Kwangtung, and Kwangsi, and they have now more than fully obtained their desire. But, on the other hand, all that China has gained in the contest is nothing but her own indemnity, which she is not forced to pay the French. In other words, she has barely escaped with her life. The Annam and Tonquin affair has remained unsettled for more than a year, and, during that time, things have been in so critical a condition that the least false step on either side would have led to a war. It appears that, as a rule, the diplomatic policy of the Chinese Government results in botching matters whenever complications with other nations reach a crisis. We always found it difficult to persuade ourselves that the recent embroglio with France would lead to war. Yet the resolute demands of the Marquis Tseng, and the active measures taken by the Chinese for the defence of their littoral, and the like, induced us for a moment to suppose that China had this time resolved to forcibly resist France's claims. These warlike preparations were carried on by both nations, and it was often doubtful whether such complications could end without bloodshed.

We also supposed that even though terms of peace were offered China, she would not accept them at once. It is most surprising that she should have so quietly complied with the demands of France. The French have succeeded admirably in occupying Tonquin, and forcing China to believe that they held the country as a hostage for her good behaviour. Their success can only be ascribed to the fact that they had a marvellously correct opinion of the policy of the Chinese Government.

The resolute action of the Marquis Tseng at Paris may have arisen from a spirit of bravado, and it is not to be wondered at that the Chinese troops despatched to the west of Bac-ninh were hopelessly routed. Nevertheless, when the party of Prince Kung were replaced about a month ago by the Ministers of the two Princes Ch'un and Li, we declared that, in spite of ministerial changes, the two parties referred to were not separated from each other by reason of their policy, but that they were rather disposed to offer mutual resistance for the sake of political power. To regard them, therefore, as two distinct parties—the one advocating war and the other, peace—would not have been thoroughly correct. But although we believed that the warlike tendencies of Ch'un and Li were not so deep-rooted as many were inclined to suppose, we never dreamed of their being really in favour of peace. We thought it extremely strange that the Viceroy Li Hung-chang was still permitted to maintain his prominent position, and that he did not share the fate of other Ministers. But now we understand that the new Cabinet in Peking has advocated peace from the outset. Although we do not know how matters came to so sudden a standstill, yet the people of China and all other nations are to be congratulated upon the amicable

solution of these complications. The information we have received announces that Li Hung-chang was accredited by the Peking Government with full power to carry on peaceful negotiations, and that he communicated his desire to Captain Fournier at Tientsin. Captain Fournier reported the matter to the Cabinet at Paris, and, after receiving special instructions, opened negotiations with Li Hung-chang and concluded a treaty in three days. Therefore, the negotiations in question appear to have opened on the 7th or 8th instant. It is extremely difficult to become familiar with the actual condition of the Chinese Government. Nor is it an exaggeration to state that its policy is so changeable that its real nature is indeterminable. If the Chinese had really anticipated disadvantageous results from a war with France, why did they not long ago abandon their vain claims to the suzerainty of Tonquin and Annam? Why did they not accept the propositions advanced by France, divide those provinces, and settle their boundaries amicably? If they had entered into negotiations at the outset, they might have been able to conclude a treaty much better than the one they have just signed. We cannot but regret that they have lost all opportunity to maintain their prestige. It may be justly supposed that in enforcing the present treaty many points will arise which will necessitate further negotiations, and that the results will materially affect the policy of China as well as that of Western and Eastern nations. Although the peaceable conclusion of the difficulties between France and China may be beneficial to the latter country, yet we cannot help regretting that the Middle Kingdom should have had many of its rights wrested away by France—losses for which there is no compensation and nothing to show.

THE REVISION OF THE STAMP REGULATIONS.

(Translated from the *Nichi Nichi Shimbun*.)

It was in February of the 6th year of Meiji (1873) that our Government published the Stamp Regulations by Notification No. 56 of the Privy Council. These Regulations were subsequently revised in several Notifications until they were entirely abolished by Notification No. 81 of the Privy Council, issued on the 29th July, 1874. New Regulations were then published, and have been in force up to the present time. On the 1st of this month, however, another ordinance was promulgated over the signatures of the First Minister of State, H.E. Sanjo Saneyoshi, and the Minister of Finance, H.E. Matsukata Masayoshi, with the Imperial sanction. This ordinance is to come into force on the 1st July of this year. To be brief, the new ordinance is a revision of the previous regulations, with which the public are well acquainted. As the ordinance in question, like the postal regulations, bears a relation to most public transactions, it must be carefully perused and kept constantly in mind, so that the people do not lose their rights nor offend against the law. It is scarcely necessary to say anything about the nature of the old and new regulations, as a careful comparison will clearly show whatever differences there may be in point of severity or lenity. A good knowledge of the new ordinance will suffice for the present; neither shall we take the trouble to compare the two systems, in order to point out the facilities afforded by the new regulations. According to the old system, all documents, with the exception of those in which it was not necessary to mention the amount of money, were to be made out on ruled paper known as *Kaishi*, so long as the sum concerned did not exceed ten *yen*. It was not necessary to affix stamps to such documents. Debentures for more than ten *yen* needed a one *sen* stamp, and every further ten *yen* involved an additional duty of one *sen*, no matter how large the amount. The new Ordinance requires the attachment of a one *sen* stamp to debentures for more than one *yen*; but for sums up to four thousand *yen* the stamp duty does not exceed one *yen*. Although the rate of duty may, in some respects, be neutralized in the two systems, according to the amount of money specified, *the new ordinance appears, on the whole, to have more or less lowered the stamp duty*. What we regard as a great boon, is the total abolition of the use of *Kaishi* in ordinary debentures. According to existing rules, we are not only compelled to use ruled paper, but also to affix stamps to our debentures; and therefore we have a double trouble, and, in reality, a double stamp duty. Debentures for ten *yen* are actually subject to a duty of *sen* 1.7. Experience shows that merchants who conduct business on a large scale are frequently embarrassed by reason of the present system, to be abrogated, happily, on the 1st July next. After the abolition of the present

system, *Hanshi*, *Minogami*, *Hankiri*, or any other kind of paper may be used in debentures, according to choice; and the waste of paper by reason of bad writing or copying will no longer entail loss upon the writer. These circumstances, together with the reduction of the stamp duty, will not fail to promote the public good.

Although it seems convenient to make exclusive use of *Kaishi* without stamps, yet it will be rather difficult to find suitable paper for various contracts or debentures; especially as the number of words to be written is not fixed. Indeed, it may be quite convenient in business transactions to employ *Kaishi* for bills of exchange, promissory notes, and money orders on security, all of which documents require but a definite number of words, such as a statement of the amount of money, the date, and names of the persons concerned. The present revision of the regulations extends also to the papers to be used for such purposes. For instance, thin dark paper worth four *sen* is to be used in bills of exchange bearing a value of *yen* 150; and light bluish paper worth fifty *sen* for promissory notes with a face value of *yen* 5,000. In both cases no stamps are needed, and immense facilities are thus afforded.

Yet some are inclined to assert that all the documents made out in contravention of both old and new regulations will not be accepted in courts of justice, and that the possessors of such documents will be required to resign the rights or claims to which they are entitled. It is said, however, that this will not be the case, so long as proper corroborative evidence can be produced. As for ourselves, we would assert that, since the new Stamp Regulations have only to do with the collection of taxes and are not based on the so-called law of testimony, they have no reference to any such law. But there are two questions that may arouse suspicion. One of these relates to Article IV. of the new regulations which provides that if the ledgers or debentures to which stamps should be affixed are not stamped in accordance with Article V. they will not be accepted in civil courts. . . . If the notes or bills which do not require the attachment of stamps are made out on other than the appropriate legal paper, in contravention of the Regulations, and if fines are paid in accordance with Article XIX., will they be received in civil courts? This is a question which demands solution. If they are to be taken in the courts, the efficiency of the new regulations will be impaired. Are they, then, not to be accepted? We do not find any provisions which distinctly forbid their acceptance. How are they to be dealt with? Some are disposed to think that, as the use of notes or bills is generally encouraged by the laws of the country, the fact of their having been drawn up in contravention of the Regulations is not likely to injure their validity. We do not wish to express an opinion on the subject, and would rather leave it to the judgment of the public. The other question also relates to Article IV., which forbids the acceptance of bills or notes in civil courts, if they are drawn up in violation of the rules. But how are we to be dealt with in the matter of *oral contracts*? For instance: a person who prepares a debenture for a thousand *yen* will not only be liable to punishment if he neglects to affix a stamp to it to the value of thirty-eight *sen*, but he will actually lose all legal claim to the debt. If, however, he lends that sum under the security of a trustworthy person without receiving a debenture for it, he will not only save himself from falling into the clutches of the law, but he can also request the court to accept his document whenever he desires to sue the debtor. He will by no means forfeit his rights if he can produce corroborative evidence in support of his claim. Although it is true that the absence of a debenture may sometimes lead to the suppression of evidence, yet there is no reason to assert that *oral contracts* will not hold good in a court of justice. Now, if the court is to accept oral contracts and reject unstamped debentures, the question naturally arises whether such a proceeding would not savour of illegality. How our Government will solve the problem we are unable to predict; and we simply refer to it so that our thinking men may give it their earnest consideration. Article XIV. of the present Regulations, which provides that persons who, having discovered offences committed against the ordinance, and informed the proper authorities of the fact, shall receive half the amount of the fines exacted from the offender—has been withdrawn from the new Regulations, and this may have arisen from the idea that those who willfully impeach others in order to show their own honesty are not worthy of a reward. Many other alterations have been made, but it is unnecessary to dwell upon them any further. And before we lay aside our pen, we would state our conviction that the alterations in question are destined to lessen the trouble of the people, and are a decided improvement upon the old regulations.

NOTIFICATIONS.

NOTIFICATION No. 16 OF THE COUNCIL OF STATE.

It is hereby prohibited to hunt seals and otters throughout the Hokkaido. Persons violating this prohibition will be dealt with according to the provisions of Article CCCLXXIII. 1 of the Criminal Code. The catch shall be confiscated, and the price of any seals or otters sold shall be exacted from the sellers.

N.B.—This prohibition does not extend to those who have received special permission from the Minister of Agriculture and Commerce.

By Imperial Decree.

PRINCE TARUHITO,
Second Minister of State.
SAIGO YORIMICHI,
Minister of Agriculture and Commerce.

May 23rd, 1884.

NOTIFICATION No. 17 OF THE COUNCIL OF STATE.

The words "and from Ogaki to Yokkaichi, Ise, Miye Prefecture" shall be inserted after the words "along the Nakasendo" in Article I. 2 of the Nakasendo Railway Bonds Regulations, published by Notification No. 4 of December, 1883.

By Imperial Decree,

PRINCE TARUHITO, Second Minister of State.
MATSUKATA MASAYOSHI, Minister of Finance.

May 22nd, 1884.

NEW CONVERTIBLE BANK-NOTES.

NOTIFICATION No. 18 OF THE COUNCIL OF STATE.

Convertible Bank-Notes Regulations have been established in accordance with the following articles, and will be enforced on and after the 1st July, 1884.

By Imperial Decree,

MATSUKATA MASAYOSHI, Minister of Finance.
PRINCE TARUHITO, Second Minister of State.

May 26th, 1884.

N.B.—Notification No. 100 issued in September of the 7th year of Meiji (1874) will be abolished after one year from the date of this Notification.

CONVERTIBLE BANK-NOTES REGULATIONS.

Art. I.—Convertible bank-notes shall be issued by the Nippon Ginko, in accordance with Article XIV. of the same Bank. These bank-notes shall be exchangeable for silver coins.

Art. II.—The Nippon Ginko shall provide the silver fund equivalent to the amount of notes issued, and appropriate it to their exchange.

Art. III.—The convertible bank-notes shall be of seven denominations:—1 *yen*, 5 *yen*, 10 *yen*, 20 *yen*, 50 *yen*, 100 *yen*, and 200 *yen*. The amount of each issue shall be determined by the Minister of Finance.

Art. IV.—The convertible bank-notes can be used in the payment of taxes and customs' duties, as well as in all other transactions.

Art. V.—The convertible bank-notes shall be manufactured by the Nippon Ginko according to a pattern indicated by the Minister of Finance, and the Bank shall report to the Minister of Finance the amount of notes manufactured.

Art. VI.—The Nippon Ginko and its branch offices shall cash these convertible bank-notes upon presentation during business hours.

Art. VII.—When gold or silver coin is presented for exchange with the bank-notes, the exchange shall be made without charge.

Art. VIII.—The Nippon Ginko shall keep a daily register and a monthly account with respect to the issue of the convertible bank-notes, and shall report on them to the Minister of Finance.

Art. IX.—The Minister of Finance shall instruct the Government inspectors to the Nippon Ginko to specially superintend all matters in connection with the issue of convertible bank-notes. These supervisors may at any time inspect the amount of cash on hand, as well as all the books of the Bank.

1 Article 373 of the Criminal Code reads as follows:—Those who shall have stolen from forests or quarries, wood, bamboos, stones, minerals, or any other products; or who shall have stolen from rivers, pools, lakes, or seas, products maintained or improved by another person, shall be punished with imprisonment with labour for a period of from one month to one year.

2 Art. 1 of the Nakasendo Railway Bonds Regulations states that the funds "shall be applied to the construction, and employed as the working capital, of a Railway along the Nakasendo, between Takasaki in the province of Kodsuke, Gunma Ken, and Ogaki, in the province of Mino, Gifu Ken." Yokkaichi is a town on the Tokaido, 3 1/2 *ri* distant from Kuwana, the chief town of Ise province. The two great routes—the Tokaido and the Nakasendo—one following the south-eastern coast and the other passing through the central provinces, approach each other closest between Yokkaichi and Ogaki, where they are barely 25 *ri* apart as the crow flies.

Art. X.—Convertible bank-notes, when torn or otherwise damaged, shall be exchanged for new notes.

Art. XI.—The Minister of Finance shall establish definite rules with regard to the manufacture of the convertible bank-notes, their redemption, and the manner of exchanging damaged notes.

Art. XII.—The counterfeiting or disfigurement of convertible bank-notes shall be dealt with in accordance with the Articles of the Criminal Code referring to the counterfeiting of paper currency.

IN THE TOKYO COURT OF APPEAL
(KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—SATURDAY, May 24th, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsu Bishi Mail Steamship Company's steamer *Akitsuishima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsuishima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossetsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

Mr. Ramsay objected to Mr. Uchiyama handing to the Court a written statement of his argument delivered at the last sitting, stating that the proper way would have been for him to have handed it in on that occasion so that the court interpreter could follow him and check it. Mr. Uchiyama replied that Mr. Ramsay was under a wrong impression. The documents were copies of the extract from the law book, reports of marine courts of enquiry held in England, and other matters referred to by him on the 21st inst.

Mr. Ramsay said he perceived the documents Mr. Uchiyama proposed to put in contained 9 pages. He ought only to be allowed to put in the words that he had actually spoken in Court. Mr. Uchiyama had not quoted the cases in fully as now written down.

Mr. Uchiyama explained that at the last sitting he had only given the points for shortness. At that time he had stated to the Court that he would furnish full copies of the matter referred to. The present documents did not contain anything new. They were only full copies of what he had cited at the previous hearing.

The Court said in that case it did not see why Mr. Ramsay should object.

Mr. Ramsay then expressed his willingness to withdraw the objection if Mr. Uchiyama thought the documents would strengthen his case.

Mr. Uchiyama then resumed his address to the Court on behalf of his client. Most of his speech, spoken in Japanese, was extempore and therefore we would say that the following report, although it contains the points of his argument, loses its force by interpretation.

The attorney for the respondent, speaking about the bearings of the light not having been taken, said it was impossible on account of the funnel. Mr. Uchiyama contended that the compass on the *Akitsuishima Maru* had always been in the same place. For five years the appellant had successfully navigated the vessel through all kinds of weather, with the compass in the same position, and therefore it seemed very clear that the master was able and did take bearings by it. Speaking about the contention that the appellant never attempted to ascertain his position, &c., Mr. Ramsay had quoted from the evidence of Captain Frahm, among the questions and answers there being the following:—Q.—"How was ship's position ascertained at 5.30 p.m. on the 9th?" A.—"By my own calculations and the log." Mr. Ramsay then added "yet there is nothing recorded in the log."

Mr. Uchiyama here explained to the Court the meaning of log-book and patent-log, after which he went on to say that Mr. Ramsay had tried very hard to make the Court believe that when the appellant gave the above answer he meant the log-book. But he contended that that was impossible, because Captain Frahm in his evidence had also said that he did not see the log-book. Therefore what he meant to say was that he had worked up the ship's position by his own calculations aided by the patent-log, not the log-book. This, Mr. Uchiyama maintained, was the true meaning of the appellant's answer. Mr. Ramsay, however, had tried to twist it round to aid his own purposes. Regarding Mr. Ramsay's lengthy argument as to the statement made by him (Mr. Uchiyama) that the appellant was unable to take any observations during 40 hours previous to the catastrophe, he

(Mr. Ramsay) although he had tried very hard, had only been able to show that correct observations were taken within 22½ hours before the disaster. He (counsel) had made a slip of the tongue and instead of saying about 14 hours before the sighting of the light, he had said 40 hours. If 14 hours before the sighting of the light was taken, it would give about 22 hours before the disaster, as stated by Mr. Ramsay. Mr. Ramsay, quoting from the *Japan Daily Mail*, had said that he (Mr. Uchiyama) had said "that for 3 days previous to the catastrophe they had been unable to take an observation." He denied having made such a statement, and considering the Japanese vocabulary of the *Mail's* reporter contained only about 10 words he would like to know what reliance could be placed on his interpretation. The *Japan Gazette*, whose reporter had a good knowledge of the language, contained no such statement. He would, however, go entirely by the record of the Court, which although it stated that he had said that there was bad weather during 3 days, contained no mention of observations not having been taken during that time. The respondent had further tried to show that "although Mr. Uchiyama Rossettsu stated that from noon to 5.30 p.m. on the 9th, the appellant could not get to his room" it was quite clear that he could, in support of which he quoted one of the masters's answers, namely:—"I had been on deck for 48 hours. I had no rest at all. The greater part of the time I was on the bridge, and I only went below to consult the charts and barometer and to take my food." Mr. Uchiyama contended that this was only a general answer, referring to the last two days and not to the particular time between noon and 5.30 p.m. on the 9th, which, he maintained, became clear by looking at another part of the appellants's evidence given on the 12th November, viz., "The position of the ship was not worked up by me or the chief officer at noon on the 9th. I could not get into my room and I don't think the chief officer could get into his." This was sufficient to prove the point, and to show that when the hurricane was at its height the master could not enter his room. Referring to the report of the *Khiwa*, Mr. Ramsay had produced a letter to show that the vessel was about 500 miles from the *Akitsuishima Maru* when she experienced the current which took her 40 miles out of her reckoning in 12 hours. This, Mr. Uchiyama contended, did not affect his argument in the least. He had no desire to prove that the *Khiwa* was at the same place as the *Akitsuishima Maru*, although she was in the same typhoon. What he wanted to show was the variableness of the currents on the coast of Japan, where Mr. Ramsay could not deny the *Khiwa* was. The currents on that coast, he remarked, were more variable than on any other in the world; so much so that experienced ship-masters, who had sailed on the coast for seventeen years, had told him that they did not yet know the currents, as they often changed with the direction and force of the wind. As an instance, and to prove this, he had mentioned the case of the *Khiwa*. This vessel was coming from Hongkong and approaching Omai-saki, a course that one would think was as well known as the Ginza in Tokio, and yet she became 40 miles out in 12 hours. Regarding this subject, what had Captain Young said? Q.—"Under circumstances in which the *Akitsuishima Maru*, during the 48 hours or more, had been placed, and considering the variableness of the currents, was 20 or 24 miles much for the captain to be out in his reckoning?" A.—Certainly it was not, even if he had been 60 miles out in his reckoning I would not consider it extraordinary." That evidence alone, Mr. Uchiyama said, settled the question, and Mr. Ramsay might have saved himself the trouble of getting the letter. At the close of sitting on the 10th, Mr. Ramsay had said:—"The Marine Court did not take into its consideration the master's neglect in disregarding his owner's instructions; it was outside the province of the Court to do so." He (Mr. Uchiyama) was glad that Mr. Ramsay admitted that such private regulations had nothing to do with the Court of Enquiry, because he thought, at first, by the length at which Mr. Ramsay had quoted the regulations in the answer to the petition of appeal, that he would have to waste time in arguing about a matter which now became unnecessary, owing to Mr. Ramsay admitting that it did not bear on the case.

In continuing his remarks on Mr. Ramsay's argument, Mr. Uchiyama said that Mr. Ramsay had exerted himself strenuously and at great length to prove that on the 9th it was clear weather, and not as dark as he (Mr. Uchiyama) would have the Court to believe; but Mr. Ramsay had not got further with his proof than noon of that day, when the real hurricane commenced. From that time forth there was nothing said about clear weather. What did Captain Young say, in answer to a question from Mr. Ramsay, regarding

the darkness in those regions at that time of the year? Q.—"Would you assume the lee-way by guess?" A.—"I would have to guess mostly, for at that time of the year there is more night than day." When he Mr. Uchiyama used the words *ni-san-ken* (2 or 3 ken) he did not mean literally two or at the most three ken, but in the way it was always used in the Japanese language, i.e., a few ken. Regarding the trim of the vessel, it had not been his intention to state anything contrary to the evidence, and if he had said that the draft of the *Akitsuishima Maru* was 6 feet and aft from 8 to 10 feet, it was merely a mistake in reading the record, which could be easily understood by looking at the figures used. These were 6, 8, 10, as given in evidence, but meant 6 feet 8 or 10 inches by the stern. Mr. Ramsay had shown a drawing of the *Akitsuishima Maru* to the Court, but had neglected to state that she was built at Glasgow, England, as a great many colliers were, to go to sea without cargo and with only the ballast tanks filled with water. This would make the vessel in a trim of about 6 feet or so by the stern, which trim she was in on the present occasion. On the question of a vessel's trim, what did Captain Young say? Q.—"Do you consider a vessel seaworthy drawing 6 feet 8 or 10 inches by the stern?" A.—Some vessels might be, but whether the *Akitsuishima Maru* was or not I am not prepared to say." However, there was no necessity to go at length into the question of trim. The only point to be considered regarding the trim was, whether the ship was lost through the improper trim or not? Emphatically she was not. And why not? Because the evidence showed, and Mr. Ramsay had admitted in his statements to the Court, that from about 9 a.m. on the 9th, i.e., long before the light was sighted, and 6 or 7 hours before the accident, that the *Akitsuishima Maru* answered her helm and was entirely manageable. Now, if the vessel was entirely manageable hours before the disaster took place and when the captain, thinking everything safe, had gone below, the question of trim could have nothing to do with the loss of the vessel, and must therefore be put on one side. Mr. Ramsay, in speaking of his (Mr. Uchiyama's) second objection: "The chief officer, a person appointed by the Company, neglected to call the master when he should have done so," said "why so? because the chief officer observed the master so entirely ignoring his responsibilities in regard to the safe navigation of the ship that he (the chief officer) thought he might also disregard the master's instructions to call him." Was the man who said this, Mr. Ramsay, the person who was entrusted with the presidency of the Marine Court of Enquiry? It almost looked as if he desired to return Mr. Werner, poor injured man, his certificate. It was monstrous for a judge to argue that because one man was a thief another would be perfectly justified in stealing also. This expression of opinion by Mr. Ramsay was sufficient to show his incompetency to preside over the Court or plead for the respondent. He, however, would say no more about that matter. He would now hand in a document received by Captain Frahm from the Directors of the Mitsui Bishi Mail Steamship Company which stated that he had been in their employ from 1875 to the 9th November, 1883. The document also stated that during that period he had been chief mate for twelve months, and master nearly seven years, and had given the greatest satisfaction. He also wished to put in a copy of the *London Shipping and Mercantile Gazette* of the 4th April, 1884, which contained reports of two cases recently decided in England, one of which he had already referred to and which was almost the exact counterpart of the present case.

The case referred to by Mr. Uchiyama was an Enquiry held at Glasgow into the stranding of the *Rose*. In this case the master mistook a light which proceeded from a church steeple for the masthead light of a tug; the immediate cause of the stranding of the vessel being attributed to the course laid down by the master not being steered. The judgment concludes as follows:—

The Court was asked to deal with the certificates of the master and chief officer. The counsel who defended the master and the chief officer admitted that there had been blame in this case. In the opinion of the Court there was blame. The Court thought there was blame attachable to both those gentlemen. In the first place—for he would assume that the course steered was not N.N.E. but E.N.E.—there was an alteration of four points. That should have been seen by the master. The mate also was in our opinion to blame. It was perfectly true that the master, when he comes on deck, takes the charge; but still that does not relieve the mate from those duties which he was called upon to discharge. The master ordered a course of N.N.E. to be steered, and it was the mate's duty to see that course was kept. The Court did not believe the statement of the man at the wheel that he steered N.N.E. We believe he steered an E.N.E. course. The fault seemed to him to be that the master did not see the position of the Cumbrae Light, and the mistake of the mate was that he did not see the order that had been given properly carried out. At the same time, this was not a case in which the Court felt disposed to deal with the certificates of those gentlemen. The certificates that had

been produced showed them to be men of good character and steady in every way, and under the circumstances, although they were guilty to some extent of neglect it was not such neglect as would induce the Court to deal with their certificates.

The second case was the stranding of the steamer *Thetis*. In answer to the question put to it,

The Court replied—1. A proper course was set and steered after rounding the north pier buoy. 2. The course set after passing Hartley Buoy was too fine, taking the state of the weather and tide into consideration. 3. The lead was not used with sufficient frequency. 4. There was no evidence to show that a good look-out was not kept. 5. The vessel was not navigated with proper and seamanlike care. 6. The Court had no reason to believe that the vessel was over-insured. The Court found the master, Henry Gaze, in default, but, having regard to his good character, did not deal with his certificate. At the same time the Court censured him.

In both cases, Mr. Uchiyama remarked, the masters were found at fault. Nevertheless, the Court, far superior ones than could be headed by Mr. Ramsay, did not desire to deal with the certificates of the masters. They looked at their past career and would not for one's mistake, and at the most Captain Frahm's was only an error of judgment, deprive a long proven sailor, a good, sober, and energetic master, of his livelihood; for taking away a man's certificate meant depriving him of the means of earning bread for himself and the family. What was the past career of the appellant? He could show better service and better certificates than the man who judged him. He held an English and a Danish master's certificate, in addition to a Japanese. What certificates could Mr. Ramsay show? For further proof regarding the appellant's character and ability he referred the Court to Captain Young's evidence. In the first case quoted, which was very similar to the present, what was said regarding the responsibility of the master when he had given over charge of the ship to the mate? "It is true the master takes charge when he comes on deck, but that does not relieve the mate from his duties." In this case the master not being on deck, where did his responsibility come in? He would conclude by briefly referring to his former assertions, which were. (1) The captain was misled by a false light which under the circumstances might easily have been mistaken for the Shiriya-saki light, and all that could be said on that point was, not that any inability or carelessness had been proved, but at the most an error which might easily be made by anyone. (2) That the direct cause of the loss of the ship was owing to the action of the chief officer, whose duties under the circumstances were plain, as was clearly shown by the cases quoted. On the question of calling the captain what did Captain Young say?

Q.—"Considering that the *Akitsuishima Maru*, after losing sight of the light ran for about 2 miles before striking, would not the master have had plenty of time to save the vessel if the first officer had done his duty and at once called him after losing sight of the light?" A.—Yes, he would have had plenty of time."

Mr. Uchiyama, continuing, said it must not be forgotten that when the appellant left the deck in charge of the mate he was greatly fatigued by his exertions during the past 48 hours. In addition to his previous assertions he now desired to add a third reason why the Court was in error, which was that, even supposing the master to have been in fault, no just Court would deprive a man of the means of obtaining a livelihood for one such error as is claimed the appellant committed. They would have enquired into his past career. If they had found that he was a drunkard or an incapable man the case might have been different, but when they found that he was a steady, thoroughly competent, hard working man, as the appellant was, who had met his first accident during a period of 25 years, they would have returned him his certificate, as was done in the two cases lately tried in England, in both of which the masters were in fault. In concluding, Mr. Uchiyama said he did not yet know if he would put in a written argument, as he considered he had proved all his points, while his opponent had confined himself to big talk, all smoke and no fire. He, therefore, prayed the Court for a judgment ordering the return of his client's certificate which, he said, had been most unjustly taken from him.

Mr. Ramsay remarked that before the Court adjourned he wished to say a word regarding the two cases quoted by Mr. Uchiyama. These cases were tried in England according to English law. Japan had her own laws and what occurred in England had nothing to do with the question.

Mr. Uchiyama said that the present was the first case of the kind tried in Japan, and therefore he had produced the reports of the cases to show his Honour how the experienced judges of England dealt with such matters. Of course it was for his Honour to consider whether he would be guided by them or not.

The Court adjourned till the 2nd June, at 9 a.m.

The following telegram from Captain Fournier appears in *Le Saigonnais* :—

Tientsin, 13th May.

By order of the Minister of Marine, I have the honour to announce that the preliminary convention which I proposed to the Viceroy Li Hung-chang has been entirely approved by the Court of Peking and the French Government, and was signed on the 11th May at Tientsin.

It stipulates the withdrawal of the Chinese troops from Tonquin, respect for all our past and future treaties with Annam, a treaty of commerce opening in their entire extent the common frontiers of Tonquin and China to free traffic in goods, with guarantees; advantages for French trade. Will send you the text.

London, May 19th.

AN EXPEDITION TO BE SENT TO KHARTOUM.

It is reported that the British Government has resolved to send an expeditionary force to the relief of the garrison at Khartoum almost immediately.

A BRITISH OFFICIAL MADE PRISONER BY THE ARABS.

The British Agent at Berber, in endeavouring to escape from that place, has been captured by the Arabs.

[FROM "LE SAIGONNAIS."—M. BLANSUBE TO THE GOVERNOR.]

Paris, 7th May.

THE MUNICIPAL ELECTIONS.

The Municipal Elections have terminated. Everything quiet. Immense Republican majority. Radicalism accentuated about Paris.

TROUBLES IN SPAIN.

The troubles in Spain continue.

THE MAHDI.

The success of the Mahdi continues.

FRANCE AND MOROCCO.

The French Legation at Morocco has lowered its flag.

GOVERNORSHIP OF INDO-CHINA.

Yesterday's papers speak of the nomination of a Governor-General of Indo-China; Admiral Duperré and a high functionary in the Foreign Office are mentioned.

I believe Patenôtre is being sent as Resident to Hué.

THE FRENCH CHAMBERS.

The Chambers will meet on the 20th.

[M. BLANSUBE TO GOVERNOR OF SAIGON.]

Paris, 13th May.

The Tientsin Treaty favourably received.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, MAY 23RD, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
--- represents velocity of wind.
--- percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 43.5 miles per hour on Saturday, at 4 p.m.
The highest reading of the barometer for the week was 30.026 inches on Wednesday at 6 a.m., and the lowest was 29.307 inches on Saturday, at 2 p.m.
The highest temperature for the week was 73.5 on Saturday, and the lowest was 44.3 on Tuesday. The maximum and minimum for the corresponding week of last year were 77.8 and 48.5 respectively.
The total amount of rain for the week was .048 inches, against .669 inches for the corresponding week of last year.

REPORTS.

The British bark *Agnes Muir*, Captain James Lowe, reports leaving Cardiff on the 18th December, 1883, with light variable N. and N.W. winds till the 24th, when experienced strong gale with had squalls, and high sea from S.W. hauling to S. and S.E. Passed Norwegian bark *Rechnild* lat. 40° 08' N. long. 18° 41' W. on the 27th, sighting Island of Palma on the 3rd January, 1884, wind south-westerly, light. Took N.E. Trades in 26° 30' N. 20° 02' W. very light, and unsteady throughout, passing St. Antonio about 4 miles off on the 14th, and exchanged signals with British bark *Mary Hogarth*, of Ardrossan, from Hartlepool for Buenos Ayres, 59 days out; on the 16th January, spoke British bark *St. Andrew*, of St. John's, N.B., from Cardiff, for Rio Janeiro 31 days out, lat. 8° 40' N. long. 25° 48' W. Took S.E. Trades in 2° 30' N., crossing Equator and signalling British bark *Sylhet* bound north, on the 22nd, winds very light; on the 23rd signalled H.M.S. *Rambler* bound north, and on the 27th exchanged signals with British bark *Fiery Cross* from London for Penang, 41 days out. Passed Island of Trinidad on the 2nd February, winds light easterly; On 6th signalled British bark *Bereau*, of London from Launceston, Tasmania, for London 46 days out, lat. 27° 43' S. long 24° 06' W. Had light northerly winds from thence to lat. 36° south, when fresh south and south-east breezes set into Gough Island which was passed on the 14th February, from there to coast of Tasmania moderate variable winds, rounding Tasman Head on the 31st March, distant 5 miles. Had light-winds to Howe Island, passing it on the 7th April, experiencing light airs and calms from there to lat. 9° N., passing Pocklington Reef on the 18th April; Bougainville Island 27th; St. John's Island, 29th; Caru Islands, 30th; crossing the Equator on the 1st May. Sighted Pagan and Algaman Islands on the 12th, light winds from thence to port, making No-sima light at 7 p.m. on the 21st; took pilot, H. Deguchi, on board on the 22nd off Tsurugisaki, and tried to beat up, but gale freshening with hard squalls had to come to anchor in Tateyama Bay for the night; weather moderating next noon proceeded and anchored in the bay at 8 p.m. of 23rd. Experienced strong S.W. and N.W. currents from equator to port.

The British bark *Channel Queen*, Captain Wm. Le Lacheur, from Takao, reports having experienced light variable winds till within forty miles of the Linschoten Islands; thence to port strong variable winds and current setting to the north-east at the rate of sixty miles per day. Arrived at Yokohama on the 23rd May, after a passage of 16 days.

The American steamer *City of Tokio*, Captain J. Maury, reports leaving Hongkong on the 21st May, at 2 p.m. with fine weather throughout the passage. Arrived at Yokohama on the 27th May, at 8.15 a.m. Passage, 5 days and 15 hours.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 29th May, at 6 p.m. with light N.E. breeze and fine weather to Rock Island; thence to port fresh N.E. breeze and thick rainy weather. Arrived at Yokohama on the 31st May, at 7.30 a.m.

LATEST COMMERCIAL.

IMPORTS.

This season of the year is usually very dull, owing to the attention required by produce crops, and the present forms no exception, as the Market is in an extremely quiet state.

COTTON YARN.—Business has been on a very small scale, dealers not caring to speculate, and, having few orders in hand, quote prices 25 to 50 cents lower, whilst holders, encouraged by the firmness of Manchester, refuse to sell at such rates, and nearly all quotations are quite nominal for English Yarns. Bombays have been sold to a moderate extent at slightly lower prices.

COTTON PIECE GOODS.—The Market has continued dull, and very few transactions have been recorded.

WOOLLENS.—Some large sales of Mousseline de Laine have been reported at lower prices; also a fair quantity of Orleans; but in other descriptions there is next to nothing doing.

EXPORTS.

RAW SILK.

Our last Report was of the 23rd instant, since which date there has been no business done in this Market, and for the third consecutive week we have no Settlements; a state of things without parallel for many years past. Arrivals have come in from the producing districts, but an equal amount has been withdrawn for the interior trade, and for "direct" Export; leaving the Stock same total as last week, although composed of rather different items.

The position is practically the same, but again more intensified. Japanese brokers and dealers

perambulate the Settlement, using their best exertions towards moving their accumulated stocks, but without avail; foreign buyers refuse to listen to the voice of the charmer. Crop news from all quarters is good: altogether too good for holders, who are getting anxious, and know not what loss they may sustain on some of their old stock. Some of them have reduced their asking price very considerably, others just ask for an offer.

Reports as to the New Crop continue favorable. In Japan all things are well, more "seed" has been laid down than last year, and there will probably be an increased yield of fully ten per cent. on last crop. The worms are spinning their cocoons in *Koshu*, *Bushu*, and *Joshu*: in a few days all will be over in those provinces, and warned in time by the stagnation here, dealers are determined to open the interior Markets at low prices. From China the estimate is maintained at about 60,000 bales available for Export, if required: in spite of a few days' bad weather and some deficit in the Long-reel district. From Europe also news is good, and it seems that the prospect everywhere is for a full crop of excellent quality with reasonable prices. Such an outlook should be eminently acceptable to consumers, and tend to the spread of the manufacturing industries.

The P. & O. steamer *Thibet*, which sailed for Hongkong, via ports, on Saturday, the 24th inst., carried no Raw Silk at all: the P.M. steamship *City of Tokio*, which left port this day for San Francisco, had on board 34 bales, of which 20 bales were on native account and 14 bales represent the balance of some old-time purchases. The Export figures now stand at 29,409 bales, against 27,081 bales to same date last year, and 19,789 bales on 30th May, 1882.

At closing there is some disposition on the part of foreigners to operate, and *Koshu* filatures are reported settled at \$600 or thereabouts.

Hanks.—No business in the foreign Market: something done for interior use, at prices which have not transpired.

Filatures.—Further supplies of well-known marks have come in, and dealers are willing to listen to much lower prices. *Nihonmatsu* would probably take \$640. *Tokosha* (with about 70 piculs in stock) is more conservative. Good No. 1 *Filatures* could be obtained at \$630, with good *Koshu* sorts at \$610 or less.

Re-reels.—Nothing fresh beyond a few arrivals which the owners would no doubt sell at about \$600 for well-known chops.

Kakedas.—No new feature, some parcels of good silk could be bought at near \$600 with a firm order in hand.

Export Tables, Raw Silk, to 30th May, 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
France and Italy	17,214	13,736	10,020
America	9,556	9,058	6,271
England	2,639	4,287	3,498
Total	29,409	27,081	19,789

WASTE SILK.

There has been but a small business doing in this department, caused by the undesirable nature of the Stock now remaining. Buyers are willing to pay a fair price for the qualities they require, but favorite assortments are remarkable by their absence and the parcels on offer are not inviting. Prices for anything decent are well maintained.

The P. & O. mail steamer *Thibet* on the 24th instant, carried 10 bales only, all booked for London. Total Export to date is now 23,321 piculs against 24,167 piculs last year, and 24,733 to 30th May, 1882. Arrivals of *Filature* Wastes have come in fairly well and Stock is about 700 piculs, chiefly low *Kibiso* kinds.

Noshiito.—The parcel of *Tomiyoka* filature mentioned in our last, has been finally settled at the high price of \$157½, a marked advance on the figure

paid a month ago. Some *Hagiwara* fil. at \$138, and *Foshu* at \$80, with a parcel of fair *Oshu* at \$145, complete the list.

Kibiso.—Not much done in this. Best *Filatures* \$125 (a parcel *Tokosha* held for \$127½) *Zaguri* \$95, Common *Foshu* \$33.

Sundries.—A little *Kusuito* settled at \$70. In *Neri* a mixed lot is on offer at dear prices, considering the quality: a parcel of *Tokosha* has arrived, but no price mentioned at present.

TEA.

An active demand has existed throughout the past week, and the Settlements for the interval are heavier than at any period during the present season. Medium and Good Medium have declined fully one dollar since our last quotations. The same can be said for Fine and Finest kinds. Choice and Choicest are met very sparingly, and cannot be considered any cheaper than that we quoted in our last Market report. The Settlements for the week amount to 16,250 piculs, and they are distributed under the following various grades:—Medium 490 piculs, Good Medium, 5,010 piculs, Fine 4,870 piculs, Finest 3,975 piculs, Choice 1,370 piculs, and Choicest 435 piculs. The Stock consists of 7,200 piculs at this port, against 8,400 piculs in 1883 at the same date. The P.M. steamer *City of Tokio*, which sailed on the morning of the 30th inst., took 483,660 lbs. Tea, and they are divided as follows:—106,632 lbs. for New York, 248,947 lbs. for Chicago, 700 lbs for Saint Louis, Mo., 116,574 lbs. for California, and 10,807 lbs. for Canada Markets. The steamship *Glenavon* leaves here for New York, via Amoy, on Monday, the 2nd June, and will be followed by the *Pembroke* during the week. The former, it is stated, takes about 2,000 tons Tea from Japan. The O. & O. steamer *Arabic* is circulated to leave on the 19th June, and she takes Tea at the following rates:—3 cents per lb. gross to Eastern States and Canadian Cities; 5 cents per lb. gross to Salt Lake City and Ogden; 2 cents per lb. gross to San Francisco. The Market closes easy at the undernoted quotations:—

QUOTATIONS.

Medium	\$17 to 19
Good Medium	20 to 22
Fine	23 to 25
Finest	26 to 29
Choice	32 to 36

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health for
all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia,"
says—"I ordered the dragoman Mahomet to inform the
Faker that I was a Doctor, and I had the best medicines at
the service of the sick, with advice gratis. In a short time
I had many applicants, to whom I served out a quantity of
Holloway's Pills. These are most useful to an explorer, as
possessing unmistakable purgative properties they create an
undeniable effect upon the patient, which satisfies them of
their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds.
It acts miraculously in healing ulcerations, curing skin diseases, and in
arresting and subduing inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says
—"I had with me a quantity of Holloway's Ointment. I gave some to the
people, and nothing could exceed their gratitude; and in consequence,
milk, fowls, butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas, and the
demand became so great that I was obliged to lock up the small remaining
"stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English
manufacture. For its purity and great excellence it has
obtained Nine Prize Medals, including London,
Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,

YOKOHAMA, MAY 31ST, 1884.

REPORT ON TAXATION IN JAPAN.

By J. H. GUBBINS, Esq., Acting Japanese Secretary, H.B.M. Legation.

[Reprinted from "Commercial Reports by Her Majesty's Consuls, &c., in Japan: 1883."]

Taxation in Japan may be most conveniently considered under two heads:—"National" or "Imperial Taxation," ¹ i.e., taxes which go directly into the National Treasury to appear afterwards in the Estimates of Government Revenue and Expenditure; and "Local Taxation," by which is understood all taxes which do not enter the Imperial Exchequer, but constitute the revenue by which the expenditure of the various local constituencies throughout Japan is met.

Under the head of "National Taxation" come—

- | | |
|----------------------------------|--|
| 1. Land tax. | 12. Licence fees— |
| 2. Saké tax. | 1. Shooting licences. |
| 3. Malt tax. | 2. Attorneys' licences. |
| 4. Tobacco tax. | 3. Horse-and-cattle-dealers' licences. |
| 5. Tax on drugs, &c. | 13. Other fees— |
| 6. Ship tax. | 1. Copyright fees. |
| 7. Carriage tax. | 2. Judicial fees. |
| 8. Mining tax. | 3. Passport fees. |
| 9. Tax on Yezo exports. | 14. Stamp duties. |
| 10. Tax on Companies. | 15. Customs duties. |
| 11. Tax on weights and measures. | 16. Postal receipts. |

Under the head of "Local Taxation" we have—

1. Land rate.
2. House tax.
3. Trades tax and miscellaneous taxes.
4. "Kiyô-gi-hi," or district rates.

The "land rate" is a tax levied on land in the same way as the land tax, only for local purposes. It is assessed at present at one-third of the land tax, and amounts, therefore, to a charge of five-sixths upon the value of land.

The "house tax" is a tax levied on householders. It is calculated on the measurement of each building, and varies according to the classification of houses and of the ground on which they stand.

The "trades tax" is a tax levied in the form of the house tax on all industries, trades, and professions. The "miscellaneous taxes" are similar taxes not levied in the form of the house tax.

The "district" or "ward rates," though they may properly be classed with "local taxes," are in their assessment and application somewhat different. They are determined by the residents in each district or ward, and not by the Government.

Taxation in Japan admits, however, of another classification which may be briefly noticed. It may be divided into "fixed taxes" and "variable taxes."

The words "fixed taxes" may be taken to mean that the taxes so described, though liable to modification and change from time to time at the pleasure of the Government, are yet sufficiently determinate in their character to be regarded as settled; and these are, moreover, taxes in regard to which it is in the interests of the Government to discourage fluctuation.

"Variable taxes," on the other hand, include all those taxes and rates which, from their nature, do not admit of being fixed.

Under the head of "fixed taxes" we can therefore place—

- | | |
|---------------|---|
| Land tax. | Tax on Yezo exports. |
| Land rate. | Tax on Companies. |
| Saké tax. | Tax on weights and measures. |
| Malt tax. | Licence fees, &c. |
| Tobacco tax. | Stamp duties. |
| Tax on drugs. | Customs duties, postal receipts, and a portion of the trades tax. |
| Ship tax. | |
| Carriage tax. | |
| Mining tax. | |

While under the head of "taxes which are not fixed" will come the "house tax," a portion of the "trades tax," and the "district rates" or "Kiyô-gi-hi."

It may be necessary to refer to this second classification of the taxes, but for the general purposes of this paper it will be sufficient to follow the division of taxation into "National" and "Local

Taxes," and to consider each tax in the order previously given.

(A) NATIONAL TAXES.

I.—LAND TAX.

Before considering this tax, which, in regard to the revenue it yields and the extent of its application, is by far the most important tax in Japan, it will be well to consider generally the subject of the land on which the tax is levied.

Land in Japan (not including Yezo and Loochoo) admits of the following broad division² into two kinds:—

1. Government land.
2. Private land, or land owned by the people.

Government land may again be sub-divided as follows:—

Class I., for which no title-deed is issued and no taxes are paid, includes—

1. Ground occupied by Imperial Palaces.
2. Religious ground, i.e., that occupied by the Isé shrines, the Imperial cemeteries, official and national shrines, Fu and Ken shrines, and other shrines not owned by the people.

Class II., for which a title-deed is issued but no taxes are paid, includes—

1. Land held by members of the Royal Family.
2. Land held by Government for the purposes of various Departments of State, e.g., ground occupied by army and navy buildings and public offices.

In the case of land held by Fu and Ken authorities, no title-deed is required: the land is simply registered in the land books; but if Government buildings or Government lands are leased to private people, a land rent is charged.³

Class III., for which no title-deed is issued, and no taxes are paid, includes—

1. Land, of whatsoever kind, not owned by the people, whether hill land, forest land, land under the sea, land under rivers, marshes, moors, and under canals, dykes, roads, or cultivated land.
2. Land occupied by railroads, telegraphs, and lighthouses.
3. Land comprised in places rendered famous by tradition.
4. Land in which the people's rights have lapsed.⁴
5. Land occupied by public buildings and cemeteries not owned by the people.
6. Land used for places of execution.

Class IV., for which no title-deed is issued, and no taxes are paid:—

Land occupied by temples, schools, religious lecture-halls, hospitals, and poor-houses, not owned by the people.

The subdivision of private land is as follows:—

Class I., for which a title-deed is issued, and land tax and local taxes are paid, includes—

1. Cultivated land in the possession of private individuals who have a clear title to ownership; and also mountain, forest, and other land held in the same way.⁵

The purchase and sale of this land are left free and unrestricted in any way. When, however, great changes are about to be made in land, as, for instance, by bringing waste land under cultivation, permission must be obtained from the authorities.

2. Land occupied by schools, hospitals, or district godowns, land consisting of grazing commons, pasture land, and ground attached to shrines and temples, not being Government property, which is the common property of one village, or of several villages, or is in the joint ownership of several individuals, and to which the owners have a clear title. Unrestricted liberty of sale and purchase are enjoyed, as in the case of the land above mentioned.

Class II., in regard to which a title-deed is issued, but no taxes are payable, includes—

¹ This classification is taken from the "Zei-Soku-teiyo," a small work on taxation.
² But the lessee would not be charged any land tax or land rate, for the land would still be in the ownership of the Government.
³ E.g., land on which mines have been discovered; and unclaimed land rendered waste by natural calamity, which, like land on which mines have been discovered, becomes Government property.
⁴ Here the words "and house land" should be added.—J. H. G.

1. Temple land and cemeteries owned by districts and villages, not being Government property.
2. Land occupied by irrigation ditches, sewerage drains, ponds, dykes, wells, and canals.
3. Land occupied by public roads.

(But) when alterations are made in the conformation of land by the construction of new roads, the permission of the Government must be obtained.)

The foregoing classification shows clearly the various classes into which land is divided, and establishes two facts.—

1. All cultivated land in the country, with a few exceptions, belongs to the people.
2. All waste land, with a few exceptions, belongs to the Government.

To these we may add a third, that all land in Japan is subject to land tax, with three exceptions:—

1. Government land.
2. Land held for religious purposes.
3. Land used for purposes of irrigation, drainage, and roads.⁶

The question of the land tax had probably been under careful consideration by the Government for some time before it was definitely decided, in 1873, to adopt the sweeping reform then introduced.

The Imperial Proclamation promulgated in July of that year, which was issued simultaneously with the Notification by which the regulations for the revision were published, was to the following effect:—

"Taxation is a question of great importance to the country, for it is either beneficial or injurious to the people. The system hitherto in force has been wanting in uniformity, the incidence of taxation being in some cases harsh, and in others too lenient, and for the most part unfair. We are desirous of remedying this state of things, and accordingly we have inquired into the views of the district Mayors, we have elicited the opinions of the local authorities throughout the country, and we have further discussed and come to a decision on this subject in conjunction with the members of our Cabinet, with a view to establish a just and uniform system. We now publish a revised system of land taxation, by which we trust the evil of an unfair distribution of taxes will be removed, and the industry of the people will be no longer prejudiced by any partiality."

The Notification of the same date (July 28, 1873) is worded as follows:—

"The land tax having now been revised, the old system of paying taxes on rice land and other arable land in rice is altogether abolished, and as soon as fresh title-deeds for the land have been prepared, the land tax will be fixed at 3 per cent. on the value of the land. These are His Majesty's commands. The details of the revision, as they appear in the accompanying Regulations, are to be observed."

"The local taxation," hitherto levied on the yield of the land, will in future be levied on the value of the land. The amount of this taxation shall not exceed one-third of the land tax."

The change thus introduced amounted to this:—The land tax, which had previously been paid in rice, and had been calculated on the assessed yield of ground under cultivation, was in future to be paid in money, and based on the assessed value as entered in the title-deed held by the owner of the same land.

The Regulations, which form Appendix (C), may be summarized briefly as follows:—

The local authorities were instructed to take great care in preparing the question of the land tax for revision, and to collect the opinions of the people in each district as to the value of the land, and then to report details to the Central Government, which reserves to itself the right of ultimate decision in each case; and they were especially enjoined not to form too rapid conclusions, but to give the subject patient and deliberate investigation. This was the more necessary in view of the decision having been formed by the Government to allow the revised system to come into force in each district as soon as the result of the investigation of

⁵ This exception only came into force when the land tax was last revised.

⁶ Land rate, equivalent to the present "Jizowari-zei."

the local authorities should have been reported, and should have received the Government's approval.

The value of the land, after being determined by the official valuers, was to remain unaltered until the period of reassessment arrived, and during such time no reduction was to be made in years of famine, and no increase in years of plenty.

The distinction between paddy and other arable land was abolished,⁸ and all land under tillage was to be known as cultivated land. Land of other kinds was to be known by a special denomination, such as pasture land, moorland, &c.

In cases of damage to land from natural disasters, exemption from taxation for certain periods was to be granted, under certain well-defined conditions.

The proper rate of land tax was recognized to be 1 per cent., but in view of the disorganized condition of taxation generally, it was deemed necessary to fix the land tax at 3 per cent. When, however, the taxation from sources other than land had reached the sum of 2,000,000 yen, a promise was held out that the land tax would be reduced gradually until it reached its proper rate of 1 per cent.⁹

More detailed instructions were issued later on by the Finance Department, which will be found in Appendix (B).

By these the local authorities were to call upon all holders of land to state the value of the holdings, based on the profits attending cultivation of the land, and also to remeasure the land and furnish a statement of such remeasurement, so that the extent of each holding might be determined according to the modern method of measuring the land.

Instructions were given as to the system to be followed in computing the value of barren land in remote or mountainous districts.

Experts were to be appointed in each district to remeasure and value every holding.

In the case of a holder of land refusing to agree to the value of his holding as estimated by the official assessor, the land was to be sold by written tender to the highest bidder, or at a price fixed by the Government.

The work of revising the land tax did not proceed so rapidly as the Government, it seems, had anticipated. In the spring of 1875, the pressure of business connected with the revision became so great as to necessitate the establishment of a separate office for the transaction of these matters, and in the autumn of the same year, the inconvenience resulting from the long delay was urged upon the attention of the local authorities by the Government, who fixed the beginning of the year 1876 as the date by which the land tax revision must be concluded.

Neither that year, however, nor the next, saw the end of the undertaking; it lasted five years more, being eventually completed in 1881.

Four years after the work of revision had begun, the following Notification was issued, reducing the land tax to 2½ per cent. :—

"The accompanying Imperial Proclamation having been issued by His Majesty, the land tax, payable from the first day of this year (1877), has been fixed at 2½ per cent. on the value of land.

"IMPERIAL PROCLAMATION."

"Although it is not long since the Restoration took place, the nation has been busily employed with domestic and foreign affairs, and so numerous are the wants of the country that it is difficult to estimate them. The people are still in distress, and are not yet in a position to enjoy the blessings of wealth. Moved by a feeling of pity for this state of things, we revised, some time ago, the old system of taxation, and settled the land tax at 3 per cent. with the object of removing what inequalities and harshness existed under the former method. Now, again perceiving the difficulties still attending the pursuit of agriculture, we are anxious to enable cultivators to earn their livelihoods without distress. We have therefore reduced the land tax still further, and fixed it at 2½ per cent. on the value of the land. Do all of you officials take note of our wishes, and, by the practice of economy in public expenditure, aid us in the furtherance of our intentions.

"January 4, 1877."

Shortly after the issue of this Proclamation some short Rules for the regulations in land entered into between the Government and the people were drawn up. These will be found in Appendix (D).

In carrying out the revision of the land tax, one difficulty which presented itself to the Government was this. Formerly, in estimating the tax to be

paid on land, the Government had simply to estimate the yield of the land. Under the revised system, which superseded the method of payment in kind, it became necessary, in order to arrive at the value of land, to convert the yield of land in rice or other cereals into money, and, in order to do this, it was necessary to fix a uniform price for a koku of rice.

A Notification bearing on this subject, which exemplifies in some way the difficulty alluded to, was issued to the local authorities in March, 1875:—

"With regard to the price of rice, which is to be made a basis for investigating and fixing the value of land, a Notification was lately issued by the Revision directing that, in fixing the value of land, the average prices of first, second, and third class rice for the five years immediately preceding the commencement of the revision were to be taken as a basis. But as the prices of rice in the different *ken* during those years have varied considerably, according as the date of the commencement of the revision has been early or late, the value of land, if fixed on the basis of store prices, would also vary greatly, which would be productive of much inconvenience. The valuation of land is therefore to be conducted on the basis of the average price of rice during the five years from 1870 to 1874 inclusive; and you will accordingly prepare estimates of this average price, and submit the same for approval."

While the revision of the land tax was in progress, and before it had reached its conclusion, taxes continued to be levied for the most part according to the old system in kind. But in some cases the Government anticipated the new system which was about to be introduced, and, taking the value of a holding as entered in the Land Register as the correct price, charged the tax upon that.

The plan generally adopted in fixing the value of land in a district was to take a certain village as a "specimen village,"¹⁰ and having fixed the value of the land in it, make that value the basis for determining the value of all the other land in the district. The assessors chosen were usually local landed proprietors of means and position and considerable local knowledge. The valuation of a holding was practically left in their hands, for the farmer was, of course, an interested party, and the Government had not sufficient local experience to venture to interfere, with any confidence, in the decisions of the experts.

Every five years the land was to be revalued.

As the date at which the land tax was actually settled under the new system in the different districts was rarely identical (the revision in some cases being finished in 1875 and 1876, while in others, it was not concluded until 1881), the period of reassessment differs in almost every locality.

For some months at least after the revision of the land tax had come into operation, those farmers who held rice land were allowed to pay half of the tax on their rice land in kind. This part payment in rice was allowed under special Rules,¹¹ which, as they have never been rescinded, are still nominally in force, though virtually inoperative; whether, indeed, the privileges they conferred were ever made use of is not at all clear. The arrangement was from the first intended only to be provisional; at the present time, when the market price of rice is low, it would be very much to the interest of the farmers to pay their land tax in kind. But it is needless to say that the Government have no intention of allowing them to do so.

In the autumn of 1877, the distinction between rice and other arable land, which had been abolished at the commencement of the revision of the land tax in 1873, was restored, and about the same time the periods for collection of the land tax were altered and fixed as follows¹² :—

In the case of rice land—	Was made payable from—
The first instalment, consisting of half of the land tax due for the year	Dec. 1 to Jan. 31
The second instalment, consisting of three-tenths of the land tax due for the year.....	Feb. 1 to Mar. 31
The third instalment, consisting of two-tenths of the land tax due for the year	Apr. 1 to Apr. 30
In the case of all other land—	
The first instalment, consisting of two-tenths of the tax due for the year	July 1 to Aug. 31
The second instalment, consisting of half of the tax due for the year.....	Sept. 1 to Oct. 31
The third instalment, consisting of three-tenths of the tax due for the year	Nov. 1 to Dec. 31

In February, 1881, the collection of the land tax underwent further revision, and a new mode of payment was introduced considerably shortening the period in which the tax was collected.

¹⁰ "Mo-han-son."

¹¹ They have never been used in the Tochigi Ken or in the Tokio Fu.

¹² By Notification No. 53 of July 1877.

Under this new system the land tax was made payable in two instalments instead of three.

Was made payable from—

In the case of rice lands—	
Half of the tax	Nov. 1 to Dec. 15
And the other half	Jan. 1 to Feb. 28
In the case of other lands—	
Half of the tax	July 1 to Aug. 31
And the other half	Sept. 1 to Dec. 31

This is the latest alteration which has taken place in the land tax, and although it affected only the method of payment, and not the amount of tax to be paid, some dissatisfaction was provoked by it.

On the whole, however, it is generally allowed that the revision of the land tax has been a success. In the days when the farmers paid their taxes in kind, they laboured under several disadvantages. Besides the expense and risk attending the transport of the rice to the Government offices where it was received, which were borne by the farmer, it was customary for the Government to fix a certain average of loss in weight which was supposed to occur in packing the tax rice into bags for conveyance to the receiving stations. The farmers had therefore to deliver so many bags of rice, plus so much per bag for loss of weight. The bags, too, into which the tax rice was packed, were required to be of superior quality and make, and the packing had to be done with more care than in the case of ordinary rice. From all these inconveniences the farmer is saved by the payment of the land tax in money, and there is every reason to believe that the present system works well, and has proved satisfactory to agriculturists and to the owners of land generally.

II.—SAKÉ TAX.

Under the Regulations published in September, 1880, this was placed on a new footing, and although in December, 1882, further alterations were introduced, and the tax was greatly increased (in some cases 100 per cent.), the general provisions for its collection remain the same.

The tax is paid by the brewer.

The licence tax, payable in one sum on application for a licence, is fixed at 30 yen, and in addition to this the brewer has to pay on all saké which he brews—

	Per koku. Yen.
For Saké of Class I.	4
For Saké of Class II.	5
For Saké of Class III.	6

This tax is payable in three instalments. The first of these, payable by the 30th April in each year, amounts to half of the tax chargeable on the saké which has been officially inspected in the period between the 1st October in the year preceding and the 31st March of the current year.

The second instalment, payable by the 31st July, amounts to half the tax chargeable on the saké which has been officially inspected in the period between the 1st April and the 30th June.

The third instalment, payable by the 30th September, amounts to the full tax chargeable on saké inspected in the period from the 1st July to the 30th September, and the balance of taxes for the two previous periods which remains unpaid.

Other points noticeable in these Regulations are as follows :—

The saké year is reckoned from the 1st October to the 30th September.

Persons wishing to receive a brewer's licence must apply for it before the 30th September in each year.

No brewer is allowed to manufacture any saké after the 31st August in each year.

No tax is chargeable on damaged saké if the damage is duly reported to the authorities.

Saké altered from one class to another must pay tax for both classes.

All saké must be officially inspected before sale. No uninspected saké can be sold or consumed on the premises.

Persons other than saké brewers are allowed to make one koku of saké per year without paying any tax on it. But they must pay a licence fee of 80 sen¹³ a year.

Persons making wine from grapes and spirits from barley, &c., pay the same licence tax as saké brewers, but no other tax.

Penal clauses were added, in December of last year, punishing infractions of these rules with fines ranging from 2 to 30 yen.¹⁴

III.—MALT TAX.

Established for the first time in 1880.

The only tax levied is a licence tax of 50 yen, payable in one sum on application for a licence.

⁸ By special Notification, July 1873.

⁹ It is unnecessary to state that this promise was not fulfilled.

¹³ About 2s. 11d.

¹⁴ 7s. 4d. to 5l. 10s.

This licence can, with the permission of the authorities, be sold or transferred.¹⁵

The malt tax year, or period, as it is called, is reckoned, like the saké year, from the 1st October to the 30th September.

Among other new clauses added to the Malt Regulations at the end of last year was one rather curious Article which provides that, for any infringement of these rules on the part of any member of a maltster's family, or any one in his employ, the maltster shall be held responsible. It may be well to note that the nature of this impost is not described by the signification ordinarily attached to the term "malt tax."

IV.—TOBACCO TAX.

The tobacco duties, established in 1878, were also revised in December 1882.¹⁶

In the new Regulations, which came into force only on the 1st July of this year, those engaged in the tobacco trade are divided into three classes:—

1. Manufacturers.

2. Middle-men, namely, merchants who buy from manufacturers and producers and sell to retailers.

3. Retail dealers.

The difference between these three classes is thus explained:—

"The term 'manufacturer' applies only to those who manufacture their own tobacco. It does not include people who manufacture the tobacco of others at a fixed charge."

"The term 'middle-men' applies to those who buy unmanufactured tobacco and sell it to manufacturers or to persons in their own branch of trade; or who buy manufactured tobacco and sell it again to retail dealers or to persons in their own branch of trade."

"The term 'retail dealer' is applied to a person who buys manufactured tobacco and sells it to the consumer."

The following three Articles contain rather complicated provisions, and will be given best in full:—

"Art. 2. Licences must be applied for by all persons wishing to engage in any of the three branches of the tobacco trade specified above. If the same persons are both manufacturers and middle-men, or manufacturers and retail dealers, they must provide themselves with licences for each branch of the trade."

"Permits for buying and selling tobacco must also be carried by persons engaged in buying or selling tobacco, and by their employes and members of their families."

"The following are the fees to be paid for licences:—

For tobacco trade licence (renewable yearly) 20 sen*
For licence to sell tobacco.....10 sen*
For licence to buy tobacco.....10 sen*

"The licence is not transferable."

"Art. 3. The following taxes are to be paid:—

	Yearly.
By manufacturers.....	15 yen
By middle-men.....	15 yen
By retail dealers.....	5 yen

"The tax in each case is payable in two instalments. The tax for first half-year to the 30th June by the 31st January; that for second half-year to the 31st January by the 31st July."

"Art. 4. Cut tobacco must be put up into boxes or packets, and an Excise Stamp must be affixed according to the following table of weights:—

"1. On tobacco the fixed price of which is less than 25 sen per 100 mommé—

For	Rin	For	Sen
5 mommé a stamp of...2		30 mommé a stamp of...1½	
10 mommé a stamp of...4		50 mommé a stamp of...2	
15 mommé a stamp of...6		100 mommé a stamp of...4	
20 mommé a stamp of...8			

"2. On tobacco the fixed price of which is more than 25 sen but less than 50 sen per 100 mommé:—

For	Rin	For	Sen
5 mommé a stamp of...3		20 mommé a stamp of...1½	
10 mommé a stamp of...6		30 mommé a stamp of...1½	
15 mommé a stamp of...9		50 mommé a stamp of...3	
		For 100 mommé a stamp of 6 sen	

"3. On tobacco the fixed price of which is more than 50 sen per 100 mommé—

For	Rin	For	Sen
5 mommé a stamp of...4		20 mommé a stamp of...1½	
10 mommé a stamp of...8		30 mommé a stamp of...2½	
	Sen	50 mommé a stamp of...4	
15 mommé a stamp of...1½		100 mommé a stamp of...8	

The stamps vary in colour according to the price, and there are two kinds of shapes. One of these is the same as an ordinary postage stamp. The

other stamp is attached to a strip of paper similar to the newspaper wrappers used in Europe.¹⁷

They are sold by those who obtain licences¹⁸ to sell them, and these persons receive a small commission on the sale from the Government. Preference is given in issuing the licences to those who are known to be in impoverished circumstances.

Every packet or box of tobacco must bear the name and address of the manufacturer.

Tobacco manufacturers and dealers are obliged to keep books for the registration of sales and the purchase of Excise Stamps. In July of every year, each manufacturer and dealer must report in detail to the local office the amount of his transactions in tobacco and Excise Stamps, and state at the same time what tobacco and Stamps he has left on hand after the 30th June up to date of report.

Sellers of Excise Stamps must give similar reports at the same time as to sale of Stamps, giving the names and addresses of purchasers of Stamps, and amounts sold to each.

Every tobacco manufacturer and dealer must obtain a licence to buy Stamps, which he must produce to the seller of Stamps.

The books kept by tobacco manufacturers and dealers, and the tobacco held in stock, must be open to the inspection of the local authorities at any time. The inspecting officers must, however, carry a certificate of authorization, which they shall produce on demand.

The penalties for infraction of these Regulations are as follows:—

1. For selling tobacco bearing no Excise stamp or on which an insufficient stamp has been placed, 10 to 100 yen.

2. For evading payment of licence fee, three times the amount of such fee; confiscation of all tobacco in stock; and the offender is also liable to prosecution for the value of all tobacco fraudulently sold by him.

3. For falsification of books or reports, 10 to 100 yen (1l. 15s. 8d. to 18l. 6s. 8d.).¹⁹

4. For carelessness and neglect in keeping books, 5 to 50 yen (18s. 4d. to 9l. 3s. 4d.).²⁰

There are other smaller penalties for minor infractions.

V.—TAX ON DRUGS. TAX ON SALE OF PREPARED MEDICINES. STAMP DUTY ON MEDICINES.

The profession of a druggist in Japan does not coincide with that of a foreign apothecary. Before this country was opened to foreigners there was no such class as apothecaries, as we understand the word. The sale of medicines was confined to doctors, who either sold medicines prepared by themselves according to original recipes of their own or according to prescriptions of others, or, perhaps more commonly still, sold medicines already prepared and known to practitioners and patients by the names of the doctors who compounded them.

The legislative enactments relating to this branch of taxation, which may in part be traced to the encroachments of foreign medical science upon existing native systems of medical treatment, have been so numerous that they can only be clearly explained by going back to the year 1877, when these taxes were first introduced.

Under the Regulations established in January of that year, persons engaged in the sale of medicines were, for the purposes of taxation, divided into three classes: druggists, retail dealers, and itinerant sellers of medicine.

By a Notification, however, published in April, the taxes²¹ leviable on the two latter classes were placed under the head of local taxation. These will therefore be considered later on in their proper place.

The taxes levied on druggists (which appear in the Financial Estimates under the title of "Druggists' Licences") under these Regulations consist of:—

1. A tax of 2 yen yearly on each separate medicine prepared and sold by them.²²

2. A licence fee of 20 sen, repayable every five years, for a licence to sell each separate medicine prepared and sold by them.²³

The various provisions of these Regulations are not important enough to be given in detail. It will be sufficient to notice that the details of analysis, weight, and taste of each separate medicine, of its medicinal properties, and of the amounts given in

a dose, had to be sent in to the Home Office when applications for licences were made; and that the Home Office reserved to itself the right to refuse licences in the case of any medicine which might be considered dangerous.

The term "prepared medicines" comprised medicine in a liquid form, and in the form of pills, ointments, and powders.

The penalties for infraction of these Regulations ranged from 10 to 500 yen,²⁴ and in aggravated cases the stock in trade of the offender was also liable to confiscation.

By a subsequent enactment of last year, every druggist had to pay the same tax and licence fee in the case of every branch shop conducted in his name.

A further tax on the sale of medicines was established by a Notification of the 27th October, 1882, and has been enforced from the 1st January of this year.

This tax is in the form of a stamp duty on the sale of prepared medicines. The duties payable are stated as follows in the 1st Article of these new Regulations:—

"A fixed price must be attached to all drugs, and the following stamps proportionate to such fixed prices must be affixed by all druggists:—

On medicines of the price of 1 sen, a stamp of 1 rin.
On medicines of the price of 2 sen, a stamp of 2 rin.
On medicines of the price of 3 sen, a stamp of 3 rin.
On medicines of the price of 4 sen, a stamp of 4 rin.
On medicines of the price of 5 sen, a stamp of 5 rin.
On medicines of the price of 10 sen, a stamp of 10 rin.

"On medicines the price of which is more than 10 sen, an additional stamp of 5 rin must be affixed for every additional 5 sen in value."

The stamps can only be sold by persons who receive licences from the Government to sell them.

The penalties to be exacted for infringement of these Regulations vary from 2 to 20 yen; the heaviest penalty being inflicted for the offence of selling unstamped medicines.

VI.—SHIP TAX.

Under the Regulations established in the case of sea-going vessels in 1871, and in the case of cargo-boats, &c., in 1874, which were links in a chain of successive enactments dating back to the year 1868, the taxation on vessels of all kinds, including boats, was settled as follows:—

Vessels of Japanese build and of 50 koku burden and over—	Yen
Paid yearly per 100 koku burden.....	1
Steamers—	
Paid yearly per 100 tons.....	15 = £2 5s.
Foreign-built sailing-vessels—	
Paid yearly per 100 tons.....	10 = £1 16s. 8d.
Vessels under 50 koku burden, and not exceeding 18 feet in length—	
Paid yearly.....	0.20 sen
And for every additional 6 feet in length an additional tax of 15 sen was charged.	

Under the present Regulations (see Appendix F), which were published on the 17th April last, and came into force from the 1st July last, the taxes on steamers and foreign-built sailing-vessels remain the same. But the tax on Japanese-built vessels of over 50 koku²⁵ burden has been doubled; and that on vessels under 50 koku burden has been increased from 20 to 30 sen.

Pleasure-boats have also been made a distinct class, the tax on which is 50 sen a-year.

These taxes are payable in advance in two instalments: that for the first half-year being payable by the 31st January, and that for the second half-year by the 31st July.

Vessels exempt from taxation are:—

"Store-vessels, punts used in cultivating paddy-fields, boats kept for use in times of flood, ferry-boats used to supply the place of bridges, boats used in bridges of boats, and boats carried on board of vessels during a voyage."

The principal penalty for the infraction of these Regulations is that imposed for attempted evasion of payment of the tax, namely, five times the amount of the tax sought to be evaded, or a proportionate fine.

VII.—CARRIAGE TAX (OR TAX ON WHEELED VEHICLES).

Formerly, by a Notification of January, 1873, the taxes on wheeled vehicles were placed in the same category with taxes on men and women servants, on palanquins, on riding-horses, and on pleasure-boats.

In February 1878, however, the rules issued in the former year were abolished, and the taxation on wheeled vehicles was made a separate part of the revenue under Regulations specially framed for that purpose.

²⁵ Taking the yen as the equivalent of a dollar, and as worth, therefore, 3s. 8d., 10 yen will equal 1l. 16s. 8d., 500 yen 91l. 13s. 4d.

²⁶ A koku = 2½ piculs.

* When renewed in consequence of loss or necessary alteration, the same fee is to be paid.

¹⁵ What are the advantages to be gained by the person buying the licence does not appear.

¹⁶ Notification No. 63.

¹⁷ Specimens of these stamps were issued in a Notification of May of this year, and appear in Appendix (E).

¹⁸ These licences are not transferable.

¹⁹ Taking the yen at 3s. 8d.

²⁰ These are only the licence fees of 20 sen a-year.

²¹ Payable in two instalments: half by the 31st July, and half by the 31st January in each year.

²² Payable on application for issue or renewal of licence.

The 1st Article of these Regulations reads:—

The yearly tax for a two-horse carriage is fixed at...	3 00
The yearly tax for a one-horse carriage is fixed at...	2 00
The yearly tax for a luggage-cart, drawn by horses...	1 00
The yearly tax for a jinrikisha, to carry two persons...	2 00
The yearly tax for a jinrikisha, to carry one person...	1 00
The yearly tax for a bullock-cart	1 00
The yearly tax for a luggage-cart, drawn by coolies...	1 00
The yearly tax for a luggage-cart, small	0 50

These taxes are not payable in advance like the ship tax; otherwise their payment is regulated in a similar manner.

VIII.—MINING TAX.

All mines in Japan belong, as of right, to the Government, and any mine newly discovered is, by virtue of that right, at once appropriated by the Government; the owner of the land in which the mine is situated being indemnified by the Government for the loss of the land. There is, therefore, no such thing as royalty. But a tax introduced in 1873 is levied on those who obtain permission from the Government to work mines.

Persons working mines containing ores from which gold or silver can be extracted, pay a yearly tax of 1.50 yen per 500 tsubo of superficial measurement.

Persons working iron mines and other mines yielding ore from which gold or silver cannot be extracted, being mines not previously worked, pay 90 sen yearly for 500 tsubo of superficial measurement.

Persons working old mines pay the same tax per 1,000 tsubo.

In the case of mines the superficial measurement of which is less than 1,000 or 500 tsubo, proportional taxes are paid. The first year's taxes are paid according to the number of months due.

Taxes on the working of mines in Yezo are payable monthly.

IX.—TAXES ON EXPORTS FROM YEZO (KNOWN AS HOKKAIDO TAXES).

All productions of Yezo, whether shipped on Government or on private account, pay, with the exception of metals, rice, and other cereals, silk-worms' eggs, raw silk, and hardware, and of goods required for the army or navy, an export tax of 4 per cent. on original value.²⁵

The tax is levied at the port of export.

In the case of Japanese-owned vessels, the master of the ship collects the tax; in the case of foreign-owned vessels, the exporter pays the tax direct to the Government.

X.—TAX ON "COMPANIES."²⁶

The history, not, perhaps, exactly, of this tax, but of legislative enactments bearing on this subject, dates back to the second year of the Restoration (1869). At that time, all commercial operations of any magnitude, and notably those conducted with foreigners, were in the hands of large trading societies, which went under various designations, such as "Town" and "Provincial Guilds," and Clan Commercial Associations," but which had all, more or less, through connection with central or local officials, an official character, some, indeed, though nominally private enterprises, being established entirely on an official basis. In June, 1869, the Government issued a Notification in which, referring to these various trading associations, the evils caused by the virtual monopoly in different branches of trade enjoyed by these societies were pointed out. Owing, it was said, to the action of the agents of these so-called mercantile firms, trade was diverted from its proper channels, its free and unrestricted exercise was hampered, and the markets being manipulated for the sole benefit of these wealthy traders, the general development of commerce was impeded. The Notification concluded by observing that, in order to put a stop to these practices, commercial inspectors had been appointed, and rules carefully drawn up for the regulation of commercial establishments.

The first results of this special legislation do not seem to have been altogether favourable to the objects the reformers had in view, for in April, 1871, another Notification appeared on this same subject. In this attention was drawn to the unsatisfactory conditions under which trade was conducted through non-conformance with the Regulations²⁷ for the formation of trading societies. Litigation had increased, trading societies had ventured in an arbitrary manner to issue notes purporting to have the value of current money, no care was taken to keep a reserve of money at

hand to meet liabilities, and the general result of these proceedings was depression and insolvency. Further Regulations would therefore be made in order to insure sufficient control in these matters, and, meanwhile, the local authorities were strictly enjoined to put a stop to this state of things in so far as they were able.

In 1873 a few general rules were drawn up having reference to the issue of licences in the case of commercial establishments of all kinds, but it was not until the following year that any important legislation was undertaken by the Government. In October of that year (1874) Regulations were framed for the control of share agencies,²⁸ and these were followed in August, 1876, by the establishment of the National Bank Regulations (which were revised only the other day²⁹), and by the issue of further Regulations in regard to the management of rice exchanges.

The taxes³⁰ at present levied on commercial establishments, as such, are limited to these three classes.

Of these—

National Banks pay to the Government a yearly licence fee of 7 per cent. on the total value of their note issue.

Rice exchanges pay to the Government a yearly licence fee of 40 per cent. on the total amount of commission received and profits made in the course of business.

Stock exchanges and share agencies pay to the Government a yearly licence fee of 10 per cent. on the total amount of commission received and profits made in the course of business.

The taxes are payable half-yearly: that for the first half-year by the 21st July, and that for the second half-year by the 20th of the following January.

In order to keep a check on the transactions of these commercial establishments in the interests of the revenue, they are required to supply detailed statements at specified periods of all business done. And in the case of Stock Exchanges, every newly-established agency is required to publish, for the period of six months from the date of commencing business, monthly statements of business done; and in accordance with these the tax for the first half-year for which it becomes due is levied.

In 1882, however, the tax on companies was increased by the imposition of taxes leviable on brokers who are members of Rice Exchanges and Stock Exchanges.

These taxes are as follows:—

Members of Rice Exchanges pay a tax of $\frac{1}{2}$ per cent. upon the amount of each transaction in rice.

Members of Stock Exchanges pay a tax of $\frac{1}{10}$ per cent. upon the amount of each transaction in Public Debt bonds, and a tax of $\frac{1}{4}$ per cent. upon the amount of each transaction in old coinage and foreign currency.

In the present year a further Notification was issued,³¹ enacting that persons wishing to become brokers must pay a licence fee of 30 yen (5l. 10s.).

XI.—TAX ON WEIGHTS AND MEASURES.

Regulations for the collection of these taxes were issued in 1875, but they underwent revision in the following year.

The present system of taxation is as follows:—

Weights and measures are divided into three classes (a classification borrowed from the Regulations of 1875).

The expenses of manufacturing the various instruments for testing weights and measures in each locality are ascertained; to these are added incidental expenses which may occur before the articles are ready for sale. The total cost thus ascertained is called the "original value." This original value is increased by the addition of a further sum of 24 per cent. and the value thus increased is termed the current selling value. Of this 24 per cent. by which the cost of production, or original value is increased, one per cent. goes to the Government as tax and the remaining 23 per cent. is divided as profit between the manufacturer and dealer. Taking yen 1.00 as the cost of production, yen 1.24 is fixed as selling value. Of this sum one sen goes as tax to the Government, and 23 sen are divided as profit between the manufacturer and dealer.

XII.—LICENCE FEES.

The following taxes are paid into the National Treasury under the head of licence fees:—

1. Shooting licences.
2. Attorneys' licences.

²⁸ Brokers' establishments.

²⁹ May 1883.

³⁰ Irrespective of local taxation.

³¹ No. 28 of August 6, 1883.

3. Horse and cattle-dealers' licences.

1. SHOOTING LICENCES.—Professional hunters pay a yearly licence fee of 1 yen.

Sportsmen pay a yearly licence fee of 10 yen.

2. ATTORNEYS' LICENCES.—Attorneys pay a yearly licence fee of 10 yen (1l. 16s. 8d.).

The provisions respecting attorneys, after passing through repeated revisions, were finally settled in the year 1880, since when no material alterations have been made.

3. HORSE AND CATTLE DEALERS' LICENCES.—

In 1870, the tax payable by dealers in horses and cattle was fixed at 3 bus (about 75 sen) per annum. In the following year it was increased to 1 yen.

At the end of the same year this tax underwent further revision, and new Regulations were framed, for the purpose, as stated in the Notification giving effect to these Regulations, of placing the taxation on an uniform basis throughout the country. Some local dissatisfaction was probably caused by this alteration of the tax, for, a year afterwards, stringent orders were sent by the Finance Department to the various local authorities, directing the immediate payment of the arrears which had been allowed to accumulate.

According to these Regulations, the local authorities in each district were instructed to ascertain the names and residences of the horse and cattle dealers in each district, and to issue to each dealer a licence for every "string"³² of horses or cattle which he owned, on payment of a fee of 1 yen for each licence, the licence or licences to be renewed every year on payment of the same fee. Lists of the dealers in each Fu and Ken were to be sent into the Finance Department at the end of every year. The full tax for the year was, under these Regulations, made payable by February in each year; but by a subsequent enactment passed in 1875, the tax was made payable in advance in two instalments: that for the first half-year being collected in February, and that for the second half-year in August.

The penalty inflicted in the case of a dealer pursuing his calling without a licence was ten times the amount of the licence fee, and confiscation of the offender's horses and cattle. To encourage the detection of attempts to evade the tax, a reward of one-fifth of the value of the confiscated animals was given to the informers on whose information an offender was convicted.

It is impossible not to notice the impracticability of collecting this tax in the manner described so as to leave no room for fraud. What, for instance, would be more simple than for dealers to dispose of their stock in collusion with one another just at the moment when the tax became due, and on receipt of a licence for a few head of cattle, quietly receive back the cattle they had temporarily parted with? And, indeed, without going so far as this, it is obvious that a dealer might evade payment of the proper amount of tax due from him in many ways without coming within reach of the law. For, supposing a dealer to have 100 head of cattle actually in stock when he applies for a licence, and a week afterwards to have increased his stock to 1,000 head, he could not be called upon to pay a fresh licence fee, for he would naturally denounce the hardship of paying fees for cattle which might only remain in his possession for a week. In fact, by playing his cards skilfully in the intervals between the dates fixed for payment of the taxes, a dealer might pay only 3 or 4 yen a-year, and yet have transactions in cattle amounting to 3,000 or 4,000 yen. It is, indeed, generally understood that this device is commonly resorted to by dealers, and that it is unusual for a dealer to pay fees for more than one "string" of horses or cattle.

XIII.—OTHER FEES.

Under the head of "National Taxes" the following fees also appear in the Financial Estimates:—

1. Copyright fees.
2. Judicial fees.
3. Passport fees (paid by Japanese who receive passports for foreign travel).

1. COPYRIGHT FEES.—Authors (and publishers) of books or maps, and translators (and publishers) of books or maps, may obtain a copyright giving the exclusive right of publication for a period of thirty years on payment of a fee amounting to the value of six copies of the book or map which it is intended to publish. This fee is payable on application for the grant of copyright. If this copyright is give up by the person obtaining it, a fee of 30 sen is charged.

³² 2. JUDICIAL FEES.—These relate to civil matters only, and are divided into three kinds:—

³³ A string was composed of seven horses or cattle.

³⁴ Replaced by new system introduced April 1, 1884 (see Annex 2.).

²⁵ The original value is defined as being the market value at the place of export of that third part of the month in which goods are supplied.

NOTE.—Japanese months are divided into three parts, of, theoretically, ten days each, called first, middle, and last part.

²⁶ I have adhered to the term given in the Finance Minister's estimates.

²⁷ What these Regulations were I have been unable to ascertain.

(1.) Charges for ruled paper on which Petitions and answers in civil cases are written.

(2.) Charges for ruled paper on which Judgments in civil cases are written.

(3.) Charges for ruled paper used in interlocutory proceedings, and summonses, motions, &c.

The charges are made at so much per sheet of ruled paper used, and vary with the amount of money involved in the matter before a Court, and according as the suit is one in which money, goods, houses, or land is sought to be recovered.

Details of these fees are given in Appendix (G).

3. PASSPORT FEES.—These require little explanation.

The fee for a passport issued in Japan is 50 *sen* (1s. 10d.), when issued abroad by a Japanese Minister or Consul the fee is 2 *yen* (7s. 4d.).

Under the head of passport fees is included a fee of 10 *sen* (about 4½d.) charged on all Japanese who take passage in a foreign-owned vessel, even though the vessel is only bound on a coasting voyage from one Japanese port to another.

14. STAMP DUTIES.³⁴

The stamp duties include charges for Government ruled paper used in drawing up documents of a business character, and charges for Government stamps, which are required in nearly all business transactions; they also include the charge for official seals necessary in notarial acts.

The Government ruled paper is of three kinds:—

Large-sized paper, for which the charge per sheet is... 7 *rin*.
Medium 5 *rin*.
Small 2 *rin*.

The use of this ruled paper is obligatory, with a few exceptions, in all business transactions of a documentary nature where stamps are required to be used. In some cases, however, ruled paper alone is necessary without the adjuncts of stamps. The cost of the stamps to be employed varies according to the nature of the transaction and the amount of money involved.

The provisions regulating the use of "ruled paper" and stamps are given in detail in Appendix (H). They are voluminous and uninteresting, and some of the distinctions drawn appear to any one not intimately acquainted with Japanese methods of business so very arbitrary that a brief notice of them will be all that is necessary.

The cases in which stamps are required are divided into two large classes:—

1. Documents.
2. Account-books, ledgers, &c.

In the former case ruled paper is always necessary, sometimes, as previously stated, when stamps are not required. In the latter case stamps only are used.

The documents on which stamps have to be affixed admit of a further classification into several classes, which will be understood by reference to Appendix (H).

Both stamps and ruled paper are sold by persons who obtain a licence for that purpose from the Government.

Those dealers who pay in-advance to the Government the cost of stamps and ruled paper received by them for sale from the Government, receive a commission of 10 per cent. on the total value of what they sell. Those, again, who pay to the Government the cost of stamps and paper after they have disposed of them, receive a commission of only 4 per cent. on the total value of what they sell.

The charges for notarial seals are only required in certain commercial matters, and vary according to the amount of money involved.

CUSTOMS DUTIES.—These duties are connected with foreign trade, and do not call for any remarks in this paper.

POSTAL DUTIES.—These appear in the Finance Estimates under the head of "National Taxes," and I have therefore included them in the list given in this paper. But as they belong to a subject which may be considered as quite separate from taxation, no comment on them is necessary.

(B.)—LOCAL TAXES.

The establishment of the system of local taxation now in force was commenced in 1878. In July of that year a Notification was issued enacting that the local taxes in each Prefecture, or administrative district, should be divided into three classes:—

1. Land rate ("jizowari-zei").
2. House tax ("kosuwari-zei,"³⁵ or "kaoku-zei").

³⁴ Introduced by Notification No. 121 of July 1878. These duties have now been raised;—the new system will come into force July 1, 1884 (see Annex 3).

³⁵ In 1882 the name was changed from "kosuwari ze" to "kaoku-zei."

3. Trades tax and miscellaneous taxes.³⁶

The local expenditure which this taxation is designed to meet may be divided broadly into the following heads:—

Police rates.	Educational rates.
Prison rates. ³⁷	Poor rates.

Maintenance of public roads (including construction and repair of roads, bridges, dykes, and canals).
Maintenance of hospitals.

Maintenance of lunatic asylums.

Cost of construction and repairs of prefectural and municipal³⁸ offices and buildings.

Expenses of Board of Health (or sanitary rates), including cost of sanitary precautions rendered necessary by outbreaks of epidemic disease.

Wages and expenses incurred on public service of local officials and District Mayors.

Expenses of shipping offices and relief of shipwrecked vessels.

Cost of printing and publishing Government Notifications.

Expenses of Prefectural and Municipal Assemblies and of local Government offices.

Official expenditure incurred in the development of national industries.

And extraordinary expenses of various kinds occasioned by fire or flood, or arising out of any other causes.

The expenditure incurred under the foregoing heads differs in almost each locality, and the incidence of taxation varies accordingly. In some districts, where the number of householders is small as compared with that of land-owners, and where the outlay of public money is made more in the interests of the latter, certain charges which, in townships like those of Tōkiō and Osaka are borne by house property, are in these localities laid upon the land.

The system under which the local taxes are collected, in spite of the variations in detail which have been noticed, may be roughly described as follows:—

The estimates of expenditure, and of the taxation to be imposed in order to meet it, for each year (*i.e.*, for the period from the 1st July to the 30th June) are drawn up in February of each year by the Prefect of each Prefecture, who presents them for discussion to the local Prefectural Assembly. When the estimates have been passed by this Assembly, they are submitted for approval to the Home and Finance Ministers. The estimates are then given to the District or Municipal Assemblies, where the minor details of taxation are settled.

Extraordinary expenditure incurred through sudden emergencies is met by special taxation. In cases of urgency this additional taxation may be levied at once and reported subsequently to the central authorities. But in ordinary cases the usual course of procedure above described is followed.

In July of every year the Prefect of each Prefecture prepares a detailed financial statement, called the "Fixed Account," of the expenditure and receipts for the preceding twelve months, which is forwarded to the central authorities, and is laid before the Prefectural Assembly in the following year.

1. LAND RATE.

This tax was first established in 1878, and is leviable on land in the same manner as the land tax. It was then assessed at one-fifth of the land tax, but was subsequently, in 1880, increased to one-third. As the latter tax is at present fixed at 2½ per cent. on the value of land, the land rate amounts to a charge of five-sixths on the same land. It is payable half-yearly in January and July of each year.

2. HOUSE TAX.

This tax is imposed on owners of houses. The tax itself is not new, dating back to the times of the Tokugawa Shogunate, when it was known to ratepayers under the name of "kiki-goma."³⁹ In the spring of 1879, however, some alterations were introduced into the collection of the tax by allowing the Municipal Assemblies greater latitude in determining and fixing the rates; and in October of the following year the system of taxation was completely revised (the revision having retrospective effect to the 1st July of that year), the old method of rat-

ing a house according to its frontage being replaced by one under which the square measurement of a house is taken. The old system of levying the house tax is probably responsible for the peculiar construction of Japanese houses, which have a very narrow frontage but extend back a long way from the street.

The tax is now payable half-yearly, that for the first half-year being payable in the period comprising July and August; that for the second half-year by the end of February. So little uniformity obtains in the incidence of this tax throughout the country that it is impossible to consider its details as applicable to the whole of Japan. In dealing with this tax, therefore, it must be understood that by the house tax is meant this tax as it is collected in Tōkiō and the neighbourhood.

The city of Tōkiō is, for administrative purposes, divided into fifteen urban districts, called "ku," which constitute the city proper, and into six rural districts, which constitute the suburbs.⁴⁰ Under the Regulations which came into force in March 1879, the estimates of the local expenditure of the Prefecture of Tōkiō for the ensuing year⁴¹ are discussed and settled in the Prefectural Assembly, and at the same time the Assembly settles the amount of taxation to be levied in each "ku" and "gun" in order to meet this estimated expenditure, and the rate per tsubo⁴² (of the tsubo measurement of the premises belonging to each householder at which the contribution is to be levied). The results, after being submitted for approval to the Home and Finance Ministers, are communicated to the Mayors of each "ku" and "gun," and, with this estimate before them, the Ku and Gun Assemblies meet together in May and November of each year in order to consider and fix the exact contribution to be levied on each householder in the "ku" and "gun" for the coming half-year, the tax being collected every six months. It rests with these bodies, therefore, to determine the classification of each house, and of the ground on which it stands, and to rate the premises accordingly.

The system on which the tax is distributed amongst the different ratepayers is practically the same in every district of Japan, and its complicated character renders a detailed explanation necessary.

The amount leviable as house tax on a particular householder, as house tax holder, is determined by calculating the square measurement in tsubo of the buildings on the premises, godowns, and buildings detached from the main structure being all measured (an exception being made only in the case of houses which have more than one storey, the measurement of the second storey is taken as seven-tenths, and that of the third storey as half of the measurement of the ground floor.⁴³)

But all houses or buildings are not taxed alike. They are rated according to their construction. For this purpose buildings are divided into two classes:—

Under Class 1 come houses built of stone or brick, and houses built like godowns (*i.e.*, of a specially solid construction).

In the case of buildings of this class the actual measurement of tsubo is doubled. That is to say, a house of 100 tsubo is, for the purpose of taxation, taken to measure 200 tsubo.

Class 2 includes wooden houses only.

In this case the measurement of tsubo simply remains as it is.

The same distinction made in the case of houses is made in the case of the land on which they stand.

For the purposes of this taxation, the land on which houses stand is divided into no less than nine classes, and more than 160 grades.⁴⁴

With regard to land of the first class coming under grades 1 to 20, the actual measurement of tsubo, as ascertained by the official surveyors, is multiplied by 5, and on this increased measurement the rate per tsubo fixed beforehand by the Municipal Assembly is levied.

With regard to land of the second class, coming under grades 21 to 40, the actual measurement of tsubo is multiplied by 4½, and so on till we come to land of the ninth class, coming under grades 160 and further, in which case the multiplier is 1, the measurement of tsubo remaining as it is.

Houses, the building and ground measurement

⁴⁰ In Tōkiō there are certain limits which inclose Tōkiō proper; all districts outside these limits, but within the Tōkiō Fu, are included in the suburbs.

⁴¹ July 1 to June 30.

⁴² 1 tsubo = 36 square feet.

⁴³ If a house of three storeys have a measurement of 100 tsubo on the ground floor, 70 tsubo will be added for the second storey, and 50 for the third storey, so that the total measurement becomes 220 tsubo.

⁴⁴ The value of house-ground in Tōkiō is determined entirely by the position it occupies. It is rated accordingly as it is situated in a populous or unfrequented part of the city.

of which amount to less than 8 tsubo, are exempt from taxation.

The application of the rate per tsubo which has been fixed by the Municipal Assembly is thus governed by three considerations:—

1. The extent of tsubo measurement of the buildings constituting each separate house-holding or premises, which will vary according as the buildings are one, two, or three storeys high.

2. The class of buildings under which the particular house comes.

3. The class of land under which the ground occupied by the premises in question comes.

To make the matter clearer, we will take the case of a householder owning a two-storeyed building coming under Class 1, the measurement of the ground floor of which has been officially determined at 100 tsubo, and standing upon ground rated as of the 1st Class.⁴⁵

The measurement of the building will be taken as...	Tsubo.
As the building is of the 1st-class, this measurement will be doubled	170

Which gives as the measurement of building...	340
The land being of the 1st-class, this measurement will again be multiplied by	5

So that the total measurement on which the rate will be levied will be	1,700
--	-------

Again, let us take the case of a householder owning premises which consist of two buildings, one a two-storeyed building coming under Class 1, the measurement of the ground floor of which has been officially determined at 100 tsubo, and the other a one-storeyed building coming under Class 2, the measurement of which has been officially determined at 50 tsubo, both these buildings standing upon ground rated as of the 9th Class.⁴⁶

In this case the building measurement will be as follows:—

Building 1—	Tsubo.
Measurement	170
This measurement will be doubled, as the building is of the 1st-class	170
Total measurement of Building 1	340
Building 2—	
Measurement	50
Which will remain as it is, this building coming under Class 2	
The total measurement of both buildings will thus be	390

As the ground supporting these buildings is of the 9th Class, this measurement will remain as it is, so that the total measurement on which the rate will be levied will in this case be only 390 tsubo.

Taking the rate fixed for the year's taxation at 5 *sen* per tsubo, the first-named householder would pay a house tax of 85 *yen*, while the latter would pay only 19.50 *yen*.⁴⁷

The tsubo measurement of house property is liable to revision every five years; claims to exemption from taxation are considered at the same intervals of time.

Up to July, 1882, the house tax was paid by the occupants of houses, whether they were tenants or landlords, and no tax was imposed on unoccupied buildings. In March of that year, however, the question was discussed in the Tōkiō Prefectural Assembly, and it was decided that in future this tax was to be paid by the landlord, irrespective of whether a house was tenanted or not. This change, it is said, increased the revenue of the "fu" by 170,000 *yen*.

The local expenditure of the Prefecture which this tax assists to defray, includes the heads of local expenditure previously given, with the addition of the expenses of the Fire Brigade.

The item of educational rates includes only the cost of maintaining the "Chiu-Gakkō," or "Middle Schools." Previous to this year the "Middle Schools" were maintained at Government expense in the same way as the "Dai-Gakkō," or Universities, are still. The "Primary Schools" are supported out of the "kiyo-gi-hi," or district rates.

The Assembly of the Tōkiō Prefecture, when determining the estimates of expenditure, also fix the proportions chargeable to the householders in the "ku," or city proper, and to those in the "gun," or suburbs of Tōkiō. This distribution of the house taxation varies with each head of expenditure, but in most cases the charge per house levied in the city proper is at least double, and in some cases seven or eight times as much as, that levied

in the suburbs. In certain items, too, a portion of the expense is met by contributions from the Government funds.

Government property and buildings and religious edifices pay no house tax.

The Table given in Appendix (I) shows the amount contributed as house tax in the year 1881 by the various urban districts of Tōkiō.

3. TRADES TAX AND MISCELLANEOUS TAXES.

By the trades tax and miscellaneous taxes are understood all taxes levied on trades, industries, and professions for local purposes. These taxes were first established in July, 1879. The Regulations then issued were of an intricate nature, and the system of taxation exceedingly complicated. It was found necessary in July of the following year to revise this system, under which no business or profession was secure from official intrusion, and commercial privacy could not exist; and again in August, 1881, the subject was taken up by the Government, and fresh Regulations were issued superseding all previous enactments in regard to these taxes. These new Regulations introduced an entirely new system, which is now in force. It will be sufficient, therefore, if we confine our attention to the present mode of assessing and collecting these taxes, although, as the subject is one of some interest, a description of the former system will be found in Appendix (J).

Under the present system, which, in view of the numerous local differences which exist, must be taken as applying only to the Prefecture of Tōkiō, the trades tax and miscellaneous taxes are divided into two classes:—

1. These taxes as levied in the urban districts.
2. The same taxes as levied in the country districts.

CLASS I.—TRADES TAX.

A tax similar to the house tax previously described, being assessed according to the tsubo measurement of the premises occupied by the ratepayer, and regulated and made payable in an identical manner, is levied on all commercial Companies or Associations of every kind, and all merchants and shop-keepers; in fact, this tax includes all people of the trading class, with the exception of those who are taxed separately by the Government, such as saké dealers, tobacco dealers, and druggists, and those who pay taxes which come under the head of miscellaneous taxes.

The only difference between this and the house tax is that, whereas in the case of the latter, land which supports buildings is divided into nine classes, in the case of the former, the classes into which similar land is divided are no less than twenty-seven. Moreover, in the case of the house tax, the measurement of buildings standing upon land of the 1st Class is multiplied by 5, and the measurement of buildings standing upon land of the 9th Class remains as it is, while in the case of the trades tax, the measurement of buildings standing upon land of the 1st Class is multiplied by 14, and it is not till we come to land of the 27th Class that the measurement of buildings remains as it is.

In the case of manufacturers and artisans the same tax is levied, with this difference, that it is assessed on the tsubo measurement of the buildings actually used as workshops.

CLASS I.—MISCELLANEOUS TAXES.

Restaurants, hotels,⁴⁸ assignation houses, pleasure-boat houses, tea houses attached to theatres and music-halls, are taxed according to their guest-room accommodation as follows:—

1. Restaurants having a guest-room accommodation of—

	Yen	sen.
70 tsubo and over, pay monthly	10	00
60 tsubo and over, pay monthly	8	00
50 tsubo and over, pay monthly	6	00
40 tsubo and over, pay monthly	4	00
30 tsubo and over, pay monthly	3	00
20 tsubo and over, pay monthly	2	00
15 tsubo and over, pay monthly	1	00
10 tsubo and over, pay monthly	0	50
5 tsubo and over, pay monthly	0	25
And under 5 tsubo, monthly	0	10

2. Hotels⁴⁹ having a guest-room accommodation of—

	Yen	sen.
40 tsubo and over, pay monthly	1	00
30 tsubo and over, pay monthly	0	45
20 tsubo and over, pay monthly	0	30
10 tsubo and over, pay monthly	0	25
5 tsubo and over, pay monthly	0	10

⁴⁸ On further examination of the Financial Reports of the Tōkiō Prefecture, I see that under the head of "Trades Tax" are included the two items of "hotel taxes," "druggists' licences," &c.; why these should not come under "Miscellaneous Taxes" is not clear. The taxes levied in these two cases are similar to the other miscellaneous taxes in every respect.

⁴⁹ See note on "hotels" previously given.

3. Assignation houses and boat houses having a guest-room accommodation of—

30 tsubo and over, pay monthly	3	yen
20 tsubo and over, pay monthly	2	yen

4. Tea houses attached to theatres with a tsubo measurement of 300 tsubo and over, which have a guest-room accommodation of—

	Yen	sen.
20 tsubo and over, pay each day ⁵⁰	0	20
Under 20 tsubo, pay each day	0	15

- Tea houses attached to theatres with a measurement of 200 tsubo and over, which have a guest-room accommodation of—

	Yen	sen.
20 tsubo and over, pay each day	0	15
Under 20 tsubo, pay each day	0	10

- Tea houses attached to theatres with a measurement of under 200 tsubo, which have a guest-room accommodation of—

	Yen	sen.
20 tsubo and over, pay each per day	0	10
Under 20 tsubo, pay each per day	0	05

But the yearly taxation is limited in the case of each tea house to 36 *yen*.

5. Music-halls having a guest-room accommodation of—

	Yen	sen.
25 tsubo and over, pay monthly	0	75
Under 25 tsubo, pay monthly	0	50

When the same persons are proprietors of two or more of these establishments, the nature of the establishment being different in each case, they are only charged the tax on that which is most heavily rated.

Bath-houses, hair-dressers, and servants' agencies pay the following taxes:—

Bath-houses pay yearly	2	yen.
(In the case of very small bath-houses the tax is only 1 <i>yen</i> .)		
Hair-dressers pay yearly	1	yen.
Servants' agencies	1	yen.

Billiard saloons, rifle and archery saloons, and bowling alleys pay monthly taxes ranging from 1.50 *yen* in the case of the first, to 50 *sen* in the case of the last.

The following taxes are imposed on water-mills:—

Silk mills, grain mills, and mills for hulling rice pay yearly 5 *yen*.

Boats of various kinds pay yearly taxes as follows:

Boats over 12 feet, a tax equivalent to half the Imperial tax; under 12 feet, a quarter of the same.

Carriages belonging to livery stables, ox-carts, goods-carts, waggons, and velocipedes pay yearly a tax equivalent to half of the Imperial tax.

Private carriages and private jinrikisha pay yearly the same amount as the Imperial tax.

Riding-horses belonging to livery stables pay yearly 1 *yen*; private riding-horses pay 3 *yen*.

Graziers, who supply the meat market, pay yearly:—

Per Ox sold	40	sen.
Per Calf sold	10	sen.
Per Sheep sold	15	sen.
Per Pig sold	10	sen.

Formerly, the taxes on markets were assessed at so much per cent. on the value of the sales, and were payable monthly.

The tax on markets has now been settled at a fixed annual sum, which varies in different districts.

The market in Nihonbashi⁵¹ pays 100 *yen*; that at Yokkaichi pays 60 *yen*; and other markets pay taxes varying from 10 to 1 *yen*.

Theatres pay a tax of 8 per cent. on total receipts (i.e., all money taken at the doors).

Shows and other places of entertainment (not otherwise taxed) pay a tax of 5 per cent. on receipts.

In each case the tax is payable every ten days.

Actors, wrestlers, dancing-girls, jesters, jugglers, singers, reciters, circus-riders, and story-tellers pay the following taxes:—

	Yen	sen.
Actors—		
First class, pay monthly	5	00
Second class, pay monthly	4	00
Wrestlers—		
First class, pay monthly	1	00
Second class, pay monthly	0	50
Dancing-girls—		
First class, pay monthly	2	00
Second class, pay monthly	1	00
Jesters, pay monthly	2	00
Jugglers, singers, reciters, circus-riders, and story tellers—		
First class, pay monthly	2	00
Second class, pay monthly	1	00
Third class, pay monthly	0	30

⁵⁰ Namely, for each day while the performances are going on.

⁵¹ The central market in Tōkiō.

⁴⁵ Being in a busy quarter of the town.

⁴⁶ Being in an unfrequented portion of the city.

⁴⁷ These figures are simply given by way of illustrating the working of the system. In point of fact, the average measurement of buildings in Tōkiō is given officially at about 17 tsubo for the country districts. In the case of urban districts, no average measurement of buildings has been officially determined.

Blind minstrels, and professional performers above 60 years of age, pay no taxes.

Apothecaries and medicine pedlars pay an annual licence fee of 20 *sen*.⁵²

Actors and wrestlers pay their taxes to the office of the Prefecture; other people to the district offices.

It will be seen that the period of assessment as regards the trades tax and miscellaneous taxes varies, being sometimes annual, in other cases monthly, and in others, again, daily.

In the case of these taxes, which are assessed at so much per year, payment is made in two instalments; the tax due for the first half-year to the 30th June being payable before the end of August, and that for the latter half-year being payable by the end of the following February. Monthly taxes must be paid by the 20th day of the month for which they are due.

Daily taxes are payable every ten days.⁵³

CLASS 2.—TRADES TAX.

The trades tax and miscellaneous taxes levied in the country districts of Tōkiō are practically the same as those levied in the urban districts.

The principal difference lies in the details of assessing the trades tax.

The classification of houses is the same, only that in the case of the measurement of houses of the 1st Class the measurement is not doubled as in the urban districts, but is increased by half of the ascertained measurement.

In the case of land the classification differs materially.

Land supporting buildings is divided into five classes only, and in the case of buildings standing upon ground of the 1st Class the tsubo measurement is multiplied by 3; while in the case of buildings standing upon ground of the 5th Class the tsubo measurement remains as it is.

CLASS 2.—MISCELLANEOUS TAXES.

Restaurants, hotels, and similar establishments previously enumerated under the head of urban districts pay a much lower rate of tax in the country districts, these monthly taxes varying from 1 *yen* to 10 *sen*, and the same comparatively low rates are levied in most of the other items of taxation—theatres, for instance, paying only 5 per cent. on receipts.

Both in the urban and country districts people of the poorest class are exempted from taxation.

4. DISTRICT RATES, OR "KAYOJIHI."

It only remains to notice these rates, which may be dismissed with the brief explanation that they are variable in amount, and are determined by the residents in each district. In case of disputes, the questions at issue are referred for settlement to the local authorities.

The expenditure thus met comprises:—

1. Maintenance of primary schools.
2. Construction and repair of local wells, privies, drains, aqueducts, and street lamps.

GENERAL REMARKS.

(A)—NATIONAL TAXES.

The Financial Estimates for the year 1883-84, just published, give the total amount of the revenue from national taxes at 70,256,720 *yen*, divided as follows:—

	YEN.		YEN.
1. Land tax	43,029,745 ⁵⁴	10. Tax on Companies	500,000
2. Saké tax	16,711,635 ⁵⁵	11. Tax on exchange brokers	Nil
3. Malt tax	56,500		
4. Tobacco tax	974,199		
5. Tax on druggists, &c.	686,495		
6. Ship tax	136,131		
7. Carriage tax	441,549		
8. Mining tax	15,878		
9. Tax on Yezo exports	864,193		

A detailed comparison of the amounts collected under the various heads of national taxation, as they appear in the present Estimates, and in those for former years, belongs properly to a Financial Report, so I will confine myself in the present instance to pointing out the increase of revenue which has occurred under the above heads in the last four years. This is shown by the following Table, in which the figures, of the present Estimates are compared with those of the Estimates of the financial year 1879-80.

COMPARATIVE TABLE SHOWING THE AMOUNTS OF NATIONAL TAXES APPEARING RESPECTIVELY IN THE FINANCIAL ESTIMATES FOR 1879-80 AND 1883-84.

TAX.	FINANCIAL YEAR 1879-80. YEN.	FINANCIAL YEAR 1883-84. YEN.	REMARKS.
Land tax	41,000,950	43,029,745	Increase... 2,028,795
Saké tax	4,507,272	16,711,635	Increase... 12,204,363
Malt tax	—	56,500	Only established in 1880. No Returns till 1881.
Tobacco tax	348,674	974,199	Increase... 625,525
Tax on druggists, &c.	79,131	686,495	Increase... 607,364
Ship tax	138,357	136,131	Decrease... 2,226
Carriage tax	270,348	441,549	Increase... 171,201
Mining tax	11,537	15,878	Increase... 4,341
Tax on Yezo exports	363,971	864,193	Increase... 500,222
Tax on Companies	500,000	1,279,544	Increase... 779,544
Tax on weights, &c.	2,925	3,309	Increase... 384
Licence fees	118,730	191,057	Increase... 72,327
Other fees	88,464	129,819	Increase... 41,355
Stamp duties	539,168	886,336	Increase... 347,168
Customs duties	2,181,310	2,600,330	Increase... 419,020
Postal receipts	1,050,000	2,250,000	Increase... 1,200,000
Add tax on official salaries	81,992	—	Abolished in 1880.
Total taxes ...	51,282,829	70,256,720	
	£ 9,401,851 9 8	£ 12,880,398 13 4	

It will be seen from the above Table that, making allowance for two items which figure alone in each financial year, namely, that of the tax on salaries of officials, and that of the malt tax, the Estimates for 1883-84 show a net increase in the total amount of national taxation for the financial year, as compared with the Estimates for 1871-80, of 18,999,383 *yen*.

Of this amount the saké tax alone contributes an increase of 12,204,363 *yen*. This large increase is due to the additional taxation imposed in 1880, and again in 1882.

The land tax shows an increase of 2,028,795 *yen*, which may be attributed to the increased area of ground under cultivation, owing to the gradual reclamation of waste land.

The tobacco tax shows an increase of 625,525 *yen*. Of this, 125,525 *yen* are due to increased manufacture and consumption, and 500,000 *yen* to the newly-imposed stamp duty on tobacco, which was established in 1882.

In the revenue derived from the tax on druggists and on prepared medicines the increase is 607,364 *yen*. Of this amount, 7,364 *yen* are attributable to an increased trade in drugs, while 600,000 *yen* represent the additional revenue obtained by the imposition of the stamp duty on prepared medicines.

The increase of 500,000 *yen* in the item of duties levied on exports from Yezo is due to the increased export trade from that island.

The tax on Companies shows an increase of 779,544 *yen*. This increase is explained by the imposition in December 1882 of the taxes on brokers who are members of Rice and Stock Exchanges.

The actual revenue derived from the tax on Companies has increased but slightly, as the following figures show:—

	1879-80. Yen.	1883-84. Yen.
Tax on Companies	500,000	546,588
Tax on exchange brokers	Nil	932,956

giving a balance in favour of the financial year 1883-84 of 779,544 *yen*.

The only other item which need be considered is the increase of 347,168 *yen* in stamp duties.

We see, therefore, that of the total increase of revenue shown in the Estimates for 1883-84, as compared with 1879-80, amounting to 18,999,383 *yen*, no less a sum than 14,216,706 *yen* is due to the additional taxation imposed in the case of four taxes—those on saké, tobacco, drugs, and on Companies, most of this additional taxation having been introduced at the end of last year (1882).

(B) LOCAL TAXES.

The amount yielded by the land rate in the financial year 1883-84, being one-third of the land tax, is estimated at 14,343,249 *yen*.

The statistics of the other local taxes for the whole country are not obtainable, nor indeed have the statistics of these taxes, as collected in the Tōkiō Prefecture, for either the last or the present financial year, been yet published in a complete form.

It is necessary, therefore, to fall back upon the statistics of local expenditure and taxation in the Tōkiō Prefecture for the financial year 1881-82, which have been kindly placed at my disposal by the Prefect of Tōkiō. The division of this local expenditure into three classes—expenditure chargeable jointly to urban and country districts, expenditure chargeable to urban districts only, and expenditure chargeable to country districts only—has neces-

sitated the adoption of a similar arrangement in the preparation of the two following tables:—

(TABLE A)—SHOWING EXPENDITURE CHARGEABLE JOINTLY TO URBAN AND COUNTRY DISTRICTS, AND AMOUNT PAID OUT OF GOVERNMENT FUNDS IN THE FINANCIAL YEAR 1881-82.

Nature of Expenditure.	Expenditure chargeable jointly to Urban and Country Districts, and Amount paid out of Government Funds.	
	Paid by Urban Districts. Yen.	Paid out of Government Funds. Yen.
Police rates	208,786	349,249
Public works	7,324	8,492
Expenses of Fu Assembly	737	169
Expenses of hospitals and Board of Health	6,155	355
Educational rates	3,269	2,542
Poor rates	25,968	1,495
(Including maintenance of lunatic asylums.)		
Expenses of shipping offices and relief of shipwrecked vessels	289	66
Encouragement of industries	307	45
Maintenance of Prefectural buildings	2,194	509
Prison rates	159,549	18,373
(Including maintenance of prison buildings.)		
Totals	414,668	351,637

(TABLE B)—SHOWING EXPENDITURE CHARGEABLE SEPARATELY TO URBAN AND COUNTRY DISTRICTS RESPECTIVELY, AND AMOUNT PAID OUT OF GOVERNMENT FUNDS, AND TOTAL EXPENDITURE UNDER EACH HEADING.

Nature of Expenditure.	Expenditure chargeable to Urban Districts only. Yen.	Paid out of Government Funds.		Total paid out of Government Funds. Yen.
		Urban Districts. Yen.	Coun-try Dis-tricts. Yen.	
Police rates	20,203	79	113	30,418
Public works	103,438	52,600	600	600
Expenses of Fu Assembly	3,177	2,303	—	—
Expenses of hospitals and Board of Health	7,773	400	—	—
Educational rates	1,629	—	—	—
Maintenance of district offices and buildings	1,264	84	—	—
Salaries, &c., of Prefectural and district officials	104,781	47,413	—	—
Poor rates	2,128	263	—	—
(Including maintenance of lunatic asylums.)				
Cost of publishing Government Notifications	210	788	—	—
Cost of collecting taxes	3,119	513	—	—
Gas rates	17,064	—	—	—
Encouragement of industries	—	17	—	—
Deficit from financial year 1879-80	10,514	—	—	—
Totals	275,300	104,361	—	31,018
Add expenditure paid by urban and country districts, from Table (A)	414,668	56,090	—	—
Add expenditure paid out of Government funds, taken from Table (A)	—	—	—	351,637
Grand totals	689,968	160,451	—	382,655
	£ 126,494 (about)	£ 29,416 (about)	—	—

The above Tables show that the local expenditure of the Tōkiō Prefecture chargeable to urban and country districts for the financial year 1881-82 amounted to—

	Yen.
Urban districts	689,968
Country districts	160,451

The local revenue derived from the three local taxes, which appear in the Estimates of the local authorities for the same period, was as follows:—

	Urban Districts. Yen.	Country Districts. Yen.
Land rate	88,452	92,488
House tax	294,291 ⁵⁶	15,729 ⁵⁶
Trades tax and miscellaneous taxes	299,014	17,956
Totals	681,757	126,416

It will be seen that there was an excess of expenditure over revenue for this year in each case.

This deficit in revenue has, I understand, been partly met by surplus funds remaining over from previous years, and by receipts derived from the sale of local Government property.

NON-PAYMENT OF TAXES.

With regard to the measures adopted by the Government in regard to arrears of taxes, the following provisions were established in November, 1877, and have effect in the case of all taxation, whether Imperial or local:—

"When taxes remain unpaid, after the period within which they are to be collected, a public sale is ordered of the property on which the unpaid taxes are leviable. If such property has been sold, or transferred in free gift to any other person, the person buying or receiving such property is held responsible for the arrears of taxes. In the case of property given in pledge or mortgaged, if the debtor

⁵² These amounts do not agree with those given in Appendix (1); but the latter form the estimated revenue from this tax, while the former represent the actual revenue collected.

⁵³ See note on "hotels" previously given.

⁵⁴ This is explained by the Japanese method of dividing a month into three parts, each consisting nominally of ten days.

⁵⁵ Taking the *yen* as the equivalent of a dollar, and as therefore worth 38. *sd.*, the equivalent in English money will be about 7,888,328.

⁵⁶ The saké tax yields in English money a revenue of about 3,063,799.

declares himself able to pay the arrears due, they shall be charged to him and not to the mortgagee.

"In the case of arrears of trades taxes, the business or trade of the defaulter will be suspended, and the goods in stock shall be publicly sold first, and then afterwards, if necessary, the machinery or plant. Brewers who do not pay their taxes will be dealt with according to this clause.

"In all cases of arrear in local taxation, the defaulter shall be dealt with in this manner. In cases where the taxes are not leviable on particular property, in the event of the taxpayer becoming insolvent, the Government shall have a preference claim before all other creditors in the case of property other than land and houses.

"When the property of taxpayers whose taxes are in arrears has been publicly sold, the cost of such public sale will be made the first charge on the proceeds of the sale. This having been defrayed, the proceeds will then be applied to meet the arrears of taxes, and if any balance is left over, it will be returned to the defaulter.

"Property offered for public sale, for which no purchaser can be found, will be confiscated by the Government."

CASES OF FAILURE OF CROPS.

In ordinary cases of hardship endured by agriculturists through the failure of crops in bad years, no allowance is made by the Government on the ground that the land tax has been adjusted on a liberal scale, so as to enable the people, by the profits which they make in good seasons, to cover their losses in bad years. But in cases of extraordinary hardship, caused by inundations, or prolonged drought, the localities which have suffered damage to land or crops are inspected by the Government, and where the damage sustained amounts to the loss of one-half or more of the year's crop, half of the tax due is made payable at the ordinary time, and the payment of the other half extended over a period of five years, dating from the year in which the loss was sustained. In the case of the total failure of crops, the payment of the whole tax due is extended over a period of ten years, dating from the year in which the loss was sustained.

COLLECTION OF TAXES.

The mode of collecting both national and local taxes is uniform throughout Japan, although the process of collecting taxes in town and in country districts is slightly different. The Taxation Bureau of the Finance Department has eighteen branch establishments in various parts of the country which are entrusted with the immediate supervision of all matters connected with the receipt of taxes.

In towns the District Mayors collect all taxes at the periods when they are due, and pay the sums so collected into the local National Bank, receiving a receipt for each amount paid in. These receipts are given in to the nearest branch establishment of the Taxation Bureau.

In the country the District Mayors collect the taxes in the same way, and pay the sums so collected into the nearest local National Bank. The receipts given for these payments are handed in by them to the "Gunchō," or district offices, by which they are forwarded to the nearest branch office of the Taxation Bureau.

The National Banks receive a commission of one-tenth per cent. on all sums paid in, and this commission is chargeable to the taxpayers and not to the Government.

It will be seen from a consideration of the system of taxation, as explained in the preceding pages, that the revenue of Japan is anything but elastic. The large increase of revenue discernible in the last few years has been derived mainly, if not entirely, from specific taxation on such commodities as saké and tobacco, and this increased taxation cannot, it is clear, admit of any further extension. The land tax is the only tax which can be recognized as capable of yielding an increased revenue to the country. And although it is commonly reported that the valuation of land in certain localities has been considerably underrated, and rumours are current that, in the ensuing survey and revaluation of land which will take place in 1885, a high increase will be made in the assessment of all holdings, it remains to be seen how far the Government may be able to expand the national revenue from this source, without at the same time imposing too heavy a burden on the productive powers of the country.

(Signed) JOHN H. GUBBINS,
Acting Japanese Secretary.

September, 1883.

APPENDIX (A).

RULES RELATING TO WASTE LAND.

WASTE LAND.

1. Under the term "waste land" is included land which is damaged by landslips, inundations, or by the changing of a river's course, land forming part of the bed of a river, and land which, by natural calamity, has been converted into ponds, lakes, rivers, or sea.

2. The period for which tax exemption is given in the case of land rendered waste varies, according to the extent of damage, within a limit of ten years. At the expiration of this period, if, on inspection, it appears that the ground has not yet been brought under cultivation so as to yield a profit, a further extension will be allowed.

3. In the event of an owner of land rendered waste by devastation caused by river, sea, or lake, wishing to continue in possession, on application, a title-deed, in which the value of the land is stated, will be given, and a period of ten years' exemption from taxation fixed. If at the end of this term the land be not brought into its former cultivated condition, the title-deed will be taken back, and the land revert to Government in its devastated state as waste land.

4. In the event of land rendered waste by conversion into a pond at the expiration of the term of exemption remaining still unprofitable as cultivated land, if it yields any profit from weeds, fish, &c., tax will be collected according to the profit accruing to the owner, and the land entered in the Land Register as pond land.

5. In the case of waste land yielding profit to its owner, during the term of exemption, from the growth of bamboos, trees, reeds, or rushes, at the expiration of the term such land will be entered under the head of reed and rush land.

6. With regard to waste land which, at the expiration of the term of exemption, has been brought under profitable cultivation, the extent of land so rendered profitable will be determined and tax collected.

7. After the revision of the land tax, land owned by people, being mountain land precipitous in nature, or very rocky land, converted into house land, shall be treated on favourable terms on account of the labour involved, and a suitable period determined during which taxes will be collected according to the original value of land. In the case of land for which no value is entered in the title-deed, owing to its being sea, river, or lake land, being turned into house land, a suitable period of exemption from taxes will be granted.

8. After the revision of the land tax, land owned by people, being waste land permitted to be converted into arable land, and for which an exemption period has been granted, when turned into house land for reasons of convenience, will still, during period of exemption, be regarded as land under cultivation.

9. Waste land turned into house land during the exempted period will pay suitable taxes from the year following that in which the conversion takes place.

Land on which much labour has been expended will be left exempt during a period fixed.

(The last three clauses were added in 1876.)

An additional clause was subsequently introduced:—

"In the case of reclaimed land, either mountain, forest, or moor, the owners of which received exemption from payment of taxes for a term of years before the revision of the land tax,⁵⁷ should the owners apply for an extension of the term of exemption after the revision of the land tax, and obtain such extension, they shall pay during such extended term of years a tax based on the value of the land in its wild state, such value to be assessed on the basis of the value of neighbouring land of a similar kind."

APPENDIX (B).

REGULATIONS FOR REVISION OF LAND TAX.

1. With regard to the present revision of the land tax, as it is not an easy matter, great care must be taken in preparing the subject for revision. As in regard to land of the best quality there are cases which can be quickly settled, and others the settlement of which is tedious—cases which present much difficulty, and others which are easily dealt with—the revision cannot, of course, be carried out simultaneously in all districts. The matter is, therefore, not one which requires a prompt settlement. When detailed opinions have been carefully prepared, reports must be made to the Finance Department, and when these have been approved by that Department, then the old taxes

⁵⁷ Called the "hoeing term."

will be abolished, and the new system will be brought into operation. This must be borne in mind.

NOTE.—Even if arrangements in respect to all the lands under one jurisdiction be not completed, when these arrangements are complete in one district, they may be brought into operation in that place.

2. When the revision of taxes has been brought into operation, taxation will be levied according to the actual value of the land in each case. Taxation will not be increased, of course, in years of plenty, and similarly in bad years no reduction will be allowed.

3. When changes occur to land through natural disasters, the land in question will be inspected, and, in accordance with the extent of damage sustained, either a reduction of rent for that year will be made, or a period of years will be fixed within which the land can be brought into cultivation again, and during this term of years no fixed rent will be charged.

4. After the revision of taxation has taken place, the distinction between paddy and ordinary arable land will be abolished, and all land under tillage will be called cultivated land. Other land will be called by its respective appellations, such as grazing land, mountain land, forest land, moor land, &c.

5. Land on which buildings are erected will be known as house land.

6. Hitherto taxes on various commodities and taxes on buildings have become mixed up with the land tax, but when the taxation has been revised, a clear distinction will be made, and, although the land tax ought to be at 1 per cent., the taxes on various commodities have not yet been fixed, and therefore the land tax has been fixed at 3 per cent. Later on, however, when taxes on tea, tobacco, and timber, &c., have been introduced, and the revenue has been increased until the total amount of taxation has reached the sum of 2,000,000 yen or more, then, in the case only of land which has been subjected to this revised taxation, the increased amount of money derived from the new taxes will be substituted for part of the land tax, and the latter will be gradually reduced until it reaches the proportion of 1 per cent.

7. Until the land tax has been revised, it will be necessary to adhere to the old system, and therefore, even if complaints of hardship in regard to the old taxes be preferred, they will not be entertained, except in special cases, when the taxes are unfairly severe or unfairly light. This must be borne in mind. In the case of land on which a reduction of rent has been allowed after inspection, and land in regard to which the reduction of rent has been cancelled, the old rules are to be followed.

The above rules have been established. Detailed instructions will be issued later on by the Finance Department.

July, 1873.

An additional clause was added in May of the following year, 1874, stating that should the value of land rise or fall in connection with transactions of sale or purchase, the value as fixed at the time of revision would still be considered, during the period of five years, to have remained unaltered, and accordingly the same land tax would for that period be levied. But the local authorities were instructed to endorse on the title-deeds of land, the value of which varied in any transaction of sale or purchase, the extent of such variation.

APPENDIX (C).

RULES FOR CARRYING OUT THE REVISION OF THE LAND TAXATION.

The Imperial commands having now been issued for a revision of the land tax, with regard to the value of land as entered in the title-deeds of land formerly issued (by the Government), the amount levied was not uniform owing to the rice measures not being identical, and to other inequalities of taxation. Therefore the owners of land will be made to estimate the yearly profit on land, and to give their opinion as to the value of their holdings based on the profit attending cultivation according to the customs of the different localities, and a suitable tax will be levied after inspection of the land on the part of the Government.

2. In the old title-deeds, although there ought to have been no mistakes in the extent of the land, yet, as it is to be apprehended that fractions of land were omitted, if the old land records be followed the actual facts would be lost, and, consequently, inequalities of rating be caused. As it would be difficult to examine into the matter, the actual measurements of land (held by farmers) must be submitted.

3. In the case of places in country districts where it is difficult to fix the price of house land, the value

must be fixed in accordance with the average price of cultivated land in those places, and the value of corresponding house land in neighbouring districts.

4. In the case of house land, or mountain land, and land on the seashore, where it is difficult, in the absence of land which could serve as a basis of comparison, to fix the price of house land, the price of such house land shall be fixed at not less than 10 sen per tan⁸⁸

5. Land on which district godowns, schools, and poor-houses are erected, though hitherto untaxable, shall, when held as common property in the district, be subject to the same tax as house land.

6. All the mountain, pasture, and other land held in common in a district shall pay a suitable land tax.

7. No tax will be levied on land occupied as dykes, roads, and graveyards, though such taxes have been paid hitherto.

8. In the case of land in the vicinity of the sea, of rivers, or lakes, the limits and extent of which, owing to the variation in the influx of water, are hard to define, and land cultivated by way of experiment, the exact nature of such land must be defined, and an estimate of its extent given.

9. In the case of reclaimed land, the extent must be remeasured, and taxes levied according to these Regulations.

10. In the case of damaged land, a term of years will be fixed proportioned to the extent of damage sustained, and the difficulty of bringing the land into cultivation again, and a title-deed will be given remitting taxes during the term of years so fixed.

11. Suitable taxes will be levied on ponds and marshes, which, by reason of rushes, weeds, and other sources of profit, are remunerative to the owners.

12. A term of years will be fixed in the case of reclaimed land, and a title-deed remitting taxes for that term of years given to the holder.

13. Suitable persons will be appointed by the various district offices to estimate the value of land.

14. The assessors will survey the land, and erect posts in each holding on which will be inscribed the extent of land held, the number, and the name of the occupier.

15. In the case of holdings the price of which is correctly stated, the old title-deeds will be renewed, and the details regarding the land endorsed on the back.

16. In the case of holdings the price of which is not correctly stated, a fresh estimate will be ordered, and in case of the holders disagreeing still with the estimate of the Government, the land will be sold by written tender, or at a price fixed by Government.

17. When the title-deeds have been prepared, the forms for taxes will be drawn up in the inclosed form. They must be produced at the Taxation Department before taxes are paid.

(Signed) OKUMA SHIGENOBU.

For the information of local authorities.

APPENDIX (D).

1. In the case of the purchase by Government of private land (as opposed to Government lands), the land tax for the year shall be paid to the end of the month previous to that in which the purchase is made.

2. In the case of the purchase by private individuals of Government land, the land tax for the year shall be paid for the number of months remaining, dating from the month following that in which the purchase is made.

3. In the case of private land converted by permission of the Government into river frontages, parks, roads, wharves, &c., tax shall be paid up to the end of the month preceding that in which the land is appropriated to its new use.

APPENDIX (E).

(Translation.)

With regard to the notification, by Decree No. 63 of December 1882 of the revision of the Tobacco Tax Regulations, the following stamps (specimens annexed) have been issued.

(Signed.) SANJO SANÉYOSHI,
Daijō Daijin.
MATSUKATA MASAYOSHI,
Minister of Finance.

May 28th, 1883.

APPENDIX (F).

NOTIFICATION NO. 13.

The following Ship Tax Regulations have been established and will come into force on the 1st July, 1883.

⁸⁸ About a quarter of an acre.

(Previous Notifications and Decrees relating to ship taxes are abolished.)

(Signed) SANJO SANÉYOSHI,
Daijō Daijin.
MATSUKATA MASAYOSHI,
Minister of Finance.

April 17, 1883.

SHIP TAX REGULATIONS.

SECTION I.—LICENCE, TAXATION, EXEMPTION FROM TAXES.

Art. 1. All vessels are made subject to taxation.

Art. 2. Owners of vessels must fix a regular place of anchorage for their vessels, and must make application to the local office in the place of anchorage so determined; and when their vessels have been inspected they must apply for licences.

Art. 3. When, in the case of vessels newly built, the regular place of anchorage (determined by the owners) is not within the jurisdiction of "fu" or "ken," in which the place where the vessel was constructed is, the owners must apply to the office of the said "fu" or "ken" (as the case may be), and the vessels, having been examined, they must apply for a provisional licence. When the vessels have been taken round to the regular place of anchorage, application must be made to the local office for the exchange of the provisional licence (for a permanent one).

Art. 4. In the event of alterations being made to a vessel, and its tonnage or length increased, application must be made to the local office at the regular place of anchorage, where the vessel must be inspected and application must be made for an exchange of licence.

Art. 5. In the case of the sale or transfer of a vessel, after both parties have signed (the licence) application must be made to the local office at the regular place of anchorage by the purchaser or transferee, for an exchange of licence.

Art. 6. The taxation of vessels will be as follows:—

Steamers of foreign build, per 100 tons yearly 15 yen.

Sailing-vessels of foreign build, per 100 tons yearly 10 yen.

Vessels of Japanese build, 50 koku burden and over, per 100 koku yearly 2 yen.

Vessels under 50 koku burden, not exceeding 18 feet in length from stem to stern; and passenger-boats, cargo-boats, and fishing-boats, not exceeding the same length (shall pay) irrespective of carrying capacity, annually 30 sen.

(For every 6 feet of additional length an increase of 15 sen will be charged.)

Pleasure-boats not exceeding 18 feet in length from stem to stern, shall pay, annually 50 sen.

(For every 6 feet of additional length an increase of 25 sen will be charged.)

Art. 7. The permanent or provisional licence must be held on board of a vessel when she is on a voyage, or when she is being sent round from the place of construction to the port of regular anchorage. (In the case of vessels of Japanese build under 50 koku burden, and passenger, cargo, and fishing boats, the permanent licence must be attached to the vessel or boat.)

Art. 8. In the event of the loss of vessels through being broken up (on account of their age) or shipwrecked, or through accident by water, fire, or theft, the circumstance must be reported to the local office at the place of regular anchorage, and the licence returned.⁸⁹

Art. 9. Should a licence be destroyed or injured, or should the owner change his name, or should the ownership be transferred from father to son, or should the vessel's name be changed or the regular place of anchorage be altered, application must be made to the local office of the regular place of anchorage, and a fresh licence or an exchange of licence requested.

Art. 10. The vessels enumerated below are exempted from taxation:—The owners of such vessels must report (the fact of ownership) to the local office and apply for the burnt stamp:—Store-vessels, punts used in cultivating paddy-fields, boats kept for use in times of flood, ferry-boats used to supply the place of bridges, boats used in bridges of boats, and boats carried on board of vessels during a voyage.

SECTION II.—PAYMENT OF TAX.

Art. 11. The tax is divided into two periods, and will be leviable on ships actually in existence on the 1st January and 1st July. The tax due for the first half-year must be paid into the office of the regular place of anchorage by the 31st January, and the tax for the latter half year by the 31st July.

Art. 12. Newly-built vessels must pay the tax for the period in which their owners receive a licence.

Art. 13. In the event of a ship being altered and its tonnage or length increased, a tax proportionate to such increase must be paid for the period following that in which the alterations are effected.

⁸⁹ In the case of vessels under 50 koku burden there would in most cases be no licence to return.

Art. 14. If the regular place of anchorage be fixed in a jurisdiction other than that to which the owner is subject, an agent must be appointed, and the (owner's and agent's) names having been duly affixed to the licence, a report must be made to the office of the regular place of anchorage and the tax paid.

Art. 15. When the regular place of anchorage is fixed in the same jurisdiction as that in which the owner is registered, in the owner's absence an agent must be appointed, who will report to the office of the regular place of anchorage and pay the tax.

Art. 16. In cases where the period of payment of tax arrives during the passage of a ship, to the owner of which a provisional licence has been issued, from the port of construction to the regular place of anchorage, an agent must be appointed beforehand at the regular place of anchorage, who will report to the office concerned and pay the tax.

Art. 17. Persons who infringe these Regulations and evade taxation will, after payment of the fine, be made to pay the tax in addition.

SECTION III.—PENAL CLAUSES.

Art. 18. Persons who infringe these Regulations and evade payment of the tax will be punished by a penalty of five times the amount of the tax evaded, or by a fine.

Art. 19. Persons who put vessels exempted from tax to the use of taxed vessels will be punished by a penalty of not less than 2 yen and not more than 50 yen.

Art. 20. Persons who infringe Articles 3, 5, 7, 9, 14, 15, and 16, and owners of vessels exempt from taxation under Article 10, who neglect to have the official stamp put on such vessels, will be punished by a penalty of not less than 1 yen and not more than 1.95 yen.

Art. 21. In the case of persons punished by fine or penalty under these Regulations, the offence that they may have committed against the criminal law will not be inquired into, nor will the system of diminution of penalty in cases of light offences or of increase of penalties in grave cases, &c., be employed. Cases, however, which come under clauses 75 and 76 of the Criminal Code⁹⁰ will not be included in this category.

APPENDIX (G).

JUDICIAL FEES.

1. Charges for petitions and answers:—

In cases where money, rice, or other cereals are in question:—

Where the amount involved is under 10 yen or 5 koku⁹¹ of rice, or 10 koku of other cereals, 1 sen⁹² per sheet of ruled paper on which the petition is written.

Where the amount involved is over 10 yen but under 100 yen, or over 5 koku but under 50 koku of rice, or over 10 koku but under 100 koku of other cereals, 2 sen per sheet of ruled paper on which the petition is written.

Where the amount involved is over 100 yen but under 500 yen, or over 50 koku but under 250 koku of rice, or over 100 koku but under 500 koku of other cereals, 3 sen per sheet of ruled paper on which the petition is written.

Where the amount involved is over 500 yen but under 1,000 yen, or over 250 koku but under 500 koku of rice, or over 500 koku but under 1,000 koku of other cereals, 4 sen per sheet of ruled paper on which the petition is written.

Where the amount involved is over 1,000 yen, or over 500 koku of rice, or over 1,000 koku of other cereals, 5 sen per sheet of ruled paper on which the petition is written.

In cases concerning succession of property, adoption, and employment of servants:—

1½ sen per sheet of paper.

In cases concerning land and houses:—

1½ sen per sheet of paper.

In cases concerning miscellaneous matters:—

1½ sen per sheet of paper.

2. Charges for judgments.

In cases where money, rice, or other cereals are in question:—

Where the amount involved is under 10 yen, or under 5 koku of rice, or under 10 koku of other cereals, 2 sen per sheet of paper.

Where the amount involved is over 10 yen but under 100 yen, or over 5 koku but under 50 koku of rice, or over 10 koku but under 100 koku of other cereals, 3 sen per sheet of paper.

Where the amount involved is over 100 yen but under 500 yen, or over 50 koku but under 250 koku of rice, or over 100 koku but under 500 koku of other cereals, 4 sen per sheet of paper.

Where the amount involved is over 500 yen but under 1,000 yen, or over 250 koku but under 500 koku of rice, or over 500 koku but under 1,000 koku of other cereals, 5 sen per sheet of paper.

Where the amount involved is over 1,000 yen, or over 500 koku of rice, or over 1,000 koku of other cereals, 6 sen per sheet of paper.

⁹⁰ Cases where persons have acted under compulsion, or under orders from a superior.

⁹¹ 1 koku = 2½ piculs.

⁹² Taking the yen as the equivalent of a dollar, and as worth 3s. 8d., 1 sen being the hundredth part of a yen = 3½ths of a penny.

- In cases concerning succession to property, adoption, and employment of servants :—
 $3\frac{1}{2}$ sen per sheet of paper.
 In cases concerning land, houses, &c. :—
 $2\frac{1}{2}$ sen per sheet of paper.
 In cases concerning miscellaneous matters :—
 $2\frac{1}{2}$ sen per sheet of paper.
 3. Charges for interlocutory proceedings, and for summonses, motions, etc. :—
 5 sen per sheet, in all cases.

APPENDIX (H).

STAMP DUTIES.

RULED PAPER USED FOR ALL KINDS OF FORMAL DEEDS AND DOCUMENTS (EXCEPT JUDICIAL DOCUMENTS.)

	Charges. Rin. ⁶³
One sheet—	
Large size.....	7
Medium size.....	5
Small size.....	3

(A)—STAMP DUTIES (ON DOCUMENTS).
FIRST CLASS.

1. Receipt for money received in payment of goods sold, or in return for discharge of duties of any kind.
 Receipt for goods pledged.
 Ruled paper required, and 1 sen for sums of 10 yen and over. No stamp duties on ruled paper required for sums less than 10 yen.
2. Receipt for money received on deposit.
 Receipt for rice received on deposit.
 Receipt for cereals received on deposit.
 Lease of land for purposes of cultivation.
 For sums of 10 yen and over, for 5 koku of rice and over, for 10 koku of other cereals and over, ruled paper, 1 sen required.
 Deed of gift of money on death of donor.
 For sums less than 10 yen, &c., no stamp duty or ruled paper required.
3. Certificate of shares in a Company or commercial firm.
 Bill of lading or invoice.
 Deed of gift of land or buildings.
 Deed of gift of goods.
 Receipt on goods received on deposit.
 Deed of gift of public debt bonds, &c.
 Deed of gift of all property ⁶⁴ either before or after donor's decease.
 Ruled paper required, and 1 sen stamp, irrespective of amount.

SECOND CLASS.

1. Entries in books of large transactions in the sale of and purchase of goods, &c.
 For sums under 10 yen no stamp or ruled paper required.
2. Deed executed in borrowing money.
 Receipt for deposit of money, in which it is not stated that the rice must not be used.
 Receipt for deposit of rice, in which it is not stated that the cereals must not be used.
 Receipt for deposit of cereals, in which it is not stated that the money must not be used.
3. Deed of value of land and buildings.
 Deed of pledge and mortgage of land and buildings.
 Deed of sale of public debt bonds, &c.
 Deed of pledge and mortgage of goods.
 Deed of contract to execute work of building contract.
 Contracts in which money is advanced.
 Contracts in which money is advanced and deeds exchanged between parties to the contract.
 Deed for the sale and purchase of rice, cereals, or other goods.
 Deed for the loan of rice.
 Deed for the loan of cereals.
 Deed for the loan of goods kept for sale.
 Deed of loan of land.
 Deed of loan of buildings.
 Deed of guarantee of employé, over 10 yen in value.
 Deed for deposit of security money in transactions of sale and purchase.
 Deed for payment of money in advance as security for fulfilment of loan or other contract.
 For sums of under 10 yen, and for amounts under 5 koku of rice, and 10 koku of other cereals, ruled paper required, but no stamp.
 For sums above 10 yen and under 20 yen, for amounts over 8 koku of rice but under 10 koku, for amounts over 10 koku of other cereals, but under 20 koku, ruled paper and 1 sen stamp.
 Sums above 20 yen but under 30 yen, rice above 10 koku but under 15 koku, cereals above 20 koku but under 30 koku, ruled paper and 3 sen stamp.
 For sums of 40 yen and over, for 20 koku of rice and over, and 40 koku of other cereals and over, ruled paper and stamps in proportion to value.

⁶³ A rin is the tenth part of a sen, and about $\frac{1}{10}$ th of a halipenny.
⁶⁴ Whole estate.

Receipt for money placed on current deposit in bank.

1 sen stamp, irrespective of amount.

Bill of exchange.

(Invoice of goods endorsed for value received is considered to be of similar effect as bill of exchange.)

Under 50 yen, no ruled paper or stamp required.

Over 50 yen and under 100 yen, 1 sen.

Over 100 yen and under 150 yen, 2 sen.

Over 150 yen and under 200 yen, 3 sen.

Over 200 yen and under 250 yen, 4 sen.

For amounts in excess of these, stamps proportionate to amount.

Slips of paper given in exchange for value received, entitling the bearer to the following goods in the following cases—

Saké—

Under 1 sho.

No stamp and no ruled paper required.

Over 1 sho and under 1 to.

1 sen and ruled paper.

Over 1 to and under 2 to.

2 sen and ruled paper.

Over 2 to and under 3 to.

3 sen and ruled paper.

For amounts in excess of these, stamps proportionate to amount.

Eatables—

Under 25 sen.

No stamp and no ruled paper.

Over 25 sen and under 2.50 yen.

1 sen and ruled paper.

Over 2.50 yen and under 5 yen.

2 sen and ruled paper.

Over 5 yen and under 10 yen.

3 sen and ruled paper.

For amounts in excess, stamps proportionate to value.

Slips of paper given in the purchase of rice, oil, and shoyu (sauce)—

Under 25 sen.

No stamp or ruled paper.

Over 25 sen and under 5 yen.

1 sen and ruled paper.

Over 5 yen and under 10 yen.

2 sen and ruled paper.

Over 10 yen and under 20 yen.

3 sen and ruled paper.

For amounts in excess, stamps proportionate to value.

Receipt for goods.

When unaccompanied by invoice, no ruled paper required; when accompanied by invoice, either ruled paper may be used or an entry made in the books of the person handing over the goods.

Contracts of all kinds, where money is not concerned.

Ruled paper required, but no stamp.

Power of attorney or letter of authorization.

Ruled paper required, but no stamp.

Documents requiring the stamp of offices or officials in the course of the transaction of business do not require ruled paper or stamps.

Receipts for official salaries, for money given in rewards, and for money given in charity, do not require ruled paper or stamps.

(B.)—ON RECEIPT-BOOKS, LEDGERS, ACCOUNT-BOOKS, &c.; AND IN BUSINESS TRANSACTIONS.

FIRST CLASS.

Ledger for entries of receipt of money paid, kept by person paying money.

Ledger for entries of receipt of goods pledged, kept by person pledging the goods.

Ledger for entries of receipt of money placed on current deposit in bank, kept by person depositing the money.

If estimated amount is under 100 yen, ruled paper; stamp not required.

Over 100 yen and under 200 yen, 1 sen stamp.

Over 200 yen and under 300 yen, 2 sen stamp.

Over 300 yen and under 400 yen, 3 sen stamp.

For amounts in excess, proportionate stamps.

SECOND CLASS.

Ledger for entries of receipt of goods pledged (kept by pawnbroker.)

Ledger for entry of money borrowed and lent.

Ledger for entry of amount of damage to goods borrowed.

Ledger for entry of loans on goods kept for sale.

Ledger for entry of money received on deposit, only referring to money which may be spent.

If estimated amount is under 100 yen, no paper is required, or stamps.

Over 100 yen and under 200 yen, 5 sen stamp.

Over 200 yen and under 300 yen, 10 sen stamp.

Over 300 yen and under 400 yen, 15 sen stamp.

For amounts in excess, proportionate stamps.

THIRD CLASS.

Ledger for entry of receipt of goods, kept by person handing over the goods.

Ledger for entry of receipt of miscellaneous articles, kept by person handing them over.

20 yen a-year, irrespective of the number of entries.

(PPENDIX AI).

TABLE SHOWING ESTIMATED REVENUE FROM HOUSE TAX LEVIED IN URBAN DISTRICTS IN TOKIO IN 1881-82 (JULY 1 TO JUNE 30).

DISTRICT.	Tax. Yen Sen.	DISTRICT.	Tax. Yen Sen.
Kojimachi.....	10,860 00	Ushigomé	7,170 75
Kanda	30,034 40	Ko-ishikawa ...	5,249 42
Nihonbashi ...	65,924 39	Hongo	10,894 55
Kiyobashi	35,548 53	Shitaya	10,188 67
Shiba	23,212 41	Asakusa	29,467 82
Azabu	6,094 04	Honjo.....	16,061 98
Akasaka	4,551 21	Fukagawa	15,806 13
Yotsuya.....	4,813 50		
Total.....			275,807 80

The amount contributed in the same manner by the country districts of the Tōkiō Fu for the same year was estimated as about 17,912 yen.

APPENDIX (J).

TRADES TAX AND MISCELLANEOUS TAXES AS ESTABLISHED BY NOTIFICATION OF THE 4TH JUNE, 1879, WHICH CAME INTO OPERATION FROM THE 1ST JULY.

The system introduced at this date will best be explained by quoting from the Regulations then published :—

“CLAUSE I.

“The Companies and commercial establishments on which the trades tax will be levied are settled as follows :—

“COMPANIES.—Under this term is included any association of two or more people who form a capital for carrying on joint business of any kind, whether ordinary trade, or manufactures, or transport, or printing, or contracting work, or money-lending, or brokerage, and who do not, in connection with their particular business, pay any Imperial taxes.

“WHOLESALE MERCHANTS.—Under this term are included dealers who buy commodities at first hand, namely, direct from the producers, or who buy them from other dealers and sell them to other dealers, or who buy things in the rough and finish them for the market, and then sell them to other dealers, and who do not, in connection with their particular business, pay any Imperial taxes.

“MIDDLE-MEN AND COMMISSION MERCHANTS.—This term applies to dealers who buy commodities from the producers and sell them to other dealers, or who, acting as agents, buy goods on commission from wholesale dealers for sale to retail dealers, and who do not, in connection with their particular business, pay any Imperial taxes.

“RETAIL DEALERS.—This term applies to dealers who sell goods direct to the consumers.

“CLAUSE II.

“Companies and commercial establishments of all kinds, whatsoever their appellations, which come within the meaning of the first clause of these Regulations, will be provided with a licence for carrying on business.

“CLAUSE III.

“In the first month of each year the manager of every commercial establishment conducted on the basis of an association of members shall report the classification of such establishment to the office of the Prefecture in which it is situated. The classification of commercial establishments will consist of nine or more grades. In the case of Companies and commercial establishments conducted by associations of several members, or by single individuals, a statement of the total business done during the previous year must be sent in through the district offices to the office of the Prefecture namely :—

“WHOLESALE AND RETAIL DEALERS will furnish statements of the total value of goods sold during the previous year;

“MIDDLE-MEN AND COMMISSION MERCHANTS will furnish statements of the total value of goods sold and commission received;

“MANUFACTURERS AND PROPRIETORS OF PRINTING ESTABLISHMENTS, will furnish statements of goods manufactured and sold, and of work executed;

“CONTRACTORS will furnish statements of receipts taken in the course of their business;

“MONEY-LENDERS will furnish statements of amount of interest received on loans made; and

“BROKERS will furnish statements showing total amount of brokerage received in the course of the previous year.

“CLAUSE IV.

“The Prefectural offices will examine the statements received and will fix the amount of tax to be levied in each case.

"CLAUSE V.

"The periods for payment of taxes are fixed as follows:—

First period	July and August.
Second period	September and October.
Third period	November and December.
Fourth period	January and February.
Fifth period	March and April.
Sixth period	May and June.

"CLAUSE VI.

"Taxes will not be levied on business establishments which have been in existence for a period less than one full year from the date of commencing business. Persons changing their business will be charged the old tax for the current year."

The miscellaneous taxes were levied on a similar system.

Enough has been quoted to show the complicated nature of this system, and the many inconveniences to which ratepayers were exposed in regard to the taxation levied under it.

SUPPLEMENT TO REPORT ON TAXATION.

LAND TENURE.

In describing the system of land taxation in Japan, various legislative changes, extending over the last ten years, have been noticed in the order in which they occurred. But there are many points in connection with land in Japan which have not yet been discussed, and as they have no direct bearing on the question of taxation, it will be best to consider them separately.

The question of the tenure of land, however, is one of great difficulty, and opens out such a wide field of inquiry that the following remarks must be understood as being simply a brief sketch of the subject:—

In a country where the farmers occupied a position next to the "Shizoku," or military class, ranking above both artisan and merchant, it is not singular that the subject of land should always have been one of considerable importance.

It is difficult to ascertain the precise condition of land tenure before the Restoration of 1868. It is more than probable that in points of detail it varied in each locality. We know, however, that the greater part of the land in Japan under the feudal system prior to the Restoration of 1868 was held by the territorial nobility, or Daimios, and that, besides the land included in the territory of each Daimiate, there were—

Lands belonging to the Imperial Family;

Lands held by the Shōgun;

Lands in the possession of the "Hatamoto," who may be described as a small feudal aristocracy forming a distinct class, created by the Tokugawa Shōguns, and holding petty fiefs from them;

Lands in the possession of Shintō and Buddhist religious establishments; and

Lands received by individuals as grants from the Government in return for meritorious services.

The actual ownership of land at the time we speak of admits of the above distinctions, and the occupiers of land might therefore hold it from a territorial noble or from the Emperor, from the Shōgun's Government, from a "Hatamoto," from a Shintō or Buddhist establishment, or from any large proprietor, being a grantee of land from the Government.

The ordinary inference from a consideration of this state of things would be that the people who occupied the land were simply tenants. But we are confronted with the singular problem that, while tenants in point of fact, they were landlords in name, each in respect of his particular holding. The true solution of this puzzling contradiction must, no doubt, be sought in the internal history of the country. Before the comparatively settled times which date from the beginning of the seventeenth century, Japan had passed through many phases of government. And it is not impossible that, when the feudal system was established about 1180-90, the existing tenure of land throughout the country in all its complicated variety of local usage was not changed, but absorbed into the new system of administration, certain modifications being introduced at a later date from time to time in different localities, as occasion offered, or the caprice of a feudal baron suggested.

Though landlords in name, the people may therefore properly be regarded as tenants. But very extensive proprietary rights, though falling short of complete ownership, were enjoyed by the different classes who occupied the land.

The land so occupied may be divided as follows:—

- Land in towns;
- Land in the country.⁶⁵

The town holdings, again, were of two kinds:—

Holdings occupied by the military class,⁶⁶ who were exempt from taxation, and held no title-deeds; and "Town land,"⁶⁷ as it was called, by which was understood land held by merchants and artisans, who paid taxes and held title-deeds.⁶⁸

The country holdings comprised nearly all land under cultivation occupied by the large class of agriculturists,⁶⁹ who were, nominally, proprietors of their holdings, and were in the same position as merchants and artisans with regard to taxes and title-deeds.

There was, indeed, a numerous class of smaller agriculturists who went by the name of "Midzunami-hiyakushō." These, however, were in no sense of the word proprietors, but were simply tillers of the soil, who rented their holdings from the upper class of farmers, or from the real owners.

The land occupied by the military class was held under the peculiar conditions attaching to military service then existing in Japan; and the position of the agriculturists differed in some respects from that of the tax-paying classes who occupied town holdings. But the proprietary rights in each case were much the same. Holdings descended from father to son, in accordance with the law of primogeniture, the effects of which in Japan were sensibly modified by the law of adoption peculiar to the country, or, failing direct heirs in the same family, the right of sub-letting, subject to the approval of the real owner, was acknowledged and freely exercised, and fixity of tenure was virtually assured.

But, though the tenant was therefore practically free from disturbance in his holding, and had a tenant-right good as against all other people, he possessed only a modified tenant-right as against the real owner. The latter reserved to himself the right, rarely, it is believed, exercised, of re-entering upon the land at will, and in such cases of disturbance the occupant received some sort of compensation by the grant of other land (which was usually of an inferior kind) in the vicinity.

There were other restrictions to which the occupiers of land were subject. The agriculturist could not combine the profession of merchant with that of farmer, and he was not free to cultivate his land as he pleased. He was limited to certain methods in the rotation of crops, and was usually prohibited from growing anything but rice and wheat, except in small quantities for private consumption.⁷⁰ Farmers, merchants, and artisans were alike precluded from entering into any transactions in regard to land occupied by the military class, and a reciprocal prohibition was enforced in the case of the latter. This mutual disability, which extended to house property, existing between the military class on the one hand, and the three other classes of the people on the other, is exemplified in the division of all castle towns in Japan into two quarters, the "Shizoku" quarter, and the commercial or industrial quarter, and owed its origin, doubtless, to the important distinction that the "buké-chi," a land assigned to the military class, was exempt from taxation, while land held by the other classes was not.

Another, and, seemingly, a very important restriction by which the tenant-right of occupiers of land was curtailed, was the prohibition, enforced also in the case of house property, of the sale or free gift of land by the tenant in occupation. But the right of mortgage was, strangely enough, allowed, and there is abundant evidence that, under cover of this privilege, the sale and transfer of land were matters of common occurrence, the terms used to signify these transactions being either "to mortgage," or "to give in pledge."

Of late years so much laxity appears to have attended the enforcement of this prohibition that in many cases the transfer of land was not questioned so long as the actual words, "sale," or "free gift," did not appear in the wording of the deed of transfer.

In a document now before me, which purports to be the form of a deed of transfer of town land in general use during the fifty years preceding the Restoration, space is left for the actual price paid for the holding, and the terms used to indicate the nature of the transaction are simply: "In consideration of the sum above mentioned, I hand over

⁶⁵ Called "son-chi."

⁶⁶ Styled "buké-chi."

⁶⁷ "Machi-junen."

⁶⁸ All title-deeds were issued by the District Mayors until after the Restoration.

⁶⁹ There were distinctions between large and small cultivators, into which we need not enter.

⁷⁰ This restriction was introduced and maintained on the ground that there might otherwise be an insufficiency of food for the wants of the country.

to you the aforesaid lot of ground," &c., "and I hereby guarantee to secure you against interference on the part of any other person."

It is clear, therefore, that the holders of land in Japan prior to the Restoration possessed very extensive proprietary rights in regard to their holdings, limited by the restrictions which have been mentioned. But it must not be forgotten that under the feudal system—the keystone of which, so to speak, in this country was the absolute subservience in everything of the subject to his feudal lord—the occupiers of land owned by the territorial nobility were virtually at the mercy of their landlords. Side by side with the rights of which we have spoken came the rights of the feudal proprietor, which were backed by the weight of centuries of traditionary custom, which knew no limit, and against which there was no appeal. And although we are aware that these rights were not generally exercised in their fullest extent, still the fact remains that the power to enforce them was always there. The power which each feudal noble enjoyed in those days is illustrated by the unlimited issue in the territory of each large clan of a separate paper currency, by the call for forced labour to which every peasant had to respond, and by the formation of trade monopolies and guilds in each clan which rendered the conduct of mercantile operations by single individuals on any large scale, impossible. And yet in the midst of these features of the feudal system, which would seem to indicate beyond a doubt that the bulk of the population in Japan were, in those days, little better than serfs, we are startled to perceive that the holders of land were in some respects on a footing nearly approaching that of the owner of an estate in fee simple in our own country.

Enough has been said to show that the subject abounds in contradictions, which only ceased to exist with the extinction of feudalism.

In the autumn of the year 1868, when the struggle between the Mikado and the Shōgun had terminated in the defeat of the latter, and the consequent downfall of the Shōgunates, the way was cleared for the abolition of the feudal system by the voluntary surrender of their fiefs by the territorial nobility. The lead in this great measure was taken by the four clans of Chōshū, Satsuma, Hizen, and Tosa. The Memorial to the Emperor in which they surrendered their territorial and feudal privileges is of considerable interest, and, in view of the importance of the subject it may be as well to give it in full:—

Joint Memorial of MORI, SHIMADZU, NABESHIMA, and YAMANOCHI, Daimios of the four clans of Chōshū, Satsuma, Hizen, and Tosa:—

Your servants again venture to address your Majesty with profound reverence. Two things are essential to the Mikado's Administration. There must be one central body of Government, and one universal authority, which must be preserved intact. Since the time when your Majesty's ancestors founded this country and established a basis of government, all things in the wide expanse of Heaven, and all things on the earth to its furthest limits, have belonged to the Emperor from generation to generation. This is what is known as 'one central body of Government.' And the sole power of giving and of taking away, which renders it impossible for the Nobles to hold the people in subjection by virtue of their rank, or to deal with the smallest piece of ground at their pleasure, or to seize and treat despotically any single individual of the humbler classes; this is understood by the term 'one universal authority.'

The Administration of the Emperors was conducted entirely on this principle. The Emperors conducted the Government in their own persons, and, consequently, the name and the reality of power existed side by side, and the nation was tranquil and contented. But from the time of the Middle Ages the administrative system became lax, and the authority of the Emperors came to be a plaything. All men fighting for power, changes of Government followed each other in rapid succession until half of the country fell into the hands of men who dealt with the people and the land at their pleasure; and, in the end, a state of things was reached where there was nothing but open contention and acts of violence. The Government, having no body of Administration to protect, and no effective power, were unable to control matters. Everywhere men of influence, but of unprincipled character, took advantage of the existing disorder to promote their own interests, and the weak became food for the strong.

The most powerful barons took possession of fourteen or fifteen provinces, while those of less influence collected bodies of armed retainers to the number of 5,000 and 6,000. The Tokugawa Administration seized lands and people arbitrarily wherever it thought fit, and by this means extended its influence. Finally, the Mikado's Government lost all real authority, and was entirely dependent on the views of the Shōgunate. The boundless despotism of the Shōgunate lasted for over 600 years, and during this interval violent dealings with land and with the people were carried out by stealth under the pretence of the Imperial authority. And these acts were rendered possible owing to the existence of people who could not dissociate themselves from the time-honoured observances of the past, and were still guided by the reverence due from a subject to his Sovereign, and by a proper sense of the relations which should exist between high and low.

The ancient family of the Tokugawa dynasty of Shōguns and their relatives held half of the country; as a natural consequence fresh families were constantly springing up; and it became a precedent founded on long custom

which has lasted up to the present day for these numerous branches of the Tokugawa family to take no heed of the question as to whether their lands and subjects had been received in grant from the proper Government or not. It was commonly said by members of these families, 'These possessions of ours were gained by the military prowess of our ancestors.' But there is little doubt that these ancestors had originally raised forces, invaded the Imperial store-houses, and had laid forcible hands on the treasures contained, and that they had braved the penalty of death in the execution of their designs. Those who break into store-houses are commonly termed robbers, but no suspicion was attached by the nation to those who seized upon the land and the people. It is terrible, indeed, this confusion of ideas between right and wrong.

"It is now sought to establish an entirely new form of government. Care must therefore be taken to preserve intact both one central body of Government and one universal authority. The land in which your servants reside is the land of the Emperor, and the people whom they govern are his subjects. Neither the one, therefore, nor the other can belong to your servants.

"Your servants accordingly beg respectfully to surrender to your Majesty the registers of the population, and beg your Majesty to deal with everything as you may think fit, giving what should be given and taking away what should be taken away. They entreat your Majesty to issue such Imperial Decrees as you may deem necessary with respect to the lands and the people of the four clans represented in this Memorial, and to make such changes as your Majesty may think proper. They also beg that all laws, decrees, and military regulations, extending even to rules respecting military dress and accoutrements, may be issued by the Central Government, so that all matters of State, both great and small, may be decided by one and the same authority. In this way both name and reality will be secured, and this country will be placed on a footing of equality with foreign Powers.

Your servants share the responsibility which the present critical condition of affairs entails upon the Mikado's Government. It is this which has led them to present their foolish views for the consideration of your Majesty.

The surrender of their territorial fiefs by the various Daimios was of course a preconcerted measure. The example of the four Daimies which had taken the most prominent part in the Restoration was at once followed, more or less willingly, by the other clans, and although the wording of each Memorial differed in some points, the gist of each may be gathered from the specimen given.

That the surrender would be accepted by the Emperor was of course understood. The lands of the various Daimies were taken over by the Crown, and suitable provision was made out of the revenue of each Daimie for the maintenance of the ex-Daimios, and for the administration of the country under the new system. The settlement of the details of these measures presented many difficulties, as a distinction was not unnaturally made between those clans who had fought on the side of the Mikado in the civil war and those who had sided with the Shōgun. By the spring of 1871, however, the necessary measures had been completed, and the abolition of feudalism was formally announced to the country in a Decree which, considering the magnitude of the change effected, is most singular in its brevity. "The clans," so ran this Decree, "are abolished, and Prefectures are established in their place."

Simultaneously a further Edict was issued, by which the Government took back, with certain exceptions, all land previously held by the Shintō and Buddhist religious establishments.

It is more than probable that the farmers were unable at first to realize the importance of the change. Accustomed to generations of feudal servitude, their experience had taught them that a change of landlord was for them merely a change in name, having no practical significance, and in no wise affected their position as cultivators of the soil. So long as they were able to draw a subsistence from the land on which they were settled, it mattered little to them whether they held that land from Emperor, Shōgun, or territorial noble; and certainly the attitude of the Government was not calculated to open their eyes to the new order of things which was in train.

We have seen how, in the Memorials of the clans, a complete surrender of both land and people to the Emperor had been made. The terms used to express this surrender differed in several cases. In some the actual words, "the land and the people," were used; in others the term, "feudal rights;" and again in others the words, "registers of the population." Each of these expressions, however, was tantamount to this: that the ownership of all land held under feudal tenure reverted to the Crown, and that the people passed with the land.

The peculiar character of this feudal tenure, under which landlord and tenant were associated in a kind of joint ownership, has also already been noticed. And it might have been expected that the Government would have taken advantage of the surrender of the fiefs to place the question of land tenure on a clear footing by defining accurately the position of the people with regard to the land. This, however, was not done. No Decree

affecting the broad question raised by the abolition of the feudal system was promulgated, and it was only by degrees that the intentions of the Government became apparent. Step by step the policy of the new Administration was manifested by the removal of the various restrictions which had curtailed the tenants' rights, until at length it became clear that while retaining the theory that the ownership of all land was vested as of right in the Crown, the intention of the Government was that each occupier of land should become virtually the proprietor of his own holding.

One explanation of the delay which occurred, and the extreme caution displayed by the Government in dealing with the land question, is to be found in the embarrassing circumstances which followed the abolition of the feudal system. The surrender of their fiefs by the Daimios involved logically the surrender to the Crown of all land throughout Japan occupied by the military class, which numbered about 6,000,000 souls.⁷¹ In the case of those who, having sided with the Shōgun, were regarded as rebels, scant mercy was shown, but there remained a very large number whose loyalty to the Crown had been proved in the civil war, and in dealing with these the Government, which was then only feeling its way, had to proceed with extreme caution.

The first act of the Government at the end of the civil war had been to place all land as far as possible on a common footing. And the earliest step in this direction was taken in March, 1868, when it was enacted that all land held in grant from the Government should be liable to taxation. This measure affected the class of Hatamoto, which did not long survive the abolition of the Shōgunate, as well as all other grantees of land, and "yashikis," or feudal residences of the territorial nobility in Tōkiō, came under the same rule. The ground covered by these yashikis, some of which were very extensive, forming separate parks in different quarters of the town, had originally, like other grants of land, been handed over in free gift to the nobles, who paid neither rent nor land tax.

In the autumn of the same year (1868) another step in the same direction was taken by the partial removal of the prohibition against any transactions in land or house property between the military class and the other classes of the people. The Decree then issued allowed Shizoku to purchase land in country or in towns, provided the transaction was concluded in the name of some person not belonging to the military class. The restriction, however, was not wholly removed until the end of the year 1871, when it was formally decreed that the distinction between land occupied by the military class and that in occupation by the other classes was abolished, and that all land in occupation would be placed on the same footing as "land for which title-deeds are issued."

In 1870, the restrictions which prevented the farmer from engaging in commercial pursuits, and the further restrictions to which he was subject in the cultivation of his ground, were abolished.

Towards the end of 1871 all restrictions relating to the sale and transfer of land were removed, and title-deeds were issued by the Central Government for all land in occupation.

Regulations respecting the land followed each other in rapid succession about this date; in one of these a special clause appears by which the Government bound itself, in the event of land in occupation being required for Government purposes, to compensate the holder for disturbance in his holding by paying him the value of his holding as entered in the title-deed.

By the beginning of the year 1872 the position of the tenant in regard to his holding had, by these gradual measures, forming, as it were, a course of negative legislation, been at length clearly defined,⁷² and from that date therefore we may regard the occupier of land in Japan as virtually a proprietor, although traces of the system of joint ownership that existed before the abolition of feudalism have survived in two privileges which the Crown still retains: the right of the Crown to the possession of all mines discovered on land in individual occupation, and the right of the Crown

⁷¹ Various estimates are given of the proportion borne by the military class to the whole population, this proportion being variously computed at one-eighth, one-sixth, and one-fifth. We have evidence, in any case, to show that the military class increased considerably in numbers in the latter years of the Shōgunate, and taking the population of Japan at the period of the Restoration as 36,000,000, we are probably not far wrong in assuming the military class at this time to have numbered in all one-sixth of the total population.

⁷² In a Notification issued in the spring of this year, which has an interest of its own in so far as it applies to the prohibition of the sale and mortgage of land to foreigners, the following passage occurs, which tends to confirm this view:—"Although land has now become the personal property of individuals, no land can be sold to foreigners, nor can any land be mortgaged in connection with pecuniary transactions to any foreigner, or the title-deed be given in pledge."

to re-enter on any land in individual occupation, in the event of the non-payment of the land tax, or in the event of the land being required for Crown purposes.

(Signed)

JOHN H. GUBBINS,
Acting Japanese Secretary.

September, 1883.

ADDENDA.

Since the above Report was compiled, various changes have been introduced. Some of these, viz., the alterations in the "Land Tax," in "Judicial Fees," and in "Stamp Duties" are of sufficient importance to warrant their being appended to this Report in the form of Annexes. The report will thus be brought up to date. These additions comprise:—

Annex 1 New Land Tax Regulations.
Annex 2 New System of Judicial Fees.
Annex 3 New System of Stamp Duties.

It has also been thought advisable to add extracts from a series of Articles on the Land Question, translated by the same writer, which appeared in the *Hochi Shimbun* of November and December last, and were reproduced in the *Japan Gazette*.

ANNEX I.

LAND-TAX REGULATIONS.

NOTIFICATION NO. 7 OF COUNCIL OF STATE.

The following Land-Tax Regulations have been established. The Regulations for the revision of the Land-Tax published by Notification No. 272 of 1873, the rules relating to the revision of the Land-tax, and all other measures which conflict with these Regulations are hereby abolished.

In the case, however, of the Seven Islands of Idzu and of the Island of Ogasawara, which are in the jurisdiction of the Tokio Fu, and of the Hakodate, Okinawa, Sapporo, and Nemuro Prefectures, the existing regulations will remain in force.

The above is notified by Imperial Decree,

(Signed) SANJO SANEYOSHI,
Prime Minister.

(Signed) MATSUGATA MASAYOSHI,
Minister of Finance.

15th March, 1884.

LAND-TAX REGULATIONS.

I.—The Land-tax is fixed at 2½ per cent. of the value of land per year.

By "the value of land," mentioned in these regulations is understood the value of land as stated in the Title Deed.

II.—The Land-tax will not be increased in years of plenty nor will it be reduced in years of scarcity.

III.—Taxable land is divided into two classes.

1.—Rice land; land on which crops other than rice are grown; house land in country districts; house land in towns; salt flats; and land about mineral springs.

2.—Marsh land; hill and forest land; moor land; and other land not specially classified.

Land of the 1st class or land of the 2nd class, the separate classification¹ of which is altered, shall be known as "altered land."

Land of the 2nd class which by the employment of labor and capital has been converted into land of the 1st class shall be known as "reclaimed land."

Land of the 2nd class the conformation of which has been altered by natural calamity, such as "land slips, changes in a river's course, encroachments of the sea or of rivers, deposits of sand by sea or river, and land which by such natural disasters has been converted into rivers, into sea or into lakes, etc., shall be known as "waste land."

IV.—Land occupied by Public Schools, land occupied by Shinto Shrines in the country,² and by cemeteries, land covered by drains, land underlying artificial ponds or reservoirs, land forming dykes and embankments, land underlying trenches used for purposes of irrigation, and land included in public thoroughfares, is exempt from taxation.

V.—In the measurement of land the long measure *kanjaku* will be used, and 6 feet of this measure will constitute one *ken*. One square *ken* will constitute one *ho*, 30 *ho* one *se*, 10 *se* one *tan*, and 10 *tan* one *cho*.

¹ The meaning is not quite clear. But evidently the alteration referred to is intended to apply only to alterations within the particular class; such as rice land being converted into ordinary arable land or forest land becoming moor land; or again arable land, being turned into house land.

² No mention is made of the land included in the precincts of Buddhist Temples.

In the case of house land, one square *ken* will constitute a *tsubo*; one-tenth of this square area will constitute one *go*; and one-tenth of a *go* will constitute one *shaku*.

VI.—When the value of land is to be determined upon the expiration of the period known as the "Hoeing Term" in the case of reclaimed land, and of the period of exemption from taxes in the case of waste land, and when the classification of land is changed, the land in question shall be measured.

VII.—The value of land, except in the case of land the classification of which is changed and reclaimed land, shall not be altered.

VIII.—Should it be necessary to make an universal revaluation of land, notice of the fact will be given beforehand by decree.

IX.—In determining the value of land, the quality of the land and its class will be specially determined, the profit attending cultivation will be ascertained, and the value will be fixed in accordance with the conditions of the land.

X.—When the classification of land is altered, application must be made to the office of the local prefecture, and the land will be re-valued in accordance with the actual conditions of the holding in question.

XI.—When it is desired to convert land exempt from taxation into taxable land, the permission of the office of the local prefecture must be obtained, and the value of the land will be fixed in accordance with the actual conditions of the holding.

XII.—The Land-tax will be levied on the person in whose name the title deed of the land is made out. But in the case of land given in pledge the Land-tax will be paid by the mortgagee.

XIII.—When taxable land is converted into land occupied by Public Schools, into land occupied by Shinto Shrines in the country, or into cemeteries, exemption from taxation will date from the month¹ in which permission for the proposed conversion is obtained. When taxable land is converted into land covered by drains, into land underlying artificial ponds or reservoirs, into land forming dykes and embankments, into land underlying trenches used for purposes of irrigation, or into land included in public thoroughfares, exemption from taxation will date from the month² in which the work of carrying out the changes commences: when land exempt from taxation is converted into taxable land, the Land-tax will be levied from the month immediately following that in which permission for the proposed conversion is obtained.

XIV.—In the case of land the classification of which is altered, Land-tax will be levied, in accordance with the change in the value of the land, from the year in which the alteration in value took place.

XV.—In the case of reclaimed land and waste land, Land-tax will be levied from the year following that in which the "Hoeing Term" and period of exemption from taxation, respectively expire, in accordance with the value of the land as determined.

XVI.—When it is desired to reclaim land,³ the permission of the office of the local prefecture must be obtained. A "Hoeing Term" not exceeding 15 years will then be granted; during this period, however, Land-tax will be levied on such land in accordance with its original value.

XVII.—Should the cultivator, during the "Hoeing Term," change his intentions and convert the land in question into a class of land different from that originally intended, he must report the fact to the office of the local prefecture. Under these circumstances the value of the land may be at once determined, or a new "Hoeing Term" be granted, (according to the nature of the case).

XVIII.—In the case of land which, at the expiration of the "Hoeing Term" has not been brought into profitable cultivation, a further "Hoeing Term" not exceeding 15 years will be granted.

XIX.—At the expiration of the "Hoeing Term" a revaluation of the land in question will take place. In the event of the "cultivator's original intentions with regard to the land not being realized, and the land being converted into a class of land different from that originally intended, the value will be fixed in accordance with the actual conditions of such land.

XX.—In the case of land rendered waste by natural calamity, a period of exemption from taxation not exceeding 10 years, and dating from the year in which the calamity occurred, will be fixed.

¹ The "Hoeing Term" is a period fixed, in the case of moor or forest land, etc., being brought under cultivation, during which the cultivator, in consideration of his having improved the quality of the land, is only called upon to pay the Land-tax leviable upon the land in its original condition. The reclamation of "waste-land" is treated separately.

² i.e. periods of days not being taken into account, the exemption will take effect from the 1st day of that month.

³ See previous note.

⁴ This does not apply to the reclamation of "Waste Land;" see previous note.

At the expiration of this period the land will revert to its original value.

XXI.—In the case of waste land the actual condition of which at the expiration of the period of exemption from taxation is such as will not admit of its reverting to the original value, a further period not exceeding 10 years will be fixed, during which the value of the land will be estimated at a low rate, not, however, less than 30 per cent. of the original value. At the expiration of this further period the land will revert to its original value.

XXII.—In the case of land which at the expiration of the further period during which it has been estimated at a reduced value is still not in a state to revert to its original value, and in the case of land which at the expiration of the period of exemption from taxation is not in a condition to be restored to its original classification, the value will be fixed in accordance with the actual condition of such land.

XXIII.—In the case of land which at the expiration of the period of exemption from taxation preserves all the characteristics of waste land, an extended period not exceeding 10 years will be granted; and land which at the expiration of such extended period is still not in a condition to revert to its original value will be dealt with in accordance with the provisions of Articles XXI. and XXII.

XXIV.—In the case of land rendered waste by being converted into rivers, into sea, or into lakes, not being restored to its original condition at the expiration of the period of exemption from taxation, an extended period of exemption not exceeding 20 years will be granted; and if at the expiration of this extended period the land in question has not reverted to its original classification, and is incapable of any other classification, such land shall be regarded as land underlying rivers, sea, or lakes, and the title deed shall be taken back.

XXV.—Persons who fraudulently conceal the extent of their holdings and thereby evade payment of land-tax, will be punished by a fine of not less than *yen* 4 and not more than *yen* 40. Moreover, the value of the land in question will be determined in accordance with its original classification, and land-tax will be exacted for the number of years during which the fraudulent concealment has continued.

This provision, however, will not have retrospective effect in respect to offences of this nature which occurred previous to the 1st year of the Land-tax Revision (1873).

XXVI.—Persons violating Articles XI. and XVI. will be punished by a fine of not less than *yen* 3 and not more than *yen* 30. In the case of land exempted from taxation which has thus been converted (without notice to the authorities) into taxable land, and in the case of land being reclaimed (without the permission of the authorities having been obtained) and in respect to which it appears fitting that such permission should be given, the price of all such land shall be determined respectively in accordance with its actual¹ classification, and the Land-tax shall be levied on the increased scale.

This provision, however, will not have retrospective effect in respect to offences of this nature which occurred previous to the 1st year of the Land-tax Revision.

XXVII.—Persons violating Articles X. and XVII. will be punished by a penalty of not less than *yen* 1.00 and not more than *yen* 1.95.

XXVIII.—With regard to the offences enumerated in Article XXV. and in succeeding Articles, should these be committed by the lessee or cultivator without the knowledge of the proprietor, the lessee or cultivator shall be fined and the taxes shall be levied from the proprietor.

XXIX.—In the event of persons who have committed the offences enumerated in Articles XXV., XXVI., XXVII., and XXVIII. confessing their misdemeanours, the fines and penalties in question will be remitted, but the Land-tax will be exacted.

ANNEX 2.

JUDICIAL FEES.

NOTIFICATION No. 5.

The accompanying Regulations relating to Stamps to be used in Civil Suits have been established and will come into force from the 1st April next.

The regulations for the use of Ruled Paper in Civil Suits which were published by Notification No. 196 of December, 1875, will cease to have effect from the date above named.

The above is notified by Imperial decree.

SANJO SAN'EYOSHI, Prime Minister.

YAMADA AKIYOSHI, Minister of Justice.

February 23rd, 1884.

¹ And not, as it would otherwise be, for a term of years in accordance with the original classification.

REGULATIONS RESPECTING STAMPS TO BE USED IN CIVIL SUITS.

1.—Stamps must be affixed to all documents in Civil Suits in accordance with the provisions of these regulations.

2.—In the case of Petitions, Stamps must be affixed to the original copy of the petition at the time that it is received, in accordance with the following scale, and corresponding to the sum of money claimed in the petition, or the actual amount involved in the case.

Where the sum of money claimed or the amount involved does not exceed 5 *Yen*.....

Stamps to the value of	
20 <i>Sen</i>	
Do. 10 <i>Yen</i>	Do. 30
Do. 20	Do. 60
Do. 50	Do. <i>Yen</i> 1.50
Do. 75	Do. 2.20
Do. 100	Do. 3.00
Do. 250	Do. 6.50
Do. 500	Do. 10.00
Do. 750	Do. 13.00
Do. 1,000	Do. 15.00
Do. 2,500	Do. 20.00
Do. 5,000	Do. 25.00

In cases where the sum of money claimed or amount involved exceeds *yen* 5,000, stamps to the value of *yen* 2.00 must be affixed for every additional sum of *yen* 1,000, or less.¹

In the case of appeals to the Superior Courts Stamps to the value of half the above stated amounts must be affixed; and in the case of appeals to the Supreme Court, Stamps to the same amount.

3.—In cases affecting personal rights² and in other cases where it is impossible to estimate the amount involved, stamps to the value of *yen* 3.00 must be affixed (to the original petition);—and in the case of appeals in such suits to the Superior Courts and the Supreme Court, stamps to the same value must be affixed.

But in suits of this nature where the plaintiff is in very impoverished circumstances and brings a certificate to that effect from the *Kochō*, the judge may remit the stamp fees.

4.—Stamps to the value of 20 *sen* must be affixed to each original copy of the following documents:—

1.—Answers; copies of documentary evidence; statements made in refutation of allegations made by plaintiffs; explanatory statements; reports;³ and statements of fact.⁴

2.—Applications for issue of summonses to experts, valuers, and persons whose corroborative testimony is required.

3.—Applications for postponement of trial.

5.—Stamps to the value of 50 *sen* must be affixed to the original copy of the following documents:—

1.—Applications for the attendance of an official for the purpose of inspection.

2.—Application for order of Court to execute judgment.

3.—Applications for proceedings in bankruptcy to be taken (made by creditors).

When copies of judgments are furnished (by the Court) stamps must be affixed to the receipt for the same at the rate of 5 *sen* for each sheet⁵ of the written judgment: when copies of other documents are given (by the Court) Stamps must be affixed to the receipt for the same at the rate of 3 *sen* for each sheet of the copied document.

6.—Each sheet of a copied judgment must only contain 12 lines of writing and there must be 12 characters to a line. In the case of copies of other documents each sheet shall contain 20 lines and there must be 18 characters to a line.

7.—In the case of official arbitration⁶ the parties to a suit shall in each case affix Stamps to the value of 20 *sen* to the statement of arbitration signed jointly by them.

8.—The cost of stamps affixed (to documents) in accordance with these regulations shall be repaid by the party which has lost the suit to the party which has gained it.

9.—Details respecting the classes of stamps to be used, their denominations, and the mode of affixing them will be settled by a notification from the department concerned.

10.—Stamps will be sold at those places where permission has been received from the local authorities to sell them. They may not be sold anywhere else.

¹ The wording is not very clear, but this appears to be the meaning.

² *Jin-jī*.—This term is difficult to translate literally. It includes all cases affecting matters of succession, disinheritance, adoption, matrimonial and family disputes, and the employment of servants, etc.

³ Voluntary statements made to the Court in writing.

⁴ Statements made in writing by order of the Courts.

⁵ A sheet of Japanese paper contains two pages.

⁶ *Hankajo* is a Court of arbitration for the settlement of small cases which might otherwise come before the ordinary Court of Justice.

11.—Persons selling stamps at any place other than that where permission to sell has been received from the local authorities shall be punished by a fine of not less than *yen* 20 and not more than *yen* 100, and in addition the stamps they may have in their possession shall be confiscated; and persons who knowingly buy stamps so sold shall be punished by a fine of not less than *yen* 10 and not more than *yen* 100, and in addition the stamps in their possession shall be confiscated.

12.—In the case of persons violating these regulations the offence that they may have committed against the criminal law will not be enquired into, neither will the system laid down in the Penal Code with reference to the diminution of penalties in cases of light offences, to the increase of penalties in grave cases, or to the commission of several infractions by the same offender be employed.

NOTIFICATION NO. 4.

Regulations respecting Stamps to be used in Civil cases having been established by Imperial Notification No. 5, the different kinds of Stamps to be employed, their prices, and the mode of affixing them have been settled as follows:—

YEN. SEN.		YEN.	
Grey stamp.....	3	Blue stamp	5
Black stamp	5	Bright yellow stamp ..	10
Orange stamp.....	10	Green stamp.....	15
Light brown stamp ..	50	Chestnut stamp	20
Yellow stamp.....	1.00		

These Stamps must be affixed to all original copies of petitions and other documents and must be effaced by the seal of the person affixing them.

The above is notified.

SANJO SAN'EYOSHI, Prime Minister.

YAMADA AKIYOSHI, Minister of Justice.

February 23rd, 1884.

The new system of Judicial Fees in civil process which came into force on the 1st April last, varies greatly from that established in 1875 which it has superseded.

Under the old system the fees levied were divided into three classes.

1. Charges for petitions and answers.
2. Charges for copies of judgments.
3. Charges for summonses and documents used in interlocutory proceedings.

The mode of levying these fees, moreover, was peculiar, the charge being calculated at so much per sheet of paper used and varying according to the amount of money involved in the case. The paper employed was ruled paper made expressly by the Government, and sold only by stationers who received permission to do so. The fees, in other words, were the price paid for ruled paper for use either (1) in petitions and answers, or (2) copies of judgments, or (3) summonses, &c.

The scale fixed was very moderate, varying from 1 *sen* per sheet of paper, in cases where the amount involved did not exceed *yen* 10, to 5 *sen* per sheet in cases where the amount involved exceeded *yen* 1,000; and five *sen* per sheet was the maximum charge.

The new system which came into force on the 1st April last is quite different. Ruled paper is no longer used, and has been replaced by stamps, the charges for which are fixed on a much higher scale. The system, however, has the advantage of simplicity. Under the old system the amount of fees to be paid depended on two things, the length of the documents concerned, and the amount of money involved in the case. The amount of fees to be levied according to the scale fixed by the new regulations is made to depend entirely upon the amount of money involved,—except in the case of copies of judgments and other documents furnished by the Court,—and provision is made for the payment of a fixed fee of *yen* 3 in cases affecting personal rights,^a and in cases where it is impossible to estimate the sum involved in the suit.

The new system in fact approaches more nearly to our own.

In the case of filing original petitions, the scale of fees varies from 20 *sen*, in cases where the amount does not exceed *yen* 5, to *yen* 25 in cases where the amount involved does not exceed *yen* 5,000; and where the amount involved exceeds the latter sum a fee of *yen* 2 is charged for every additional sum of *yen* 1,000 or less.

The Fees charged for filing petitions of appeal to the Superior Courts (*Fōtō Saibansho*) are half those charged in the Court below; but in the case of appeals to the Supreme Court the fees levied are the same as those paid in the Court of First Instance.

^a 1 sheet = 2 pages.

^b *Jin-ji*.—See note a.

In the case of answers, written statements, copies of documentary evidence, and applications to the Court of all kinds, the fee charged is 20 *sen* or 50 *sen* according to the nature of the document.

Copies of judgments and of other documents furnished by the Court are charged for at the rate of 3 and 5 *sen* per sheet respectively, irrespective of the amount of money involved in the case.

The Fees go with the decision of the Court, the party losing the case being held responsible for the whole expenses of litigation. Whether this rule will be modified later on remains to be seen. As it now stands, the judge has no power of ruling in regard to costs.^b

It will be seen that the principal fees to be paid are those charged on filing a petition to the Court of First Instance, and on filing Petitions of Appeal; the fees charged in all other instances being comparatively trifling.

Provision is also made in these Regulations for the remission of fees in cases where a person is allowed to sue *in forma pauperis*. This is a privilege formerly unknown to Japanese suitors.

JOHN H. GUBBINS.

May, 1884.

ANNEX 3.

THE NEW STAMP DUTIES.

NOTIFICATION NO. 11.

The Regulations respecting Stamp Duties, published by Notification No. 81 of July, 1874, have been revised as shown in the accompanying enclosure. The amended regulations will come into force from the 1st July next, from which date Notification No. 120, of July 1875, will cease to have effect.

The above is notified by Imperial Decree.

(Signed) SANJŌ SAN'EYOSHI,
Prime Minister.

(Signed) MATSUGATA MASAYOSHI,
Minister of Finance.

(ENCLOSURE.)

REGULATIONS RESPECTING STAMP DUTIES.

Article I.—Stamps must be affixed in accordance with the provisions of these Regulations to all formal documents and ledgers, etc., which are used in the transfer of property or as evidence of a contract.

Article II.—Formal documents and ledgers, etc., are divided into two classes, and stamp duties are leviable on them as follows:—

Class I.—The Stamps specified below must be affixed to the following formal documents and ledgers, whether money is involved or not, and irrespective of the sum involved. In the case of cheques drawn on a Current Account, application may be made for the seal of the Finance Department instead.

A Stamp of 5 *rin* is required for—

- A Cheque drawn on a Current Account.
- A Power of Attorney.

A Stamp of one *sen* is required for—

- A Deed of Contract where no amount is named.
- A Will bequeathing money or property.
- A Deed of transfer of property to an heir, or of an interest or shares in a business to a successor.
- A Deed of gift.
- A Receipt for money held on deposit where no fixed period is named.
- A Lease of land (by proprietor to tenant) for purposes of cultivation.
- A Deed of guarantee of employé or servant.
- A Receipt for goods held on deposit the value of which is not stated.
- A Receipt for goods borrowed the value of which is not stated.
- A Receipt for land or houses held on deposit.

¹ Tickets given in exchange for value received entitling the bearer to certain articles (such as saké, fish, etc.).

- A Lease of Land or Houses.
- A Special Contract of sale and purchase used in Mercantile Transactions.
- A Policy of Insurance.
- A Certificate of Shares in a Company or Commercial Firm.
- A Draft or Bill of Exchange.
- A Ledger for entries in regard to money or goods—one book per year.
- A Pass-Book in which entries of transactions in money or goods are certified by seal.
- A Deed of Partnership (under which a Company or Commercial Firm is established).

Should deeds of partnership contain any stipulations as to the payment of or loan of money, the documents or ledgers which serve as proof of such

^a A Judge had a discretionary power under the old system.

^b These are peculiar to Japan, and are used in the following way. A person pays the price of, say, a *shō* of saké, or a dozen fish, and, not wanting the saké or fish at the moment, is handed a Ticket entitling him to receive these articles at any future time on presentation of the Ticket.

^c *Shi-kiri-sho*.

payment or loan, although no sum be named, must bear the same stamps as the various contracts mentioned in Class 2, where special amounts are named.

The documents hereinafter mentioned, which deal with sums of *yen* 5 and over that amount, must bear stamps as follows:—

A Stamp of one *sen* is required for—

- Invoices used in business transactions.
- Receipts given in business transactions.

If such documents are bound into one book, one stamp of one *sen* will suffice for the year.

Class 2.—Stamps must be affixed to the documents specified below according to the following rates and in proportion to the amount of money involved.

In the case of Bills of Exchange and Agreements, the special forms required must be used.

The documents here named require stamps in proportion to the amounts given in the following tables:—

- Deed of Loan.
- Deed of sale or purchase of land or houses.
- Receipt for goods held on deposit where value of goods is specified.
- Deed of loan of goods, where value of goods is specified.
- Deed of sale or purchase of goods.
- Receipt for money held on deposit for fixed period.
- Contracts of all kinds where the amount of money is specified.

Where the amount of money involved is *Yen* one, or over, but under *Yen* 20, a Stamp of one *Sen* is required.

OVER.	UNDER.	VALUE OF STAMP REQUIRED.
Yen 20	Yen 50	2 Sen.
Yen 50	Yen 100	4 Sen.
Yen 100	Yen 150	6 Sen.
Yen 150	Yen 200	8 Sen.
Yen 200	Yen 300	11 Sen.
Yen 300	Yen 400	14 Sen.
Yen 400	Yen 600	20 Sen.
Yen 600	Yen 800	26 Sen.
Yen 800	Yen 1,000	32 Sen.
Yen 1,000	Yen 1,400	38 Sen.
Yen 1,400	Yen 1,700	44 Sen.
Yen 1,700	Yen 2,000	50 Sen.
Yen 2,000	Yen 2,500	60 Sen.
Yen 2,500	Yen 3,000	70 Sen.
Yen 3,000	Yen 3,500	80 Sen.
Yen 3,500	Yen 4,000	90 Sen.
Yen 4,000 and over—	a stamp of one Yen.	

If the above documents are made into one book, stamps must be affixed according to the estimated total value specified in the whole documents, taken together, and in accordance with the following rates:—

Where the total sum involved is under *Yen* 100, Stamps to the value of 4 *sen* are required.

Where the total sum involved is *Yen* 100, or over the duties will be calculated on the value of the stamps^a to be fixed in the case of each document.

Receipt for money deposited on Current Account, or Pawn-broker's Ticket, where the amount involved is—

OVER.	UNDER.	VALUE OF STAMP REQUIRED.
Yen 1	Yen 20	1 Sen.
Yen 20	—	2 Sen.

If these documents are bound into one book, they must bear Stamps as follows, according to the estimated total value specified in the whole documents when fastened together.

Where the total amount is under *Yen* 100, a Stamp of 2 *Sen*.

Where the total amount is *Yen* 100, or over, a Stamp of 4 *Sen*.

- Bills of Exchange.
- Contracts of Barter.
- Formal Agreements.

Where the total amount involved is under *Yen* 50, a Stamp of 1 *Sen* is required.

OVER.	UNDER.	VALUE OF STAMP REQUIRED.
Yen 50	Yen 100	2 Sen.
Yen 100	Yen 200	4 Sen.
Yen 200	Yen 500	8 Sen.
Yen 500	Yen 1,000	15 Sen.
Yen 1,000	Yen 2,000	25 Sen.
Yen 2,000	—	50 Sen.

Article III.—Documents the intention and effect of which are similar to those mentioned in the foregoing clauses, must bear Stamps of a suitable value, irrespective of their special names or designations.

Article IV.—Documents and ledgers, etc., which should bear Stamps, but to which Stamps have not been affixed in accordance with Article V., shall not be accepted as valid by the Civil Courts. But this rule does not apply to documents and ledgers to which Stamps have been fixed after a penalty has been enforced for their not having been stamped.

Article V.—Stamps must be affixed by the person transferring a document or by the owner of a ledger before such document has been accepted or such ledger has been used. The seal, which is to be affixed immediately below the name of the person executing the document or making an entry in the ledger, shall be placed partly on the Stamp and

^a If there are 5 documents and the Stamp duty on each is 5 *sen*, the duty will be 25 *sen*.

partly on the paper surrounding it, and the Stamp shall thus be effaced.

Article VI.—The denominations of the Stamps and the forms to be used (in certain cases) will be settled (hereafter) by notification.

Article VII.—These Stamps and forms shall only be sold at places where an official license to sell has been obtained.

Article VIII.—All ledgers,* special contracts, and invoices that require Stamps, shall be examined by officers appointed for that purpose.

Article IX.—The documents and ledgers herein-after specified do not require stamps.

1. Formal documents executed by Government Offices and ledgers used by them.
2. Documents used in pursuance of their duties by officials or deputy officials, or by members of deliberative assemblies appointed by official decrees, or by persons serving in public schools or hospitals.
3. Deeds of guarantee for receipt of money deposited with Government Offices by the Treasury agencies or Government accountants.
4. Formal receipts given to Government offices by the Treasury agencies or Government accountants in return for taxes paid in by them.
5. Formal acknowledgment given by the Treasury Agencies or Government accountants of the receipt of an order for money issued to them by Government Offices.
6. Receipts given to individuals for taxes received by the Treasury agencies or Government accountants.
7. Documents concerning donations of money made to Government Offices by individuals either to relieve distress occasioned by any natural calamity or disaster, or towards any State undertaking or public work.

Article X.—With regard to ledgers of Class 2 the estimated value of transactions, the period for which the ledger will be used, and the number of pages of the ledger, must be entered on the first page. Ledgers which refer to the transfer and receipt of goods must contain a statement of the value of such goods.

Article XI.—Should items in respect to which the stamp duties differ, be noted in the same document, or should entries the stamp duties on which are not identical, occur in the same ledger, the proper stamps required in each case must be affixed.

Article XII.—In the case of ledgers which have been duly stamped, when the previously estimated total value of transactions entered has been reached, or when the period for which the ledger is to be used has expired, the fact must be noted in the ledger, and when the inspecting officer comes to make inspection, his seal must be affixed to this entry.

Article XIII.—Should there remain in a ledger such as mentioned in the foregoing article^a any blank pages, and it is desired to utilize them, the proper stamps must be affixed in the manner indicated in Article X.

Article XIV.—Should all the pages of a ledger be exhausted either before the previously estimated total value of transactions entered has been reached, or before the period for which the ledger is to be used has expired,—fresh pages may be added to the ledger. In these cases the reasons for increasing the ledger and the number of pages added must be noted at the side of the entries as to estimated value of transactions and period of use which are made at the beginning of the ledger.

Article XV.—Should the amount of a transaction be entered in a document or ledger in Foreign coin, the equivalent amount in Japanese Currency must be calculated and entered, and the proper stamps affixed.

Article XVI.—When formal documents are exchanged between two parties each party to the transaction must affix the requisite stamps.

Article XVII.—When a supplementary document previously executed, or when an endorsement is made on a previously executed document, if by the addition of such supplementary document or endorsement the intention and effect of the previously executed document are altered, or if the amount of the transaction is thereby increased or lessened, fresh stamps of the proper value must be affixed.

Article XVIII.—In cases where these Regulations are violated by persons who seek to evade payment of duties, after the offence has been punished the proper stamps may be affixed by the person receiving the document or ledger, etc.

Article XIX.—Persons who do not affix stamps to documents or ledgers, etc., which ought to bear stamps, or who affix stamps of an insufficient value, and persons who do not use forms when requisite, or who use insufficiently stamped forms, shall be punished by a penalty of 20 times the value of the stamp duties sought to be evaded, or by a fine;—and persons who have received such unstamped or insufficiently stamped documents, ledgers, or forms shall be punished in the same way.

Article XX.—Persons who neglect to efface the stamp with a seal in accordance with the provisions of Article V.—the circumstances stated in Article XVIII. being excepted,—shall be punished by a penalty of 10 times the value of the stamps in the case in question, or by a fine; and persons who have received documents or ledgers, etc., in which such irregularities have occurred will be punished in the same way.

Article XXI.—Persons who have affixed their seals as guarantees or witnesses to documents or ledgers, etc., in respect to which infractions of these Regulations have occurred shall be punished by a penalty or fine amounting to half of that incurred by the principal parties in the transaction.

Article XXII.—Persons who refuse to submit documents or ledgers, etc., for inspection in accordance with Article VIII. shall be punished by a fine of not less than *yen* 2 and not more than *yen* 20.

Article XXIII.—Persons infringing Articles X. and XIII. shall be punished by a fine of not less than *yen* 2 and not more than *yen* 10.

Article XXIV.—Persons infringing Articles XII. and XIV. shall be punished by a penalty of not less than *yen* 1 and not more than *yen* 1.95.

Article XXV.—Persons infringing Article VII. shall be punished by the confiscation of all stamps in their possession and all profit they may have made by the (unauthorized) sale of stamps, and in addition by a fine of not less than *yen* 5 and not more than *yen* 50.

Article XXVI.—In the case of persons who have committed any of the above-mentioned infractions of these Regulations the offence they may have committed will not be enquired into by the Penal Code, nor will the system (laid down in that Code) in regard to the diminution of penalties in cases of light offences, to the increase of penalties in cases where the offence is repeated, or to the disclosure of several offences at the same time be employed.

ANNEX 4.

HISTORY OF THE REVISION OF THE LAND TAX.

(Translated from *Hochi Shimbun* of November and December, 1883.)

The history of ancient laws in regard to taxation in Japan is difficult to trace owing to the imperfect nature of the records on the subject, but we learn from various books that in early times the land system was based upon that of Corea. According to this system, 6 square feet of land were reckoned as one *ho*; 29 *ho* constituted a *shiro*; and for every 50 *shiro* one bundle and a half of rice in the ear were paid as tax. In the period of *Tai-kwa* (1230 years ago) the area of a *ho* was altered, and 5 square feet were made one *ho*; 360 *ho* were made to constitute a *tan*; and on each *tan* a tax of 2 bundles and 2 sheaves of rice in the ear was levied. Some years later the old system was reverted to, but in the period of *Tai-ho* (about 1177 years ago) the system established in the period of *Tai-kwa* was again introduced. In the period of *Kei-un*,—only three years later, a reduction of 3 *sho* and 5 *go* was made in the tax levied on each *tan*. In the period of *Wa-do* (about 1170 years ago) the Corean foot was abolished and the Chinese foot adopted, and the amount of taxation levied on a *tan* of ground was altered to what it had been in the period of *Tai-ho*. From this time forward all learning and all laws and regulations were based on Chinese models, and taxation was introduced on the Chinese system and divided into 3 kinds of taxation,—rice tax, forced labour, and local taxes. This arrangement, however, did not work well. Those in authority appropriated lands at their pleasure, and religious associations vied with each other in taking possession of agricultural holdings. Both in Imperial taxes, local taxes, and miscellaneous dues, the tax-payers were allowed to fall into arrears, on the condition that they paid 50 and 70 per cent. interest for such arrears to the government. These facts will serve to show the confused state of the laws relating to taxation. Later on, changes took place which had the result of increasing the power of the military classes, and the people of Japan became divided into two divisions, agriculturists and soldiers, and taxation was increased.

When Yoritomo assumed control of the administration, the land regulations were found incon-

venient for apportioning the forced labour levied upon the land for military purposes. Consequently the taxes on land were fixed in *kwan*,¹ and land was classified according to its quality. Moreover, the system of paying taxes only in rice and other grain was abolished, and a joint system of payment in grain and in money was introduced. Under the Ashikaga Administration, Chinese copper cash of the *Yei-raku* period (made in the Ming Dynasty), were imported into Japan in large quantities, and to this importation of cash the fact is probably due that the yield of land was computed at so many *kwan*, and so many *yei*. All land appears to have been classified, its value in *kwan* or *yei* cash determined, and taxes in the shape of forced labour were, it seems, levied upon the land for military purposes, according to this assessed value. The system was not without its advantages, but at this time the country was divided into various feudal districts and powerful military chieftains held fiefs in various parts of the country, and exercised in a tyrannical manner their feudal rights to levy military supplies upon the land. Consequently the laws in regard to taxation fell into a state of terrible confusion.

When Hideyoshi suddenly rose to power lands in all the provinces were remeasured; 6 square feet and 3 square inches were made to constitute a *ho*; and 300 *ho* were made equal to one *tan*. Taxes were levied upon the land according to the assessed yield of rice, and the previous confused systems and regulations were brought into order and rectified. Iyeyasu followed the policy bequeathed to him by Hideyoshi, and introduced no unreasonable reforms. But, warned by the past wholesale appropriation of land in the 20th year of the period *Kwan-yei* (about 235 years ago), the sale and purchase of arable land were strictly prohibited, the infraction of this prohibition being punished by confiscation of the property of the offenders, and the exaction of fines from the village officials who had connived at the occurrence. At the same time, various reforms were introduced affecting the minor provisions of land taxation.

In the period *Hiyō-ho* (about 162 years ago), the land laws were at last arranged on a system which was fairly satisfactory. But this system was only in force in the case of those lands which were under the direct administration of the Shōgun's government, and did not extend to the territories of the various clans, or to those lands which were either in the possession of temples and shrines, or owned by members of the nobility. In all parts of the country outside the jurisdiction of the Shōgun, ancient systems of taxation prevailed, and land was assessed variously at certain values in *kwan* and *yei*, cash, or according to measurement in *tan* or *shiro*, or again according to the estimated yield in rice. Moreover the *ho*, varied in different places, being sometimes equal to 6 square feet and 5 square inches, sometimes equal to 6 square feet and 3 square inches, or 6 square feet and 2½ inches, or only 6 square feet; and it was the same in the case of the *tan*, which contained variously 900 *ho*, 360 *ho*, 300, and 200 *ho*, according to the system obtaining in a particular locality. The assessment of taxes also varied in different districts. In some places, 70ths of the yield of land went to the landlord and 30ths to the cultivator; in others the proportions were 3ths and 2ths; in some, again, the yield of land was divided equally between landlord and cultivator; and yet in others, the landlord received only 10ths, and the cultivator 90ths. Nor did the differences end here. The methods of assessing the yield were not identical. There were three distinct methods of assessing the yield, the assessment by measure (in which the measurement of the land was taken), the assessment by inspection of the crops (in which the yield was estimated by the appearance and condition of the crops), and the assessment by sample (in which specimens of the rice growing were taken as samples). The amount of hulled rice that one *sho* of un-hulled rice would produce was moreover variously estimated at 6 *go*, 5½ *go*, and 5 *go*; and to complete the list of divergencies, each district had its own peculiar system of packing and weighing rice, and its own rules in regard to matters of detail, forming no part of the regular taxation,—such as the right of the government to surplus rice of all kinds, and the payment of taxes on all commodities in rice. To crown everything, the inequalities in the measurement of land and in the incidence of taxation became so outrageous that in many places it was possible to find fertile land pay no taxes at all and waste land burdened with an enormous tax. And the numerous evils which arose out of this wide spread injustice grew gradually larger and larger. When taxes were unfairly light they became still lighter; where they were excessive they grew still more burdensome; until at last universal disorder prevailed in regard to the land system, for the poor

* Shi-kiri-sho.

^a i.e. a completed ledger which has been examined and sealed by the inspecting officer.

¹ 1 Kwan = 1,000 cash.

man was ground down by taxation while the rich man escaped.

Under the Shōgun's administration the land system was, as we have seen, in a state of confusion. According to the system then in force, the area of land was determined by measurement, the yield was calculated according to the amount of the production, and good and bad years were determined by inspection of the crops. The land tax was levied in this manner, and was paid always in rice. In followed, therefore, that the amount of taxes payable could not be ascertained beforehand, nor could the selling price of rice be calculated in advance, because there were both years of plenty and years of scarcity, and fluctuations occurred in the value of rice. The amount of taxes payable, therefore, depended upon good or bad years, and upon the price of rice. On the one hand, the people suffered from the grievance of burdensome taxation, and on the other hand, the government were saddled with a deficit in revenue. A revision of the land tax was thus urgently required at this time, but the indecision and procrastinating policy of the Shōgunate made it quite impossible for such an important work to be undertaken. When the Restoration took place, great changes were effected in the national economy, and the evils consequent upon the disordered state of taxation became more and more a subject for serious consideration. Political economists consequently directed their attention to the introduction of reforms in the land system, and the government decided to take definite steps in the matter. In the 2nd and 3rd years of Meiji the Home Department took the lead in this direction by bringing forward a proposal to re-assess the valuation of land, and Kanda Kohei, a member of the senate, introduced a measure for the reform of the land system. The principal features in this reform were that the sale of land should be allowed, that a title deed should be granted for each holding, and that taxes should be paid in money according to the value of the holding as stated in the title deed. To prevent the value of a holding being understated, with the view of evading taxation, a provision was inserted by which it was stipulated that should any person offer to buy a holding for a higher price than that fixed by the proprietor, the holding should be sold, and if the proprietor would not purchase it, the price offered for the holding should be entered in the title deed as the value of that holding, in place of the value as fixed by the proprietor, and one-tenth of the purchasing money paid for the holding by the bidder should be given to the proprietor in satisfaction of his claims. Subordinate offices were to be established in each *Fu* and *Ken*, which should have jurisdiction over five or ten villages, as the case might be, and have control of all matters relating to land in their jurisdiction. A land register was to be kept in each office, in which all title deeds were to be registered, and the original title deed and the corresponding entry in the register were to be sealed with a joint seal.

Whenever the price of land varied, the change in value was to be entered and taxes were to be paid in accordance with the value of the land as entered in the title deed.

The officers were also to ascertain the total value of the title deeds according to the entries in the land register, to determine the average amount of rice paid as taxes during a period of 20 years, and then to convert this amount into money according to the average market price of rice. The sum total thus obtained was to be compared with the sum total of the values of the various holdings stated in the title deeds, and the tax due on each title deed fixed. When the fixed period for payment arrived, the proprietor of each holding was to pay his taxes to the local office, which was to receive them, and, adding together all the taxes paid on land in its jurisdiction, was to hand them in to the office of the prefecture. Each prefectural office was to keep a general register of the title deeds of all land in its jurisdiction, and the taxes, when received, were to be compared with the entries in the register and paid in collectively to the finance department. The finance department was to compare the taxes thus received with the entries in the "general register of the title deeds of all land throughout the country," and place them all together. This scheme was therefore a proposal to levy taxes on land according to its selling value, and was called the "title deed system of taxation."

The title deed system of taxation proposed by Mr. Kanda was a sound measure, in its way, but at the time it was brought forward the Restoration was in its infancy, and public affairs were in a state of general confusion. Moreover, each clan had different laws, and therefore, although the government were eager to amend the land system, it was impossible for them to introduce the necessary reforms.

In the month of August of the next year, however,

(1871), the great work of abolishing the clans and establishing prefectures in their place was accomplished, full powers in all military matters reverted to the government, and the finance department for the first time had full control over the collection of revenue and the national finance. The bureau of taxation then prepared a draft scheme for the revision of the laws of taxation, and submitted it to the Finance Department. The Minister and Vice-Minister of Finance, Messrs. Okubo Toshimichi and Inouye Kaoru, accepted this scheme and brought forward a proposal for the revision of the land tax. This was in the month of December 1871. The principal features of this proposal were as follows.

The proprietor of a holding was to be free to cultivate his land in all respects as he pleased, and the right of absolute sale of his land was conceded to him. The export and import of rice and other cereals by the people were to be freely permitted. The extent of all cultivated land, house land and forest land, etc., throughout the country was to be ascertained by survey. Title deeds were to be issued for all land with certain exceptions, taxes were to be levied according to the selling price of the land, and the value of all land was to be fixed after examination.

The *Sei-in*^a adopted the scheme proposed by the Finance Department and caused arrangements to be made for carrying it into effect. The Finance Department accordingly framed, in concert with the taxation bureau, a set of title deed regulations, containing 28 clauses, which, in January 1872, were put in force, as a tentative measure, in the limits of the *Tokio Fu*, and later on were made applicable to all town-land, and other land coming under the same designation, in all the prefectures. Then for the first time, moreover, castle-towns, and places famous by tradition were made to pay land tax.

In February 1872, the Finance Department issued a set of regulations, containing 24 clauses, for the issue of title-deeds and the payment of land tax. In clause 10 of these regulations it was stated:—"The Land Tax shall be paid annually as follows:—namely, at the rate of 2 per cent. of the value of the land as entered in the title deed," and an additional sum of 3 *sen* for every *yen* of land tax will be paid as office expenses. For the present, the amount of taxation has been fixed at the rate stated in these regulations, but it must necessarily vary from time to time according to circumstances. Clause 23 stated, that after an interval of 5 years a re-examination of all title deeds would take place.

In March, 1872, the restriction on the absolute sale of land was removed and rules were published which provided for the transfer of the title-deed of land when thus sold.

It appears from these regulations that the government considered the title deed taxation system as the most convenient method of levying taxes, and were anxious by issuing title-deeds in the case of castle towns and places famous by tradition, which had hitherto been exempt from taxation, and by granting title deeds in the case of all land sold, to fix the value of land throughout the country, and collect taxes in accordance with the value so determined. Land, however, being in the nature of a fixture, people are usually very unwilling to relinquish possession of it, and therefore, as the government proposed to wait until land was sold or transferred before issuing title-deeds, 40 or 50 years might have elapsed, and even then title deeds would probably not have been issued for all the land in the country. It is easy to understand, therefore, that difficulties arose in the determination of the value of land. Accordingly, in August of the same year, the government supplemented these regulations by additional rules under which they agreed to issue title deeds for all land in Japan under occupation by the people, irrespective of its sale or transfer, and published a notification to the local authorities everywhere to the effect that the task of issuing title deeds was to be finished by the month of October. In September, the Bureau for the Revision of the Land Tax was established as a sub-office of the Taxation Bureau, and to this office full powers for this revision were entrusted together with the special control of all matters connected with title deeds. In this month a draft of the revised system of land taxation was completed and communicated to the chief administrative officers in each locality, and rules were framed for carrying this system into effect.

Later on, a fresh proposal for the revision of the land tax was brought forward by Mr. Mutsu Munemitsu, Governor of the *Kanagawa ken*. This proposal may be summarized as follows:—"The existing system of land taxation was to be changed, and all ancient methods of assessing taxes, and determining the extent and yield of land were, without exception, to be abolished. The land tax was to be levied at a certain rate according to the actual

value of land, and the taxes were to be payable in certain fixed periods. The three classes into which land was divided were to be amalgamated, all land to be valued according to its productiveness, and on the value thus fixed the land tax was to be assessed. Thus, if the land was productive the assessed value would be high, and if the value was high the taxes would of course be heavy. If, on the contrary, the land was unproductive, the assessed value would be small and the taxes therefore would be light. By this method, it was argued, much trouble would be saved to the authorities and the people without detriment to either, and the land taxes would be adjusted on a fair and equitable basis. The government accordingly appointed Mr. Mutsu superintendent of taxation, and the work of revision was commenced.

The plan proposed by Mr. Mutsu was, we see, substantially the same as that brought forward by Mr. Kanda in 1870, and by Mr. Okubo in the following year; but at that time the laws in each clan were different and the administration was not yet firmly established. Although, therefore, the government gladly concurred in the plans then put forward, they could not easily be carried into effect throughout the whole country. When however, the Daimios surrendered their fiefs to the crown, and the administrative power being placed in the hands of a central government, the way was cleared for the settlement of the affairs of the country, the work of revising the land tax was at once commenced.

In February, 1873, the chief administrative officials in each locality were summoned by the finance department to a deliberative meeting, and the draft scheme for the revision of the land tax was discussed. The result of the deliberations of this assembly was that the members eventually were divided into three parties. One party proposed that the total amount of the taxes previously levied on land in rice should be converted into money (such amount to be fixed on the basis of the average amount of taxation for the previous 10 or 5 or 6 years); that the money obtained by this calculation should be apportioned according to the total amount of land entered in the title deeds; and that, afterwards, an equitable adjustment of the taxation to be levied on each holding should be gradually made in accordance with the quality of the land. A second party argued that it was useless to deal with superficialities without going to the root of the matter; that the question should be dealt with in a decisive manner by abolishing once and for all the methods of assessing taxes according to the yield of land and the inspection of crops; and that a simple and uniform system of taxation based on the value of land should be introduced. The third party held that it would be no easy matter suddenly to do away with all old customs and usages, that it would be better for some time to follow the system introduced under the Tokugawa Shōgunate, and adopting an equitable method of taxation based on the system of inspecting crops, to correct any unfair incidence of taxation in the case of particular holdings. Title deeds might then be issued gradually, and a new system of taxation introduced later on, when the people, having out-grown old usages, were prepared to accept it.

The views of these three parties were not identical, but in reality they only differed on the question as to whether the reform should be carried out at once, or gradually. As far as the main issue of the necessity of reform was concerned their views coincided. The president of the assembly, Mr. Inouye Kaoru, then selected a few of the members of the assembly and entrusted them with the task of drawing up a draft scheme for the revision of the land tax. When this draft was completed, Mr. Inouye suddenly sent in a memorial to the government and resigned office. Mr. Okuma, the chief of the party, who was then a *sangi*, assumed charge of the Finance Department. He accordingly became president of the assembly and presented the draft scheme for the revision of the land tax to the members, who discussed it clause by clause.

The draft law was then submitted to the Emperor, who readily gave it his sanction, and it was then notified to the country by Imperial decree. This occurred on the 28th July, 1873.—(see Report).

Regulations for the revision of the land tax containing seven clauses^b were accordingly issued by the Council of State, another set of regulations for the carrying out of this revision, containing 17^c articles, were published by the Finance Department, and a memorandum of 44 clauses for the information and guidance of the local authorities, and a set of new rules for the inspection of land containing 3^d articles were also drawn up and made public. We will summarize the chief provisions in this series of enactments which concern our present argument.

As soon as the revision of the land tax was com-

^a Name of the old senate which was replaced by the *Gemō-in*.

^b See Report Appendix B. ^c Appendix C. ^d Appendix D.

pleted, the land tax was to be levied on the value of land. No increase of taxation was to take place in good years; nor was any decrease of taxation to be allowed in bad years (see Article 2 of the Revision Regulations). The land tax had hitherto been mixed up with taxes on various commodities, and with the house tax, but henceforth a clear distinction was to be made. And although it was agreed that the land ought not to be assessed at more than 1 per cent. on the value of land, yet as the taxes on various commodities were not yet settled, for the present the land tax was to be assessed at 3 per cent. on the value of land. When, however, the taxes on tea, tobacco, timber, and other productions of the soil had been established, and the yearly revenue from these sources had reached the sum of yen 2,000,000, then the land tax levied on all land in respect of which the land tax had been revised was to be reduced gradually in proportion to the increase in the revenue derived from these new taxes, until it reached the limit of 1 per cent. on the value of the land. (See Article 6 of the Revised Regulations.)

With regard to the value of land, the owners of land were to be made to estimate the yearly profit attending the cultivation of their holdings, and to give their opinion as to the value of their holdings based on this estimate of the profit attending cultivation, according to the customs of the different localities; and a suitable tax was to be levied after inspection of the land on the part of the Government. (Article 1. of the rules for the carrying out of the regulations of the land tax.)

In the case of holdings the price of which was not correctly stated by the proprietors, a fresh estimate was to be ordered, and in the event of the land holders being dissatisfied with the value thus estimated, and refusing to listen to reason, the land was to be sold by written tender or at a price fixed by the Government. (Articles 16 of the same rules.)

The price of land, it was said, depended upon many considerations: upon its position, whether in town or country; upon people's tastes; upon the difficulty, or ease of cultivation, and upon the different nature of the industries carried on by the people; and not only upon the actual profit attending its cultivation by the farmers. People's tastes and their views as to the convenient or inconvenient position of land were, it was pointed out, matters of private opinion which did not as a matter of course find open expression, and consequently the value of land as regulated by these considerations could only be calculated by conjecture. It followed, therefore, that unless land repeatedly changed hands and was sold by competition to the highest bidder, its true value, in so far as these two elements of price were concerned, could not possibly be determined. Accordingly, the best method for determining the value of land was to estimate the profit attending cultivation. As the price of land for which there was a great demand would naturally rise higher than the value thus calculated, this method ought by all means to be adopted. (Article 10 of the memorandum for the information and guidance of local officials.)

In cases where the value of land was understated by the holder, and it was difficult to sell it by written tender, the holder was to be asked whether he was willing to sell it to the Government at the price named by him, and if he consented, he was to be called upon to give a written guarantee to that effect. (Article 33 of the same memorandum.)

It might occasionally happen, it was pointed out, that a holding would be bought by the Government when the value fixed by the proprietor was very near the proper value, but in most cases the Government would only step in as a purchaser when it was thought that a false estimate of value had been furnished by the proprietor. (Article 35 of the same memorandum.)

In determining the value of land in pursuance of the revision of the system of taxation, no regard was to be paid to the amount of taxes on rice formerly levied, but each proprietor was to state what he considered to be the actual selling price of his holding. Instructions in this sense were to be issued to each village. (Article 40 of the same memorandum.)

The system of measuring land by which its extent was determined, the system of investigating the yield of land by which its fertility or unproductiveness was ascertained, and the system of inspecting the crops by which a distinction could be made between good and bad years, were all good methods in their way. The evil lay in the practical application of these methods. This was attended by numerous drawbacks, which continued until the year 1868. For instance, the practice of assessing the taxes to be paid in a particular year only after the results of that year's harvest had been ascertained, made it impossible to draw up any estimate of annual revenue; and this impossibility of estimat-

ing the annual revenue made it very difficult to administer the national finances in an efficient manner. Consequently, when the new period of Meiji commenced, political economists were anxious for the establishment of a sound land system under which the evils of unequal taxation and a fluctuating revenue might be avoided; and they endeavoured by every means in their power to find some expedient which would serve their purpose. But although by a just and impartial system of measuring land and estimating its yield it is possible to remedy an unfair incidence of taxation, a fluctuating revenue is a difficulty which does not admit of solution in the same manner. In all times farmers have regarded with distrust and aversion the measurement of land, and as often as this has taken place local disorders have been the result. It is impossible not to understand that this result would not certainly have happened had these reforms been hastily taken in hand, so shortly after the new Government had come into power, and before it had gained the confidence of the people. It would, indeed, have been a mistaken policy at this early period to have inaugurated the work of reform by re-measuring the land. The reformers probably saw the danger, and accordingly altered their plans and brought forward the scheme known as the title deed system of taxation, which became law in July, 1873.

It appears to us, that the two most necessary points in a system of taxation are that it should have the advantage of simplicity and that it should satisfy the people. Now, in point of simplicity, the assessment of the land tax according to the value of land is not as satisfactory as the assessment of the tax according to the yearly revenue it yields to the cultivator. But the aversion to the measurement of land was a feeling ingrained in the minds of the people and one which could not easily be eradicated. The Government in deciding to adopt the system of assessing taxation upon the value of the land, avoided the danger of a measure which the people regarded with suspicious aversion,^a and although the principal object of the Government was not to avoid this danger, the decision, nevertheless, was certainly most opportune in view of the fact that at this time the Government did not command the full confidence of the people. By revaluing all land throughout the country, fixing its proper value and assessing a fixed yearly tax, the difficulties connected with the varying extent of holdings were avoided, the unfair incidence of taxation was remedied, and the evil of a fluctuating revenue was removed. These were the good results of the new system. Why then, it may be asked, was it condemned by some people at the time? It was condemned firstly on the ground that it would be difficult to carry it out; secondly, that the assessment of the land tax at 3 per cent. would not produce sufficient revenue for the requirements of the administration; and thirdly, that if taxes were not increased and lessened in good and bad years the people would become imprudent, and no provision for bad years would be made. Exception was also taken to the provision for a gradual reduction of the tax until it should reach the proportion of 1 per cent. When a 3 per cent. tax, it was said, is not enough to support the finances of the country, what shall we say to a further reduction of the tax? This was the fourth ground of objection. Again the opponents of the new system quoted in support of their arguments the following passage from Mr. Mutsu's scheme:—"We will suppose that the land tax is fixed at 5 per cent. on the original value of the land; and that there is a piece of land the soil of which is naturally rich and which is advantageously situated with regard to the water supply. The price of such land is, of course, high, probably yen 1,000. The land tax to be paid on it will be yen 50. Then we will take another piece of land of the same size the soil of which, however, is of a poor quality, being stony, and which presents no facilities for cultivation. The price of such land is, of course, small, say yen 500. The land tax to be paid on it will be yen 25."

This, said the objectors, was of course only intended by Mr. Mutsu to be taken as illustrating his

^a The meaning of the writer is this:—Previous to the restoration, the assessment of the land tax underwent revision at certain periods. But this revision simply amounted to a re-measurement of all holdings, with the object of augmenting the Government revenue by ascertaining the increased area of land brought under cultivation since the last census of land had been taken. No alteration was introduced in the system of taxation. As these periodical revisions, therefore, in the vast majority of cases, simply resulted in an increase of the land tax, although in some few instances perhaps a previous excess of measurement may have been rectified, it was only natural that the people should regard the re-measurement of land with unconcealed aversion, foreseeing, as they did each time, that it must result in an increase of taxes.

In the revision of the land tax introduced by the present Government, the re-measurement of land formed of course part of the official programme. But the Government, by giving the greatest prominence to the change of system that was inaugurated by the new enactments, diverted attention from the re-measurement of land which would in any case have been a necessary consequence of the revision.—(Translator.)

scheme, and cannot, therefore, be regarded as his opinion on the actual rate of assessment; but it is a well-known rule that is such an important matter as a memorial of this kind, the greatest care must be taken even in a single word or meaning. And it is very clear that if Mr. Mutsu's idea was that the land tax should be assessed at 3 per cent. or less, he would not have taken it as he did at 5 per cent. for the purpose of illustrating his argument. And if Mr. Mutsu knew that such an assessment would be too low, then clearly others should know it; more especially in view of the fact that under the Shōgun's administration the proportions of the produce of land which went to the government and to the cultivator respectively were at the lowest rate of taxation $\frac{7}{10}$ ths to the cultivator and $\frac{3}{10}$ ths to the government, and at the highest $\frac{7}{10}$ ths to the cultivator and $\frac{3}{10}$ ths to the Government. These were the grounds on which the opinion was based that the assessment of the land tax at 3 per cent. was too low. This opinion was held by many, and still more were opposed to the provision that, as taxes on commodities increased, the land tax should be reduced until it reached the proportion of 1 per cent.

Our director, Mr. Okuma, however, who was then Minister of Finance, and Sangi, having, in obedience to the benevolent command of His Majesty, elicited a clear collective opinion on the subject, fixed the assessment of the land tax at 3 per cent., and established the provision for gradual reduction of the tax to 1 per cent.; he also inserted the clause by which no alteration of taxes would take place in good and bad years, and presenting the draft law to His Majesty obtained for it the Imperial sanction. The decision of the Government was based on the fact that a famine year is an occurrence out of the ordinary course of things, and cannot therefore be taken as a basis for regulating the ordinary system of national finance; and that land again, being the principal source of national revenue, to impose heavy taxes on the principal source of revenue is to prevent the extension and development of all productions and industries.

The 17 clauses of the regulations for carrying out the revision of the land tax defined the methods for determining the value of all land under cultivation, and of house land, hill land, forest land, and moor land, and of land included in dykes, etc., and for assessing the land tax; and were therefore in the nature of explanatory rules for the carrying out of the revision. The most difficult matter, when the revision was in progress, was the determination of the value of land. Accordingly, the same Government had occasion to explain no less than three successive times its intentions in regard to this determination of value.

The 44 clauses of the memorandum for the information and guidance of the local authorities were in the nature of explanatory rules giving information on points which it was necessary for the local authorities to possess. In this case too, the determination of the value of land was the chief point in regard to which the Government had to explain its views. But the circumstances of each district, and indeed of each village, being different, it was impossible to carry matters with a high hand, and establish one fair basis which should serve for the determination of the value of all land. And as the people were anxious to obtain as light an assessment of taxation as possible, there were not wanting proprietors who endeavoured to deceive the authorities by understating the income they drew from the land, and tenants who practised the same fraud in regard to the amount of their share of the produce of the land. Accordingly the Government published 4 additional rules for inspecting land, intended to be applied in those cases where the general fair basis for determining the value of land could not be adopted. The taxation system was thus perfected in all its details, and the plan which had cost so many years of labour to elaborate was able to be put into operation. The necessity of prompt action was accordingly urged on the local authorities; and the great work of revising the land tax was commenced.

In September, 1873, the laws in respect to the reclamation of land and the evasion of land registration, with intent to defraud the revenue, were revised, and it was thus rendered impossible for the ownership of land to be concealed from the authorities; for a notification was issued to the effect that if after the conclusion of the revision of the land tax any persons should be found guilty of such concealment they would be punished according to the law established to meet such cases.

In May, 1874, clause No. 8 was added to the revision regulations. By this clause it was enacted that even though the price of any land should, after the revision, vary in price in transactions of sale, the land tax would still, for the period of 5 years dating from the revision, be levied according to the value originally fixed at the time of such revision.

In June of the same year, the rules under which tax-payers who fell into arrears were made to pay interest in addition to the taxes due were re-enacted.

In the following December a re-classification of land took place; a broad distinction was established between land owned by the Government and land owned by the people, and land was sub-divided into several minor classes.

In March, 1875, a bureau for the control of all matters connected with the revision of the land tax was established as an intermediate office between the Finance and Home Departments. This step was taken because although the revision of the land tax was a matter under the control of the Department of Finance, many questions arose in the course of the revision which concerned the Home Department, and much delay was unavoidably occasioned by the joint discussion of such questions which took place between the two departments.

In the same month, an order was issued to the effect that as it was intended to fix the price of rice, to be used in determining the value of holdings, by taking the average market value of rice for the period included in the 5 years from 1870-4, particulars respecting such average value were to be collected and sent in by the local authorities to the Central Government.

In August of the same year, it was notified that all town land, etc., in the various prefectures on which the land tax had been levied at the rate of 1 per cent. on the value of the land, should, after the revision of the land tax had come into operation, be taxed at the rate of 3 per cent. on the value of the land. In the same month, also, the following Notification was issued to the various prefectures:—

“Although there is no immediate necessity for the rapid completion of the revision of the land tax, still if this revision is only accomplished step by step the opportunity of fixing an average basis of land value by comparing the prices of land in different localities will be lost. Accordingly the year 1876 is fixed as the date by which the revision of the land tax must everywhere be completed. Take note of these our intentions and by the exercise of diligence see that the work of revision is completed.”

In the following September, all taxes were divided into two classes: “National taxes and prefectural taxes.” In October, a supplementary clause was added to the regulations for the revision of the land tax; and in the same month it was notified that the local taxes levied on town land in prefectural districts should not exceed one third of the land tax.

In May, 1876, a notification was issued to the effect that in the case of persons who, when the revision of the land tax had taken place, persisted in adhering to their own estimates of the values of their holdings, and refused to accept the proper price fixed, the land tax was to be assessed and levied at the same rate as that charged on neighbouring land, and title deeds issued accordingly.

In October of the same year, it was notified that even though the value of any town land should vary in transactions of sale, taxes would still be levied on the land in question for the period of 5 years from the date of the revision of the land tax, according to the original value determined at the time of revision. And in the following December a notification was issued to the effect that, owing to the work of colonization in Yezo being still in its infancy, the land tax in that part of Japan would, for the time being, be assessed at 1 per cent. on the value of land.

The work of revision was thus in a fair way to show practical results. The people, however, still suffered considerable distress. Consequently the government decided to reduce the land tax in conformity with the 6th clause of the revision regulations. This was done by means of an Imperial decree issued in January 1877.—(see Report)

The land tax was thus reduced to $2\frac{1}{2}$ per cent. and at the same time the local taxation levied on all holdings was reduced to $\frac{1}{3}$ th of the amount of land tax.

In February of the same year, a notification was issued regulating the collection and remission of taxes in regard to land bought and sold by the government, and waste land; and in the following July another notification was issued reducing the land tax on all land in remote mountainous districts and all land bordering on the sea, which, in the absence of any fair basis of comparison, had, in accordance with article 4 of the rules for the carrying out of the revision of the land tax, at the time of this revision been fixed at 10 sen per tan² by 1 $\frac{1}{2}$ th such reduction to date from January, 1877. In

the same month the system of collecting taxes was changed, the periods for payment of taxes being altered to six. In December of the same year, 30 years from the date of first cultivating the land was fixed as the period during which exemption from taxation would be allowed in the case of the reclamation of waste land.

In November, 1879, authority was given to the local authorities to grant a remission of taxes on land in regard to which improvements had been executed for the public advantage, such as the construction of drains and canals, etc.

In May, 1880, the Government issued a notification of 4 clauses. The first clause stated that although by a notification of 1874 it had been established that no alteration should take place in the assessment of the land tax for 5 years dating from the time of the revision of the tax, and that during that period taxes would be levied according to the value of the land as determined at the time of the revision, it had been decided by the Government to extend the period of 5 years originally fixed until the year 1885. Should, however, the land tax in any locality be considered by the governor of the prefecture to be improperly adjusted, on his reporting the fact to the government, officers would be despatched by the Finance Department to the locality in question. These officers would investigate the matter on the spot, and, if necessary, special permission would be given to alter the assessment of taxes in the case of any ward, village, or town or country district.

The 2nd clause referred to the alteration of land. It was provided that in all cases of the conversion of land, such as the conversion of rice land into ordinary arable land, or ordinary arable land into rice land, or house land, which had taken place subsequent to the revision of the land tax, such land should be re-registered under its new designation within the period of 5 years from the date of such conversion, and the value re-estimated. In the case, however, of all future conversion of land, the re-registration and re-estimation of value should be made yearly.

Clause 3 enacted that all alterations in the values of land which might be made under clauses 1 and 2 were to be carried out in accordance with the provisions of the regulations for the revision of the land tax, and the rules for carrying out the revision of the land tax, which were issued in July, 1873; and that all expenses connected with these alterations in value, with the exception of the salaries and travelling expenses of the officials entrusted with the conduct of the investigations, should be charged to the district concerned, or to the land holders, as circumstances might require.

In clause 4 it was provided that all increase or diminution of taxes which should follow upon the alterations so made in the value of land should date from the year in which such alterations received official sanction.

This notification was followed by another in November of the same year, in which it was stated that any applications for alterations of land value in accordance with the above-mentioned provisions, should be addressed to the Finance Department not later than the middle of February, 1881.

In February, 1881, the periods for payment of the land tax were altered to four. In the following March it was notified that in the event of a land holder being dissatisfied with the value of his holding, as re-estimated in the manner above stated, the value of his holding would be determined by taking the average yield of his land for the three following years. During those three years, however, he would be required to pay taxes according to the original estimate of the value of his land.

The great work of the land tax revision which had cost all classes of the people so much labour since the year 1873, was thus, at last, practically completed, and accordingly, on the 30th June 1881, the government closed the bureau for the revision of the land tax, and entrusted what affairs still remained to be arranged to the taxation bureau. Reviewing the course of events, we see that in the first year of the new period of Meiji (1868) a notification was issued announcing that the system of taxation which existed in the various provinces would be allowed to remain as they were for one or two years, and that the minds of the people were thus reassured. This result having been obtained, the changes which subsequently took place in the laws relating to land were many and various. The most conspicuous of these reforms were the rules for inspection of the crops issued in July, 1870; the permission to pay taxes in money instead of in rice granted in May, 1871; the removal of all restrictions upon the cultivation of land which took place in September, 1871; the tide deed system of taxation brought forward in December of the same year; the removal of the restriction

on the absolute sale (or sale in perpetuity,) of land which took place in February, 1872; the abolition of the payment of taxes in money calculated at the market price of the cheapest rice, which came into effect in August, 1872; the abolition of the old system of paying the land tax in rice according to the *koku* assessment which followed in June, 1873; and, finally, the regulations for the revision of the land tax issued in July, 1873, by means of which the value of all land throughout the country was settled on the same basis, and the land tax assessed at 3 per cent.

The energy displayed by the Finance Department in regard to the administration of the revenues of the country was considerable. Several works on taxation and finance were printed and published, and the Bureau for the Revision of the Land Tax made arrangements for publishing special information in connection with the progress of the revision.

In conclusion, if we attentively consider the whole course of this land tax revision, from the time of the issue of the initiatory notification down to the completion of the work, we shall find that the principal reforms introduced were five in number:

1. The change in the nature of the price of land.
2. The change in the method of investigating and determining the value of land.
3. The change in the method of measuring the land.
4. The change in regard to taxation in bad years.
5. The change in the classification of the land.

The exertion and labour which it cost the reformers to accomplish this work could not, in the nature of things, be properly appreciated even by those who observed the progress of the revision.

The two most difficult matters connected with the revision of the land tax were the determination of the extent of all holdings and the determination of their value.

The estimated extent of all land held by the people ascertained in the course of the land tax revision amounted to 12,543,770 *cho*. The extent of such land previous to the revision had been estimated at 3,916,077. The revision of the land tax, therefore, resulted in an addition of 8,627,693 *cho* to the area of land subject to taxation.

The value of the total area of land owned by the people, as determined by the revision, was assessed at yen 1,648,764,476 and the revised land tax charged on this was yen 49,462,934.^{*} The total amount of land tax levied previous to the revision was yen 52,368,054. The immediate result of the revision of the land tax was, therefore, a loss to the government of yen 2,905,109 in the revenue derived from the land tax.

The writer observes, in regard to these figures, that those politicians who had propounded the doctrine that the assessment of the land tax at 3 per cent. would not yield sufficient revenue for the finances of the country to be properly administered must have recognized the falsity of their views when they saw that the re-adjustment of the land tax in the form to which they objected caused a diminution in revenue of only yen 2,905,109.

The following table is then given showing the results of the revision in regard to the classification of land and the value in each case of land so classified, the figures given being those for the year 1881:

	Extent.	Value.
Rice land	2,631,068	1,230,118,277
Other arable land	1,855,974	267,245,578
House land	349,041	135,009,755
Hill, forest, and moor land	6,901,685	24,051,465
Salt fields	6,821	2,039,556
Miscellaneous land	7,642	172,538

The price of cereals adopted for determining the value of land was, as we have seen, the average market price of all classes of cereals for the 5 years from 1870 to 1874 inclusive. The method employed to determine the value of a holding for the purpose of taxation was as follows:—

The total yield in rice or other cereals of the holding was ascertained and converted into money at the average market price of the rice or other cereals in question for the period of five years above referred to. From the sum thus obtained, the cost of cultivation was deducted, the balance left over being the net profit of the cultivator. This profit was taken to be the interest on the value of the land at 6 per cent., and a simple calculation gave the net value of the land on which this interest accrued to the cultivator. This was fixed as the assessed value of the land on which the land tax was levied.

The following comparative tables show the total area of land on which rice and other crops were

^{*} 1 tan = 4 acre.

^{*} The tax therefore became 6 sen and 3 rin per tan.

^{*} At 8 per cent. = yen 49,462,934.

cultivated in the year 1881, and the amount of produce yielded:—

In estimating the yield of land, the writer says, all rice fields were, of course, taken as producing rice, and other arable land was taken as producing chiefly barley, oats, wheat, and beans. The yield of the land in the case of tea, mulberry, hemp, and indigo cultivation was estimated according to the profit attending the cultivation of rice¹⁰ and wheat in the vicinity. The cultivation of beans being on a small scale as compared with that of rice and wheat, we do not therefore give the estimated production, which is comparatively inconsiderable.

The yearly profit obtained from hill, forest, and moor lands is, on the whole, much the same as that on cultivated land. But the profit derived from such lands is only obtained once in 30 or 50 years. In order to ascertain the value of such lands it was, therefore, necessary first to estimate the productive power of the land, and, in the case of forest land, it was further necessary to calculate in how many years a growth of wood would be obtained, to make a rough estimate of the value of such, and deducting the expenses of planting and tending the trees and the cost of transporting the timber to market, to divide the result by the number of years it had taken to obtain this return on the cultivator's original outlay. The sum thus obtained was fixed as the yearly profit attending the cultivation of such forest land. As the surveys of all hill, forest, and moor lands were at that time very incomplete, the Government, we understand, experienced great difficulty in investigating and dealing with the subject.

With regard to the price of rice and other cereals, the price employed for the purpose of revision was, as we have seen, the average price of the 5 years from 1870-74 inclusive, the dates on which the yearly averages were taken being the dates for payment of taxes in rice in each of the 5 years. In the year 1873, however, the price of cereals was abnormally high, owing to the bad crops of the previous year. Moreover, the importation of rice from one province into another having under the feudal system been strictly prohibited, the prices of these cereals differed greatly even in provinces which adjoined one another, being in one case high and in another low. It would have been impossible, therefore, to prevent the average price for the 5 years in question, as fixed by the Government, from being in some localities quite unsuitable; in these cases the Government proceeded with careful deliberation, and endeavoured, as far as possible, to avoid any unfair incidence of taxation. If we now reduce to an average for the whole country the prices of cereals employed in the revision of the land tax, we find that the average price per *koku* of rice employed to calculate the value of a holding, was a trifle under *yen* 4.18 $\frac{1}{2}$; that of wheat, a little less than *yen* 1.79 $\frac{1}{2}$; and that of beans, a little less than *yen* 3.01 $\frac{1}{2}$. The amount of interest to be deducted from the estimated value of a holding before the taxable value was determined, was based upon the profit attending the cultivation of the land. As the circumstances of each locality were different, the rate of interest also varied. The Government, however, fixed the ordinary rate of interest at 6 per cent., and the highest rate of interest at 7 per cent. If, therefore, we reduce the various rates of interest to one average rate for the whole country, we find that the interest on rice land was a trifle under 6 $\frac{1}{10}$ per cent., and on other arable land a little less than 6 $\frac{1}{10}$ per cent. The cost of seed and manure was calculated by the Government at 15 per cent. of the total value of yield.

[TRANSLATOR'S NOTE.—The writer here amplifies his former statement of the method adopted by the Government in estimating the taxable value of land, but he still leaves a good deal to be supplied by his readers. It may be well, therefore, to explain clearly the method

adopted by the Government in determining the value of land. Land was, first of all, divided into two classes; rice land, and land on which other crops were grown; valuers were employed to estimate the yield of a holding. This yield was then converted into money in the case of rice, wheat, and beans by taking the average market value per *koku* of each of these articles of produce for the 5 years included in the period from 1870-74. In fixing this average market value it would have been impracticable to have taken one price for the whole country.¹¹ The difficulty was therefore met by fixing various market values which were used as the separate bases of valuation in each locality where local conditions and circumstances required special consideration. Thus, in some cases, one market value for rice say, or for wheat, was made the basis of valuing land in an entire province; whereas, in other cases, separate market values had to be determined for each district or even village. In the case of land on which other productions such as tea, mulberries, hemp, indigo, etc., were grown, the method employed was to estimate what crops of wheat and beans land of the same value yielded; the yield of similar land laid down in wheat or beans was then taken as the yield of the land in question, and this yield converted into money at the average market price of wheat or beans for the 5 years from 1870-4 as fixed for the particular locality.

The estimation of the yield of land and the conversion of the yield into money were, however, only the first steps in the valuation of holdings and assessment of the land tax. The process by which the value of a holding was determined was somewhat complicated: a distinction was made between holdings cultivated by the proprietor and those which were leased to tenant farmers who paid a certain proportion of the produce of the land to the proprietor as rent for the holding; the amount of produce thus due to the proprietor being variable, and depending upon the arrangement in each case made between landlord and tenant.

In the case of land cultivated by the proprietor, the yield having been estimated by the valuers and converted into money, the next step in the process was to deduct 15 per cent. of this sum (the proportion fixed in all cases by the government) as cost of seed and manure from the total value of the yield. From the sum which remained the amount of local taxes and land tax assessed, in the latter case, originally at 3 per cent., and in the former at $\frac{1}{3}$ rd of the land tax (and calculated on the value of the net yield of the land, after deduction of the cost of seed and manure), was again deducted. The balance remaining over was taken to represent the actual profit to the cultivator, and as the Government decided to regard 6 per cent. as the annual profit accruing to each cultivator (though in some cases, as the writer points out, the rate of such profit, or interest, was taken to be 7 per cent.), the value of the holding was determined by a simple calculation.¹² This value so determined was fixed as the assessed or taxable value of the land, upon which the land tax (at 3 per cent., and later 2 $\frac{1}{2}$ per cent.) was levied.

In the case of the holdings cultivated by tenant farmers where the yield of the land was shared between landlord and tenant (or proprietor and cultivator), in certain proportions regulated by mutual arrangement, the same method was employed with one exception:—the cost of seed and manure was included in the share of the yield of the land taken by the proprietor, and the share taken by the cultivator constituted the net yield of the land on which taxation was levied.

The process by which the value of land was determined and the land tax calculated by the government was illustrated by them as follows in the memorandum issued for the information and guidance of the local authorities.¹³

Given a holding cultivated by the proprietor yielding 20 *koku* of rice:—

Taking the average market value of rice for the 5 years 1870-4 as adopted in the district in question for the purposes of the revision at *yen* 3, the value of this yield will amount to.....*yen* 60
Deducting 15 per cent. for cost of seed and manure, we get*yen* 51
which sum represents the net value of the yield of his holding to the proprietor cultivating his own land.
From this sum deduct $\frac{1}{3}$ th for local taxes, i.e. *yen* 5.10 : balance.....*yen* 45.90
From this balance deduct again $\frac{1}{3}$ rd for land tax, i.e. *yen* 15.30 : balance*yen* 30.60¹⁴
which sum represents the actual yearly profit, as calculated by the government, to the landlord, farmer, or proprietor who cultivated his own holding.

¹¹ The reasons are obvious. Not only do the prices of rice and other cereals differ in various localities, but it must be remembered that the revised system of land taxation came into operation at different dates in different places.

¹² e.g. If the net profit on a holding was *yen* 50, the calculation was as follows:—6 : 50 :: 100 : *yen* 833.33.

¹³ The figures are not exactly the same as those used by the Government, but any figures will serve the same purpose.

¹⁴ The taxes deducted therefore amount to 40 per cent. on the net yield of the land; for $\frac{1}{3}$ th of *yen* 51 and $\frac{1}{3}$ rd of *yen* 45.90 = 40 per cent. of *yen* 51, which is the net yield of the land.

Then 6 per cent. being fixed by the government as the ordinary rate of profit accruing to a cultivator annually from the cultivation of his holding, and *yen* 30.60 being the yearly profit in this case, we arrive at the sum of *yen* 51.0 as the taxable value of the holding. And the land tax payable on this at 3 per cent. will be *yen* 15.30; and the local taxes (assessed at $\frac{1}{3}$ rd of the former will be *yen* 5.10; the amount in each case being the same as that previously arrived at in fixing the value of the holding.

A simple manipulation of figures shows that the same result might have been arrived at in a less indirect manner by merely multiplying the net yield of the land, which in this case was, as we have seen, *yen* 51, by 10 and calculating the land tax and local taxes on that amount.

The reason of the more elaborate calculation being given is due probably to the desire of the government to explain clearly to the farmers the principle on which the government worked in calculating the taxable value of land.

Stated shortly, therefore, the matter resolves itself into this:—

The taxable value of land as determined by the revision was in all cases the net value of its yield to the cultivator; and the amount of taxes leviable (including land tax and local taxes) was 40 per cent.¹⁵ on the net yield or taxable value.]

From the foregoing brief review of the revision of the land tax, the practical results of the work accomplished by the Government after several years of labour may be understood. Before, however, we can properly consider the whole subject it is necessary that we should ascertain the cost of the revision of the land tax to the government and to the people.

This total cost was..... *Yen* 37,108,014

Divided as follows:—
Expenses defrayed by bureau for the revision of the land tax *Yen* 672,279
Expenses defrayed by prefectural treasuries *Yen* 7,339,919
Expenses defrayed by the people - *Yen* 29,095,822

The "Expenses defrayed by the bureau for the revision of the land tax" include all expenditure of the bureau from the date of its establishment in 1875 up to February, 1881 (when it was closed), connected with official salaries, travelling expenses, and the cost of making out title deeds and transmitting the same to the various prefectures.

The "prefectural expenditure" which was incurred from the date of the issue of title deeds in 1872, down to the completion of the revision, include official salaries and travelling expenses, cost of land registers, and advisers who were engaged to value the land.

The "expenses defrayed by the people" represent the total outlay directly incurred by them in connection with the land tax revision, such as the cost of measuring the land with rods and ropes, of preparing land registers, fixing land marks, of drawing up plans of each holding, and of classifying land and estimating the yield for the purposes of determining the value of land, and the cost of furnishing detailed reports to the local authorities.

It appears that at the outset of the revision, all matters connected with it were managed by the Finance Department; and that subsequently a special Revision Bureau was established and all affairs were transacted through officials of the Home and Finance Departments. In the case of the prefectures, too, although supernumerary officials and experts, were engaged for this special business, most of the work was done by the ordinary staff of local officials in each case; therefore, the larger portion of the salaries paid was included in the ordinary expenditure, and the amount actually debited to the expenses of the revision was small. Moreover, the stamp duties levied by the government in connection with the title deeds issued amounted to *yen* 6,156,741, which sum must be added to the expenses incurred by the people on account of revision of the land tax. We may, therefore, estimate the total cost of the revision of the land tax to the people at between 44 and 45 million *yen*. This, divided amongst the population, gives a proportion of *yen* 1 $\frac{2}{3}$ per individual. The time and labour spent in this work cannot of course be estimated in money, but both must have been very considerable. These facts serve to show that a work of extraordinary magnitude must entail extraordinary expense and labour.

¹⁵ Taking the land tax at 3 per cent. and the local taxes at $\frac{1}{3}$ rd of the former; prior therefore to the reductions subsequently made by the government.

¹⁰ Wheat or beans, not rice. Vide note later on.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 7TH, 1884.

SUMMARY OF NEWS.

It is stated that the new Korean Minister to Japan will be Mr. Pak Yōng-hyo.

A MUSICAL entertainment was given on board H.M.S. *Sapphire* on the evening of the 29th ult.

THE total decrease in the traffic receipts of the Government railways during 1883 was 267,193 *yen*.

THE Japanese Punch (*Maru Maru Chimbun*) has been suspended by order of the Press Bureau.

It is in contemplation to engage two more Italian experts for service at the Gun Foundry in Osaka.

Two meteorological signal stations have been erected by order of the Home Department at Yokohama and Yokosuka.

A RECENT return shows that the number of fishermen living in Tokiyo is 3,788, and that the number of houses they inhabit is 2,212.

ON the night of the 3rd instant, a young man by name Saze Kujiro, residing in Makacho, Tokiyo, murdered his father and then shot himself.

HIS EXCELLENCY GENERAL SAIGO was a passenger by the Mitsu Bishi Mail steamship *Nagoya Maru* which sailed on Wednesday.

It is announced that a fancy bazaar in aid of the Tokiyo Charity Hospital will be held by the

Japanese ladies of Tokiyo at the Rokumeikwan on the 12th instant and three following days.

THE health of His Majesty the Emperor is now completely restored, and His Majesty has resumed his attendance at the Council of State.

THE Ladies' Purse, to be run for at the first meeting of the Union Race Club at Lake Shinobadzu, will, it is said, contain about a thousand *yen*.

A NUMBER of Japanese, and Chinese gamblers were arrested at No. 165 in the foreign settlement of Yokohama on the night of the 30th ultimo.

THE disturbances recently reported from the district of Amata, province of Tamba, have entirely ceased, and the ringleaders have returned to their homes.

THE judgment delivered in H.B.M.'s Court in Japan in the case of Yukioka Shobei *versus* Ed. Whittall has been reversed with costs by the Supreme Court in Shanghai.

A COOLIE engaged in filling a water-cart to water the streets of Yokohama, on the 5th instant, had his leg badly crushed by the falling of the wall of a neighbouring godown.

THE rice-market is reported very brisk, quotations having made a big jump upward on Monday. Altogether, the future looks brighter than it did at the beginning of the year.

THE Yokohama Amateur Rowing Club held an extraordinary meeting on the 2nd instant, when measures were adopted with a view to holding evening concerts on the premises of the Club.

ON the 31st ultimo, the M.B.S.S. Co.'s steamer *Sekiryo Maru* came into collision, off the coast of Tateyama, with a sailing vessel called the *Hiroshima Maru*. The latter vessel was sunk, but no lives were lost.

THE new man-of-war ordered from France has been named *Unebi-Kan*, and the gunboat and iron cruiser now in course of construction at Yokosuka are to be called the *Alago-Kan* and *Takao-Kan*, respectively.

WE hear that the *Sallara* has changed hands for the sum of \$18,000, Captain Hubenet being the purchaser. Her cargo will be taken by an early steamer, probably the *Flintshire*, and she will be placed under the Dutch flag.

MESSRS. HAYASHI AND OYE-TAKU, who with Mr. Mutsu Munemitsu were sentenced to a term of imprisonment for implication in the Southern Rebellion of 1876, have had their sentences shortened and will be released in 1886.

A WELL known merchant of Kobe, Mr. Hirose, has been assaulted and cruelly beaten. It is supposed that the affair had its origin in disputes between rival steamship companies, in one of which Mr. Hirose was prominently interested.

News from Korea is to the effect that steps are

about to be taken to strengthen the defences of the northern frontier, and that the Government contemplates constructing a line of submarine cables between the principal ports of the Kingdom.

TOKIYO was visited by a violent thunder-storm on the afternoon of the 3rd instant. The house of a jinrikisha-coolie, at Koishikawa, Tokiyo, was struck by lightning and two children were seriously injured. Four other places were also struck.

A NEW port at Nagahama was opened by His Excellency the First Minister of State on the 25th ultimo. The opening of the railway has converted this place into a prosperous emporium of trade, and its future is considered most promising, now that a good port has been constructed.

A FIRE broke out at Omachi, Noshiro, Yamagata Prefecture, on the 27th of last month. Fanned by a strong north-westerly wind, the flames soon reached the four neighbouring wards, which were completely destroyed. No less than 244 dwellings, including several warehouses and monasteries, were burnt to the ground.

SIXTY-FOUR persons, including two women, were punished for gambling in Tokiyo during the month of May. The numbers of civil and criminal cases brought before the Court of Cassation during the same period were 103 and 650 respectively.

A NUMBER of persons residing in the Osumi district, Kanagawa Prefecture, held a mass meeting on the 27th of May, and resolved to compel their creditors to grant them extravagant facilities for the discharge of their debts, as well as to dispense with any security. The affair has not yet been settled.

It is stated that the authorities propose to equalize the charges for telegrams throughout the country, and that in future the cost of despatching ten words between any two places within the limits of Japan will be fifteen *sen*. Vernacular journals regard this as still too dear, and urge the advisability of further reductions, not only in the charges for telegrams, but also in the rates of postage.

THE meteorological system of Japan now comprises 23 observatories in the most important places throughout the country. Reports are sent from each district to the central observatory in Tokiyo thrice a day, and are there thrown into suitable form for publication by the leading journals in the Capital and the open ports. To a German Scientist, Dr. E. Knipping, belongs the credit of elaborating and perfecting the whole system.

THE Financial Estimates for the 17th fiscal year of Meiji (1884-85) have been issued. The revenue is estimated at 75,282,969 *yen*, being an increase of 376,910 *yen* as compared with last year, and the expenditure is put down at the same sum, being an increase of 376,503 *yen*. The equality of incomings and outgoings is due to the fact that the surplus revenue is completely absorbed by the scheme of currency contraction.

NOTES.

ACCORDING to the latest news from London the relief expedition to Khartoum is to start in July, not October, as we supposed. It is said that the force employed will consist of 8,000 men, including an Indian contingent, and that the main body will proceed by the Nile route, while the remainder goes by the Red Sea, via Suakim and Berber. A camel depôt at Assouan is spoken of as already established, and if this be so, either the Government must have been hiding its hand with unnecessary care, or the Egyptian authorities have displayed remarkable foresight. But, indeed, judging by the Egyptian correspondence laid before the Houses of Parliament at the end of April, the Gladstone Cabinet was from the first disposed to give Gordon military support. Among the telegrams included in the correspondence is one from Earl Granville to Sir Evelyn Baring, suggesting that British troops be despatched to Wadi-Halfa to support General Gordon. To that telegram Sir Evelyn Baring replied that the military authorities deprecated the proposed movement or account of the climate. On April 9th, General Gordon telegraphed that 300 Turkish infantry and 1,000 cavalry could accomplish the relief of Khartoum and crush El Mahdi in four months. Sir Evelyn Baring answered that it would be impossible to organize a Turkish force in time to be of any use, and that to despatch troops of the Sultan would involve political difficulties. A fortnight later (April 23rd), Earl Granville telegraphed to Mr. Egerton as follows:—"General Gordon should be immediately instructed to keep us informed in regard to any immediate or prospective danger at Khartoum, and that, in order to be prepared for such danger, he should advise us in regard to the force necessary to secure his removal. We do not propose to supply him with a force for the purpose of making military expeditions, such being beyond the scope of his commission and contrary to the pacific policy which was the purpose of his mission." At the time this message was sent, the Cabinet was in receipt of telegrams from Khartoum, dated April 21st, reporting everything safe, and adding that the Greek merchants were in direct correspondence with the Mahdi with a view to the establishment of regular commerce should the city be taken. But the correspondence also contains a despatch from Gordon to Sir Evelyn Baring, written at Khartoum on April 16th, and saying:—"As far as I understand the situation, you state that there is no intention of sending relief here or to Berber. You refuse me Zebhr Pacha. I consider myself free to act according to circumstances. I shall hold on here as long as I can. If I can suppress the rebellion I shall do so, otherwise I shall retire to the Equator and leave you the indelible disgrace of abandoning the garrisons of Sennaar, Kassala, Berber, and Dongola, with the certainty that you will eventually be forced to smash up the Mahdi under great difficulties if you would retain peace in Egypt." Colonel Stewart supplemented this by a despatch in the following terms:—"General Gordon has acquainted me with your intention not to relieve Khartoum. It is proposed that I shall go to Berber, trusting to the success of your negotiations for the opening of the Suakim and Berber routes. Doubting, however, success, so far as the Berber road is concerned, unless it is opened by advancing troops, I am inclined to think my retreat safer

by way of the Equator, and shall, therefore, follow General Gordon's fortunes." Events have proved that Colonel Stewart was right in his forecast. Berber was in the hands of the rebels a fortnight later, and the route via Suakim was effectually closed. If Gordon is driven to retreat by the Equator, he will have to contend not only against terrible natural difficulties, but also against the attacks of the wild Bedouin tribes, who "think it honourable warfare to perch themselves on a hill and shoot down upon unsuspecting travellers." But at the beginning of April, he had fully five months provisions in Khartoum, and there was no reason whatsoever to apprehend any immediate necessity for retreat. If a British expedition is really to start in July, it is not likely that Khartoum will be abandoned before its arrival. Meanwhile, arrangements for a Conference of the Powers in London appear to have been settled. A telegram dated May 5th says:—"The conference will meet in London the first week in June, and is expected to last three weeks. The *Post* says it understands that the conditions upon which the French government will consent to the conference with England upon the Egyptian question are that England shall give up all idea of annexation and of a protectorate; and that, on the other hand, France shall recognize the services rendered by England in Egypt and shall acquiesce in the right of England to maintain a military occupation of Egypt until the task of reorganization has been completed; France stipulates that the date of withdrawal of the British troops shall be definitely fixed; that before occupation shall cease the Egyptian army shall be reorganized, and, that it shall be officered partly by British soldiers; that France and Italy must, however, be allowed to exercise a share of the influence in respect to the financial and judicial administration of the affairs of Egypt. France on her side pledges herself not to interfere by arms with the affairs of Egypt, recognizing that England alone has the right to do so."

It is not difficult to foresee the end of the course which the Irish agitators are pursuing. Their theory, as propounded by themselves, is that they are waging war on a scientific basis, and that if it is lawful in a military campaign to blow up women and children in order to compel the surrender of a besieged city, it is also lawful for a people without arms and therefore incapable of going to battle, to make use of every known device of science for the purpose of scaring their enemies into surrender. But the weak points of this theory are that Englishmen have never yet been scared into surrender, and that the dynamiters think they may employ the weapons of savages while their adversaries, all the while, adhere to the courteous fashions of civilized politicians. There is a limit, beyond which any alarm the people of England may feel at the possibility of having their wives and children shattered and mangled will change to a very different sort of sentiment. "The English were sadly frightened by the Indian mutiny," wrote William Dillon in the last number of the *Fortnightly Review*, "but it was not the sort of fright which causes concession or surrender. Its effect, as we all know, was to cause the suppression of the mutiny to be accompanied by outrages on humanity which threw the crimes of the mutineers into the shade. Experience shows that the English are never so savage, never so dangerous, as when terror is added to rage. To

work the English people up to this condition is the very most that the dynamite policy can hope to accomplish. If this policy is carried on for any length of time and to any considerable extent, it is not hard to predict the result. It will infuriate the English people; it will make the democracy of England as hostile to the Irish cause as the governing classes there have always been; it will alienate from Ireland the sympathy of foreign nations; and it will thus make it possible for England to trample upon Ireland with impunity." No sensible person believes that England wants to "trample upon Ireland," but men must be more than ordinarily sensible and self-contained if they patiently endure such outrages as the telegraph announces this morning. Early in May, the London police discovered that a number of spirit flasks containing nitro-glycerine had been conveyed to England from America, and one of them was found in the garden of a man at Birmingham. How much of the deadly compound was smuggled in by this device the telegrams do not say, but it is plain that the three explosions on the first of June may be only the precursors of a number of others.

On the night of the 30th ult., some Japanese and Chinese votaries of the game of hazard were spending a quiet evening at No. 165, Settlement. Unfortunately for the enjoyment of the gamblers, a dispute arose between them and the proprietor, who left the room in a huff, and betrayed his guests to the police. Several constables hastened to the scene of the ill-omened dispute, and arrested two Japanese in *flagrante delicto*. The Chinese gamblers were firmly but unostentatiously handed over to the tender mercies of their own Consul.

THE opening ceremony of the Sekigahara-Ogaki Railway took place on the 25th of last month. Several Government officials were present. The line is 8½ miles long, and the work of construction was commenced on the 16th of last November. From Sekigahara to Nagahama there is another line, completed in May, 1883, which is 14½ miles long, so that the two lines extend over a whole distance of 23 miles. There are only three intermediate stations between Ogaki and Nagahama, exclusive of Sekigahara, and trains run between the two termini in one hour and three quarters. There are several steep grades on the line, the station at Tarui being 305 feet (*shaku*) below the level of Sekigahara, while Ogaki lies 73 feet lower than Tarui. Two railway bridges, 250 and 260 feet long, span the Ai and Akasaka Rivers.—*Fiji Shimbun*.

WE observe that the *Fiji Shimpō* gives publicity, though in a somewhat exaggerated form, to the scheme proposed by the Rev. C. S. Eby for the promotion of Christianity in Japan. Our Tokiyo contemporary says that Mr. Eby's plan is to establish an university and a number of churches in Tokiyo, and that, as the support of these institutions would require an outlay of some \$200,000 per annum, it is in contemplation to raise a sum of three million dollars in Europe and America, and invest it in Japanese bonds so as to realize seven per cent. The *Fiji Shimpō* is right so far as the university is concerned, but we have heard nothing hitherto about the churches. Mr. Eby's pamphlet on "The Immediate Christianization of Japan," emphatically supports the idea that the Japanese should build their own churches, as far as possible, and that Christianity in this country should

be self-supporting. He counsels his brother missionaries to regard themselves always as a vanishing factor, and to work with the hope of hastening the time when they will be able to abdicate altogether in favour of Japanese. But though Tokiyo does not want churches built with foreign funds, it certainly does want a lecture hall, and we trust that the missionaries may soon be able to supply that need.

SOME of the recent discoveries in the universal distribution of those unpleasant bacteria are enough to make one forswear water, unless properly rectified. Dr. Pehl, of St. Petersburg, has, according to *Nature*, lately made a series of bacterioscopic measurements on the waters of the Russian Capital. The Neva is naturally rather poor in bacteria, only a beggarly 300 germs going to one cubic centimetre. After heavy rains, this number rises to 4,500 and 6,500 during the thawing of the ice. The canals of St. Petersburg, on the contrary, are infested with bacteria, their number reaching 110,000 in a cubic centimetre, even during good weather. The same is true of all the conduits throughout the city. Dr. Pehl explains this apparent anomaly by the rapidity of the motion of the water in the river, and his experiments directly confirm this hypothesis. In fact, when water was brought into rapid motion for an hour, by means of the centrifugal machine, the number of developing germs was reduced by 90 per cent. Recent experiments have shown that in the canals and conduits of Tokiyo there are enormous numbers of these pestiferous bacteria, and it seems tolerably certain that their presence is mainly due to the sluggish movement of the water. The germs are practically indestructible by ordinary means, but if Dr. Pehl's theory prove correct, a simple acceleration of the flow of the water will tend to decrease the number of developing germs. The aqueducts in Yokohama are, just at present, in a bad way, as many leak so greatly as to render the water quite brackish and undrinkable. It is a most necessary sanitary precaution to have this leakage stopped at once, for many of the inhabitants depend on the Tokugawa for their drinking water, a due analysis of which would undoubtedly disclose any quantity of bacteria; especially as the Tokugawa drains large tracts of rice-fields before reaching the sea. If the bacillus theory as to the origin of cholera be correct, and every day throws greater and more convincing light on the subject, it is of the first importance not only to keep the walls of the conduits intact, but also to make periodical microscopic examination of the water, and, if possible, prevent it from becoming stagnant or sluggish. Recently, when one or two doubtful cases of cholera were reported in the capital, the Board of Health enforced strict inspection in certain quarters around Nihonbashi and Kanda; but the amount of decaying filth which was discovered should certainly not have been dumped into the public streets, as was done, filling the air with the most noxious odours, and, doubtless, liberating quantities of disease-laden germs. In this case, the remedy employed was considerably worse than none at all.

THE telegram published in this issue with regard to the safety of General Gordon and the defeat of the rebels before Berber is very welcome. It will be remembered that our latest telegraphic information direct from Berber was dated April 25th, and that it embodied a de-

claration from the Governor, Hussein Pacha, to the effect that he and the garrison under his command would die at the post of duty. Three days later, the Paris journals published a statement that Berber had been evacuated and that the troops had fraternized with the rebels. We ventured, at the time, to question the truth of this report, and to include it among a series of *canards* which the French press set itself to bruit abroad during the last days of April, from motives readily conceivable. With Berber still in friendly hands, the situation wears a very different complexion. Another month will probably see the relief expedition under weigh. The plan indicated by recent telegrams is evidently that mapped out in Sir Samuel Baker's last letter to *The Times*. "Not a day should be lost," he wrote, "in preparing for this necessity. The route from Suakin to Berber can only be opened and secured by Indian troops. The Nile will afford the most secure route from Cairo to Khartoum if immediate preparations be made for an expedition at the first rise of the river in July. I have already suggested to the highest authority this plan of advance which requires the most careful but energetic management. Still I have no hope that such energy will be exhibited." Events have fortunately proved that Sir Samuel was needlessly desponding. An expedition is actually to start in July, and the news of that resolve has probably reached Berber and Khartoum ere now. The trouble with Mr. Gladstone's Cabinet seems to be such a blind loyalty to abstract principles that when they do consent to act vigorously, the performance has to be classed in the rank of ignoble necessities. The Marquis of Salisbury had a happy inspiration when he called their foreign policy "a policy of after-thoughts." In this instance, however, they have been singularly fortunate. The loss of Berber would have incalculably embarrassed them, and so the kind fates willed that Berber should be commanded by one of the rare Egyptian Generals who have shown themselves worthy of command, and garrisoned by one of the still rarer Egyptian garrisons who have shown themselves capable of fighting.

A LADY of somewhat varied accomplishments met with a hard fate two or three days ago in Tokiyo. The daughter of one Sudzuki Tokumatsu, who resided in a village called Ikenobe, Kanagawa prefecture, Kayo, as she was called, from the days of her childhood excited the admiration of the neighbourhood by her beautiful complexion, delicate features, and luxuriant hair. With such recommendations to public favour she soon found the paternal homestead too humble for her fancies. She set off to seek her fortune, accompanied only by her charms. At first everything went smoothly. She had a little stock of money which, while it lasted, enabled her to command all the services she needed and to reject those which were too importunate for her fancy. But when the bottom of her purse came in sight, she began to find this butterfly existence of flitting from inn to inn somewhat perplexing. It was necessary to take a decisive step, and she took it, as usual in such cases, at the expense of a country gentleman who was too fond of nature to be impervious to her attractions. He had just arrived from Kadzusa, this Mr. Saito Ninosuke, and to his sorrow he happened to be the possessor of a sum sufficient to attract Okayo's cupidity. She robbed him of 372 *yen*, and being too pretty to be suspected, went

off happily with the spoils. These sort of gains are sweet enough not to be easily foregone. Five months later, that is to say, last February, another genteel bumpkin turned up conveniently. Okayo's society cost him a hundred *yen*, but he was either less romantic or more reflecting than his predecessor, for he caused the beauty to be arrested and carried to the police station. There Okayo underwent the *procès verbal* with the most complete calmness. Her prettiness perplexed her judges, and above all, the money could not be found. Her belongings and her person were carefully searched without avail, though it is hinted by unscrupulous experts that she had the *Yensatsu* about her all the while. At any rate she escaped scot-free, but deeming it safer to change the scene of her operations, betook herself to Yokohama. And, indeed, but for this part of her career, we should scarcely ask our readers to peruse the story of an adventuress whose kindred are common everywhere. Yokohama, as we have frequently observed before, is the *dernier ressort* of all the scum of its environs. It is a rascals' paradise, for the castellated properties of the foreigners homes afford a perfect safeguard against police surveillance, and the foreigner himself offers a not uninviting prey to Japanese living by their wits. Okayo had found this out long before the time of her last return to the besieged Settlement. Four years previously, she had carried on a pretty little series of petty larcenies at the house of a Mr. Verdant, and subsequently appropriated 91 *yen*, the pocket money of his friend, with whom she very improperly went on a picnic. The gallant Anglo-Saxon, however, never suspects a pretty woman, and when Okayo found her own countrymen less genteel, she naturally drifted back to the place where the police are powerless and the stranger is sympathetic. There she soon found a protector, and with scarcely less alacrity eased him of 70 *yen* in coin and seven sea-otter skins in kind, four of which she sold for 80 *yen* to another foreigner, and then retired to Tokiyo to take her ease in her inn. But the skins proved her ruin. She was arrested at the very acme of a round of theatre-going and general jollification, and sentenced to imprisonment with hard labour for two years, to be followed by one year's police surveillance. It is believed by those who ought to be themselves worthy of belief, that a great many light-fingered ladies of Okayo's class have dangerous access to foreign property in Yokohama. We should be sorry to pronounce a decided opinion upon this subject, but we submit the story for our readers' reflection, reminding them only of the old proverb:—*bonum est fugienda adspicere in alieno malo*.

AN American paper, referring to the recently deceased English novelist, says:—The late Charles Reade took a deep interest in the American branch of his family, of which the late Chief Justice John Meredith Reade of Pennsylvania was a distinguished member. An article on this able jurist in the London *Graphic* gives an interesting sketch of the life of the Chief Justice, and of his son and namesake, General John Meredith Reade late our Minister to Greece. Of the latter the *Graphic* says, among other things:—"This gentleman is distinguished both in science and politics, has represented the United States in Paris, and is now American Minister at Athens. Reverting to the English branch of the family, we may observe that the baronetcy, unassociated

with estates, has not yet been claimed by the person to whom it belongs. The younger branch holds the lands of Ipsden, etc., which have been four centuries in the family, and is best known to the public by Mr. Winwood Reade, the African traveller, and Mr. Charles Reade, the popular writer. We understand that the Philadelphia and Oxfordshire branches maintain a firm friendship and sympathy."

THE Marquis of Salisbury, speaking at Birmingham on the 16th of April, said:—"You know how the industry of this town is being cramped and fettered and confused by the growing wall of hostile tariffs which shuts you out of most of the markets of the world.—(Hear, hear, and cheers.)—I will not now discuss how far it may be possible for diplomacy to relieve you of that confinement. I fear that most of the advantages which we might have offered to the other nations of the world in return for more favourable tariffs have been thrown away by the want of foresight of former legislators. I doubt if that evil can be retraced. At all events you must consider this—that if you are being shut out by tariffs from the civilized markets of the world, the uncivilized markets are becoming more and more precious to you. They threaten to be the only fields which will offer to you a profitable business. At all events they are fields which will offer the most profitable business, and as civilization goes on and exploration increases these uncivilized markets will be thrown open to you, if only no foreign Power is allowed to come in and introduce its hostile tariffs between you and the benefit for which you look.—(Hear, hear.)—The effect of the policy of the Government has been in place after place to allow these markets to be stolen away from you, and you know that in the Congo a treaty has been made which will have the effect of putting a highly protective and prohibitory power between your industry and the consumption of the native population of Africa. The same thing is the case with Madagascar. The French are being allowed to surround it, to make claims upon the sea coast, which will enable them to set up their exclusive and prohibitory tariff and to shut you out from those markets." Things certainly look bad for the one apostle of free trade. She is at the mercy of all the world, and she has hitherto been so much more prosperous than her neighbours that their desire to see her humbled gets the better of their logic. In all these years England has not made one convert to her free-trade doctrines. Even her own colonies have deserted their colours, and are just as protective as any alien rival. One is tempted to speculate whether the instinct which prompts the practice of all nations is not a safer guide than the abstract wisdom of any economical school. The Marquis of Salisbury is happily vague when he speaks of "the advantages we might have offered to the other nations of the world in return for more favourable tariffs," but it is not difficult to divine, generally, what he means. Having surrendered these advantages, however, without obtaining any reciprocal concessions, nothing remains but "the uncivilized markets." These the conservative policy would keep open at any price. We, in the East, are very familiar with the sound of this political note, and the ideas of most of us are probably in entire harmony with it. Nevertheless, Japan is about to be allowed to add her mite to the "wall of hostile tariffs," not because it was impossible to prevent her,

but because we preferred to leave her comparatively free in that direction rather than to entertain her legitimate proposals in another. Largely increased trade facilities and an extended lease of the old tariff might have been obtained by some trifling concessions on the extraterritorial question. But even hard-headed merchants can be romantic when occasion offers. The old tocsin *civis Romanus sum*, the old sentimental affection for English laws and English institutions under any and all circumstances, has rendered the prospect of continued isolation and a doubled tariff pleasanter than that of free intercourse, an unchanged tariff, and the remote contingency of having sometimes to obey Japanese laws.

WE (*Hongkong Daily Press*) regret to have to add another to the rather lengthy list of marine disasters this year. A telegram was received from Shanghai yesterday (May 29) by the general managers (Messrs. Jardine, Matheson & Co.) that the Indo-China Steam Navigation Co.'s steamer *Posang* had gone ashore at the Fisherman's Group of islands, near Chusan. The passengers and specie were saved. Assistance has been sent from Shanghai, but the safety of the vessel is uncertain. The *Posang* left Hongkong on the 22nd inst. for Shanghai, *via* Swatow, which latter port she left on the 24th. She had on board one saloon passenger (Miss Mitchell), one European, and about one hundred native deck passengers. The specie on board amounted to about \$22,000. She had only two chests of opium. It is to be hoped that the vessel may yet be got off.

WE (*Straits Times*) have received some private advices from the interior of Selangore to the effect that the disturbance in Pahang continues, and is not unlikely to spread. The Sultan or Bandahara of Pahang has ordered Rajahs Impi and Ismail to quit his territory, and they have both refused. The Sultan has, in consequence, called to his assistance his old friend Tunku Koodin (of Quedah), whom, it will be recollected, he assisted nine or ten years ago in Selangore, before the English Government intervened on Sir Andrew Clarke's arrival. Rajah Impi is reported to have received instructions from Rajah Ismail, who is said to be here in Singapore, to hold out to the last, and to fight if necessary. Rajah Impi has summoned back to his assistance a number of his followers, who emigrated a short time ago to Selangore. We do not know what truth there may be in all this, but merely publish the information as received, and as what is currently reported in Selangore.

COLONEL BURLEIGH, who recently acted as the special correspondent of the *Daily Telegraph* in the Soudan, proposes to effect the relief of Khartoum by the rapid construction of a railway. He describes the project thus:—"I would build a narrow-gauge road, such as they have in the United States, or used to have when I was there in the oil regions. A road of this kind could be constructed very rapidly. In fact, there are establishments in Europe where narrow-gauge roads are manufactured in rail lengths all ready to be laid down. The great difficulty in this whole business is to move and maintain an army between Suakim and Berber, because of the terrible nature of the sandy surface and the almost total lack of water. If a good connection could be established between these points, Khartoum could be quite easily secured

and controlled from Berber. I have been all over Egypt, and have served in all the recent campaigns, and my experience in the Soudan convinces me that no military expedition of a size large enough to subdue the Soudan, with Khartoum as the objective point, can be moved successfully across the desert west of Suakim except by rail. A narrow-gauge road, manufactured in sections and transported to Suakim by water, can be laid across the desert between Suakim and Berber much faster than a well equipped modern army can travel, afoot or horsed, over these sands. The sands are so hot, the temperature so high, and water so extremely scarce, that, even under the slowest movement, the troops lose enormously by exhaustion. But the railroad once laid, an army of any size and with any equipment could be moved quickly, and comfortably to Berber. The road completed, the route would be safe forever, and with Berber in constant and easy access from the Red Sea, Khartoum would be within easy control.' The Colonel has submitted his idea to the Government, and offered to take charge of an expedition to lay the road. He estimates the cost at half a million sterling, and thinks that there would be no difficulty whatsoever in keeping the Arabs off while the construction was in progress. In fact, such an evidence of England's resolution would probably put an end at once to Arab opposition. If the line were afterwards extended beyond Berber, it could be made to pay handsomely, and would become the means of developing the great wealth of Central Africa. Of late the Soudan has begun to stink in English nostrils. People think only of getting quit of the huge district and its huger troubles with the least possible delay. A year ago, however, it was regarded as a valuable territory, needing only a railway for its development, and Lord Dufferin himself, in his celebrated report, recommended the building of a line from Suakim to the Nile.

ONE of the recent German weeklies has been giving some advice with regard to seeking shelter during thunder storms. Every one is supposed to know enough to go in out of the rain, but it is not so easy a matter to avoid thunderbolts. "Avoid staying in open fields, where there are no trees nor walls," says our contemporary, but adds, rather paradoxically, "don't go near walls nor trees if you happen to be in the open." High trees and all prominent objects are especially tabooed. If a heavy storm comes on while one is in the fields, it is unwise to run quickly so as to get in a great heat. It is tolerably safe to throw one's self flat on the ground, but by no means absolutely so. "If in water when the storm comes, get on dry land, and run for shelter,"—good advice, which no one would hesitate to follow; but what an awe-inspiring sight it would be to catch a startled bather flying across the fields in fragmentary clothing,—besides, one musn't run. "If in a house unprovided with lightning-rods, keep in the middle of a room, as far as possible from the walls. Don't stand under a chandelier, and keep away from bell-wires, and the like. Avoid stoves and grates in which there is fire, and don't stand in a draught." It is a relief to know that the chances of being struck by lightning are, after all, but one in 200,000.

WRITING on the terrible maritime disaster which recently took place in the Atlantic Ocean, the *Alla* says:—"The mystery surrounding the fate

of the *State of Florida* has been cleared up by the arrival of the ship which rescued her passengers and by the announcement that the *Florida* was sunk by collision with a bark, which also foundered. There was a frightful loss of life, though there is some confusion about the exact figures. The same day's despatches bring news of another disaster of the same character—the Guion steamer *Nevada* having run down and sunk the steamer *Romano*. These disasters make it plain that it is time to establish the proposed steam lanes across the Atlantic, and by international concert of action make it compulsory on vessels of all kinds to keep in certain tracks in going and coming. This would lessen the number of the disasters, which it now appears nothing can absolutely prevent. Occasional collisions at sea there always must be, but in an ocean so crowded with the vehicles of commerce as the North Atlantic now is, the best precautions possible should be taken to make the number of such affairs as small as it can be.

MR. YENUMA, a botanist, went to Korea last year in order to make scientific collections, and his success, though often imperilled, lies before us embodied in several large volumes. His collections were exhibited at the University Museum, and elicited great admiration from Mr. Techow who inspected them a short time ago. Mr. Yenuma has now received instructions to travel throughout the eight districts of Korea, and beyond the Russian frontier. It is feared, however, that he will have great difficulty in travelling through the interior of Korea, for some persons state that the country around Phŏng-an-do and Ham-gyōng-do is inhabited by regular savages, who clothe themselves in hides and like nothing better than a fresh blood-pudding.—*Fiyu Shimbun*.

WITH the death of Jem Ward, which took place on the 2nd ult., the last great figure of the old generation of prize-fighters has disappeared. It was perhaps a kindly release, for the old champion had fallen on evil days and evil tongues; the art he gloried in had degenerated, and his powerful frame had for some time lost all vigour and vitality, although he solaced his old age with music and a little painting, besides recollections of the past. There clung round the veteran heavy-weight, who took the champion's belt from Simon Byrne as long ago as 1831, lingering reminiscences of the days when the chief curiosity of the Allied Sovereigns was to see a prize-fight; and when one "Royal personage," it is said, ventured into Tom Cribb's famous parlour and was proud to shake hands with the fancy.—*Pall Mall Gazette*.

THE investigations into the circumstances of the card sharpening at the Club in the *Rue Royale* had not yet succeeded in exposing the guilty parties, at the date of latest advices. It will be remembered that a servant of the Club, named Monvoisin, was proved to have been acting as agent in the matter. He was employed to mark the cards in a very ingenious fashion, namely, by pricking them slightly with a pin, at the four corners in the case of the tens, and in the middle in the case of the fives. The indentations being on the back could be detected by the dealer only. As for Monvoisin, however, persuasion and threats have alike failed to elicit from him any statement with regard to his employers. He persists in asserting that he acted in obedience to written orders, sent by

some unknown persons and accompanied by considerable presents of money, directing him simply to mark the cards. It is a nice question, under these circumstances, to determine whether he has brought himself within the clutches of the criminal law. Certainly he was a *particeps criminis*, but in an exceedingly remote degree, and it would be difficult to determine whom he wronged or who ought to prosecute him.

A SOCIALISTIC mass meeting was held in Osumigori, Sagami, Kanagawa Prefecture, on the 27th of last month. Three hundred persons representing 44 villages met on Koboyama, bewailed their unfortunate lots, and expressed great sorrow at having had to mortgage the land their forefathers had held before them. They then determined to force their creditors to consent to a payment of their debts in many instalments. After passing this virtuous resolution, they hurried to the various money-lenders in bands of ten and fifteen, and demanded their agreeing to a payment of all the monies owed in—thirty-five annual instalments. With great difficulty, the creditors managed to evade direct personal assaults; but the mob is prepared to become riotous at any moment.—*Fiyu Shimbun*.

A TELEGRAM in this issue gives the result of the Oaks—Busyboddy 1, Superba 2, Queen Adelaide 3—a result which will surprise no one, but which indicates that the flying daughter of Petrarch and Spinaway will probably at the back end be pronounced the best of her year, as she certainly is at present, having now won the Oaks, the One Thousand Guineas, the Middle Park Plate, the Great Challenge Stakes, and the Rous Memorial. The second, Superba, belonging to Mr. Robert Peck, is a smart filly, having won the Champagne Stakes at Doncaster, beside earning winning brackets at Ascot and Lewes, and although not a single bet on the race is recorded in the latest home papers, it is safe to assume that Superba carried a pot of money at the post. It is rather hard luck for Sir John Willoughby, this consistent running into a place of Queen Adelaide, the filly having run second in the One Thousand, third in the Derby, and third in the Oaks; and this is emphasised when her splendid *début* in the July Stakes is remembered; for, although she had been highly tried, in this race she had to meet Sandiway with an unbeaten record, but public form had on this occasion to give way to private reputation, as the finish, which was a tremendous struggle, was between Queen Adelaide and Archiduc, and nothing but the gameness of the daughter of Hermit and Adelaide enabled her to win by a head in the last two strides. Sir John Willoughby's filly, however, once turned the tables on Busyboddy, for at the Newmarket Houghton Meeting she won the Dewhurst Plate, although the "magpie jacket" was not far behind. She was described last year as one of the grandest looking two-year-olds ever seen, and if the Town Moor suits her—as she is entered in the St. Leger—the greater northern event may be her journey. The name of Busyboddy naturally leads to that of Petrarch, her sire, and Petrarch begets a recollection of his numerous relations. As on a recent occasion "The Oracle" confessed his ignorance of the existence of a certain sire, a member of one of the first families in the Stud Book, to wit, Thornhill, "it may be as well to point out" that Thornhill is an elder brother of Petrarch, and although he does not

stand at a high figure he has already got several winners, and would probably receive more patronage than he does were it not for rumours of an infirmity acquired, it is said, through too early and hurried a preparation which cut short his racing career. Thornhill, however, quietly holds his own at Hollist Farm, Midhurst, and indications are not wanting, amongst two-year-olds and yearling stock, that the brother to Petrarch may yet achieve a success that will enhance his own reputation and assist to maintain that of the distinguished family to which he belongs.

At the sale of Lord Falmouth's racehorses on the 28th April, Sir John Willoughby bought the three-year-old brown colt Harvester for £8,600. The three-year old bay filly Busyboddy was purchased by Lord Abington for £8,800. Total amount of sale £38,228.

ON Wednesday evening, while returning from an excursion to the booths in Isezakicho, a correspondent happened to pass by several of those useful servants of the public who follow the romantic occupation of night-soil coolie. Somehow or other, the coolies chanced to come into odorous collision close to one of the public wells in Honmura Road, and two buckets with the contents were precipitated into the depths of the well. Dreadful as it may seem, there was no help for it, and so the ruthless destroyers of public sanitation fled in dire dismay. On the following morning, quite a little crowd had collected around the well, on hearing it reported that two buckets were floating at the bottom, and after some dexterous fishing, one fortunate speculator was seen hauling up a bucket, with results which can be better imagined than described.

ACCORDING to the *American Cricketer*, the team of the Philadelphians now on a visit to England to play a series of matches will number 14 and consist of the cream of the willow wielders of the United States, these having been selected from 24 candidates who arranged some months ago to hold themselves in readiness for the campaign. The first match will be played to-day (June 5), at Brighton, with the Gentlemen of Sussex, the next match will be at Lord's on the 16th instant, with the Gentlemen of the M.C.C., and matches have been already arranged at Stockport, Leicester, Southampton, Derby, Maidstone, Manchester, and Norwich.

THE following is a summary of the Consular Trade Report of Ninsen, received under date of the 22nd March last:—The chief imports during the month of January were cotton cloths, hulled rice, sugar, silk, woollen fabrics, dyed stuffs, zinc, musk, kerosene, shirtings, *sawai*; amounting altogether to 66,939.36.5 *yen*, of which 10,925.02.0 *yen* represent the amount consumed by foreign residents at the port. The chief exports were bullion, hides, beans, pepper, and gold dust, amounting to 92,124.59.0 *yen*. The imports during February reached 51,704.72.0 *yen*, as against 32,244.94.0 *yen* of exports.—*Kwampo*.

THE impending retirement of Prince Bismarck from the Prussian Ministry forms the subject of an article in the *North German Gazette* which explains that the step is the consequence of medical advice. Prince Bismarck was informed that his power to work could only be maintained if his labours were reduced in extent, and he was therefore absolutely ordered to give up some of the business which he had previously been in

the habit of transacting. The Chancellor accordingly decided to retain the Imperial business and to renounce his control over Prussian affairs. This determination he explained by stating that in the domain of foreign affairs he occupied a position of confidence with respect to foreign Governments which was of a personal character and could not therefore be transferred. Besides, his foreign business was free from the friction which in home affairs had added so greatly to his difficulties as to demand from him exceptional efforts.

MR. AUGUSTINE HEARD has addressed to the *New York Herald* a long letter on the subject of "France in Tonquin." Much of the letter is historical, and deals with facts familiar to all, but the writer's method of discussing China's claims of suzerainty in Annam is worth reproduction:—

The provinces of Annam and Tonquin were conquered and colonized by China long before the Christian era, and remained subject to her authority till the early part of the fifteenth century, when they threw off her yoke (some authorities place this as remote as the tenth century) and became independent. Independent they remained, and the continuity of Chinese rule was broken. For many hundred years China made no pretence of exercising her authority over them, and they may be said to have taken their place among the technically "tributary States" from which their early history had marked a certain distinction.

The connection between China and these States—Annam, Corea, Loochoo, &c.—was of a very curious and peculiar character. The duties and responsibilities which were recognized in mediæval Europe between vassal and sovereign—of service on the one side and of protection on the other—were here unknown. The inferior power invariably took the initiative and rendered homage, if so disposed, and the superior received it with dignity and condescension. "It is the respectful homage of an inferior to a superior, and not that of a fief to a sovereign. It is the sincere regard of a disciple to a teacher."—Dr. S. Wells Williams, in the *Journal of the North China Branch of the Asiatic Society*, 1866. The act was purely voluntary and might be omitted through long intervals without in any way disturbing peaceful relations. No compulsion was employed to bring in or to bring back an adherent; and years of intestine strife might ravage one of these tributary kingdoms without provoking a movement on the part of China; but she would serenely acknowledge, if requested, and invest with the insignia of royalty the victor in the struggle, who might or might not belong to the dynasty previously ruling. Siam broke away from this quasi-allegiance without a word of protest, so far as is known; and it may not be out of place to mention that on the official Chinese records England herself is inscribed as a tributary kingdom.

This account is at variance with the story told by General Mesny, according to whom Annam's struggle, now for autonomy, now against usurpers, lasted throughout the whole of the fourteenth century, and was only brought to a temporary close about the year 1429, when the Emperor of China, in compliance with a joint memorial forwarded by his own General and the commander of the Annamite forces, recalled the Chinese officials, and appointed the head of the Li family Viceroy of Annam. From time to time, during the succeeding centuries, Annam was invaded by Chinese forces and, if General Mesny's account be credible, a Chinese resident was appointed as late as 1848. It is certainly incorrect to say that "no compulsion was ever employed to bring in or to bring back an adherent," for assuredly the motive of nearly all the Chinese invasions of Annam was the restoration of some potentate whose ancestors had received investiture from the Dragon Throne. On the other hand, we quite agree with Mr. Heard, that the bonds between China and her tributary were altogether too shadowy to stand the strain of modern practice. Like many Americans, however, he seems to labour under an idea that, to complete his essay, a case of some sort must be made out against England, so he proceeds to attribute all China's mistaken policy to British intrigue. "Englishmen" he writes, "in their

shortsighted policy and hereditary prejudice, were delighted that their dreams of transcontinental Burmese-Western-China trade should be uninterfered with and the Red River remain closed to the nations. They are too much disposed to say, forgetful how much must inure to them from it all in the end:—The French cannot colonize. If they do establish a colony in Cochin China-Tonquin, and open new routes of trade, they will get no benefit therefrom, and so forth, and so on. And so, in the expectation that France would retire upon the multitudinous barking at her heels, assiduous barking was begun; but, for a wonder, France stood firm, and at once England began to reckon whether it would not be better to hold hard her Chinese friends. It certainly never would suit her for France to become really in earnest and wage war with China, even to the blockading of Chinese ports and the stoppage of Western trade." Not the least remarkable feature of all this is that a sober-minded merchant can be found to pen such silliness. England's counsels have doubtless a great deal of weight with the Peking Government, but they have always been directed to ends very different from those suggested by Mr. Heard. From the first, English politicians and journalists recognised that a speedy and peaceful solution of the Annamite trouble was most desirable in the interests of all, and certainly they wished for nothing less than that China's arrogance should be increased and her conservatism confirmed by a diplomatic victory over one of the leading Powers of Europe. But Mr. Heard apparently seeks to persuade China that she has a bad friend, and France that she has a treacherous enemy, in England, forgetting that but for England and France American merchants would not be doing business with the Middle Kingdom at all to-day. He has the assurance to deliver a judgment without appeal on the whole situation, and yet his idea of China's right to be consulted about the fate of Annam is limited to her claim of suzerainty, though, in point of fact, had no such bond existed between the two countries at any time in their history, the rulers of the Middle Kingdom would still have possessed a clear title to a voice in any arrangement that concerned the territory through which the chief route to their richest provinces lies. It is a curious and noteworthy point that England's "short-sighted policy and hereditary prejudices" have succeeded sufficiently well during the past half-dozen centuries to make her an object of envy and detraction to half the civilized world.

THE dressing bag that was stolen from Mr. J. M. Blair's cabin on the morning of the departure of the *City of Tokio* for San Francisco, was picked up in the Public Gardens by one of the Fire Brigade coolies, on Saturday last. That the thief was accustomed to deal with such property could be gathered from the expert manner in which he had broken the lock without injuring the rest of the bag. It is needless to say that all the coin and everything that could be turned into money were abstracted, but Mr. Blair will no doubt only be too glad to recover the drafts and papers which were of no use to the thief.

THE Judgment in H.B.M. Supreme Court for China and Japan, on appeal from H.B.M. Court for Japan, by Chief Justice Sir Richard Rennie, and Mr. R. A. Mowat, Assistant Judge, in the case of Edward Whittall, defendant and appellant, Yokioba Shobey, plaintiff and respondent,

was delivered on the 27th ult. Judgment was for the appellant, with costs both below and on appeal. This judgment leaves the respondent at liberty to bring an action for the recovery of such portion of the payment he made to the appellant for which he has received no value.

THE *Sanshi Kiyokwai* (Silk Industrial Association) has elected as its President Mr. Kawase Hideharu, who is also the President of the *Seicha Kiyokwai* (Tea Association). Mr. Kawase was formerly President of the Commercial Bureau, and has travelled in Europe and America in order to inspect the commercial systems of the Occident. The Association is certain to thrive under his auspices.—*Bukka Shimpō*.

THE Japanese papers report that the *Meiho Maru*, with a cargo of some 1,300 *koku* of beans, collided on the 31st of last month with the *Sekiriu Maru*, of the Mitsu Bishi Steamship Company. The collision took place off Cape Tateyama, Idzu. The *Meiho Maru* sank almost immediately, and her crew were saved with great difficulty. It appears that every precaution had been taken by the *Meiho Maru*, but that she collided with the steamer so soon as the latter hove into sight.

THE *Mainichi Shimbun* states that no less than 23 observatories have been erected in all the important localities of Japan since 1875. A meteorological report is forwarded thrice a day to the Central Observatory in Tokiyo. In future, weather bulletins are to be posted at the entrance of all police stations whenever sudden atmospheric changes are expected.

WE stated the other day, says the *Fiji Shimpō*, that Public Loan Bonds, redeemable in Silver Coin, would be sold on the London Stock Exchange. We now hear that a formal contract was made in March of this year by a Japanese National Bank and a well-known foreign merchant for the sale of some ten million *yen* worth of these bonds. We need not mention their names publicly, as the contract was of a private character.

ACCORDING to late telegrams, it appears H.I.H. Yamashina-no-Miya was on the way from New York to Niagara Falls when the train in which he was riding collided with another one near Rochester. His Imperial Highness sustained a slight wound on the right arm just below the elbow, the bone being uninjured. Five of his retinue were wounded in various parts of the body.

IN H.B.M. Court for Japan, on Thursday before Russell Robertson, Esq., Acting Judge, two firemen of the steamer *Mosser*, named Ross and Flemm, were brought up charged with being drunk and incapable. His Honour discharged Ross with a caution, ordering him to pay costs. Flemm, who had been up before, was sentenced to 48 hours' imprisonment, with hard labour, and costs.

WHILST a gang of coolies in charge of a water cart were filling up on Thursday at the well at No. 96, a large stone fell from the wall of a go-down close by, and, alighting on one man's foot, completely smashed it. The unfortunate man was at once carried off to the hospital by his mates.

WHAT JAPAN WANTS.

THE second issue of railway bonds and their rapid purchase by the public recall a subject which lies at the root of Japan's commercial prospects. The people have now subscribed ten million *yen* within the space of six months for purposes of railway construction, and the applications for the Finance Minister's bonds having nearly doubled the amount offered for sale, we may fairly conclude that, so long as the present commercial depression continues, so long as profitable investments in the ordinary lines of trade do not present themselves, there will be no difficulty in placing considerable quantities of this stock in the home markets. We have already expressed strong doubts with regard to the wisdom of making such large demands on the nation's floating capital. The Government, however, seems to rely on the salability of the bonds to foreigners as a means of preventing any inconvenience of this sort, and it cannot be denied that the success which has attended this financial measure up to the present entitles the opinion of its originators to more than average credit. We are disposed to think, too, that foreign estimates of Japan's financial capabilities have hitherto been somewhat under the mark. Not that it would be proper to draw any extended inference as to the people's pecuniary condition from the story of these railway bonds. Such securities have everywhere been a favorite species of investment at a season of trade stagnation, and if there was any money at all in Japan seeking employment, they would assuredly have attracted it. But the account recently given, in the *Nichi Nichi Shimbun*, of the methods pursued by Japanese merchants, shows that the funds engaged in commercial transactions are altogether disproportionate to the aggregate of the transactions. Merchants—excepting, of course, the few who have been able to adopt Western methods—instead of conducting a business several times as large as the amount of their capital, virtually keep seventy *yen* idle for every thirty they employ profitably. It follows, necessarily, that under such circumstances, any obstacle in the path of trade causes an immense overflow of these secondary funds, and releases a volume of money of which the recent contributions for railway purposes represents but an insignificant sub-multiple. Testimony of a more direct nature was furnished, the other day, by the prospectus of a new association—*Kwangiyo-shihon-kwai*—which, at its inauguration, was able to announce a capital of ten million *yen*, to be offered for the promotion of agricultural industry. This, however, by the way. Our immediate purpose is to speak, not of Japan's floating capital, but of the only means she can command to compass the profitable development of her resources. The Memorial presented two years ago by

the foreign merchants of Yokohama, embodying, as it did, the experienced opinion of a large number of intelligent experts, deserved, and doubtless received, the fullest consideration. We believe that the estimate formed by the memorialists of the quantity of rice available for export was an exaggeration. It is impossible to reconcile the hypothesis of a large surplus stock with the fact of well-sustained prices. A surplus there undoubtedly was, but we are not without precedents to show the consequences of abundant harvests in a country where faulty means of transport render distant markets inaccessible. After the annexation of the Punjab, the reduction of the land tax and the peace and security of the country gave such an impetus to agriculture that there resulted a glut of produce, and means of disposing of it not being available, the cultivators were reduced to great straits. There are still large districts of India, notably the Central Provinces, where an abundant harvest is anything but a blessing to the farmers, and the same thing has lately been observed, though in much less marked degree, in Japan. All through these years, however, while great stores of grain were supposed to be lying idle in the interior, the prosperity of the agricultural classes was said to be unprecedented, and if they kept rice in their godowns, it was not because, being perplexed how to dispose of it, they would have welcomed the advent of ships to carry it away, but because they preferred it to paper money of fluctuating value. But these are questions of degree. Whether the estimate of the memorialists was too large or too small, the principle they advocated admits of no contradiction. If Japan is ever to become wealthy, it must be by improving her facilities for transport. The shipping question is simple enough, and will probably be soon arranged on the lines suggested by the memorialists. But the question of internal transport, though of incomparably greater importance, seems to be much farther from a satisfactory solution. Speaking roughly, Japan has now 280 miles of railway open, and her present plan contemplates the construction of about 100 miles per annum in the immediate future. This is a very praiseworthy effort, but there are good reasons to doubt whether it is well directed. The Nakasendo road is probably the least beneficial, from a commercial point of view, that could have been selected. The connection of Saikiyo and Tokiyo by a line of rails is not what Japan wants. Her immediate and pressing need is a number of radial lines bringing the interior within easy reach of the coast. India has ten thousand miles of railways, but not one line corresponding to that projected by the Japanese scheme. Routes there are in abundance passing from coast to coast of the great peninsula, as from Bombay to Madras or Calcutta, but in all that network of roads planned under the most

skilled advice, there is the plainest evidence that means of exit from the interior to the sea were rightly judged of paramount importance. Japan, however, has mixed up strategical and industrial considerations. She is bent upon fixing a large amount of her floating capital in a line which cannot help much to develop her wealth; and, what is still more regrettable, there is danger that this enterprise will occupy her attention and absorb her available resources to the prejudice of more profitable undertakings. Official statistics show that the production of wheat in Japan in 1881, was about three hundred thousand tons, and that the average price per quarter at Tokiyo and Osaka was twenty-five shillings. So long as carriage remains in its present hopeless condition, it is useless to attempt any elaborate calculations as to the cost at which this cereal can be produced in the interior. From the experience of India, however, we know that the price of exportable grain in the neighbourhood of a railway, is twice as much as the price in more remote districts, and there is every reason to believe that the same is true of Japan. Farm labour is as cheap here as in India, and there unquestionably exist large tracts of land on which wheat could be grown with success. But it never will be grown until improved transport facilities bring Western markets within reach. Nothing could be more instructive than the experience of India, in this respect. Ten years ago, nobody perceived a prospect of Indian wheat becoming an important article of foreign commerce. But during those ten years, railways have gradually approached some of the producing districts, and the results can be seen in the following table:—

AMOUNT AND VALUE OF INDIAN WHEAT EXPORTED.			
YEAR.	TONS.		£.
1873	19,700	167,690
1878	318,658	2,873,765
1882	995,050	8,869,562
1883 (6 months).	784,749	6,613,432

This enormous development has taken place in spite of the fact that railway carriage in India is still twice as dear as in the United States. The latter country has 100,000 miles of railway, and competition takes care that rates shall be adapted to the demands of trade, the results being little short of miraculous. The history of every State is simply a history of railways. Illinois was little more than a prairie before the railway made it one of the first producing States of the Union, and the same may be said of Nebraska, Missouri, Kansas, and other great districts. Without exception "their vast agricultural wealth would have been locked up indefinitely but for the locomotive."* It may be too much to hope that Japan will follow the example of the United States closely, but she ought certainly to be capable of a greater effort than she is making at present. England has twenty thousand miles of railway. It will

* William Fowler. *Nineteenth Century*. p. 282.

take Japan half a century to construct a fourth of that length at her present rate of going, and if she persists in the phantasy of devoting her own capital to the process, she must look forward, in the interim, to commercial distress of the gravest character. Considering that the United States, already possessing such an immense network of lines, continue to construct eight to ten thousand miles per annum, and considering that India, with her ten thousand miles, which have cost her a hundred and forty-three millions sterling, is awaking to the necessity of taking immediate steps to construct an additional twelve hundred miles annually, Japan's performance scarcely deserves to be spoken of at all. It seems to us that the Government is sedulously treading in the very grooves along which Japanese merchants, untrained in the ways of a larger world, used formerly to creep. This notion of attempting nothing which cannot be accomplished with the country's unaided capital, is precisely analogous to the case of a man who allows his rice-field to lie barren rather than borrow some of his neighbour's surplus water. Japan cannot possibly become prosperous and happy until railways enable her people to utilize the resources nature has bountifully placed at their disposal, and she cannot have railways without doing as all other countries have done,—borrowing money to build them. While her currency was at a heavy depreciation, a foreign loan presented many inconvenient and perilous features, but now that she has successfully grappled with this difficulty, there is nothing to forbid recourse to European markets. The increased trade facilities which her revised treaties will confer, the excellent state of her finances, and the promptitude with which she has hitherto met all her engagements abroad, could not fail to obtain for her excellent terms. There never was a time, too, in the history of the iron trade when railway material could be procured so cheaply, and it seems not improbable that during the course of the next two or three years the ratio between silver and gold will have reached the point most favorable to borrowers of the latter metal. It will not be possible to say that this country is fairly launched upon the route to prosperity until she takes measures to construct, not a maximum of one hundred, but a minimum of five hundred, miles of railway every year.

CONSCRIPTION.

IF there ever was a country in which the ranks of the army might have been kept well filled by a voluntary system, that country ought to have been Japan, where the traditions of a large section of the nation had for centuries been associated with military service, and where, twelve years ago, the problem was, not what to do for soldiers, but what to do with the hereditary soldiers if their trade was taken

from them. But Japan has abolished her *Samurai* class, and adopted compulsory service, pure and simple, for reasons with some of which the public must sympathise, while it regrets the existence of others. It must, therefore, be interesting for her to observe the results which the methods she has adopted are producing on the national prosperity and happiness of the countries she is supposed to have taken as models. Just at present, the question of compulsory service is attracting much attention in France. After thirteen years' experience, the Government of the New Republic is still puzzled as to the best method of dealing with this problem. The law of 1872 fixed five years as the least nominal period of service, but by the aid of an extensive system of exemptions the hardships of this rule were considerably mitigated. Now, however, it is proposed to reduce the nominal period to three years, but, at the same time, to make service compulsory for all. This change, while apparently in the direction of greater liberty, has stirred up the whole controversy once more. French journalists refer in almost plaintive terms to the disadvantages under which their countrymen labour as compared with the people of England and America. The latter, alone throughout the universe, are absolutely free from restraint; free to go where they please and do what they please. They have not to endure the artificial and demoralizing existence of the conscript, nor to receive a training which unfits them for the pursuits they were born to. The sacrifices which the conscription imposes upon the adult population of the country are compared to a periodical blight, falling every spring upon the vegetable world, just at the moment when the buds and sprouts are gathering strength. France, thus handicapped, cannot, it is complained, possibly hope to compete with English-speaking countries. And the curious part of the affair is that Germany, who may be said to have imposed this irksome necessity upon Europe, does not herself seem to feel its inconvenience to a similar degree. Her statesmen, by a number of far-seeing and intelligent precautions, have contrived to rob compulsory service of most of its embarrassments. They have not fallen into the fatal error of supposing that a great nation can ever be established on a basis of absolute equality among its people. They recognise how unreasonable it would be to take scientists from their laboratories, students from their books, painters from their easels, and colonists from their travels, in order to compel them, during three years, not to study the business of a soldier, which they can acquire in twelve months, but to perform fatigue duties, make soup, sweep barrack-rooms, and clean latrines. In Germany it is confessed that these mechanical and revolting tasks need not be performed by everyone. "German laws," says a great French writer, "are not made for the unique purpose of satis-

fying the envious or mean instincts of the human soul; their object is not to bully, vex, or humiliate certain classes of citizens, and to inspire others with false ideas." Every device is therefore resorted to with the intention of protecting the scientific and mercantile classes against the disadvantages of the conscription, and among these devices the most efficient is the voluntary service of one year, which, instead of subjecting the volunteer, as in France, to all the menial offices of a common trooper, obliges him to acquire only the simple principles of his profession, and takes care that he shall be helped to do so in such a way as to interfere, as little as possible, with his professional or scientific career. Exceptional enactments also enable Germans to engage in foreign commerce without being called home every autumn to go through twenty-eight days' training. Add to this an excellent and wide-embracing system of exemptions, so framed as to include almost every legitimate case where exemption is desirable, and it will be seen that Germany manages to derive a maximum of advantage with a minimum of disadvantage from that most irksome necessity called conscription. LEROY-BEAULIEU, who has been unwearied in his endeavours to expose the abuses of French military laws, asks pertinently, why France, having been beaten by Germany, did not adopt the latter's conscription procedure in its entirety. That, he thinks, would have been much wiser than to try and better German systems by engrafting upon them elements of suicidal tyranny under the guise of Republican liberty, equality and fraternity. We are not at all surprised that Japan is of a similar opinion in her own case. Her conscription laws, promulgated last autumn, contain many of those that have been found so successful in Germany, and it is understood that the chief purpose of the military mission lately despatched to Europe is to acquire an accurate knowledge of the working of these provisions. As might have been expected, the mission has been exposed to a great deal of hostile criticism. Writers, who do not seem to give themselves much concern about the motives which prompted the Government to take such a step, have not hesitated to describe it as a wanton waste of the State's funds; a concession to the idle curiosity of a few officials who wished to enjoy the pleasures of a foreign tour at the public expense. Nothing is easier than to offer an explanation of that nature, except, perhaps, to find people whom it satisfies. But if a nation is so unfortunate as to be obliged to resort to compulsory military service, its rulers are bound by every consideration of duty and expediency to make the necessity sit as lightly as possible upon the people, and few things are better calculated to assist them in this endeavour than a practical knowledge of the methods followed in Germany.

MR. HENRY GEORGE.

THE Duke of ARGYLL has taken the trouble to expose the fallacies of Mr. HENRY GEORGE'S new philosophy in one of the prettiest and most convincing essays it has ever been our pleasure to peruse. At the outset, it strikes His Grace as a very curious coincidence, that this phenomenal compound of "goose and fanatic" should be a native of San Francisco. The boundless resources of the United States and their apparently inexhaustible prospects did not prepare men to find that from this land of opulence, above all others, there should issue "a solitary voice, prophesying a future of intolerable woe." Yet, writing in this land, nay more, writing in that part of it where wealth is supposed to be most plentiful, "the prophet of San Francisco" declares that "all the miseries of the Old World are already firmly established in the New; that they are increasing in an ever-accelerating ratio, growing with the growth of the people, and strengthening with its apparent strength. He tells us of crowded cities, of pestilential rooms, of men and women struggling for employments however mean, of the breathlessness of competition, of the extremes of poverty and of wealth—in short of all the inequalities of condition, of all the pressures and suffocations which accompany the struggle for existence in the oldest and most crowded societies in the World." To be sure, Mr. HENRY GEORGE is a pessimist. It is his business to paint things darkly, because he can only hope to get Society to listen to his doctrines by "trying to convince it that it is in the grasp of some deadly malady." As for himself, however, he declines to be bound by the results of his own observations. Having added the United States to the list of countries where population presses upon the limits of subsistence, and having thus completed the list so that it includes every habitable land on the globe, he nevertheless rejects with indignation the Malthusian doctrine; refuses to allow facts universally established to be generalized into a law. There is a double danger for him in the admission of such a doctrine: the direct danger, that it would destroy the value of the remedy he suggests; and the indirect danger, that if a law may be based upon one class of universal experiences, another law may, with equal justice, be based upon another class. If the hitherto unvarying experience that population does press upon the limits of production may be elevated to the rank of a natural law, then the equally unvarying experience that the right of property in land has always been recognised by all peoples in all climes as a necessary condition of agricultural prosperity, may also claim the respect due to a social axiom. Mr. HENRY GEORGE has to avoid this pitfall. But there are other pitfalls which he fails to avoid, probably because his mental vision is not keen

enough to perceive them. For example; while he goes about the world proclaiming that land is to be as free as the atmosphere, and that no exclusive ownership exists for any one in it, he nevertheless "claims for the community of California the right of excluding the whole human race absolutely, except on its own conditions, from a large portion of the earth's surface—a portion so large that it embraces no less than ninety-nine millions of acres." And this community, whose Government he denounces for ever consenting to part with any of these vast tracts, is a mere handful of men, less than one quarter of the population of London! But a pitfall even deeper lies immediately ahead. Supposing that Mr. GEORGE'S plans were carried out, and that ownership of the soil being abolished, it was parcelled out among individuals under some system of terminable leases, would not the whole area of any given region, thus parcelled out, be in the exclusive possession of a certain number of individuals for the periods of the leases, just as much as though it were their legal property? "Thus the absolute ownership which Mr. GEORGE declares to be blasphemous against God and Nature, is still asserted on behalf of some mere fraction of the human race, and this absolute ownership is again doled out to the members of this small community and to them alone, in such shares as it considers to be most remunerative to itself." As for the bodies whom he would constitute the sole and universal landlords, and to whom he would confide the duty of assessing and of spending the rents of everybody all over the area of the State, it is enough to quote his own words with regard to the experiment of popular Government in America:—"Speaking generally of the whole country, from the Atlantic to the Pacific, and from the Lakes to the Gulf, our Government by the people has in a large degree become, in a larger degree becoming, government by the strong and unscrupulous." But Mr. HENRY GEORGE scoffs at all experience. The way to correct the corruption of democracies is, according to him, to give them larger opportunities to be corrupt. Nay more, the way to prepare Governments for this great trust, is to teach them the duty of repudiation. They are to begin by resuming the ownership of every bit of land already occupied, without compensation to the man who has bought it, who has spent upon it years of labour, and who from first to last has relied on the security of the State and on the honour of its Government. Well may the corruption of this teaching be called "desolating dishonour." It is purblind dishonour, too. For surely if ownership deserves no respect, neither will tenancy. "If one generation cannot bind the next to recognize a purchase, can one generation bind another to recognize a lease?" Truly Mr. GEORGE and his fellow lunatics have set themselves a strange task when they go about endeavouring

to overturn the customs into which the wisdom of all the ages has crystallized. If wholesale robbery of land be legal, why not also wholesale robbery of other properties? Why should not national debts be expunged, for surely they are as unjust as ownership of land? Mr. GEORGE, indeed, has not hesitated to push his doctrines towards their logical conclusion. In a recent publication, he says that "the institution of public debts, like the institution of private property in land, rests upon the preposterous assumption that one generation may bind another generation." But he has still another step to go. Since he considers that a Government would be justified in taking property entrusted to its honorable keeping, he cannot escape the still more legitimate contention that a Government may take property not entrusted to it. Thus every accumulation of industry would become liable to confiscation. Barbarism would be established as the summit of civilization. Even from this Mr. GEORGE does not shrink. Referring to that splendid war which the Northern States of America waged in the cause of humanity, he says:—"If when we called on men to die for their country, we had not shrunk from taking, if necessary, nine hundred and ninety-nine thousand dollars from every millionaire, we need not have created any debt." Civilized communities have been accustomed to think that without security of property material prosperity is impossible. In Korea at present men do not care to grow rich because evidences of wealth attract official spoliation. Mr. GEORGE would convert the whole world into a vast Korea. He would have the State, in time of need, help itself without stint out of the purse of every well-to-do citizen. The Duke of ARGYLL justly says of him:—"Here we have a man who probably sincerely thinks he is a Christian, and who sets up as a philosopher, but who is not the least shocked by consequences which abolish the Decalogue, and deny the primary obligations both of public and of private honour." This nineteenth century has produced a great many phenomena, but none more phenomenal than Mr. HENRY GEORGE.

YOKOHAMA AMATEUR ROWING CLUB.

An Extraordinary General Meeting of the Rowing Club was called last evening to discuss the advisability of holding Concerts either afternoon or evening during the summer months at the Boat House.

There was a small attendance, but amongst those present were—Mr. Hamilton (Chairman), Mr. Till (Hon. Secretary), and Messrs. Rickett, Pinn, Stewart, Hepburn, Sutter, Boag, Snow, Van Buren, Samuels, Gorman, Bull, Fraser, Glennie, Townley, Maxwell, Willoughby, Schwabe, &c.

The CHAIRMAN said that this was a general meeting called under the rules and duly advertised. It was called with the intention of getting up afternoon or evening concerts. The idea was that if they could get sufficient members to guarantee the expenses of the Band from Tokiyo

they might have a series of evening concerts and by this means raise funds, which were sadly wanted, to fence in and alter the portion of the Hatoba which they hoped would be granted to them by the Government. He thought that it would be necessary to appoint a committee to arrange affairs and to sell the tickets, but as the scheme might be said to originate with Mr. Hepburn, he would leave him to expound his views.

Mr. HEPBURN said that the Chairman had explained all he had to say. Funds were required, and he thought that this would be a good way of obtaining them. They would have to put up a fence on the pier, move the boundary wall, shift the flag-staff, and make sundry other alterations, besides this the house wanted some repairs. They did not wish to draw upon the reserve fund, which was put aside in case of a typhoon or other emergency, and he thought that if the meeting would sanction the Committee charging the members one *yen* entrance fee or five *yen* for the series of concerts which it was proposed to hold, there would be a good surplus to meet these expenses. He thought that as the object was to get money, the entrance should not be confined to members of the Club only, and would suggest that the sale of the tickets should be in the hands of the Committee or of a Special Committee appointed to manage the concerts so that no objectionable people should be admitted. He calculated that if 40 members could be induced to subscribe 5 *yen* each the scheme could be carried through. The first evening would be the most expensive and after that he thought 50 *yen* per night would cover it.

Mr. GLENNIE supposed that it would be the same as at the Bluff Gardens, where ladies well admitted free.

Mr. TILL calculated that it would cost *yen* 75 per night. Dance music was the cheapest, because they could get a portion of the band, but for concerts the band would not come without its full complement. He thought that ladies ought to be charged for, otherwise they would not get in sufficient money.

Mr. BOAG said that for the last two years there had been concerts in the Bluff Gardens, and he thought it would be better to find out whether there had been any surplus receipts, and also whether they intended to hold them this year again.

Mr. TILL made a proposition that 10 members should guarantee the sale of 10 tickets each for the first concert, in which case, if it succeeded, they would not want any guarantors.

Mr. BOAG seconded the proposition.

The CHAIRMAN said that before putting Mr. Till's proposition to the meeting it was first necessary to get the members to authorize the Committee to charge an entrance fee, at present they had no power to do so as any member could enter the compound so long as it was open.

Mr. PINN proposed that the present Committee be authorized to charge an entrance fee to the members on band evenings.

Mr. SAMUELS seconded the proposition, which was carried unanimously.

Mr. TILL's motion was then put to the meeting and carried, the 100 tickets being subscribed for there and then.

The CHAIRMAN asked whether it was the wish of the members present that the permanent Committee of the Club should have the arrangement, of the concerts or would they like to appoint a special committee.

Mr. GLENNIE proposed and Mr. BOAG seconded, that the permanent Committee have charge of the whole of the arrangements.

This proposition was carried, and the meeting adjourned.

FINANCIAL ESTIMATES FOR THE 17th FISCAL YEAR OF MEIJI (1884-85).

PRELIMINARY REMARKS.

Before proceeding to specify the causes of the increase and decrease of the Revenue and Expenditure for the current fiscal year, as compared with previous years, a few important points require explanation, namely:—The total estimate of the Revenue is *yen* 75,982,969, showing an increase of *yen* 376,910, as compared with that of last year, *yen* 75,606,059. The causes which have led to the augmentation are to be found in the increase of the Tobacco Tax by *yen* 614,001, of the stamp tax on the papers for judicial proceedings by *yen* 530,576, and of the Gensai Kuriire (money to be transferred from the Reserve Fund to the ordinary receipts), and the miscellaneous receipts of both ordinary and extraordinary taxes by *yen* 1,656,616; making the total of *yen* 2,801,193. On the other hand, there is a decrease of *yen* 748,061 in the Tax on Companies, of *yen* 207,537 in the Tax on products of Hokkaido, and of *yen* 1,468,685 in the profits of the railways, &c., under the Public Works Department, the repayment of the loans made by the Government, and the sales of the Government property; the total being *yen* 2,424,283. Thus, the balance shows an increase of *yen* 376,910 as stated above. As regards the Expenditure, the total estimate is *yen* 75,982,562, the increase being *yen* 376,503 as compared with that of last year *yen* 75,606,059. This is attributable to an increase of *yen* 472,871 in the Expenses for the Imperial Family, of *yen* 1,630,000 in the redemption of paper money, and of *yen* 6,890,891 in the repayment of the Foreign Loan, the Expenditures for the Army and Navy and sundry expenditures both Ordinary and Extraordinary; making the total of *yen* 8,993,762. On the other hand, there is a decrease of *yen* 3,169,990, in redemption of the Domestic Loan, of *yen* 1,621,513 in Gunbibu Kuriire, and of *yen* 3,825,756 in the Contingency Fund of the Imperial Household Department, Cities, and Prefectures; the total being *yen* 8,617,259. Thus, the balance shows an increase of *yen* 376,503, as mentioned above. As regards the withdrawal of the paper currency, and the Gensai Kuriire (money to be transferred from the Ordinary receipts to the Reserve Fund), though there will be more or less increase or decrease according to the exigencies of the moment, the programme originally laid down will be adhered to with the utmost possible strictness.

The following are the several causes of increase in the Revenue:—

(N.B.—The items that underwent no change and the sums presenting no difference are excluded from these remarks.)

CUSTOMS REVENUES.—The import duties have suffered a decrease of *yen* 55,669, owing to the falling off in imports. This is, however, counterbalanced by an increase of *yen* 62,920 in the export duties, and of *yen* 2,419 in other various receipts, the total increase being *yen* 65,339.

TAX ON SAKÉ.—This shows a decrease of *yen* 178,400 on Licenses, consequent upon the decrease of the brewers since the issue of Notification No. 61, in the 15th year of Meiji, and though there has been some decrease in the amount of the production owing to the modification of the rate of taxation in the last fiscal year, there is a prospect of its being restored to its former condition. Hence, the increase of *yen* 70,553 in the tax on the amount of the brewing, and of *yen* 209,824 in License fees granting permission to brew for domestic consumption, applicants for which are on the increase. Thus, the total increase is *yen* 280,377.

TAX ON KOJI.—This shows an increase owing to an extension of demand consequent upon the increase of the saké brewed for domestic consumption.

TAX ON TOBACCO.—Although there has been a decrease of *yen* 119,632 in the business tax consequent upon a decrease in the number of Tobacco-traders since the issue of Notification No. 63, in the 15th year of Meiji (1882), yet this is counterbalanced by a considerable excess of the actual receipts in the previous year over the estimate; showing an increase of *yen* 733,633 in the stamp duties.

POSTAL DUTIES.—Although the sale of postage stamps and rent of boxes respectively show a decrease of *yen* 23,600 and *yen* 1,556 (amounting in the aggregate to *yen* 25,156), yet there is an increase of *yen* 27,864 in the fees charged for money orders, which are augmenting.

STAMP TAX ON PAPER FOR JUDICIAL PROCEEDINGS.—Newly created by Notification No. 5 of the current year.

TAX ON SHIPS.—Although there has been a decrease of *yen* 43 in the tax imposed upon steamers and sailing ships of foreign build by Notification No. 13 of the 16th year of Meiji (1883), yet this is

counterbalanced by an increase of *yen* 62,057, of which *yen* 24,903 are from taxes on junks, and *yen* 37,154 from taxes on lighters, fishing boats, &c.

TAX ON VEHICLES.—Owing to an increase of vehicles of various descriptions.

FEES FOR PASSPORTS AND OTHERS.—Although under this heading there is a decrease of *yen* 1,003 owing to the fees for the issue of title deeds to foreigners and passports for internal travel having been transferred to the Miscellaneous Receipts, yet this is overbalanced by the sums of *yen* 1,380 arising from the imposition of *Ninkariyo* (permission fee) upon the brokers of the rice and stock exchanges according to Notification No. 28 of Council of State of the 16th year of Meiji (1883); of *yen* 13,211, in the licence fees for medical practitioners according to Notification No. 35, and of *yen* 3,099 in the fees for the engagement or discharge of mariners according to Notification No. 45. The increase is therefore *yen* 17,690.

PROFITS OF THE ARSENAL UNDER THE WAR DEPARTMENT.—Owing to the progress of the work in the Tokiyo Arsenal.

PROFITS OF THE DOCKYARDS UNDER THE NAVAL DEPARTMENT.—Owing to the increasing number of ships undergoing repairs on account of the second dock in Yokosuka having been completed.

GENSAI KURIIRE.—Owing to an increase of the sums appropriated for repayment of the National Debts as per the plan for redemption.

RENT OF GOVERNMENT PROPERTY.—Under this heading, there has been a decrease of *yen* 622 in consequence of the rents of the carriages and sledges of the Bureau for Control of Industries in Hokkaido and of the ships belonging to the Public Works Department having fallen off. But this is met by an increase of *yen* 36,552 in ground rents owing to the creek side having been newly let out in Tokiyo, and by increase in storage at the Explosive Storage Buildings in Yokohama, and of *yen* 18,861 in house rents; the total increase being *yen* 55,413.

MISCELLANEOUS RECEIPTS (ORDINARY).—Owing to the sale of the Kwampo (Official Gazette) by Notification No. 22 of the Council of State of the 16th year of Meiji (1883).

MISCELLANEOUS RECEIPTS (EXTRAORDINARY).—This item witnessed a decrease of *yen* 113,670 owing to the fee paid for exemption from conscription having been abolished by Notification No. 46 of the 16th year of Meiji. Against this decrease, however, has to be set an increase of *yen* 28,080 in the fines, and of *yen* 533,253 in the miscellaneous receipts; the total being *yen* 561,333.

In addition to the above fifteen items, there are four others—mining tax, copyright fees, profits of mines in Hiroshima Prefecture, and rent of Government lands in the treaty ports; making the total increase of *yen* 2,801,193.

The following are the causes of decrease in the estimated Revenue:—

(N.B.—Those items that underwent no change and sums presenting no difference are excluded from these remarks.)

LAND TAX.—Under this heading there has been an increase of *yen* 91,022 in stamp duties on title deeds, consequent upon the brisk transfer of lands, and of *yen* 17,875 in taxes imposed upon lands after the expiration of the hoeing term, the total being *yen* 108,897. This is, however, counterbalanced by a decrease of *yen* 192,910 in the taxes from Okinawa Prefecture (Riu Kiu Islands), which are paid in kind, owing to their depreciation, and of *yen* 57,166 owing to some loans payable by yearly instalments having been all paid off; the total decrease being *yen* 250,076.

TAX ON PRODUCTS OF HOKKAIDO.—Owing to the depreciation of the products received as taxes.

TAX ON RULED PAPER FOR JUDICIAL PROCEEDINGS.—This item has been expunged by Notification No. 5 of the current year.

LAWYERS' LICENCE FEES.—This item shows a decrease as compared with the actual receipts in the previous year.

TAX ON COMPANIES.—Although there has been an increase of *yen* 27,324 in dues payable by the brokers of the Rice Exchange, as compared with the previous year, yet there is a decrease of *yen* 280 in the Tax on national Banks, owing to the closing of some of the National Banks. And taking into consideration the past circumstances, there would accrue a further decrease of *yen* 775,105 under the three headings, Taxes on Rice Exchanges, on Stock Exchanges, and Taxes payable by the brokers of the guild, so that the total decrease is *yen* 775,385.

SHOOTING LICENCES.—This item shows an increase of *yen* 390 in so far as the number of those who take out licences for pleasure are concerned. On the other hand, there has been a decrease of *yen* 4,846 in the tax upon professional hunting.

TAX ON HORSE AND CATTLE DEALERS.—Owing to a decrease in the number of licences.

TAX ON PATENT MEDICINES.—This shows a decrease as compared with the previous year.

MINTING PROFIT UNDER THE FINANCE DEPARTMENT.—Owing to a decrease in the export of sulphuric acid.

PROFIT OF COAL UNDER THE NAVAL DEPARTMENT.—Owing to a depreciation in the value of coal.

PROFIT OF FACTORIES UNDER THE AGRICULTURAL AND COMMERCIAL DEPARTMENT.—Owing to the work at the Senji Woollen Factory having been impeded by the destruction of the workshops by fire, and the depreciation of articles turned out in the Aichi Spinning Establishment.

PROFIT OF THE MINES UNDER THE PUBLIC WORKS DEPARTMENT.—Owing to a depreciation of mineral products.

PROFIT OF RAILWAYS UNDER THE PUBLIC WORKS DEPARTMENT.—Although the traffic receipts have been augmented by yen 95,740, owing to the line between Tsuruga and Sekigahara having been completed, yet this is balanced by a decrease of yen 55,793 in the Tokiyo-Yokohama line, due to the diminution of passengers and merchandise, and of yen 211,400 in the receipts of the Kobe-Otsu line; the total decrease being yen 267,193.

PROFIT OF TELEGRAPHS UNDER THE PUBLIC WORKS DEPARTMENT.—Owing to a decrease of messages, due to the stagnation in trade.

PROFIT OF SHIPBUILDING UNDER THE PUBLIC WORKS DEPARTMENT.—This item shows an increase of yen 2,496 owing to the workshops have been perfected in the Hiogo Dockyard; but there has been a decrease of yen 4,720 in consequence of there being less work at the Nagasaki Dockyard.

REPAYMENT OF LOANS.—Owing to this item having been transferred to the Reserve Fund.

REPAYMENT OF LOANS MADE TO THE IMPERIAL FAMILIES AND EX-CLANS.—Owing to the same cause as above.

REPAYMENT OF LOANS MADE IN PROPORTION TO RICE PRODUCTION.—The same cause as above.

SALES OF GOVERNMENT PROPERTY.—This item, though showing an increase of yen 3,001 on sales of buildings, has a decrease of yen 17,790 on sales of Government land, and of yen 134,317 on sales of articles, and as the price of mail-steamers sold was fully paid in the previous year, the total decrease is yen 152,107.

One more item, Tax on Scales, added to the above nineteen, makes a total decrease of yen 2,424,283.

This sum deducted from the aggregate amount of total increase, leaves a difference of yen 376,910, which is the net increase for the present fiscal year.

The following are the causes of increase in estimated expenditure:—

(N.B.—Those items that underwent no change and the sums presenting no great difference are excluded from these remarks.)

REPAYMENT OF FOREIGN DEBT.—Owing to an augmentation of sinking funds appropriated for the redemption of principal as the interest diminishes, amount for such redemption being the same every year.

REDUCTION OF PAPER CURRENCY.—Although yen 2,000,000 were transferred to the item Genshi Kuriire, yet the amount to be withdrawn has been increased by yen 3,630,000 according to the plan of redemption.

INTEREST ON DOMESTIC DEBT.—Although there has been a decrease of yen 331,461, owing to the principal of the new issue of Hereditary Pension Bonds, the Pension to the ex-Shinto priests, and to the Industrial Loan having been diminished, and the redemption of the voluntary capitalized pension bonds concluded, yet there is a total increase of yen 664,197. Of this, yen 14,197 belong to the Kinsatsu Exchange Bonds, yen 350,000 to the Nakasendo Railway Bonds, promulgated by Notification No. 47 of the 16th year of Meiji, and yen 300,000 to the newly issued unregistered Kinsatsu Exchange Bonds under Notification No. 48.

SUNDRY EXPENSES IN CONNECTION WITH DOMESTIC DEBTS.—Owing to the issue of the Nakasendo Railway, and unregistered Kinsatsu Exchange Bonds.

EXPENSES FOR IMPERIAL HOUSEHOLD.—Sundry items for the Imperial Household Department have been included.

HEREDITARY PENSION BONDS TO THE SHIZOKU OF OKINAWA PREFECTURE.—Although this item shows a decrease of yen 743, owing to the gradual lapse of pensions, yet there is an increase of yen 19,436 due to an alteration in the standard, i.e., price of rice, whereby the dues in proportion to rice production were regulated, and of yen 26,764 due to the Aitai-Kikemashi (fees exacted by landlords from peasants as mutually agreed upon) etc., having been included in this heading.

GRATUITIES.—This item, newly established, is

made up of sums to be granted to Civil Officers on the occasion of their retirement, and of allowances to the military.

WAR DEPARTMENT.—Although there has been a decrease of yen 15,716 in superannuation gratuities, owing to the issue of Notifications No. 5, and No. 36 of the Council of State of the 17th year of Meiji (1884), yet an increase of soldiers necessitated an augmentation of yen 500,000, and the tour to Europe of the Minister of War yen 25,000; the total increase being yen 525,000.

NAVAL DEPARTMENT.—There has been a decrease of yen 8,654 in superannuation gratuities for the same reason as in the case of the War Department, and of yen 1,058 on account of fees for money transactions having been placed under charge of the Finance Department; showing a total decrease of yen 9,712; but the maintenance of new men-of-war has necessitated an increment of yen 153,850.

EDUCATIONAL DEPARTMENT.—There has been a decrease of yen 1,370 in superannuation gratuities, owing to the same reason as in the War Department; but there is an increase of yen 5,000 in superannuation gratuities, owing to the reform of educational courses in the Tokiyo Daigaku.

PUBLIC WORKS DEPARTMENT.—Decrease of yen 2,456 in superannuation gratuities, owing to the same reason as in the War Department; but this is counterbalanced by an increase of yen 28,000, owing to the erection of a lighthouse and signal station at Muneyamisaki.

JUDICIAL DEPARTMENT.—Decrease of yen 13,988 in superannuation gratuities, owing to the same reason as in the War Department; but the construction of courts and repairs to official residences caused an increase of yen 230,576.

SENATE.—Decrease of yen 500, in superannuation gratuities, owing to the same reason as in the War Department; but outbalanced by yen 32,494, owing to the increase in the number of senators.

LEGATIONS AND CONSULATES ABROAD.—Increase owing to the establishment of a consulate at Lyons and to an increase of staff in the Consulate at Chefoo, China.

INTERNAL REVENUE OFFICE.—Decrease of yen 2,375 in superannuation gratuities, owing to the same cause as in the War Department; but there has been an increase of yen 171,185 for the manufacture of stamps, &c., calculated from the actual expenses in the previous year.

POST OFFICE.—Decrease of yen 600 in superannuation gratuities, owing to the same cause as in the War Department; but the subsidy of yen 8,800 for navigation from and to Ninsen, Korea, the expenses for foreign tours, yen 14,555, and those for the extension of the postal service, yen 41,717, make the total increase of yen 65,072.

REPAIRS AND CONSTRUCTIONS.—There has been a decrease of yen 961 in repairs to the Explosive Storage Buildings at Yokohama and other places; but there is an increase of yen 5,300 owing to the reconstruction of the branch office of the Tokiyo-Fu in Ogasawara-jima (Bonin Islands).

ENGINEERING.—There has been a decrease of yen 104,751 in the expenses for the improvement of the Yodo, Fuji, Sho, and Oi Rivers, which works were executed with regard to their urgent nature or otherwise, and in the subsidy for the construction of roads in Fukushima Prefecture, of tunnels in Hiogo Prefecture, and repairs to the river embankments in Kumamoto Prefecture; there is a further decrease of yen 1,500, owing to the expense for repairs to the earthworks round the Imperial Palace having been transferred to the appropriation for repairs to the Palace, and a still further decrease of yen 56 in superannuation gratuities as in the case of the War Department. The total decrease is yen 106,307. On the other hand, the improvement of the Agano, Yoshino, Chikugo, and Mogami Rivers, such works being also done with regard to their urgency, and various engineering works in Okinawa Prefecture, necessitated an outlay of yen 69,590. There has also been another expenditure of yen 206,616 in connection with the opening of the Shimidzugoshi roads, improvement of Fushino River in Yamaguchi Prefecture, construction of roads in Hiogo, Tochigi, Miyagi, Yamagata, Niigata, Akita, Iwate, and Yamaguchi Prefectures, and the dredging of rivers in Tokiyo. The total increase is yen 366,206.

EXPENSES FOR COLLECTION OF TAXES IN PREFECTURES AND CITIES.—This item, newly established, consequent upon the expenses for collection of National Taxes connected with the Expenditures for Cities and Prefectures, had been included here in expenses incurred for careful collection of taxes.

EXPENDITURES FOR CITY AND PROVINCIAL POLICE.—Though there has been a decrease of yen 5,777 in the superannuation gratuities, for the same reason as in the War Department, and of yen 3,560

in the subsidy to Cities and Prefectures, due to the rate of appropriation as fixed by the Bill for the Estimates of provincial expenses being less, making a total of yen 9,337, yet this is overbalanced by sums of yen 38,330 and yen 1,583, incurred respectively for the increase of police inspectors and the despatch of police at the Seven Islands of Idzu. The total increase is yen 39,913.

TOKIYO PENITENTIARY.—Decrease of yen 370 in superannuation gratuities owing to the same cause as in the War Department, but there is an increase of yen 32,419 in the expenses for convicts and other expenses owing to an increase in the number of convicts.

MIYAGI PENITENTIARY.—Decrease of yen 200 in the superannuation gratuities owing to the same cause as in the War Department, but it is counterbalanced by yen 30,074, owing to the same cause as above.

MIIKE PENITENTIARY.—Decrease of yen 250 in the superannuation gratuities, owing to the same cause as in the War Department, but it is overbalanced by an increase of yen 7,284 owing to the augmentation of officers and of their salaries on account of the increase in the number of convicts.

SORACHI PENITENTIARY.—Decrease of yen 1,500 in the superannuation gratuities, owing to the same cause as in the War Department, and yen 2,752 in expenses for convicts, making a total decrease of yen 4,252. But there is an increase of yen 20,781 in salaries and other outlays.

EXPENSES FOR SHRINES.—Increase owing to the "Futa-Ara-Yama Jinsha" having been made a National Shrine of the second grade, and the salaries of Shinto priests increased, by Notification No. 57 of the Council of State of the 16th year of Meiji.

EXPENSES FOR REPAIRS TO THE SURROUNDINGS OF THE IMPERIAL PALACE.—Owing to the expenses for repairs to the earthwork round the Imperial Palace having been transferred from the Engineering expenses.

EXPENSES FOR DECORATIONS AND GRATUITIES.—This item, established owing to its having been transferred from the Miscellaneous Outlays (ordinary), in accordance with the result of the actual expenses of the previous year.

EXPENSES FOR CUPS OF MERIT AND REWARDS.—Newly established, the sums under control of the Central Police Office and of Cities and Prefectures having been combined.

MISCELLANEOUS OUTLAYS (ORDINARY).—Decrease of yen 46,980, owing to the Decorations and Gratuities having been transferred to the item above. But there is an increase of yen 86,000 on account of the expenses for forwarding money having been transferred from the Finance Department, and of yen 48,000 for publication of the Official Gazette, showing a total of yen 134,000.

EXPENSES FOR CREATION OF INDUSTRY UNDER TELEGRAPHS OF PUBLIC WORKS DEPARTMENT.—Owing to the construction of lines between Sapporo, Nemuro, &c.

WOOLLEN FACTORY OF THE AGRICULTURAL AND COMMERCIAL DEPARTMENT.—Owing to setting the machines and reconstructing of the workshops which had been destroyed by fire.

EXPENSES FOR BUILDING OF MEN-OF-WAR.—Owing to many ships having been built this year.

SUBSIDY TO THE NIPPON RAILWAY COMPANY.—Although the traffic receipts are increasing, yet as the line is extended and is not yet completed the amount of subsidy becomes larger and larger—hence the increase.

MISCELLANEOUS OUTLAYS (EXTRAORDINARY).—There has been a decrease of yen 42,215 in the subsidy to the Commercial School, the salary of priests of shrines and temples in Okinawa Prefecture, the yearly fund for encouragement of industries, and in expenses for maintenance of men-of-war in Korean waters; and a further decrease of yen 169,075 owing to the expenses of the erection of the Emperor Kwammu's tomb at Kashiwara Hill, and for the construction of Judicial Courts:—those for the removal of the shisoku from Himeji castle, those for education of students abroad, those for land taxation reform and for the competitive exhibition of tea and the Shuidan Kwai (meeting of tea manufacturers for investigating questions concerning tea production), did not occur in previous years. The total decrease is yen 211,290. This is, however, counterbalanced by an increase of yen 163,420 arising from the grant of a subsidy to the Kunashiri Islands, expenses for shipping inspection office, and competitive exhibition of pierced cocoons, lacquer work, fabrics, and porcelain, exhibition at New Orleans, U.S.A., destruction of voracious insects in the Hokkaido, interchange of art objects with foreign countries, rebuilding of the Tokiyo Normal School, increase of the militia and their movements, and training of police in military tactics. Beside

this, there is another increase of *yen* 189,003 in the expenses for prizes to the union competitive exhibitions of Cities and Prefectures, in those for relief of the natives of Nemiuro Prefecture, and others. The total increase is *yen* 352,423.

GENSHI KURIIRE, FOR REDUCTION OF THE PAPER CURRENCY.—Owing to this having been transferred from the item "Redemption of paper currency."

Another item—Pension to Military—added to the above thirty-five, makes the total increase of *yen* 8,993,762.

The following are items showing causes of decrease in the estimated expenditure:—

(Those which underwent no change and sums showing no great change are excluded from these remarks).

REPAYMENT OF DOMESTIC DEBTS.—Although there has been a total increase of *yen* 98,705 (*yen* 80 in old Loan, *yen* 67,750 in *Kinsatsu* Exchange Bonds, *yen* 12,075 in pension bonds to ex-priests of shrines, and *yen* 18,800 in Industrial Bonds), yet there is a decrease of *yen* 400 in New Loan Bonds, *yen* 2,220 in hereditary pension Bonds, and *yen* 3,266,075 owing to the entire redemption of the voluntary Capitalized Pension Bonds, making the total *yen* 3,268,695.

INTEREST ON FOREIGN DEBTS.—Owing to the principal having diminished.

ANNUAL GRATUITIES FOR MERITORIOUS DEEDS.—Owing to the recipients having died.

PENSIONS FOR SHRINES AND TEMPLES.—Owing to this payment having ended with last year.

COUNCIL OF STATE.—Owing to a decrease of the superannuation gratuities consequent upon the issue of Notifications No. 5 and 36 of the Council of State.

FOREIGN DEPARTMENT.—Owing to the same reason as above, and to the expense connected with monetary transactions having been transferred to the Finance Department.

HOME DEPARTMENT.—Owing to the same cause as in the Council of State.

FINANCE DEPARTMENT.—There has been an increase of *yen* 20,420 in consequence of the expenses (*yen* 11,390) connected with monetary transactions for the Foreign and Naval Departments and other offices, and those for exchange of paper currency (*yen* 9,030) having been transferred to this item from Cities and Prefectures. But there is a decrease of *yen* 86,000 owing to insurance on remittances and pay to the Kawasekata having been transferred to the expenses for forwarding the money of the Miscellaneous Outlays (ordinary), and another decrease of *yen* 7,655 in superannuation gratuities owing to the same cause as in the Council of State; the total decrease is *yen* 93,655.

AGRICULTURAL AND COMMERCIAL DEPARTMENT.—Although the establishment of the Commercial School caused an expense of *yen* 10,000, yet there has been a decrease of *yen* 14,837 in the working expenses of the Breeding Farm in Shimosa, and of *yen* 3,166 in the superannuation gratuities owing to the same cause as in the Council of State; the total being *yen* 18,003.

IMPERIAL HOUSEHOLD DEPARTMENT.—Owing to transfer to the Imperial Household expenses.

CUSTOMS BUREAU.—Owing to the same cause as in the Council of State.

BUREAU FOR CONTROL OF INDUSTRIES IN HOKKAIDO.—Owing to the same cause as in the Council of State, and to the expenses of the breeding farm at Uii-Kapo-Maki having been transferred to the item of Imperial Household Expenses.

EXPENDITURES FOR CITIES AND PREFECTURES.—Owing to a decrease of the superannuation gratuities from the same cause as in the Council of State, the transfer of Imperial tomb-keeper's salary to the Imperial Household expenses, and of expenses for exchange of money to the Finance Department, and of expenses for imposing of national taxation and for collection of taxes in Cities and Prefectures; and owing to the decrease in expenses for relief and for local expenses in Okinawa Prefecture.

CENTRAL POLICE OFFICE.—Owing to the same cause as in the Council of State.

KABATO PENITENTIARY.—Decrease here is owing to the same cause as above and to a diminution in the expenses for convicts owing to a fall in the cost of commodities.

EXPENSES FOR CRIMINALS IN PRISONS OF CITIES AND PREFECTURES.—Owing to the same cause as above and to a decrease in the number of criminals.

EXPENSES FOR WORKING OF DOCKS UNDER THE NAVAL DEPARTMENT.—Owing to the completion of the second dock at Yokosuka.

GUNPOWDER FACTORY UNDER THE NAVAL DEPARTMENT.—Owing to the outlay in previous years having been dispensed with.

MINING EXPENSES UNDER THE PUBLIC WORKS DEPARTMENT.—Owing to the same cause as above.

EXPENSES FOR WORKING OF RAILWAYS UNDER THE PUBLIC WORKS DEPARTMENT.—Owing to certain outlays having been reduced.

EXPENSES FOR ERECTION OF THE TEMPORARY PALACE.—Owing to the decrease of the original fund in consequence of donations from the people (which were made a separate fund in the 15th fiscal year, apart from the Miscellaneous Receipts) being employed for this purpose.

EXPENSES FOR REGULAR REPAIRS TO THE JINGU SHRINE.—Owing to the felling of timbers necessary for its construction having been brought to an end.

WAR SUPPLEMENTARY FUND.—Owing to the excessive outlay in consequence of the enlargement of the military organization.

CONTINGENCY FUND.—This item has not been provided for owing to the generally ample nature of the appropriations this year.

The total amount of decrease in the above twenty-four items is *yen* 8,617,259.

The above, deducted from the total increase, leaves a sum of *yen* 376,503, which is the net surplus for the current fiscal year.

APPENDIX.

The total amount of the domestic and foreign debts remaining unredeemed was, on the 30th April, 1884, *yen* 324,709,013.80. This amount, compared with the sum of *yen* 335,366,186.30 mentioned in the Budget of the last fiscal year, shows a decrease of *yen* 10,657,172.50. This decrease has been effected in the following manner:—By the issue of *Kinsatsu* Exchange Bonds, an increase of *yen* 325,950; an increase of *yen* 1,250,000 by the issue of unregistered *Kinsatsu* Exchange Bonds; of *yen* 3,091,600 by the issue of the Nakasendo Railway Bonds, and of *yen* 5,300 by the adjustment of various other loans, making a total of *yen* 4,672,850; but a decrease of *yen* 10,023,615 was effected by the redemption of the new loan, *Kinsatsu* Exchange Bonds, Voluntary Capitalized Pension Bonds, and of other domestic debts, *yen* 430,416 by the redemption of the foreign debt, *yen* 4,875,950, by the redemption of outstanding paper currency, and *yen* 41.50 by the withdrawal of counterfeit paper currency, making a total of *yen* 15,330,022.50.

The total amount of the Reserve Fund was *yen* 47,403,156.043, on the 30th April, 1884. This amount, compared with that of the reserve fund of *yen* 53,415,490.442 mentioned in the Budget of the last fiscal year, shows a decrease of *yen* 6,012,334.399. This decrease was caused in the following manner:—Although the sums *yen* 13,744 and *yen* 11,710.022, derived from the surplus in the 13th and 14th fiscal years respectively, and *yen* 938,674.867, being interest on Public Loan Bonds and profit of drawn bonds—both belonging to the Reserve Fund—were added to the fund, making a total of *yen* 950,398.633, yet there is a decrease of *yen* 5,223,429.406, owing to that sum having been transferred to the ordinary expenditure for the purpose of refunding the money borrowed for the subjugation of the south-western rebellion, and *yen* 1,739,303.626 owing to loss caused by exchanging paper currency for specie, making the total *yen* 6,962,733.032.

The total amount of advances was, on the 30th April, 1884, *yen* 23,696,128.40, showing an increase of *yen* 4,634,569.103 as compared with that of last year—*yen* 19,061,559.297. The cause is that, although there has been a decrease of *yen* 373,482.645 in consequence of loans made for relief having been fully repaid, of *yen* 683,997.657 owing to the adjustment of loans to former *Han* and repudiation, and of *yen* 525,507.742 arising from the reduction of a certain sum of capital for maintenance of industries under various Departments (amounting in the aggregate to *yen* 1,582,988.044), yet there has been a total increase of *yen* 6,217,557.147, of which *yen* 4,382.184 are the expenses handed over to the various Departments for the maintenance of their industries, *yen* 323,174.963 the sum added thereto by the alteration of management of advances, and *yen* 5,890,000, advanced hitherto out of the Reserve Fund, is classed as an advance out of the ordinary revenue.

The fund for the relief of agricultural distress was, on the 30th April, 1884, *yen* 2,230,554.743; showing an increase of *yen* 332,859.505 as compared with that of last year—*yen* 897,695.238. This is due to the fact that the remainder—*yen* 150,000—of the sums handed to every city and prefecture for the said purpose, for the second half of the 16th Fiscal year, and for the first half of the 15th Fiscal year, has been included in this item, and also due to the addition of the interest on the *Kinsatsu* Exchange Bonds, *yen* 32,859.505.

The total amount of the Special Receipts was *yen* 1,000,000 on the 31st April, 1884. The amount

compared with that of last fiscal year—*yen* 884,508.02—shows an increase of *yen* 115,491.98. The cause is that the sum of *yen* 884,508.02 in silver was exchanged for paper currency, which has been invested in *Kinsatsu* Exchange Bonds with a view to their increment, and the paper currency so exchanged will be destroyed.

NATIONAL DEBT.

DOMESTIC DEBT.

Domestic Debt, bearing interest...	214,479,310.000

TRANSLATIONS FROM NATIVE JOURNALS.

TREATY REVISION.

(Translated from the *Hochi Shimbun*).

Treaty Revision is rather a national than a party question. The judicious revision of the treaties will promote the well-being of the whole nation, while injudicious modifications will tend to injure one and all. The results of treaty revision are not confined to one locality or a single faction. Different men desire different regulations for the control of commerce; some follow the principles of free trade, while others advocate protection. Free-traders regard the tenets of their party as the sole source of national welfare, while Protectionists believe the same of their own creed. Commercial regulations, therefore, are *prima facie* a party question. But as for treaty revision, undeniably the first question of the day, there is no reason to assert that it has anything to do with political factions. Nor do we desire to see the several parties in opposition for the reason of different opinions on this subject. The importance of the revision lies in the restoration of those inherent rights which were unjustly wrested from us, as well as in reasserting our independence as a nation by freeing ourselves from the yoke to which we were forced to submit an account of our little acquaintance with Western diplomacy, and in consequence the dissensions which existed between the Emperor and the Shogunate at the time of the opening of the ports. To restore those rights which we ought never to have lost, and to secure the wellbeing of the nation by removing the yoke to which we should never have submitted, is the one desire of thirty-six millions of Japanese. If this is the wish of the Government, it is the hope of the people as well.

It is unnecessary to show that the views and principles advocated equally by the Government and the people cannot belong to any one political party. In the desire for treaty revision both Government and people, nobles and commoners, adults and youths, participate alike. And for this reason the revision of the treaties must be regarded as a national, not a party, question. Yet should there be any political clique in this land which ignores the restoration of our rights and is willing to bear with meekness the insults of Western nations, we will carry the standard of the Partisans of Treaty Revision, and crush all others out of existence. Only in this case can the burning question of our times be a party matter. Although the whole nation may strive for the restoration of our inherent rights, yet if every man differs in his opinion as to how we should go to work, the manner of revising the treaties may be discussed as a question of factions and parties; but even then the subject is of national and universal importance. Every one should consider the question from the most disinterested standpoint, and do away with all prejudice of class or position. If, after giving the matter unbiassed consideration, they perceive that the independence and dignity of the country are at stake, they should urge the revision of the treaties in utter disregard of personal interests. True patriots should be willing to give up all prejudice arising from position, custom, or self-love. We, personally, are among those who hold definite principles, which we would see carried into practice; but we are far from wishing to oppose all other steps not in accordance with our particular creed. We have never hesitated in giving praiseworthy propositions our hearty approval, nor have we failed to condemn iniquitous or evil-minded proceedings either among our own party or any other. Such is the course we have hitherto pursued; and, with regard to the revision of the treaties, we have ever endeavored to consider the subject with discretion and justice, and to approve all such proposals which promised speedy restoration of our rational rights and prestige. This is not our own peculiar creed, but is the real spirit of every patriot.

More than ten years have elapsed since the question of treaty revision has become a popular subject of discussion in this country, and, during this period, disturbances have arisen in Formosa, in Saga, in Kumamoto, and in Kagoshima. Although both Government and people are alike interested in the important affairs of the nation, their several ideas or sentiments were necessarily more or less affected in such times of emergency, and they were thus unable to give their full attention to the revision of the treaties. But now peace reigns throughout the Empire, and as the internal administration as well as foreign relations are in a state of perfect

tranquillity, our Government can well devote its undivided attention to the modification of the existing treaties; and, so far as we can see, nothing in the immediate future is likely to impede the negotiations of the Government. With great sagacity, the Government appears to have resolved to take advantage of the present tranquillity in order to settle the great question of treaty revision,—that perplexing problem which has given us anxious thought for so many years. Moreover, it is evident that the British Government and people, who of all the seventeen Treaty Powers are most closely connected with the revision of the treaties, have begun to give careful attention to the matter in hand. Parliament has declared that the modification of the treaties would ere long be completed, while the new Minister, the Hon. F. R. Plunkett, who is said to have received special instructions and to be accredited with special power, has already arrived in this country. From all this we may infer that the Foreign Department is already in receipt of proposals from the Government of Great Britain, and that although the new Minister has not yet commenced negotiations, the longed-for day is not far distant. Among those European and American countries which have commercial relations with Japan, Great Britain stands foremost. Next come the United States and France, followed by Germany, Austria, Holland, and Italy. The United States and Germany are said to have consented to our proposals for revision. If, then, the negotiations with Great Britain result favourably, all other obstacles in the way of treaty revision would be removed. So important are the negotiations which will shortly open between the British Minister and our Foreign Department, that the welfare and misery, the honor and dishonor of this country depend upon their issue. Now, of all times, should the public express their views on the revision of the treaties. We shall endeavour to discuss the subject in the proper spirit, and acquaint the Cabinet with our views.

THE ACTUAL CONDITION OF THE TREATIES.

The public are familiar with the fact that the treaties concluded between this country and the nations of Europe and America for the promotion of peace, amity, and commerce, are based on wrong principles, and tend to injure our national interests and prestige. No demonstration is needed to attest the truth of this fact. But the humiliation and injury we have suffered by reason of the existing treaties may be beyond the range of public information, and so it is necessary to refer to facts in order to substantiate our argument.

Our foreign treaties are, indeed, replete with unjust and harmful provisions, but the most serious injustice lies in the extraterritorial clause and the restriction of the tariff. It is undeniable that the rights of jurisdiction and tariff regulation are the inherent property of every independent nation. All the disadvantages and inconveniences under which we have laboured are chiefly due to the fact that these two rights were seriously crippled by the treaties. Properly speaking, extraterritoriality originates in the idea of protecting the Envoy of a foreign potentate when accredited to the Court of another nation, and is not a privilege to be enjoyed by private individuals. A Legation, in this instance, assumes the functions of a Sovereign. In whatever country a Legation may be established, it must maintain the status of an independent nation, and stand beyond the jurisdiction of the land in which it exists. This is not surprising. But it must be seen that it is a gross injustice to extend this peculiar privilege of an Envoy to private individuals, as merchants, traders, and the like; and that serious abuses are likely to result from granting them such extraordinary license. History shows that the unjust and preposterous law of extraterritoriality had its origin in Ancient Turkey. Ever since the Turks succeeded in founding an Empire in Europe, they have had commercial relations with various European countries; but the Mohammedan creed of the Turks unfortunately compels them to regard the adherents of all other religions as men of lower intellect and unequal rights, to beat, or even kill, whom finds favour in the sight of Paradise. As far as Christians in Turkey were concerned, they had no safeguard from the violence of fanatic Moslems, however great their injuries. Of course, no Continental country could hold commercial relations with the Turks under such abnormal conditions, and the Mohammedans had to suffer the consequences. One of the emperors of Turkey, however, issued a decree granting Europeans the privilege of being under the jurisdiction of their own laws, without respect to any Mohammedan code. This was the origin of extraterritoriality; a custom or system invented by a Turkish Emperor of olden time. When Europeans and Americans first opened intercourse with China, they concluded a treaty securing them this singular privilege, and

a special clause concerning extraterritoriality was inserted in the treaties concluded with Japan. Notwithstanding the fact that extraterritoriality was originally an unusual and special privilege granted under peculiar circumstances, Europeans appear now to regard it as one of their inherent rights, and display unreasonable anger when any one proposes to abolish it. This is mere impertinence.

Extraterritoriality can be sanctioned if it is confined within certain limits. Foreigners are not only not satisfied with privileges which they should enjoy exclusively within the jurisdiction of their own countries, but they also boast their ability to violate Japanese laws and regulations without fear of punishment. Under the present system, we are unable to bind aliens with our laws unless these laws have been sanctioned by the Corps Diplomatique prior to their enforcement. If aliens infringe laws not sanctioned by their Ministers they are in no way liable to punishment. It is by no means an easy task to receive the approval of the Representatives of seventeen Treaty Powers for every law or regulation the Government may desire to enforce. And granting even that such an undertaking were readily accomplished, *our judicial as well as our legislative power is sure to suffer from it.* How much more serious is the injury when we find the greatest difficulty in obtaining the approval of our seventeen allies for every law or rule we propose to enact. Were there no objection on the part of the Diplomatic Body we might put new laws in force; but were there any dissentient voice, we could never hope to force aliens to observe them. The extraterritorial privileges enjoyed by foreigners, outside of the legitimate benefits of the treaties, are formidable obstacles in the path of our administration. Again, foreign journalists not infrequently grossly insult our Sovereign and his people, and this with perfect impunity. All these abuses are directly ascribable to that abominable extraterritorial system which not only materially interferes with our administration, but also causes us to harbour ill-will against all aliens, and renders our mutual interests irreconcilable.

In addition to the fact that extraterritoriality is a blot on our nation's escutcheon, that it obstructs our administration, destroys all friendly feelings towards aliens, and impairs our mutual interests—in addition to all this, the existing treaties do us still further harm. They seriously diminish the revenues of the Government by placing restrictions on the tariff. *Deprivation of the power to regulate the tariff is in itself enough to destroy the honour of any independent nation.* The present treaties restrict the customs' duties to an average of five per cent. *ad valorem*, but even this duty is hardly realized. There is no country in Europe and America which has such an insignificantly small customs' revenue. The duties exacted by European and American nations generally form one of the principal sources of revenue, while the case is exactly the reverse in Japan. Great Britain's revenue from her customs averages 96,400,000 yen a year; France receives 61,400,000 yen; the United States 195,000,000 yen. Even Spain, whose foreign trade is a minimum, and Belgium, one of the smallest Continental nations, enjoy revenues from their customs amounting to 23,000,000 yen and 4,340,000 yen respectively. Compare these figures with our own customs' revenue of 2,700,000 yen, and we see how utterly insignificant are our receipts. The countries we have just enumerated have been engaged in commerce for a long time, and the gradual prosperity they enjoy stands in strong contrast with the lethargic condition of our own commerce. *Yet the small amount of our customs' revenue is in no way due to the decline of trade, but is solely to be ascribed to the fact that our customs are hampered by unjust treaties and their attendant commercial regulations.* The customs' dues of Spain form 10 per cent. of the total value of her imports and exports, while those of the United States amount to 13 per cent. Those of Japan do not exceed four per cent. Moreover, in Europe and America the duties are chiefly levied on imports, rarely on exports, and so they may be, on the whole, looked upon as import duties. Basing our calculation upon the supposition that the two continents impose duties exclusively on imports, we find that Spain exacts twenty-three per cent. on the original value of imports, while the United States levy twenty-seven per cent. Here, again, the tariff of Japan does not exceed four per cent. The revenue that we ought to receive from the Customs, but do not, amounts to several millions of yen. The extent to which the present treaties deprive us of our rights and just profits is simply incalculable.

THE NEGOTIATIONS FOR THE REVISION OF THE TREATIES.

We have already shown that the treaties are employed by our allies to encroach upon our rights of jurisdiction and legislation, as well as of tariff regulation, thereby entailing losses

upon us amounting annually to millions of yen. This simply represents the amount of loss on the customs' dues; for were we to take all the losses into consideration that result from our inability to regulate the tariff the sum would be a truly formidable one. Treaties as unjust and injurious as ours do not exist between any other nations on the face of the globe. Even such semi-barbarous countries as Hawaii, Bolivia, Venezuela, and Guatemala, have treaties far better than those of either China or Japan. Notwithstanding the fact that our treaties should have been revised in the 5th or 6th year of Meiji (1872 or 1873), they have remained untouched and unaltered. But as the country was just then in the early days of the Restoration, the energetic modification of the treaties was next to impossible; nevertheless, treaty revision was at an early date a moot question among individuals of all classes, and public-spirited men eagerly discussed the matter in all its bearings. Our Envoys travelled all over Europe and America in order to open negotiations with foreign governments with respect to treaty revision, but the Formosan difficulties for the time absorbed the entire attention of the Cabinet Ministers. Troubles both at home and abroad have interfered with the tranquillity of the Empire, so that negotiations with regard to the revision of the treaties were practically out of the question until after the suppression of the Satsuma rebellion in the 10th year of Meiji (1877). So soon as peace and order were restored, the Government began to give particular attention to internal administration, and again brought the question of treaty revision forward. Measures were speedily taken to submit proposals for modification to the several Treaty Powers, a movement which was hailed by our thinking men and literati with enthusiasm. It was at this time that the clamour for treaty revision reached a climax. This state of affairs continued during the 13th and 14th years of Meiji (1880-1881), while in the 15th year of the present era (1882), the foreign representatives in the capital were requested to meet together for the purpose of participating in the negotiations. It may be truthfully affirmed that both our Government and our people have spared neither time nor pains to affect the revision of the treaties. And yet no satisfactory results have been arrived at, and the negotiations for revision have dragged wearily and hopelessly onward up to the present day.

THE ACTUAL STATE OF NEGOTIATIONS.

It is said that when, some time ago, our Government submitted proposals for revision to the various Treaty Powers, both the United States and Germany signified their acquiescence. But it seems that the proposals referred to embodied the increase of the import tariff and the abolition of export duties, while extraterritoriality was not touched upon at all. And now we should like to know what decision the Foreign Representatives in Tokyo have arrived at; whether the matter was left unsettled, without arriving at any decision at all; whether the Government did not suggest any particular scheme with regard to the revision; whether the Treaty Powers, in their turn, demanded aught of us; and how far the proposals for modification are to be pushed forward. These questions are the very natural result of an investigation into the true nature of treaty revision. Just as the public were busily engaged in discussing these questions, it was reported that, on the occasion of the opening of Parliament, H. M. the Queen of Great Britain had intimated, in her inaugural address, the near completion of a revised treaty with this country. Following in the footsteps of this report came another affirming the intention of our Government to establish Mixed Courts. Thereupon other rumours became current that the Government proposed engaging foreign judges instead of establishing Mixed Courts, and that, if agreed to by the Treaty Powers, steps would forthwith be taken to throw open the whole country to foreign trade and residence. But as these reports have had their origin chiefly in foreign correspondence, their truth or falsity can hardly be determined without confirmation or contradiction by those who are responsible for the revision of the treaties. Yet, upon careful comparison of all the telegrams which have arrived in this country of late, we find that they apparently contain much that is true. Despatches and letters from London, Paris, and New York are, it is true, not always of the same tenor, but they all agree in at least one point, and that is that our Government has proposed to establish Courts of justice in which suits involving foreign residents are to be tried by a tribunal composed of foreign and Japanese judges. It is, therefore, not unreasonable to assert that proposals for the establishment of Mixed Courts have really been propounded by the Cabinet, and that these proposals are now being seriously considered by foreign Governments. Although it is self-evident

that, should these proposals be acceded to by the Treaty Powers, extraterritoriality will at once be abolished, will our Government then, in return, proceed to open up the country to trade at once? Or will it rather sanction residence in the interior? All the foreign intelligence which we have hitherto received confirms the idea that the country will be thrown open to foreign commerce. Not a few contend that the new dispensation will remain in force for eight years, while others put this term at not less than twelve years. Though our foreign intelligence varies considerably in this respect, it appears, on the whole, probable that the Government aims at the complete recovery of the right of jurisdiction after the new system has been in force for ten years, or thereabouts. Our Treasury has not overplus funds, and yet the rate of taxation must be lowered. The import duty is one of the most trustworthy sources for an increase of revenue, and there can be no doubt that the Government will persistently adhere to its propositions for a revision of the tariff; especially as a revision of the customs' duties will tend to replenish the Treasury, and this, in turn, will permit the Cabinet to adopt measures for the reduction of the land tax. We may thus reasonably conclude, that the claims of the Government will not be restricted to the restoration of the right of jurisdiction, but will include also the right of tariff regulation. What will be the demands of foreign governments in their turn? One of the chief desires of foreigners is to obtain the privilege of residence in the interior. If, therefore, we demand anything of them, they will surely reply by asking for the removal of all restrictions imposed upon residence in the interior. In this case, the actual condition of negotiations for treaty revision will be something like the following:—

The Government of Japan will propose: first, to revise the tariff so that a duty of 14 or 15 per cent. can be levied on imports, instead of four per cent. as heretofore; secondly, to establish Courts of justice where suits involving foreigners may be tried by tribunals composed of Japanese and foreign judges in the service of the Government; thirdly, to discontinue the employment of foreign judges in Courts of justice and to recover full right of jurisdiction after the lapse of a certain number of years,—say eight or twelve.

In reply to these proposals, the Treaty Powers will demand the abolition of all restrictions placed upon foreign residence in the interior, and claim the enjoyment of the same privileges as those of the Japanese themselves, in order that foreigners may reside, travel, and hold landed property in any part of the Empire.

And now, should the Government accede to this request, will the Treaty Powers accept the three proposals which, as we suppose, will be made them by our Government? Or will they accept the first, reject the last two, and still demand the privilege of residence in the interior? These are questions which we cannot answer.

THE DIFFICULTIES ATTENDING THE RESTORATION OF THE RIGHTS OF JURISDICTION AND TARIFF REGULATION.

Both the right of jurisdiction over foreigners and that of tariff regulation must be restored to us, for they are the legitimate property of every independent state, and their loss or even limitation cannot fail to be productive of serious injury. As a simple matter of justice, these two rights ought never to have passed into alien hands. Yet we have long since been taught that, pertinacious and obstinate as are our allies, they have absolutely no regard for the dictates of justice so long as they gain nothing thereby. *We cannot hope to revise the treaties on the plea of justice, but must manage to attain our desires in conformity with the circumstances under which we are placed.* If justice is ineffectual in prompting the revision of the treaties, we must take all those circumstances into consideration which indicate the comparative degree of the difficulty or necessity of treaty revision. Those parts of the treaties which require immediate alteration should be at once undertaken, while all modifications of a less important nature should be reserved for future adjustment. Any attempt to effect revision for the simultaneous restoration of both rights is likely to result in their loss. All are familiar with the fact that extraterritoriality is a national curse, and that it obstructs the progress of our administration. Our patriots unanimously desire to see it abolished; while the Japanese people at large have shown a spirit of hostility towards the one-sided and arbitrary measures of our allies, who scheme for nothing but self-profit, even at the risk of their own honour, and in utter disregard of the fact that their proceedings are liable to be stigmatised as unjust and tyrannical. The fact that the Treaty Powers still cling obstinately to extraterritoriality has aroused the uncontrollable anger of the Japa-

nese. So long as this iniquitous system obtains, the relations between foreigners and ourselves can never be consolidated. Yet unbiassed retrospect shows that aliens have a shadow of reason in still claiming extraterritorial privileges: *and this is the not yet perfected improvement of our internal administration.* Properly speaking, right and duty stand on an equal footing. Should we desire to obtain a right, we must perform some equally necessary duty. Aliens enjoy a freedom of pen and speech which we are far from holding. They have fine Commercial Codes and Laws of Property, which we do not possess; they have a Civil Code, Trial by Jury, and Codes for the protection of life and property, all of which have not yet been established in Japan. There are innumerable other advantages which they enjoy to the full, but which we do not own. It may very possibly be due to these circumstances that they persist in maintaining the extraterritorial system, little caring how much they thus encroach upon our rights. In order to do away forever with extraterritoriality, we must considerably improve our internal administration, so that aliens can have no pretext for rejecting our just claims. So long as they have the least semblance of justice on their side, they will adhere most persistently to the present system, without giving a thought to the propriety or impropriety of their actions. Is it then not perfectly clear that, as matters stand, we shall experience the utmost difficulty in the restoration of our autonomic rights?

On the other hand, there is absolutely no reason to refuse our proposals for the increase of the import duties in order to benefit the customs' revenue, no matter how self-willed and arbitrary our allies may be. They not only possess no valid reason for refusal, but will rather approve of this step, so long as we appropriate the surplus funds to some notable enterprise. In the thirteenth year of Meiji (1880), our Government submitted to the Treaty Powers a scheme for the increase of the import tariff to an average of 15 per cent. *ad valorem.* Taking this as a basis for our calculation, and supposing that the imports reach an annual total of 32,500,000 yen, we should have a revenue of somewhat more than 4,870,000 yen. And if this amount could be realized, we might do away entirely with the export duties and still have a yearly surplus of more than two million yen. Again, though the price of imports may rise in like ratio with the increase of the tariff, their increased value will virtually lead to a reduction of the land tax, and the purchasing power of the people would by no means be curtailed; and if this be true, there is no reason why the imports should fall off in bulk. Foreigners, too, would not sustain any loss, but would rather enjoy the greater advantage of purchasing domestic products at lower rates. The economical management of both central and local administrations would enable the Government to reduce the land tax by seventeen million yen. *This arrangement thus increases the tariff by two million yen, while it decreases the burden of the people by seventeen million yen.* The purchasing power of the people would herewith be greatly augmented. As the abolition of export duties will increase the amount of exports, and as the reduction of the land tax gives the people greater license to purchase and promotes the import trade, so will our foreign commerce attain a great degree of prosperity, beneficial to all alike. Foreigners are exceedingly shrewd in looking after their own profits, and there is no reason why they should not recognize in this instance the greater advantages which will accrue to them. And so surely as they recognize these advantages they will not refuse to revise the tariff. So far as the actual state of affairs is concerned, agriculture demands the immediate adoption of measures for its protection. Apart from the increase of the customs' duties, we must afford facilities for the development of our agricultural interests, in which lies the true source of national wealth. Should we explain all this to the Treaty Powers, they could not possibly reject our propositions. Hence it is plain that, although it may be difficult to abolish extraterritoriality, it is comparatively easy to augment the import tariff.

THE NECESSITY OF THE RESTORATION OF THE RIGHT OF TARIFF REGULATION BEFORE THAT OF JURISDICTION.

We have shown that the difficulty in obtaining the two great rights simultaneously is well-nigh insurmountable. Extraterritoriality is beyond all doubt highly detrimental to the progress of national administration, as well as to our reputation as a free nation. We can hardly wait for the time when it will be utterly done away with. Yet, so long as foreigners are confined to their settlements, and so long as the Government persists in the maintenance of restrictions upon residence in the interior, it is quite unlikely that the welfare of this nation will be

seriously endangered. If circumstances require our so doing, we must patiently submit to extraterritorial abuses, and take active measures for the improvement of our internal administration, so that foreigners can have no possible excuse for replying to our proposals in the negative. Should our people have full freedom of speech, and should the Government establish Civil Codes, a Commercial Code, a codified Law of Property—in fact, all those codes and laws which Europeans and Americans regard as the very stronghold of liberty, and ostentatiously point to as the source of national supremacy—our allies could no longer urge any reason for not agreeing to the abolition of extraterritoriality, however thoroughly selfish they may be. *If they should then still persist in their refusal, we should have no alternative but to oppose them with as great a force as the country could put in the field. We are truly most sincere in our desire to recover the right of jurisdiction over aliens, and are, therefore, ready to adopt any course of action that may enable us to attain our desire. But, as matters stand, the restoration of our rights is attended with almost insurmountable difficulties.* Nevertheless, the revision of the customs' tariff is not nearly so difficult an undertaking. So far as the regulation of the tariff is concerned, our allies have no reason to reject our claims; and the present system is harmful to our interests and rights alike. Look at the internal condition of Japan. Every year sees the taxation increased in a dozen different ways. A tax has been imposed even upon patent medicines and tobacco, although the revenue from these sources can but be insignificantly small. The import tariff alone stands on the old five per cent. basis, and the Government thus loses annually several million yen from the most iniquitous and unjust of causes. Moreover, the fall in the value of rice has well-nigh made it impossible for our agriculturists to pay their taxes, and extensive rice-lands are on the verge of becoming desolate and deserted. The Government cannot do away with the export tariff in order to encourage domestic industry, for the simple reason that the customs' revenue is even now a mere bagatelle. Our farmers are forced to give fully one half of their produce towards defraying the expenses of the administration, while the import tariff does not exceed five per cent. on the original values of articles which are comparatively low-priced. This is bitterly unjust. And all the while the revision of the tariff is as easy as the restoration of the right of jurisdiction is difficult. It is to be hoped, therefore, that as present circumstances forbid the satisfactory modification of all contested points, measures will be at once adopted to restore the right of tariff regulation before all else. It must, however, be borne in mind, that this step can only then be taken when some grave and truly unavoidable obstacles prevent our attaining our original desire. For, as far as possible, we must strive to effect the simultaneous restoration of both rights.

THE NECESSITY OF DISTINGUISHING BETWEEN FRIENDLY AND COMMERCIAL TREATIES.

Treaties of amity differ considerably from purely commercial conventions. When one nation enters into intercourse with another and concludes an agreement for the development of mutual goodwill, it is not necessary to revise the articles of this agreement so long as friendly relations are maintained. The case is different with commercial treaties. Whenever a change takes place in the production of commodities or in other commercial matters, the revision of the treaty stipulations becomes inevitable; and it is but natural that such changes should occur from time to time. In point of mutability, commercial stipulations differ greatly from amicable conventions. As these two sorts of treaties are so widely different, special provisions should be made to keep them clearly distinct from one another. For this reason, both should stand on an independent basis. When this country first began intercourse with other nations, our relations with foreign powers were limited strictly to commercial transactions, and our political administration had absolutely no connection with any nation beyond our own borders. The treaties were in consequence based on commercial principles, and the provisions for "peace and friendship" were attached merely as a sort of formal political preamble. The modification of the trade stipulations and that of the main treaties were fixed for one and the same period. No distinction whatever was made between commercial and friendly stipulations. At the time, circumstances may have necessitated such an arrangement; but our present intimacy with foreign powers grows greater and closer every day, so that our treaties bear important relations not only to commerce, but to our own political administration. And all the while the complex nature of our commercial position necessitates an immediate change in our mutual status. So that, *if friendly treaties of a permanent nature are to be*

confounded with commercial treaties, which, in accordance with circumstances require frequent alteration; and, if these two treaties are both to undergo modifications at one and the same period, serious disadvantages and inconveniences will inevitably be the result. Despite this very evident fact, no distinction is made in our treaties between commerce and amity, so that whenever we wish to modify any of the tradal stipulations we are forced to deal with the whole. Even a proposal for the revision of one single clause or provision can only be brought forward under the high-sounding heading of "treaty revision." If an accurate and precise distinction had, from the outset, been made between friendly and commercial stipulations, and if the period for modification had been different in the case of either, no such intricate complications as those which have now arisen could ever have occurred: the tradal conventions as well as the question of extraterritoriality might each have been separately discussed. Had this been the case, treaty revision might have been effected with much less difficulty. We can thus reasonably assume that the confusion of the two treaties at the very outset is the direct cause of our present troubles.

THE ADVANTAGES OF MIXED RESIDENCE.

It is unquestionably true that were foreigners to enjoy the privilege of residence in the interior such an arrangement would prove beneficial to the nation. Aliens are far superior to the Japanese in point of intelligence, wealth, and stubborn perseverance. Their active lives stand in strong contrast to the happy-go-lucky characteristics of our countrymen. And so, were these wise, rich, and energetic aliens to carry on trade in the interior, they would certainly acquire overwhelming influence over our own merchants, and derive large profits therefrom. Yet their actions would just so surely arouse this careless and antiquated generation from its long, unhealthy years of lethargy. Our countrymen would soon perceive the necessity of enterprise when they saw the full force of the activity of foreigners; were they to lose their means in the commercial contest with aliens, they would have to devise some method of regaining them; were they exposed to insults in social intercourse with aliens, they would speedily contrive to wipe out their disgrace. Although they ran the risk of losing their money in trading with foreigners, their losses would be counterbalanced by the development of their intellectual capabilities, as well as their dormant energies, which could be aroused only by actual contact with their rivals. Moreover, were foreigners to reside in the interior they would carry with them an immense capital, in order to engage in some industry or trade; so that those manufactures and commercial enterprises which have been abandoned or fallen into desuetude from want of funds would quickly revive, while the local authorities, who, accustomed to deal with a submissive and indolent people, fulfill their administrative functions after a most listless and hap-hazard fashion, would find themselves face to face with the audacious, overbearing foreigner, and they would thus have to make a mighty alteration in their policy. The removal of all restrictions placed upon mixed residence will certainly cause an influx of foreigners; it will tend to arouse our apathetic countrymen from their long slumbers; it will cause our industries and commercial enterprises to prosper, and will give a decided impetus to the improvement of administration. Is not all this highly beneficial to the country? Yet it is worse than childish to consider the matter of mixed residence solely from the standpoint of the probable consequences; nor can we conscientiously treat the subject in this light alone. Some eight or nine years ago, our thinking men, trusting in their own abilities, discussed the question of mixed residence at great length; but some confined their arguments solely to the advantages of the proposed system, while others could talk of nothing but the attendant disadvantages. Public opinion has, since then, made remarkable progress, and the intellectual classes now direct their whole attention to practical social phenomena, and have ceased to express vague and useless opinions on far-fetched themes. So that, in conclusion, it is absolutely necessary to consider all the relations that mixed residence may bring to bear upon society before we can determine whether it is to our advantage or to our disadvantage.

THE ADVISABILITY OF PROHIBITING MIXED RESIDENCE UNTIL THE INTERNAL ADMINISTRATION BE IMPROVED.

Although mixed residence is attended with certain advantages, the time has not yet come to remove the restrictions imposed upon foreign sojourn in the interior. The imperfect development of our internal administration is a serious obstacle. Any reckless removal of the present restrictions will considerably impede the progress of administration, and tend also to jeopardize our national

prestige. Foreigners are already only too willing to despise us, and if they are permitted to enjoy the same privileges as do the Japanese, even the authority of the Central Government will prove ineffectual in keeping them under control. The difficulty of enforcing their observance of the local administration can be easily imagined. Careless of the authority of our Executive, and despising us at heart, their haughty selfishness will reach a most extravagant pitch. Whatever inconveniences they may suffer will be at once laid to the door of the local authorities. And should they fail in their demands for redress, they will at once endeavour to evade the enforcement of the local administration, in proud reliance on the strength and power of their native countries. Granting even that they would treat our countrymen with respect and readily submit to the authority of our local administrations, they would naturally feel a high degree of dissatisfaction upon entering our country and perceiving that the rights enjoyed by us are not to be compared with those which they possess under their own liberal Governments. This feeling would eventually lead them to criticize adversely our administration, and to complain of everything on all occasions. *Should we not grant these complaints an audience, they would inevitably attempt to evade the enforcement of the administration; while if we listened to them out of sheer timidity, our national prestige would be irrevocably lost.* We may thus logically conclude that, were we to grant aliens the privilege of residence in the interior before the improvement of our internal administration is actually completed, formidable political obstacles would arise, and our honour as a nation be endangered. If it is impossible for us to set about improving our domestic administration without bearing the brunt of foreign opposition and menace, let us meet these administrative exigencies with fortitude, and suffer our disgrace in silence. *If we fear the immediate consequences, we must still remember the ultimate advantages of mixed residence. Yet we confidently assert that both the Government and the people are able to improve the domestic administration without encountering the ill-will and menace of our allies.* Before we sanction foreign residence in the interior we must introduce considerable reforms into our internal administration, in order to avoid national disgrace and political deadlocks.

THE NECESSITY OF PROHIBITING MIXED RESIDENCE UNTIL THE COMPLETE RESTORATION OF THE RIGHTS OF JURISDICTION AND TARIFF REGULATION.

If we once remove all restrictions imposed upon foreign residence in the interior, we will become virtually unable to revise the present treaties, to restore the one-time reputation of our nation, and to keep the selfish instincts of our allies within bounds. All the hope we have of treaty revision is based solely on the prohibition of mixed residence. We can only make a demand of the Treaty Powers when we have something which they wish to possess. *International relations can be maintained on an equal footing only when mutual demands present no marked degree of difference.* If one nation ask a favour of another, without receiving a request in return, their rank is perforce vitally different. What we now have to request of the Treaty Powers is the revision of the customs' tariff and the abolition of extraterritoriality. These are truly no insignificant requests. *Should aliens see that we have nothing to give them in return, they would never accede to our demands, even though we appealed to them in the name of justice and humanity, and without exercising the authority of an independent nation.* In the prohibition of mixed residence we have, fortunately, a barrier which keeps them from trading freely in the interior. They have already expressed their earnest desire to see this barrier removed. Whenever we ask them to do us a favour they are always ready to request in return the removal of restrictions upon residence in the interior. But if we accede to their demands before our requests are granted, we should have nothing more to give them, and so be the sole petitioners. The only alternative left to us would then be to postpone the revision of the treaties until the strength of the country would intimidate them. *As this case is by no means purely hypothetical, we urge that the prohibition of mixed residence should be maintained as a security for the restoration of our rights.* To permit mixed residence before the complete abolition of extraterritoriality would be to let so many ravenous wolves loose in the interior of Japan; for these aliens might then commit what ravages they liked without fear of punishment on the score of this nation's law. *We might just as well sanction the formation of a number of independent states from end to end of the Empire.* While we fully recognize the advantages that are likely to result from mixed residence, we still urge the maintenance of the present restrictions so long as matters stand as they do.

THE ENGAGEMENT OF FOREIGN JUDGES.

Our Government is well aware of the necessity of abolishing extraterritoriality and of maintaining the restrictions upon mixed residence until its complete abrogation. But the foreign correspondence which has reached us intimates that the Government proposes establishing Courts of justice, where suits involving foreigners are to be tried by tribunals composed of Japanese and foreign judges; that the latter jurists are to be engaged by the Government in foreign lands; and that, if the Treaty Powers agree to this arrangement, the country will be thrown open. Whether these statements are correct or incorrect, we know not. Nor are we able to find out whether the so-called opening up of the country means simply the permission to travel and trade in the interior, without the right of residence; or whether it includes the right of possessing landed property in the same manner as do the Japanese themselves. At all events, it is certain that there are great difficulties in obtaining the approval of our allies to the schemes we have mentioned. So many nations have entered into treaty relations with us, that were we to engage judges from each the entailed labour and expense would be truly formidable. And yet, were we to engage jurists in one country and not in another, those countries not represented in the legal contingent would be extremely discontented. Among all the seventeen Treaty Powers, Great Britain, France, and the United States are the most intimate of our allies, and it may be supposed that the engagement of judges belonging to these three nations would satisfy all the rest. Granting this even, obstacles would be found in the imperfection of our legal system, and the ignorance of foreigners with regard to Japanese Law. What we desire to see established are not mixed courts of this description, but we hold that foreign lawyers should be engaged, who, in conjunction with Japanese judges, might examine into the merits of the cases brought before our Courts of justice. These lawyers would be required to administer Japanese Law; but what should we do when cases arose which must be tried in accordance with codes which we do not yet possess? The imperfect condition of our legal system could not fail to make many difficulties, even though the law were administered by excellent judges. *If the judges engaged in foreign lands were free from prejudice and thoroughly impartial, matters might run on smoothly; but if they show favour in behalf of their compatriots, or incline towards partiality, our foreign relations would at once become critical.*

Placing ourselves for a moment in the position of foreign judges thus employed, we see that the object of their presence in our Courts would be the protection of their countrymen's interests, and that being thus required to safeguard their own people, they would ultimately come to regard themselves as advocates rather than judges. Under these circumstances, a spirit of partiality would necessarily be engendered, and any attempt on the part of the foreign judges to be equitable and disinterested would probably beget troubles between themselves and their nationals, since the latter would be content only with judgments favorable to their own cause. Partiality and prejudice would, in short, be unavoidable features of such a system. Yet, on the other hand, it would be incumbent upon us to set our face against any display of favoritism, and disputes calculated to disturb our international relations might easily be the outcome. Further, if we consider the arguments advanced by foreigners in support of the maintenance of extraterritoriality, it appears that those arguments are invariably based on the supposed incompetence of our judiciary and on the reluctance of westerners to submit to Eastern Laws. There can be little doubt that such pretexts are in the main prompted by arrogance and ignorance. Yet even granting our inferiority and the incompetence of our judges, it cannot be pretended that judges engaged in foreign countries would have any knowledge of our laws or be in any degree familiar with our social conditions. How would it be possible for foreigners to feel secure in the hands of officials administering laws with which they have no acquaintance? Considering that westerners never cease to find fault with our jurists, dubbing them all incompetent and inexperienced, it is difficult to see how their own high standard of judicial attainments would be satisfied by judges administering strange and alien statutes. Unless we are much mistaken in the views we have set down here, it appears to us that the scheme for the employment of foreign judges ought not to be carried out without grave consideration. Should foreigners urge the removal of restrictions upon mixed residence and at the same time refuse to restore our judicial autonomy, their demand must be set down as wholly unreasonable, and our Government ought not for a moment to think of complying with it.

KOREAN CORRESPONDENCE.

(Translated from the *Mainichi Shimbun*.)

Cho Hi-sik, the Magistrate of Inchhōn, has been appointed Commander of the Northern Troops, and has been instructed to strengthen Korea's military position along the northern frontiers. The Government will despatch a number of students to Japan in order to study the method of vaccination, which they will afterwards practice on a large scale throughout the Kingdom. Although the Koreans have, as a rule, large families, half of their offspring die from small-pox in their infancy, and the bereaved parents, strange to say, do not mourn the death of their darlings from small-pox as much as they do when they fall victims to some other diseases. So soon as a case of the fatal epidemic has made its appearance in a household, the inmates clean and decorate the rooms with the usual *shime*, or straw ropes, as if entertaining a guest. In fact, small-pox is generally called *sonnin*, i.e. a respected guest. It seems that the parents would not look upon their sons as worthy scions of the race unless they had at some time passed safely through all the stages of this fearful disease. There are no dykes, water-wheels, or similar contrivances in Korea, and long drought or continued rain is invariably followed by agricultural distress.

(Translated from the *Fiji Shimpō*.)

The inhabitants of Sōul, though not particularly virtuous, are not particularly fond of games of chance. Even coolies who spend their idle moments in petty gambling, rarely let the stakes exceed three or four *sen*. The daily wages of the street-savengers and their congeners are from 30 to 40 *mon*. Carpenters and paper-hangers get one or two *riyo* a day. Female servants can be hired without paying wages, and they consider themselves lucky if they get a dress now and then. Three soldiers of the Chinese Garrison were recently condemned to death for smoking opium. Despite strict military regulations and the probability of capital punishment, every member of the Chinese troops will smoke opium whenever occasion offers. The death penalty inflicted upon the three unfortunate hedonists was meant as a warning to their comrades, and yet this abominable practice remains the one favourite luxury of the soldiers. A Russian man-of-war is in the harbour at Inchhōn, and brings, it is supposed, the envoys who are to conclude a treaty with Korea.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—TUESDAY,
3rd June, 1884.

P. BOHM V. G. BUTLAND.

This was a petition to obtain possession of the books, vouchers, monies, and a statement of accounts of the business carried on under the name of George Butland.

The plaintiff in his petition stated that he had engaged the defendant as manager of his undertaking business. That the defendant agreed to pay to him all monies received, and afterwards receive his remuneration. The books were to be kept at plaintiff's office. That he had frequently applied to the defendant to keep to the agreement, and he had refused to do so. Finally he demanded from the defendant all the books, vouchers, goods, utensils, and money, also a statement of the accounts up to the date when the defendant left his premises. This he refused to do. The petition therefore prays that the defendant may be ordered to comply with plaintiff's demands, and also pay the costs of this suit, and that plaintiff may have such further relief as the nature of the case may require.

The defendant, in his reply, stated that he did not under the circumstances, consider himself manager of the undertaking business. By mutual consent, as the carrying out of the agreement was found inconvenient, he was allowed to keep the books in his office, which was in plaintiff's compound, where they were always open for his (plaintiff's) inspection. Plaintiff also agreed that that he should collect all monies and pay all the accounts. The plaintiff had supplied goods at most exorbitant prices. The business was carried on in defendant's name, but he denied that the plaintiff had ever asked him to act up to the

agreement dated 30th January, 1883. He admitted receiving a letter dated 25th April, 1884. All the articles applied for excepting the books and vouchers had always been in the plaintiff's possession. He considered that as the business was in his name he was personally responsible, and he therefore held the vouchers. A true statement of accounts up to the 31st March, 1884, had been made up, which showed a balance of \$217.28 in plaintiff's favour, of which \$100.00 had since been paid, and balance would be paid as soon as collected.

Plaintiff stated that the defendant had been engaged in his service since 1878. In 1882 the defendant handed him an account current dated 31st October, which was made up to cover a fraud which had been committed upon him by removing his property out of his reach. He applied then to the British Consul, and through his influence the defendant was brought to his senses and an amicable arrangement was arrived at by which he received a promissory note for \$800.00 in settlement of everything. Plaintiff stated that on the 30th January they made a new arrangement (letter produced) by which defendant agreed to act as his manager, the books to be kept in his office, and the defendant to hand over all monies collected. The defendant was to receive a half share of the profits, a quarter of which was to go towards paying off the promissory note and a quarter for defendant's private use. Defendant was also to be paid \$2.00 per diem for all work outside of the undertaking business. After this he wrote several letters demanding the accounts and vouchers (put in), and on the 15th April he dismissed him. The only letter he received from defendant was one denying that he was his servant, and stating that, if he did not wish it, he would use no more of his goods. The defendant having been his manager, he thought that when he dismissed him he was entitled to the books and vouchers so that he could check them, as he believed the books had not been properly kept.

Defendant thought he had a right to keep the books and vouchers till the case was settled. He had no objection to the books being examined.

His Honour thought it would be better to have the books put into Court and examined by a person appointed by the Court.

Plaintiff said this would be a great expense, whereas if he did it money might be saved.

His Honour said the plaintiff might look at the books, but he could not order them to be handed to him till it was decided whether the defendant was his manager or whether he was in business on his own account.

Defendant said he could not be Mr. Bohm's manager, or he could not have put the advertisement in the paper transferring the business. He had been charged 350 per cent. profit on all goods used. He was forced to sign the letter of agreement, as Mr. Bohm locked him up till he did so.

His Honour said he would go through the books himself, and the case would stand adjourned till there was a settlement as to accounts.

THE SAME V. THE SAME.

This was a claim for the sum of \$800.00 on a promissory note which the defendant had given to the plaintiff in settlement of all accounts between the parties up to the 30th September, 1882.

The plaintiff in his petition stated that defendant had given him the bill of exchange and since then had acted as manager of his undertaking business. He would have been satisfied to receive it in small payments, but the defendant, in spite of frequent demands, had not paid him anything whatsoever on account.

His Honour said that it appeared that no answer had been put in, there had been some question of a counter claim but that also had not been put in.

Defendant said he had sworn an affidavit and was prepared to show that he had worked for the plaintiff for four years without any remuneration.

He applied for an adjournment of the case that he might obtain legal advice.

Plaintiff thought the evidence was so clear that it would be only a useless delay, and if Mr. Litchfield took up the case he might be asked to deposit costs.

His Honour granted the application for adjournment on condition that defendant instructed Mr. Litchfield not to apply for security for costs, and adjourned the case till Thursday the 5th instant.

THURSDAY, 5th June, 1884.

Mr. Litchfield appeared for the defendant.

Mr. Litchfield wished to be allowed to put in an answer to the petition, and also to file a counter

claim. In accordance with rule of the Court No. 46, the summons had been returned and an affidavit stated that the defendant was employed in various capacities by the plaintiff, for which he had received no remuneration. It was only on the plaintiff promising to pay him for this work that he was induced to sign the bill of exchange, believing that there was a much larger sum due to him. He thought he ought to be allowed to answer, especially after the evidence adduced in the previous case. The matter was really a question of accounts, and he thought justice would not be done if, through a technical objection, the answer were not allowed. The answer was to the effect that defendant denied his indebtedness of \$800.00. He admitted giving the note, but at the time plaintiff owed him \$280.00, and it was only on plaintiff's promising to pay him that amount that he was induced to sign the note. He had not yet received the money, and desired to have it set off. Counsel asked that the answer might be allowed to be filed, or that plaintiff show good cause why it should not. As to the counter claim, assuming that the answer had been filed by leave of the Court, the Order in Council of 1881, gave this Court power to hear and determine suits between Englishmen and persons of other nationalities where the foreigner had obtained in Court and filed in writing submission to the Court. He would ask that the defendant be examined as to the nature of his claim, and how it had arisen, so long as it was shown that it was not made for vexatious delay. It would be a great hardship for the defendant to have to carry his counter claim into the German Court, as the plaintiff had been a constant litigant in this Court, and even if the defendant got his case in the German Court it was very doubtful whether the plaintiff was solvent.

His Honour said that, with regard to the counter claim, in the plaintiff's petition there was a promissory note in final settlement of accounts, and he did not know how the defendant was to get over the wording of it. The only relief the Court could give would be to suspend execution till the defendant had a chance of bringing his case in the German Court. As to the filing of the petition, he did not wish technicalities to interfere, but the defendant had been very negligent. Ten days before he had brought an affidavit and a similar answer, and Court had given him plenty of time to put them in order. The only condition on which he would grant the motion would be if the defendant paid into Court the \$800.00 and the costs, otherwise the case must proceed.

P. Bohm stated that on the 30th of January he received the promissory note in settlement of all accounts to the 30th of September, 1883. He was willing to receive it by small instalments. The arrangement was that Mr. Butland should pay half his earnings against the bill of exchange, but he had not done so. He had demanded the money several times, and, receiving nothing, brought this action on the 25th of April. He finally demanded payment in presence of a witness. He asked his Honour to give judgment in his favour.

In reply to Mr. Litchfield, plaintiff said—The promissory note was given to him on the 30th January, the agreement was given the same day. He could not say whether it was in the morning or evening. The agreement was signed in Mr. Clark's room. He did not know whether the agreement and promissory note were both signed at the same time. Mr. Butland made up his account and plaintiff his; it was an arrangement between the two. On the 30th January the defendant owed him for rent; this was included in the account. He claimed the rent when it was due, but as an account was running between them he allowed it to stand. The rent was for No. 119. At first it was \$15.00, afterwards \$25.00, and subsequently \$20.00. He did not know whether he had sent in an account for rent before the 30th December, 1882. He received an account from the defendant up to the 30th October, claiming \$4,900, being 49 months at \$100.00 per month. He had worked for him landing lumber, coal, etc., but not the whole time. He agreed before signing the promissory note to pay him a heavy amount for the work he had done outside of the undertaking business. He had paid him by allowing for it in the settlement arrived at on the 30th January something about \$1,200. This he deducted from the total amount of the accounts which he owed him. The account made up by defendant was to cover a fraud. The fraud was that the defendant ran away with his hearse and some other things. The property had not been sold by him to Mr. Butland in 1878. The advertisement transferring the business was not put in with his knowledge. He did not remember having seen the advertisement in the papers. In July, 1878, he thought he ceased to manage the undertaking business himself, and became a merchant. There was no arrangement for the transfer of the busi-

ness. There was no verbal agreement that Mr. Butland should pay him the sum of \$2,500.00 in instalments, and when it was paid the business should be transferred. He had been in Yokohama 14 years, and 13 years ago bought the business from Laufenburg and another, he also bought the two lots No. 114 and 119. He forgot what he paid for them. There was no dispute about the transfer of the lots, and no claim had ever been made on him about their having been handed over to him on trust.

G. Butland said he remembered the 30th January, 1883, when he signed the bill of exchange. The balance of account was arrived at at 8 o'clock at night in Mr. Clark's room. Mr. Bohm had charged him in his account for goods of which he knew nothing and others that he had paid for, and Mr. Clark advised them to draw up the promissory note in settlement, as it would be better to come to terms there than go into Court. He was constantly working for Mr. Bohm between 1878 and 1882, discharging ships, selling lumber, etc. He worked for four years and one month. Mr. Bohm had often agreed to pay him for the work done. The amount that Mr. Bohm promised to pay him was not included in the account which was settled by the promissory note. No account was made up on the 30th January. He signed the promissory note on the understanding that he should be paid for the work done.

In reply to the Court, defendant said he had told him at a previous enquiry that the note had nothing to do with the undertaking business.

To Mr. Litchfield—The note was for work done outside of the undertaking business. The account included rent for No. 119, that was all he knew about. The claim from Mr. Bohm for rent was \$1,063.33 with interest, double interest, and compound interest. He did not know how the account was reduced to \$800.00.

To His Honour—Bills were sent in to him for \$1,967.87, which included the one for rent. This was the first time he had received a bill from Mr. Bohm, up to that time he understood he was living rent free. The bills were handed to him before he made out the account to the 31st October. He could not explain how it was that the bills were dated 31st December.

To plaintiff—On the 17th January plaintiff demanded in settlement the sum of \$1,000.00. It was not of his own free will that he signed the note. He signed it rather than have any legal difficulty.

To His Honour—He supposed that the reduction between the amount of \$1,967.87 and \$800.00 was payment for part of the work he had done. He did not know how he came to sign on the note "in final settlement of all accounts."

His Honour asked Mr. Litchfield whether it were any use carrying on the case. Both parties had stated that the promissory note had nothing to do with the undertaking business.

Mr. Bohm wished to say that he had not said it had nothing to do with the undertaking business, for a portion of the account settled by the \$800.00 referred to that business.

Mr. Litchfield said he did not think it was necessary to continue the case.

His Honour said that the verdict, so far as the promissory note was concerned, would be for the plaintiff. He would remind the defendant that according to the rules, he had ten days to pay it in, after which execution could be taken out, but he could apply for suspension of execution if he intended to bring his counter claim in the German Court.

FRIDAY, 6th June, 1884.

W. BELLAMY V. J. J. EFFORD.

This was a claim brought by the late steward of the *Ise Maru* for his passage home.

Defendant acknowledged that he had engaged the plaintiff on the 21st June, 1883, as steward of the *Ise Maru* at £8 per month with two months extra pay, but denied that he was entitled to a passage home.

Plaintiff stated that—He joined the ship in Middlesbrough and went in her to Glasgow and from there to Cardiff. He was engaged by the week at the rate of £8 per month. The officers signed articles on the 8th or 10th of June. After this the ship went to Cardiff where the Captain shipped his crew. He asked whether he should sign and was told to sign on board. He received his advance at 4 o'clock on the day of sailing, without having signed the articles. He spoke to the Captain who said he would see about it. He signed after they had been six or seven days out. The articles were on the cabin table. His son, the carpenter, and himself all signed at the same time. It was more like kidnapping than anything else, as he had no option. The Captain said that it was all right, he did not wish him to return home but to stop out in Japan with

him. He asked how it would be if the Company discharged him, and the defendant said he would see that he got a passage home, saying "do you doubt me, you have been with me long enough to know me." Having been with him in several other ships, he had implicit faith in the Captain. He did not ask for a passage for his son as no arrangement had been made. Whilst at Shinagawa, the defendant received orders to go home for another vessel, and told him to pack up and go with him, but the order was cancelled. The steamer arrived here on the 20th October, 1883. After being here some time, the carpenter and seamen were discharged. At Shinagawa the officers went ashore and signed articles, he also signed, but the articles being in Japanese he did not understand them. He was not asked to sign off the old articles. After one trip to the West some of the officers were discharged, and got their two months extra pay and passage money. He received \$43.00 per month under the Japanese articles. On the 10th April the Captain said that he had received orders to discharge him and his son, and that he was going to Tokyo and would see about his passage. The next day when they were going to sea he told him that there was no time to settle then, he must go this trip, he had seen Mr. Irwin about the passage, and Mr. Irwin had said that he was entitled to one. On the 3rd May the Captain discharged him and gave him a letter to the office asking them to give him a 3rd class passage, all the others had had 2nd class passages. He took the letter to the office, and five days afterwards was told by a Japanese gentleman in the office that the matter had been brought before the Directors, who declined to grant the passage, as he had not signed to that effect and blamed him for trusting anyone without a written agreement. He also said they had granted him \$50.00 for good service. This at first he refused to take, but the gentleman said it was a present and had nothing to do with the passage; he therefore ultimately accepted it. He gave a receipt for the \$50.00, and was told to look to the defendant for the passage-money. He applied to the defendant on the 27th May, and afterwards was shown a letter from the Company acknowledging one from the defendant and saying they could not grant the passage but had given him \$50.00. He thought that he had been badly treated in not being allowed to sign ashore when he would have had the option of refusing. He did not bring this case through any animosity, but simply as a matter of law.

Defendant stated—The plaintiff was attached to the ship for some time in England, when they went to Cardiff they loaded and left in a hurry. There were no articles before a shipping master as the ship cleared under the Japanese flag. The engagement was not made before the Japanese Consul or a shipping master of any kind. He told plaintiff to meet him at his agent's office, but being busy he did not come. The agreement was placed on the saloon table and he (defendant) having to go on the bridge to take the ship out, told his officer to see the plaintiff sign it. They had bad weather for two or three days, after which he found it had not been signed. He then told plaintiff he had better sign it and put the papers away, which he did. That was all he knew about it. As to the conversation about his finding him a passage should he be discharged, it seemed to be a concoction of his own, he denied any such conversation. On their arrival in Yokohama the term of the agreement expired. He paid off the crew and gave them two months' wages in lieu of passage. He told plaintiff that he might go and he would try and get him a passage. After plaintiff had received the two months' pay defendant told him that if he liked to stop in Japan he would keep him as long as the Company would and would do the best for him that he could. He agreed to stop and signed a new agreement.

After the plaintiff was paid off he did not hear from him for some time. He gave him a letter to the Company, but told him that he did not think they would give him a passage, they might make him a present, which they did. Since plaintiff left the ship he had found him situations on two ships to go home in the capacity of steward. One ship was the *Pactolus* and the other the *Sattara*, which only went to Kobe and which, had he believed, been sold since, but it appeared to him that he did not wish to go.

His Honour said there was an agreement in writing, and after that was signed it could not be added to by a verbal statement. Even if he believed all that the plaintiff had stated it could not affect the written agreement. The agreement being to serve in a Japanese ship the signing before a shipping master was not necessary. The agreement said two months extra wages, which he had received, and said nothing about passage money. Judgment for the defendant.

NOTES FROM JAPANESE PAPERS.

The Italian Minister, who is to return to Italy about the middle of this month, will give a farewell banquet to the Japanese and foreign dignitaries on the 7th inst. It is rumoured that His Excellency will receive a higher appointment after reaching Italy.

The Russian Minister left for Yukao on the 3rd instant, where he will spend three weeks.

Forty-one silver-brokers who were arrested on the 10th of last month on suspicion of specie speculation have been sentenced to fines ranging from 40 to 100 yen. The fines amount altogether to 2,775 yen.

Wrestling is a favourite topic of conversation in the metropolis. Matches are going on in two places, Kobiki-cho and Nagasaki-cho. The ardent devotees of the popular game are untiring in arranging matches and the like.

The favourable growth of the silk-worms in Mayebashi, Joshu, has been considerably retarded by the late heavy rains. The worms will spin their cocoons on or about the 10th instant.

NOTE.—This report is incorrect; specimens of Mayebashi silk are already in the market, and a good many bales are expected on the 16th instant.

At Tomioka, Gumma, Prefecture, large numbers of workmen from the adjacent prefectures are employed in rearing silk-worms. The men are at work night and day. The worms have gone into the third stage, but the rearers are much concerned about the irregularity of the weather.

Four hundred naval recruits are to be enlisted in the south-western provinces.—*Fiji Shimpō*.

It is said that the two-hundredth part of the salary of every official in the Finance Department is to be handed over to the Treasury, in order to swell the fund for the construction of railways in the Hokkaido. In the case of an official resigning his post, the money will be restored with interest.

One of our deified sages once remarked:—"Japanese spirit, Chinese wisdom." We now say, "Japanese spirit, German wisdom;" for the staff of the *Seido Torishirabe Kiyoku* is to be divided into two parts, the one of which will commence a series of investigations of the German constitution, while the other will report upon the customs and institutions of Old Japan. So much, at least, for popular rumours.—*Fiyu Shimbun*.

A terrible murder took place at Mikacho, Tokyo, early in the morning of the 3rd inst. One Saze Kujiuro, living in the same ward, an old man, had a ruffianly son, at one time an official in the Military Department, but for some time dependent upon his father. The old man had severely reprimanded with his son, on the previous day, for pursuing a vicious and dissolute course of conduct, and this seems to have caused the younger man to resolve upon his heinous crime. While the neighbours were still asleep, the parricide killed his helpless father with a sword, wounded the latter's grandson, and then committed suicide by shooting himself.—*Mainichi Shimbun*.

PASSENGERS.

ARRIVED.

Per American steamer *City of Peking*, from San Francisco:—Mr. and Mrs. J. A. Coffin, Messrs. A. E. Kent, T. H. Richardson, A. E. Phillipene, H. Osborne, A. F. Thompson, F. E. Lewis, J. O. Averill, and J. L. Hartshorn in cabin; and 2 Europeans in steerage. For Hongkong: Mr. and Mrs. Ho Quong and child, Mrs. P. Saunders, and Mr. A. Rowe in cabin; 305 Chinese in steerage.

Per British steamer *Teheran*, from Hongkong via Nagasaki and Kobe:—Mrs. Morris and family, Messrs. Reiff and Mayesono in cabin. From London: Mr. and Mrs. Reid, Messrs. Black, Hardy, Lalande, Strauss, Ginsburg, and E. Lancaster in cabin; 5 Chinese in 2nd class, and 12 Chinese and 14 Japanese in steerage.

Per Japanese steamer *Takachiho Maru*, from Hakodate:—25 Japanese.

Per Japanese steamer *Kosuge Maru*, from Kobe:—48 Japanese.

Per Japanese steamer *Owari Maru*, from Hakodate and Otaru:—Mr. Dunn in cabin; and 20 Japanese in steerage.

Per Japanese steamer *Shima Maru*, from Yokkaichi:—38 Japanese.

Per Japanese steamer *Hiogo Maru*, from Hakodate:—24 Japanese in steerage. From Oginohama: Mr. Ono in cabin; and 24 Japanese in steerage.

Per Japanese steamer *Horai Maru*, from Yokkaichi:—73 Japanese.

Per Japanese steamer *Ise Maru*, from Oginohama:—5 Japanese.

Per American steamer *San Pablo*, from Hongkong:—214 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—Bishop and Mrs. A. W. Poole, Mr. and Mrs. Swire and servant, Mr. and Mrs. Hitch, Messrs. W. H. Hargart, E. Stollerfoht, C. A. Taylor, Ichiji, Kiwaki, and Shinowara in cabin; and 5 Europeans, 6 Chinese, and 168 Japanese in steerage.

Per Japanese steamer *Okame Maru*, from Toba:—12 Japanese.

Per Japanese steamer *Uke Maru*, from Shi:—15 Japanese.

Per Japanese steamer *Onoura Maru*, from Fukuda:—15 Japanese.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—36 Japanese.

Per Japanese steamer *Sekirio Maru*, from Oginohama:—8 Japanese.

Per Japanese steamer *Takasago Maru*, from Kobe:—Mr. Robertson and 4 Japanese in cabin; and 141 Japanese in steerage.

Per French steamer *Volga*, from Hongkong:—Mrs. Mantelin, Mr. Leopold Paulhan and servant, Messrs. Charles Steovey, L. A. Anderson, L. P. Michelson, and B. Kasakura in cabin.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—13 Japanese.

Per Japanese steamer *Tsukai Maru*, from Shimidzu:—11 Japanese.

Per Japanese steamer *Fayui Maru*, from Shimidzu:—14 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—54 Japanese.

Per Japanese steamer *Totomi Maru*, from Hakodate:—2 Europeans and 35 Japanese.

DEPARTED.

Per French steamer *Menzaleh*, for Hongkong:—Mr. and Mrs. Richard Lestarer and 2 children, Miss Omasson, Messrs. Davidson, William Attwell, Garberoglio, Water Scott, and Okawa in cabin.

Per Japanese steamer *Horai Maru*, for Yokkaichi:—Judge Nakajima and Mr. Cho Jin Kei in cabin; and 30 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, for Hakodate:—Mr. and Mrs. H. Ishii, Messrs. James Scott, T. Sakamoto, S. Shimidzu, M. Tatsuno, M. Togana, and S. Shibuya in cabin; and 150 Japanese in steerage.

Per American steamer *City of Peking*, for Hongkong:—Mr. and Mrs. Ho Quong and child, Mrs. P. Saunders, and Mr. A. Rowe in cabin; and 305 Chinese in steerage.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—His Excellency General Saigo, Colonel Tadjima, Major Ota, Major Grilu, Mr. and Mrs. Hearst, Mr. and Mrs. Kawasaki, Mr. and Mrs. Takeda, Mr. and Mrs. Kitawo, Mr. and Mrs. J. A. Coffin, Mrs. Murata, Messrs. F. E. Lewis, A. F. Thompson, H. Osborne, Wm. Bell, J. Calder, J. L. Hartshorn, P. Colombe, H. Budler, G. Hayashi, Miyaki, Yamamoto, Tanabe, Watanabe, Kobayashi, and Sakurai in cabin.

Per Japanese steamer *Kumamoto Maru*, for Kobe:—10 Japanese in steerage.

CARGOES.

Per British steamer *Teheran*, from Hongkong via Nagasaki and Kobe:—4,300 packages.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Treasure, \$183,000.00.

Per American steamer *San Pablo*, from Hongkong:—Sugar, 3,083 bags; Merchandise, 73 packages; 2 Parcels.

Per French steamer *Volga*, from Hongkong:—6,342 packages.

REPORTS.

The British steamer *Benlarig*, Captain Clarke, reports leaving Hongkong on the 25th May, at 4 p.m. with moderate variable winds and fine weather to Rock Island; thence to port fresh to strong N.E. winds and thick rainy weather. On the 28th May in latitude 28° N. and longitude 125° 40' E. passed British bark *Chateaubriand*, from Takao to this port.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Hakodate on the 1st June, at 10 a.m. with moderate S.E. winds and dense fog to Oginohama, where arrived on the 2nd, at 4 p.m., and left on the 3rd, at 6.10 a.m. with thick fog for three hours; thence to Inuboye variable winds and rainy weather; and thence to port N.W. winds and clear weather. Arrived at Yokohama on the 4th June, at 10 a.m.

LATEST COMMERCIAL.

IMPORTS.

With hardly any country orders in hand and not feeling disposed to speculate ahead, few dealers have been giving much attention to business, and the tone of the Market is extremely dull, but we do not alter quotations.

COTTON YARN.—Trifling sales have been made daily, but there is no general demand, and prices are more or less nominal.

COTTON PIECE GOODS.—There has been very little enquiry for Grey Goods, and prices may be considered nominal. Turkey Reds have also been in less demand, but velvets are readily saleable at full prices.

WOOLLENS.—Mousseline de Laine continues to find buyers for fair quantities at the reduced rates, but nearly all other Goods are difficult of sale.

Brown Formosa	3.40 to 3.45

EXPORTS.

RAW SILK.

Our last issue was on the 30th ult., since which date our Market has awakened slowly from its long sleep, and we have to report about 85 piculs purchased during the week. When last writing one large buyer was coquetting with a parcel or two of *Filatures*, which at last resulted in a purchase, thus reopening a Market which had been entirely closed for twenty-two days—a suspension of business without parallel since the great

"Kwaisha" agitation of 1881, at which time things were at a dead-lock from 15th September to 19th November.

Dealers are still anxious to sell, but their uneasiness is less marked since the market is once more open. All the business done has been in *Filature* and *Kakeda* sorts; but holders of other kinds profess their willingness to listen to any offers which may be made. A few New *Hanks* were shown at the *Maibashi* Market held on the 4th instant; price mentioned was 33 *momme*, equal to about \$485 per picul Yokohama, for ordinary first arrivals. A few native bales are expected on offer here by the 16th instant. This date is rather earlier than last year, the first purchase of *Hanks* being made in Yokohama on the 22nd June; it is to be expected that supplies will reach this port sooner and with more regularity, as the railway system extends.

Reports as to New Crop continue "all well." In Japan some little trouble was experienced through late frosts in *Shinshu* province; but this has passed away and we are promised an abundant crop of good quality. *Cocoons* are plentiful in the nearer provinces and reeling has begun. From Canton, the first crop is reported queer; but as there are six more to follow, the partial failure of one is not so very serious. From Shanghai the former estimate of 60,000 bales is confirmed, but we have not yet heard that the Market for New Silk is open. In France the *education* is reported finished with the result of 10 to 20 per cent. increase on last crop. In Italy all things progress, but the *raccolla* is not yet complete.

The M.M. steamer *Menzaleh*, which left this port for Hongkong on the morning of the 1st instant, had no Raw Silk on board. The Export figures to date therefore remain unaltered at 29,409 bales, against 27,511 bales last year, and 20,866 bales in 1882.

Hanks.—Nothing done for export. Some few arrivals have come to hand, but these have been more than counterbalanced by sales for internal use.

Filatures.—The *Koshu* mentioned in our last were finally sent back, the buyer taking in a large parcel *Shinshu* (fil. Tokosha) in their place. This lot was eventually weighed at \$630, and has been followed by a Settlement of *Koshu* Yajima, at \$570. *Nihonmatsu*, encouraged by the business done, asks \$650, but would no doubt accept something less.

Re-reels.—Owners asking \$610 for No. 1, but would, we think, be glad of an offer on that figure.

Kakedas.—Beyond a small parcel of Medium reported sold at \$530, there has been no business. A good parcel of 1 to 1½ could be had at about \$600.

England	2,639	4,294	3,532
Total	29,409	27,511	20,886

WASTE SILK.

Business has again fallen off, and Settlements recorded do not amount to more than 50 piculs. There are enquiries every day for *Good Waste*, but the required quality is not forthcoming, and in some cases buyers are beguiled into paying long prices for very inferior stuff. The first small parcels of New Waste may be looked for by the 15th proximo.

The French mail steamer *Menzaleh* on the 1st instant carried 85 bales for Europe; and the *Glenavon*, which sailed on the 2nd instant, is reported to have taken 4 sample bales to New York. These shipments leave the Export still about 1,000 piculs below last year's, the exact figures running thus:—Export to date 23,594 piculs, against 24,536 piculs last year, and 25,469 piculs in 1882.

Noshi-ito.—Some business done, including *Utsu-nomiya* fil. at \$155, *Hagiwara* fil. at \$135. Some *Foshu* inferior assortment reported settled, but the price has not been correctly ascertained.

Kibiso.—Nothing done beyond a few piculs *Filature* at from \$110 to \$115 according to quality.

Sundries.—A little *Kuzuito* noted at \$65. No business in *Neri*, prices asked being far above the ideas of buyers.

Exchange.—No change to report: Bankers would like to sell their dollars at higher rates, but have not been able to command any advance. LONDON 4 m/s., Credits, 3/9½; Documents, 3/9½; NEW YORK, 30 d/s., 90½; 60 d/s., 91; PARIS, 4 m/s., fcs. 4.75; 6 m/s., 4.77½. *Kinsatsu* have been worked up to something better than 109 per \$100.

Estimated Silk Stock, 6th June, 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	490	Pierced Cocoons	13
Filature & Re-reels	310	Noshi-ito	120
Kakeda	160	Kibiso	360
Sendai & Hamatsuki	100	Mawata	90
Taysam Kinds	10	Sundries	117
Total piculs	1,070	Total piculs	700

TEA.

Buyers continue to roll the ball as briskly as ever, notwithstanding that the latest wire quotations from New York still show a drooping Market. All grades of Tea have been represented, and the Teas grading Good Medium and Fine sorts have come in for the greatest share of attention. During the first part of week, the Market had an upward tendency and prices were fully half a dollar higher than the quotation given below. For the past few days, purchases have been less and as the receipts from the country exceed the Settlements by 1,500 piculs daily, the Market has again resumed its natural position and to day Teas can be bought at least a half dollar lower than our quotations indicate. The aggregate Settlements are 15,565 piculs, and the total Settlements since the commencement of the present season show an excess of about 5,000 piculs over the previous year at the same date. The steamship *Glenavon*, sailed on the 2nd instant for New York, via Amoy, with the following:—1,104,489 lbs. for New York, and 222,802 lbs. for Canadian Markets, making a total of 1,331,291 lbs. Tea from this port. The steamship *Claymore* sailed on the 4th instant and the steamship *Pembroke-shire* on the 6th instant, the former took 7,079 packages, and the latter 5,598 packages, all for New York. Weights of these shipments will be given in our next Market Report. The Market closes easy at the undernoted quotations:—

QUOTATIONS.

Good Common	\$13 to 15
Medium	17 to 19
Good Medium	20 to 22
Fine	23 to 24
Finest	25 to 28
Choice	32 to 35
Choicest	38 & up'ds.

EXCHANGE.

Rates have remained extremely steady throughout the week, and close firm at the following quotations:—

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health for
all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia,"
says—"I ordered the dragoman Mahomet to inform the
Faker that I was a Doctor, and I had the best medicines at
the service of the sick, with advice gratis. In a short time
I had many applicants, to whom I served out a quantity of
Holloway's Pills. These are most useful to an explorer, as
possessing unmistakable purgative properties they create an
undeniable effect upon the patient, which satisfies them of
their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds.
It acts miraculously in healing ulcerations, curing skin diseases, and in
arresting and subduing inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says
—"I had with me a quantity of Holloway's Ointment. I gave some to the
people, and nothing could exceed their gratitude; and in consequence,
milk, fowls, butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas, and the
demand became so great that I was obliged to lock up the small remaining
"stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

**J. & E. ATKINSON'S
PERFUMERY,**

celebrated for nearly a century past, is of the very best English
manufacture. For its purity and great excellence it has
obtained Nine Prize Medals, including London,
Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

**ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.**

White Rose, Frangipanne, Ylangylang, Stephanotis,
Opopanax, Jockey Club, Ess Bouquet, Trevol,
Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet,
and all other odours, of the finest quality only.

**ATKINSON'S
GOLD MEDAL EAU DE COLOGNE**

is strongly recommended, being more lasting and fragrant than
the German kinds.

**ATKINSON'S
OLD BROWN WINDSOR SOAP,**

celebrated for so many years, continues to be made as hereto-
fore. It is strongly Perfumed, and will be found very durable
in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR.

a new and indispensable Toilet accompaniment, and most
refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialties and general articles of Perfumery may be
obtained of all dealers throughout the World, and of the
manufacturers

KEATING'S COUGH LOZENGES

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges
contain no opium nor any deleterious drug, there-
fore the most delicate can take them with perfect
confidence. Their beneficial effect is speedy and
certain. This old unfailing family remedy is daily
recommended by the most eminent Physicians. In
use nearly 60 years.

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.
Sir,—Your Lozenges are excellent, and their beneficial
effect most reliable. I strongly recommend them in cases
of Cough and Asthma. You are at liberty to state this as
my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.
Indian Medical Service.

MR. T. KEATING.—Dear Sir,—Having tried your Lo-
zenges in India, I have much pleasure in testifying to their
beneficial effects in cases of Incipient Consumption, Asthma
and Bronchial Affections. I have prescribed them largely,
with the best results.

W. B. G.,—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold
by all Chemists, in bottles, of various sizes, each
having the words, "KEATING'S Cough Lozenges"
engraved on the government stamp.

KEATING'S WORM TABLETS,

A PURELY VEGETABLE SWEETMEAT,
both in appearance and taste, furnishing a most
agreeable method of administering the only cer-
tain remedy for INTESTINAL or THREAD
WORMS. It is a perfectly safe and mild pre-
paration, and is especially adapted for Children.
SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London.
Export Chemist and Druggist.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the “JAPAN WEEKLY MAIL,” must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 14TH, 1884.

DEATH.

On the 11th June, 1884, on board the Mitsu Bishi Steamship *Kumamoto Maru*, FREDERIK WILHELM IVERSEN, chief engineer, aged 40 years.

SUMMARY OF NEWS.

THE Russian Minister has gone to Yukao.

THE suspension of the *Choya Shimbun* has been removed.

A CASE of cholera is said to have occurred in Tokiyo.

HIS IMPERIAL HIGHNESS PRINCE ARISUGAWA TAKEHITO has joined the *Hiyei Kan*.

MR. ITOHEI, a well known merchant of Tokiyo and Yokohama, died on the 8th instant.

HER MAJESTY'S MINISTER and Mrs. Plunkett have returned from a short excursion to Nikkwo.

A DEMONSTRATION in honour of liberty was made by a number of youths in Nagano on the 1st instant.

THE Arsenal at Osaka has turned out two Krupp guns which are to be mounted on the fort at Kanonsaki.

MR. ANDO TARO, the new Japanese Consul at Shanghai, left Yokohama on the 11th instant for his new post.

IT is stated that the draft of the new commercial code has been submitted to the Council of State for final revision.

A TOLERABLY severe shock of earthquake was felt in Tokiyo and Yokohama at 11 o'clock on the night of the 11th instant.

THIRTY-ONE young noblemen (*Kwazoku*) have

been admitted to the Preparatory School of the Military College, Tokiyo.

SERIOUS disturbances are reported to have occurred at Kiyoto on the occasion of a lecture delivered by Japanese Christians.

A RECENTLY published return shows that the total value of the coins struck at the Osaka Mint since its opening is 15,292,633 *yen*.

THE Bureaux of Inland Revenue and Customs Revenue have been abolished and their functions assumed by the Revenue Bureau.

REGULATIONS relating to the registration and use of trade marks have been published by the Department of Agriculture and Commerce.

FORTY-ONE brokers of Yokohama have been sentenced to fines amounting in the aggregate to 2,775 *yen* for illegal transactions on 'Change.

THE proprietor, editor, and manager of the Tokiyo Punch have been fined 50 *yen* each for publishing a cartoon intended to defame His Excellency Ito.

A new carriage road over the Usui range of mountains in Nagano has been completed, and was opened by the Minister of Home Affairs on the 22nd ultimo.

THE ceremony of awarding diplomas to the graduates of the Gymnastic School, Tokiyo, came off on the 7th instant. Seventeen graduates received diplomas.

THE statement of traffic receipts upon the Tokiyo-Yokohama railway for the week ended 8th instant is \$10,322.11, against \$10,470.17 for the corresponding week last year.

NEWS from Korea is to the effect that post roads are to be constructed between Söul, Wonsan, Pusan, and Inchoon, and that the Government proposes to enter the postal union.

CONSIDERABLE distress is reported to prevail among the agricultural class in the district of Shimashita, province of Settsu, and an allowance of money has been made to them from the Agricultural Relief Fund.

THE British Consular Trade report of Kanagawa has been published. It shows a total decrease of 2½ million dollars in the trade during 1883, but says that, on the whole, profits and losses have about balanced each other.

A PLANT of machinery for the manufacture of sugar has arrived in Yokohama, and will be immediately forwarded to the Hokkaido, where it will be erected and worked under the superintendence of German *employés* of the Department of Agriculture and Commerce.

A BAZAAR in aid of the Tokiyo Charity Hospital for women and children was held by the ladies of Tokiyo in the *Rokumei-kwan* on the 12th, 13th, and 14th instant. About fourteen thousand tickets of admission were sold, and the affair was in every way a remarkable success.

NOTES.

THE Fancy Bazaar, of which we spoke in a recent issue, in aid of the Tokiyo Charity Hospital, is to be held at the *Rokumei-kwan* on the 12th, 13th, and 14th instant. Owing to the loss of a certain measure of support which the Hospital previously received from the Tokiyo Municipality, much difficulty is experienced in extending a sufficiency of medical aid to sick women and children among the poorer classes of the people. An appeal has therefore been made to the ladies of Tokiyo, with the result that they have entered heart and soul into the work, and prepared a number of simple but very beautiful articles to furnish a Bazaar. We believe that the handiwork of almost every lady of position in the capital will be represented, and as the handsome apartments in the *Rokumei-kwan* have been placed at the disposal of the Committee and decorated with remarkable taste, the Bazaar will offer exceptional attractions. It will also derive a special interest from the fact that it is the first enterprise of the kind in Japanese history. The ladies of this country, though individually their names have been frequently associated with acts of benevolent devotion and heroism, have, as a class, occupied a comparatively insignificant position, and there is, perhaps, no surer sign of the vitality of Japan's progress, than the improvement their status is now rapidly undergoing. Their habits were never governed, indeed, by those rules of strict seclusion which disgrace the civilization of some Oriental peoples. The Japanese lady was always expected to be sociable and unaffected. But she received an education based on the hypothesis that her sphere of influence and usefulness must necessarily be limited, and that beyond her household duties she had no interest in the events of her time. Many years must doubtless elapse before a radical change in these respects is accomplished, but the gentle sex in Japan has, at all events, one advantage; it has never been trained to think that sociability is immodest. Were not this the case, it is doubtful whether the liberal codes of recent years, even when supplemented by a charitable appeal, could have induced the ladies of Tokiyo to come forward with the unanimity they have displayed in the present instance. We confess that, although the wonderful metamorphoses this country has undergone since the Restoration have pretty well fortified us against surprise, it does require some stretch of credulity to believe that in two or three days the people of Tokiyo and Yokohama will have an opportunity of visiting a Fancy Bazaar and purchasing articles made and sold by the aristocracy of Japan in aid of a charity hospital. That the enterprise will be a success there can be very little question. Its novelty alone must secure a large attendance. It is under the patronage of their Imperial Highnesses the Princesses Taruhito and Takehito; the President is Madame Oyama, and the Vice-Presidents are Madame Ito, Madame Inouye, and Madame Mori. These ladies, assisted by about

Digitized by Google

It will be remembered that a telegram, dated London, May 9th, informed us of an open breach between the Marquis of Salisbury and Lord Randolph Churchill, in consequence of the latter's desire to reorganize the Conservative Party on a popular representative basis; and that another message, twenty-four hours later, described this political difference as "arranged substantially in accordance with the views of Lord Randolph." Everybody who has followed the recent course of English politics with any attention must have seen that Lord Randolph Churchill was purposely playing the rôle of a free lance, and that his apparent violence and indiscretion were, in the main, assumed for the purpose of preserving his independence. At Birmingham, on the 15th of April, he allowed his hand to be seen distinctly for the first time. He showed, as the *Pall Mall Budget* pithily observed, that the Conservatives are resolved to compete with the Liberals on their own line, and to be "better Radicals than the Radicals themselves." In fact, there are no longer two parties in England separated from each other by a barrier of principles. There are only two congregations of politicians, occupying different camps because both cannot hold office together. There were, of course, doubts as to the wisdom of the programme—peace, retrenchment, and reform—mapped out by the Conservative Thersites, but there could be no doubt that the great party needed a programme as well as some vigour in pursuing it. Lord Randolph, at any rate, having made his profession of faith, showed no symptom of wavering. He had been very recently elected president of the Union of Conservative Associations, and his election was regarded as an unmistakeable evidence that the Conservative rank and file were dissatisfied with Sir Stafford Northcote and Lord Salisbury, both right men enough, in their way, but in the wrong places. On the 5th of May Lord Randolph withdrew from the Conservative Union. His co-seceders were Mr. John Eldon Gorst and the Right Hon. Henry Cecil Raikes, and the aim of the secession was to form a new party, on a "Conservative democratic" basis. We cannot tell what may be the exact import of this new method of wheedling "the great democratic beast," but it does not appear to have immediately commended itself to the Marquis of Salisbury's judgment, as the telegram of May 9th shows. Lord Churchill asked the Marquis to consent to the establishment of a Central Council, which should "guide the electoral organization, advocate free education, and prepare measures having in view the subordination of the land question to social topics." The Marquis rebelled at first, but the prospect of a fatal split in the camp evidently forced his hand, and from the 10th of May the Conservatives set out on their travels by a new route to popular favour. They have at last a compass, such as it is, and its cardinal points are—the caucus; a large stride in the direction of what Herbert Spencer calls the "Coming Slavery," and a sort of left-handed recognition of Mr. Henry George's lunacy. A portion of this programme they can claim as their own, but of another portion it will unquestionably be said that they have paid their adversaries the compliment of borrowing an advanced leaf out of the Radicals' book.

QUITE a sensation appears to have been produced in English social circles by the marriage of the Grand Duke of Hesse-Darmstadt to the

Countess Alexandrine Czapski, daughter of a Russian Chamberlain. Louis IV. of Hesse-Darmstadt is now 47 years of age and has seven children, five of whom are living. He became a widower in 1878 by the death of the Princess Alice, whose daughter, the Princess Victoria, was married on April 30th to Prince Louis of Battenberg. It appears that the Grand Duke's marriage took place immediately after that of his daughter. His new wife is described as a lady thirty years old, of extraordinary beauty. She was formerly the wife of a Russian Secretary of Legation—de Kalemine—from whom she was recently divorced. The particular feature which lends interest to this affair is that the Grand Duke was the intended husband of the Princess Beatrice of England, whom, however, he was prevented from espousing by the rejection of the bill permitting marriage with a deceased wife's sister. He is by no means an opulent potentate, his whole income, so far as Hesse-Darmstadt is concerned, being derived from a civil list, amounting to some £60,000, out of which he has to pay allowances to other princes, his brothers and uncles. It was hinted, therefore, that his marriage with the Princess Alice was a welcome assistance to his treasury, as it brought him a dowry of £30,000 and an allowance of £6,000 per annum. He would probably have been glad to take another English Princess on the same terms.

THE Italian press laws appear to be sometimes enforced in a manner scarcely worthy of European civilization. A journalist was recently sentenced to a month's imprisonment for some display of disrespect to his country's institutions. The sentence does not seem to have excited any indignation. On the contrary, more than one of the culprit's *confrères* hinted that he had only been served as he himself desired. But the method of carrying out the judgment was not so satisfactory. The indiscreet writer was taken off to a prison called the Carceri Nuove, which is described as one of the most terrible dungeons conceivable, a veritable jail of the middle ages, hideously dirty, and constructed so that the persons incarcerated there never breathe a breath of fresh air. The journalist obtained a separate cell, which is a luxury that any prisoner can procure by paying nine francs a month, but when he asked permission to purchase some insecticide as a protection against the hosts of vermin that shared his seclusion, his request was peremptorily refused; and to augment his pleasures, he was not permitted to have pens, ink, paper, books, or newspapers. The Italian Code provides that the prison where journalists are confined for violations of the press laws shall always be different from the prison for ordinary malefactors, but it would seem that the code is not invariably followed.

THE Consular and Diplomatic Bill reported by Mr. Randall in the House of Representatives on the 26th of April, appears to be a very strange measure. The *New York Herald* thus sums up its provisions:—

First—It cuts off entirely the fund out of which the State Department has hitherto paid for the necessary official journeys of Ministers, and thereupon abolishes the mission to Bolivia and joins it to Chile without increasing the compensation of the Minister to that country. That is to say, it imposes on the Minister to Chile expensive journeys and troublesome duties, involving protracted absences from his important post, and requires him to pay the large extra expenses.

Second—The item for "foreign intercourse," which means contingent expenses, which has long been eighty-five thousand dollars, is cut down to fifteen thou-

sand dollars, and the bill provides that this shall be expended only for stationery, seals, flags, &c. It thus forbids payment for office rent, furniture for official work, care of archives, expense of moving, cost of telegrams, postage and travel, whereas in several cases, a Minister is accredited to two countries. If this section should pass as it stands, every Minister will have to pay out of his salary the postage on his despatches and the cost of his official telegrams, and the Secretary of State will have to pay out of his own pocket postage and telegraph money whenever he finds it necessary to communicate with a Minister abroad.

Third—All secretaries of legation who are not abolished are cut down in salary, so that hereafter, under Mr. Randall's ingenious plan, only men of wealth can afford to take such places. That, we suppose, is democratic. Second secretaries are cut down from eighteen hundred to fifteen hundred dollars. There are just three of these in the service, and Mr. Randall effects in this item the magnificent saving of nine hundred dollars.

Fourth—The bill also obliges consuls to pay official postage out of their own salaries, and by forbidding vice consuls to receive any money whatever, forces these officers to pay official postage out of their own pockets.

Fifth—The bill with singular liberality provides for marshals for four consular courts in China, "including Hongkong." Mr. Randall ought to ask the first schoolboy he meets, who will tell him that Hongkong is a British possession, where we can have no consular court.

Sixth—The appropriation for enforcing the neutrality laws is entirely omitted by Mr. Randall, who thus proposes to disable the State Department from taking measures to prevent new descents on Cuba and other attempts to violate neutrality.

Seventh—The bill abolishes consular jails in China, Japan, Siam, and Turkey, and allows seventy-five cents a day for the "keep" of each prisoner. Mr. Randall seems to be under the impression that in those countries consuls or Ministers having judicial powers may easily get their prisoners "boarded out." If this clause should pass, it would strike a blow at the very important extraterritorial jurisdiction on which rest safety and justice to American citizens in the countries named.

Eighth—Legation buildings at Peking and Tokio are rented for a term of years under an existing law. Mr. Randall in this bill refuses to pay the rent contracted for.

The Secretary of State has fortunately set his face against this cheese-paring policy. In a long report addressed to the President, he points out, with great force and clearness, the high functions which Ministers are called on to perform. "Ministers," he says, "represent to other Governments the interests of their own. Their powers, duties and privileges are fixed upon the basis of long existing general assent forming the law of nations. They are the necessary channels of communication between Governments. Nor are their duties confined, as has been somewhere stated, to the formal communication of instructions from their Governments, or to formal written documents. A Minister who so understands his duty is, to say the least, not a valuable officer. On the contrary, written official communications form but a small and comparatively unimportant part of his labours. * * * The duty of a diplomat is to seek to avoid issues by procuring a satisfactory settlement before a subject of formal discussion is presented. The essence of any such arrangement is its informality and secrecy. * * * The successes of diplomacy are, therefore, usually known but to a few, which, perhaps not unnaturally, has led to the belief held by many that with the introduction of the steamship and telegraph the duties of a Minister have ceased. But, however fast the mail or efficient the telegraph, neither can ever supply the place of the diplomatic agent, who advises his Government of the disposition of the other and conducts the personal negotiations under general instructions from home. The important duty of diplomacy is the daily work which attracts no attention, and is, in fact, successful in proportion to its silence and apparent repose." Mr. Frelinghuysen then combats the idea of combining Consular and Ministerial functions in one individual, and contends that, having regard to the important and multifarious duties discharged by Consuls at

such places as Shanghai, the Consular fees are in many cases inadequate. Few persons, we imagine, who have lived in the East will be found to deny this. The Secretary of State finally recommends that no action should be taken in the direction recommended by Mr. Randall's Bill, until the whole subject of the simplification and improvement of the Consular system shall have been investigated by a Commission, and the *New York Herald* hopes that "there are democrats in the House intelligent enough to see that their party cannot afford to adopt such curious rubbish" as the new proposals. If the Government of the United States were under any necessity to economize, the case might be different, but seeing that the difficulty is, not to accumulate funds, but to dispose of the present yearly accumulations, one fails to see why congress should be invited to put the screw upon a service already far underpaid.

It is plain that the recently concluded Congo Treaty is not likely to add much glory to the foreign policy of Her Majesty's present advisers. What is meant by "the Congo," Mr. Jacob Bright explains very succinctly in the *Daily News*:—"The region with which this treaty with Portugal deals lies between 5 deg. 12 min. and 8 deg. South latitude on the South-West Coast of Africa. It embraces both banks of the Congo, and has become of extreme importance, owing to the knowledge we now possess of this greatest of African rivers, whose flood is said to freshen the surface of the ocean for seventy miles. Cargo-carrying vessels can, according to the statement of Liverpool merchants, ascend the Congo as far as Bull Island, 12 miles from the mouth, and here goods have to be transhipped for trade beyond. At Vivi, 115 miles, navigation is closed by rocks and cataracts. From Vivi to Stanley Pool, a distance of 200 miles, there is difficult communication, partly by land and partly by water, and then commences free navigation for nearly 1,000 miles. The river has large tributaries, also navigable, and the productive character of the country is said to be great." On the Lower Congo are established many trading factories, the great majority of which belong to British, French, German, and Dutch houses, and the policy of Her Majesty's Government has always been to prevent the course of trade throughout the region being impeded by the imposition of burdens such as Portugal imposes on all her subjects. Yet by the new treaty, Portugal virtually acquires the power to do as she pleases on the Congo. Among the three declared objects of the Treaty, the second is "the complete extinction of the slave trade," and concerning this Mr. Jacob Bright pertinently remarks that "the slave trade is the only trade for which the Portuguese have shown a marked aptitude." Lord Mayo, no later than last year, was able to declare, as the result of personal observation, that a regular traffic in slaves is carried on between Angola and the island of St. Thomas under the auspices of Portuguese officials. "I do not know," says Mr. Bright, "where we could find greater credulity than that which would seem to exist in the Foreign Office, if they believe that anything on paper is likely to make Portugal suppress slavery in Africa." But the third object of the Treaty is, if possible, a greater burlesque:—"To promote the development of commerce and civilization on the African continent." Whatever commerce and civilization exist there at present, are due,

according to Mr. Bright, to the absence of the Portuguese. Mozambique is a specimen of Portuguese devices to promote commerce. Since 1877 the burdens imposed upon traders have been so tremendous that only one English house remains. Mercantile establishments have to pay from £1,000 to £1,500 a year for the right to exist there, and each employé in an establishment must pay a tax of £15 or £20 annually. No wonder that to be handed over to the Portuguese is regarded by the British merchants on the Congo as the worst fate that could have befallen them and the last thing they could have foreseen."

A REMARKABLE speech was delivered before Congress by Mr. Hurd, of Ohio, on April 29th, during the debate on the Tariff Bill. Mr. Hurd is an earnest opponent of protection, and his eloquence seems to be worthy of his logic. "On what ground," he asked, "should the Government interpose to help the business of one citizen at the expense of another? If a man's business were a profitable one, it did not need the protection of the government. If it were unprofitable, that was a good reason why he should not put his money into it, but no reason why he should compel his fellow citizens to pay two prices for the article he made in order to make good his losses. If he (Mr. Hurd) were compelled by legislation to pay \$150 for what would otherwise cost \$100, then the seller had been armed with the taxing power of the government to take from him \$50." Of course there is not much that is new to be said of the general doctrines of free trade. They have been set forth again and again by the ablest writers in terms that compel assent. Even protectionists themselves, in a majority of cases, do not pretend that there is any weak spot in the free trade theory. They admit that protection is contrary to the dictates of reason, yet still they protect. Mr. Hurd's statement, however, of the effects of protection on the United States themselves is well worth reproducing:—

The present American tariff was a high protective one. It increased the price of articles imported into this country more than forty-three per cent. It was perfectly manifest that its influence on our foreign commerce could only be deleterious. Trade was merely mutuality of exchange, and foreign trade was the exchange of products between citizens of different countries. Every hindrance to the importation of foreign goods was an embarrassment to commerce, for to the same extent it prevented the exportation of American goods. The country could not have a large exportation without having a large importation. Every tariff duty was a burden on foreign commerce, and it was doubly so, for it gave foreign nations an excuse for keeping out American goods. More injurious still was this system on the carrying trade, and it was the question of only a little time when, under this policy, the American flag would entirely disappear from the high seas. The tariff prohibited the importation of foreign vessels, and American capital, when it desired to engage in the carrying trade, must do so under a foreign flag. On the shipbuilding interest protection had been most disastrous. Nothing was clearer to his mind than that the destruction of the foreign carrying trade was the result of the prohibition of an American registry to foreign built vessels and the high price of raw material to shipbuilders. The oceans were free to all; any person might sail whithersoever he pleased; but in this free for all where was America? The skill of the sailor of every nation was there asserting itself except ours; fortunes were being built up for people of all nations except ours; and yet this was an ocean-bound Republic. Every ripple of the waters on the sea-shore was an invitation to enjoy the wealth of foreign nations, and every stormy wave that beat upon the crags spoke in thundering denunciation of a policy that would lock America out of the markets of the world.—(Loud applause.)—God speed the day when the divine thought of man's brotherhood to man would succeed the degrading and humiliating one of national isolation and foreign exclusion.

What was the effect of the ruinous system on the farmer? It increased the price of all articles which entered into his daily consumption, and this increase amounted to an annual sum of \$450,000,000. For this there was absolutely no compensation in the protective system. The system operated to increase the price of

the transportation of grain from the West to the seaboard and from the seaboard to Europe. When the grain of the American farmer reached Liverpool it came in competition with the grain of every other farmer of the world. The protective tariff of America was unable to help him there, and every dollar of increase of price which transportation occasions to him diminished the profits of his sales. But the protective tariff did more injury to the farmer in the injury it occasioned to his foreign market. It had already robbed America of one-half of the markets of the Old World. England, because the American tariff prohibited practically the importation of English goods, had sought to find food supplies elsewhere, and under the impulse of the necessity the most amazing fact of modern times had been developed. India, old and effete, had become to Great Britain the country from which her grain might be obtained. The effect of this on the markets of the United States within the last nine months had been a decline in the exportation of American cereals of more than \$47,000,000, and wheat had gone down in Chicago to less than eighty cents. And this development of the wheat production of India was entirely the result of the protective policy in America. I say, continued he, to the farmers of America, the prospect before you is not encouraging now. With elevators and granaries and warehouses all full of the old crop unsold, with vast fields greening to the coming harvest, with a crop unexcelled in India, with a splendid promise among all wheat growing nations, and with the price of wheat at less than eighty cents, the result will be inevitable that the price of wheat before January next will not pay for the price of production, and the corn raised on the Western prairies again will be burned for fuel. In that day the farmers will be beggars in the midst of their own plenty, paupers by the side of their own golden gathered sheaves. There is absolutely no relief except in foreign markets for agriculture.

The Morrison bill as it stood proposed a small reduction of the tariff, which must satisfy for the time the great agricultural interests of the people; but if the protectionists would not listen, would not accept a compromise, in less than a year the farmers would rise from the lethargy in which they were slumbering and would overthrow in an hour the whole protective system.

He went on to argue that the effect of the system was not beneficial to the manufacturing interests, but, on the contrary, was detrimental to them, in that it prevented them from securing free raw material. Oh! if I could burn into the brain of the manufacturers of America one sentence—he burst forth—it would be this:—"Turn from this constant introspection to the nations of the world. Down with the walls! Out to the sea! There are 2,000,000,000 people who want to buy what you make. Rise up to the truth of the great thought that these immense peoples can be supplied by you with all of the instruments of husbandry and the tools of artisanship. But they will not take your goods unless you take theirs. Let your tariff disappear, and then, O manufacturers! your attention will be diverted from the home markets to the generous rivalries of foreign trade, in which a wealth will come to you of which you do not dream to-day.—(Applause.)

It has been said that there is a mysterious but inevitable force which impels the civilized peoples of Europe to conquer and reduce to subjection the so-called barbarians of the Orient. And certainly this is true, if a general law may be deduced from a long series of unvarying experiences. At the same time, it is curious to note that the agent of this inexorable law is almost always chance. England's intervention in Egypt was due to causes which, most assuredly, were not contrived by herself; France was directed towards Africa by the blow of a Dey's fan, and the basis of the empire she is founding in the Orient was the obstinacy of an officer who chose to ignore his instructions. Moreover, all these aggressions are taking place in despite of public opinion at a time when that opinion is supposed to be supreme. The expedition to Tonquin was never popular in France until its success reconciled the people to it. So, too, an English Government supposed to be most *en rapport* with the masses, will probably fall because it refuses to annex Egypt, though if the national vote were taken, it would certainly be against annexation. The civilized world, in short, seems to be directed by accident in a sense contrary to its wishes. It would fain be just and conscientious, but circumstances are too strong for it, whether they take the form of a vertigo like that which at present possesses a

section of the French people, or a defiance, like that of the Mahdi and his fanatic followers. In many respects the Old Chinese philosophers were profoundly shrewd. They did not, perhaps, recognise that their fossil systems must crumble into dust at the first touch of the free air of Western civilization, but they understood plainly enough that isolation was the surest way to preserve the integrity of their country. There is another way, which Japan has chosen: namely, the adoption of Western civilization, and consequent admission into the family of militant nations. But China still sets her face against any such choice. Her statesmen have lost their touch of the times. In the very presence of facts which their ancestors only divined, they do not yet perceive that Europe has two consciences—a conscience of profession and a conscience of performance. The dictates of the former are wholly altruistic; those of the latter, equally egoistic. The one says, “love your neighbour as yourself;” the other, “trample your neighbour under foot, in obedience to a providential law which decrees that the inferior civilization shall be forced by the superior into the path of progress or annihilation.”

AMERICAN mob law, though by no means a national disgrace, inasmuch as it is motivated by a desire to punish crime, threatens to become indiscriminate in its action. Its latest performance was the lynching of a negro lad in Kentucky, whose crime was a theft of \$150. It was, certainly, a theft committed under very aggravated circumstances, inasmuch as the victim was an aged pensioner. But violence was not used, nor was there anything to distinguish the crime from many others that are thought to be sufficiently expiated by six months or a year in prison. The Burlington lynchings thought differently, however. About a hundred of them, mounted and masked, presented themselves before the jail in Burlington on the 4th of May, and received the boy from the jailer, whose resistance was merely of a formal character. Half-an-hour later, the corpse of a negro, aged eighteen, was dangling from the limb of a dead sycamore tree.

THE *Manchester Guardian*, quoting the *Japan Gazette* as its authority, says that foreigners, if they submitted to Japanese jurisdiction, would be “liable to imprisonment and fine if they engaged in larger transactions in exchange than usual.” We cannot tell whether the former journal has misinterpreted the latter, but the statement, as it stands, is singularly incorrect. The impression conveyed is, that the nature of the exchange transactions which a Japanese may carry on, depends entirely on the caprice of the authorities, and that if he speculates so largely as to attract attention, he is liable to be arrested and imprisoned. The truth is, that exchange transactions, of whatever magnitude, are not forbidden in Japan, nor is anybody arrested for carrying them on, provided only they are *bond fide* transactions. Speculating in margins is illegal, and certain taxes have to be paid by persons engaging in the business of exchange, but for the rest, there is no liability whatsoever to either fine or imprisonment. Everybody knows, too, or ought to know, that even these restrictions are imposed by special legislation to which the Government has resorted in the hope of checking currency fluctuations. We do not believe that the theory is sound, although financiers of the United States pursued a similar

course with regard to greenbacks. But that is neither here nor there. The law is intelligible enough. It offers no obstacle to legitimate business, and exposes no one to danger except those who deliberately violate its provisions. Foreigners may gamble in margins now as much as they please. They are beyond the reach of Japanese law, and they enjoy the privilege of being able to engage, with impunity, in transactions which the Japanese authorities have forbidden in the public interest. True, they would forfeit that privilege if they came under Japanese jurisdiction,—just as publicans would forfeit the privilege of selling spirituous liquors without a license,—and to some, perhaps, the forfeiture might seem a hardship. But we do not believe that such persons would receive much sympathy even from the journals which permit themselves to ventilate this baseless and laughable grievance.

* * *

The same paper, on the same authority, says that, under Japanese laws, foreigners would be “liable to have their premises broken into and all persons therein arrested on suspicion, and to have their newspapers confiscated or suppressed, with the incarceration of proprietors, editors, and printers.” The first part of this statement is diametrically opposed to the truth. The Code of Criminal Procedure explicitly provides that, except in case of flagrant offences, nobody may be arrested without a warrant, and that no house may be entered for purposes of arrest without preliminary measures analogous to those adopted in Europe. As for people being arrested on suspicion, we are not aware that any nation in the world enjoys immunity from that practice, nor is there a tittle of evidence to show that it prevails in Japan more than in Great Britain or the United States. Any criminal process may be made to sound terrible according to the way it is stated. Thus, under Japanese jurisdiction, foreigners would be liable to be hung, to be transported, to be forced to work on the road in chains, and to be kept in solitary confinement; all of which might be very inconvenient, and very disagreeable—to criminals. But the trouble is that criminals are liable to precisely the same misfortunes everywhere. Extraterritoriality is not a device to save foreign lawbreakers from the consequences of their wrong doing; and inasmuch as law-abiding individuals are just as secure in Japan as in any other country, the vicarious anxiety of the *Manchester Guardian* seems a little superfluous. With regard to the Press Regulations, the case is different. It is a great misfortune for Japan that she cannot yet enjoy freedom of speech. Very few of her treaty friends, however, may justly cast that reproach in her teeth, since many of them are no happier themselves. Still, it is a reproach, and by their persistent allusion to it, the advocates of extraterritoriality have made it quite clear that they expect Japan to attain, not the general, but the highest, standard of European excellence before her autonomy can be recognised.

THE Southern States of America are to hold their first Exhibition this year. The enterprise appears to be on a stupendous scale. It was originally intended to be confined to cotton exhibits, the idea of its inception having been suggested in connection with the centennial anniversary (1884) of the first exportation of cotton from America. Ultimately, however, it developed into “the World’s Industrial and Cotton Centennial Exposition,” and judging from the pro-

spectus, a copy of which we have received from the United States’ Consul-General, it will probably be the largest undertaking of the kind that has ever been seen on the continent of America. Every variety of agricultural and industrial specimen finds a place in some of the groups, and under the heading of agriculture are included all classes of animals and birds associated, directly or indirectly, with farming pursuits. We observe that a leading feature of the Exposition will be a display of women’s work, intended “to practically develop and illustrate the field of women’s employment, and to enlarge the sphere of usefulness of the sex in the domestic economy and industry of the world.” Japan might send some very interesting contributions to this section. The first Monday in next December is fixed as the opening day, and it is provided that the Exposition shall not remain open longer than the 31st of May, 1885. Foreign applications for admission are to be made in accordance with a special form furnished by the Director General to foreign commissions, but the rules to be observed in making these applications do not appear to have been issued as yet.

THE *Pall Mall Gazette* alludes in the following strong terms to the judgment recently delivered in the Swiss Consular Court in the case of Ludwig and Trüb:—

A pretty sample of the sort of justice that is served out in far Eastern settlements under the system of consular jurisdiction is reported from Yokohama. By an arrangement made in 1878 with an English local bank, a Swiss firm of good repute had been allowed to cash cheques for the purchase of silk, on condition of holding the bank fully covered by the silk so acquired. At one time the advances on these terms approached to £50,000. Every month the firm had to furnish storage notes detailing the silk held to the bank’s order, but the unsuspecting manager took no steps to verify the accuracy of these documents. It was ascertained, however, in January last, that the storage notes were fraudulent, that while the firm owed the bank some £38,000, their warehouses were nearly empty and their secured assets of small amount, and that, in fact, the two partners had been carrying on a deliberate swindle since 1879 or 1880. Yet, though nothing could be said for them, except that they had not absconded, and that when concealment was no longer possible they had made a clean breast of the whole affair, the penalty awarded to this precious pair by the court of the Swiss Consul-General, for monstrous and systematic frauds extending over a series of years, was—six months’ imprisonment!

The fact is that the judge and assessors who heard the above case were not only fellow-mortals, but friends and fellow-traders of the culprits, some of that half-educated huckster class, as Sir Edward Reed has called them, who deal out “justice” for the smaller European Powers in the treaty ports of China and Japan. But what must be the standard of commercial probity among men who can thus lightly punish an outrageous and gigantic swindle, and what the influence of such a sentence upon the rest of the foreign community, and upon the granting of banking facilities to business men? To the Japanese this latest absurdity in the shape of European justice must be very edifying. It will also be encouraging to them, for their efforts to get the present system of consular jurisdiction extensively modified could scarcely be better strengthened than by such displays in a consular court in the chief of their treaty ports. The system is plainly too rotten to last. Most persons in Yokohama were probably quite prepared to find that the report of this extraordinary case would evoke some such comments as the above from the English press. It remains to this day an insolvable problem why the Swiss Court delivered a judgment so eminently calculated to strike at the root of commercial credit, and so strangely disproportionate to the magnitude of the crime. It has, indeed, been stated that the Bank ought to have divined the nature of the defaulters’ security, since merchants do not keep silk lying for months in their godowns. Even supposing that this argument were valid—which we do not at all believe—to convert it into a mitigating plea would be equivalent to asserting that the degree of guilt attaching to a fraud varies inversely with the facilities for perpetrating

it. The *Pall Mall Gazette* is scarcely justified in the epithet it applies to the Judge and Assessors in the Swiss Court, but it cannot be denied that to those who take the English Bench as a standard, some of the judicial arrangements in Yokohama must look a little farcical.

THE assassin of M. Ducros de Sixt created quite a sensation in Paris, first by his violence and then by his obstinacy. When taken to the condemned cell, he was visited by an access of fury such as the guardians of the prison had never seen before, and under the influence of this excitement his enormous strength was multiplied to such a degree that half-a-dozen men barely succeeded in putting him into a straight waistcoat. It was known that the name he gave himself—Campi—was fictitious, but nothing could induce him to reveal his real name; he was resolved, he said, to preserve it from dishonour. This obstinacy, commendable enough in itself, had a curious effect on the public. Even those who were opposed, on principle, to capital punishment, declared that the sooner the murderer was executed, the better, since if he were suffered to live, his name would certainly become known, and then his brother who was understood to be an officer of rank, must of necessity commit suicide. The code of honour which condemns a man to shoot himself because his brother has stabbed somebody else, is no familiar to everybody outside France. Yet it has been acted on ere now. A notable case was that of a man called Thomas, who in former times was condemned to death for attempting to kill a fruiteress. Asked to give his real name, he refused, saying that his father was an old naval officer widely respected. This evidence of paternal respect touched the French King and Thomas's sentence was commuted. A year afterwards, however, in a moment of carelessness, he let his jailors discover the truth, and the newspapers published it, whereupon his father blew out his brains, and his sister, who was just about to be married, died of grief. Guided by this precedent, the good people of Paris declared that Campi ought to be guillotined without loss of time.

At a recent session of the French Chamber of Deputies, some interesting facts were elicited *à propos* of a proposal that the Government should interfere in the strike of the Anzin miners. The men had been on strike from February 21st to April 8th, and during that time the wages they had forfeited amounted to 1,200,000 francs, in addition to their allowance for fuel. Moreover, the loss to the proprietors by the partial cessation of the works amounted, during these 43 days, to 217,000 tons, valued at 2,604,000 francs. Such an account is calculated to disturb people's minds. It seems to have turned the heads of some of the Radicals completely. M. Clémenceau, for example, got it into his mind that the causes which led to the strike were only additional evidences of the hostility of the whole wealthy class in France to Republican institutions. We cannot follow this reasoning, but the unfortunate wealthy classes may be compelled to feel its force.

THE *Mainichi Shimbun* reprints from the *Mai-shiu Shimpō* an account of some lectures on Christianity recently delivered in Kiyoto. It appears that party feeling runs very high in that city, for the missionaries barely escaped with

their lives, and the mob was rife for any amount of violence. On the evening of the 22nd of last month, Messrs. Green, Omiya, Ono, Sugita, and Kato commenced a series of addresses in a theatre at Omiyadori, Kiyoto, in the presence of more than 500 auditors. Almost from the outset the audience was a most unquiet one, and loudly called out most offensive remarks. The addresses for the evening were no sooner over, than a Buddhist arose and began interrogating the lecturers. One or two points were discussed when the priest began decrying his opponents after a most unpriestly manner. The audience dispersed, however, in tolerable order. The next evening a far larger number of listeners, composed chiefly of workmen and labourers, flocked to the theatre. Mr. Yebihara, who first addressed them, was saluted with a shower of abusive epithets, and Mr. Baba, who followed him, had to curtail his lecture in consequence. The third lecturer, Mr. Tsuji, was compelled to stop on account of the utter indifference of his listeners, who kept up their noisy disturbances, until it was deemed necessary to call in the police. No sooner had the last speaker concluded, than about twenty rioters leaped on the platform, put out the lights and surrounded the little band of missionaries, crying "Beat the Christians! Kill them! Betrayers!" Just at this moment, a police inspector accompanied by two constables arrived on the spot, and ordered the crowd to disperse; but, in spite of all commands, it was more than an hour before the lecturers managed to leave the hall. On their way home they were surrounded by a riotous mob, the streets being completely blocked up by their foes. Sign-boards, stones, and bricks were hurled at the missionaries, besides their being directly attacked by some of the rioters. The lecturers received, without exception, many wounds, and reached their homes finally in a most exhausted condition. The next evening, some Buddhist lectures were delivered in the same theatre, and the lecturers reviled Christianity and its followers in the most outspoken manner. It was a religion, said they, which one might attack with impunity; while recommending their hearers not to use stones or bricks, they added that all Christian preachers were intolerable offenders, and would receive severe punishment at the hands of the Buddhists, were it not for the Government. Shortly afterwards, one of the audience remarked that some twenty adults were prepared to attack the Christians at any moment. All carried stones in their handkerchiefs, and one was seen with a knife in his hand.

THE House of Commons would probably have hesitated about rejecting the bill for licensing cremation had it been in possession of some statistics similar to those accidentally made public by the recent experiences of a lady in New York. Miss Savillar Berkley, *alias* Downing, having followed to the grave the body of her baby, and seen it buried very humbly, at a cost of \$2, afterward found herself in circumstances that suggested a more demonstrative funeral. She therefore set about having the coffin exhumed. But here an unexpected difficulty presented itself. The grave, about two feet wide or seven or eight feet long, when opened was found to contain thirty-nine coffins, in which were bodies of children, some as much as four years old, some still-born infants. The coffins, according to Miss Berkley's evidence, were placed one on the top of the other, and the thickness of

earth over the uppermost was only a couple of inches. Further enquires at the churchyard itself elicited the fact that twenty-five coffins were an average number to place in one grave, and that the practice of piling up the shells indiscriminately was not confined to the case of children but was also pursued with the bodies of adults. There is, in fact, no legal limit to the number of corpses buried in one grave, and as the coffins are often of the flimsiest construction—infants' bodies are sometimes brought in cigar cases—while the quantity of earth placed over them is a mere make-believe, some idea may be formed of the health-promoting character of such a cemetery in the midst of a thickly populated city. The *New York Herald*, writing upon this subject, pertinently observes:—"In times of war or pestilence human remains may be crowded into graves in this fashion, but that the same custom should prevail in large cities is horrifying to general sentiment regarding humanity's last resting place. It is shocking, too, to think of the contents of such a grave being disturbed, removed, and replaced whenever relatives want to reclaim the remains of a loved one for better burial. Cremation would be far less offensive to human feeling, besides not menacing the public health, as the interment of a great number of persons in a single small pit is likely to do."

In the surgical dispensary of the Philadelphia Polyclinic, Dr. Roberts has been using with satisfactory results Japanese paper handkerchiefs for drying wounds. Sponges are so seldom and with such difficulty perfectly cleansed after being once used that they are never employed in the hospital. Ordinary cotton or linen towels are much preferable to sponges, which, if dirty, are liable to introduce septic material into wounds. The paper towels, however, answer the same purpose as cotton ones, and are so cheap that they can be thrown away after being used.

THE proposed Congressional appropriation in aid of the development of silk-growing has been subject to sundry vicissitudes in the Senate, and if it is cut down in the same proportion in the House, there will be little of it left when the President comes to sign the bill. As the bill was originally prepared in this city, it proposed to create a Bureau of Silk Culture in the Department of Agriculture, and to appropriate for the first year \$150,000, with which to establish five silk culture stations, including filatures, one of such stations being in California. Senator Miller had the bill attached as an amendment to the Agricultural bill, but the committee reduced the amount of the appropriation to \$30,000, with the understanding that the California silk-culture station should be the only one established for the present. The \$30,000 has now been halved, giving but \$15,000 for the first year's operations. The appropriation of \$15,000 may serve to keep alive an interest in the subject and thereby stimulate private enterprise, but it cannot accomplish much directly toward booming the business of growing silk in the American Italy. We have had enough six-penny experiments in silk culture. In fact, it ought to have ceased to be an experiment and become a business long ago. As an experiment, silk culture in what is now the United States, began more than two hundred and fifty years ago in the settlement at Jamestown, Va. The earliest settlers in the colonies brought over

silkworm eggs, and both the home and colonial Governments made the most vigorous efforts to promote the Silk-growing industry. Every settler was required to plant mulberry trees, under penalty of a heavy fine, and the amount of public money which was spent in trying to develop the business was great enough to put to shame an appropriation of \$15,000 by Congress. In 1725 a gown made of silk grown in Georgia was woven for the Queen of England and worn by her on the King's birthday. It is a hundred and fifty years since the first silk filature was established in the country, and we are still trying, in a petty, experimental way, to begin where our great-grandfathers left off. It is true that in California we have more perfect conditions for silk culture than are found in the States east of the mountains, but this fact being conclusively established, the experimental stage of the industry should have been passed a long time ago. We know as well as we need to know that we have the right climate for silk-growing; that the mulberry tree flourishes and the silkworm thrives in California; that California silk is as fine as any in the world, and that there are unlimited facilities for its production. Why, then should we need to experiment further? Why does the industry need nursing? The only apparent reason is because it is not an easy industry in which to make a start on a large scale. It requires a liberal expenditure of capital and time before the industry is placed on a paying basis. If Congress can help us to do that, well and good; but if a small appropriation is made and a station started only to show that the climate of California is admirably adopted to the mulberry and the silkworm, the gain will be very small, for we knew all that before. What is wanted is sufficient inducement for people to go into the production of silk, not as an experiment, but as a remunerative business. If the regular market rates for the product will not do that, the best stimulant would be a system of bounties for the production of cocoons and home-reeled silk. Possibly the day is passed when the Government will pay any more bounties, but if so private enterprise should supply the lack of public. A syndicate of silk manufacturers strong enough, and public-spirited enough, to offer liberal inducements for the production of the raw material of their industry, would be the thing needed. In fact, any organization that can afford to put money into the enterprise and wait a number of years before getting it out would fill the conditions of the element that is now lacking to the success of silk culture.—*Alla*.

A CURIOUS story is going the round of the Japanese social journals to the effect that Umegatani, the champion of the wrestling ring, having been defeated twice in succession by Odate, has committed suicide. The rumour, romantic enough in itself, is surrounded with elements which add to its effect. Umegatani is an universal favorite. As intelligent and modest as he is strong and skilful, he has hitherto held his own easily against all comers, and being still in the very prime of life, the idea that a rival would deprive him of his laurels seemed untenable. During the past year wrestling sprang into public favour with that suddenness which occasionally marks the growth and decay of a national fancy in Japan. The Emperor himself witnessed several matches and bestowed rewards upon the victors. On these occasions Umegatani was always a central figure, and nothing appeared

more improbable than that his colours should be lowered within a few months. His rival Odate, on the other hand, though a man of immense physical strength, has the reputation of being both ignorant and arrogant. Whatever popularity his prowess might have won for him, was reduced, the other day, to a vanishing quantity by an act of rudeness of which he was guilty to the celebrated actor Ichikawa Danjiuro. Wrestling in Japan had its origin in an incident many centuries old, when among the guards of the Palace—men selected, on account of their strength, from all parts of Japan—there was one, a species of Odate in his way, who, presuming on his thews, made himself particularly obnoxious to everybody. A levy of strong men was called with the special object of finding some one capable of bringing this truculent Kehaya to his bearings, and fortunately among these new comers was Nomi no Sukune, who threw Kehaya and killed him by a cleverly planted kick. Nomi no Sukune afterwards attained a position of considerable eminence at Court, and the science which he elaborated, and which has remained ever since pretty much as he left it, naturally bestows on its votaries something of the rank of its founder. The social status of actors, on the contrary, used formerly to be of the very lowest. Not that there was supposed to be anything degrading in the profession itself, or that its followers were originally taken from a degraded class, as has sometimes been stated, but simply that, by an unfortunate choice of locality, the first theatre in Japan came to be associated with the resort of the Kiyoto mendicants, and its company received a nickname which gradually passed into a description. Since the Restoration all this has been altered. The actor now receives something of the recognition due to his talents. But fifty years ago, the wrestler was the better man of the two both socially and physically. Odate, the gentleman whose victories are supposed to have unhinged Umegatani's mind, is foolish enough to forget that the times are changed. Being invited recently to an entertainment at which Ichikawa Danjiuro was among the guests, he had the insolence and bad taste to place a wine-cup on his foot and offer it to the great actor. Danjiuro was inclined, at first, to treat the affair as a joke. He did not indeed, accept the cup, but laughingly explained that though Odate's proceeding might have been well enough twenty years ago, it was a little behind the present age. Odate, however, took care to show that he was in earnest, and a serious quarrel was with difficulty prevented. Of course the good people of Tokiyo were highly indignant at the wrestler's rudeness, and when his defeat of their favourite champion was followed by the latter's disappearance and supposed suicide, their regrets became very loud. But it turns out, after all, that Umegatani has not laid violent hands on himself at all. He has simply gone to Osaka to visit his mother, who is dangerously ill, and so everybody is now praying that on his return he may completely reverse the previous record. We reciprocate the wish, for certainly a wrestler who could venture to look down upon such an artist as Ichikawa Danjiuro, does not deserve to be champion of the Japanese ring.

THE fastest railroad speed on record is recalled to mind by a correspondent of the *Engineer*, who sends that journal a card, which has been preserved since 1848, on which is printed:—The Great Western Railway broad-gauge engine,

Great Britain, accomplished the fastest journey on record, viz., from Paddington to Didcot, fifty-three and a quarter miles, in forty-seven minutes. The train was the 9.45 express to Bristol, and consisted of four carriages and vans, and was driven on May 11, 1848, by J. Michael Almond, driver; Richard Denham, fireman. The correspondent adds that the fireman, Denham, is still living, superannuated. At the time this run was made the battle of the gauges was raging, and the advocates of the seven-foot gauge were anxious to show that the highest speed could only be obtained on their line, the Great Western, laid out by Brunel. The engineers therefore had orders to run the trains as fast as possible, regardless of time-tables. When the superiority of the broad gauges as regards high speed had been fully demonstrated this practice was given up, but as late as 1862 the schedule time of this train, the Flying Dutchman, was fifty-seven minutes for fifty-three and one-half miles. The line is practically level, the mean grade is, however, nearly three feet to the mile against the train.

THE *Alla* of the 7th ult. thus refers to the defeat of the Tariff Bill:—Morrison's revenue reform bill has been defeated by a majority so small that three votes would have turned the scale the other way. A hundred and fifty-nine members voted for the bill to a hundred and fifty-four against it. Much might be said of the possible effects of this result on the Presidential election, but it is sufficient to say that the attempt to pass a tariff bill at this session was ill-advised and ought not to have been undertaken. It was ill-advised, not because the bill was not a righteous one—for it was—but because it was folly to attempt its passage when the necessary strength was lacking. No step should have been taken looking to revival of the tariff discussion this year until there was absolute assurance that it would result in something definite so far as the House of Representatives was concerned. Once more the party has neglected the salutary maxim to be sure you are right before you go ahead. This is the utmost, however, that can be said against the management of the bill. In its favor it can be said that no other tariff debate was ever conducted with so little interruption to the other business of the House, and that the fight has been made in a dignified and honorable manner which is an agreeable contrast to the similar contest in the preceding Congress.

THE *Fiyu Shimbun* furnishes, in a recent issue, the truly astounding intelligence that Yokohama and New York are to be connected by submarine cable, said cable to probably run around one or both of the Capes. And after unburdening its soul of this intelligence in the most innocent manner, the *Fiyu* goes on to state that "it is proposed that Japan should bear the expenses for the benefit of the United States." No wonder that people speak of the reduction of the land-tax when such magnificent schemes are on foot.

It is not good to have a black skin in the United States of America. One inconvenience of the thing is that when mobs are out on negro-whipping-or negro-lynching expeditions, they are apt to fall into errors of identity. Something of this sort happened in Calloway county, the other day. A negro called Julius Patterson had been tied to a tree and severely flogged for circulating slanderous reports about respectable ladies. The men

who flogged him were arrested and tried, but acquitted. Emboldened by this result, another mob went after Julius on May 3rd, and seizing his brother by mistake, riddled his body with bullets. No arrests had been made in connection with the affair up to the date of latest advices. After all, it was only an error of judgment. Had Julius himself been forthcoming, his brother would not have met with any accident, and the hand of inexorable justice would have been duly recognised.

AN imitation of the Collie frauds, says the *Whitehall Review*, has just come to light at Yokohama. So far back as 1878 a firm of Swiss silk merchants had been getting advances from an English bank on goods supposed to be deposited in the merchant's godown. It apparently never entered into the brain of the bank manager to inspect the stock on which he was advancing money, nor to test the value of his security. Needless to say, as was the case in the Collie discrepancies, when the bank did eventually wish to see the security, it was not to be found. Like the Spanish fleet in "The Critic," it could not be seen, because it was not in sight. Of course, the bank is a heavy loser. More remarkable, however, is the punishment which the Swiss Consul-General has imposed upon the perpetrators of this gigantic swindle. They have been sentenced to six months' imprisonment! Swindling will be at a premium in Yokohama, for if a man can live in affluence at a bank's expense for some five years, and then only have to rest on his oars in the prison for six months—the game is quite worth the candle.

LORD RANDOLPH CHURCHILL is a singularly frank politician. He told the Birmingham electors, the other day, that he had long ago adopted Mr. Gladstone's motto, "Trust the people," and then, anticipating the obvious rejoinder, "Well, if you trust the people why did you vote against the Reform Bill?" he proceeded to explain that "the Government of England is Government by party, and under that system it is the general duty of the followers of Sir Stafford Northcote to resist the legislation which may be proposed by Mr. Gladstone." This is doubtless true, but it looks a little startling when stated in such naked terms. Government by party is a very fine thing, so long as by "party" is understood English Liberals or English Conservatives, but when Irish Home Rulers are added to the company, Government of this sort becomes decidedly difficult.

IN the last issue of the Caucasian *Izvestia* appears the following new information on the Merv oasis, due to M. Alikhanoff:—"Its surface is about 2,150 square miles, which area could be increased by irrigation, the whole of the oasis having its origin due to the irrigation of the sand by canals drawn from the Murgab. This river, being dug at Kaushut-khan-bend, two canals, subdivided into numerous *aryks* (smaller canals), issue from it, taking in nearly all the water of the river which does not flow beneath the dam. Notwithstanding the southern position of the oasis, it has a cold winter, and there falls every year some snow, sometimes 2 feet deep; it soon disappears, however, as the temperature rises rapidly, and reaches occasionally 30 deg. Celsius in February. During the summer, strong hot winds, which bring masses of hot sand, blow, mostly from the south-west. Still the climate is healthy enough, healthier than that of Akhal-tekke; but the

mortality is very great, owing to the poverty of the inhabitants and the dirtiness of their habits; the *kara masta*, or black disease, a kind of pestilence, and the *merghi*, a kind of cholera, are endemic. The population is estimated at 32,700 *kibitkas*, which M. Alikhanoff considers to represent no less than 194,000 or 200,000 inhabitants. This population is, however, too numerous for the oasis, the average area of irrigated land being only six acres per inhabitant. M. Alikhanoff considers the Merv as the least attractive of the Turcomans, and discovers in them only one good feature—their hospitality."

As an example of the way newspapers are managed now-a-days, the issue of the London *Mail* of Friday, April 18th, is worth noticing. Sir W. Harcourt made a speech at Leeds on the evening of April 16th, Lord Randolph Churchill read that speech at Birmingham on the afternoon of the following day, and replied to it the same evening. *The Times* correspondent at Cairo received a *précis* of it on the same day, and replied to it immediately. The *Mail* of the following morning published Sir W. Harcourt's speech, Lord Randolph's reply, and the comments of the Cairo correspondent. Thus we have a triangular debate carried on at Leeds, Birmingham, and Cairo, and published verbatim in London, within the space of twenty-four hours. Pretty smart journalism, that.

ALTHOUGH Blaine and Logan are the Republican Nominees for President and Vice-President, it is still possible that the election will fall to an outsider after all. Candidates are certainly not wanting. As a train from the Eastern States arrived at the Union Depot in Chicago, the other day, a man yelled out, "Hurrah for the next President!" Five prominent politicians instantly lifted their hats in acknowledgement of the compliment.

THERE was a grand turn-out last night, says the *Hongkong Telegraph* of the 24th ult., on the occasion of the marriage of Mr. Alarakia, assistant master in the Government Central School, to a young Indian lady, daughter of the late Mahomed Arab. An imposing procession, in which five carriages, and some half a dozen horses ridden by friends of the happy pair, figured, started from the residence of the bridegroom in Gage-street shortly before nine o'clock, traversing Wellington and D'Aguilar streets, then proceeding down Queen's Road Central, and turning again into Wellington-street at the corner below No. 5 Police Station, thence wending its way up Graham-street and finally reaching the bride's residence in Peel Street. Banjos, violins, drums, concertinas, &c., played by a number of experts, served to enliven matters generally as the procession pursued its course, and some 250 Japanese colored lanterns, all alight, carried on two bamboo poles from which they depended, together with numerous blue-lights, lent additional splendor to the display. A conspicuous figure was the bridegroom himself as he appeared mounted on a lofty Pegasus, arrayed, in Arabian style, in a long crimson colored satin dress and turban. Talk about floral embellishments! The to-day happy man literally revelled in flowers, garlands hanging down in great profusion from the top of his head to the soles of his feet, both in front and rear. A Mahomedan priest made the couple fast at the bride's house, where the processionists and other friends were regaled with refreshments and music

until four or five o'clock this morning. The redoubtable MacBean, of the Supreme Court, appeared in the procession driving one of the carriages, and wore an expression almost as solemn and impressive as that of Sir George Phillippo when sentencing a prisoner for libel. Mr. Kennedy of the Horse Repository must have made a good thing out of the affair, as we understand the horses and carriages were all obtained from his stables.

THE *Mainichi Shimbun* states that some *toshiyori daumo* (superannuated wrestlers) in the capital have entered into negotiations with several showmen in New York, and that a troupe of Japanese athletes will probably start for the United States before long. The unprecedented success of Sadakichi "the champion wrestler of Japan(?)" is at the bottom of this sudden demand for Eastern athletes; but we are inclined to think that anything outside of "champion wrestlers" will prove a losing venture.

OUR readers are requested to make the following correction in the first paragraph of the "Preliminary Remarks" of the Financial Estimates, a translation of which appeared in our columns last Saturday:—

For, "On the other hand, there is a decrease of *yen* 3,169,990 in the redemption of the Domestic Loan, of *yen* 1,621,513 in *Gunbibu Kuriire*, and of *yen* 3,825,756 in the Contingency Fund of the Imperial Household Department, Cities and Prefectures; the total being *yen* 8,617,259."

Read, "On the other hand, there is a decrease of *yen* 3,169,990 in the redemption of the Domestic Loan, of *yen* 1,621,513 in *Gunbibu Kuriire*, and of *yen* 3,825,756 in the expenditure for the Imperial Household Department, Cities and Prefectures, and Contingency Fund."

THE *Daily News* says:—"A movement is on foot to enlist a body of volunteers, some two hundred strong, to go to the relief of General Gordon. The idea originates in a high social circle, and it is understood that the volunteers are to be able to subscribe their quota of the cost of the expedition. The Secretary of State for War is, in the first instance, to be asked to sanction the undertaking, but his refusal (not unanticipated) is not to be accepted as a bar to carrying it out.

THE new conscription regulations would appear to have been slightly mutilated before they reached the English paper which publishes the following:—Women's rights have taken another turn in Japan. The conscription flourishes, and its last decree is that women between the ages of eighteen and twenty-eight are to be enlisted as soldiers. The Japanese war party has spent a deal of imperial money on arms and ships of war. Soon they will be singing their ballad of war—

We don't want to fight, but, by Daibuts, if we do,
We've got the ships, we've got the men—we've got the women too!

ON WEDNESDAY evening a fire broke out in Nishicho, Shitaya, Tokiyo. The flames spread to Minami-Inaricho and Kami-Karumazakacho, destroying about thirty houses. Two men were slightly injured.

MR. ANDO TARO, the newly appointed Consul at Shanghai (successor to Mr. T. Shinagawa, who is expected to return to Japan shortly), left for his post on Wednesday evening by the Mitsu Bishi Mail steamer *Hiroshima Maru*.

MR. A. R. COLQUHOUN, the correspondent of *The Times*, left Shanghai for Yokohama on the 28th ultimo.

THE SUPPOSED RETROGRADE MOVEMENT IN JAPAN.

READERS of the vernacular press must have been struck by discussions occurring in its columns, from time to time during the past year, on the subject of a retrograde tendency which Japanese society is supposed to have developed. On the whole it cannot be said that these discussions have been characterized by more than the average depth of thought which commonly inspires ephemeral literature. Broadly speaking, there has been on the one side a vague note of complaint that the people are reverting to their old grooves of philosophy and æstheticism, and on the other, a general denial that such is the case, unaccompanied, however, by any satisfactory explanation of indications which certainly exist, and which, to a superficial observer, plainly suggest a renaissance of old fashions. The article which we reproduce from the *Hochi Shimbun* to-day does not throw much light on the situation, though the line taken by the writer is at least intelligible. He makes no attempt to deny that a section of society appears to have turned its face backwards, but he argues that the wave of progress cannot be checked by any partial obstructions of this nature, and that, so long as material civilization advances, no fears need be entertained of the general result. This contention appears to us superficial and unsatisfactory. It is superficial, because material civilization may not properly be regarded as any index of the condition of a nation which, having borrowed that civilization in a ready-made form, cannot be credited with any share in its development. It is unsatisfactory, because it leaves wholly untouched the true motives of this apparent reaction. Upon the former point we need not dwell at length. Outward evidences of an exotic civilization no more indicate the true condition of the national mind, than the whitewash of the Jackdaw which intruded itself into the dove-cot suggested the character of the trespasser's voice. If the writer in the *Hochi Shimbun* means, that so long as the adjuncts of Western civilization remain popular in Japan, its spirit also may be supposed to prevail, his testimony does not contribute much to the discussion one way or the other. It becomes necessary to look a little deeper if we desire to discover the truth.

The signs which pessimists adduce in proof of their contention are of two kinds: first, a reversion to the social observances, and more especially to the æsthetic grooves, of former times; secondly, a revival of the ethical philosophy of the old Chinese school. With regard to the first, we took occasion to express our opinion at some length in a recent article, and to point out the extravagance of attributing a retrogressive character to a

movement which derives its motive from thoroughly sound sources. There were born among the exceptional social conditions of Japan in the middle ages certain art tendencies, which attained a very high state of development, and which bequeathed to posterity results of a most admirable character. European nations have shown themselves at least as highly appreciative of these as Japan is of Western civilization, and this reciprocity of appreciation has brought about the curious spectacle of an Oriental people borrowing from the Occident all the features of practical civilization, and lending in return a grammar of ornament such as is generally associated with the highest stages of refined culture. If, during the first strong impulse towards Western systems, Japan seemed for a time to loosen her hold upon the products of her own civilization, it is as natural as it is fortunate that she should turn to them again in her calmer moments. This renaissance may be, and probably is, carried needlessly far in certain directions, but in the main it is a matter of congratulation not of apprehension. The second point—the revival of Chinese ethical philosophy—has, we believe, a more significant and an incomparably more important bearing. The writer of this article recently heard a prominent Japanese statesman relate an incident which excellently explains the origin of that revival. Some years ago, the statesman collected a sum of money sufficient to endow a school in his own province, but owing to absence in Europe and other causes, he was prevented from taking any personal share in the direction of the establishment. Ultimately, when he was able to visit the place, he found, to his surprise, that, side by side with Western languages and sciences, the students were receiving instruction in the philosophy of CONFUCIUS. On enquiring the reason of this apparent anomaly, he was told that not only the discipline of the school but also the relations of every-day life could not be comfortably preserved without the assistance of Chinese ethics. A moral code which inculcates unreasoning obedience to seniors, unwavering reverence for teachers, and staunch fidelity to feudal chiefs, became, he was assured, more than ever necessary when the young generation was growing up to the possession of knowledge and accomplishments in which its elders had no share. The experience furnished by this school is common throughout the whole of Japan. Everywhere youths, educated according to the new system, are required to serve under men far inferior to themselves in useful attainments, and deficient even in the very technical knowledge essential to the prosecution of the business they are appointed to direct. Respect, which is the germ of all discipline, is impossible under such circumstances. It is impossible, for example, that a student who, having graduated with honours at the Tokio University or the

Engineering College, has passed half a dozen years in Europe or America acquiring practical skill in the details of his profession, can come back to Japan and settle down quietly to construct railways, assist in mining industry, or take part in other industrial enterprises, under the direction of officials whom he knows to be virtually ignorant of the science of their duties. Equally perplexing is the position of a child which, at school, is taught that to believe in enchantment or sortilege is an evidence of barbarism, and, at home, sees its parents tremble at the supernatural powers of a fox or hurry off to consult a necromancer about every entanglement in the thread of household affairs. We question whether many people pause to think about these things: whether they appreciate the disturbing elements that have been introduced into Japanese society by grafting Western sciences and Western acquirements upon a stock that has its roots in Chinese philosophy. Assuredly the Japanese journalists who have hitherto undertaken to discuss the problem fail to recognise its most essential features. Did they look a little below the surface, they would see that the tendency to revert to Chinese ethics, the tendency which they mistake for a pause in the nation's progress, is in reality a protest against the rapidity of that progress. It is not young Japan that turns its face backwards, but rather old Japan that would fain preserve its touch of the times by the aid of those reverend talismans which the new philosophy has robbed of their virtue. The spectacle commands our sympathy. History does not offer any examples by which we can forecast the issue of such strange conditions, or gauge the force of the disturbing elements which this national metamorphosis has brought in its train. But we may at least avoid the error of misconstruing, into an evidence of universal reaction, what in truth is mainly an instinctive effort on the part of the dying generation to re-establish the influence it cannot yet reconcile itself to surrender.

ECHOES OF THE CHAMBER OF COMMERCE.

THE last English mail brings us some feeble echoes of the discussion which filled our local press four months ago. The *Manchester Guardian* and the *London and China Express* take the matter up, and ventilate it after a fashion which recalls the least happy features of the controversy. Mr. A. J. WILKIN's speech in the Chamber of Commerce constitutes the basis of both journals' articles, and it seems to us that the treatment his utterances receive is not of a nature to enhance their value. There are some things which become more and more grotesque the longer they are examined, and undoubtedly one of these is the apprehension, that if a foreigner submits to Japanese jurisdiction, he acquires

the "privilege of being able to tell his wife she may go; he does not want her any more." A keener satire could scarcely have been published on the fidelity of Western husbands. The law alone keeps them faithful. Relax its restraints, and they will lose no time in adopting the worst Oriental precedents. What they are afraid of is, not the severity of Japanese codes, but the weakness of their own morality. Only give them a chance to snap the conjugal ties, and they will immediately avail themselves of the "privilege." If the libellous nature of this comical fear did not strike Mr. WILKIN and his fellow-thinkers, one could scarcely expect them to appreciate the absurdity of supposing that a British subject, by submitting to Japanese jurisdiction for purposes of temporary residence in Japan, would be absolved *de facto* from all the obligations he had previously incurred as an Englishman. This we could scarcely expect, but certainly there was even less cause to anticipate that reason and common sense would be similarly outraged by a newspaper like the *Manchester Guardian*. The writer in that journal, unless he is remarkably ill-informed, must know that there are States in America where divorces can be procured with almost as much ease as in the Orient. Does he suppose that, living in those States and not naturalized there, he could avail himself of local processes to obtain the dissolution of a marriage contracted in Great Britain? How, then, can it possibly signify to an Englishman whether or no the laws of Japan sanction a license of which he may not avail himself so long as he remains an Englishman? If he changed his nationality, then indeed the case might be different, but that is purely a matter of choice. Truly the very frivolity of such an argument secures it against serious contradiction. Its worthy context is also quoted gravely by the two English journals: the question is again asked in solemn tones, "shall I be liable to be browbeaten by a policeman if I walk on the Bund without a lantern, even under the gas lamps?" According to the *Manchester Guardian*, "the mere fact that a man like Mr. WILKIN is unable to speak positively on the state of Japanese law and its administration makes it apparent that the grounds of confidence in Japanese jurisdiction do not exist." We apprehend that a very different inference is to be drawn from this "mere fact." None so blind as those that will not see. Mr. WILKIN might have objected with equal accuracy that to walk on the Bund in high-lows is illegal. There is no regulation, either local or imperial, requiring a person on foot to carry a lamp. Mr. WILKIN is a very old resident, and we are not surprised that he mixes up reminiscences with realities, but he carries this confusion a little too far, perhaps, when he complains, in the year 1884, of a custom which was abolished in 1870. Reading on, we find

the *habeas corpus* bugbear raising its terrible head once more. "Is there any *habeas corpus*? Is it not still the case that a man can be thrown into prison on a mere suspicion, and kept there for weeks without trial?" Nothing of the sort is possible, unless the provisions of the Criminal Codes are wholly ignored, in which case the sufferer's remedy is simple and complete. But Mr. WILKIN's statement is quoted, "I know for a fact that comparatively recently this has been done." When we remember that in the matter of lamp carrying this gentleman has not yet learned to distinguish between the Tokugawa Government and that of the Restoration, his expression "comparatively recently" assumes a bewilderingly vague character. In the House of Commons, the other day, a member called attention to the case of a commercial traveller called FITZGERALD, who declared that, having been arrested in London without a warrant, he was carried off to Dublin, and thence to Sligo, without being shown any copy of the charge against him or permitted to communicate with either his friends or his solicitor. Another member was very violent about one JAMES COMMINS, of Waterford, who having been lodged in prison, was there strapped up in a strait waiscoat with no clothing but a nightshirt, after a fortnight of which treatment he died of congestion of the lungs. The two honorable members who ventilated these grievances were doubtless quite as firmly persuaded as Mr. WILKIN that justice had been outraged, yet, on investigation, it turned out that they were quite mistaken. With all respect to Mr. WILKIN, we could wish that he, too, had given us some better evidence than his own knowledge, or at least that his knowledge in this particular instance had not been accompanied by such a display of ignorance in other directions. The Criminal Codes, which were promulgated in July, 1880, are accessible to anyone who will take the trouble to consult them. Their provisions are perfectly plain. Except in the case of flagrant felony or misdemeanour nobody may be arrested without a warrant.¹ Such warrant must contain a statement of the offence, and at the time of execution its original must be shown to the accused and a copy delivered to him.² After arrest, the accused must be immediately conducted before an officer of judicial police:³ his examination must take place within 48 hours, and he must then be released unless placed under warrant of attachment.⁴ Ten days from the execution of the latter warrant, he must either be liberated on bail or recommitted.⁵ When it is suspected that the accused is hidden in his own house or that of another, the agent charged with the execution of a warrant, draws up a deed of search, which is signed by himself and the Headman of the District, or, failing the latter, by two neighbours, after which the search—which cannot be made before

sunrise or after sunset—is conducted in presence of the Headman or the two neighbours.⁶ If the person against whom a warrant is issued is already under detention, a copy of the warrant is delivered to him in person.⁷ Except in cases of solitary confinement, a prisoner is entitled to receive, in presence of an officer, visits of friends, relatives, or attorney, in conformity with the prison regulations,⁸ and in every prison a copy of the Criminal Codes must be placed at the disposal of the prisoners.⁹ Finally, a prisoner may be set at liberty on bail, for which either he himself, his relatives or his representatives may apply,¹⁰ and means of opposition are duly provided¹¹ against the delivery of an illegal warrant, the non-delivery of a legal warrant, and against the illegal concession, or refusal, of bail. These provisions furnish a complete answer to Mr. WILKIN's question, and at the same time demonstrate the absurdity of his complaint that *habeas corpus* does not exist. *Habeas corpus* is simply a device to supply defects which do not disfigure the Japanese Codes: all the privileges it confers are amply provided by the latter in a different form. There are some persons, however, who, like Mr. WELLER Senior, regard the *habeas corpus* as a species of panacea against all legal wrong-doing, and imagine that no criminal procedure can be perfect without it. This is another phase of that worthy but exuberant conservatism which induced the Chinese tailor to ornament a new suit of clothes with copies of the patches he found on the pattern.

It is scarcely necessary, we trust, to observe that our object in making these remarks is not to criticise Mr. WILKIN, but to clear away misapprehensions which by no means promote foreign interests in Japan. All men are under an equal obligation, in the abstract, to be accurate and fair, but the obligation weighs with special force upon a gentleman like Mr. WILKIN, whose deservedly high reputation entitles his public utterances to the fullest confidence. He can now see for himself the errors into which he has betrayed the *Manchester Guardian* and the *London and China Express*, and he will doubtless recognise the necessity of correcting such false impressions. It will probably give him more pleasure than pain to be able to confess that he was mistaken: that though *habeas corpus* does not exist in that form in Japan, the rights it confers are one and all embodied in the Criminal Codes; that a man can *not* be "thrown into prison on a mere suspicion, and kept there for weeks without a trial," except in direct contravention of those Codes, in which case the law provides a simple and thorough remedy: that no pedestrian in Japan is obliged to carry a lantern, or can be "browbeaten" by the police for not doing so; that as this

¹ Code of Criminal Procedure, Art. 102. ² Ditto, Art. 130. ³ Ditto, Art. 103. ⁴ Ditto, Art. 122. ⁵ Ditto, Art. 127. ⁶ Ditto, Art. 133. ⁷ Ditto, Art. 139. ⁸ Ditto, Art. 140. ⁹ Ditto, Art. 142. ¹⁰ Ditto, Art. 210. ¹¹ Ditto, Chap. IV.

"small matter" has no existence save in Mr. WILKIN'S memory of fifteen years ago, the extensive inferences he desires the public to draw from it are equally unreal; that Englishmen submitting to Japanese jurisdiction would not acquire the "privilege" of dismissing their wives at will; that the first written code of laws was *not* formed in Japan within the past three years, but that the present Criminal Codes, promulgated four years ago, are the fourth of their kind, having been preceded by the *Taihorei* (A.D. 702), the *Shinritsu-korei* (1870) and the *Kaitei-ritsurei* (1873); and finally, that Japanese statesmen do frankly admit the deference due to foreign opinion—though not to foreign prejudice—in this matter, as well as the fact that things are not yet "ripe for an immediate and complete solution" of the extraterritorial problem. Nothing can be more important than that all imaginary difficulties should be removed from the threshold of a question presenting in itself so many perplexing aspects, and it is to men like Mr. WILKIN that the public looks for trustworthy and exact information. Unfortunately, however, Mr. WILKIN has very seriously misled the public, and since his reputation as an upright gentleman has given weight to his unintentional misrepresentations, we trust that for the sake of that reputation he will lose no time in undoing the mischief.

GROWING UNANIMITY.

THIS seems to be the season for general peace-making. Everybody appears to be getting quite easy in his mind under the influence of a conviction that extraterritorial privileges are not about to be swept away root and branch, but that they will only undergo such curtailment as is judicious and beneficial. It has taken the public a long time, a strangely long time, to discover this. People were resolutely bent upon persuading themselves that nothing but the most drastic measures would satisfy the Japanese Government, and that unless Japan's judicial autonomy were restored *in toto* and *instanter*, there would be no peace for either the wicked or the good. Of course it was a part of this unreasoning panic to denounce every one who ventured to have a contrary opinion. When men imagine themselves in serious peril, what they want is willing aid not cold logic. He that is not with them heart and soul is against them. We speak from experience. The *Japan Mail* had the temerity to think and say that foreigners could never be prosperous or happy in Japan unless they consented to modify a system outgrown by their opportunities, and no longer suited to the radically altered conditions of the times. The *Japan Mail* was accordingly denounced in terms of unmeasured invective as a traitor to the cause of its own nationals; a journal which had sold itself body and soul to the enemy. The better to portray the tremendous depth of infamy

to which its editor has fallen, his previous career as a servant of the QUEEN was contrasted with his supposed enlistment under an alien flag, and persevering efforts were made to discredit the course he advocated by declaring him unworthy to advocate any respectable course whatever. This species of invective fortunately absolves its subject from the necessity of replying. Public opinion is provided with unerring capacities of self adjustment. It may sway for a time in a wrong direction, but, in the long run, it will inevitably recover its equilibrium. All considerable changes, too, are accompanied by more or less agitation, and their promoters must expect to be exposed to something of the odium which, in ancient times, attached to the man that moved his neighbour's landmark. Yet reform is achieved sooner or later, justifying its advocates' foresight and disarming its opponents' prejudices. It is well, of course, that those prejudices should be treated tenderly. Caution is a very admirable quality, and when it crystallizes into the form of grey-headed conservatism, clinging fondly, for old-acquaintance sake, to the ills it knows, lest the very effort of uprooting them should be attended by a novel shock, it commands a measure of the respect that belongs to everything venerable and steadfast. But it needed little prescience to perceive, long ago, that without some change the circumstances of the mercantile communities at the open ports must become intolerable. Whatever the inherent vitality of Japan's foreign trade, it must eventually languish under such conditions. And it has languished into a state closely resembling inanition. There is no need to demonstrate this unhappy fact: everybody recognises it. Two years ago, the whole mercantile community, with one or two exceptions, placed on record a weighty protest against the permanence of restrictions which are gradually choking commerce. One of the exceptions afterwards came forward, and published an *ex cathedra* opinion diametrically opposed to that of his fellow residents. He did not even take the trouble to explain that he differed from them. This was a little perplexing. People enquired whether it was possible that the merchants of Yokohama could openly advocate a certain trade policy in 1882, and as openly denounce it in 1884. But the merchants of Yokohama were not really guilty of any such inconsistency. Unable to control, they could not be held responsible for the vagaries of every one of their number. The unanimity of their verdict was disturbed by a solitary voice which unfortunately happened to be a very voluble and very self-asserting voice. The verdict itself, however, remained unshaken and virtually unanimous: namely, that increased trade facilities are essential to the development, nay to the very existence, of Japan's foreign trade. Now this, strange to say, is the ground where people are beginning to discover that they

occupy a common position with their supposed opponents. They are opening their eyes to the fact that, after all, both sides are travelling towards the same goal; but being naturally reluctant to acknowledge that so desirable a state of affairs existed from the first, and was only obscured by their temporary inability to perceive it, they comfort themselves with the notion that the soundness of their policy is at length receiving recognition, and overcoming resistance. We do not propose to disturb this satisfaction. We have long anticipated it. For in truth the only difference that ever existed was one of method, not of object. Everybody has for years been persuaded that what Japanese trade wants is a wider market and larger liberties of conduct. The former is to be obtained by increased transport facilities; the latter, by raising the seige of the open ports. But while one side confined itself to complaining that things were not as they ought to be, the other set forth what it believed to be the only method of putting them right. That was the sole difference. It was doubtless true, in the main, that Yokohama was surrounded by monopolists whose selfish greed was gradually narrowing the paltry margin of possible profit remaining to foreigners. But of what avail was it to cry out against this, so long as the Treaties rendered every effectual remedy impossible. The Government could not interfere between the *Saitori* and their foreign victims without arrogating functions which the latter would have been themselves the first to condemn. Equally true was it that while foreigners were confined to the open ports, their association with the Japanese could never be placed on a satisfactory footing. But of what avail was it to denounce that confinement, so long as the Treaties upheld it? Unrestricted trade and residence in the interior could not be permitted without some new provision for the exercise of jurisdiction over foreigners, and foreign Governments would neither make that provision themselves nor consent to the Japanese making it. Equally true was it that exports might be stimulated by allowing foreign vessels to load cargoes at unopened ports. But of what avail was it to condemn the folly of withholding this liberty so long as the Treaties and the Orders in Council withheld it? And so on, through the whole list of troubles. The one side saw the troubles plainly enough and naturally inveighed against them, but without suggesting a feasible remedy; the other saw the troubles equally plainly, but without confining itself to complaints, steadily pointed out the only radical remedy; namely, a revision of the treaties in a sense opposite to the obsolete and barbarous notion that the Japanese are not fit to associate with us on equal terms, and that in order to carry on the common processes of commerce in Japan, it is necessary to preserve for ever a system clumsy in itself and wholly incapable of being extended so as to suit a broader and more liberal intercourse. Nevertheless, the recognition of both parties that they are travelling on convergent, not divergent, lines, is a very great gain. So soon as sensible and clear-headed people agree that they have a common object, one can be tolerably sure that they are not very far distant from its accomplishment.

BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1883.

BRITISH CONSULATE,

Kanagawa, May 20th, 1884.

SIR,—I have the honour to forward Returns of the Trade and Shipping of this Port for the year 1883, together with a Return of the duties and fees paid into the Custom House, and a Return of the number of British and Foreign Residents and Firms actually in residence and in business on the 31st of December last.

The following figures exhibit the trade of 1883, as compared with that of 1882:—

	1883.	1882.
Exports.....	25,691,215	26,661,889
Imports.....	18,618,612	20,208,802
	\$44,309,827	\$46,870,691
Decrease in Exports		970,674
Decrease in Imports		1,590,190
Actual Decrease in Trade.....		\$2,560,864

Commencing with the Import Trade, I proceed to pass in review the articles that call for more particular mention.

COTTON MANUFACTURES show an Import of \$6,240,138, against \$8,518,658 in 1882, being a decrease of \$2,278,520.

Taking Cotton Manufactures in detail, it will be seen that the figures for Chintzes and Printed Cottons are 2,460,808 yards, valued at \$147,165, as compared with 1,118,241 yards valued at \$70,218 for the previous year. These goods have held a fair position throughout the year; the varieties of quality and style, as noted in my previous report, are great, and prices vary accordingly. The deliveries for the twelve months amounted to \$135,541.

DRILLS.—The Import figures are 393,810 yards, valued at \$31,917, against 1,161,057 yards to the value of \$101,079 in 1882. The same remarks, as made in my Report for 1882, will, doubtless, equally apply to the past year; namely, that these goods have almost ceased to be an article of foreign import, and their mention is attributable to their importation, through Japanese firms, for Government use.

LAWNS (CAMBRICS AND LAWNS).—These exhibit a return of 1,728,202 yards, valued at \$83,578, against 463,857 yards to the value of \$24,034 in 1882. These have run a fair course of business during the season, which is in the first few months of the year, and with moderate stocks and supplies, prices have been in accord with the demand.

Starting in 1883 with a range of seventy to seventy-five cents., prices improved during the spring some five cents per piece; but, at the close of the year, had receded 10 to 15 cents. In respect of this class of goods it is a noticeable feature that Corea has been the destination of a good many sold here. The deliveries at this port for the past year are estimated at \$70,204.

SATINS (COTTON).—The figures do not call for much comment. 509,950 yards, valued at \$45,265, were imported in 1883, against 426,086 yards of the value of \$39,600, in the previous year.

I am informed that there is little demand now for these goods, and they would seem to have almost dropped out of the category of staples of current sale. The deliveries are put at \$72,193.

SHIRTINGS, GREY.—The figures are 19,059,268 yards valued at \$876,780 for 1883, as compared with 43,232,071 yards of \$2,070,728 in 1882.

The business of the year in this staple has been described to me as a "miserable one," and the above figures fully justify this expression. The deliveries of 8½ lbs. are little more than one-third of those of 1882, or of one-half those of 1880 and 1881, and of 9 lbs., about one-half of the three previous years. In March, and again in May, there were short-lived spurts in 9 lbs., and in September some 80,000 pieces were placed in a few days; otherwise the market has been in a deadly condition. Prices of 9 lbs. have ranged from \$1.87½ for common to \$2.45 for

best. At the close of the year best quality could not be quoted at more than \$2.27½.

The Chamber of Commerce gives the deliveries of 8½ lbs. at \$185,154, and of 9 lbs. at \$708,018.

DYED SHIRTINGS show an import of 1,823,012 yards, value \$151,780, against 608,436 yards to the value of \$54,787 in 1882. As regards this article, I have only to mention that the famine price of \$2, reached at the end of last year, gave place, in due course, to the more moderate quotations of \$1.50 to \$1.75 according to quality; these goods have been in fair request, but towards the end of the year were very heavy. \$150,658 represent the value of the deliveries for the year.

TAFFACHELAS.—The consumption in these goods is very slight; small lots of suitable patterns at one time sold fairly, but old patterns could not be placed, except at very low rates; the figures are 151,200 yards, valued at \$24,334, against 206,400 yards, to the value of \$33,509, imported in 1882. Deliveries for the year \$21,832.

T.-CLOTHS.—There has been a moderate and steady business with no great variation in values, but, towards the end of the year, sharing the prevailing weakness. The stock includes a good many of Bombay make. The returns are 2,430,476 yards, valued at \$128,553, against 1,937,829 yards, valued at \$102,671, imported in the previous year. Deliveries \$104,259.

TURKEY REDS.—Show an import of 1,456,897 yards valued at \$103,030 in 1883, against 5,911,037 yards valued at \$338,720 imported in the previous year. The decrease is very marked, though, as the deliveries indicate, there has been a respectable current of business throughout the year with no more variation in price than has been exhibited in shirtings. Deliveries are estimated at \$196,746.

VELVETS.—The trade has been dull and dragging in spite of small stocks. The lower qualities have ranged between \$5.80 and \$6. Good between \$6.50 and \$6.75, and best between \$8 and \$8.25. In December, however, some demand setting in for New Year requirements, it became apparent that stocks were exhausted, and common qualities rapidly advanced 50 to 75 cents. The deliveries amounted to \$249,296, and the import figures are 1,256,795 yards valued at \$199,315 in 1883, against 1,272,856 yards valued at \$212,505 in 1882.

YARNS.—Imported during the past year, 173,503 piculs valued at \$4,262,631, against 207,593 piculs valued at \$5,340,562 in 1882.

The record of the year is made up of long periods of extreme dullness relieved now and again by fair business doing for some days, followed by a relapse into calm. The closing months of the year were the very worst of all.

There has been little variation in the course of prices of 16/24's;—taking as a standard Good Mock, of which the spinning "Jos. Byrom" is one of the best known, prices may be quoted as starting in January at about \$29.50, fluctuating between \$29 and \$29.75 till towards the close of the year, and then declining to \$28.25.

Low qualities 16/24's, and Bombay yarns have not regained favour.

28/32's suffered more in price towards the end of the year. Taking the same spinning "Jos. Byrom," which was worth \$32.75 in January, it could not be quoted better than \$30.50 in December.

Neither 38/42's nor doubled 42's have exhibited any special features. In reverse 16/24's, the consumption has, apparently, been very small, due, possibly, to the depression in the branch of trade in which it is used. Doubled 32's have also been in small request, in part owing to the same cause, and partly in the competition of yarn doubled by natives.

The deliveries for the year were \$4,890,678, the diminution being most marked in 16/24's, in Reverse, and in double 32's.

IN WOOLLENS, AND MIXED COTTON AND WOOLLEN MANUFACTURES, the imports show a value of \$2,261,032 against \$1,924,031 in 1882.

As regards Blankets, I am informed that it is

difficult to trace the business in them, owing, doubtless, to the circumstance that a great many are imported to Government order.

Prices have ruled low, and the market has been a quiet one.

The figures for 1883 are 5,052 piculs, valued at \$227,473, against 3,282 piculs, valued at \$144,151, imported in 1882. Deliveries estimated at \$198,764.

CLOTH.—Imported in 1883, yards 283,876 valued at \$225,786, against 141,613 yards valued at \$166,111 imported in 1882. This market, I am informed, is so disorganized that it is difficult to give any precise report on it. Certain qualities, at times, find buyers at low prices, but good quality staple goods, formerly in vogue, have only been saleable at ruinous prices. Thus for Presidents, formerly in demand at 60 to 65 cents per yard, have been difficult of sale at 45 or even 40 cents. The partial destruction of the Tōkiō mills at Senji has, I believe, improved the position of Army Cloths. The Chamber of Commerce Statistics give the deliveries of Cloth at \$99,524. There is a marked increase in the deliveries of Blankets for 1883 as compared with the previous year, the figures being \$198,764 against \$128,760.

This increase is, I understand, to be accounted for by sales actually made in 1882, but made, for the most part, towards the end of the year, and goods were, probably, not taken delivery of until January or even February of 1883. It might happen, and probably did occur, that sales were entered as at date of clearance or delivery, and this would very materially alter the figures. Moreover, the early months of 1883 were marked by exceptional cold, causing a great demand for wraps, especially Cloth and Blankets. This circumstance would tend to swell the figures of 1883.

ITALIAN CLOTH shows an import of 3,890,199 yards valued at \$821,490, against 2,646,875 yards valued at \$566,128 imported in 1882.

One of the features in this business has been that the market has been suffering under the incubus of heavy stocks of the higher qualities—goods chiefly contracted for, but which buyers have for one reason and another delayed to clear. The trade has been largely done by contract; a few "chops" or marks commanding the supply of the most important channels for the year. Under pressure of this stock the quotations for good qualities declined severely, say, 3 to 4 cents per yard on qualities ranging 27 to 30 cents per yard. Lower qualities at from 21 to 23 cents have been better maintained; price, rather than quality, being the object with buyers. The deliveries are estimated at \$520,683, but these are, doubtless, largely out of old contracts.

LUSTRES AND ORLEANS.—The market for these seems to have ceased to exist. In the summer and autumn, however, some enquiry came from Kōbē at from \$3.75 to \$4.25 for current qualities.

MOUSSELINE DE LAINE.—The Returns give 5,780,145 yards valued at \$790,856 imported in 1883, against 5,286,424 yards valued at \$696,942 imported in the previous year. The business done has partaken of the general character of the trade of the year—for the most part slow and dragging. Towards the end of July a better tone set in, and as stocks of suitable goods had been low, the price of standard colours advanced one cent per yard. Supplies, however, became more ample, and by October the buoyancy had passed, and from that time values have declined.

The year closed very much as it commenced, namely, 14½ to 14¾ cents for aniline, assorted in scarlet and purple. In August and September these colours were saleable at from cents 15½ to 15¾, according to quality. Various colours have, according to season, been in special demand, but with no marked feature.

The scarlet cochineal for printing purposes has ruled even lower than aniline; and the latter, both in German and French goods, carries the day. Native printers continue to work patterns on the latter. In printed goods the business has been exceedingly depressed, owing, in some degree, to the above fact, and, partly, to the general neglect of expensive luxuries. The deliveries amounted to \$987,691.

SILK FACED SATINS.—These goods, though finding a place in the Tables under the heading of Miscellaneous Foreign Imports, may, appropriately, be mentioned at this stage before passing from Staple Piece Goods.

The importation of Satins and Silk and Cotton Mixtures in 1883 was 598,332 yards valued at \$348,466—in 1882 it amounted to \$416,983. I have only to remark of these goods that, like others which may be described as articles of luxury and ornament, they have been very dull throughout the year, exhibiting only some slight improvement in December. Best goods at from 70 cents to 80 or 85 cents per yard have generally been more saleable than the lower qualities at from 42½ cents to 60. The deliveries are estimated at \$198,663.

METALS show an Import of \$1,185,581, against \$1,036,274 imported in 1882.

The most noticeable features of the Trade in Metals for the past year have been the comparatively small fluctuations in prices of manufactured Iron and Steel, the continued fall in prices of Pig-iron, and, with the exception of a period of a few weeks in the autumn, the total absence of any buoyancy in the market.

The fluctuations of native currency make calculations difficult, and the risk considerable; Japanese dealers, therefore, averse to holding large stocks, have bought with caution, and have been content to supply their wants sparingly.

NAIL ROD IRON.—A fair business was done for the first six months of the year at prices ranging from \$2.75 to \$3.00 per picul, advancing, subsequently, to \$2.85 and \$3.15 which were about the current rates at the close of the year. Deliveries for the year estimated at \$18,603.

BAR IRON has shown a steady rate of \$2.60 to \$2.90 per picul for ordinary assortments. From September to November there was a slight rise of about ten cents in consequence of a more general enquiry, but prices again receded in December. The market may be generally described as a lifeless one with sales very difficult to make, except for special assortments. Dealers were able to secure large concessions in order to induce business in other than readily saleable assortments. The year closed with weak prices and moderate stocks.

PLATE AND SHEET IRON may be said to have maintained a quotation of \$3.00 to \$3.50 throughout the year. The business in these has generally followed the course of Bar Iron. Deliveries of Bar Iron &c. and Plate and Sheet Iron are estimated at \$409,986.

PIG IRON.—The quotation in January, 1883, for No. 3 quality North Country Iron, commenced at \$1.45 to \$1.50, but has shown an almost uninterrupted downward tendency till it reached, in December, \$1.25 to \$1.30. Deliveries given at \$35,439.

STEEL BARS.—The quotation for ordinary qualities has remained steady throughout the year at \$3.75 to \$4.00. The difference in price between this article and Bar Iron is comparatively slight, but Japanese buyers hesitate to pay it, notwithstanding the fact that for many purposes its durability should more than compensate for the difference in price and additional expense in working. Deliveries \$21,808.

TIN PLATES.—Prices have remained fairly steady at \$5.30 to \$5.60 per cwt. box. From September to November, notwithstanding small stocks, there was an advance of 20 to 25 cents, but prices again receded to \$5.20—\$5.40. Tin Plates have attracted more attention during the year in consequence of Kerosene oil tins, which Japanese tin-men have relied on for some years past, being now largely used for the export of Fish Oil.

WIRE NAILS.—These continue an important branch of the Metal Trade; but, owing to the difference in cost of the various sizes, are scarcely quotable, though, in sympathy with lower prices in the home markets, the course of values here has been a gradual decline during the last six months of the year.

GALVANIZED IRON, both plain and corrugated, continues to be fairly dealt in, and the use of this kind of iron is becoming more general.

SPELTER, ZINC SHEETS, and YELLOW METAL SHEATHING have exhibited unsatisfactory prices throughout the year, and but little business has been done.

PIG LEAD has almost disappeared from the market as an article of Trade.

In my Trade Report for 1882 the excessive demands by buyers in respect of sea damage to Iron and Steel in bulk were touched upon, and reference was made to the arrangement come to in the Trade, by which a per centage allowance of 10 per cent. should be made, the buyer taking the risk to that extent. Buyers still make the slightest additional damage an excuse for claims which have to be met, unless an opportunity for sale elsewhere affords itself; a remote contingency, having regard to the paucity of buyers and the absence of any competition amongst them, the tendency being rather to combination than competition.

Complaints are still made as to the absence at the Custom House of the necessary accommodation for the Metal Trade; the accommodation, as at present provided, is altogether short of the requirements of this port, and the Metal business, which demands considerable space for sorting, weighing, and delivering on arrival, has still to be carried out in ill-protected and inconveniently crowded sheds.

Copies of a correspondence on this subject between those interested in the Trade, the Chamber of Commerce, and the Superintendent of Customs at this Port, is appended to the Annual Report of the Chamber of Commerce for 1883. Under date the 18th of July, 1883, the Superintendent of Customs, in a letter to the Chairman of the Chamber, promises to provide better accommodation and to prohibit the bringing into proximity goods that may be deleterious to metals.

KEROSENE.—The Import of this attained to 13,076,020 gallons valued at \$1,351,947, against 9,007,925 gallons valued at \$1,007,169 imported in 1882.

The year opened with a quiet market, a stock of little more than 100,000 cases, and with a range of prices from \$1.90 to \$2.10 per case according to brand, "Devoe's" oil commanding the highest prices. The prevailing features of the first six months of the year, a brief period of activity from the middle of March to the middle of April excepted, were the moderate amount of business done, the extreme caution of native buyers, a gradual and almost uninterrupted decline in prices, and a steady accumulation of stocks: by the end of June prices had fallen to \$1.52 to \$1.70 per case, and stocks had increased to about 600,000 cases.

In July a revival of business took place causing a slight recovery in prices, which was lost in August, the market having relapsed into quiet. Towards the end of the month the dealers again purchased freely, but heavy arrivals in the first half of September raising the stock to about 770,000 cases prevented any advance in values; about this time speculative purchases by foreign buyers helped the market a little, but the native dealers were not disposed to follow suit and continued to pursue their cautious policy of buying only for actual requirements. In November the lowest point of the market was reached, prices then standing at \$1.48 to \$1.66 per case, but they gained a little strength during December, and by the close of the month had advanced to \$1.60 to \$1.73 per case, stocks, having, meanwhile, decreased to about 650,000 cases.

The results of the past year have, undoubtedly, been unremunerative, and, therefore, unsatisfactory; losses more or less severe must have been incurred by the generality of Importers; the trade has been a dragging one throughout, and the persistently downward tendency of prices has been most monotonous.

Notwithstanding the prevalence of low prices, no further expansion of the trade has taken place, the year's consumption showing, on the contrary, a falling off, judging by the Chamber of Commerce statistics, which put the deliveries at 790,075 cases against 900,050 cases delivered in

the previous year. The estimated value of the deliveries for 1883 is \$1,346,546.

MISCELLANEOUS FOREIGN figure for \$3,929,302 against \$3,623,781 in 1882.

The more prominent items in this List are

Arms and Munitions of War, which were imported to an amount of	\$ 89,845
Beer and Porter	\$ 69,667
Canvass and Duck	\$ 81,347
Clothing and Haberdashery	\$202,022
Coal	\$ 98,354
Coral and Coral Beads	\$ 65,518
Drugs, Medicines, and Chemicals	\$446,458
Dyes and Paints	\$305,883
Window Glass	\$ 66,080
Leather	\$171,647
Machinery and fittings	\$122,677
Paper and Stationery	\$125,573
Provisions, stores, etc.	\$211,000
Watches and fittings	\$135,228
Wines and Spirits	\$148,642

Of these I select the Trade in Drugs, Medicines and Chemicals, as also in Dyes and Paints, as calling for more than passing comment. The business in Drugs and Chemicals during the year has not been satisfactory, although in some few articles the business has slightly increased: it has, however, been far from profitable. It may be said of these, as of other goods, that the depressed condition of trade has generally affected them, and further I am informed that the tax on patent medicines has also seriously interfered with the expansion of the Chemical trade.

An increased tax was, as you are aware, notified by a Government Notification of the 27th of October, 1882, and came into force from the 1st of January, 1883. As an instance of how the imposition of this tax has interfered with the trade, it may be noted that Santonine, an article much in request amongst the Japanese, shows, for the past year, a reduced consumption of nearly 20,000 oz. as compared with the previous year, notwithstanding that the average price ruling in 1883 was 23 cents instead of 30, the average price during the year 1882. The sale of Santonine attained to only 72,800 ounces, prices throughout the year having really been below cost of Import, and at the close were as low as 20 cents per oz. in 1 ounce bottles, and, indeed, very few sales were effected at that price.

In **QUININE** the consumption has somewhat increased, some 27,000 ounces having been disposed of.

BROMIDE OF POTASSIUM has been sold to the extent of about 37,000 lbs.; prices have fluctuated very little, and 45 cents per lb. was the average price in 1 lb. bottles. The trade in this article may be said fairly to hold its own.

CAUSTIC SODA.—The consumption of this is steadily increasing, and sales were made during the year to the extent of about 1,450 tons. At the commencement of the year prices were about \$3.70 to \$3.80 per picul, and gradually hardened towards the close of the year, when the quotation was \$4.

IODIDE OF POTASSIUM has been sold to a considerable extent, about 28,000 lbs. having changed hands. The low prices ruling in Europe have tended to increase consumption.

MORPHIA has been sold to an average extent, but generally below import cost.

BISMUTH SUBNITRAS has exhibited a much restricted business, owing to the difficulty in getting the manufacturers to supply an article that will meet the requirements of the Japanese Government laboratory. Stocks are in consequence very scarce, as importers do not care to run the risk of a condemnation of their goods.

It may be said that some of the leading articles have fairly well held their own, more particularly as applicable to chemicals required for technical and manufacturing purposes.

A subject worthy of note is the starting of a manufactory of Pharmaceutical Chemicals on a large scale in Tōkiō as an incorporated company with a capital of 200,000 yen. The Government, I am informed, contributes 100,000 yen of the capital, free of interest for a period of 20 years; a free grant of land is also given, and the necessary buildings erected free of cost. Another enterprise about to be undertaken is the formation of a Company with a capital of

250,000 *yen* having for its object the manufacture of alcohol out of waste "Saké" from the native Breweries; and it is noteworthy that the manufacture of Bleaching Powder on a large scale has been commenced at the Insatsu Kiyoku.

DYES.—The trade in Aniline Dyes is increasing, goods under this heading coming, for the most part, from Germany: the business done during the year comprises 410 piculs of Chinese Blue, 300 piculs of Ultramarine, and 168 piculs of Methyl Violet. Extract of Logwood, a few special brands excepted, has met with a small sale. Generally the trade in Dyes was a more satisfactory one than last year.

SUGARS, which find a place between the Import list of Miscellaneous Foreign and Miscellaneous Eastern, figure to \$3,230,849, as against \$3,099,874 imported in 1882.

Under the heading MISCELLANEOUS (EASTERN), the total of which is \$419,763 as compared with \$999,015 in the year previous, the most prominent items are Raw Cotton, \$128,051, Drugs and Chemicals \$59,896, and Tortoise shell \$59,207. A glance at the returns of 1882 will show why the figures under the heading of Miscellaneous Eastern have dropped to less than half in 1883. It will be seen that in the former year Raw Cotton figured for \$200,445, Drugs and Chemicals \$93,432, Dyes and Paints \$56,983, and in many other items, the contrast is as great, as for instance, Beans, Peas and Pulse which were imported to the value of \$37,456 in 1882, whereas the figures for 1883 were only \$9,272. Also Bean and Pea Oil, \$15,419 in 1882 against \$1,126 in 1883.

The general aspect of the Import trade for the past year has been far from cheerful. In some of the staples there have been times of fair activity, but, on the other hand, there have been long periods of stagnation, and demand for goods in general has been dragging. In my Report for 1882, when writing of the staple Yarns, I remarked on the falling off in deliveries in this article, as compared with 1881, and turning now to 1883, the figures show a falling off of some 30,000 piculs on those of the previous year, a circumstance not a little startling.

In SHIRTINGS too, the statistics, which exhibited some increase, and not a falling off in 1882, now show that considerably less than one-half was delivered in 1883, as compared with 1882.

Ten thousand bales of Yarns, and ten thousand bales of Shirtings taken out of a trade like that of Yokohama, in which Yarns and Shirtings play such an important part, cannot fail to leave a considerable blank, and to give an air of depression to the general character of business. The trade, however, has been free from some of the miserable features of the preceding year; the stocks of old goods, costing very dear, and showing ruinous losses, have not formed such an encumbrance, having been, to a great extent, worked off. New importations have cost more moderately, and there has not been the disparity between cost and selling price; on the whole, to importers the year has probably been neither good nor bad, small profits have been made at times, and in some directions losses, but not heavy ones, have ensued. Speaking roughly, the business may be said to have cleared itself; but this is, after all, an unsatisfactory result to merchants, who naturally seek remuneration for their labours.

The persistent complaint of native dealers throughout has been that their country customers did not buy, in fact that the consuming classes held their hands, and from all accounts it seems pretty certain that the domestic weaving trade has been in a state of prostration; a remark which applies to the silk, as well as to the cotton-manufacturing industries. Rice and all other produce of the kind have ruled at very low rates, and to this fact, equally as it held good last year, is attributed the attenuated condition of the purchasing power of the country. Meanwhile the continued and gradual appreciation of currency has marked the reaction from that period of inflation of years past, which appears to have been productive of such a heritage of distress.

As before, the deliveries of goods appearing

in the Chamber of Commerce Returns do not altogether bear out the general impression of such bad times, but the record confirms the impression that 1882 included much that had been sold some time before.

Fluctuations in price have not been large; the low range, to which most articles had come down, has proved so far a source of security to the importer in that he has not been subject to severe losses; stocks, moreover, have, for the most part, been moderate, and it has been strange to notice that in goods considered to be staples, stocks reach the verge of exhaustion without in the least stimulating demand for them.

EXPORTS.

The Custom House Returns give under the heading of Raw Silk an Export of 31,220 piculs to the value of \$16,183,540, against 28,841 piculs to the value of \$16,232,150 exported in 1882.

The Chamber of Commerce figures for 1883 are 34,143 bales valued at \$15,990,366.

The figures are the highest that have been attained since the opening of the Port, and, indeed, the increase is actually greater than would appear by a mere reference to figures, for whereas prior to 1880 the average weight of a bale was only 80 catties, it has been the custom of the trade of recent years to make up bales to an average of 92 catties. The export has been much influenced by the low consumption of the raw material in native manufacture, and it is to be regretted that there are no reliable data on which to found an approximately accurate estimate of the amount of raw silk actually consumed in the country. There can be little doubt that ordinarily the annual consumption is large, much larger, indeed, than is generally supposed, for Japanese engaged in the trade place it as high as from 13,000 to 15,000 piculs, indeed in 1881 it is said to have reached 21,000 piculs, which would account for the low export in that year. During 1882 consumption is said to have fallen off to 13,000 piculs, while in 1883 some 5,300 piculs only were required, which would amply account for the unusually large export of 1883. In fact last year the manufacturing industry passed through a period of unprecedented depression, from which there are only quite recently any signs of recovery. This is borne out by the fact that amongst the coarse silks placed on the market were a number of classes of the old-fashioned sorts such as "Nagahama," "Echizens," "Sodais," which had been thought to be extinct. These have, of late years, been prepared only for native consumption, but the native weaving trade has apparently been crushed out, and, consequently these silks have been sent forward to Yokohama for sale.

In its results to foreign merchants the trade of the year has probably been, on the average, like that in Imports, neither good nor bad: at times losses have been made, but there have also been occasions of fair profits.

The range of prices has been moderate, and the fluctuations not severe. Quotations at the commencement of the year were as follows:—

Fair Hachioji Hanks,.....	about	\$450
Good 2½ Maebashi,.....	about	\$500
Good Maebashi,.....	about	\$520 to \$540
Good Kakida,.....	about	\$570 to \$580
Extra Kakida,.....	up to	\$625
Good filatures,.....	about	\$600
Best filatures,.....	up to	\$640
Hamatsuki.....		\$450 to \$490

The business from this time to the end of May was of a quiet character, and prices had then become rather lower, but the season of course was nearly closed. In June the new season was opened at \$540 for the first Maebashi silk offering, being an advance of \$60 per picul on the closing rates of the month. At the commencement of June the telegrams from Europe were to the effect that the European crop was not turning out as well as had been expected, and advices from Shanghai were to the like effect as regards the China crop.

The Lyons and London markets were, of course, affected by these reports; and when, on the 22nd June, the first lot of new season's

Maebashi came down it was, as mentioned above, eagerly taken at the high price of \$540.

These reports of the unsatisfactory nature of the crops did not altogether prove correct, and, as regards Europe, it may be noted that the crop has turned out to be an unusually large one; the China crop did, on the other hand, turn out to be a small one, though the export has been somewhat augmented beyond the lowest estimates by the shipment of inferior sorts. Prices here towards the close of June suddenly lost \$40 of their advance, the next arrivals of Maebashi 2½ bringing only \$510/520. In July prices still further declined \$20 per picul, but became steadier towards the middle of the month. Filature silks now began to arrive, and, the quality proving good, they were freely taken for America, chiefly at \$625/635. Settlements during July were 1,400 piculs.

Throughout the greater part of the month of August prices were well maintained, but weakened \$10 at the close. Holders at first attempted to raise prices, as the Exchange rate of *Kinsatsu* (Japanese paper currency) was against them, but large arrivals and scarcity of money at last obliged them to follow the market and sell currently. September witnessed a continued drooping of prices, and buyers operated largely, Filatures and Oshiu sorts having the preference. Settlements were about 4,900 piculs, leaving a stock of 5,000 piculs. A large business was continued in October in all classes of silks, holders being disposed to force sales; during this month 5,400 piculs were settled, yet stocks had increased to 5,700 piculs, prices were as follows:—

Maebashi 2½.....	\$450 to \$460
Maebashi 3.....	\$430 to \$440
Filatures 1.....	\$580 to \$610
Kakida 2.....	\$535 to \$545
Hamatsuki 1 and 2.....	\$470 to \$480

The downward course of prices continued in November until about the 20th of that month; business, however, being still maintained on a large scale. Maebashi 2½ was obtainable at \$440/453, then the large settlements began to tell upon stocks, and sellers regained courage. Transactions for the month were 6,000 piculs, Stocks at the close 4,600 piculs. From this to the end of the year the position of the market steadily strengthened, arrivals fell off, and the native manufacturing trade showed symptoms of revival. Prices advanced and closed at about \$450 for Hachioji, fairly good Maebashi \$485 to \$500, with a corresponding advance in most other sorts.

A peculiar feature marked the silk business in October; during that month silk men were pressing to sell, and some small concessions were obtainable, the supplies being so large, and money evidently wanted. Towards the end of October money became exceedingly tight; in fact, the treasuries of the foreign Banks were so far depleted that they could buy but little of the paper which foreign merchants wished to sell against their shipments. At the same time the news from the European silk markets was very bad, and prices there continued to give way before the pressure of the heavy supplies of both Italian and Japan silk. For a short time business in this market came to a stand-still; silkmen, however, seemed to be in no mood to hold out against the course of affairs, and they became pressing to sell on buyers' terms. Arrangements were now made by which funds were obtainable from the Japanese Banks, and this furnished an opportunity to the *Sho-kin Gin-ko* or "Yokohama Specie Bank" to enter the field as a competitor with foreign Banks for foreign Mercantile Bills of Exchange. This Bank had, for some time, been anxious to engage in business of the kind, but foreign merchants, as might be expected, did not readily leave their accustomed channels. Now, however, with plenty of specie in its treasury, with willing buyers, and offering, as it did, a better rate of Exchange by ½ to ¾ per cent. than could be obtained from the foreign Banks, its proffers met with acceptance, and it secured considerable quantities of private paper. The connection thus secured has been since maintained; and agencies of the Bank are also in operation in Lyons and London. It may be

asked how the Bank can afford to part with dollars at a price so much below the rates of the open market: to this no definite reply can be given. Of the large shipments this season on Japanese account it is understood that a large portion is on behalf of the Government, and it would seem that both Bills and silk go to provide funds for disbursements abroad. Equally difficult of explanation is the fact that the Specie Bank does not make use of Bank Bills in preference to private paper for its purposes.

To turn again to the general features of the silk trade for the year it will be seen that the total value of silk exported in 1883 was slightly below that of 1882, though the quantity shipped was larger by 2,379 piculs. This was due to the very low range of prices ruling throughout the year. Another point of interest is the altered course of shipments, as appears from the subjoined table which has been kindly furnished me.

YEAR.	TO ENGLAND.	FRANCE.	UNITED STATES.	OTHER COUNTRIES.	TOTAL.
	Bales.	Bales.	Bales.	Bales.	Bales.
1874...	5,669	5,810	244	262	11,985
1875...	5,362	8,781	53	402	14,598
1876...	10,287	11,013	117	849	22,266
1877...	9,928	7,896	699	1,201	19,724
1878...	4,583	9,927	2,336	394	17,240
1879...	5,969	9,309	4,511	146	19,935
1880...	2,748	7,584	5,788	58	16,178
1881...	3,937	11,698	4,590	45	20,270
1882...	4,621	16,065	10,244	343	31,273
1883...	4,104	19,196	10,549	294	34,143

The foregoing table exhibits how silk shipments are now made directly to the markets of consumption, and that the trade to England in this staple has become of small importance. The rapid growth and extensive proportions of the silk trade between this country and America, reached in such a short time, is most remarkable; and there can be no doubt that it is capable of still further extension. The qualities mostly in demand for New York are Filatures, Reeled Hanks, and Kakida sorts. Speaking generally of the course of prices throughout the year, it may be observed, with the exception of a slight spurt in June of very short duration, the movement of prices has been continually retrograde, greater firmness on the part of holders only manifesting itself at the close of the year: this decline was brought about by causes that had their origin here, and not from any anticipated further fall of values in Europe or America, where, at the commencement of the year: prices were already so low that few people looked for any further fall. The chief cause, undoubtedly, was the gradual appreciation in Exchange value of *Kinsatsu* (Japanese paper currency) with the Mexican dollar. The dollar, which in February could be exchanged for 1 *yen* 40 *sen Kinsatsu*, was in December exchangeable only at the rate of 1 *yen* 10 *sen*; and the unfortunate owner of silk, who receives payment in Mexican dollars, hurried the sale of silk as soon as it came on the market, as each day's delay brought with it increased losses. The absence of native consumption, and consequent very heavy supplies, increased the pressure to sell, and prices were forced down to an unexpectedly low level, the lowest point being reached in November; extensive purchases by foreigners, and large direct shipments by Japanese then relieved the market, and from that time matters began to improve.

Shippers have had to contend with the low prices and large quantities of Italian silk which throughout the year have been persistently pressed for sale in Europe and in America, and have interfered with the sale of Japanese. Fashion has favoured a variety of articles, but there has been no steady enquiry for any one class of silk goods, excepting Velvets, in the manufacture of which little pure Silk is required. It has been stated to me, and the opinion is one in which I cannot but agree, having regard to all the information that has been kindly placed at my disposal, that this rich industry (silk) is yearly growing, and there is no reason why it should not be further extended by the planting of mulberry trees in new areas. As to the quality of the crop of 1883 there is little special to remark beyond what has been already mentioned as to the abundance of coarse sorts.

SILKWORM EGGS show an export of 75,091 cards, valued at \$55,287, against 177,240 cards, valued at \$122,486, exported in 1882. The trade in these may be looked upon as finished.

TEA, according to Custom House Returns, shows an export of 138,356 piculs, valued at \$3,620,564 in 1883, against 142,168 piculs valued at \$4,405,841 exported in 1882.

The Chamber of Commerce Returns give 153,574 piculs valued at \$3,684,163: this, doubtless, includes all kinds of tea, inclusive of Bancha, Tea Dust, etc.; and, as the total Returns furnished by the Custom House, give an export of \$3,688,307 the discrepancy is but trifling.

As is generally the case, the year 1883 opened with little or no life in the tea Market. Stocks still in native hands consisted principally of teas shown before the close of the preceding year, and but few good quality parcels had remained unsold. The business transacted offers but few features of interest to report on. Settlements up to 30th April amounted to 10,675 piculs and consisted principally of Good Common to Good Medium grades at prices ranging from \$13 to \$19 per picul, and bought chiefly for the Canadian and Californian Markets.

By the first of May a few musters of new crop teas made their appearance, and "Choice to Choicest" parcels commanded \$31 to \$34 per picul; these were the only grades in supply until about the 20th of May, when "Finest Teas" also came in, and were in good demand at \$28 to \$30 per picul. During June the Market was fully supplied with grades as under, and prices ranged as follows:—

Medium.....	\$17 to \$20
Good Medium.....	\$21 to \$23
Fine.....	\$24 to \$26
Finest.....	\$27 to \$30
Choice }.....	\$31 and upwards.
Choicest }	

The settlements during the month were by far the heaviest for any one month of the year, amounting to the large total of piculs 49,878.

Fully one-half of the new season's crop had come to this market, and though the quality on infusion was good, yet the leaf, on the average, was markedly inferior as compared with the crop of the year preceding, there being a very evident want of care bestowed on the manipulation of the leaf, though, perhaps, the spring weather, which was cold and inclement, may, in a measure, have contributed to the evil.

In July business was somewhat checked by wire advices of the adverse state of the American tea market created, in a measure, by the inferiority of the crop, but more by the large amount of tea shipped from Japan which was considered to be much in excess of the immediate wants of American consumers. Buyers in consequence either withdrew, or considerably reduced their offers, and though native merchants for a few days stoutly resisted, about the middle of the month they gave way, and business was resumed on a moderate scale, fair quality "Good Medium" commanding \$17 to \$18 per picul, and other grades in proportion. This may be considered the lowest point of the Tea Market during the year under review, the teas being of good quality in the cup, fragrant in the hand, and the leaf well-suited to undergo the re-firing process without great loss in weight.

The amount of Tea settled during the months of August and September was moderate, averaging about 12,000 piculs per month, and arrivals coming in showed a very apparent falling off in quality. This market was now almost denuded of "First Crop" Teas, and the few parcels remaining were mostly spoiled by heating. The most eligible "chops" of Second Crop had generally found buyers, and but little Tea grading over "Good Medium" was obtainable.

But slight business was transacted until the opening of November, when fresh orders coming to hand, purchasing recommenced on a basis of \$17 per picul for "Good Medium," and the demand continuing, by the end of the year an advance of fully \$2 per picul was

established on all grades obtainable, which consisted of—

Common.....	\$12 and under
Good Common.....	\$13 to \$14
Medium.....	\$15 to \$18
Good Medium.....	\$19 to \$22
Fine.....	\$26 nominally

other grades without supply.

The following Table gives the Comparative Settlements of Tea during the twelve months in the years 1883 and 1882 respectively:—

1883.		1882.
3,937 piculs.....	January.....	2,884 piculs
2,671 piculs.....	February.....	3,252 piculs
3,203 piculs.....	March.....	3,408 piculs
864 piculs.....	April.....	3,478 piculs
41,835 piculs.....	May.....	56,303 piculs
49,878 piculs.....	June.....	34,506 piculs
20,580 piculs.....	July.....	17,163 piculs
12,284 piculs.....	August.....	12,628 piculs
12,794 piculs.....	September.....	11,119 piculs
6,370 piculs.....	October.....	5,096 piculs
6,684 piculs.....	November.....	5,260 piculs
3,086 piculs.....	December.....	5,679 piculs

164,186 piculs 159,776 piculs
Increase, 4,410 piculs.

The Teas were distributed as follows:—

1883.		1882.
10,039,021 lbs....	New York, Boston, etc.	11,109,476 lbs.
4,044,855 lbs....	California, Oregon, etc.	3,730,189 lbs.
3,043,998 lbs....	Canada.....	2,526,279 lbs.
2,937,596 lbs {	Chicago and Western States }	3,297,495 lbs.
75,532 lbs....	England.....	214,560 lbs.
20,141,002 lbs.		20,877,999 lbs.

Decrease in 1883, 736,997 lbs.

The above Table of distribution has been furnished to me privately, but it is as well to give the distribution, as appearing in the Returns for 1883, supplied to the Chamber of Commerce, which are as follows:—

To New York.....	10,171,617 lbs.
To San Francisco.....	4,095,979 lbs.
To Boston, Chicago.....	6,117,444 lbs.
To England.....	91,562 lbs.

20,476,602 lbs.

The teas during 1883 were shipped as follows,—the comparative figures of 1882 being also given:—

	1883.	1882.
By Suez steamer, English bottoms.....	9,757,691 lbs.	8,370,390 lbs.
By Occidental and Oriental Company, English bottoms.....	4,007,257 lbs.	8,693,211 lbs.
By Pacific Mail Company, American bottoms.....	3,899,892 lbs.	2,870,805 lbs.
By sailing vessel to San Francisco, American bottoms.....	2,365,580 lbs.	729,033 lbs.
By Suez steamer to London, English bottoms.....	110,582 lbs.	214,560 lbs.
	20,141,002 lbs.	20,877,999 lbs.
Total in English bottoms.....	13,875,530 lbs.	
Total in American bottoms.....	6,265,472 lbs.	

20,141,002 lbs.

Before closing my remarks on the export trade of this Port for the past year, I would beg your attention to the comparatively large export of Fish Oil which figures for \$108,483, as against \$87,811 in 1882. Cod Liver Oil, which would, doubtless, be embraced in these figures, is now a recognized article of commerce, and is shipped in considerable quantities to Europe and America. It is obtained in the northern island Yezo, and is made from the livers of the Cod fish frequenting the northern portion of the Main Island, and the shores of the Island of Yezo.

JAPAN OIL OF PEPPERMINT is forcing itself to the front as an article of export, and is said to be competing with the American production.

SHIPPING AND NAVIGATION.—313 vessels, with a tonnage of 556,024 tons, entered this Port during the past year, as against 291 vessels, with a tonnage of 523,074 tons, entered in 1882, showing an increase of 32,950 tons for the year 1883.

Of the entries for the year under review, the number of British vessels is 172, with a tonnage of 339,618 tons, as against 169, with a tonnage of 351,633 tons, entered in 1882, showing an increase of 3 vessels, but a decrease in tonnage of

12,015 tons: the fact that three British Steamers, the *Coptic*, *Belgic*, and *Gaelic*, of comparatively large tonnage, have been withdrawn from these waters, and from their employment on the Occidental and Oriental line, will go far to explain the decrease. In Foreign Shipping there is an increase of 44,965 tons. Of this increase American shipping furnishes 37,186 tons, German shipping 5,941 tons, Russian shipping 6,286 tons, Norwegian shipping 307 tons; French shipping exhibits a decrease of 4,755 tons.

Of the British tonnage given above, Mail Steamers figure for 185,788 tons, the Peninsular and Oriental Steam Navigation Company contributing 65,178 tons, and the Occidental and Oriental Steamship Company 120,610 tons. Of General Shipping (British), other than Mail Steamers, the entries show 115 vessels, of 153,830 tons, of which 62 vessels, with a tonnage of 124,079 tons, are steamers, and 53 vessels, with a tonnage of 29,751 tons, are sailing vessels.

Of the 62 steamers 32, with a tonnage of 64,116 tons, were from Great Britain, as also were 4 sailing vessels with a tonnage of 5,418 tons. The steamers carried general cargoes; two of the sailing vessels arrived with general cargoes, and two with coals.

Of the remaining 30 steamers, 16 were from Coast Ports, 7 from Hongkong, 3 from Shanghai, 2 from Antwerp, and 1 from Manila and New York respectively.

Of the remaining 49 sailing vessels, 10 were from Takao, 8 from Newcastle, N.S.W., 8 from Coast Ports, 6 from New York, 1 from British Columbia, 1 from Antwerp, 1 from Shanghai, 7 from North Pacific Islands, 1 from Auckland N.Z., 4 were purchased at this Port, and 2 re-entered. Of the 79 vessels thus arriving otherwise than from Great Britain, 62 entered with cargoes, viz.:—18 with general cargoes, 17 with coals, 11 with sugar, 7 with kerosene oil, 2 with timber, and 7 with furs and skins. Of the remaining 17 vessels, 11 entered in ballast, 2 re-entered, and 4 were purchased in Port.

175 British vessels of 343,029 tons cleared from this Port in 1883. Of these 123 were steamers with a tonnage of 312,229 tons, and 52 were sailing vessels of 30,800 tons.

Of the steamers, 57 with a tonnage of 185,788 tons, were Mail steamers with general cargoes, and of the remaining 118 vessels, 77 cleared with cargoes, and 41 were in ballast.

One British steamer, the *Patricio*, was sold here to Japanese purchasers in 1883 for \$150,000.

The Shipping report for 1883 would not be complete without mention of the Union Steam Navigation Company, a Japanese Company, which, projected in 1882, has now commenced active operations in Japanese waters.

The Capital of the Company is six million *yen* in 120,000 shares, of which, according to the latest report, 42,141 shares, representing 2,107,050 *yen* have been registered, 673,485 *yen* of this amount having been received on account. The number of shares subscribed for by the Government was 52,000, leaving 68,000 shares at the disposition of the public. With the Union Steam Navigation Company the following Companies heretofore in existence have been amalgamated: the Tōkiō Sailing Ship Company, the Hokkaidō Transportation Company, and the Yetchiu Sailing Ship Association.

The Company has made extensive purchases of steamers in England. The Company's fleet consists, at the moment, of some fifteen steamers ranging from 700 to 2,400 tons, and some eight additional steamers are, I believe, now in course of construction in England. Within a few months the Company's fleet will probably number some thirty vessels.

EXCHANGE.—During the first five months of the year the demand rate for Bank Bills on London ranged from 3/8 to 3/7½, fluctuating up and down with the telegraphed quotations for bar-silver from London, until June, when the money market here being very tight, exchange went up to 3/8½, keeping very firm until September, when a slight reaction took place, and the rate went down to 3/7½, but again rallied in

October, and during the last quarter of the year exchange was very firm, touching as high as 3/9½, but closing at 3/8½.

During November, when the rates touched the highest point, the Japanese "Specie Bank" (the *Shō-kin Gin-kō*) was a free buyer.

The foreign exchange for the year under review may be said to have followed the course of silver on the London market, with few exceptions, which latter were most marked in June and August when a great stringency took place in the money market here, and the tightness would have been much more exaggerated had it not been for the very unusual position of the Japanese Banks which were plentifully supplied with money, and were free lenders to the foreign Banks at first, but subsequently became strong competitors against them, buying largely of the merchants against shipments of silk to Europe, often as much as one per cent. under the foreign Banks, which materially helped to keep exchange lower than would otherwise have happened. It is uncertain, however, whether the Japanese Specie Bank is likely to continue to be a current buyer against the foreign Banks, and, indeed, its action in the past, which was also prominently mentioned in the course of this Report when treating of the Silk Export, is stated to be probably due to certain requirements of the Government which necessitated the placing of money in Europe.

The fluctuations in "*Satsu*," or Japanese paper currency, have been less than for many years past, and the tendency has been towards improved value, strangely enough, however, without a corresponding improvement in business. There is no doubt but that the enhanced value has been partially caused by the curtailment of the issue, but it is perhaps more likely to be due to the action of the Government in controlling Bourse transactions, and thus minimizing the evils arising from time bargains. At first this had a deleterious effect on trade because there was no confidence in the improved value, and neither Japanese sellers nor buyers could accommodate themselves to the new order of things, but there is every prospect of the current year witnessing a renewed confidence in the Government paper, and, with confidence, a revival of trade will, doubtless, follow. Such revival, if it is brought about, is likely to be more especially in favour of the Japanese, as the prices of Exports and the Commodities used by foreigners have not declined in the same ratio as the corresponding advance in *Satsu*. The improvement in paper will enable the Japanese to pay for his requirements in Imports from abroad, of which the interior is reported, and generally believed, to be bare, and, with the issue brought to within controllable limits there is not the same risk of violent fluctuations as in former years.

Satsu opened in January at 137 per \$100, declining to 144 until towards March, when an improvement took place. About this period heavy gambling transactions on time were frequent, until the Government stepped in, and from the 10th to the 28th of April the Exchange or Bourse was closed. Regulations were then issued having for their object the suppression of time bargains. From the beginning of May a gradual improvement began, which was maintained month by month to the close of the year. The following table will furnish information as to the steady appreciation of Paper:

	Per \$100.		Per \$100.
January	137/138	July	130/125
February	138/144	August	125/116
March	144/138	September	118/119
April 1st to 10th	138/140	October	119/112
May	130/132	November	111
June	132/130	December	105/109

The traffic receipts on the Yokohama-Tōkiō line of Railway for the past year, as compared with 1882, were as follows:—

	1883.	1882.
Passengers (No.)	2,221,210	2,238,802
Goods (tons)	22,025	40,520

The amount received on account of passengers in 1883 was 503,503 *yen*, and for goods 40,497 *yen*, against in 1882 the sums of 511,874 *yen* and 52,863 *yen* respectively.

The message traffic (Telegraphs) at Yokohama during the year was as follows:—

Japanese messages forwarded	129,418
Japanese messages received	100,011
Local foreign messages forwarded	10,341
Local foreign messages received	9,610
International messages forwarded	9,647
International messages received	10,021
	269,048

The Returns of Railway and Telegraph message traffic exhibit some decrease as compared with the previous year.

I have the honour to be,

Sir,

Your most obedient, humble Servant,

RUSSELL ROBERTSON.

The Honourable F. R. PLUNKETT,
&c., &c., &c.,

H.M.'s Envoy Extraordinary and Minister
Plenipotentiary, Tōkiō.

1.—RETURN OF THE IMPORT TRADE OF THE PORT OF KANAGAWA FOR THE YEAR ENDED DECEMBER 31ST, 1883.

TRANSLATIONS FROM NATIVE JOURNALS.

THE ACTUAL CONDITION OF JAPAN.

(Translated from the *Hochi Shimbun*.)

Certain persons have lately expressed an opinion to the effect that our country, ceasing to pursue the path of progress, is beginning to retrace its steps; that old-fashioned and previously abandoned social customs and usages are in process of revival; that ancient creeds which had apparently been swept away by the tide of Western civilization, are again attracting disciples, and that all these recently discernible phenomena cannot fail to be detrimental to the interests of the nation. It would seem that these views are shared by a great many. Even men of erudition and intelligence have expressed apprehensions for the future of the country. It may be advisable, therefore, to comment briefly on the actual condition of the empire, with a view to correcting these erroneous impressions.

Great excitement, such as that experienced by Japan of recent years, is generally followed by a reaction, but not necessarily such a reaction as to alter radically the course of events, or check the progress of society at large. Causes connected with foreign intercourse gave rise, some time ago, to an extraordinary national agitation, which was followed by changes that well nigh revolutionized our social organization. Against the steady progress that ensued a slight reaction subsequently set in, which, however, cannot be regarded as anything more than a temporary phenomenon affecting a mere fraction of society, and having no relation to the whole body of the people nor any connection with the permanent progress of the country. There is no power or influence capable of seriously obstructing the progress of human knowledge, nor is it within the compass of man's abilities to check the activity of mental faculties. Even though he possessed such ability, it would still be beyond his strength to affect the results accomplished by the previous exercise of those faculties. If, then, the progress of human knowledge cannot be effectually obstructed or the activity of human faculties checked, it follows necessarily that social conditions, in the presence of ameliorating influences, must continue to improve. Look back, for example, at the state of affairs which existed in this country during the epoch *Keiō* (1866). Can it be pretended for a moment that the present condition of Japanese society is in any respect inferior to the condition existing in that epoch? Or again, if we consider a still shorter interval, and recall the social conditions of ten years ago, can we doubt that large improvements have taken place, and that many admirable elements are to be found now which did not visibly exist then? This progress is to be regarded as the direct consequence of the development of the nation's intellectual faculties, and assuredly, unless some hitherto unknown scheme be discovered for checking the growth of human wisdom, there is no danger of our progress being exchanged for stagnation. Even the most bigoted conservatives do not deny that steamers can travel faster than sailing vessels and locomotives more rapidly than *jirikisha*. Nor is the utility of steamboats and trains recognised more thoroughly than the advantages of telegraphs and the penny post. True, the Conservatives, while they use the locomotive may be ignorant of its mechanism as well as of the principles of its motive force, and while they have daily recourse to the telegraph, they may have no acquaintance with the art of applying electricity to practical

purposes. None the less is it certainly due to the development of their intelligence that they have been able to appreciate the utility of both the former and the latter. It cannot be said, perhaps, that these men contribute directly to the progress of society. Only the higher orders of intellect are capable of initiating the impulses by which the lower profit. Setting aside this distinction, however, it may be asserted generally that the degree of social progress is a measure of the growth of knowledge, and that the temporary stagnation which sometimes occurs in a particular part of the social body can by no means obstruct the development of the whole, or be regarded as a state of permanent inertia even so far as that part is concerned.

This reasoning can be comprehended by all persons of ordinary sense, yet it does not seem to have appealed to some of our countrymen, or to have modified their curious views. They know that steamers and locomotives serve for the rapid transport of passengers and goods, but they fail to discover any relation between these wonderful agents and the extension as well as the interchange of knowledge. They appreciate the utility of telegraphs and posts, but they appear to overlook the principle that the convenience of these devices is in itself a factor of intellectual development. They recognise the fact that the steamers and railway cars now employed in Japan have been imported from the West, but they do not comprehend that these steamers and railway cars came to us freighted with indestructible elements of social progress. Do not our steamers increase in number every year? our railways and telegraphs in length? our postal system in efficiency? If these questions can be answered in the affirmative, it must be admitted that what may be called the invisible impulse of progress is always in operation, and constantly gains momentum. When it is shown that there has sprung up among the people a feeling of indifference to all these products of civilization and a willingness to dispense with them, then perhaps it may be asserted of our social conditions that they are inert, or even retrogressive.

We might point, too, in this context, to the growth of literature, of journalism, of political activity and of public discussion, and we might analyse the various signs of a gradually developing intelligence which preceded, and prepared our countrymen for, the advent of Western civilization. To oppose an effectual barrier to all this steadily evolved impetus, a device for checking intellectual growth must first be discovered. No such device has been, or can ever be, discovered, and so long as evidences of material progress are discernible, it is childish to allow our attention to be distracted or our apprehension aroused by partial and temporary phenomena, inseparable from the necessarily irregular nature of all social development.

THE OPENING OF THE CHARITY BAZAAR.

(Translated from the *Mainichi & Choya Shimbun*.)

As had been announced before, the Bazaar in aid of the Tokiyo Charity Hospital was opened the day before yesterday. The entrance to that grand building, the *Rokumei-kwan*, where the Bazaar is installed, was decorated with two large national flags, and on either of the doorway ample curtains were hung. Several tents had been erected in the garden, where the attendant officials took their rest, and numbers of chairs placed everywhere for the convenience of visitors. On ascending the main staircase, one met with the first three stalls, on which the exhibits were arranged in admirable order. The fourth stall was under the direction of the Princesses, while the fifth and sixth stalls were in the hands of the lady Vice-Presidents and Committee. On the lower floor, visitors were welcomed at the fourteenth and fifteenth stalls, or in the refreshment room, where fragrant tea, delicious ice-cream, and lemonade, were served at the request of the guests.

At 7 o'clock on the morning of the day in question, ninety-five ladies, dressed in European and Japanese costume, took their seats at the different stalls. The Princesses Arisugawa, accompanied by Madame Oyama, then personally inspected all the exhibits. Their Highnesses were followed by the Privy Councillors, officers of *Chokunin* and *Senin* rank, and Foreign Ministers accompanied by their families. The other Prince and Princesses were prevented from coming owing to the period of mourning for the death of the Prince Kashi-no-Miya not having expired. Both the Japanese and foreign dignitaries bought many of the exhibits, and are said to have refused to take "change." In the afternoon, crowds of people provided with tickets made a rush for the Bazaar, so much so that many constables had to keep guard at the entrance and exit of the building. Altogether, 3,060 persons visited the

Bazaar on the first day. No less than 300 articles were for sale at each stall, eight-tenths of which were sold in a few hours. Madame Sasaki's stall was literally besieged, and everything sold before four o'clock; Madame Oyama was equally fortunate, but her energetic charity was amply proved when a number of reserved goods made their appearance in her stall later in the afternoon. The high officials and Foreign Ministers were the most liberal patrons of the Bazaar. It is a matter for universal admiration that ladies of such high rank should show themselves perfectly *au fait* in conducting the sale of the exhibits; and their kind and earnest manner left a most pleasing impression on all who visited the Bazaar.

IN THE TOKIYO COURT OF APPEAL (KOSO SAIBANSHO).

Before NISHIKATA TATSU, Esq., Judge, and Two Judges Assisting.—FRIDAY, June 6th, 1884.

In the matter of a Marine Court of Enquiry into the loss of the Mitsui Bishi Mail Steamship Company's steamer *Akitsu-shima Maru*.

Between Johannes Frahm, Danish subject, late master of the steamship *Akitsu-shima Maru*, by his attorney P. Frahm, of No. 149, Bluff, Yokohama, Appellant; and the Kwansen Kioku of the Noshomusho, by its Minister H.E. Saigo Tsukumichi, Respondent.

Mr. Uchiyama Rossettsu appeared for the appellant, and Captain G. E. O. Ramsay for the respondent.

On resuming, Mr. Ramsay addressed the Court as follows:—I now ask this most honourable Court to re-confirm its statements as made on the 16th of April last, viz., that the present hearing of the case was by order of the Daijokwan.

The Court replied that it was so ordered.

Mr. Ramsay—Now I ask the judges of this most honourable Court to confirm their ruling as pronounced on the 17th of May, that Mr. Rossettsu should comment on Captain Young's evidence, and Mr. Ramsay's statements and conclude his case, after doing which I gathered from the ruling that I should finally address the court. Will the court kindly do so, and cause the decision to be recorded on its minutes?

The Court said Mr. Uchiyama had been told to conclude his remarks, but he was not told that he could not put in a final argument in writing.

Mr. Ramsay remarked that Mr. Uchiyama had had ample time already and he did not think he ought to have the privilege of replying to what he (Mr. Ramsay) might say to-day. If he were allowed that privilege Mr. Ramsay would claim the right to reply. Mr. Uchiyama might then wish to again speak, and so the case would become interminable.

Mr. Uchiyama said he did not think he would wish to say anything further. Mr. Ramsay, however, had not yet commented on the evidence of Captain Young. When he had heard Mr. Ramsay he would be able to say if he wished to reply.

After some further discussion the Court ruled that Mr. Uchiyama could put in a final written argument, to which Mr. Ramsay could reply in the same manner.

Mr. Ramsay, continuing—All Mr. Rossettsu's statements of error I have refuted entirely and directly by the evidence as given in the lower Court. Had I failed to do so it certainly would not imply that his statements had been substantiated. I am not going to comment further upon any one of his remarks. Now, I must ask the Court to permit me to hand in Mr. Johannes Frahm's report to the Mitsui Bishi Mail Steamship Company on the conduct and qualifications of his officers, and further, a copy of a testimonial given to Mr. Werner by the master, Johannes Frahm, asking the Court to return me the original after having compared it with the copy, so as to benefit Mr. Werner.

The testimonial read as follows:—Steamship *Akitsu-shima-maru*, December 24th 1881. This is to certify that Mr. John C. Werner, during the last ten months, has served on board this steamer as second officer, and always conducted himself to my satisfaction, as a strictly sober, trustworthy, and good officer. Johannes Frahm, commander. The quarterly report sent in by captain Frahm to the directors of the Mitsui Bishi Mail Steamship Company was also handed in to the Court and, regarding Mr. Werner, read:—"qualifications good, conduct, strictly sober."

Only for the information of this most honourable Court, I will briefly assign some of the reasons for the members of the marine Court arriving at their judgment (I am not bound by law to do so), and which it was not at all necessary to enumerate in detail in the summing up, all points having been considered. Regarding the navigation of the ship,

page 4, 2nd paragraph of summing up. "The irregular manner in which the navigation of the ship has been apparently habitually conducted, &c." How proved? First, compass so placed that bearings by it could only be taken over an arc of $8\frac{1}{2}$ points on each side, that is, from 2 points before the beam to $1\frac{1}{2}$ points on the quarter; and this was the only compass used by the master in navigating his vessel and the one by which the vessel was steered. Second, the log-book being useless is proved by the fact that no one could (nor even can now) work up this vessel's position at any time, particularly as the master had no private record of ship's proceedings. Third, officers had not access to chart-room in order to consult charts, or to note the barometer, or to ascertain the errors of the compass on courses steered. Fourth, no night order-book was kept. It is in this book that the master's standing orders are usually written. Fifth, the master disdained to consult with his officers about the navigation of the ship at any time. Sixth, no bearing taken of the light either at time of sighting, or subsequently. Seventh, the master did not point out on the chart to the chief officer the supposed position of the ship ere he left the deck. Eighth, he never attempted to verify the light as that of Siriya-saki, nor to ascertain his position, even by bearings, before finally shaping his course. To prove her unseaworthiness. First, she was not so on account of construction, nor of equipment, except in one most vital point, and that is the compass, for the reasons before assigned, all borne out by evidence. Second, regarding the trim, she was not seaworthy owing to the fact that in case of encountering bad weather the vessel would be unmanageable (corroborated by Captain Young), as she was on two occasions. Not being in trim the ship was exposed to imminent danger, namely: being in the trough of the sea there was every probability of staving in hatches, washing away engine room skylight, either of which might cause the ship to founder; and sweeping houses off the deck, and every risk of smashing the rudder with a quartering sea, it, the rudder, being hard down. Third, after the stranding of the vessel no strenuous measures were made to haul her off, nor even to float her, by jettisoning the bricks from the after hold, or by pumping out the after tank, until he (the master) was advised to do so by the chief engineer. These facts cannot be disproved by any subtleness of discursive argument, either legal or illegal, for they are based on the foundation of truth, being in accord with the evidence.

Regarding Captain Young's report. The document I now hand into the Court will prove that the same was duly considered as part of the evidence in the lower Court; and to verify the same, I also hand into this Court a copy of the letter forwarded to the Directors of the Mitsu Bishi Mail Steamship Company acknowledging the receipt thereof, the copy now to be compared with the original as in the letter book.

This was done, the document reading as follows:—"We, the undersigned members of the Marine Court of Enquiry, who sat on the 12th, 13th, and 14th of November last to enquire into the loss of the *Akitsu-shima Maru*, do hereby certify that Captain Young's report as to the resemblance of the light sighted from the *Akitsu-shima Maru*, to that of Siriya-saki, was submitted to us as a part of the evidence in the case and received due consideration." Captain Young's report was here read and handed into Court.

It is now my duty to justify the procedure of the Noshomusho, namely, in rejecting the appellant's petition of appeal. In the first instance, it was owing to the fact that the appellant in that petition failed to prove that fresh points of evidence had been discovered since the judgment of the Japanese lower Court had been delivered. How should he have proceeded? By law, and only in accord therewith, or in other words his petition of appeal should have clearly and indisputably set forth that he, the appellant, had discovered fresh points of evidence bearing on the case, upon such discovery he should have made application in the first instance to the Japanese lower Court for a new trial; and had the lower Court through the Noshomusho rejected his application, then and then only would he have been justified in petitioning this most honourable Court to exercise its judicial functions in regard to this case. Here I must state that this is the first case of appeal ever known, so far as it relates to the suspension of a man's certificate by the Department of State which granted such certificate, consequently, Mr. Uchiyama's quotations from the English merchant shipping act and newspaper reports have no bearing on the case at all, especially as there is no precedent to quote from, and more particularly, Mr. Uchiyama must know that the venue has not been changed to England, as one would suppose from his quotations. What the administration of justice in England has to do with Japan I know not. Now I have to ask this most honourable

Court to confirm and to uphold the judgment of the Japanese lower Court on the previous remarks, and on the following grounds, viz:—That the legal adviser of the appellant has not the slightest idea how to conduct this case of appeal in the interests of his client, for he is not conversant with the law in this matter, as is proved by the fact that he was not prepared to conduct the case in a legal manner, which he should have been, more especially as the judges of this most honourable Court informed him, as well as the attorney for the respondent, that the present bearing of the case was by order of the Daijokwan. Therefore, it was his bounden duty, being a practitioner in the law Courts of this empire, to have shown forth that he was one worthy of such honour, being by birth an alien, instead of which, his proceedings have been most illegal throughout. First, in not being in possession of copies of evidence as given in the Japanese lower Court, nor a copy of that Court's summing up and judgment. He never, I believe, applied for them. Second, by conducting his case entirely relying on the cuttings from newspaper reports, without first obtaining the sanction of this most honourable Court to do so; by not handing into this Court copies of such paper, also, in not asking (through the Court) the consent of the respondent's attorney to such a proceeding (my consent would not most assuredly have been given). Third, his procedure was in direct opposition to law, as he sought to vilify the characters of certain individuals; and he spoke in defamatory language of one of the judicial Courts of this empire and sought to bring the actions of the said Japanese lower Court into disrepute. The proceedings thereof were conducted as specified by notification No. 75, 28th day of the 12th month of the 14th year of Meiji, which was issued by His Majesty's command, and which notification I now hand into this Court, together with the agreement all enter into before their application for a certificate is entertained, not for its enlightenment, but simply to prove that the proceedings of the Japanese Marine Court have been in accordance with the laws of this empire. Fourth, through not having substantiated any one of his statements addressed to this Court direct, by the evidence as taken before the Japanese lower Court. Fifth, in not having brought forth any new evidence. As a rule new evidence cannot be offered in a Court of appeal, but in this case most graciously did this honourable Court accord him the privilege of so doing, and of this privilege he did not avail himself (though he thought he had) and to this favour I did not, nor could I, object. Sixth, most assuredly it was his bounden duty, as a lawyer, to argue solely on the judgment, and to prove by the evidence as brought in the Japanese lower Court, that the said judgment was in direct opposition to the evidence, and to these points only should he have confined himself. But he has signally failed to do so, consequently, I again ask this Court to confirm the judgment of the Japanese lower Court for reasons before assigned, and so as to confirm that judgment I would ask the honourable judges of this Court to entirely exclude from their consideration any statement addressed to the Court by Mr. Rossettsu, inasmuch as all his statements have been opposed to the evidence and by it refuted entirely, and are contrary to law. I desire, with the sanction of the Court, to make a few quotations from this standard work, viz., *The Law relating to Shipmasters and Seamen*, which is universally adopted. Part 2, chapter 2, page 31: "The qualifications of the master. The master of a ship is entrusted with the care of the ship, &c., he is required to conduct the navigation with skill," &c. Which the appellant did not, as proved by evidence and log; and through not so doing he caused her loss. Chapter 6, section 6: "No certificate shall be cancelled or suspended under this section, unless a copy of the report or statement of the case upon which the investigation is ordered has been furnished to the owner of the certificate before the commencement of the investigation," &c. This was done, and also section 10, 1st, 2nd, and 3rd paragraph and section 13, were read over from the general regulations for the examination of and granting certificates to masters, mates, and engineers, therefore the procedure of the Japanese Marine Court was in accordance with the law. Chapter 7, page 60. "Any master, &c., who by wilful breach of duty, or by neglect of duty, &c., does any act tending to the immediate loss, &c., of such ship, &c., or omits to do any lawful act proper and requisite to be done by him for preserving such ship from immediate loss or destruction, &c., shall be guilty of a misdemeanour." The master showed great neglect of duty in not verifying the light, by not taking bearing's of it, by not ascertaining his position. He did not make any strenuous efforts to haul or float her off. The master's general duties, &c. Part 3, chapter 1, page 75. "It is the duty of a master to obey the written instructions of his owners, where they have given any" &c. The

Marine Court was precluded from taking into consideration this neglect of duty on the part of the master, as the regulation book of the Mitsu Bishi Mail Steamship Company was not put in as evidence. But the respondent, through his attorney, was justified in quoting from that book in his reply to the petition of appeal, to show how utterly the master ignored the safe navigation of the vessel and also his owner's instructions. Chapter 2. His duty to see that the ship is seaworthy. Section 1. page 77. "It is the duty of the owner and master to take care, at the commencement of the voyage on which the ship is about to sail, that she is in a proper condition to perform that voyage," &c. The appellant had not the vessel in proper condition. 1st, owing to trim, and in encountering severe weather she was unmanageable. 2nd, owing to position of compass she was not in proper condition. For these points the appellant was solely responsible. What documents the master must procure and keep. Chapter, 7, page 127, No. 6. The log-book. "If the master keeps an ordinary log of the daily occurrences, &c., it is his duty to make those entries correctly," &c. The log-book of the *Akitsu-shima Maru* has not been so kept. With respect to the cargo. Part 4, chapter 1, page 259. "When there is danger of a total loss, &c., so imminent and conclusive, as in the view of a judicious and skilled mariner to admit of but one alternative, and that a sacrifice, it is not only justifiable but the duty of the master, as agent for all, to make such sacrifice." I must here draw the particular attention of the Court to this fact, viz., that the vessel grounded at 4.45 a.m. 10th of October, 1883, that no attempts were made to jettison the cargo; but when the boats came at 8 a.m., the cargo was discharged into them; no efforts were made to carry out a bower anchor and chain, though the sea was comparatively smooth, proved by evidence and boats coming off; and it was not until 18 minutes past 10 that the fires were put out. Consequently, the master wasted 5 hours and 23 minutes. Had he but at once have jettisoned the bricks from after hold, and pumped out the after tank with engines going astern, she must have come off, as when the vessel was abandoned the main and fore holds were dry (as in evidence and by log) "Monday, 15th October, 1883, p.m. 5 o'clock, all hands left the ship and went on board of the steamship *Takasago-maru*. No water in main hold." Does not such a man deserve to have his certificate suspended? In his own country I do not think he would have been so leniently dealt with. Now, I must here state that the proceedings of the Noshomusho in suspending the appellant's certificate have been in accordance with the universal law relating to shipmasters and seamen. Consequently, and finally, it only remains for me to ask this Court to ratify the proceedings of the Japanese lower Court and to confirm its approved judgment.

In concluding, Mr. Ramsay handed to the Court a written summary containing the points of his argument, drawing particular attention to what he called the ridiculous statements of Mr. Uchiyama, as recorded in the minutes of the Court, one of which he said was drawing a comparison between a master carefully navigating his ship, and a general drawing maps, &c., when his enemy was attacking him, without making any attempt for his defence. He, the general, Mr. Uchiyama had said would assuredly be killed through drawing a map. Mr. Ramsay maintained that the master lost the *Akitsu-shima Maru*, through not ascertaining his position by careful bearings; even as the general would be killed through not being prepared to receive his enemies' attack. Again, Mr. Rossettsu's remarks upon drawing triangular forms and expecting these triangles when drawn to tell the master the name of the light to which his ship was approaching was only worthy of himself and deserved no further comment. There was also the story of the robber entering his house when he, through taking bad aim, missed the robber. Mr. Uchiyama's aim, Mr. Ramsay remarked, was now no better, for he had enabled him (Mr. Ramsay) to cut him down and hold him up to the ridicule, which he deserved, he being non-conversant with the law and the technicalities of the case at issue, for he had invariably applied for the same to the gentleman on his right, who had so ably interpreted for him (Mr. Ramsay).

Mr. Uchiyama said that after hearing Mr. Ramsay's address he would waive his right to reply in writing, but desired to make a few remarks. If the object of Mr. Ramsay's labours had been to demonstrate to the Court his vindictiveness to him (Mr. Uchiyama) he would acknowledge he must have succeeded, but if it was intended to influence the Court in its decision he felt convinced that he had failed. Mr. Ramsay had stated that he (Mr. Uchiyama) had proved nothing. If so, wherefore the animosity displayed. The reason was that he had shown that the decision of the lower Court was wrong. Regarding the testimonial given Mr.

Werner by Captain Frahm, he had no doubt it was authentic, but Werner was not a servant of Captain Frahm and under those circumstances everyone knew it was seldom that unfavourable testimonials were given without some special reason. Mr. Werner's general conduct had nothing to do with the case. The important question was had he been careless or neglectful on the occasion when the vessel was lost and was the ship lost owing to that neglect? Mr. Uchiyama maintained that it was and in support of that contention referred the Court to Captain Frahm's letter to the directors of the Mitsu Bishi Mail Steamship Company, wherein he had said that if the mate had called him when the light disappeared the vessel would not have been lost.

Mr. Ramsay, replying, said Mr. Uchiyama's remarks were a slur on the whole mercantile marine. It was too bad to say that a shipmaster would put his name to an untruth, as Mr. Uchiyama suggested Captain Frahm had done when giving the testimonial to Mr. Werner. Mr. Werner had certainly contributed to the loss of the vessel, but had been sufficiently punished by having his certificate suspended for six months.

This concluded the case, judgment being reserved.

THE YOKOHAMA CHAMBER OF COMMERCE.

In commenting, some months ago, on the anxiety of the Japanese Government to obtain the assent of foreign Powers to a revised tariff, we remarked that higher duties do not always mean increased revenue, and that the restraint imposed by existing treaties had not perhaps been prejudicial to the best interests of the Japanese themselves. This impression is certainly not weakened by the statistics quoted in the report of the Yokohama Chamber of Commerce. It is hardly at a moment when imports show a decrease of two and a-half millions, and exports a decrease of one and a quarter million, of dollars from the preceding year, that a wise financier would risk depressing a languid trade still farther by imposing higher rates of duty. But, although there appears to be still some obstacle to the imposition of the revised scale which has been virtually agreed on in deference to the urgent wish of the Government, it does not seem to arise from any hesitation on this score. It is consistent with the extreme sensitiveness Japanese statesmen have lately shown, on points of international punctilio, that technical considerations as to duration and mode of determination should exercise them seemingly more than the financial problems involved. They may possibly find some consolation for the shrinking figures of the grand total, in the reflection that they at least show a balance in favour of Japan of nearly nine million dollars; though, if the reflection of the Chamber be true, that the great export of silk which mainly contributes to this result is partly due to the depressed condition of the native manufacturing industry, the result is not one for unqualified satisfaction. It is curious to note this one among other causes which contributed to raise the supply of Eastern silk to something near the normal level, despite the great falling off in the China crop.

It was natural that the subject of extraterritoriality should come up for reference, at a time when the Japanese are forcing it so prominently upon public notice; and Mr. Wilkin offered some temperate remarks which agree in the main with comments we have ourselves made, from time to time, on the question. There is evidently a willingness in the abstract to concede the point for which Japan manifests such extreme anxiety, so soon as it is felt the concession can be made with safety to the rights and privileges of foreign residents. Mr. Wilkin shows, however, that despite the willingness shown to bring the native codes and jurisprudence into harmony with Western notions, the abandonment of extra-territorial rights would, as yet, be very premature. "Is there," he asks, "any *habeas corpus*? Is it not still the case that a man can be thrown into prison on a mere suspicion, and kept there for weeks without trial? I know for a fact that comparatively recently this has been done. Shall I be liable to be browbeaten by a policeman if I walk on the bund without a lantern, even under the gas-lamps?—a small matter, perhaps, but the representative of a good deal. Or, take a more serious question the marriage law, or rather marriage customs, of the country; for I suppose there are no marriage laws. Is the foreigner to have the power or the privilege of being able to tell his wife she may go; he does not want her any more?" Such incidents may not seem outrageous to people with whom they are habitual; but Japanese who have lived in England will admit that Englishmen could

not readily submit themselves to a *régime* so different from their own. We have always cordially admitted the great advance already made in the principles and practice of judicial administration, since the earlier days of our intercourse; but it is not to be expected that a new code and new system could be brought into perfect working order, during the two or three years which have elapsed since their introduction. Even a nation so remarkably adaptable as the Japanese cannot so rapidly modify its preconceived ideas. The whole body of magistrates will not at one stroke comprehend and admit the new restrictions placed upon their action—the extreme guarantees enjoyed by Englishmen against interference with their personal liberty. Mr. Wilkin probably does not exaggerate, in saying it will "take a generation before a state of thought and feeling can be developed which will place Japan in consonance with the platform of the West." The interval may, not improbably, be bridged in the manner we recently suggested—by an extension of the Mixed Court system, which will at once help to educate Japanese magistrates and facilitate the transmutation; but it is clear that matters are not yet ripe for the immediate and complete solution which the anxious pride of Japan would lead her to desire.

Though trade is not altogether prosperous, and many facilities are still lacking which the more highly organised Governments of the West afford, there is one element in the report of the Yokohama Chamber of Commerce which no amount of research can detect in the utterances of its colleagues in China. There is an admission, a foreshadowing—nay, a certainty—of progress. The new code may not be perfect, nor its administration yet assured; but it is an immense improvement, in both respects, upon the ancient system. Trade has not settled down into a condition of normal and healthy progress; but the Government is at least willing to encourage development by facilitating the means of transport. Railways are being gradually constructed and extended; and the hope expressed in the studiously-guarded language of the Committee's report—that their ultimate effect, in conjunction with the increased facilities for coast transport afforded by the numerous additions to the native mercantile marine, may be to give an impetus to the trade and commerce of the country—can hardly fail of eventual realisation.—*London and China Express*.

The speech by Mr. A. J. Wilkin at the recent annual meeting of the Yokohama Chamber of Commerce puts in a very clear light the practical objections to a sudden abolition of foreign jurisdiction in Japan. Mr. Wilkin is one of the oldest foreign residents in Yokohama. For nearly a quarter of a century he has been engaged in business there, and hence may claim not only to speak with some knowledge of the country and the working of its institutions but also to represent the opinions of the more experienced of the foreign residents. He is, moreover, credited with an active participation in most good movements, public and private, in Japan. His remarks on the occasion in question were characterised by a tone of fairness and conciliation which justifies hopes that a question which naturally affects the *amour propre* of both sides may be adjusted without leaving any sense of wounded pride. He freely admitted the perfect reasonableness of the claims of the Japanese to be masters in their own country, and deprecated any selfish or sentimental considerations being allowed to influence the foreign community with respect to the partial or complete abolition of extraterritoriality. At the same time he submitted that the Japanese ought to admit that the foreigners have rights also which Japan in her own interest should regard in a spirit of justice. In the first place, foreigners would never have invested their capital in the country had they not been guaranteed against the consequences of the absence of any written law in Japan, the utter dissimilarity formerly of European and Japanese thought and feeling, despotic treatment, the prevalence of torture, and "a code of morality of a unique pattern." Admitting that the judicial conditions may have been changed, Mr. Wilkin pointed out that such a change cannot be three years old. Within that period a written code of laws has been formed, and it is said to be already working to some extent. But, leaving out of the question the character of the code itself, it would be an unprecedented thing if a code so recently compiled should already be perfectly administered throughout the country. There has been a good deal of exaggeration on both sides, according to Mr. Wilkin. Thus the "oppression" of Japan by foreign nations has been spoken of; whereas practically there has been really very little friction in the relations of Japan with foreign Powers. The Japanese are admittedly, a sensitive people, and this fact has been taken advantage of to develop in them a strong sense of injury. On the other

hand, no doubt, foreign residents, have made the most of alleged cases of cruelty by the Japanese police, in which abuses even high officials are said to have been concerned. But the mere fact that a man like Mr. Wilkin is unable to speak positively on the state of Japanese law and its administration makes it apparent that the grounds of confidence in Japanese jurisdiction do not exist so far as the foreign community are concerned. Is there any Habeas Corpus Act asks Mr. Wilkin. Is it not still the case that a man may be thrown into prison and kept there indefinitely? Then, are there any marriage laws in Japan, or are foreigners to have the right or "the privilege" of dismissing their wives at will? In addition, the *Japan Gazette* asks whether foreigners are to be liable to imprisonment and fine if they engage in larger transactions in exchange than usual, to have their premises broken into and all persons therein arrested on suspicion, and to have their newspapers confiscated or suppressed, with the incarceration of proprietors, editors, and printers? It is really not a question as to whether Japanese laws and customs are as intelligent or wise as European laws or customs, or whether or not the Japanese are as just and high-minded as the foreign residents. It is quite sufficient to know that Eastern and Western ideas and practice are traditionally different. Now it is the boast of Japan that she has rapidly developed institutions in accordance with Western ideas. In using this plea for the abolition of extraterritoriality her advocates justify the unwillingness of the foreign residents to submit to Japanese jurisdiction until they can have reasonable confidence that not only in intention but in fact there is no serious divergence between the native and Western systems.—*Manchester Guardian*.

NOTES FROM JAPANESE PAPERS.

A private meeting of local Police Inspectors was recently held at the offices of the Home Department, when a certain Minister, whose office is closely connected with Foreign Affairs, is said to have addressed the officers present, and in the course of his remarks to have intimated that, "in the execution of Police duty it was not necessary to pry into the political opinions of citizens, or to attempt to unveil their private affairs or interfere with their movements in any way, providing they conducted themselves with becoming propriety. Police duties he said, would be amply performed if officers took such measures as would conduce to public tranquillity; but what he particularly desired to draw the attention of the Inspectors to, was that they should observe the utmost care to be prudent as well as zealous in the performance of their functions, which were frequently of a delicate nature, and that their movements and manner of speech in addressing others should be such that they would be capable of bearing the strictest investigation upon enquiry, in the event of complaints being lodged against members of the force for the way in which they had performed their duty. This was necessary in regard to their conduct before their own countrymen, and it was also to be desired that the contact of the police with foreigners should be above reproach, as foreign intercourse was daily becoming more complicated and a greater number of foreigners were moving about in the interior than heretofore. He (the speaker) trusted the officers present would bear his remarks in mind, and remember that their good conduct generally would tend to assist the authorities in carrying out the laws of the land." We cannot answer for the truth of this rumour, inasmuch as the meeting being a private one, no reporters were present. We give it for what it may be worth, but there can be no question, presuming that such remarks were addressed to the Police Inspectors, that the speaker set forth some most undeniable truths.

The bricks made by the Oriental Company (*Toyo-Gumi*) have been frequently reported upon as of a very superior quality, and the company has recently turned out a variety of water and drain pipes of great strength and durability. Some of the latter, similar to those in use in England, have been sent to the International Sanitary exhibition, London.

His Imperial Highness Arisugawa Takehito has joined the *Hiyei Kan*, this vessel having been ordered on a cruise round the coast of Japan.

Two Krupp guns, which have been manufactured at the Arsenal at Osaka, are destined to be mounted on the Kanonsaki Fort.

The suspension of the *Choya Shimibun* recently ordered by the authorities, has been removed.—*Fuyu Shimibun*.

A tea grower at Uji, Kiyo, has lately been fined 10 yen by the Tea Association in that place, and

large quantities of spurious tea found in his possession have been destroyed. It seems that this is the third time that he has been detected manufacturing worthless teas. He used to employ a large number of tea firers, each of whom fired from 10 to 12 *kwamme* daily. The process was as follows:—As soon as the fresh leaves had been steamed, they were put between large mats and thus chafed. The leaves were then dried by means of boxes, the upper sides of which were made of paper over which the leaves were strewn, the inside of the boxes being filled with glowing charcoal. This ended the whole procedure, except that the leaves were afterwards twisted by hand.

A rumour is going the round of our literary circles that the new ceremonial uniform of Professors will be partly in Ancient Japanese, and partly in European, style.

The local police expenses supported by the Central Government will be attended to by the Home Department, instead of the Finance Department as heretofore.—*Choya Shimbun*.

It is rumoured that the recent application for permission to establish the *Riyo-gaye Gumi* (Exchange Company) has been refused by the authorities.

The Chinese Consul at Yokohama will return to China during the present year.

The inspection of the cash-books of the merchants of Yokohama has been commenced at the Town Hall (*Machi-gwaisho*).

A man named Sekiguchi, 33 years of age, living at Haneda-mura, Yebagori, Tokiyo, broke into Igarashi's, at Okazaki-cho, Kiyobashi, on Tuesday night, and killed his daughter with a sword, also severely wounding the father.

Messrs. Illies & Co., of No. 45, Yokohama, have applied to the Naval Department through their manager, Fukuma, for a contract for all the foreign goods required by the Department.

For about a month past, small pebbles have every night fallen upon the roof of a house occupied by a carpenter named Sato, at Motomachi, in Yokohama, and neither the occupants nor the neighbours could find any clue to the mystery. On Monday night last, while the intimates were asleep, a board was fastened to the door, bearing the characters, "To-morrow night this house will be burned." The matter was reported to the police, and, notwithstanding that a watch was set, the house was fired on Tuesday night, and it was only with the greatest difficulty that the flames were extinguished.—*Mainichi Shimbun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JUNE 6TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—represents velocity of wind.
Percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 34.2 miles per hour on Monday, at 3 p.m.
The highest reading of the barometer for the week was 30.125 inches on Friday at 10 a.m., and the lowest was 29.771 inches on Wednesday, at 6 p.m.
The highest temperature for the week was 85.3 on Thursday, and the lowest was 58.7 on Saturday. The maximum and minimum for the corresponding week of last year were 74.2 and 49.0 respectively.
The total amount of rain for the week was 0.202 inches, against 0.383 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong, per P. & O. Co. Sunday, June 15th.*
From America ... per O. & O. Co. Monday, June 16th.†
From Shanghai, Nagasaki, & Kobe ... per M. B. Co. Thursday, June 19th.
From Europe, via Hongkong, per M. M. Co. Tuesday, June 24th.

* *Thibet* left Nagasaki on June 12th. † *Oceanic* left San Francisco on May 27th.

THE NEXT MAIL LEAVES

For Hakodate ... per M. B. Co. Saturday, June 14th.
For Europe, via Hongkong ... per M. M. Co. Sunday, June 15th.
For Shanghai, Kobe, and Nagasaki ... per M. B. Co. Wednesday, June 18th.
For America ... per P. M. Co. Wednesday, June 25th.
For America ... per O. & O. Co. Friday, July 11th.
For Europe, via Hongkong ... per P. & O. Co. Sunday, June 22nd.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

REPORTS.

Per Japanese steamer *Kumamoto Maru*, for Hakodate via Oginohama:—Bishop and Mrs. Poole, Messrs. B. Hashiguchi, H. Yamada, and 3 Germans in cabin; and 135 Japanese in steerage.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Hakodate on the 7th June, at 10 a.m. with light variable winds and foggy weather to Oginohama, where arrived on the 9th, at 1 p.m., being detained for 22 hours off Kinkwazan by the dense fog, and left on the same day, at 7.45 p.m. with fresh south breeze cloudy weather throughout the passage. Arrived at Yokohama on the 11th June, at 3 a.m. On the 7th June passed British bark *Omega*, off Hakodate head, bound in.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 12th June, at 6 p.m. with beautiful weather throughout the passage. Arrived at Yokohama on the 14th June, at daylight. On the 13th June at 0.30 a.m. passed the Company's steamer *Hiroshima Maru*, and on same day, at noon, the steamer *Niigata Maru*.

LATEST COMMERCIAL.

IMPORTS.

Extreme dullness is the chief characteristic of the whole Market, and most of the dealers have been absent. Prices are in most cases quite nominal, as holders seem satisfied to wait for business so long as Manchester continues on its present level and dealers are indisposed to operate except at lower rates.

COTTON YARN.—Trifling sales have been reported in English Yarns, and a fair business in Bombay 16's, of which rather a large line has been taken on speculation by Chinese.

COTTON PIECE GOODS.—Scarcely anything doing.

WOOLLENS.—Business has almost been restricted to a few sales of Mousseline de Laine.

Brown Formosa	3.20 to 3.25

EXPORTS.

RAW SILK.

Our last report was dated the 6th instant, since

when there has been a little doing in old Silk at about former prices. Settlements amount to about 50 piculs, and the available Stock is somewhat reduced by parcels being taken off the market for native use. Buyers are very cautious—looking for low rates here in sympathy with Shanghai, where the market has been opened at Tls. 350 for "Blue Elephant" Tsattees:—fully ten per cent. lower than the price paid at the opening of last season.

Dealers here are still anxious to be moving off their old Stock, but now begin to realise the fact that foreigners generally will not operate before there is a good supply of New Silk on offer. Crop news remains as before; there are conflicting reports from various parts of Italy, but so far nothing serious; and in a few days' time we shall doubtless have reliable information as to the outcome of the Silk-harvest there. In Japan all goes fairly well, the recent hot weather in the neighbourhood of Yokohama does not seem to have been felt up in the hill-districts.

Our Market for New Hanks was opened on the 11th instant by the purchase of two bales *Maibashi* (ordinary first arrivals) at \$475 per picul. This price shows a loss to the middleman upon the up-country quotations, and the next price at the approaching *Maibashi* market is expected to be somewhere about 35 *momme*. These would lay down in Yokohama, with the present high rate of *Kinsatsu*, at from \$465 to \$470 per picul. The two bales mentioned above were of white colour, fine size, but knobby, as is usual with a small parcel hurried in to be the first in the market. The season would seem to be exceptionally early, the first Hanks last year being settled on the 22nd June.

Yesterday two boxes new *Filatures* from *Koshu* province, fil. *Shinshosha* arrived. These were shown round the trade and offers were talked of at about \$570 to \$580, the small parcel being eventually settled at \$575. Buyers as a rule, are not quite ready for business, preferring to wait a little until they can see more clearly ahead.

The P. & O. steamer *Teheran*, which sailed for Hongkong via ports on the 8th instant, carried 3 bales only for Lyons; while the *San Pablo*, leaving on the same date for San Francisco, took 110 bales, of which 32 bales were Direct shipments. The Export figures to date, now stand at 29,522 bales, against 27,835 bales last year, and 21,078 bales in 1882.

We withdraw all quotations, pending further arrivals and more transactions in New staple.

Hanks.—Nothing done in old Silk. The first purchase in New *Maibashi* was made on the 11th instant, as noticed above, at \$475 per picul.

Filatures.—Following up the purchases noted in our last, there has been some business done in Old Silk; about 40/50 piculs finding purchasers on the basis of \$615 for *Kaimeisha* and *Hikune*. *Ise* done at \$590, and *Hagiwara* at \$580. The parcel of *Nihonmatsu* still remains on offer.

In other sorts there has been absolutely nothing done: a parcel of *Re-reels* (*Stork* chop) were shipped on native account by the last American mail.

Export Tables, Raw Silk, to 13th June, 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	17,217	14,050	10,687
America	9,666	9,416	6,833
England	2,639	4,369	3,558
Total	29,522	27,835	21,078

WASTE SILK.

There has been rather more done in this department, and Settlements for the week are returned as 100 piculs. The assortment on offer is very poor, but some fresh buyers have come in and put a little more life into the market. Arrivals from the interior have nearly ceased, and the Stock is somewhat reduced.

The steamer *Pembroke*, which left on the 6th instant, had a few sample packages for New York, and the English mail of the 8th instant (*Teheran*) took 44 bales for Europe. The Export figures to date are now 23,730 piculs, against 24,644 piculs last year, and 25,484 piculs to 13th June, 1882.

Noshi-ito.—A little done in *Filature* sorts at \$130, \$120, and \$110. Some fine *Foshu* at \$95, and a few sample purchases complete the list.

Kibiso.—The bulk of the trade (80 piculs) has been in this class; the transactions comprising *Tokosha* fil. at \$118½, with *Zaguri* at \$75, ordinary *Foshu* at \$25, and *Bushu* at \$17½.

Sundries.—Nothing beyond one small parcel *Kusuto* at \$50, and some *Neri* at \$10.

Export Table, Waste Silk, to 13th June, 1884:—

	SEASON 1883-1884.	1882-1883.	1881-1882.
	PICULS.	PICULS.	PICULS.
Waste Silk	21,529	21,350	21,246
Pierced Cocoons	2,201	3,294	4,238
Total	23,730	24,644	25,484

Exchange is quoted firm at last week's rates. LONDON, 4 m/s., Credits, 3/9½; Documents, 3/9½; NEW YORK, 30 d/s., 90½; 60 d/s., 91; PARIS, 4 m/s., fcs. 4.75; 6 m/s., 4.77½. *Kinsatsu* have continued their upward march, until they range between 105 and 106 per \$100.

Estimated Silk Stock, 13th June, 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	450	Pierced Cocoons	13
Filature & Re-reels	290	Noshi-ito	100
Kakada	150	Kibiso	300
Sendai & Hamatsuki	100	Mawata	90
Taysam Kinds	10	Sundries	97
Total piculs	1,000	Total piculs	600

TEA.

As anticipated, considering the wretched condition of the American Markets, we did not expect to see such a large business in Tea during the week now under review as the previous one. Medium, Good Medium, and higher grades have declined fully one dollar all round since our last Market Report. Receipts during the past week have been steady, and they aggregate about 12,950 piculs, against 14,450 piculs at the corresponding date in 1883. The total Settlements since last issue are 12,960 piculs as compared with 10,920 piculs last year. Estimated Tea in Stock at this port is 6,000 piculs, against 8,200 piculs in comparison with 1883. The shipments of Tea during the interval are as follows:—For New York, 342,213 lb.; for Chicago, 165,522 lbs.; and for Canada, 17,033 lb.; total 524,768 lbs.; per steamship *Claymore* (sailed June 4th). For New York, 361,940 lbs.; and 11,788 lbs. for Canada, total 373,728 lbs., per steamship *Pembroke* (sailed June 6th). For New York, 281,085 lb.; for Chicago, 489,906 lbs.; for Saint Paul, 66,488 lbs.; for Saint Louis, 18,000 lbs.; for Saint Joseph, 15,000 lbs.; for California, 72,565 lbs.; and for Canada, 69,391 lbs.; total 1,012,435 lbs., per steamship *San Pablo* (sailed June 8th). For New York, 271,544 lbs. per steamship *Benvenue* (sailed June 9th), making a total of 2,182,475 lbs. Tea shipped by these four steamers from Yokohama. The following is a list showing the various grades of Teas settled at this port since last issue:—Common 1,006 piculs, Good Common 1,385 piculs, Medium 2,575 piculs, Good Medium 3,985 piculs, Fine 1,850 piculs, Finest 1,454 piculs, Choice 485 piculs, and Choicest 130 piculs. The Market closes weak at the undernoted quotations:—

QUOTATIONS.

Common	\$12 & under
Good Common	13 to 14
Medium	15 to 17
Good Medium	18 to 20
Fine	22 to 24
Finest	25 to 28
Choice	30 to 33
Choicest	35 & up

} Very scarce and not freely offered.

EXCHANGE.

There have been no fluctuations in rates during the week and the business transacted has been small—closing quotations are:—

Sterling—Bank Bills on demand	3/8½
Sterling—Bank 4 months' sight	3/9
Sterling—Private 4 months' sight	3/9½
Sterling—Private 6 months' sight	3/9½

KINSATSU QUOTATIONS.

Saturday, June 14th 106

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS,
Works:—Wilden, near Stourport; Swindon,
near Dudley; Horsley Field, Wolverhampton.
London Office:—4, Corbet Court, Gracechurch
Street, E.C.

For the excellence of our Manufactures, we
have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health for
all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia,"
says—"I ordered the dragoman Mahomet to inform the
Faker that I was a Doctor, and I had the best medicines at
the service of the sick, with advice gratis. In a short time
I had many applicants, to whom I served out a quantity of
Holloway's Pills. These are most useful to an explorer, as
possessing unmistakable purgative properties they create an
undeniable effect upon the patient, which satisfies them of
their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds.
It acts miraculously in healing ulcerations, curing skin diseases, and in
arresting and subduing inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says
—"I had with me a quantity of Holloway's Ointment. I gave some to the
people, and nothing could exceed their gratitude; and in consequence,
milk, fowls, butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas, and the
demand became so great that I was obliged to lock up the small remaining
"stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

**J. & E. ATKINSON'S
PERFUMERY,**

celebrated for nearly a century past, is of the very best English
manufacture. For its purity and great excellence it has
obtained Nine Prize Medals, including London,
Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

**ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.**

White Rose, Frangipanne, Ylang-ylang, Stephanotis,
Opopanax, Jockey Club, Ess Bonquet, Trevel,
Magnolia, Jasmin, Wood Violet, Gold Medal Bonquet,
and all other odours, of the finest quality only.

**ATKINSON'S
GOLD MEDAL EAU DE COLOGNE**
is strongly recommended, being more lasting and fragrant than
the German kinds.

**ATKINSON'S
OLD BROWN WINDSOR SOAP,**
celebrated for so many years, continues to be made as hereto-
fore. It is strongly Perfumed, and will be found very durable
in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,
a new and indispensable Toilet accompaniment, and most
refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialities and general articles of Perfumery may be
obtained of all dealers throughout the World, and of the
manufacturers

**J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.**

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture
their articles of one and the best quality only. Purchasers are
cautioned to avoid counterfeits by observing that each article
is labelled with the firm's Trade Mark, a "White Rose" on a
"Golden Lyre."

ESTABLISHED 1799.

Dec. 29th, 1883.

KEATING'S COUGH LOZENGES

COUGHS,

ASTHMA,

BRONCHITIS,

ACCUMULATION OF PHLEGM.

Composed of the purest articles. These Lozenges
contain no opium nor any deleterious drug, there-
fore the most delicate can take them with perfect
confidence. Their beneficial effect is speedy and
certain. This old unfailing family remedy is daily
recommended by the most eminent Physicians. In
use nearly 60 years.

MEDICAL TESTIMONY.

July 25th, 1877. 22, Cold Harbour Lane, London.
Sir,—Your Lozenges are excellent, and their beneficial
effect most reliable. I strongly recommend them in cases
of Cough and Asthma. You are at liberty to state this as
my opinion, formed from many years experience.

J. BRINGLOE, M.R.C.S.L., L.S.A., L.M.

Indian Medical Service.

MR. T. KEATING.—Dear Sir,—Having tried your Lo-
zenges in India, I have much pleasure in testifying to their
beneficial effects in cases of Incipient Consumption, Asthma
and Bronchial Affections. I have prescribed them largely,
with the best results.

W. B. G.,—, Apothecary, H.M.S.

KEATING'S COUGH LOZENGES are sold
by all Chemists, in bottles, of various sizes, each
having the words, "KEATING'S Cough Lozenges"
engraved on the government stamp.

KEATING'S WORM TABLETS,
A PURELY VEGETABLE SWEETMEAT,
both in appearance and taste, furnishing a most
agreeable method of administering the only cer-
tain remedy for INTESTINAL or THREAD
WORMS. It is a perfectly safe and mild pre-
paration, and is especially adapted for Children.
SOLD IN BOTTLES BY ALL CHEMISTS.

Proprietor, THOMAS KEATING, London.
Export Chemist and Druggist.

June 7th, 1884.

26ins.

CLUB HOTEL.

No. 5B, BUND, YOKOHAMA.

THIS ESTABLISHMENT, recently opened
as a FIRST-CLASS HOTEL, is plea-
santly situated on the Bund facing the Bay, in
the central part of the Settlement, close to the
Consulates and Public Offices, and affords the
very BEST ACCOMMODATION to Travellers.

The Cuisine is under the direction of an ex-
perienced Chef, and the Wines and Liquors
are of the BEST QUALITY obtainable.

The Tariff, which is STRICTLY MODERATE, can
be obtained on application to the Lessees,

HEARNE AND BEGUEX.

Yokohama, March 15th, 1884.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 21ST, 1884.

SUMMARY OF NEWS.

A SWARM of locusts is reported from Wakayama prefecture.

A LARGE whale, 100 feet long, has been captured off the coast of Hizen.

A COMPANY is in process of formation for the purpose of constructing a dockyard at Uraga.

A CENSUS taken in December of last year shows that the militia in Kagoshima prefecture numbers 27,729 men.

HIS EXCELLENCY SANJO, First Minister of State, returned to Tokiyo from Kiyoto on the morning of the 18th instant.

A CONSIDERABLE discharge of ashes and scorice took place from the volcano Asoyama, on the 7th, 8th and 9th inst.

It is announced that His Majesty the Emperor will pay a visit to the hot springs at Atami towards the end of this month.

It is stated that an oil well has been discovered at Omine, in the province of Yechigo, and that its yield is about 77 hogsheads per diem.

THE Japanese merchants of Yokohama have established an association for improving the facilities of commercial education in Japan.

TRADAL stagnation in Yokohama is, if possible, more accentuated than before, and the vernacular press speaks of the situation in a most desponding tone.

Two workmen were killed, and two others severely injured, on the 13th instant, by the falling of a bank on the line of railway now in course of construction between Shinagawa and Kawaguchi.

A HEAVY fall of hailstones took place in Ibaraki Prefecture on the 7th instant. Some of the stones are said to have been as large as rifle-bullets.

THE tea producers of Iyo, in the prefecture of Yehime, have formed themselves into a company for the purpose of improving the method of firing the leaf.

MESSRS. KUROKAWA and Komatsubara, Secretaries to the Foreign Department, have been appointed to the Japanese Legations in Rome and Berlin respectively.

It is said that a considerable demand for toys of Japanese manufacture has sprung up in China, and that large quantities have recently been shipped to that country.

AN Association called the *Riuchi-kwai*, for the promotion of the fine arts, has been formed in Tokiyo, and will meet, hereafter, once a month, at the Yunnin-ken, Wadagura.

THE statement of traffic receipts on the Tokiyo-Yokohama Railway for the week ended 15th inst., shows a total of \$9,956.81 against \$11,483.02 for the corresponding period last year.

THE statement of traffic receipts on the Kobe-Otsu railway for the week ended the 15th instant, shows a total of \$14,069.70, against \$18,481.11 for the corresponding period last year.

THE applications for Nakasendo Railway Bonds sent into the Osaka branch of the *Nippon Ginko* before the 10th instant, amounted to 1,400,000 *yen*; those presented at the Kiyoto branch to 750,000 *yen*.

THE officers of the Specie Bank in Yokohama, in combination with several of the leading Japanese merchants of Yokohama, are endeavouring to raise capital for the construction of a new wharf at that port.

TRADE-MARK REGULATIONS and By-laws have been promulgated by the Department of Agriculture and Commerce. An office for the registration of trade-marks has been established in the same Department.

It is stated that a project is on foot to construct a carriage road over the Hakone Pass. The expense is estimated at *yen* 150,000, of which the Government contribute one-half, and the inhabitants of Shidzuoka Prefecture the other.

THE weather in the early part of the week was wet, cold, and unseasonable, and though on Wednesday the usual damp heat of June asserted itself with unpleasant force, the season, on the whole, has been exceptionally cool up to the present.

THE associations recently formed for the purpose of introducing improved methods of growing and preparing tea have taken their first repressive action by fining a producer of Uji who was discovered attempting to sell spurious and ill fired leaves.

ANOTHER case of cholera is reported to have

occurred in Tokiyo. The victim was an old man of 82 years. Twenty cases of apparent cholera are also said to have taken place in Ibaraki Prefecture, six of them ending fatally. Such sporadic cases have been less numerous than usual this season, and there is every reason to hope that an epidemic will not occur.

THE Japanese Ladies of Tokiyo, to the number of nearly 300, have formed themselves into a Benevolent Society. Their first charitable undertaking was a Fancy Bazaar which was held at the *Rokumei-kwan* on the 12th, 13th, and 14th instant. The net proceeds were about six thousand *yen*. They were handed over to the Tokiyo Charity Hospital.

It is stated that measures are in progress to render the medicinal properties of the hot springs at Atami more available for the treatment of patients. The chief feature of the scheme is the erection of a large chamber into which vapour from the main spring will be carried by means of pipes, so that the atmosphere may be constantly impregnated with it. We believe that the idea of this project was suggested by the distinguished German physician, Dr. E. Baelz, and that the cure of consumption is the principal object in view.

AN Extraordinary General Meeting of the Public Hall Association of Yokohama was held at the Club Hotel on the 16th instant. No change had taken place in the financial circumstances of the Association since the previous meeting. The Committee reported that a further sum of \$13,000 was required to complete the building and to furnish it; that the annual cost of maintenance, including interest on this sum, was estimated at \$1,500, and the annual income at \$1,800. The Meeting decided that the Committee should be authorized to raise \$13,000 by endeavouring to induce the subscribers to double the number of shares placed against their names.

NOTES.

THE news of the treaty between France and China was received, as might have been anticipated, with great jubilee in France. The official journal of Paris, in publishing the text of the treaty, explained that France's abandonment of any claim to an indemnity was due to the conciliatory attitude taken by China and to the patriotic wisdom of Li Hung-chang. As soon as the intelligence was conveyed to President Grévy, he summoned a Cabinet meeting (May 13th), when it was decided to gradually recall a portion of the troops in Tonquin, and to form two regiments of Tonquinese sharpshooters with French officers. At the same time, it was asserted by the Parisian press, that the provinces of Kwang-si, Kwang-tung, and Yunnan would not be opened to general trade, as was at first reported, but only to the French. This statement, of which some confirmation comes from Shanghai, appears to have received a measure of credence in London, for, if the telegrams may be credited, Lord Granville, on the 14th of May, instructed the English Embassy at Peking to enquire into the

report concerning the terms of the treaty, and to intimate that Great Britain would demand equal privileges with France to trade with Chinese Southern provinces. With the exception of the *Pall Mall Gazette*, the London journals' opinions are not wired, but if the *Gazette* may be taken as a sample the treaty has not evoked much pleasure in England. "If the news shall be confirmed," says that paper, "Prime Minister Ferry will be much stronger and will be able by his energy to regain the position once held by France in Egypt." On the whole, however, the *Gazette's* remarks are not happy. It expresses astonishment at the fact that the treaty should have been signed by Li Hung-chang, "who had been disgraced," whereas, in point of fact, and as we explained at the time of Prince Kung's removal, the great Viceroy was the pivot upon whom the whole situation turned. Of course German influence is credited with some share in the arrangement. Wherever France is concerned, rumour is sure to drag Germany in somehow or other. In this case there emanates from that mysterious region called "political circles" a whisper that Prince Bismarck moved China to give France favorable terms, because he thought that the chances of European disarmament would thereby be increased. The public pays a better compliment to Prince Bismarck's heart than to his head when it credits him with such a visionary design as the disarmament of Europe, and, for the rest, the great Chancellor is too wise a man to waste his time interfering in a situation of which the French were completely masters. In our opinion the true solution of the enigma called Chinese foreign policy may be found much nearer home, and is very well set forth in the following account furnished to the French press by a Chinese gentleman residing in Paris:—"By a system of military despotism the Ta T'sing dynasty still exists, though in a very critical and precarious state. The history of China for the last hundred years is a history of insurrections and rebellions, till it seems to have reached a climax in the Taiping Rebellion of twenty-five years ago. The Taiping rebels conquered fourteen provinces out of the eighteen which go to make up the whole of China, and if it were not for the frustrating influences of such men as "Chinese" Gordon, Ward and other foreigners, the rebels would have undoubtedly gained their cause. The preceding bit of Chinese history is necessary to show the relation that exists between the Chinese Government and the people, and will enable the reader to appreciate the action of the Chinese Government in the Tonquin affair. The insulting and unjust pretensions of France roused the Chinese populace to the highest excitement, and, spurred on by the daily papers, the people, in many parts of China, were actually wild—notably in the provinces of Kwang-si and Kwang-tung. The Chinese Government saw that something must be done to quell the dangerous excitement of the people, and consequently issued decrees for a grand military movement. All this demonstration and preparation was meant, however, only as a sedative to the people, as the Government knew too well the consequences of an actual war with France. She knew that the people would at the first grand opportunity rise up *en masse* against the Government and wipe out the present dynasty. And what better opportunity do the people want than the impaired condition of China after a protracted war with a foreign power? However cowardly the action of the

Chinese Government in signing the last treaty may seem to those not acquainted with the internal affairs of China, it is, nevertheless, the most politic thing she could do. It was disgrace or annihilation, and she chose the former."

THE vernacular press speak in very gloomy terms of trade at this port, and, to do them justice, things do seem rather unpropitious at present. The *Bukka Shimpō*—oracle of the mercantile fraternity—states that almost nothing is doing in foreign goods, and that trade is at a still lower ebb than it was last month. Silk, too, is spoken of in a very despondent way; for the fact that quotations average some 12 per cent. lower than in 1883—says the *Fiji Shimpō*, weighs heavily on the minds of the sellers. The reason of all this the domestic journals find in the depreciation of silver, but it may not unreasonably be ascribed, in part at least, to the fact that the large sums invested in Railway Bonds have taken a great deal of ready money out of the market. The demand for foreign commodities is necessarily weaker when buyers have invested their capital wholly or partly in securities which promise to yield them a comfortable and certain annual interest, for the domestic debentures have proved even more attractive to the capitalists of this country than the "sweet simplicity" of the 3 per cents. prove in Great Britain. Tea, on the contrary, whatever may be the present demand, stands a fair chance of doing well in the future. Never were the leaves more carefully prepared, a fact due principally to the recent enactment of the Tea Association Regulations. The once universal practice of drying the young leaves by simply exposing them to the sun obtains no longer. Every now and then one hears of confiscations of large quantities of adulterated or carelessly prepared tea, and it is very evident that the local Associations are in dead earnest. The *Ise Shimbun*, however, notices that certain producers in the province of the same name still continue the objectionable practice of mixing pomatum—of all things in the world—with freshly-fired leaves. This is said to give them a bright, seductive colour for the time being, but they are certain to wither, if not to decay, in warm weather. But this and other injurious methods of treating tea is certain to be done away with if the new broom of the local Associations keeps on sweeping as cleanly as heretofore.

THE *Kiyoto Shiga Shimpō* states that burglars and highway robbers are rapidly becoming a perfect pest in that hardly-treated country, Korea. In the neighborhood of Niu Liang (near Fusan) no one dares to venture forth alone even in broad daylight, and travellers are forced to go in companies in order to protect themselves and their belongings. There are said to be no less than fifty bands of highwaymen, each under the command of a captain, often a mere stripling. These knights of the road are well armed, many carrying firearms, and have no fear of the troops stationed in the various districts. A little while ago, a company of tax collectors were surrounded by a number of these outlaws near Ryang-san, and were forced to disgorge the monies they had wrung from the peasants. The magistrates in many of the districts are recruiting volunteers, in order to make an organized and powerful raid on the offenders.

It appears that during the month of January last there were fires in the United States and Canada which swept away 12,000,000 dols. worth

of property. In February, also, fires destroyed property to the extent of 7,000,000 dols. In the first two months of the present year, therefore, the losses by fire aggregated 19,000,000 dols., as compared with 17,000,000 dols. for the corresponding two months of 1883. The inference consequently is that the vice of carelessness is a growing and a costly one. In February, 1884, there was but one really large fire the United States, but the number of fires where the reported loss ranged between 10,000 dols. and 200,000 dols. was 181. The larger fires of February, where the reported loss reached or exceeded 100,000 dols., numbered only eight, and included Philadelphia, with 500,000 dols. But there were, in addition to these, no fewer than twenty-six fires, the destructiveness of which ranged from 50,000 dols. to 100,000 dols.

THE haste with which the Government of the United States has recognised the African International Association, suggests an idea that the equitable lines upon which America's foreign policy is modelled at present might, perhaps, become a little more devious under different circumstances. The purposes and proceedings of the International Association will, doubtless, be variously judged, but beyond all question its ultimate object is the acquisition of sovereign rights over an immense tract of country, to the possession of which it has no better claim than superiority of interprise, intelligence, and organization. The story of Stanley's operations on the Congo is very simple. On his return from his exploring expedition in 1878, he was met at Marseilles by ex-Minister Sanford of Florida, who in the name of the King of the Belgians, President of the Association, asked Stanley to revisit Africa for the purpose of carrying out the Association's plan; namely, the establishment of a continuous line of stations extending from the east to the west coast of the continent. Stanley consented, and in April of this year it was officially reported that he had accomplished the great undertaking, having united Banana Point, at the mouth of the Congo, by a through route of communication, with Zanzibar, an island in the Indian Ocean, on the east coast of Africa, six degrees south of the Equator. The successive steps by which this result was achieved are thus detailed:—"In 1880 Stanley founded Vivi, the first international station in Western Africa. Before the end of the third year Leopoldville, a station on Stanley Pool at the head of the lower cataracts, and the key of the Upper Congo, was founded, and four steamers were launched on the great river. In December, 1883, the station of Stanley Falls, 1,000 miles up the river, was founded, and from this point letters from Mr. Stanley have lately been successfully transmitted through the intermediate stations to Karema, the end of the line of stations stretching from Zanzibar on the east coast into the interior. Arab merchants have also safely come through from Zanzibar to Leopoldville, thus proving the connection perfect at both ends." The effect of this chain of stations is that two thousand six hundred miles of river transit, on the Congo and its tributaries, are opened up to commerce, and the tradal consequences may be imperfectly estimated from the fact that the imports to the west coast of Africa alone were last year \$22,000,000, while the exports amounted to \$27,000,000. The special interest of the United States in the enterprise, apart from the fact that its leading spirit is an American, must

be sought in the fact that the imports consist mainly of articles which America can supply. It cannot be denied, however, that the Association, in its present form, promises to be a great civilizing power, from which no Western State need withhold recognition but for the ugly fact that the possession of this line of stations by Europeans signifies virtual sovereignty over 44 millions of people. That the Association means to exercise this sovereignty in a very practical manner may be gathered from a telegram, dated London, May 6th, which says:—The African International Association has given Captain Stephens, an Irishman, who was expelled from the British army, a commission to enlist 2,000 Houssas for service in the Congo country. Stephens is hopeful of great results from the acceptance by the United States of the flag of the Association and from the alliance of the society with France which is about to be effected." The nature of this "French alliance" may be gathered from an apparently authentic rumour, that the complaisance of the Cabinet at Paris was to be purchased by a promise of reversionary interest in the territories ruled by the Association, should circumstances compel the latter's dissolution—a promise which would certainly be very tempting to France in her present humour. The Brussels correspondent of *The Times*, writing on May 16th, said that the text of the treaty between France and the Association had been published, and that the document, if authentic, showed that Belgium had abandoned English sympathies. Germany, on the other hand, has declined to assume any definite attitude towards the Association, pending the receipt of reports made by a special mission sent to the Congo under Dr. Nachtigall. Speaking of this, "the *Norddeutsche Zeitung*" states that the mission was caused by the increase in German commerce with the West African coast, which necessitates the replacement of the present honorary consuls by official agents. Dr. Nachtigall has been instructed to report on the matter, and in the meantime to look after German interests generally. By his own wish he will be accompanied by the African traveller, Dr. Buchner, and by Herr Moebius, at present a secretary to the German Embassy in London. The *Norddeutsche* further states that German war ships are to be permanently stationed in West African waters, whither the gunboat *Moeve* will at once proceed." Meanwhile the German press comments severely on America's action with regard to the Association, and Portugal is about as angry as possible. A despatch from Madrid to *The Times*, dated April 29th, says:—"The American recognition of the flag of the African International Association, with the evident intention of ignoring Portuguese rights, has caused great irritation in Portugal. Such recognition looks like a piece of very sharp practice, novel in international relations, and hardly contemplated by international law. If sovereign rights should be ignored because slavery has been carried on and high protective duties been enforced, America would stand badly, as she was Portugal's best customer in the halcyon days of African slave trading, and her protective duties are four times higher than those stipulated by England in the Anglo-Portuguese treaty." Portuguese wrath will not signify much, perhaps, but it is difficult to think that the world will look calmly on while a company of adventurers, under the auspices of a royal philanthropist,

establishes an independent State with 2,690 miles of river communication and a population of 44 millions.

SOME time ago, says a Newcastle paper, we noticed the launch, from Sir W. G. Armstrong, Mitchell & Co.'s works, Low Walker, of the sister vessels *Yamashiro Maru* and *Omi Maru*, which had been built for the Japanese Steam Navigation Company, of which Admiral Ito is the president. The vessels are 300 ft. long, and are 2,500 tons gross register. They have been built to the highest class at Lloyd's, have teak decks, and their twin decks are fitted from end to end for passenger accommodation for the first, second, and third classes. The steamers are fitted up in the most complete manner, including electric light. The machinery for both ships has been manufactured by the Wallsend Slipway Engineering Company, and consists of a pair of compound surface condensing engines, having cylinders 42 in. and 78 in. by 54 in. stroke, with four steel boilers, working at 85 lbs. pressure. The trial conditions laid down were very stringent, two trial trips having to be made, one to ascertain the speed, the other to show the consumption of fuel at the contract speed over a run of many hours duration. The trials of the *Yamashiro Maru* took place respectively on Saturday, the 19th, and Monday, the 21st April, and were in every respect of the most satisfactory character, the main speed attained being 13.6 knots, which is considerably in excess of the contract, whilst the consumption of fuel was much less than the amount specified. Altogether the performance of the vessel was highly satisfactory. The construction has been superintended by Captain A. R. Brown, the company's representative, assisted by Mr. J. Brown, resident inspector. The *Yamashiro Maru* has completed her coaling, and will proceed to Japan under command of Mr. J. M. James, formerly of the Japanese Navy.

MR. JOSEPH MENGES, writing from Aden in the *Cologne Gazette*, gives some interesting information as to the arms used by the Soudanese. He says:—"The principal weapon of the insurgent tribes is not, as some suppose, a spear or javelin which is thrown at the enemy, but a lance. The only tribe which uses the javelin is that of the Mahommedan Jakruris, who are very small in number, and are settlers on the Abyssinian frontier from Darfour. The best lances are those used by the Bedja and Khaza races, which fought under Osman Digma in the late engagements near Suakim. These lances are rarely thrown, being much too heavy for this purpose, and the Bedjas are not provided, like the Abyssinians and Somalis, with a number of extra lances which they can use to replace any they have lost. The lances of the Baggara tribe, who are the principal supporters of the Mahdi in Kordofan, are entirely different from those used by the men under Osman Digma. They are upwards of 5 metres long, and have a head, which is very sharp both at the point and the sides, about 80 centimetres long and 12 wide. The Baggara are well mounted, and are very skilful in the use of their lances. Next to the lance, the weapon most used by the Soudanese is the straight double-edged sword, about 90 centimetres long and 4 wide, mostly made in Solingen and sold all over Northern Africa. A good sword is highly prized in the Soudan, and the people are careful to keep the swords sharp and clean. The scabbards are mostly made in

the country, either of wood covered with leather, or, for hunting swords, of elephants' ears. Swords, daggers, and oak clubs are also used; bows and arrows have almost entirely gone out of fashion. The shields used by the Soudanese are made of the skins of elephants, rhinoceroses, giraffes, and buffaloes. They are generally round and of about 50 centimetres diameter; but the Shukrieh and other tribes on the Blue Nile have long shields which cover the whole body. Armour is also used by the leading men of most of the tribes. It consists of an iron helmet and vizor, and a coat made of thin steel rings, which covers the whole body down to the feet. The chief's horses are also protected in a similar manner; but such suits of armour are very expensive, and are not used by more than six hundred persons in the whole of the Soudan. Fire-arms are not very common, but they are a good deal used in the hunting districts. The worst shots in the Soudan were among the men under Osman Digma, while in Kordofan the Mahdi has among his supporters many hunters who, if armed with Remington rifles, would be formidable even to Europeans.

THE feeling in England about General Gordon had evidently grown into something very formidable before the Government resolved to send an expedition to his rescue. At the opening of the Health Exhibition at Kensington Mr. Gladstone was greeted with groans and hisses. Even Exeter Hall protested against the programme of desertion, an audience of 3,000 people, who had assembled to hear a speech by Canon Hoare, rising to their feet and tumultuously cheering the speaker when he said that England was ashamed to see Gordon left without support or means of defence. It was expected that Mr. Gladstone would meet the vote of censure in the House by officially announcing that a military force would be despatched as soon as possible, but the expectation was only partly realized. The Prime Minister went no further than an admission that "it might be the duty of the Government to plant a British force in that terrible country," and that he fully recognised the obligations he was under both to General Gordon and to the country. At what particular moment this recognition took the form of action, our advices do not enable us to determine. It will be remembered that the *Pall Mall Budget's* announcement of an expedition in the autumn reached us by telegram under date May 22nd, but it is plain that some such measure had been resolved on before then. At all events, steps had been taken to push forward a portion of General Wood's force. As early as May 13th, fourteen hundred Egyptian troops were ordered to advance a few days' march beyond Assouan, so as to be in a position to support Korosko in the event of an Arab attack upon that place, and measures were then in progress at Cairo for forwarding the plant of seventy miles of railway to be laid beyond Wady Halfa. Earl Granville telegraphed, on the 24th of April, to General Gordon, asking what force would be required for the relief of Khartoum, but the answer this question elicited was not known apparently up to the date of our latest newspaper advices; if, indeed, it had reached Gordon at all,—for 17 days after its despatch from London we find that attempts were still being made to forward it by all possible routes, including Massowah. Meanwhile the rebellion was steadily spreading northwards. By the

12th of May the whole province of Dongola was reported in a state of panic, and the Mudir's appeals for aid were becoming urgent. The only response the British Government made was to tell the Mudir that if his forces were not sufficient to cope with the enemy, he was at liberty to withdraw. He, however, declined to withdraw, and asked again for reinforcements, saying that with more troops he could reconquer the Soudan. At this point it becomes a little difficult to follow the course of events. On the 12th of May, we are told that the Government forbade the advance of any Egyptian troops by themselves beyond Wady Halfa; yet on the 16th of May, the news from Assouan was that the force destined for the relief of Berber and Khartoum had begun its advance, that half of the battalion at Wady Halfa had set out, and that the second half was about to leave Korosko, accompanied by nine hundred Arabs. From this it would seem that, pending the despatch of an English force, General Wood's Egyptians were to be employed in an attempt to keep open the route from Korosko to Berber, and, if possible, to Khartoum. In pursuance, apparently, of this programme, 431 Egyptian regulars started for Assouan, on May 17th, from Cairo, where also, at that time, preparations were busily proceeding for the English expedition in the Autumn. A London telegram, dated May 18th, says:—"Cairo advices of to-day state that the preparations for the Khartoum expedition for General Gordon's relief include equipments for 12,000 men, 40 steam launches, 400 shallow draught boats and several thousand camels. It is doubtful whether the expedition will be ready to start before the end of August. The officers of the army of Egypt are getting furloughs until the end of July." Sir Gerald Graham, not Lord Wolseley, is to command this force, should his health permit. But if our latest telegrams be trustworthy, it seems that different counsels have temporarily prevailed, since on June 8th, the news was that preparations for the Autumn campaign had been suspended at Cairo, and that the Marines from Port Said, with another Egyptian Battalion, had been ordered to Suakim. Probably the key to this enigma is to be found in the renewed activity of Osman Digna, who, having defeated the friendly tribes at Tamanieb, turned up before Suakim on May 19th, bombarded the place for an hour, and got off with a thousand sheep. There is no reason whatever to suppose that the relief expedition has been abandoned. On the contrary, everything combines to show that without a resolute effort on England's part a solution of the trouble can never be found. Briefly, the situation at the end of May was this—Abu-Hamed (the next place of importance to the North of Berber on the Nile) was virtually in the hands of the rebels, who were advancing towards Wady Halfa, where a considerable force of Egyptians, as well as the Nile surveying party under Captain Molyneux, were stationed, while Suakim was again seriously threatened. General Gordon, however, was safe, and, so far as we know, still holds out, though Khartoum's investment must be regarded as complete.

THE telegraph reports that Mr. Brenstedt, a Danish journalist, after having been confined in prison at St. Petersburg for several weeks without a trial, has finally been banished from Russia, leaving his family in a destitute condition in St. Petersburg. Another journalist has been

deported from Germany for too freely criticising the anti-social laws, and in Cuba the Republican paper *El Palenque* has been suspended for an alleged fault against the press laws committed nine months ago. Journalistic enterprise is heavily handicapped under such circumstances. Nowhere, perhaps, have newspapers multiplied and their circulation increased under rigorous official censorship so much as in Japan. What they would become were that censorship removed, may be gathered from the story of the press in Paris, where, in 1867, when the Napoleonic reign was at its zenith, there were only eighteen political papers published—seven in the morning and eleven in the evening—whereas the number now is 70, of which forty-nine have a circulation of over three thousand. The following list shows the names and respective circulations of these forty-nine:—

THE telegram which announces that the Mahdi is marching upon Dongola with a force of 35,000 men, ought probably to be read in connection with a previous message, which announced that, on receipt of the intelligence of Osman Digna's disasters, the Mahdi immediately left El Obeid. In other words, he doubtless felt that the effects of the blow his prestige had received from the crushing defeats of his lieutenant could be averted only by some resolute and successful action of his own. To remain shut up in El Obeid while the men over whom he had thrown the ægis of his divine mission were falling by thousands before infidel bullets would have been a confession of weakness fatal to his influence. It is, of course, impossible to speak with any certainty of events happening at such a distance and fragmentarily described by the telegrams. But if we may hazard a conjecture, it would be that the Mahdi is taking advantage of England's inaction to strike his final blow in the Soudan. Should the province of Dongola—his native province—fall into his hands, the country in the direction of Suakim and Abu Hamed being already in his possession, his authority would be paramount throughout the whole Soudan, with the solitary exception of Khartoum. As for that place, he will probably let it alone for the present. An extensive forward movement is seldom undertaken in offensive warfare while the advancing force's line of communications is commanded by places of strength in the enemy's possession. But no such consideration applies to Khartoum. The Mahdi can well afford to leave that city unmolested on his flank and rear, for he knows to a certainty that Gordon dare not again trust his Egyptian poltroons in the open. There are not many practicable routes in Kordofan. An attempt to get between

the Arab army and its base, El Obeid, would require a very different combination of men and material from anything Gordon can command. Moreover, each forward step taken by the Islamic Mahdi will render the position of the Christian General more untenable. It is scarcely possible to hope that the garrison at Khartoum will remain faithful while the tide of rebellion rolls past it and blocks up every route of retreat or success. To be sure, the Egyptians cannot run away. There is some comfort in that reflection. But they can capitulate, and the fact that surrender has not hitherto ensured safety will not deter them, since cowards know only the resource of submission. One does not like to reflect upon the situation in which Gordon finds himself now. It seems plain that a part of the Mahdi's plan is to occupy the attention of the English on the Red Sea littoral while he himself pushes on to Dongola and with this object Osman Digna has probably been directed to renew his operations against Suakim. On the other hand, the increased activity of the rebels between Berber and Suakim may be nothing more than a secondary effect of the principal operations on the Nile. However this may be, it is evident that with the Mahdi himself, at the head of a powerful army, marching down the Nile towards Wady Halfa and Korosko, it would be impossible to make arrangements for the passage of a relieving force by that route. If Khartoum is to be saved at all, it must be by Suakim, Sinkat and Berber, a route that bristles with difficulties, though it is far shorter than that by Dongola. There remains, of course, the possibility that Abyssinian aid may be enlisted. Captain Speedy, whose acquaintance with King John and his subjects is intimate and recent, is firmly convinced that the Abyssinian braves, in consideration of the territory which the British government is about to concede to them and the freedom of the port of Massowah, will be willing and quite capable of dealing with the tribes on the Blue Nile, and even of carrying aid to Gordon himself. But in truth it seems like leaning on a bruised reed to hope for anything of the sort.

THE electric light in the House of Commons has proved so satisfactory, says the *Daily News*, that it is the intention of the authorities to have it extended to all parts of the building.

HOME papers recently to hand, says the *Hong-kong Telegraph*, state that the Government have offered Lieut.-Colonel Palmer, R.E., the post of Director of Public works in Ceylon, but the gallant Colonel, preferring to remain by his crops, has declined the appointment. We believe the appointment offered to Colonel Palmer is the most important engineering post, as well as the most lucrative, in the gift of the Secretary of State for the Colonies, and it is a great satisfaction to us to see this graceful tribute paid to the high scientific attainments of an officer who lately served in this Colony with so much credit to himself and advantage to the Service. Whether as commanding the Royal Engineers here, or as second in command, or in his capacity as Aide-de-camp to Governor Sir J. Pope Hennessy, or in connection with the Observatory, Colonel Palmer earned a reputation for energy and ability which will not soon be forgotten, and his courtesy and good feeling made him deservedly popular. His popularity has followed him to Manchester, where he now commands a detachment of his corps.

THE half-yearly report of the Chartered Mercantile Bank of India, London, and China, for the period ended December 31st, 1883, was recently submitted to the twenty-sixth annual general meeting of the shareholders at the Banking-house, Old Broad-street. The net profits for the half year amounted to £46,331 os. 9d., to which was added £4,154 5s. 1d., brought forward from the preceding half year. Of this total, £24,973 19s. 8d. was added to the reserve fund, bringing that fund up to £50,000; a dividend for the half-year, at the rate of 5 per cent. per annum, absorbed £18,750, and £6,761 6s. 2d. was carried forward to the current half-year. The Report appears to have given great satisfaction. The depreciation of silver is a terrible difficulty in the path of successful banking enterprise in the East. To this cause is attributable a corresponding depreciation in the capital of the Chartered Mercantile Bank, and the directors have wisely resolved, with the entire approval of the shareholders, to build up their reserve fund till it reaches £200,000—which amount will not only cover the loss by depreciation of silver, but will also include a reserve against the ordinary business of the bank. Until this object is achieved, they have determined, as the Report shows, to declare no dividend larger than 5 per cent. It certainly redounds greatly to the credit of the management that while adding so largely to the reserve fund, they should, at the same time, be able to declare a satisfactory dividend. Even at the present rate of proceeding, the reserve-fund will reach the desired dimensions in about three years, when a dividend of from 10 to 14 per cent. may be confidently looked for. As, however, all indications go to show that the bank has now surmounted the worst difficulties connected with silver depreciation, and is entering upon a period of greater prosperity, it seems probable that the objects of the directors will be accomplished in a still shorter time. In offering our congratulations on such a pleasant state of affairs, we take the opportunity of placing on record the feelings of high esteem and respect universally entertained by this community towards Mr. L. C. Masfen, Manager of the Yokohama branch of the Bank, whose approaching departure was recently announced. Mr. Masfen has been called on to direct this Agency during a time of unparalleled commercial distress; a time when, as a rule, money-making was quite out of the question, and men counted themselves fortunate if they found that their capital had not been largely invaded in the effort to keep their business going. That such an experience may never again visit Japan, is a hope devoutly entertained by all, and doubtless not least by the Banks, since upon their shoulders fell a major part of the difficulty and anxiety. It is natural that the residents of this Settlement should feel warmly towards those whose skill, courage, and sympathy were always ready to lighten the burdens of so evil a period, and to this fact may be attributable something of the popularity Mr. Masfen enjoys. But old residents' appreciation of his remarkable industry and ability dates from many years back, and inspires a sincere hope that we shall soon have the pleasure of welcoming his return to a post which must always be associated with his name.

WŌNSAN, like all the rest of the Korean ports, is suffering from the unpleasant consequences of financial embarrassment. Started on too large a scale, trade has drooped and declined

everywhere, so that once-hopeful mercantile adventurers are pulling long faces and calculating with considerable anxiety the cost of a return ticket to their respective homes. The Japanese residents in Wōnsan number no more than 200, while the floating population of actors, singers, and the like, have given up the place altogether. Most of the branches of Tokiyo and Osaka firms have been closed, only the office of the First National Bank and a few petty stores remaining open. The postal communication with Japan appears to be in a very unsatisfactory condition. From April to December of last year, the Japanese residents were not able to send more than eight mails to this country. "In winter, says the *Mainichi Shimbun*, the dwellers in Wōnsan are completely shut out from the world; the official never dips his pen in ink, while his drowsy head finds a comfortable pillow on the *soroban* (abacus)."

A VERY enthusiastic mass meeting of Catholics was held at the Cooper Union, New York, on the 28th of April, "to protest against the spoliation of the Propaganda by the Italian Government." There were a great many strong speeches, the speakers being generally unanimous in describing the conversion of the College property into Italian rents as virtually a measure of confiscation. Mayor Edson, who evidently appreciated the necessity of warming his audience, since sentiment was their principal excuse for meddling with the business at all, took occasion to contrast the vastness of the United States, and the consequent magnanimity of their citizens, with the smallness of Italy and the pettiness of its people's notions; after which fine example of psychological reasoning, he went on to speak of the depth to which the anchor of religion strikes its flukes into American soil, and then proceeded to his peroration:—"All our world stands up to protest against this act of spoliation, and refuses to stand tamely by and witness in silence this savage butchery of so great and Christian an institution done in the name of law." "Savage butchery" suited the mood of the Mayor's hearers, and they cheered him to the echo. But they did not yet know quite, where they stood, so the ex-Postmaster, Mr. James, reminded them that "their natural instinct as a free people gave them a right to protest against robbery under whatever form of law," and then, having discoursed a little about the "removal of pillars," and the "Fall of the Fabric of Society," he rapidly descended from theory to practice, and asked the meeting what they were going to do about it. Thus suddenly reminded of their impotence, the audience burst out laughing, but were sternly re-called to business by the ex-Postmaster, who told them that what they had to do was to "call the attention of the world to this act of international injustice; and if persisted in, to hold the Young Kingdom of Italy up to the execration of mankind." The speaker did not go on to explain how this "holding up" process was to be effected, but the meeting set about it by passing the following exceedingly grammatical and clearly expressed resolutions, which the President will doubtless have much pleasure in forwarding to the Italian Government:—

Resolved.—That the Italian government, in the conversion and spoliation of the property of the Propaganda, is guilty of despotism and crime, and of not only an outrage upon liberty, civil and property rights, but of an act calculated and intended to be a blow at religion and civilization and to furnish opportunities for that government's interference with and hampering the freedom of the Catholic Church.

That the Italian government is seeking, not only to ruinously affect the Propaganda by reducing the nominal value of its property by more than one-third and placing entirely at its mercy all that great department or bureau of the Papal administration, but it is an attack upon the liberty of the Pope in the exercise of the functions of his office, upon the Christian religion, and the highest and noblest interests of civilization.

That we solemnly protest against the conversion and confiscation by the Italian government of the property of the Propaganda, as contributors to and *cestuis que trust* in which we have not only religious but property interest, and deny the right of that government to deprive us by confiscation of one-third of its proceeds, or by force to change its condition.

That the action of the Italian government in connection with the Propaganda is as unwarranted, illegal, and unjust as would be the confiscation or conversion by the government of the State of New York of the property of the Trinity Church Corporation, Columbia College, the American Bible Society or the Theological Seminary.

That President Chester A. Arthur, Secretary of State Frederick T. Frelinghuysen, and Minister W. W. Astor are entitled to the gratitude of the American people for their prompt and effective action by which the rights and dignity of Americans were asserted and sustained in obtaining the exemption of the American College in Rome from confiscation and conversion.

That a copy of this preamble and these resolutions be forwarded to the President of the United States, the Secretary of State and Minister Astor, and to each Senator and Representative in Congress, and that the President be requested to transmit a copy thereof to the Italian government.

THE *North China Herald*, speaking of the ignorance that prevails among the people of China, tells a story of one of the *litterati* who wanted to know how much the Queen of England paid the Marquis Tseng for coming to London and acting as Her Majesty's governmental adviser. This gentleman thought Chinese assistance too valuable to be deliberately neglected by any one in a position to have recourse to it. "In the belief of the *litterati*," says our contemporary, "foreigners come to China because they are attracted by its many physical and moral beauties, by its wonderful civilisation, its charming cities, its vast literature. The Emperor, in his manifold grace, kindly permits them to settle on his shores, and by so doing is good enough to patronise the little kings and queens of the West who are, unhappily for them, so far removed from the centre of light and influence." Absurd as all this sounds, it is of a piece with the political mummery that goes on in the Middle Kingdom when the Government desires to hide from the people the true import of such humiliations as the Tonquin affair. Sagacious and crafty as the Chinese are in many respects, it really seems as though they derive a species of inane satisfaction from self-deception. In a recent decree published by the *Peking Gazette*, vials of Imperial wrath are poured upon the heads of the Governors and Generals who might have saved Bac-ninh and Sontai as well as the reputation of their country, if they had had the means and the instructions. That they had neither the one nor the other, was owing to the Government's vacillation and incompetence; but the Government, none the less, goes through the solemn farce of punishing them, because it is simpler to blame men for not accomplishing impossibilities, than to admit that the Ministers of the Dragon Throne can by any possibility be at fault. Hsü Yen-hsü, Governor of Kwangsi, is the first victim. He was ordered, it is said, to cross the frontiers and secure the approaches of the country, but instead of doing so, he contented himself with occupying Liang-shan, and sent two Generals to hold Bac-ninh. Of course the Generals "retreated in a disorderly fashion" when they saw the French, and for this "scandalous conduct" they are cited before a Court of Enquiry, which is instructed not to take the trouble of sending them to the Board of Punish-

ments if they are found guilty, but merely to forward a report asking for their "condign punishment." A Brigadier-General who lost a fort, and a Colonel who "loitered in the rear with his troops," are to be "summarily beheaded in the presence of the army," while the Governors of Kwangsi and Yunnan, as well as the Governor-General of Canton, are to be dismissed, arrested, and sent to Peking for punishment. It is tolerably certain that any Chinese troops which came within sight of the French behaved in a disgraceful fashion, but that they were really intended or expected to fight seriously, no one believes. Nothing can be more absurd than this comedy of pretending that the French could have been kept out of Bac-ninh and Sontai if such and such an official had not "failed to comprehend the urgent state of affairs," and such and such a General had not "withdrawn at the moment of danger." The language of the Imperial decrees reminds us of a certain waggish military riding-master who used gravely to reprimand his pupils for getting off without orders on the wrong side of their horses when they were shot over the animal's head or found clinging to his neck on the other side of the jumping bar.

The *Sōul* correspondent of the *Mainichi Shimbun* writes under date of the 31st ult. as follows:—The Chinese are all-powerful in the capital at present. The chief commercial classes, and, as a matter of course, all the official body, are actuated by what is known as "Chinese principles." The *Jun Pao* lately reported the murder of some Koreans by certain Chinese residents, much to the indignation of the latter's compatriots, who ascribed the statement to the Japanese on the editorial staff of the journal in question. Mr. Inouye Kakugoro's position on the staff on the *Jun Pao* was rendered most unpleasant in consequence, and he has since been forced to return to Japan. The meddlesome policy of the Chinese Government has become completely unbearable since the conclusion of the Annamese affair. The Hermit Kingdom is doomed to become a dependency of China in reality as well as in name.

Our private advices fully confirm the report of Chinese supremacy in the Korean Capital. It is stated that the lawless behaviour of the Chinese soldiers is something almost incredible. Their swaggering deportment too well betrays their knowledge that the Korean King is forced to play second fiddle to Ch'un and his satellites. The latter's party is now thoroughly in the ascendant; Li Hung-chang has, according to the *Jiyu Shimbun*, sent in his resignation at last. It seems that his action with regard to the conclusion of the provisional Treaty with France has been severely criticized in Peking, and that the Court has censured him in no measured terms. His has been a life of remarkable and unprecedented success, though *atra cura* must have followed him closely during the last year. But he cannot drop out of the ranks of Chinese diplomatists in so unceremonious a fashion, and may yet be destined to hold the sword of Damocles over Prince Ch'un and the Ta T'sing Dynasty.

THE Agricultural and Commercial Department, says the *Jiyu Shimbun*, has published the following report on the aborigines of Nemuro Prefecture:—In Nemuro Prefecture there are, at present, 820 houses inhabited by aborigines. There were formerly many more, but the number has fallen

off rapidly of late years. Fishing and hunting are carried on more energetically than ever before, owing to the constant and increasing influx of people from the main island. This fact, together with the disappearance of a great number of deer during the severe winter of 1878, has caused a lamentable scarcity of the supplies upon which the inhabitants chiefly depend. The adult aborigines dress themselves in hides, but the children run about naked even on the coldest winter days. Their condition is truly deplorable. An officer of the Industrial Bureau went thither in May of last year, taking with him a quantity of seeds and some agricultural implements. He stopped at Ashiyose-gori, Kujiro, one of the most deserted of the northern districts, and set the natives reclaiming the waste land, sowing the soil with potatoes, Indian corn, beans, *daikon*, *komatsuna*, and barley. The long-continued dry weather has been of the greatest benefit to the young plants, all of which are doing well, with the exception of the Indian corn, which was severely frost-bitten in the early part of the year. The natives, though fully aware of the great importance of agriculture, did not, at the outset, put much heart in their work, being very doubtful as to its results. The abundant harvests already reaped have, however, greatly encouraged them, and they now go about the work with alacrity. The land is good meadow-land; large arable tracts, irrigated by clear, pure streams and covered with grasses which are rarely hidden by the snow for any length of time. All sorts of trees and plants abound. The inhabitants are all victims to a sort of chronic low fever, and there seems to be little prospect of their ever enjoying perfect health. According to a recent investigation, out of every 130 people ten only were not liable to periodical attacks of this enervating malady.

We reported a little while ago, says the *Bukka Shimpō*, that most of the gold fish exported to America die on the journey. A resident of Nagasaki, who has often safely exported large numbers of this beautiful denizen of the waters, has supplied us with the following valuable suggestions, which are the result of his own experience:—The tubs in which the gold fish are to be transported must be made of a wood containing as little resin as possible, and they should measure at least two feet (*shaku*) in diameter. A bag of some very soft material should be suspended in the tub, so that it completely covers the wooden walls. By so doing, the fish are not likely to strike their heads against the hard wood of the tub, which they do otherwise quite frequently, and herein lies the secret of their great mortality. By carefully guarding against the probability of sudden or frequent shocks, the fish may sent to great distances in perfect condition.

At the Annual General Meeting of the Shareholders of the Chartered Mercantile Bank, the Chairman made the following remarks, which we reproduce on account of their special interest and applicability to Japan:—"You are probably aware that evidence on the subject of railways is now being taken by a Select Committee of the House of Commons. This is a matter of very great importance to the trade of India, for there cannot be a doubt that if the railway system is more fully developed, an enormous impetus will be given to the external commerce of India. The article of wheat alone, if it could be brought cheaply to the seaboard, would admit of an enormous extension of the external commerce

of India. * * * * * The difficulty, of course, is where the capital is to be raised for these enterprises. I think there cannot be any doubt that the capital must be raised in this country, for India is too poor a country to find capital for large enterprises of this kind. Besides, the value of money in India is usually so high that there is no inducement to fix it in investments at rates of interest which would be satisfactory to investors on this side. Of course there is the difficulty that the more you increase the foreign indebtedness of India the more you have to draw from her in the shape of so-called tribute to pay interest thereon. But I really do not think this need cause any serious anxiety, because if India was properly developed and fully opened up by railways, the increase of her export trade would be so prodigious that the mere provision of four or five millions a year which would be required, even if the capital required for railways amounted to 10 millions annually in the next ten years, would be so unimportant that it would be provided without any difficulty or any sensible effect on the exchanges." Japan is circumstanced exactly like India. Her route to wealth and prosperity is indicated by the experiences of other countries just as plainly as though she had already trodden it herself. Her only wants are roads and railways. If she would but set to work and build five or six hundred miles of railways every year, she would soon be able to command, among civilized nations, a position which she cannot hope to obtain otherwise. The greatest advantage placed within her reach by the improved condition of her fiat currency is that she can now, with perfect safety, borrow money abroad for the prosecution of these wealth-creating enterprises. While *kinsatsu* were at a discount of thirty or forty per cent., there were many weighty considerations to dissuade her from contracting large foreign obligations. But that state of affairs in happily changed, and she can now draw on the European money markets without any diffidence, and with the assurance that the burden not only of her new liabilities, but also of her old, would become almost imperceptible in the presence of the immense access of prosperity railways would speedily confer.

An interesting report on the mineral possibilities of the Hokkaido appears in the columns of the *Choya Shimbun*. A foreign mining expert has stated his opinion that there are several fine mines in the North, although the veins are in most cases very irregular and follow erratic courses. His statements have, however, received no further confirmation. Coal, sulphur, as well as oil-wells are to be found in many of the hilly districts. Hakodate has the honour of being the chief commercial centre, while the agricultural importance of Sapporo is rapidly increasing. Nemuro is not doing so well; the aborigines are steadily dying out, although the recent agricultural undertakings have infused a little fresh vigour into their lives. The emigration from the main island into Nemuro still goes on, but what the result of this great influx will be is hard to foretell at present. Both Hakodate and Sapporo enjoy a far more temperate climate than does Nemuro, where the severe winters tell hardly on the soil.

THE correspondence printed in the vernacular press with regard to the state of affairs in the Korean ports always harps on the same theme—financial depression. If one tenth of what the

"correspondents" write is true, it is almost incredible how the Government manages to hold together at all. And yet, every mail brings us news of some new Governmental undertaking, first a Mint, then a Post-office, then a Printing Bureau or a new barracks. Where the funds come from is an open question, but if, as we note elsewhere, the Government occasionally *does* draw on foreign capitalists, it may be that philanthropists are not wanting among the residents at the open ports. Wōsan could hardly be worse off; Sōul is only slightly better; while the latest reports from Inchhōn—published in the *Hochi Shimbun*—are very unsatisfactory. Prostitution flourishes rankly everywhere, and the moral tone of the middle and lower classes could not well be more corrupt. The Japanese residents in Inchhōn, says the *Hochi*, are suffering from *ennui*, and spend their time playing draughts and *go*. The *Flying Fish* and *Nishin Kan* are in port, besides two foreign merchant vessels, the latter being in ballast. The British Consulate is now located in the first floor of the *Boyeiki Kwaisha*, which has been leased to the English authorities. The Japanese Consul is on a tour of inspection in the western districts. On the 15th April last, most of the foreign residents moved into the new Settlement, which is considerably better situated than the older one. The Chinese still cling to the former Settlement, where they do a small trade in foreign goods, wines especially. The Custom House has been established in the former residence of a Korean official; all of the employees speak English, although they hail from half a dozen different nationalities. Mr. Von Möllendorff rarely visits the Custom House, and the staff find the time hanging heavily on their hands. Among other buildings now in course of erection are the new premises of the First National Bank, and the hospital. Mr. Tanaka is in charge of the latter institution, and enjoys a large and increasing *clientèle*. The Japanese residents number at present no more than 460, all told.

Min Yon-ik was received on his return to Sōul by a great concourse of foreign and native officials, the Japanese Consul alone being conspicuous by his absence. A large proportion of the Chinese soldiery have left the capital, but rumour states that they are to be replaced by the Manchurian troops under Tso Tso-t'ang. At all events, it seems certain that China has not abandoned her policy of interfering in Korean affairs, and people are always on the lookout for some unpleasant collision between the two governments. The *Chitose Maru* and the *Nam Yong*—a Chinese steamer—are now plying regularly between Nagasaki, Fusan, and Inchhōn.

THE *Hochi Shimbun*, after translating the comments of the *Whitehall Review* and *Pall Mall Gazette* on the Ludwig case, makes the following pertinent remarks:—The opinions of the English Press on this subject are unanimous. What do our readers think of it? We do not intend to discuss the decision of the Swiss Consul; but we do know that the adverse criticisms of English journals are not without reason, inasmuch as the plain facts prove the gross inadequacy of the punishment in comparison with the gravity of the offence. But what do Englishmen suppose have the inconveniences been from which we have suffered since the opening of the ports? Do they know, can they appreciate, how painful it is for the appellant to

have to appeal for justice to the law of the defendant's own country? Think of what we have undergone in this direction!

AMONGST the passengers by the O. & O. steamer *Oceanic* from San Francisco, which arrived here on Monday, we note the name of Mr. C. Gabriel, an old resident of Japan, and formerly in the service of the Mitsu Bishi Mail Steamship Company. Mr. Gabriel will be remembered as having succoured a shipwrecked Japanese crew landed at Vancouver's Island from the British bark *Tiger*, Captain Newby. The latter having failed to induce the Collector of Customs to assist the Japanese whose lives he had saved at sea, Mr. Gabriel took charge of the men and lodged them at the St. Nicholas Hotel. Mr. Gabriel then telegraphed to the Japanese Consul at San Francisco, and the men were ultimately forwarded to their homes.

A RATHER singular story is going the round of the Japanese papers to the effect that an American resident in Fusan has brought a suit against the Korean Government for breach of contract. The data are slightly confused, and we give them for what they are worth. It appears that the Government had ordered 5,000 Snider rifles from Messrs. Okura & Co., and drew on the American in question for the payment of the sum, under the stipulation that the money should be refunded him upon the arrival of the rifles. The *Chitose Maru* arrived, in course of time, with the cases of firearms, but the Korean authorities failed to keep their part of the bargain; the American thereby being some \$25,000 out of pocket. He immediately took steps to force payment, *et hinc ille lacrimæ*.

THE following delectable account of the recent robbery on the Bluff appears in the columns of the *Hochi Shimbun*:—A few days ago, just after dark, a robber broke into the residence of an American at Yokohama. He was dressed in European clothes, and had his face tied up in a handkerchief. A Japanese woman living in the house was the first to meet him. He threatened her with a knife and told her to give all the money in the house to him. The woman, however, was clever enough to tell the ruffian that as the master was absent she knew nothing of the whereabouts of the cash, and asked him to call again after his return (!) She even offered him a cup of tea in compensation for the trouble he had taken in coming, but the robber refused her well-meant offer. The fellow shortly left the house, taking with him a pair of boots which stood near the entrance, but he was soon caught, and turned out to be an unemployed German (!) He was taken to his Consulate, and sentenced to a fine of \$10 and imprisonment for 24 days.

THAT insufficient physical exercise considerably retards the development of the intellect, says the *Choya Shimbun*, has been fully recognized by the Tokiyo Daigaku, and infantry drill is now included in the programme of the University. The pupils of one of the public schools in Chiba Prefecture have taken up military exercise with earnest enthusiasm, under the direct encouragement of the educational authorities. Their finely executed drills are said to be a sight worth seeing.

A WORKMAN in a gold mine at Mishima-gori, Niigata Prefecture, who, until the time of the

Restoration, was one of the richest men in this country, recently sent to a relative in Tokiyo a stone which he had found one day in the mine, and which he had kept on account of its dazzling lustre. His relative took it to an English resident in Yokohama who, to his unbounded amazement, found it to be a *diamond* worth upwards of 300,000 *yen*. The foreigner requested him to send for the original finder of the *diamond* in whose presence he proposes to submit it to the examination of experts. The fortunate finder is said to have left for Yokohama on the 2nd instant.—*Choya Shimbun*.

THE British bark *Kaisow* arrived on Wednesday from Takao, and reports having experienced unsettled weather with adverse gales, having had to beat the entire passage, notwithstanding which she managed to get up in 14 days. In heavy weather lost main topmast and fore top-gallant-mast, and whilst furling the foresail on the 16th instant a seaman fell to the deck, sustaining serious injuries; the unfortunate man, however, was removed to the hospital last evening, and is reported to be progressing favourably.

A NUMBER of "Notes on Korea," which originally appeared in the *Star in the East*, have been reprinted in pamphlet form and placed on sale at the various booksellers in Shanghai and Yokohama. The Notes contain interesting accounts of nearly all the principal places in the peninsula, besides a good deal of historical and general information which cannot fail to be very valuable.

THE Silk Market at Maibashi, Joshiu, opened on Saturday, when the market was fairly well attended, and from 20 to 30 piculs Hanks were differed considerably. Hanks offered 36, and until evening nothing was done. Some few settlements were then made at 35½ to 35¾, say \$450, Yokohama, for silk averaging 2½ to 3.

HIS IMPERIAL MAJESTY'S ships *Kongo*, *Tsukushi*, *Teibo*, *Hiyei*, *Iwaki*, and *Seiki Kan*, left harbour on Thursday for a cruise outside, and on arriving off Tateyama will go through various naval evolutions and a course of target practice.

THE German brigantine *Nicoline* arrived here on Wednesday from Cronstadt, after a protracted voyage which has extended to 215 days. Calms and light variable winds have been the principal causes of the long voyage.

AMONGST the passengers by the Mitsu Bishi Mail steamship *Genkai Maru*, which left here on Wednesday, we notice the name of Count Zaluski, the Austro-Hungarian Minister.

HIS EXCELLENCY GENERAL SAIGO, Minister for War, who left here on the 4th inst. for Kobe, en route to Osaka, to inspect the Arsenal there, returned on Friday by the Mitsu Bishi steamship *Seirio Maru*.

THE German bark *Black Diamond*, 585 tons register, submitted to auction on Wednesday by Messrs. Cope & Co., was sold to Mr. A. Clark for \$2,125.

THE BRITISH CONSULAR TRADE REPORT FOR KANAGAWA.

THE British Consular Trade Report for Kanagawa is, on the whole, a less gloomy document than might have been anticipated. We are confronted, indeed, by the unpleasant fact that the bulk of the trade shows a decrease of more than two and a half millions (dollars), the figures being \$44,309,827 for 1883, against \$46,870,691 for 1882. But the general verdict with regard to imports and exports alike is that things stood at a nodal point: if there were no considerable profits, neither were there any disastrous losses. Of the imports, Mr. ROBERTSON says:—"Ten thousand bales of Yarns, and ten thousand bales of Shirtings taken out of a trade like that of Yokohama, in which Yarns and Shirtings play such an important part, cannot fail to leave a considerable blank, and to give an air of depression to the general character of business. The trade, however, has been free from some of the miserable features of the preceding year, the stocks of old goods costing very dear, and showing ruinous losses, have not formed such an encumbrance, having been, to a great extent, worked off. New importations have cost more moderately, and there has not been the disparity between cost and selling price; on the whole, to importers the year has probably been neither good nor bad, small profits have been made at times, and, in some directions losses, but not heavy ones, have ensued. Speaking roughly, the business may be said to have cleared itself; but this is, as we naturally seek remuneration for their labours." Of the export trade, he writes:—"In its results to foreign merchants the trade of the year has probably been, on the average, like that in imports, neither good nor bad; at times losses have been made, but there have also been occasions of fair profits." It is cold comfort, to be sure, to learn that men of energy, enterprise, and capital have been toiling and moiling for twelve months with no better result than that the current of adversity has not swept them away, but left them clinging painfully where they were originally. Yet if this be the sum and substance of the grudge we owe the most disastrous year Japan's foreign commerce is likely to see for many a day, the case is not as black by any means as its circumstances would have led us to anticipate. There has been an apparently total loss of that which business men can ill afford to lose, time and talent. Yet we say unhesitatingly, that if the merchants of Yokohama succeeded in weathering the evil winds of 1883 without any disaster more serious than the unproductive sacrifice of much foresight and skill, the achievement is a most comfortable omen. Men who could do this may be trusted to show a very different record with more favorable opportunities. The Japanese, too, will doubtless appreciate the signi-

ficance of this result. From the moment their fiat currency began to depreciate sensibly, bringing with it the unwholesome commercial fever and speculative tendencies which are the inevitable concomitants of a fluctuating medium of exchange—from that moment they had to anticipate a season of sharp suffering and adversity, preceding a return to specie payments. Almost every country in the world has had to endure this trouble, and everybody foresaw a similar experience for Japan. But it seems now pretty clear that Japan is passing the crisis with comparatively little effort. On her foreign commerce, especially, the effects of the shock have been much less than many persons expected. There has, of course, been a period of stagnation, resulting disastrously in some cases; but the whole might have been far worse without exceeding anticipations based on Western precedents. It cannot be doubted that the chief mitigating factors have been the cleverness and versatility of the foreign merchants. They have saved the country's commerce from a shock which it could not easily have endured, and which would have added largely to the people's perplexities.

Mr. ROBERTSON, in his most exhaustive and painstaking Report, does not fail to allude to the state of the currency and its effects upon trade. "The fluctuations in *satsu*, or Japanese paper currency," he says "have been less than for many years past, and the tendency has been towards improved value, strangely enough, however, without a corresponding improvement in business. There is no doubt but that the enhanced value has been partially caused by the curtailment of the issue, but it is perhaps more likely to be due to the action of the Government in controlling Bourse transactions, and thus minimizing the evils arising from time bargains. At first this had a deleterious effect on trade, because there was no confidence in the improved value, and neither Japanese sellers nor buyers accommodated themselves to the new order of things, but there is every prospect of the current year witnessing a renewed confidence in the Government paper, and, with confidence, a revival of trade will, doubtless, follow. Such revival, if it is brought about, is likely to be more especially in favour of the Japanese, as the prices of exports and the commodities used by foreigners have declined in the same ratio as the corresponding advance in *satsu*. The improvement in paper will enable the Japanese to pay for his requirements in imports from abroad, of which the interior is reported, and generally believed, to be bare, and, with the issue brought to within controllable limits there is not the same risk of violent fluctuations as in former years." Mr. ROBERTSON'S expression of surprise that the improved value of *kinsatsu* was not attended by a corresponding improvement in business seems a little inexplicable, seeing that the very opposite result might have been ex-

pected. Given a demand for imports, and the consequence of a temporary appreciation of *kinsatsu* would be to facilitate, and therefore stimulate, purchases, by cheapening silver—the medium of exchange. But when that appreciation is general and continuous, its ultimate effect is to paralyze demand, so that the price of silver becomes altogether a secondary consideration to local buyers. Mr. ROBERTSON, in fact, expresses surprise that a declining trade should have accompanied conditions which have everywhere proved fatal to commercial prosperity. We cannot agree with him, either, when he says that the appreciation of *kinsatsu* is probably attributable in a greater degree to Governmental Control of the Bourse than to a contraction of the currency. "The general value of the national currency cannot be affected by local manipulation, any more than the general level of water in a pond can be altered by agitating its surface. Fluctuations, indeed, may be considerably accentuated by gambling transactions on 'Change, but to assert that a permanent and extensive appreciation of a country's fiat notes may be induced by forbidding men to speculate on their rise and fall, is like saying that a physician can reduce a sick man's blood to its normal temperature by feeling his pulse. The experiment has been tried elsewhere with results too marked to be misapprehended. In the United States, when the price of gold fluctuated, in one week, between 218 and 280, and every one who could beg, borrow, or embezzle a few dollars was rushing to the market to buy specie, stocks, commodities, anything, in short, at any price,—since an advance in gold might, within a few days, give a man back his investment with 30 per cent. profit—Congress hastily passed (on the 17th of June, 1864) a bill constituting it an offence punishable with fine or imprisonment to make any bargains relative to the purchase of gold except on terms of immediate delivery and cash payment. Subsequent economists, made wise, perhaps, by the event, described this as an attempt to put out a conflagration by pouring on it oil or turpentine. For the statute merely increased the premium on gold by the cost of insurance against the heavy penalty that might be incurred by speculating on its price. It raised this premium 33 per cent. in five days, and as the oscillations then continued more uncontrollable than ever, the law had to be repealed in less than three weeks after its enactment. There is no reason whatsoever to suppose that the attempts of the Japanese Government to restrain marginal transactions in *kinsatsu* have been attended with happier results than those recorded in the history of American finance. The true causes of currency appreciation, in our opinion, have been a contraction of the volume of *kinsatsu* in circulation by exchanging them for interest-bearing bonds, and a gradual accumulation of specie in the Treasury. It may fairly be hoped that

the depressing effects of this appreciation have now passed their climax, though some time must still elapse before trade entirely recovers its elasticity. During 1883, the range of fluctuation, as Mr. ROBERTSON shows, was from 144 to 109: during the first five months of the present year, it has been from 116 to 107—a degree of variability which can scarcely exercise any troublesome influence on commerce. On the whole, we believe that Yokohama has seen its worst days, and that with a comparatively stable medium of exchange and the increased tradal facilities which Treaty Revision will confer, we may look forward to results very different from those set forth in this report. The one cloud on the horizon is the unwise diversion of home capital to railway enterprise.

THE NEW TRADE-MARK REGULATIONS.

PERHAPS the most striking feature of the recently published Trade-Mark Regulations is their simplicity. We doubt, indeed, whether some error has not been made on the side of brevity, and whether, in practice, difficulties may not result from a want of greater clearness. Japan, however, in these matters of legislation has one great advantage over European nations: she can benefit by their experiences, while, at the same time, discarding the traditions which those experiences embody and by which their results are often confused and hampered. In England, for example, Bills brought into Parliament, session after session, for the purpose of regulating the law of trade-marks, had to be abandoned for lack of time to discuss their administrative details, and the Trade-Marks Registration Act of 1875 is said to have owed its success to its shortness. The plan adopted was to settle by the Act only the general principles governing registration of trade-marks, leaving details and ancillary provisions to be filled in by rules subsequently issued under the authority of the Lord Chancellor. It is, of course, similarly possible that the Japanese regulations may be supplemented; but there are, nevertheless, some points which might have been advantageously stated with greater distinctness from the outset. First among these is the meaning of the term "trade-mark," for the purposes of the Regulations. We are not told what a trade-mark is, but only what it is not. In some respects this method of definition has its advantages. The public in general may be supposed to know that a trade-mark is an arbitrary sign employed by a vendor to designate his wares. But the public in general may not be supposed to know, for example, that the name, colour, and general appearance of a line of omnibuses, the title of a magazine, and so forth, are also trade-marks, or, at least, have been recognised as such by English Courts. For the sake of comparison it will be worthwhile

to quote the provisions of the Act of 1875 on this point. For the purposes of that Act, a trade-mark consists of

1. A name of an individual or firm printed, impressed, or woven in some distinctive manner.
2. A written signature, or copy of a written signature of, an individual or firm.
3. A distinctive device, mark, heading, label, or ticket.

The Japanese Regulations exclude marks coming under the first and second of these categories, and in this they are peculiar. Based as they evidently are upon the French law of 1857, they do not follow that law, since it defines trade-marks as, "*les noms sous forme distinctive, les dénominations, emblèmes, empreintes, timbres, cachets, vignettes, reliefs, lettres, chiffres, enveloppes, et tous autres signes servant à distinguer les produits d'une fabrique ou les objets d'un commerce.*" In a country like Japan, where the same names, whether of individuals, firms, or places, recur over and over again, it is easy to understand the motive which inspires their omission from the category of trade-marks. But such omission, none the less, greatly invalidates the effect which may hereafter be given to the Regulations as regards foreign trade-marks. A large majority of English trade-marks embody names of individuals or firms, and since these do not come under the Japanese definition, difficulty may be experienced in affording them protection. An international convention, soon we trust to be concluded, would of course extend reciprocal protection to British and Japanese trade-marks within the territories of the two States; but it is obvious that British trade-marks could not be recognised by Japanese Courts unless these Regulations are supplemented by some special provision. Again, the whole question of civil remedies for infraction of trade-mark privileges is left virtually untouched. The fifteenth Article says that "the owners of registered trade-marks may claim damages from or lay information against any person who encroaches upon their privileges;" but nothing is said as to the nature and extent of the damages, or the form of procedure. These matters will probably form the subject of subsequent legislation, to which we look forward with considerable interest. Pending its publication, criticism of the recent Regulations is, perhaps, premature; but it certainly seems that more accurate phraseology would have been better. Art. XVII., for example, which we have translated literally, imposes a criminal penalty upon an act which, as there defined, may have been committed without any criminal intent whatsoever. The word "counterfeit," used in the preceding Article, plainly implies fraudulent intent, but it would be very difficult to determine whether an offender, indicted under Art. XVII., must, or need not, be proved guilty of fraud in order to obtain conviction. It is strange, too, to find no provision made for increasing the penalties in case of repeated offences—a point upon which the French law is very clear

—and to find, also, no limit of time assigned for the institution of proceedings. Art. XXIII., which requires that proceedings must be initiated by the parties whose rights are infringed, seems to have been suggested by the Austrian law, but we fail to see why the latter should have been curtailed, in so far as it provides that when a criminal act is involved, official prosecution shall take place.

We do not know how far it may be the intention of the Japanese authorities to extend protection to foreign trade-marks. It has been pointed out in this journal that Japan is somewhat peculiarly situated, inasmuch as her object is, or ought to be, the speediest introduction and utilization of foreign inventions, which introduction is not likely to be effected, to any considerable extent, except by native effort. So long as foreigners are confined within the present treaty limits, the advantages they might derive from enterprise of this nature, as well as their opportunities of appreciating Japan's wants, are so small that there is little likelihood of their travelling beyond the beaten groove. But if a Japanese knew that his intelligence in detecting a popular need and his trouble in supplying it from abroad, would be rewarded by some measures of protection similar to that enjoyed under a registered trade-mark, the knowledge might prove a very useful stimulus. Arrangements having this end in view might easily be made without tangible prejudice to foreign interests, and the subject will be well worth considering when the question of protecting European and American trade-marks comes upon the tapis. Meanwhile, Japan deserves to be congratulated on having added another stone to the edifice of highly civilized laws she is gradually building up.

THE TOKIYO CHARITY HOSPITAL BAZAAR.

THE Ladies' Bazaar at the *Rokumei-kwan* ended on Saturday in a deluge of rain. Very fortunately the two first days were everything that could be desired in point of weather, but the third made amends in a manner worthy of a Japanese June's reputation. The rain did not, however, deter the visitors. A great many people had doubtless put off going until Saturday, and knowing they should have no other chance of seeing this novel spectacle, they went in despite of the sky. To say that the Bazaar was a success would only be saying what everybody had anticipated. Yet the most sanguine never looked forward to such a success as it proved. At first, an addition of fifteen hundred or two thousand *yen* to the funds of the Charity Hospital was thought an extravagant estimate; but we believe we shall be within the mark if we say that six thousand *yen* were netted by the affair. The sales of tickets alone, at ten *sen* each, produced thirteen hundred *yen*, and at one time some anxiety was felt lest

the number of visitors should prove unmanageably large. This apprehension not having been realized, or, at all events, not realized to any serious degree, it is perhaps unnecessary to criticise the wisdom of placing the tickets within everybody's reach. There is always a good deal of timidity about charges in Japan, and it must be confessed that from what we have been able to see of the people's thrift, a small outlay exercises a marked effect in keeping them away from places of amusement. Still, when one remembers that the charge for admission to a Bazaar in England varies from half-a-crown to half-a-guinea, an entrance fee of three pence half-penny does seem excessively small. There is, however, one happy feature about a Japanese crowd—it is always quiet and well behaved. The genuine "rough" has not yet made his appearance in this country, though it must be confessed that his embryo is discernible in some of the students educated after Western fashions, whose saw-fangled ideas of the liberty of the subject assume, occasionally, an unpleasantly demonstrative shape. These risks were taken, at any rate, though not without qualms as the sales of tickets gradually mounted to more than double the original estimate, and on the morning when the Bazaar opened, a great many people prophesied all sorts of unpleasantnesses. From first to last, however, there was not one *contretemps*, if we except Saturday's rain. The people came in the most good-humoured, tractable mood possible, and though a majority of them had evidently proposed to themselves the pleasure of an exceedingly leisurely survey of the beauty and fashion of the metropolis, they were quite content to be admitted in batches of only 200 at a time, and to be gently "moved on" from their rapt contemplation of this or that stall, after the lapse of ten all-too-short minutes. A Bazaar would be a terrible fraud, but for its pious character. As a method of reaching the pockets of people who require to be cajoled into charitable impulses, it certainly has much to recommend it. But in very truth it cannot be regarded as the highest product of Western civilization. The ladies of Tokiyo set about it in the most business-like and upright fashion. The prime cost of the articles they had made, or caused to be made, was carefully estimated, and this having been increased by a small per centage—generally five, but in a few cases, twenty, per cent.—everything was, at first, legibly marked and honestly disposed of at its appointed price. But this system soon had to be abandoned, for the simple reason, that, whereas the Bazaar was to last three days, its contents had been sold out before the evening of the first day. Restocking became necessary, and there was obviously no time to mark everything as before. The ladies, too, had received some lessons and hints very early in the proceedings, and they proved themselves apt

scholars. People coming on the second day found that the amounts they had in their purses were, in most cases, the only true indication of the prices of the goods. This merry method of selling grew more and more familiar as the hours went by, and was attended by one admirable result; namely, that people who had put off visiting the Bazaar till the very last moment, in the hopes of finding everything sold, were exposed to the full force of the fair sellers' practiced skill, and had to pay large sums for plants which had done duty in the decorations or cigarettes which remained unsmoked in the refreshment room. The refreshment rooms themselves were not the least successful portions of the affair. The most modest beverage, from a cup of tea to a bottle of lemonade, cost twenty *sen*, and economical visitors who confined themselves to a glass of iced-water, without the proverbial tooth-pick, did not receive any change worth carrying away out of a ten *sen* note. Of course there was a great deal of pretty rivalry among the ladies, but we believe that the stall at which Madame INOUE presided carried off the palm, its takings on the second day alone having been upwards of six hundred *yen*. The benevolent naval officer, to whose medical services and untiring charity the Tokiyo Hospital owes so much, was to be seen everywhere assisting everybody, his delight at the help in store for his favorite institution seeming to render him wholly impervious to fatigue. And, indeed, we cannot speak in terms of too high admiration of the fortitude displayed by the ladies, the great majority of whom remained steadily at their stalls throughout the whole three days, successfully hiding every symptom of weariness and never allowing the spirit of the proceedings to flag for a moment. The Ministers of State and many high Government officials seemed to devote all the intervals of business to visiting the Bazaar, leaving it, of course, on each occasion with empty purses. Three leading Japanese merchants of Yokohama—gentlemen whose names were on everybody's lips at the time of the Ito-gwaisha trouble—fared, perhaps, as badly as anyone. Like MOHAMMED and the mountain, they probably thought that if they did not visit the Bazaar, the Bazaar would not visit them. They were mistaken, however. The Bazaar came to them in the person of a well known Minister, who invited them to sup with him at a tea-house in Yokohama on Friday evening, and there preached the virtue of charity so successfully that they ended by contributing 200 *yen* a-piece. As for the foreign residents, it is scarcely necessary to say that their sympathy was of the most substantial nature. Hard times do not appear to touch Yokohama's kind-heartedness in the least. Every charitable appeal meets with a ready response. The promoters of the Bazaar thought they were beyond the mark in estimating a foreign contribution of five hundred *yen*. Twice

that amount would probably have been within the truth. Yokohama alone took about a thousand tickets, and each of the Foreign Representatives put down his name for two hundred. Thus, in every respect, the affair was a signal success, and the Ladies of Tokiyo deserve to be heartily congratulated. Nothing could have been more auspicious than this initial effort of the Benevolent Society into which they have formed themselves, whether it be viewed by the light of its immediate results, or as a step towards the acquisition of that social influence which is woman's right in all highly civilized countries.

THE "FIJI SHIMPO" AND THE MISSIONARIES.

THE *Fiji Shimpō's* comments on the action taken by the Missionaries with regard to Treaty Revision do not seem to us particularly happy. Assuredly they are not marked by that journal's wonted discrimination. We can sympathise fully with our Tokiyo contemporary's radical sentiments in this matter. As a patriotic Japanese, his duty and his inclinations alike forbid him to rest content with anything less than the complete restoration of his country's autonomic rights. But, in our opinion, the course he advocates is not consistent with the promptings of a wise patriotism. Indeed, we are disposed to doubt whether he has given any serious reflection to the practical results of the sweeping change he recommends. The entire and immediate abolition of extraterritoriality must be considered from two standpoints: the standpoint of those who would be required to assume judicial authority over foreigners, and the standpoint of those who would be required to submit to that authority. Under the latter aspect, the first problem that presents itself is the temper of foreigners. The *Fiji Shimpō* will readily admit that every reform—and we do not hesitate to call the ultimate abolition of extraterritoriality a reform—can only be successful when it is suited to the conditions under which it is introduced. The reform, in this case, is an extensive modification of a system of Government, and its promoters are bound to consider not only the competence of the proposed governors, but also the disposition of the governed. It would, perhaps, be extravagant to expect that a Japanese journal should set out by admitting any doubts as to the former, and besides, our contemporary's article is not without evidence that he, at any rate, has entire confidence in the ability of Japanese officials to discharge functions unprecedented in the history of Oriental and Occidental intercourse. But what we would ask is, does this confidence extend to the possibility of immediately conciliating foreign prejudices? Does the *Fiji Shimpō* sincerely believe that if foreigners were compelled to-morrow to submit to Japanese jurisdiction in its

entirety, they could accept the change with any measure of that content which is essential to the smooth working of governmental machinery? We have always insisted that the fullest credit should be given to the motives which inspire Japan's dissatisfaction with the present system. We believe, also, and have frankly admitted, that the motives which prompt foreign opposition to any radical change are in great part the outcome of prejudice and ignorance. But however the former may be extolled and the latter condemned, the facts must be dealt with as they actually exist. Anybody can see with how much persistence and how little justice attempts are at present made by a section of the foreign community to prove that Japan is wholly unfit for the charge she would assume. Every rumour of official error, from the proceedings of a constable to the sentence of a tribunal, is magnified into an evidence of national incompetence. Childish and unfair as all this is, to ignore the temper it indicates would be an unfortunate blunder. This discontented and truculent section of the foreign residents is precisely the element with which the Japanese authorities would have to reckon were the course which the *Fiji Shimpō* recommends adopted, and the result could only be endless friction and mutual dissatisfaction.

Beyond this section, of which we have spoken first, because its disturbing influence is prominent at present and would be still more prominent under the new régime, there is a large body of foreigners who sincerely desire to be fair and liberal, but who are unable to reconcile themselves to the proposed change because they are influenced by sentiments precisely analogous to those for which the *Fiji Shimpō* claims consideration in its own case. This point has already received lengthy treatment in our columns, though in truth the necessity of addressing such arguments to a journal like the *Fiji Shimpō* did not occur to us. We did not think it necessary to remind the representative of educated liberalism in Japan that the instinct of freedom—the instinct which has worked out all the great progressive measures of Western civilization—is not more active in the promotion of personal rights than it is jealous in the preservation of those rights when once secured. If it is intolerable to a Japanese that the independence of his country should be impaired by the necessity of granting exceptional privileges to foreigners, he must remember that those privileges represent, in foreign eyes, the outcome of centuries of effort and suffering. Men are unwilling to abandon what has cost them a great deal to acquire. By an Englishman, security of life and property, the impartial administration of justice, and the several rights of a free-man, are regarded as the inalienable heritage of his nationals wherever they may be, and he believes that every British

subject is entitled to claim his Government's protection against any attempt to encroach upon that heritage. This faith is an integral part of his patriotic creed, and it deserves at the hands of the Japanese the same respect which they ask for their own efforts to obtain a complete recognition of their country's independence. True, we are in Japan, not England, and the assertion of English rights must therefore be secondary to the exercise of Japanese. But to admit this carries the question into the region of logic, and we are dealing at present with sentiment. Our purpose is simply to point out that even the most moderate and liberal foreigners have good cause for hesitation in this matter, and that the grounds of their reluctance to forego at once and altogether the protection of their own institutions are both intelligible and respectable.

Seeing, then, that the disposition of the governed would, at first, be quite irreconcilable, it becomes doubly necessary to consider the competence of the governors. Is our Tokiyo contemporary quite satisfied upon that point? Does he believe that Japan has codes sufficiently complete and a judiciary sufficiently experienced to assume immediate and entire jurisdiction over foreigners? If so, he differs from those among his own countrymen upon whom the direct responsibility of such a proceeding would rest. We need not enter into particulars. It is quite enough to point out, first, that when Japan set about reconstructing her legal institutions upon Western models she confessed the necessity of that measure; and secondly, that the reconstruction is only now approaching completion. It is impossible to admit that Japan would be consulting her own interests did she prematurely anticipate her readiness to undertake duties which, at the best, it will fully tax her abilities to perform without friction. She will be the first among Oriental States to obtain such a concession at Western hands, and however deliberate, however complete, her preparations, she must look forward to difficulties of no trifling nature.

Doubtless, the Missionaries of Tokiyo and Yokohama took all this into consideration when they wrote that "the immediate and entire abolition of extraterritoriality would be premature." Their *confrères* of the South, while not committing themselves to any explicit statement of the same nature, were evidently influenced by a similarly wise discretion. Both, however, agreed that the time was fully ripe for substantial concessions to Japan's just demands, and both expressed themselves in terms of unequivocal friendship and good-will to this country. But the *Fiji Shimpō* appears to despise sincere friends. It will be content with nothing short of blind partisans. We have no right, perhaps, to criticise our contemporary's choice, little as it partakes of his usual moderation. Some measure of justice, however, we do expect at his

hands, and in this instance he has been strangely unjust. So completely does he misinterpret the motives and miscalculate the obligations of the Missionaries, that he finds fault with them for failing to do the very thing which their enemies and traducers have accused them of doing—charges them with indifference to the interests of religion because they have not advocated the complete abolition of extraterritoriality for the sake of the increased facilities of propagandism such a step would confer. Further, as though this suggestion of half-heartedness were not sufficient, he indirectly twits them with allowing selfish fears for their own safety to mar their opportunities. "Japanese law," he says, "is more than capable of protecting the lives and properties of missionaries." It may interest the *Fiji Shimpō* to know that there is not one missionary, worthy of the name, who would not gladly have placed himself under Japanese jurisdiction fifty years ago, if by so doing he could have enlarged his sphere of usefulness; and that, apart from all questions of propagandism, there are probably not half a dozen missionaries in this country to-day who, for their own sakes, would desire to defer, for so much as an hour or even a minute, the entire restoration of Japan's judicial autonomy. But the missionary does not take his personal feelings for his only guide. He has to consider the feelings and interests of others also. In this instance he has shown himself both impartial and dispassionate; the representative of that middle course in which safety and success are certainly to be found, and which Japanese statesmen are fortunately willing to tread. His reward, so far as the *Fiji Shimpō* is concerned, is singular—so singular that we are almost forced to doubt whether our Tokiyo contemporary had read the memorial and declaration he undertook to criticise. If he read them, and then in good faith wrote as he has written, we can only say that there are in Japan journalists wholly incapable of distinguishing between their country's friends and its enemies.

CORRESPONDENCE.

THE BAZAAR.

TO THE EDITOR OF THE "JAPAN MAIL".

SIR,—I cheerfully obey the behest of the ladies of the Ladies' Benevolent Society, that I convey to you their best thanks for your support of their enterprise, the Bazaar that has just been so successfully held, and in giving such prominence to your announcement of it in your columns.

Please accept their sincere acknowledgments, and believe me, Sir, very truly yours,

MIYOJI ITO,

Hon. Sec. of the Ladies' Benevolent Society.

Our ladies would ask you, unless it is trespassing too much upon your good nature, to convey in your columns in a line or two, their thanks for the liberality with which foreigners contributed to the receipts of the Bazaar.

M. I.

Tokio, 16th June, 1884.

[We publish this letter as received, thinking that this course will best meet the writer's views.—Ed. J.M.]

BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA FOR 1883.

BRITISH CONSULATE FOR HIOGO AND OSAKA,
Hiogo, May 5th, 1884.

SIR,—I have the honour to report on the Trade and Navigation of the Ports of Hiogo and Osaka for the year 1883, and inclose you the following Returns on this subject:—

Hiogo.

- 1.—Return of Imports from Foreign Countries.
 - 2.—Return of Exports to Foreign Countries.
 - 3.—Returns of Shipping, viz., (a) British and other foreign shipping. (b) Japanese shipping.
 - 4.—Return of duties and shipping dues collected.
 - 5.—Return of Import and Export of Treasure.
 - 6.—Return of Foreign Residents and Firms.
- OSAKA.
- 7.—Return of Imports from Foreign Countries.
 - 8.—Return of Exports to Foreign Countries.
 - 9.—Return of Shipping (Japanese).
 - 10.—Return of duties and shipping dues collected.
 - 11.—Return of Foreign Residents and Firms.
 - 12.—Statement showing return of Articles re-imported and duty repaid at the two ports.
 - 13.—Statement showing return of Articles re-exported and duty repaid at the two ports.
 - 14.—Comparative statement showing the Total Trade of the ports of Hiogo and Osaka for the year 1883 and the total for 1882.

The Returns of Imports and Exports are compiled from the revised Returns of the Foreign Trade of Japan for last year published by the Bureau of Customs; the Returns of Foreign Shipping and of Foreign Residents and Firms are compiled from memoranda furnished to me from the various Foreign Consulates here, and the Returns of Japanese Shipping from figures supplied from the agencies of the steamship Companies and from the Customs. I am also indebted for information, relating to the deliveries of imported goods, to the Returns of the local Chamber of Commerce and on other subjects to officers of the Government and to residents at this place.

The Returns of Foreign Imports and Exports show a total value of \$14,803,449, for the Foreign Trade of the two ports for the year, being a nett increase of \$122,994 over the value of the Trade for 1882. The value of Exports for the year amounts to \$6,473,757, being a decrease of \$288,906 from the value for 1882; while the value of Imports amounts to \$8,329,692, being an increase of \$411,900 over the value for the previous year. It may be observed that, the previous year, while the total trade of the Port showed an increase, the variation of increase and decrease, as between imports and exports was the other way.

IMPORTS.—The increase observable in the import return is distributed principally over the headings of Woollens and Mixtures and Metals. In Cottons generally there is a decrease. Notwithstanding the increase in the import return, however, the year has been by no means a good one. An examination of the Chamber of Commerce returns shows that there is a decrease in the total deliveries under each of the headings of Manufactures and under Metals. Taking the separate articles, I find that the deliveries of each article of cotton manufacture were less in 1883 than in 1882, with the sole exception of cotton yarns; that the deliveries of woollens were all less, except of Blankets, and of all mixtures the deliveries had likewise decreased. The following is a comparative statement of deliveries of manufactures for the two years:—

	DELIVERIES, 1882.	DELIVERIES, 1883.
Cotton Manufactures value	\$2,610,700	\$2,451,400
Woollen Manufactures value	1,525,000	1,079,300
Woollen and Cotton Mixtures } value	474,300	299,200

exclusive of what has been imported by Japanese merchants from Yokohama.

The value of manufactures imported by Japanese from Yokohama into this port has also materially declined during last year, the total being given at \$1,277,500, as against \$2,908,700 in 1882.

The cause of the dulness of the Import Trade has, without doubt, been the fluctuations in the value of Japanese paper, and the general depression accompanying the advance, which, as I shall mention further on, has taken place in its exchange value. Manufactures were, generally, unsaleable in the commencement of the year, but from the month of February they began to improve. Shirtings and other cottons began to be in request, and this continued until about the month of July. In particular it should be observed, that the demand for both English and Bombay yarns, but especially the latter, was for that period good; and, on the whole, this trade seems to be on the increase at this port. In October and November, the demand for imports was entirely checked by the advance in paper and the general depression continued until the end of the year.

Japanese merchants do not now buy imports in large quantities and on contract as in former years. Sales are made by Importers in smaller quantities and for cash. We hear less, consequently, of difficulties from unfulfilled contracts; and the trade is in this respect a more healthy one.

METALS.—An increase of deliveries of pig iron and nails appears in the returns for the year; but the market has been generally depressed.

KEROSENE OIL.—Deliveries were to the number of 566,826 cases, as against 684,697 cases in 1882. Stock increased from 195,460 cases in importers' hands, in the commencement of the year, to 586,800 cases in December.

EXPORTS.—Each of the headings of staple exports shows a decrease in value, last year, except in the cases of wax and tobacco, coal and lacquered ware.

TEA.—This staple shows a total export of 14,472,400 lbs.; being an increase of 434,800 lbs. over the export in 1882. The declared value \$2,350,111, of the export last year is, however, \$117,518 less than the valuation of the export in 1882. The Custom's Returns, being necessarily for the civil year, do not afford such a good basis for estimating the fluctuations of this trade as returns for the tea season would give. I have been favoured with an estimate of the average price of tea bought here during the seasons 1882-3, and 1883-4, from which it appears that while in the former season the average price was \$24.75 per picul, in the latter season the price has been \$20.25. The tendency on the American Market has been in favour of lower priced teas. The following comparison of the quantities of different priced teas bought here during the two seasons, exemplifies this in the most marked manner:—

SEASON 1882-3.		SEASON 1883-4.	
PER PICUL.	BOUGHT.	PER PICUL.	BOUGHT.
At \$ 5 to \$11.50.....	piculs 3,607	At \$ 5 to \$11.50.....	piculs 10,733
At \$12 to \$16.50.....	piculs 8,847	At \$12 to \$16.50.....	piculs 19,058
At \$17 to \$21.50.....	piculs 23,259	At \$17 to \$21.50.....	piculs 31,818
At \$22 to \$25.50.....	piculs 25,708	At \$22 to \$25.50.....	piculs 31,347
At \$26 to \$29.50.....	piculs 24,837	At \$26 to \$29.50.....	piculs 15,926
At \$30 to \$39.50.....	piculs 19,788	At \$30 to \$39.50.....	piculs 7,111
At \$40 upwards.....	piculs 1,402	At \$40 upwards.....	piculs 54

The averages given above are based on these figures.

Of the Tea exported all last year, it appears from returns with which I have been favoured by the United States Consul, that 14,042,425 lbs., or over ninety-seven per cent. of the whole, went to the United States and to Canada through the United States. Of this, somewhat less than one-third may be taken as having gone to Canada.

The Japanese Society for the advancement of the Tea Cultivation held their second meeting in the months of September and October of last year, in the Ken Assembly Hall at this Port. Exhibits from the various tea-producing districts in Japan were shown and adjudicated upon, the arrangements being under the auspices of the Agricultural Bureau.

TOBACCO.—The greater part of the export of last year went from the Port of Osaka, the quantity exported from there having risen from 808 piculs in 1882 to 2,380 piculs in 1883. This was principally owing to the shipment of a large quantity of Higo Tobacco brought from Nagasaki

and packed for export at Osaka. The total export from the two Ports amounted to 2,801 piculs, of a value of \$32,057, as against 1,537 piculs of a value of \$16,066 in 1882. Last year's crop is good, but, as in the previous year, short in quantity.

It may be interesting to remark that efforts are made by the Japanese Government, by introducing foreign seed, to encourage the farmers to grow a better class of tobacco. I am informed, however, that this is not having the effect desired. After a season or two, tobacco, originally raised from imported seed, appears to become, under the influence of soil and climate, undistinguishable from that grown from the native seed. It would, in the opinion of experts in this article, be better to endeavour to improve the native tobacco which, if the price is moderate, will always command a market in London, the chief desiderata being dryness, colour, and burning power.

The export of COPPER shows a decrease from \$606,828 value in 1882 to \$363,961 value last year. In the months of September and October some demand from Corea for this article for coinage purposes induced a rise in prices, which had the effect of checking transactions.

CAMPOR, although showing a decrease on the export in 1882, still shows a good average export value of \$535,291; Vegetable Wax an increase of \$64,928, the total being \$369,339. A large proportion of the latter was of inferior grade exported by Chinese.

RICE, for Australia, New Zealand, and Europe, shows a total of \$463,148, being not much more than half the value exported the previous year.

WHEAT, given in the returns under miscellaneous Exports, attains the considerable figure of \$198,407 value for the two ports. It may be remarked that the figures given in these returns do not always represent the entire export of rice from this part of Japan, as vessels occasionally load or fill up with rice at unopened ports for foreign countries.

EARTHENWARE and PORCELAIN and LACQUERED WARE remain at almost the same figures last year as the previous year.

ANTIMONY, classed here under miscellaneous Exports, reaches the amount of 29,210 piculs, valued at \$137,154.

BAMBOO WARE, BRONZE WARE, FANS, IVORY WARE, SCREENS, show an increased export.

RAGS were exported to the value of \$40,680 to the United States.

MATCHES, which figured largely the previous year have almost disappeared from the returns.

FISH-OIL, noted in last year's report as a new export, shows an increase.

RATES OF EXCHANGE.—The average bank rate of exchange at four months' sight, on London, for the year, was 3s. 8½d., the maximum being 3s. 9½d. and the minimum 3s. 7½d. The average sight rate was 3s. 8d.

There has been a notable rise in the value of Japanese paper during the year. The lowest rate quoted in the month of March was 145 yen per \$100, Mexican. In November, the rate had risen to 106. At the end of the year it was tolerably steady at about 109. The cause of this improvement of paper is understood to be the contraction of this part of the currency by the withdrawal by the Government of a part of the inconvertible issue, which they have been able to effect by the issue of certain terminable bonds. There is no doubt that this is a step in the right direction; but in the meantime the change causes considerable depression to the agricultural and trading interests.

THE MINT.—The Commissioner of the Mint, in Osaka, has kindly favoured me with returns of the bullion imported into the Mint, and of the amount of coins struck during the year 1883. They are as follows:—

Table showing the amount of Gold, Silver, and Copper Bullion imported during the year 1883:—					
DESCRIPTION.	GOVERNMENT.	JAPANESE.	FOREIGNERS.	TOTAL.	
Gold	Troy oz.	Troy oz.	Troy oz.	Troy oz.	
Silver	6,948.63	20,329.50	—	27,278.13	
Copper	749,388.43	496,221.48	1,700,387.95	2,945,997.86	
	27,323,254.00	—	—	27,323,254.00	
Total	28,079,591.06	516,550.98	1,700,387.95	30,296,529.99	

Table showing the amount of Gold, Silver, and Copper Coins struck during the year 1883:—

DENOMINATION.	WEIGHT.	NUMBER.	VALUE. Yen.
Gold Coins.....	29,165.88	108,858	\$44,290.00
Silver Coins	3,152,700.01	3,637,404	3,637,404.00
Copper Coins	24,620,676.50	119,419,393	1,070,791.91
Total	27,802,542.39	123,105,655	5,252,485.91

It appears from these tables that 2,022 ozs. more of gold were imported into the Mint in 1883 than in 1882 and 1,143,527 ozs. less of silver. The value of coins struck, of each metal, was less in 1883 than in 1882; the difference being principally in silver coins. The total decrease in value of coins struck, of the three metals, amounted to 1,601,222 yen.

The quantity of gold and silver refined at the mint during the year was as follows:—

	REFINED. Troy Oz.	PURE. Troy Oz.
Gold	47,559.68	47,440.13
Silver	662,007.79	660,471.25

Total..... 709,567.47 707,911.38

Some details of the quantities of Acids and other articles manufactured at the works in connection with the Mint I am giving further on in this report.

SHIPPING AND NAVIGATION.

British shipping entered at the port of Hiogo last year shows a total of 124 vessels of 159,298 tons, as against 120 vessels of 140,503 tons in 1882, being an increase of four vessels and 18,795 tons. Under the United States, German and other flags, there is a similar slight increase. The total increase, under the British and other Foreign flags, amounts to 21 vessels and 35,142 tons.

No ships, under Foreign flags entered the port of Osaka during the year.

Of British ships entering the port of Hiogo, 52 vessels of 75,810 tons were steamers of the Peninsular and Oriental Steam Navigation Company, 57 vessels of 74,625 tons, were steamers of other lines, and 15 vessels, of 8,863 tons, were sailing ships. One steamer was wrecked on the passage to this port and the wreck afterwards sold here.

Again of British shipping the greater part was from and to England or British Colonies, via intermediate Japanese ports, principally with general cargoes. Two vessels entered direct from Hongkong, two cleared direct for Hongkong, and five for Australian ports, four of the latter with rice, the rest with general cargoes.

Of the remainder of the British shipping it may be noted that five vessels arrived direct from Shanghai with general cargoes, one from Amoy with sugar, two from Philadelphia, one with general cargo, the other with Kerosene. Twenty two British vessels cleared for Chinese ports, three of them with grain and nineteen with general cargoes, two cleared for Havre, with general cargoes, three for New York with general cargoes, and two for Manila, in ballast.

Of the shipping under other than the British flag, three vessels cleared for Hongkong direct, one for Melbourne, and one for Victoria, Vancouver Island. The Mitsu Bishi Company maintains a bi-monthly steam communication under the Japanese flag, between this port and Hongkong, their vessels calling at Nagasaki on the voyage each way. One only entered here direct from Hongkong last year.

The Return, which I enclose, of Japanese shipping entering the Port of Hiogo comprises only the seagoing vessels of the various lines maintained by the larger companies. In the return of shipping for Osaka are included the small steamers plying between that port and various places on the Inland Sea. These small steamers all, or nearly all, call at Hiogo, but I have not thought it desirable to repeat the enumeration of them in the Return for Hiogo.

NEW PIER.—The pier near the western camber, referred to in Mr. Woolley's report of last year as being in prospect, was commenced in December last and is now in course of construction. This work is the enterprise of a Japanese Company, called the Kobe Pier Company. The pier is being constructed of iron on the

plan of the Railway pier on the western side of the harbour, the iron used in its construction having been imported from England and the founding done at the Government Works at Hiogo. It will, when completed, be 450 feet long by 42 feet in width. The depth of water at the end of the pier, at low spring tides, will, it is estimated, be twenty-three feet. Along the pier are to be laid three lines of steel rails, for the purpose of conveying goods from and to vessels lying alongside the pier. It is intended to furnish the pier also with steam cranes capable of lifting about six tons, and the necessary mooring anchors and other gear. The whole cost of the pier and these appliances is estimated at \$100,000. It is anticipated that the works will be completed in September next.

In connexion with the pier, the company are also erecting a series of brick warehouses, on land adjoining the pier. These will for the present, consist of four buildings, each 102 feet by 42 feet and near the warehouses there is to be a large wooden shed 216 feet by 48 feet, which will be used for the examination of cargo by the Customs. The warehouses will be used as bonded warehouses under the supervision of the Customs.

The object of the Company is thus to provide facilities for the import and export trade of the port; and if they are able to arrange that the charges for the use of the pier shall be sufficiently moderate as to induce vessels to make use of it largely, the enterprise should certainly succeed and will be a material addition to the convenience of this harbour.

The Harbour Light on Wada Point has been re-erected in a position fifty feet to the west of its former site; the old wooden tower on which it was exhibited having been replaced by an iron one.

SHIPBUILDING.—Under this head, perhaps the most important works here are those known as the Kobe Iron works, situated at the village of Ono, close by this Settlement. In consequence of the death of the English proprietor of these works, in December of last year, they have subsequently become the property of the Naval Department of the Japanese Government, which has re-engaged most of the hands employed at the works, and is now carrying them on.

I am able to give the following details of ship and engine building accomplished, and of repairs executed at these works in 1883. Besides the two steamers noticed by Mr. Woolley in his report of last year, and launched on the Biwa Lake, for the purpose of running in connection with the Railway, an iron steamer 152 feet long on the keel and 23 feet beam, with compound surface condensing engines, 55 horse-power, and designed to carry 400 tons of rice in the lower holds and passengers between the main and hurricane decks, has been completed. Extensive repairs were done to two steamers, of the Japanese Companies, the woodwork and mainmast of one, and the engines and boilers of the other having been renewed. A set of twin screw surface condensing engines and boiler 25 horse-power, were made and delivered to a Hongkong firm, for a boat building there. A set of 35 horse-power compound engines and boiler were built, and another of 100 horse-power, were about half built towards the end of the year. A great many other repairs have been executed for steamers running to this port. In March of last year a contract was given by the Japanese Government to the late proprietor of these works for the building of a composite sloop of war, 201 feet on the keel, 35 feet beam, and about 1,300 tons displacement and 1,600 indicated horse-power. At the time of his death a number of the iron-plates had been erected, a low pressure cylinder, weighing 13½ tons and a great number of castings, had been cast and machined. The building of this vessel is now being proceeded with by the Naval Department of the Government. There have been usually in employment at these works, during the year, five hundred Japanese and thirty Chinese workmen; and eleven Europeans, in the capacities of superintending engineers, draughtsmen, foremen, and clerks.

Some account was given in last years Trade Report of the nature of the work done at the Government shipbuilding works at Hiogo, known as the Shinden Works. These works continue to be in operation, for the construction and repair of vessels; and an important addition to the appliances already in existence there, namely a slip, for the hauling up of vessels, is now in course of construction. The slip was commenced last year and is expected to be finished next. Its inclination is to be one in nineteen, it is to be provided with hydraulic appliances capable of hauling up a weight of 1,500 tons, the whole work being estimated to cost a sum of about 150,000 yen.

The following particulars of work done at Messrs. Hunters' Iron and Shipbuilding Works, at Osaka, during 1883, are condensed from a statement kindly furnished to me by the owners. Two wooden steamers were built at the works, one of 500 tons, with compound surface condensing engines of 230 indicated horse-power and boilers; the other for Inland Sea traffic, of 210 tons, with similar engines, of 128 horse-power and boilers, all made at the works. Two steamers of 400 and 650 tons respectively, and a foreign barque were docked and extensive repairs and refittings done to them, of engines, boilers, hulls, masts, under the inspection of the surveyors, and sundry repairs were also done to the hulls, engines, and boilers of thirty-two steamers, many of which were docked. There were also two compound surface condensing engines and boilers built at the works, one of 50 the other of 28 horse-power; and a great deal of other minor repairs executed on steamers, sailing vessels, and land machinery. A Dry Dock, which has been constructed at the works, is capable of docking vessels 220 feet long and drawing nine feet of water. The land occupied by the works covers nearly six acres.

POPULATION.—The population of the town of Kobe-Hiogo is given at 26,485 males and 27,936 females, or 54,421 in all. The population of the Prefecture of Hiogo may be taken as about 1,420,000.

The City of Osaka contains 147,652 males and 153,010 females, or a population in all of 300,662 souls. If to this is added the population of the country districts under the jurisdiction of the City Prefect of Osaka, we arrive at a total population of 1,601,404 within the Prefecture of Osaka. These figures show a slight increase over those given in last year's Trade Report.

The Foreign Population of Hiogo and Osaka, on the 31st December last, amounting in all to 460 Europeans and Americans, and 754 Chinese, shows no notable variation from that of a year previous. The difference observable, in the tables, in the number of the Mercantile firms at Hiogo, probably arises from a different method of estimating what constitutes a firm. Simple shops or stores, are not, in this years return of British houses, reckoned as firms. The foreign population of Osaka is largely composed of Missionaries.

INDUSTRIES.—I am not in a position here to give any comprehensive account of the varied industries carried on in this district. Of those more immediately connected with this port after the shipbuilding industry which I have already noticed, may be mentioned the manufacture of paper at Kobe. The Paper Mill here is owned by an American firm, but the hands employed in it, as well as the superintendent, are all Japanese. Last year there were manufactured at the mill 1,016,710 lbs. of white news and printing paper, and 47,393 lbs. of coloured paper. The sales were considerably over a million pounds, all of them either here or in Yokohama, for native consumption. The capacity of the mill is a production of about one and three quarter million pounds of news and printing paper in the year. The material used is chiefly rags, but some straw is also made use of. Besides the women in the rag-sorting department, whose number varies, there are fifty-three workmen and two superintendents employed in the mill.

The following details will afford some notion of the nature of the manufactures carried on at

the works in connection with the Mint, in Osaka. Of Acids, Soda, &c., manufactured at these works, there were sold during the year:—

Sulphuric Acid, various	lbs.	1,046,237
Muriatic Acid (a small quantity of which refined)		26,447
Nitric Acid (some refined)		1,488
Sulphates of Iron, Copper, Zinc, Ammonia, and Soda		91,824
White Ash and Soda, various		119,018

PUBLIC WORKS—RAILWAYS.

The following is a statement of the traffic and receipts of the Kioto, Kobe, and Otsu section of the Japanese Government Railways, for the twelve months ending the 31st December last:—

NUMBER OF PASSENGERS.	RECEIPTS FOR PASSENGERS. Amount Yen	PASSENGERS, LUGGAGE, PARCELS, &c. Weight Cattles	RECEIPTS FOR PASSENGERS, LUGGAGE, PARCELS, &c. Amount Yen
3,122,388	759,634	2,215,070	31,708
TOTAL RECEIPTS FOR PASSENGERS, AND PARCELS. Amount Yen			
791,342	300,789,065	176,883	968,225

As compared with those of 1882, last year's returns show a decrease of 553,000 in the number of passengers carried over this line, the number for 1882, being 3,675,388, and a decrease in the receipts of yen 116,157. A decrease, amounting to 105,814 piculs also appears in the aggregate weight of parcels and merchandise carried and the receipts under this heading a decrease of yen 12,652. The total decrease on the receipts for the year thus amounts to yen 128,810. The cause of the decrease in the number of passengers is doubtless the straitened circumstances of the agricultural classes principally, the number of whom travelling on religious and holiday-making excursions has not been so great as in former years.

The total number of miles of railway now open in this part of Japan amounts to ninety-eight. Of this number fifty-eight miles compose the section running from this port, by Osaka and Kioto, to Otsu on the Biwa Lake, the traffic on which section, for the past year, I have just quoted. On the further side of the Lake there are two lines in operation. One of these runs from Nagahama, on the shore of the Lake, and terminates at the Port of Tsuruga, on the North-west coast. Until lately this line was divided into two sections, the tunnel, known as the Yamagase tunnel, which now unites them, having been opened for traffic only on the 16th ultimo. This tunnel, which runs through a hill some eight hundred feet high and is fourteen hundred yards in length, has been for the last four years in course of construction. Its completion now secures the continuity of this portion of the railways, twenty-six miles in length, forming the direct communication between the North-west coast and the Biwa Lake, and, by means of the small steamers plying on the Lake, with the Otsu, Kioto, and Kobe Railway. It is unfortunate, as I understand it is the case, that the larger steamers built at the Kobe Iron Works and launched on the lake last year, have been found to be too great draught to admit of their approaching the railway piers; and the smaller class of steamers are still, consequently, used to make the connection between the lines of railway on the opposite sides of the lake.

The second line beyond the lake is at present only fourteen miles in length. It also takes its departure from Nagahama and then follows a North-easterly direction. At present it terminates at Sekigahara, having been opened to traffic, thus far, in May of last year. Two trains a day pass over this section. Beyond Sekigahara, the construction of a further section, of eight miles, to the important trading town of Ogaki, was begun in September of last year. On the former section there are no works of importance, but, as it runs through a hilly district, some of the gradients are heavy, one in forty being the maximum. On the latter section there are two considerable bridges, over the Aigawa and Akazagawa respectively. This section, it is ex-

pected, will be open to traffic in the course of the coming summer and a further extension of nine miles, from Ogaki to Gifu, is now under consideration. This line it is intended shall form part of the main-trunk line, following the direction of the Nakasendo, which will ultimately connect the railway system of this part of Japan with that taking its departure from Tokio. I should add that these works have all been executed by Japanese engineers without foreign assistance.

The connection between Nagahama and Otsu, by means of the small steamers plying across the lake, is a comparatively imperfect one. From four to five hours are occupied on the passage, a distance of some forty miles, and there is the inconvenience of the transfer of goods and passengers between the railway and the steamers. The construction of a line alongside the lake, for which a survey was made some years ago, would obviate this inconvenience, and supply a link now wanting to connect the two systems of railway. Doubtless, as the line along the Nakasendo route, for which a loan of twenty million yen has lately been sought, progresses, the necessity for making this connection will be all the more felt, and it is all that now remains to be done to complete the railway connection between this port and the North West Coast of Japan.

At the railway works in Kobe there have been built during the year 101 carriages and wagons, and extensive repairs have been made to locomotives. In this department eight Europeans and twenty-two Japanese are employed. Four new locomotives, on order from a Glasgow house, are expected to arrive in June.

TELEGRAPHS.—Not much has to be noted in the way of telegraph extension in this neighbourhood during 1883. A cable was laid from Akashi, on the mainland, to the Island of Awaji, and the line opened for messages on the 1st July.

At the central telegraph office in Kobe, which is now situated at the railway station at Sannomiya, near the Foreign Settlement, there were received during the year, 7,976 domestic messages and 5,490 such messages were despatched; or, in all, there were 13,466 domestic messages passed through the office, being 395 less than during the previous year. The charges collected on domestic messages amounted to 19,817 yen, paper. The number of international messages received was 2,204, and the number despatched 2,240, total 4,444, or 348 in excess of the number received and despatched during the previous year. The amount collected on international messages was \$33,148, silver.

I have honour to be,

Sir,

Your most obedient, humble Servant,

(Signed) JAMES TROUP.

The Honourable F. R. PLUNKETT, &c., &c., &c..

H.M.'s Envoy Extraordinary and Minister Plenipotentiary, Tôkiô.

I.—RETURN OF THE IMPORT TRADE OF THE PORT OF HIOGO DURING THE YEAR ENDED DECEMBER 31ST, 1883.

FROM FOREIGN COUNTRIES.

TRADE-MARK REGULATIONS.

NOTIFICATION NO. 19 OF THE PRIVY COUNCIL.

It is hereby notified that Trade-Mark Regulations have been enacted as follows, and will come into force from the 1st of October, 1884:—

By Imperial Decree,

June 7, 17th year of Meiji (1884).

TARUHITO SHINNO,
Second Minister of State.

MATSUKATA MASAYOSHI,
Minister of Agriculture and Commerce.

TRADE-MARK REGULATIONS.

Art. I.—When trade-marks are registered at the Agricultural and Commercial Department in a book specially provided for the purpose, the owners of such marks may enjoy the exclusive privilege of employing them for a term of fifteen years from the date of registration.

Art. II.—Persons who are desirous of obtaining a right to the exclusive use of trade-marks, must apply for registration by forwarding specimens and a detailed account of the marks. This account will explain the nature of the marks and the manner of using them, and will give the name and classification of the articles to which they are to be attached.

When registration is permitted, a certificate will be granted.

Art. III.—Applications for the registration of trade-marks will be retained by the authorities for two months from the date of their receipt, after which time they will receive sanction should no conflicting applications have been received in the interim.

When two or more persons happen to apply for registration of the same marks, or of marks which closely resemble each other, with the intention of affixing them to articles of the same classification, the application, or applications, of later date will be rejected; and when they are under the same date, all will be rejected.

Art. IV.—Suitable measures will be taken by the Minister of Agriculture and Commerce to exhibit the registered trade-marks to the public.

Art. V.—Registration of the following trade-marks must not be applied for:—

1. Trade marks which are exactly the same as, or are likely to be mistaken for, marks already registered, and which are designed to be affixed to articles of the same classification.
2. Marks which represent the name of a place, a person, a shop, or a company, and those representing the general name of articles, or national arms, either foreign or domestic.
3. Marks which are universally employed by a particular class of merchants, or which are used in accordance with the common customs of the commercial community.
4. New marks which are exactly the same as, or likely to be mistaken for, marks adopted prior to the promulgation of the present Regulations, and actually used up to the present time, and all marks of a similar character, intended to be attached to articles of the same class or description.

Art. VI.—When persons who have registered their marks, change their residences, their local jurisdiction, or their personal names, or abandon their trade, or suspend it for a year or upwards during the term for which the marks are registered, they must give notice of the said change, abandonment, or suspension, to the authorities, within three months.

Art. VII.—When heirs succeed to the business of their predecessors during the term of the exclusive use of the latter's trade-marks, they must report the fact to the authorities within three months after their succession.

Art. VIII.—When persons who have obtained registration of marks desire to assign, wholly or in part, the right of using such marks to other persons, they must apply for fresh registration. In such cases, the period of the exclusive use of the marks will be reckoned from the date of original registration.

Art. IX.—When it is desired to apply or transfer the same marks to articles of other classifications, or to introduce some alterations into them, application must be made for fresh registration.

In such cases, applications will be dealt with in accordance with Article III. of these Regulations.

Art. X.—When persons who have obtained registration desire to continue the exclusive use of trade-marks after the expiration of the registered term, they must apply for fresh registration three months before the expiration of such term.

Art. XI.—In the event of certificates of regis-

tration being lost or damaged, application must be made for fresh certificates.

Art. XII.—When, after the registration of trade-marks, frauds are detected in the original application for their registration, or in the specimens or detailed accounts furnished in accordance with these regulations, or when it is found that the original applications were carried out in violation of Article V., the registration will lose its validity, and the certificates will be cancelled by the authorities.

Art. XIII.—When the owners of registered trade-marks relinquish their business entirely, they will lose their right to the exclusive use of the marks from the date of such relinquishment. This provision also holds good in the case of the suspension of a trade for three years.

Art. XIV.—Applicants for registration of trade-marks must pay the following fees; provided that, in case their applications are rejected, the money will be refunded:—

1. The sum of ten yen must be paid for the registration of one trade-mark, and if the same mark is to be applied or transferred to articles of different classes, five yen must be added for each class.
2. Applications for transfer, wholly or in part, or for alteration of trade-marks, or for the continuation of their use after the expiration of the registered term, will involve a payment of five yen for every mark.
3. One yen must be paid for obtaining a fresh certificate of registration.

Art. XV.—The owners of registered trade-marks may claim damages from, or lay information against, any person who encroaches upon their privileges.

Art. XVI.—Persons who counterfeit registered trade-marks and employ them, will be punished by imprisonment with hard labour for a term of not less than one month and not more than one year, in addition to a fine of from four to forty yen. Persons who use registered trade-marks clandestinely will be liable to a punishment mitigated by one degree from the above.

Art. XVII.—These who make and use marks which are likely to mistaken for registered marks, will be liable to imprisonment with hard labour for a period of not less than fifteen days and not more than six months, and to a fine of from two to twenty yen.

Art. XVIII.—Persons who, with full knowledge of the fact, undertake the sale of commodities bearing trade-marks of the nature interdicted by Articles XVI. and XVII., will be liable to a fine of from four yen to forty yen.

Art. XIX.—In the cases set forth in the three preceding Articles, XVI., XVII., and XVIII., the trade-marks will be confiscated, and when the marks are inseparable from the commodities, the commodities themselves will be destroyed.

Art. XX.—Those who fraudulently effect the registration of trade-marks, or falsely assert that they have obtained registration, will be punished by imprisonment with hard labour for a term of from fifteen days to six months, together with a fine of from two to twenty yen.

Art. XXI.—Persons who neglect to make a due report within a prescribed period, in accordance with Articles VI. and VII., will be liable to a fine of from one yen to 1.95 yen.

Art. XXII.—Persons infringing these regulations will not be dealt with in accordance with those provisions of the Penal Code which refer to the concurrence of several offences.

Art. XXIII.—Offences enumerated in articles XVI. to XVIII. inclusive, will be taken cognizance of only after information is laid by the owners of the registered trade-marks.

Art. XXV.—When such information is laid against offenders by the owners of marks, the judges may suspend the sale of all commodities bearing the marks in question, pending investigation.

SUPPLEMENT TO THE ABOVE REGULATIONS.

Should any person desire to make exclusive use of marks which he employed prior to the publication of these Regulations, he must apply for registration within six months from the date of the publication of these Regulations. Application so made will be held by the authorities for eight months, calculated from the date of the promulgation of the new Regulations, and if no other conflicting applications are received during that interval, registration will be granted.

When two or more persons apply, under the preceding provisions, for a registration of marks which are precisely the same as, or are likely to be mis-

taken for, each other, and which are intended to be affixed to articles of the same class, and when the applications conflict with each other, the Minister of Agriculture and Commerce will grant registration to such marks only as he finds have been in use for the longest period, and will reject all other marks.

Applications which would otherwise be dealt with in accordance with Article III. of the main Regulations, will also be held for eight months from the date of the publication of these Regulations, and should it happen that such applications conflict with those made in conformity with the first clause of these supplementary rules, both the former and the latter applications will be rejected without regard to their dates. When applications are thus rejected in accordance with the two preceding provisions, the fees received for registration will be paid back.

NOTIFICATION NO. 13 OF THE PRIVY COUNCIL.

It is hereby notified that in connection with the Trade-mark Regulations, by-laws defining the mode of presenting applications for the registration of trade-marks have been established as follows:—

June 7, 1884.

(Signed) TARUHITO SHINNO,
Second Minister of State.

MATSUKATA MASAYOSHI,
Minister of Agriculture
and Commerce.

BY-LAWS FOR THE REGISTRATION OF TRADE-MARKS.

Art. I.—Applications and reports relating to trade-marks must be presented to the Agricultural and Commercial Department through local offices.

Art. II.—Should any person desire to apply for the registration of trade-marks, he must send in five specimens of the marks, and the specified amount of fees, as well as applications and detailed accounts in duplicate.

Art. III.—When application for registration is made with the intention of applying the same mark to two or more descriptions of articles, or when application is made to transfer to one description of article only marks previously affixed to two or more descriptions, a separate application and a detailed account must be presented for every different description of article or for each mark.

Art. IV.—In preparing a report of succession, in conformity with Article VII. of the main Regulations, an heir must procure the signatures of two trustworthy persons as his sureties, when his succession is in consequence of the death of the original owner of the trade-marks; but if the succession takes place while the original owner of the marks is still living, the report must bear the signatures of the successor and the owner.

Art. V.—When application is made for the assignment of trade-marks, wholly or in part, in accordance with Article VIII. of the Regulations, such application must bear the signatures of the persons who assign the marks, and of those to whom they are assigned. Moreover, applicants must forward the certificate of registration, a copy of the contract of assignment, and two copies of their several applications as well as of the detailed accounts (three copies in case of partial assignment), together with the prescribed registration fees. When registration is thus effected, the person to whom the trade-marks are assigned will be furnished with a separate certificate of registration and a detailed account of the transaction; while the assignor will receive back the original certificate and detailed account endorsed and stamped on the back by the authorities.

Art. VI.—Applications for the transfer of trade-marks to other articles, or for their use upon more than one description of article, in accordance with Article IX of the main Regulations, will be made in conformity with Article II. of these Bye-laws.

Art. VII.—When application is made to continue the use of trade-marks or to obtain a fresh certificate of registration, in accordance with Articles X. and XI. of the Regulations, two copies of the application together with the prescribed registration fees must be forwarded.

Art. VIII.—When applications for registration are rejected by the Government, the causes of such rejection will be pointed out.

Art. IX.—Owners of registered trade-marks are at liberty to change the colour of their marks at will.

Art. X.—Owners of registered marks are, in accordance with instructions issued by the Minister of Agriculture and Commerce, required to present their trade marks, or copies of them, within thirty days from the date on which the certificate of registration was issued.

Art. XI.—Articles to which trade marks may be attached are classified as follows, and in the case of articles the classification of which is not determined by applicants for registration, a decision will be made by the Agricultural and Commercial Department :—

CLASSIFICATION OF ARTICLES.

Class I.—Chemical drugs, and medicines: acids, salts, alkalies, gums, mucilages, glue, phosphor, soap, spirits, glycerine, quinine, morphine, tinctures, syrups, decoctions, pills, ointments, medicinal oils, musk, cloves, bleaching powders.

Class II.—Dyes and pigments for painting the face: indigo and indigo-balls; *shikon* (a species of madder); rouge; cinnabar; red oxide of lead; verdigris; smalt; Prussian blue; white powder; powdered chalk; gamboge, &c.

Class III.—Materials for varnishing: lacquer; varnish; paint; *shibu* (juice expressed from unripe persimmons); blacking, &c.

Class IV.—Perfumery and incense: aromatic oil; hair-dressing oil; sacs containing perfumes; perfumed waters; burning incense; incense sticks; *neriko* (a species of incense), &c.

Class V.—Metals in ore or smelted: pig iron; wrought iron; steel; iron bars; sheet iron; iron plates; copper; copper plates; lead; lead plates; zinc; zinc plates; tin; alloys; copper and iron wire, &c.

Class VI.—Manufactured metals; moulded vessels; forged articles; engraved and chased articles, &c.

Class VII.—Cutting and sharp instruments: sickles; saws; chisels; gimlets; needles; nails; razors; scissors; knives; fire-hooks, &c.

Class VIII.—Valuable metals and articles made of these (articles made of aluminium and nickel are included in this class): gold; *Shibuichi* (composite metal made of copper three parts and silver one part); *Shido* (a composite metal consisting generally of 700 parts copper and 300 parts silver); *Kinshido* (a composite metal consisting of 600 parts copper, 250 parts zinc, and 150 parts tin); alloys of valuable metals; articles plated with metals; engraved metals; articles inlaid with metals; &c.

Class IX.—Jewels and articles inlaid with these: coral, pearls, agate, crystals, topaz, emerald, and all articles made in imitation of these.

Class X.—Minerals (coal belongs to Class LI.)

Class XI.—Stones, articles made of stone, and engraved or sculptured stones: slate, marble, whetstone, stone vessels, and imitations of these.

Class XII.—Plasters: common plaster, cement, plaster of Paris, &c.

Class XIII.—Porcelain and pottery: various sorts of porcelain and pottery; earthen wares; crucibles; tiles; bricks, &c.

Class XIV.—Enamel or porcelain wares manufactured after the fashion of enamel.

Class XV.—Glass and glass vessels: glass bottles; glass pipes; coloured or painted glass, &c.

Class XVI.—Machinery: looms; sewing machines; sugar manufacturing machines; printing machines; and machines used for various manufactures; steam engines and boilers, &c.

Class XVII.—Agricultural implements and mechanics' tools: spades; mattocks; Chinese *mino* (shallow baskets used for cleansing rice); rakes; nail extractors; iron hammers; carpenters' squares, &c.

Class XVIII.—Scientific instruments: chemical, medical, and surveying instruments, and others used for explaining natural philosophy.

Class XIX.—Weights and measures.

Class XX.—Vehicles used for the transport of goods: carts, carriages drawn by horses, *jinrikisha*, velocipedes, &c.

Class XXI.—Musical instruments: harps; guitars (samisen); violins; flutes, &c.

Class XXII.—Watches and clocks and articles appended to these.

Class XXIII.—Rifles, bullets, gunpowder, fireworks, &c.

Class XXIV.—Silkworm egg cards and cocoons.

Class XXV.—Floss silk and cotton.

Class XXVI.—Raw silk; silk thread; thread

obtained from natural cocoons: (strings for harps, and gold and silver thread belong to this class).

Class XXVII.—Cotton yarns.

Class XXVIII.—Woollen yarns.

Class XXIX.—Flaxen yarns.

Class XXX.—Silk textiles.

Class XXXI.—Cotton manufactures.

Class XXXII.—Woollen manufactures.

Class XXXIII.—Flaxen manufactures.

Class XXIV.—Woven goods other than silk; cotton, flaxen, and woollen manufactures; and other various fabrics interwoven with different sorts of thread.

Class XXXV.—Articles plaited or knit with thread: lace; braids; cords, &c.

Class XXXVI.—Clothing: costumes of all descriptions; hats and caps made of woven goods; gloves; socks; raincoats made of woven goods; hakama (loose trousers); any knit articles, &c.

Class XXXVII.—Brewages and beverages: all sorts of *sake*; vinegar; soy; sweet orange juice; soda water.

Class XXXVIII.—All sorts of sugar, molasses, honey, &c.

Class XXXIX.—Confectionary and bread: dried confectionary; steamed confectionary; foreign confectionary; *ame* (a kind of jelly); sugared fruit, &c.

Class XL.—Tea and coffee.

Class XLI.—Tobacco.

Class XLII.—Fruits, grain, and vegetable seeds: the five cereals; vegetables; mushrooms; fruits; their seeds; bulbs, &c.

Class XLIII.—Ground grain and flour, and food made of these: ground grain of all sorts; flour, all kinds of food made of flour; *yuba* (food made of beans); *kon-niyaku*, bean curd (*tofu*); &c.

Class XLIV.—*Miso* (sauce made of beans); pickles, and similar relishes.

Class XLV.—Preserved meats and seaweed, dried and smoked bonito; the *Onychotenchi*; Banksü; dried "sea-ear"; *nori* (edible sea-weed) *kombu* (the Laminaria); *tsukudani* (food boiled in soy for preservation); food preserved in sauce; all sorts of *uni*; and other picked food.

Class XLVI.—Food made of milk: condensed milk; butter; cheese; desiccated milk, &c.

Class XLVII.—*Fukuromono* (purses, pouches, &c.) and articles used for smoking: pipes of every description; tobacco-pouches; tobacco-pipe sheathes; purses, &c.

Class XLVIII.—Paper and paper articles: all sorts of paper; coloured paper; *tansaku* (slips of paper with pictures and poetry); paper manufactured like leather; oiled paper; paper smeared with persimmon juice; envelopes; paper boxes for putting ledgers in; *ikkabari* (papered articles); paper cords for binding the hair, &c.

Class XLIX.—Brushes and inks: red inks; marking ink; black ink; slate pencils; pencils; pens, &c.

Class L.—Leather and leather articles: harness; trunks; book-cases; girdles; shoes, &c.

Class LI.—Combustible materials: all sorts of coals and charcoals; lucifer matches; wicks, &c.

Class LII.—Oils and candles: all sorts of oils; wax; candles; grease, &c.

Class LIII.—Manures: dried sardines; intestines of herrings; dregs of oils; powdered bones; &c.

Class LIV.—Timber and bamboo.

Class LV.—Articles made of wood, bamboo, and Wisteria chinensis, and those lacquered or painted with gold; cabinet-ware, articles turned in a lathe; round boxes; tubs of every description; basket-work; &c.

Class LVI.—Articles made of horn; shell; or ivory.

Class LVII.—Articles made of straw and grass; matting, *Mushiro* (course mats), netted hats, cords, wheat-straw work, &c.

Class LVIII.—Umbrellas, canes, and *hakimono* (articles worn on the feet); clogs; straw sandals; thongs, &c.

Class LIX.—Fans of all sort.

Class LX.—Lanterns and lamps.

Class LXI.—Tooth-powder and *araike* (white powder used for cleansing the body).

Class LXII.—All kinds of brushes.

Class LXIII.—Toys: hair-pins; hand-balls; checkers (*Gô*); chess-men (*Shôgi*); tops made in the form of dolls; small bows; *Oshiye* (pictures in relief); artificial flowers; cards, &c.

Class LXIV.—Pictures and photographs, &c.

Class LXV.—Books, newspapers, magazines &c.

PUBLIC HALL ASSOCIATION.

An Extraordinary General Meeting of the above Association was held at the Club Hotel last evening, to receive the report of the Directors, in accordance with a resolution passed at the General Meeting held on the 30th April last.

The following gentlemen were present:—Messrs. A. O. Gay (Chairman); D. Fitz-Henry (Hon. Secretary); E. Morriss and A. Langfeldt, Directors; E. Berger, R. Dross, S. Hepburn, O. Kiel, Geo. Rice, F. Pinn, W. J. Strome, Hooper, E. J. Geoghegan, General Van Buren, Durant, Vivanti, W. B. Walter, L. Masfen, Moberley, Reid, Austen Robertson, Rottmann, Lindsay, Merian, Biagioni, Dourille.

The CHAIRMAN, after reading the advertisement calling the meeting, said he hoped they would dispense with the reading of the minutes of the last meeting.

Mr. GEOGHEGAN proposed and General VAN BUREN seconded, "that the minutes of the last meeting be taken as read," which was carried.

The CHAIRMAN said they had the report of the Directors in their hands, and he did not think it would be necessary to read it.

Mr. PINN proposed that "the Directors report be taken as read."—(Carried.)

PUBLIC HALL ASSOCIATION.

REPORT OF THE DIRECTORS TO THE MEETING OF SHAREHOLDERS, HELD JUNE 16TH, 1884.

GENTLEMEN,—In accordance with a resolution passed at the general meeting held on the 30th April last, the Directors beg to report as follows:—

The present board was organized on the 2nd of May by the election of Mr. Gay as Chairman, Mr. Fitz-Henry as Hon. Secretary, *ad. in.*, and Mr. Morriss as Hon. Treasurer; Mr. Reimers, who was elected as one of the board, declined to serve.

The position of the finances of the Association is changed only by the payment of \$97.56, the amount due for land rent for the current year.

Your Directors have fully discussed the position and prospects of the Association at meetings held from time to time, and have endeavoured to obtain the promise of an amount of money on mortgage, sufficient to complete the building. Their efforts, in this direction, however, having proved unsuccessful, they have now to submit to the shareholders the following propositions:—

1st.—To raise the sum required by issue of Debentures of \$50 each, bearing interest at 8 per cent. per annum.
2nd.—To raise not less than \$5,000 upon Debentures of \$50 each, with interest at 8 per cent. per annum, and the balance upon mortgage of the land and building.
3rd.—To liquidate the affairs of the Association by a sale of the property.

The Directors favor the first proposition, because they think it well to make an effort to obtain the whole amount required, estimated at about \$13,000, upon Debentures. These would have a first lien upon the property, but if a mortgage were given, that would have the first, and the Debentures a second lien.

With reference to the building as it now stands, the Directors find the walls, so far as they can judge, have been well and substantially constructed, and of good material, and this opinion is borne out by the testimony of an experienced and disinterested authority.

Your Directors have gone carefully over the plans and estimates, for completing the building upon a reduced scale, and recommend, if the work is to be continued, that the concert hall over the vestibule, as originally contemplated, be dispensed with, and the height of the walls of the auditorium be reduced. This will make an important saving in the cost of the erection, and according to estimates submitted to the Directors, the hall can be completed with a substantial tile-roof, and including fencing, grading, &c., for a sum not exceeding \$10,000, but exclusive of furniture and the fixtures for lighting. For the latter items, and for contingencies, \$3,000 is considered to be a safe estimate, and we then have \$13,000 as the total requirements.

The Directors are assured that the estimate can be relied upon, and are given to understand that the building can be ready for occupancy in four months after the work is again resumed.

With regard to maintaining the establishment, the annual liabilities are estimated as follows:—

Interest on \$13,000 at 8 per cent.....	\$1,040.00
Land rent.....	97.00
Fire insurance \$10,000 at 1 per cent, less 20 per cent.....	80.00
Watchman, repairs, &c.....	283.00
	\$1,500.00

It will be necessary to cover the fire risk only upon the combustible part of the building, and for this \$10,000 will be sufficient. The item of repairs will be a small one for some time to come.

To meet the liabilities, it is generally believed that a gross income of at least \$2,000 per annum can be relied upon, and it seems safe to conclude that the income will be more than sufficient to cover the liabilities, even in the present depressed condition of affairs in Yokohama. Debenture holders ought therefore to feel assured that the stipulated interest will be regularly paid, and that the property offers good security for the investment.

If it should be decided to issue Debentures, they will be offered to present shareholders in proportion to the existing shares held by them, and any that are not taken up will be disposed of by the Directors as provided V. of the Articles of Association.

A. O. GAY,

Chairman of the Board of Directors.

The CHAIRMAN said that the report being before the meeting, it only remained for the shareholders

to discuss the three propositions put forward by the Directors.

Mr. DROSS said that the report before them was a very brief and exact one. It gave them clearly the opinion of the Directors as to the state of the Public Hall and they had recommended the adoption of the first proposition. The Directors had had six weeks to form their opinion and they estimated that \$13,000 would finish the building. This they thought could be raised on debentures and that they would be able to give the debenture-holders 8 per cent. interest. He would ask how far the Directors would back up their opinion, in fact how much they would head the list with so as to give courage to the shareholders to join and subscribe sufficient to complete the Hall.

The CHAIRMAN thought it was rather premature to ask such a question. If the shareholders would vote and adopt the proposition, the Directors would come forward and do what they could. He was not prepared to say exactly how much they would do but he thought they might be relied on for about a quarter of the amount required.

Mr. LANGFELDT thought Mr. Dross's question was not out of order. The Public Hall had been a long time on hand. He thought the Directors would take a fourth of the debentures, and if the shareholders would support them, within 24 hours the thing could be settled and in four months the Hall opened.

General VAN BUREN asked where the income of \$2,000 was to come from.

The CHAIRMAN replied that everyone knew the building would be required for various purposes. The estimate had been carefully drawn up from enquiries made from several parties, and was as follows:—

12 entertainments.....	at \$75.00 =	\$900.00
12 entertainments.....	at \$50.00 =	\$600.00
Bluff Club (per month)...	at \$25.00 =	\$300.00

This, together with rent received for private balls and entertainments, they calculated would bring it up to \$2,100.

In answer to Mr. HEBURN the CHAIRMAN said that the 12 entertainments included those of professionals who travelled through.

Mr. LANGFELDT remarked that they had consulted several people, and had a list of the returns obtained by Mr. Hegt's theatre.

Mr. BERGER said that Mr. Hegt's place would still be open, and it was not every travelling company who would go up the Hill. He thought that the receipts had been altogether over estimated.

Mr. PINN said that the troupes who came here always complained of the accommodation and said that if there was a better place they would eagerly pay more than they did for Mr. Hegt's place.

Mr. FITZ-HENRY thought the discussion was moving out of the groove. They all knew that the receipts of a steamer or a theatre depended upon the state of trade. They had taken great trouble in making up the estimate. They had consulted the local societies, and could get nearly \$1,000 a year from them. The feeling had been to estimate the expenses at the highest and the receipts at the lowest, but of course every one was liable to error in a matter of this kind.

Mr. RICE said it should not be forgotten that the local societies had agreed that all surplus funds should go towards the Hall, and as their expenses were small they no doubt would pay more rent than was estimated.

Mr. WALTER thought they should not separate the Directors from the shareholders. The Directors had done a lot of work for which the shareholders were obliged and it was not fair to ask them to subscribe a lot of money. It would be better to call on those present to subscribe at once and then canvass those who were absent, after which they might ask the new comers. It seemed only fair, as it was not a money making affair but for the benefit of the community, that every one should have a chance of subscribing.

Mr. DURANT remarked that, with shares selling at \$12 he did not think the general public would take them up at the original price.

Mr. FITZ-HENRY said the first estimate of the cost of the buildings was \$20,000, it now was \$25,000; the ground was there, and he thought the debenture holders' capital would be secure.

Mr. MOBERLY was of opinion that many of the shareholders would give the money they had paid as a present to the community, but would not give more.

General VAN BUREN said that the building as it stood at present was of no use; if finished it would benefit the community. If the original shareholders wished to get anything out of it they must finish the building. If the shareholders subscribed and the amount was not sufficient they must go out into the bye-ways and get the money.

Mr. LANGFELDT remarked that the mortgage would be drawn out in favour of the debenture holders.

Mr. MASEN said no provision seemed to have been made for the balance of the income, say about \$500. Would it go to the reduction of the debentures or to pay a dividend on the original shares?

The CHAIRMAN said that would be as the shareholders might decide, possibly it might go to form a reserve fund. There could be no dividend paid on the original shares without a special meeting, and that meeting could dispose of the balance as it thought fit.

Mr. DROSS then moved "that the proposition favoured by the Directors be accepted."

This was seconded by General VAN BUREN and carried.

Mr. WALTER proposed "that failing to secure the whole of the amount required, the Directors be authorized to raise the balance on mortgage."

Mr. LANGFELDT thought that if they went round and said if we cannot get the money we want we will put a mortgage over your head it would stop many people from taking up the debentures.

Mr. WALTER said that if it was the desire of the Directors to keep the two separate he would withdraw his motion.

Mr. LANGFELDT said the Directors had made enquiries which lead them to believe that they would be able to find the whole of the money.

General VAN BUREN remarked that it seemed to him that if the Directors had taken any steps to get the money or had agreed to take any number of shares it might have a beneficial effect if they would make some statement.

The CHAIRMAN said he had already remarked that the Directors were willing to do something. They had not put their names to paper, but amongst the six of them they would take \$2,000 worth of debentures. Still he thought it would be better to let all the shareholders have the opportunity of doubling their shares, after which the Directors could use their discretion.

General VAN BUREN said the purpose of his question was clear. If the list presented to the shareholders was headed by the Directors it would be a very great encouragement to them to raise the balance.

Mr. HOOPER remarked that, as he understood it, the debentures were to be offered to the shareholders in proportion to the shares they held and that if they were not all taken up the Directors would take the balance.

Mr. LANGFELDT thought it would be a good idea to send the list round at once.

After a vote of thanks to the Directors for their trouble and exertions, proposed by Mr. DROSS, the meeting adjourned.

TRANSLATIONS FROM NATIVE JOURNALS.

THE GROWTH OF JAPANESE ARTS.

(Translated from the *Mainichi Shimbun*.)

Even in our own days there are countries where a pupil and a son are looked upon, both in word and in fact, in the same light. Though perhaps not exactly the same, our own architects still hold a similar doctrine. The apprentice carpenter still calls his master *oyakata*, as does also the apprentice mason. The implied meaning of the word *oyakata* (father) is not perfectly clear, but its literal force warrants us sufficiently in concluding that "teacher" and "father" were once synonymous terms. It is very probable, however, that an ancient canon taught that pupils should be regarded as sons, and sons as pupils, by those who taught and trained them. There seem to have been certain conditions in unenlightened nations which necessitated the assimilation of sons and pupils. Granting even that there were art schools in days gone by, the working classes would not have had the means to educate their children in these establishments. But if a landlord was at the same time the instructor of those living on his lands, the tuition fees would not have been a matter of any responsibility, and he could thus call his pupils his sons in deed. From some such arrangement as this have our domestic arts taken their origin, and, passed down as a precious heirloom from one generation to another, still proving the close paternal relations existing between teachers, and taught in the one comprehensive term *oyakata*.

Medical science is the outcome of human invention, and is of the first importance to every created being. The Confucianists, indeed, affirm that no medicine shall be taken by a sick person unless the prescribing physician be the representa-

tive of at least the third generation of a medical family. Physicians should truly be selected with care, for they hold our lives in their hands; but the simple fact of one man's ancestors having followed the same calling for centuries does not qualify him to practice the art of healing. That the so-called sage of China should have laid down such a precept only proves that he was incapable of inventing a sound doctrine of his own, and still clung to the antiquated notions of a barbarous age. Or else the law that the closest filial relations should be kept between teachers and taught was of overpowering influence during the life-time of Confucius.

The same principle runs through the entire range of Chinese literature, ancient and modern. Sons of great scholars, whether themselves wise or stupid, must needs be men of superior intellect, according to Chinese tenets. In the era of wars and widespread disturbance, learned philosophers had little or no part in the affairs of the every-day world; and yet their offspring were brought up in effect to believe that they dared not live lives different from those of their progenitors. They had to bow down before and reverence the tattered canonical books and histories of their ancestors, and endure all the misery of a mistaken calling until death finally released them from a mental bondage worse than slavery. Such were the relations existing between the fathers and sons of that ancient Chinese philosophy, and those between the teachers of the learned doctrines and their pupils were not one whit better. The followers of the Chwantze sect of Confucianists were forbidden to investigate any creed older than their own. Those who left one school of thought and creed for another more attractive received severe punishment for their pains. And this punishment, senseless and unmeaning as it may seem to the people of this generation, was deemed for weightier and much more disgraceful than to have been convicted in a court of justice. Nothing was more terrifying than the threat of dismissal from a philosophical school on account of some petty misconduct. And all this resulted from the idea that a pupil expelled from the house of his teacher, or a son disinherited by a father, could never again find a resting-place in all this wide, weary world.

The Competitive Exhibition of Paintings recently held in Ueno Park went far to prove that Japanese artists of the present day still confound the position of pupils and sons. Countless as the exhibits were, they were all nothing more than faint copies of the works of the master painters of the past. Each picture bore the same indelible stamp: this belonged to the Yenzan, that to the Tosa, School. The criterion of merit was not whether a picture faithfully portrayed nature, but whether it was or was not after the style of this or that school of art. It actually seemed as though a painter belonging to one particular school deemed it a disgrace to imitate that of another. The artists of to-day are not a bit better off than were the Chwantze sectarians in years gone by. Our delineative art has evidently been fostered under the doctrine that all pupils are sons, and *vice versa*. In this way, the crude arts and sciences of olden time were handed down to posterity in Japan and China. But the hereditary transmission of an art is certain to be fatal to its further development, and to lower its value. If it were true that no physician could be trusted unless his forefathers had for centuries been medical practitioners, he could do nothing but write prescriptions at best; for, however dexterous in surgical operations, the fact that his ancestors were not surgeons would debar him from all display of skill. And so with painters. If the styles of ancient masters are to be taken as the sole criterion of the meritorious productions of later generations, then would all painters have blindly to adhere to the schools of past ages. The vital reason of the stunted growth and slow development of Japanese and Chinese art lies in the undue appreciation of ancient works of art, and in the sweeping condemnation of all others not painfully reproduced in the same style. The spirit of independence is not only important in the administration of a nation, but is one of the most indispensable levers of the artistic and scientific world.

SUPPLEMENT TO THE ARTICLE ON TREATY REVISION.

(Translated from the *Hochi Shimbun*.)

We have already expressed our views on the question of treaty revision, but, as the subject is one of momentous importance, we find that there are several points upon which we must comment for the sake of our nation's interests. Treaty revision is, *prima facie*, a diplomatic matter, and it is thus not easy for us to thoroughly familiarize ourselves with it; and, even though we knew all

that is connected with the question, we should be unable to discuss it freely for political reasons. It is as if our feet were tired and wayworn and we were yet unable to pull off our shoes. While our arguments may fail to hasten revision, we can still frankly aver that the judicious modification of the treaties will decidedly promote our permanent well-being, while injudicious revision cannot fail to be the germ of interminable abuses. Whatever policy our countrymen may desire to adopt in connection with internal administration, they ought by all means to strive to effect the judicious and salutary revision of the treaties, unbiassed by any party-feeling. In order to bring our arguments on this subject to a conclusion, we will now briefly review the whole question as it stands.

What our nations demands with regard to its foreign treaties, is that Japan should stand on a footing of equality with foreign powers. Should the forthcoming revision of the treaties not enable us to attain this great ultimatum, *we must still strive to bring it about sooner or later.* Right and duty are ever inseparable, and if we regain our inherent rights, it is our duty to afford full protection to aliens. What the abuses of extraterritoriality are we have shown, yet, should we claim its entire abolition, foreigners will undoubtedly demand the privilege of residence in the interior. For the same reason, if we grant them this freedom, they must restore us the right of jurisdiction. Hence, *the question of right involves that of duty as well.* Aliens will claim the same degree of protection from our Government as they enjoy under their own governments, and will urge that it is the duty of the Cabinet to see this protection duly carried out. Shall our Government, then, establish an improved system of administration similar in nature to the administrations of foreign lands? We believe that the Cabinet is disposed to pursue a policy based on enlightened principles. More than twenty years have elapsed since the opening of the ports, but the intercourse we had with foreign nations from the period of Ansei to that of Kei-ō, only complicated the difficulties in our internal administration, without opening up the path of civilization before us. It is only since the days of the Restoration that our countrymen have entered heart and soul into the promotion of civilization, and have made such remarkable progress in modern enlightenment. As yet, however, everything is in its infancy, and we Japanese have not succeeded in using all the mighty levers of nineteenth century civilization. Nor can we pretend to have all the laws at present possessed by civilized lands. Some we do indeed possess, but others are of a very different nature. And so, when the time comes for our enjoying equal rights with aliens and we are required to protect their welfare as they do their own, we shall be completely puzzled as to the course to be pursued. As a rule, treaties are concluded between two or more nations for the furtherance of their mutual profits, and, as such, are not necessarily based on the actual strength of the several parties. Either in the conclusion of a new treaty or in the revision of an old one, *national interests are to be taken into consideration above all others, and the sundry negotiations that follow are invariably to be based on the idea of mutual profit.* Of course, arguments cannot fail to arise in connection with questions of advantages or disadvantages, and we must reasonably expect to encounter serious difficulties in endeavoring to reap some profit in revising the existing treaties.

The treaties which are now in operation were concluded in the days of our "barbarous age," when the internal condition of our country presented a most distressing aspect, so that they were based on a groundwork of prejudice and ignorance, and were thus far more beneficial to foreigners than to ourselves. That we should claim their modification is a matter of simple justice and equity, and *there is absolutely no valid reason for refusal.* If we are to grant foreigners two most profitable privileges in return for one only, the transaction cannot be looked upon otherwise than as a dire misfortune. *Although treaty revision may be so set about as to bring us temporary benefits, yet if the revision contains provisions which may entail future complications, the inevitable result will be the loss of all immediate advantages.* We naturally desire to reap considerable profit from the revision of the treaties, and we therefore most earnestly request our authorities to direct their particular attention to those permanent advantages which may result from the proposed modification.

What we demand, first of all, is that Japan should hold intercourse with other nations on equal terms. But should circumstances hinder us from protecting aliens as they would see themselves protected, we must endeavour to reclaim the right of tariff regulation, in order to swell our revenue. Should aliens demand something of us in return for the restoration of the right of tariff regulation,—something that would prove twice as profitable to

them as the right granted us—we should eventually have to sustain considerable loss. The question of mixed residence ought never to be brought forward until we are in entire possession of the rights of jurisdiction. On the whole, if the treaties are to establish the maintenance of foreign relations on a footing of equality, we must, sooner or later, force aliens to come under our jurisdiction, and share with our countrymen the same protection they enjoy. If so, the measures to be taken must accord with one of two conditions:—*either to protect our people as Europeans and Americans, or to protect Europeans and Americans as we do our own people.* Our policy as well as our social organization are peculiar to this country, and if we are to exercise jurisdiction over foreigners without improving our internal administration there is nothing more to be said. But if it be impossible to adopt such a course, it is absolutely necessary to introduce the best administrative systems of Europe and America into this country, thereby raising our people to the position held by the most enlightened nations. And if this is the case, whatever our countrymen do contrary to the principles of European and American civilization must be looked upon as impeding the revision of the treaties and injurious to the best interests of the Empire. As the Government desires to obtain advantages from the revision of the treaties, it must avowedly pursue a policy calculated to promote the civilization of this country, so that the Japanese may be enabled to acquire that consummation of their desires—intercourse with foreign nations on equal terms.

FOREIGN MISSIONARIES.

(Translated from the *Fiji Shimpō*.)

The momentous necessity of revising the treaties, as well as the circumstances which demand the immediate completion of the work, are one and the same thing, whether considered from the standpoint of the Japanese or of the very foreigners who so persistently combat the undertaking. Treaty revision will be of indescribable advantage to both parties, and not one tittle of inconvenience will be caused to any one. Were aliens awake to their own best interests, they would never consent to put off revision for a day; nay, they would rather urge instant adjustment. What surprises us as totally in contradiction to the general idea of European cleverness, is that foreigners should be so short-sighted as to regard treaty revision in the light of a dreadful calamity, which they try to evade in the most ridiculous and impolitic manner. We, as Japanese, must stand on the side of our country, both as patriots and as men of honour. The great obstacle to the accomplishment of the duty we owe our country is those extraterritorial privileges which foreigners, domiciled in Japan, enjoy on the strength of the present treaties. So long as extraterritoriality remains in force, aliens cannot possibly be brought to observe the laws which are so essential to the maintenance of the peace and welfare of Japan. Europeans, though living on Japanese soil, refuse to obey this country's laws; and so the only monies they pay to the Government take the form of ground-rent, and, this paid, they are entirely free from any other pecuniary obligations. Think for a moment. Japan needs war-vessels, soldiers, railways, steamers, beside many other things, and all these are obtainable by hard money only. Taxes are imposed universally in order to increase the scanty funds in the Treasury, which are to be appropriated to national expenditures. The men-of-war which protect our littoral, as well as the railways and steamers which have given the initiative to our country's trade, were paid for in hard money, the result of the imposts. Yet foreigners who live in this country and make use of the railways and merchant fleets, will not accept the responsibility of paying their quota of the expenses incurred. They are not forced to conform to the Brewery or Tobacco Tax Regulations, nor, indeed, to any others of a similar nature. Under such a dispensation Japan can never hope to maintain her independence. We have often made this plaint to foreign powers, but they would never listen to our words. We have proposed to throw the country open simultaneously with the abolition of extraterritoriality and the uniform imposition of taxes, so that foreigners may freely reside, travel, and trade in the interior. But we positively cannot understand how it is that aliens should be so content with the present situation as to refuse to accept our liberal concessions. Were such tenets held exclusively by foreign merchants, men who do not look beyond the open ports, are always busy and have no time to devote to political and social questions, we should not be very greatly astonished; but our amazement is unbounded when we find that foreign missionaries, whose education is higher

than that of the middle class, who have more than ample time to devote to the solution of social problems, and whose calling forbids their harbouring a spirit of unjust partiality, are so little courageous in attempting to put an end to extraterritorial malpractices. Their timidity we can understand and excuse; but their ignorance of their own advantages is not free from the charge of downright stupidity. We refer especially to the resolutions passed at the recent conference of the missionaries in Osaka and Kiyoto. They begin by stating that the Japan of to-day is not the Japan of twenty years ago. Yet the memorial does not in any one part clearly state that extraterritoriality should be *entirely* abolished, and Japan treated as European States treat each other; while the tenor of the document seems to imply that such abolition would be premature. The memorial presented to H.E. the Hon. F. R. Plunkett by the missionaries in Tokiyo and Yokohama does decidedly state that the abolition of extraterritoriality is at present premature. They are quite willing to see the present treaties modified in part, in return for the advantages of free residence and travel in the interior, and, although if foreigners be allowed to dwell in any part of the capital the value of the missionaries' property in Tsukiji will fall off steadily, they are willing to sacrifice personal losses to public gain. In discussing the great extraterritorial question, the missionaries thus actually take the few thousand *yen* worth of property in Tsukiji into account. We admire the accuracy of their financial calculations, suited as it is to this age of cold arithmetic, but we do not admire their deduction that the abolition of extraterritoriality is premature. The Kiyoto Conference, attended, for the most part, by American missionaries, might have plainly stated the necessity of the abrogation of the present system in its entirety. To our unfeigned regret, the Tsukiji Conference, composed of English missionaries, gave utterance to sentiments in opposition to our views. If Japan is thrown open to foreign trade, aliens will reap the greatest profits,—and we should not be under the necessity of explaining this to the Missionary Body. If extraterritoriality be not done away with, Japan's continued existence as a nation is an impossibility,—and we should not be under the obligation of consulting missionaries on the management of our national affairs. Why, we would ask them, have they come to Japan? Was it not with the intention of propagating the doctrines of Christ and to rescue the Japanese from the supposed error of their ways? If it be their sincerest wish to convert every one to the Christian Religion, and to extend the power of their creed over all countries, why do they not eagerly grasp the opportunity to travel in every part of this Empire, to come into actual contact with the men and women of the most distant provinces, to teach them the doctrine of salvation, and to found a great Christian stronghold in the Orient? Japanese law is more than capable of protecting the lives and property of missionaries, and the conversion of the Japanese should more than amply compensate them for their efforts. It is a painful exhibition of thoughtlessness that, with such fair prospects just before them, they should follow in the footsteps of unlettered merchants, and, refusing to advocate the abolition of extraterritoriality, content themselves with a microscopic field of action in the heart of the foreign settlements. We earnestly hope, most reverend pastors, that you will hold another conference, strike out your former resolutions, persuade your Governments to consent to the abolition of extraterritoriality, and, in company with us, strive to promote the welfare of this country. This is the true duty of every Christian Missionary.

The new residence of Prince Ake-no-Miya will cover an area of 500 *tsubo*.

During the month of May, in Nihonbashi *ku*, Tokiyo, 610 persons were married, and 411 others married a second time. In Kiyobashi *ku* there were 499 married, and 449 re-married.

The tea growers at Iyo, Yehime Prefecture, have established a Tea Trading Company, besides the local, officially organized, Tea Association. The capital of the Company is put at 5,000 *yen* in 500 shares of 10 *yen*, and no member can retire from the Company without good cause. The prospectus states that 15 tea-firing houses are to be erected, and the best possible means taken to insure careful preparation of the leaves.

Some very laudable steps are being taken to improve the surroundings of the Hot Springs at Atami. Several officers of the Sanitary Bureau are already on the spot, and the preliminary measures are to be submitted to the approval of the Local Assembly. A large room is to be built near the main spring, the steam from which will be carried into the room by means of tubes. Invalids and consumptives can thus easily enjoy a vapour bath.—*Fiji Shimpō*.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-TAKASAKI RAILWAY.

The Trains leave UYENO at 6.20 and 11.35 a.m. and 4.50 p.m., and TAKASAKI at 6 and 11.15 a.m. and 4.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 3.38; First-class, yen 2.00; Third-class, yen 1.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JUNE 13TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
.....represents velocity of wind.
.....percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 18.7 miles per hour on Saturday, at 3 p.m.
The highest reading of the barometer for the week was 30.028 inches on Sunday at 11 p.m., and the lowest was 29.456 inches on Tuesday, at 3 p.m.
The highest temperature for the week was 88.6 on Friday, and the lowest was 55.0 on Monday. The maximum and minimum for the corresponding week of last year were 78.8 and 48.2 respectively.
The total amount of rain for the week was 3.418 inches, against 0.863 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong, per P. M. Co.	Sunday, June 22nd.*
From Shanghai, Nagasaki, & Kobe	per M. B. Co. Thursday, June 26th.
From Hongkong, per P. & O. Co.	Monday, June 30th.
From America ... per P. M. Co.	Friday, July 4th.†

* City of Peking left Hongkong on June 16th. † City of New York left San Francisco on June 14th.

THE NEXT MAIL LEAVES

For Europe, via Hongkong	per P. & O. Co. Sunday, June 22nd.
For America	per P. M. Co. Wednesday, June 25th.
For Shanghai, Kobe, and Nagasaki	per M. B. Co. Wednesday, June 25th.
For Europe, via Hongkong	per M. M. Co. Sunday, June 29th.
For America	per O. & O. Co. Friday, July 11th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

SUNDAY CHURCH SERVICES.

Christ Church	: 11 a.m. and 5.30 p.m.
Union Church	: 11 a.m. and 8 p.m.
Roman Catholic Church	: 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo	: 11 a.m.

Correct answer received from "TESA."

It is rumoured that some alterations will be made in the Brewery Tax Regulations before long.

There are two routes on which the Nakasendo Railway can be constructed; one passing from Kiso to Gifu Prefecture, and the other from Matsumoto to Toyohashi, in Aichi Prefecture, by way of Iida and Nawa. The inhabitants of the districts lying along either route have frequently memorialized the Government to lay the line in their vicinity, and are deeply concerned in the final decision of the authorities.

Each nation excels in some peculiar military division; France in her infantry and cavalry, Germany in artillery and engineering, Japan in her infantry and engineers. The Government, it is said, intends giving particular attention to the artillery and cavalry of our army, in order that we shall be behindhand in nothing.—*Fiji Shimpô*.

Now that the Usui Pass in Nagano Prefecture has been successfully opened, the authorities have commenced surveying the new railway route between Suwagori, in the same prefecture, Nirezaki, Yamanashi Prefecture, and Matsumoto and Ituwogawa in Niigata Prefecture.

The *Kagoshima Shimbun* gives a graphic account of a second eruption at Asoyama. The volcano ceased smoking after the first eruption on the 21st of March last, but a low, grumbling sound was continually audible, even at a great distance. Early in this month, dark clouds were again seen hanging over the volcano and the neighbouring peaks, and on the 7th instant the crater reopened, sending quantities of ashes as far east as Kumamoto. On the following day, the wind veered around to the south-east, and Kikuchi and Yamakagori had to suffer from the shower of ashes and scoræ. The eruption was very violent on that day, and the throes of the volcano sounded like the discharge of gigantic cannons. On the 9th instant, the wind calmed down, and rain fell, and the volcano became quieter. But all the trees and plants for miles around are thickly encrusted with ashes.—*Fiji Shimpô*.

Large numbers of kites have, of late, been exported from Osaka. An order received by a kite-maker at Kitaku, Osaka, is so immense that it will take three years to turn out the requisite quantity of these aerial toys.—*Meiji Nippo*.

A horrible duel was fought, the other day, between one Iwama Seiji, a *shizoku*, of Kami Masukigori, Kumamoto Prefecture, and his brother Kampei, the duellists being 77 and 74 years of age. Seiji was found completely cut in two, while Kampei was shot through the head, and both were covered alike with other wounds. A third brother, aged 81, is said to have witnessed the affray from behind a screen—a rather improbable story.—*Choya Shimbun*.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Takachiho Maru*, from Kobe:—Mr. Graham in cabin; and 30 Japanese in steerage.

Per British steamer *Oceanic*, from San Francisco:—Mr. and Mrs. Nicholas Gray, Mr. and Mrs. Chas. Gabriel, Messrs. Max Raspe, J. P. Mollison, and T. P. Ness in cabin; and 1 European in steerage. For Hongkong: Mrs. Cheng and party, Mrs. Cairns, Messrs. D. A. Trotter, J. M. Scudder, and W. V. Bryan in cabin; and 2 Europeans and 173 Chinese in steerage.

Per Japanese steamer *Shinagawa Maru*, from Yokkaichi:—40 Japanese.

Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—Mr. and Mrs. Schinder, Mr. and Mrs. White, 3 children and 2 servants, Surgeon J. M. Seymour, Messrs. Benson, Springer, Willsmann, A. Ahrens, C. S. Hampson, A. Sims, W. Kelly, W. Roberts, J. Heighton, Barrett, R. Scott, F. W. Isaacson, T. Hamada, J. Hayashi, Siwojee, Achong, Chan Chong, Wah Sing, Ah Nam, Loe Hin Thin, Lon Low Him, Ah Yeun in cabin; and 27 Japanese in steerage.

Per Japanese steamer *Wakanoura Maru*, from Hakodate:—Captain Davidson in cabin; and 110 Japanese in steerage.

Per Japanese steamer *Kairio Maru*, from Yokkaichi:—63 Japanese.

Per Japanese steamer *Mikuni Maru*, from Yokkaichi:—49 Japanese.

Per Japanese steamer *Niigata Maru*, from Kobe:—Messrs. Robertson, Imoto, Serika, Watanabe, and Fujioka in cabin; and 88 Japanese in steerage.

Per Japanese steamer *Kiyokawa Maru*, from Shimidzu:—20 Japanese.

Per Japanese steamer *Okame Maru*, from Toba:—16 Japanese.

Per Japanese steamer *Onoura Maru*, from Fukuda:—13 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—84 Japanese.

Per Japanese steamer *Tokio Maru*, from Shanghai and ports:—H.E. Sanjo, Mr. and Mrs. Morse and child, Mrs. Truscott, Miss Brown, Mrs. Kishida and child, Messrs. D. Robertson, W. R. Dunn, J. Esdale, H. W. Williams, Sakai, Y. Tanaka, Saiki, Hoshiyama, Tanaka, Watanabe,

and Tanabe in cabin; and 2 Europeans and 205 Japanese in steerage.

Per Japanese steamer *Tsukai Maru*, from Shimidzu:—9 Japanese.

Per Japanese steamer *Gembu Maru*, from Hakodate:—78 Japanese.

Per Japanese steamer *Hirio Maru*, from Yayedzu:—19 Japanese.

Per Japanese steamer *Horai Maru*, from Yokkaichi:—67 Japanese.

Per Japanese steamer *Saiko Maru*, from Sagara:—11 Japanese.

Per Japanese steamer *Shidzuoka Maru*, from Shimidzu:—38 Japanese.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—H.E. General Saigo in cabin; and 53 Japanese in steerage.

Per Japanese steamer *Sekirio Maru*, from Oginohama:—15 Japanese.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—6 Japanese in cabin; and 71 Japanese in steerage.

Per French steamer *Menzaleh*, from Hongkong:—Mr. Kuhn and servant, Messrs. Piquet, Koizumi, and Matsumoto in cabin.

Per Japanese steamer *Owari Maru*, from Hakodate:—40 Japanese.

DEPARTED.

Per French steamer *Volga*, for Hongkong:—Messrs. Martin des Pallières, Victor de Bavier, Alexandre Voltard, K. Bando, T. Mukai, T. Kishi, and F. Asada in cabin.

Per British steamer *Oceanic*, for Hongkong:—Mrs. Cheng and party, Mrs. Cairns, Messrs. D. A. Trotter, J. M. Scudder, and W. B. Bryan in cabin; and 2 Europeans and 173 Chinese in steerage.

Per Japanese steamer *Hiogo Maru*, for Hakodate:—90 Japanese in steerage.

Per Japanese steamer *Shinagawa Maru*, for Hakodate:—75 Japanese in steerage.

Per Japanese steamer *Wakanoura Maru*, for Kobe:—Messrs. Smith, N. Enya, S. Uwozono in cabin; and 70 Japanese in steerage.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—H.E. Count Chas. Zaluski, Judge Ishii, Colonel Satake, Mrs. Drummond, Mrs. Watanabe, Miss A. Jurado, Messrs. F. C. W. Pan, G. P. Ness, L. A. Anderson, L. P. Michelson, W. R. Barrett, L. E. Masfen, F. Carratu, Samura, Y. Takeda, J. Kirino, F. Hamada, and J. Hayashi in cabin.

Per Japanese steamer *Taganoura Maru*, for Yokkaichi:—Mr. and Mrs. Kikuchi in cabin; and 60 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, for Hakodate via Oginohama:—Mr. and Mrs. Kazama, Messrs. Z. Nishiuchi, S. Okuda, S. Numa, K. Noritake, M. Yamamoto, K. Imoto, and E. Hasegawa in cabin; and 88 Japanese in steerage.

CARGOES.

Per French steamer *Volga*, for Hongkong:—Silk, 25 bales for France.

Per British steamer *Thibet*, from Hongkong via Nagasaki and Kobe:—Sugar, 81,37 bales; Yarn, 1,537 packages; Sundries, 10,401; Total, 10,722.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Treasure, \$136,900.00.

Per French steamer *Menzaleh*, from Hongkong:—6,978 packages.

REPORTS.

The British steamer *Oceanic*, Captain Metcalfe, reports leaving San Francisco on the 27th May, at noon with strong N.W. winds and high sea; till the 14th strong to moderate head winds and sea, when we experienced a strong gale and high sea from N.E. moderating morning of the 15th. Arrived at Yokohama on the 16th June, at daylight. Passage, 16 days and 23 hours.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 16th June, at 6.15 p.m. with fresh N.E. breeze and thick of rain; down Kii Channel to Oo-sima strong south breeze and high sea; thence to Cape Sagami fresh westerly breeze and clear weather; and thence to port foggy weather and calm sea. Arrived at Yokohama on the 18th June, at 9.45 a.m.

The Japanese steamer *Takasago Maru*, Captain C. Young, reports leaving Hakodate on the 17th June, at 10.15 a.m. with E.S.E. gale accompanied by thick rain and high sea; at 1.15 p.m. blowing very hard, turned back and arrived at Hakodate at 3.30 p.m.; and left again on the following morning at 5 a.m. with strong E.S.E. wind, drizzling rain and misty weather to Oginohama, where arrived on the 19th, at 7 a.m. and left on the same day, at 11.45 a.m. with light variable winds and fine weather. Arrived at Yokohama on the 20th June, at 1.30 p.m. Passed five Japanese men-of-war off Tateyama Bay.

LATEST COMMERCIAL.

IMPORTS.

Extreme dullness continues to be the chief characteristic of the whole Market. Prices are quite nominal, as holders seem satisfied to wait for business so long as Manchester continues on its present level, and dealers are indisposed to operate except at lower rates.

COTTON YARN.—Small sales have been reported in English Yarns, and a fair business in Bombay 16's.

COTTON PIECE GOODS.—Scarcely anything doing.

WOOLLENS.—Business has almost been restricted to small sales of Mousseline de Laine.

EXPORTS.

RAW SILK.

Our last report was of the 13th instant: since which date a considerable business for the time of year has been done, both in old and new staple. Settlements for the week reach a total of 160 piculs, a small portion of which is new silk at prices some 15 per cent. under opening rates of last season. On this basis one large buyer has entered the Market rather freely operating in *Filatures*, and some decent parcels of old Silk have thus been disposed of as per details given below.

The crop-news from all districts continues good. The harvest is not yet finished, especially in Shinshu, but in Koshu all the *Cocoons* are nearly ready, and the Kofu merchants estimate that there will be a production of 3,500 to 3,800 native boxes (say 2,000 piculs) *Filatures*, as against 3,000 during the season just closed. There are no *Hanks* received from this province now, everything destined for Export being turned into "*Filatures*." In Joshu the re-reelers are at work, and doubtless we shall soon receive something from thence. In

Shinshu, the "*Suwa*" *Filateurs* are at work on *Koshu* cocoons pending the maturing of those in their own province. The Kofu merchants report that about 300 native bales of new *Cocoons* have found their way across the boundary for use in the *Suwa* *Filatures*.

Japanese dealers are apparently disposed to be current and meet the Market fairly: although they assert that they are losing slightly on every parcel new Silk hitherto sold. Meanwhile, the prices of Silk in the interior decline a little with each succeeding Market-day, and will doubtless come down to the paying point ere long. Here business has been done in *Maibashi Hanks* at \$460, or a drop of \$15 from the first price paid for the few bales mentioned in our last circular. A few new *Filatures* have been taken up at last price, viz., \$575.

The M.M. steamer *Volga*, which left this for Hongkong on the 15th instant, had on board the small quantity of 24 bales only, bringing the Export figures to date up to 29,546 bales, against 28,103 bales in 1883, and 21,476 bales to same date in 1882.

Hanks.—The business done includes a fair parcel old Silk reported at \$460, and some New *Takasaki*, at \$465, with *Maibashi* at \$460. There are a few bales New *Maibashi* left in Stock, larger arrivals are expected to-morrow; price up country reported as 36½ *momme*.

Filatures.—Apparently influenced by the mixed news as to the crop in Italy, some buyers have operated rather freely in old Silk, and about 120 piculs have changed hands on basis of *Nihonmatsu* \$640, *Tokosha* \$620, *Seimeisha* (off-shoot of the *Tokosha*) \$620, *Kaimeisha* \$585, *Hagiwara* \$580, with other sorts running down to \$500 for low "mixed" skeins. In New kinds some business done in *Koshu* at \$575, and more Silk expected from that quarter in time for shipment by the outgoing American mail.

Re-reels.—Nothing done beyond a few bales old Silk "Five Girl" chop at \$560. New *Re-reels* may be expected in the course of a few days, the *Maibashi* factories being well under weigh.

In other sorts nothing to note. We again leave the Quotation-list blank, pending the arrival of more New Silk and a regular course of business.

Export Tables, Raw Silk, to 20th June, 1884:—

	SEASON 1883-84.	1882-83.	1881-82.
	BALES.	BALES.	BALES.
France and Italy	17,241	14,272	11,083
America	9,666	9,416	6,833
England	2,639	4,415	3,560
Total	29,546	28,103	21,476

WASTE SILK.

Business in this article has again fallen off, and the transactions for the week do not exceed 45 piculs. The quality of the Stock on offer runs down every day, the so-called good Wastes being very poor in fibre at this stage end of the season.

Small quantities of New Wastes may be expected on the Market here early in July. Hand musters of *Foshu Noshi* and *Filature Kibiso* are in town, but are too small to give any accurate indication of what the season's produce will be like.

The M. M. steamer *Volga* on the 15th instant carried 28 bales for Europe, bringing the Export figures to date up to 23,829 piculs a marked reduction on those of the last two years which stand at 24,813 piculs, and 26,355 piculs respectively.

Noshi-ito.—A few bales *fil. Hagiwara* done at \$132½, beyond this nothing. It is not likely that we shall have much to record in this class until new goods commence to arrive.

Kibiso.—Bulk of settlements in this class ranging from *Tokosha* *filature* at \$118½, down to common *Hachoji* at \$17. Among the lots recorded we note *Foshu* at \$32 and \$19½, with some inferior *Filature* sorts at \$102½ and \$100.

Sundries.—The only transaction has been a sale of *Kusuito* at \$73. It is probable that many of the odds and ends included under this head will be returned into the interior for use in the native manufacture.

QUOTATIONS.

Pierced Cocoons—Medium to Fair	None.

Sendai & Hamatsuki	100		Mawata	90
Taysam Kinds	10		Sundries	100
Total piculs	900		Total piculs	600

TEA.

The daily Settlements aggregate only 1,765 piculs, and the total Settlements for the interval are 10,550 piculs. All classes of Teas are represented in the above Settlements. Receipts are beginning to be light, as our Tea in Stock now only amounts to 4,500 piculs, against 11,500 piculs in 1883. It appears that the Tea brokers are determined to keep the Market stationary (in fact they have done so for the last four days), but if their object is to increase the prices, they will not succeed very long in face of such a wretched condition as American Market is in at present. The steamships *Mosser* and *Strathmore* sailed for New York on the 20th instant, the former calling at Kobe. These shipments will be given in our next Market Report. The Market for Teas grading above Good Medium is easy, whilst Teas classing below Good Medium are firmer. We make no alteration in our quotations, and they remain nominally unchanged.

QUOTATIONS.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia,

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevol, Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S FLORIDA WATER,

a most fragrant Perfume distilled from the choicest Exotics

ATKINSON'S QUININE HAIR LOTION,

a very refreshing Wash which stimulates the skin to a healthy action and promotes the growth of the hair.

ATKINSON'S**ETHEREAL ESSENCE OF LAVENDER,**

a powerful Perfume distilled from the finest flowers.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE, and other Specialities and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Messrs. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JUNE 28TH, 1884.

SUMMARY OF NEWS.

A GREAT archery meeting in the style of old Japan has been held at the Nobles' Club in Tokiyo.

THE total receipts of the Tsuruga-Sekigahara railway for April are said to have been 10,311 *yen*.

A NEW military hospital for *kakke* patients is to be constructed at Karuizawa, in Nagano Prefecture.

THE arrival of H.I.J.M.'s *Tsukuba Kan* at Valparaiso is announced as having taken place on the 13th instant.

THE number of cattle, pigs, and sheep slaughtered in Tokiyo during 1883, were 4,932, 1,329, and 361 respectively.

It is said that the Nagasaki Dockyard has been leased to the Mitsu Bishi Steamship Company for a period of 25 years.

It has been decided that the projected railway between Osaka and Sakai shall be extended to Wakayama, in the province of Kii.

THE Kiyoto Banks have unanimously resolved to decrease the rate of interest allowed on deposits for periods of less than six months.

A DRAMA founded on the death of Sakura Sogoro, the hero of Japanese peasants, is about to be produced at the Ichimura Theatre, in Tokiyo.

THE Maple Club (*Koyokwan*) in Tokiyo has esta-

blished a branch at Yukao, which will be open for the reception of visitors from the 1st of August.

THE Union Steam Navigation Company's new steamer, the *Yamashiro Maru*, now en route for Japan from England, left Singapore on the 25th instant.

SOME merchants of Shiga Prefecture are endeavouring to form a company, with a capital of 200,000 *yen*, for the purpose of manufacturing linen goods.

THE Imperial Lighthouse Department's steamship *Meiji Maru* returned to Yokohama on the 21st instant, from a tour of inspection of the light-houses of Japan.

A MR. NISHIO and three other residents of Osaka are reported to have organized a Company of guides who will always be available for use by tourists.

THE traffic receipts on the Kobe-Otsu railway for the week ended 22nd inst. amounted to \$13,818.22, against \$16,401.70 for the corresponding period last year.

It is stated that a case of cholera occurred in the Tobe jail, Yokohama, on the 23rd instant, and that the convicts were immediately removed from the ward as a precautionary measure.

THE Local Sanitary Assembly of Kanagawa Prefecture has decided to issue no more licenses to practitioners of acupuncture, as the operation is considered of more than doubtful utility.

It is stated that the irregularity of the weather has somewhat interfered with the growth of the silk-worms in Fukushima Prefecture, but that the crop, on the whole, will be above the average.

A VERNACULAR journal states that the Very Rev. Bishop Nicholai is about to establish three dispensaries for the poor in Tokiyo, and that he has engaged the services of an American physician for the purpose.

A WEATHER Signal Station is to be constructed on the Western Hatoba in Yokohama. The Mitsu Bishi and the Union Steam Navigation Companies are said to have contributed 2,000 *yen* each towards the expenses.

It is announced that a new road between Yamaguchi and Hagi has been nearly completed. The construction of this road presented so many difficulties that attempts made in former times were invariably abandoned.

A LARGE audience assembled at Ibumura, Asakusa, Tokiyo, on the 21st instant, to hear some lectures delivered by Japanese Christians, and considerable excitement was displayed, but the proceedings terminated without serious interruption.

THE long drought of last year is said to have been followed by considerable distress among the agricultural classes in the district of Kawara, province of Settsu. A wealthy merchant of the

locality, Mr. Okuno, has been selling large quantities of rice at exceedingly low rates to assist the people.

It is announced that His Excellency General Saigo, Minister of Agriculture and Commerce, will pay a visit to the Hokkaido next month, in company with His Excellency General Kuroda, Cabinet Adviser and formerly Chief of the Colonization Bureau.

THE authorities have under consideration a scheme for the better control of the jinrikisha coolies throughout the Empire. These men are, for the most part, taken from the lowest classes, and frequent complaints of their misbehaviour have been made of late.

As an example of the effect of the Medical Stamp Regulations published last year, which subject all patent drugs and medicines to a tax of ten per cent. of their selling price, it is stated that the business of 6,119 druggists in Tomiya, Yetchiu province, has diminished from an annual aggregate of a million *yen* to about four hundred thousand.

THE sequel of the recent riots at Kiyoto on the occasion of lectures by Missionaries and Japanese Christians, is that the ringleaders of the anti-Christian demonstration—a fishmonger and two weavers—have been punished in accordance with the police regulations. It appears that the disturbance was not motivated by fanaticism, but owed its origin to the mischievous tendencies of a few thoughtless persons.

FLAGS were flown at half-mast on Monday in consequence of the receipt of a telegram by the Minister for the Netherlands announcing the death of William Alexander Charles Henry Frederick, Prince of Orange, and heir to the throne. The deceased Prince was the second son of the present King and the Princess Sophia Frederica Matilda, daughter of William I., King of Wurtemberg, and was born on August 25th, 1851.

THE official opening of the Tokiyo-Takasaki railway was performed by His Majesty the Emperor in person on the 25th instant. His Majesty, attended by the Ministers of State, the Foreign Representatives, and a party of about two hundred Japanese and foreign guests, travelled over the line in both directions, and the ceremony concluded with a sumptuous banquet, to which some eight hundred persons were invited, at Uyeno, in the evening.

THE British Consular Trade Report for 1883 for Hiogo and Osaka has been published. The bulk of the import and export trade of the two ports shows an increase of \$122,994 as compared with the preceding year. The increase was entirely in imports, which amounted to \$8,329,692, as against \$7,917,793 for 1882; while exports, on the contrary, were only \$6,473,757, against \$6,762,663 for 1882. Taking the returns of deliveries into account, however, the total bulk of the trade actually carried on was twenty per cent. less than in 1882.

NOTES.

THE *Tetsudo-gwaisha* has been most unfortunate in the matter of its opening days. We have already described how its directors incurred a fruitless outlay of several thousands of *yen* in connection with preparations for two opening ceremonies which had to be postponed on account of His Majesty the Emperor's indisposition. Wednesday was the third attempt, and though it was attended by the success of most third attempts, inasmuch as the ceremony did actually come off, the weather threw a damper over the whole affair. The termini at Ueno and Takasaki were very tastefully decorated—the decorations, by the way, on the previous occasion cost 800 *yen*, and their materials were sold, after the second postponement, for the two-hundred-and-twentieth part of that sum—but it was not a day to set off decorations, and everybody seemed disposed to get through the affair as quickly as possible. The train left Ueno at 8 a.m., carrying about 300 persons, and after a journey of four hours, arrived at Takasaki, where a collation was served and the usual ceremonies performed. This involved a delay of three hours, so that the return journey was not commenced till a little after 3 o'clock nor concluded before 7 p.m. In addition to the party which proceeded by the train, some five hundred persons were invited to a banquet at Ueno in the evening, and various dances and other performances were provided for their entertainment. But if the weather during the day was unpropitious, that during the evening and night was worse. The rain came down in a steady pour, and though the Japanese guests did not allow their spirits to be damped by this contretemps, we cannot but regret that the sumptuous and hospitable preparations made by the directors did not meet with a happier fate.

WE do not remember to have ever detected the *Bukka Shimpō* in the perpetration of a joke. Yet we are disposed to think that our grave contemporary is poking fun when he attributes to certain merchants of Tokiyo the project of holding a bazaar and devoting the proceeds to charitable purposes. Their idea, the *Bukka Shimpō* puts it, is to do six strokes of business for themselves and half-a-dozen for the "charitable purposes," since the bazaar is to be stocked with goods which have grown rusty on the merchants' hands. The saleswomen, we are told, are to be singing girls and actors—not actresses, as a thoughtless editor might have written, forgetting that female rôles are always played by males in Japan. The pay of the saleswomen is to be defrayed by the sale of tickets of admission, and as these observant merchants have concluded that the price of the goods at the Rokumeikwan Fair had nothing to do with the charitable disposition of the purchasers, they discern, in imagination, a rosy vista of happy speculations. It is a pretty scheme, but one cannot be very sanguine of its success. Charity covers a multitude of sins, but it will not cover the sordid elements of such a project. Besides Japanese dancing girls have such a noted penchant for actors that a combination of the two would probably be fatal to the efficiency of both for bazaar purposes. If the thing is to be tried, we recommend the addition of wrestlers as salesmen.

THERE is a story told of a matter-of-fact citizen of the United States who complained that some

constables had arrested him, although he was doing nothing whatever but pursuing his regular business. It turned out, however, that his regular business was burglary. This pleasant product of imagination is outdone by the sober realities of the *Rising Sun and Nagasaki Express*, whose editor actually saw a Japanese policeman walk up to a coolie, tie the man's hands behind his back, and march him off to jail, though the unfortunate victim of official tyranny was doing nothing worse than innocently twisting a straw rope! We have heard of swindlers being arrested when they were lying in bed or quietly eating their dinners, but we never heard it suggested that indulging in sleep or satisfying the appetite was the cause of their seizure. It was reserved for a Nagasaki journalist to discover that because a coolie happened to be twisting a straw rope when he was arrested, twisting straw must necessarily be the limit of his crime. Conceive the notion of submitting Nagasaki journalists to the jurisdiction of tribunals before which a man may be haled for twisting straw! And "what is infinitely worse for the policeman" who performed this fell deed, the place of the arrest was a vacant plot of land rented by a foreigner, and therefore partaking, in prospect, of the castellated qualities attaching to a true Briton's home. Yet in spite of these fiendish outrages, this tyranny and trespass, it is unblushingly proposed to give the Japanese some jurisdiction over foreigners. The notion is outrageous. What the Nagasaki journalist and his tremulous fellow-thinkers want is, not constables and criminal courts, but a little more pap and birch.

PRINCE JEROME BONAPARTE issued a proclamation to the Bonapartist Party just before the election of the deputies on the fourth of last month, in which he forbade his adherents to vote for Monarchists or Republicans, but ordered them to give all their suffrages to Radical candidates. This proclamation caused the greatest confusion in Paris and elsewhere; especially as it is interpreted by the Bonapartists to mean that the Prince is trying to win the public over to his side, in anticipation of the "coming crisis." Exactly what it may portend, no man can say; but that the Prince has powerful and numerous supporters is undeniable. The recent actions of his party have been of a conciliatory nature, and it is very probable that they are trying to rally their forces for another Napoleonic *coup d'état*.

DESPITE the conflicting statements which have appeared in the German press during the last twelve months, an alliance between Russia and Germany appears to be highly probable. No less a person than the late Prime Minister Gortschakoff was interested in bringing the interests of the two empires into intimate relation, although his outspoken policy seemed to be diametrically opposed to such an arrangement. The *Schlesische Zeitung* has recently published some correspondence which took place prior to the ratification of the alliance between Germany and Austria. It appears that Minister Von Giers, in going through the papers of the late Premier, happened to find a series of letters which had passed between Bismarck and Gortschakoff, relating to the necessity of consolidating the friendship of Germany and Russia. When this correspondence was shown to the Czar he waxed very wrath at what he was pleased to term the "deceptive policy" of Gortschakoff, and im-

mediately despatched Von Giers to Varzin in order to communicate with Bismarck. The correspondence has now been made public, and an alliance between Russia and Germany appears to be the only natural consequence. Without dwelling on the subject of Gortschakoff's duplicity, it was undoubtedly one of the most important political intrigues of our times; for, while outwardly doing all to strengthen their respective frontiers and standing in instant readiness for a declaration of war on either side, the two great diplomatic steersmen were guiding their ships of state in one and the same direction, and were ready to treat the enemy of the one as the common foe of both. What with Austria, Germany, and Italy already trebly allied, the entrance of Russia into this notable compact will signalize the dawning of a new dispensation. Spain has already evidenced her desire to become a party to the new alliance, and only France still holds aloof.

THE legislation which took place in 1883 on the subject of trade-marks involved some material changes in procedure and administration, as well as the repeal of the rules which were previously in force. Since then, the new rules regulating applications for the registration of trade-marks have been issued, and came into operation on January 1st, 1884; the general procedure being, as far as possible, similar to that laid down in making applications for patents. The Trade-Marks Regulations recently published by Notifications Nos. 13 and 19 of the Privy Council offer an interesting parallel to the British Regulations of 1884; for, while the tenor of both enactments is virtually the same, the British Regulations have the advantage of being an improvement on the older form of 1875, while the Japanese Regulations are the first of the kind ever published in this country. For the purpose of trade-marks registration, goods are, in the regulations of either country, classified according to a schedule attached to the rules; but, in the event of any doubt arising as to what class any particular description of goods belong to, the doubt, in this country, will be determined by the Agricultural and Commercial Department. The latter part of Article XI. reads:

In the case of articles the classification of which is not determined by applicants for registration, the decision will be made by the Agricultural and Commercial Department.

In Great Britain, on the contrary, the classification of the articles in question will be determined by the Comptroller of Patents, Designs, and Trade-Marks, who, by the Act of last year, is appointed as the chief officer of the Patent Office. No special stipulation is made in the Japanese Regulations as to who shall have the right to apply for and hold registered trade-marks: all alike come under the common heading of "Persons who are desirous of obtaining a right to the exclusive use of trade-marks;" in the British Act, however, it is expressly stated, that "firms and companies are equally entitled to hold trade-marks, and the necessary steps may, in all cases, be taken by duly authorized agents." With regard to the registration of trade-marks which have already been in use for a time, the Regulations of both countries are similar, with the exception that the British Act does not directly state that the application for registration must be made within a certain period before the expiration of the registered term. The matter may be epitomized as follows:—"When an applicant desires to register what is known as an old mark, *i.e.*, one

in use before August 13, 1875 (this, being the date of the previous Act), his application must contain a statement of the time during which, and of the person by whom, it has been so used in respect of the goods mentioned in the application." Again, "Respecting the time of the registration, it is provided that so soon as possible after the expiration of two months from the advertisement of the application, the Comptroller shall, if he is satisfied that the applicant is entitled to registration on payment of the prescribed fee, enter the applicant's name, address, and description in the Register of Trade-Marks, as the registered proprietor of the trade-mark in respect of the particular goods or classes of goods described in his application." The parallel articles in the Japanese Regulations run as follows:—

Art. III.—Applications for the registration of trade-marks will be retained by the authorities for two months from the date of their receipt, after which time they will receive sanction should no conflicting applications have been received in the interim.

Art. X.—When persons who have obtained registration desire to continue the exclusive use of trade-marks after the expiration of the registered term, they must apply for fresh registration three months before the expiration of such term.

Another interesting point is, that only the Cutlers' Company at Sheffield is required to send in duplicate applications for the registration of trade-marks, one of which is to be sent to the Comptroller within seven days of its receipt. The Japanese Regulations, on the other hand, require the forwarding of two copies of the application "whenever application is made to continue the use of trade-marks or to obtain a fresh certificate of registration." Finally, in the event of conflicting claims as to ownership, the Comptroller may refuse to register any one until the respective rights have been determined according to its being determined as a special case or otherwise; and, if by special case, it may be submitted to the parties for the purpose of being agreed to, but if they differ it may be settled by the Comptroller. These provisions are the equivalent of Art. III. and the Supplement to the Regulations under Notification 19. The British Regulations also prescribe the size and form of the documents to be used in making applications, and state that all applications will be published in an official paper published under the Board of Trade.

We had occasion the other day, says the *Fiji Shimpō*, to publish a rumour with regard to the sale of certain shares of the Specie Bank by the Government. A resident in Yokohama sent us, thereupon, the following letter, which we publish for its own sake:—"Being a shareholder of the Specie Bank, I was not a little interested in a paragraph which recently appeared in your columns. I have made inquiries with regard to the rumoured sale of shares, but the results I have obtained are slightly at variance with your information. The total amount of the shares subscribed for by the Government was originally 700,000 *yen*, and those lately sold amounted to 500,000 *yen*. The remaining 200,000 *yen* are either in the hands of the authorities or of private individuals. The shares recently sold by the Government were quoted at 105 *yen*, not 111 *yen*, as the *Fiji* stated. Speculators at this port believe that the Bank will throw these shares again on the market, but this is scarcely credible in face of the fact that the present market is too weak to buy up the shares, and such an act would certainly tend to lower the quotation. Another rumour states that the Bank will destroy the whole 500,000 *yen* worth of shares, decreasing

its capital by that sum, in order to prevent any further depreciation. As a holder of shares, I can only praise any and all measures calculated to increase their value."

On the subject of treaty revision, the *Choya Shimbun* makes a somewhat startling revelation, but, as usual, the Tokiyo paper refers its information to many-tongued rumour. It says:—"The revision of the treaties, so long and so ardently desired by the people of our country, has been put off till the present time on account of the many difficult questions that cropped up during the preliminary negotiations. Our authorities, however, have now arrived at the conclusion that the desired end in regard to treaty revision can only be brought about by the united efforts of the Government and the governed, and with this view consider that it would be a wise policy to open the National Assembly in 1886 instead of 1890, and thus comply with the expressed desire of the Japanese people, at the same time that a check would be placed upon the insolent proceedings of aliens. We do not vouch for the accuracy of this report, but it is evident that treaty revision, as the people of this country understand the term, can never be brought about without having recourse to some such method as is here indicated."

The following tables of robberies, petty larcenies, &c., are cut from the recent Statistical Returns of the Home Department:—

YEAR.	ROBBERIES.	PETTY LARCENIES.	PRICE OF RICE.	NUMBER OF POLICE.	RATIO BETWEEN NUMBER OF POLICE AND OFFENCES.
			Yen.		
1875.....	3,361	129,627	5.77	13,606	9.774
1876.....	3,067	150,486	4.90	18,238	8.419
1877.....	4,382	173,529	5.11	24,446	7.229
1878.....	4,893	197,273	6.12	21,426	9.435
1879.....	6,014	223,620	7.16	21,616	10.623
1880.....	6,765	242,418	10.58	20,810	11.947
1881.....	7,374	228,811	9.85	21,437	11.015
1882.....	9,744	212,674	8.37	22,930	9.699

From the above tables it would appear that, when the price of rice was high, the number of thefts increased accordingly. That the number of offences gradually increased during 1881 and 1882, despite the fall in the price of rice, can only be accounted for by a decided difference between the temptations to commit crime. The abnormally large number of the police employed in 1880 was ascribable to the south-western rebellion.—*Choya Shimbun*.

MR. HENRY GEORGE appears to be quite satisfied with the result of his trip to England. He says it was "hard, interesting, and most successful." The hardship seems to have consisted chiefly in the fact that everybody was ashamed of him. Even the proprietor of a circus was so shocked by the revolutionary doctrines preached by the Prophet of San Francisco that he refused to let his circus for another performance of the same nature. In Portree, again, the men who invited Mr. George to speak, came to him under cover of darkness and told him that none of them dared to ask for a hall where a meeting might be held. A Free Church Minister was the *deus ex machina* on that occasion. He lent a school-house, and there the propagandist of spoliation had an audience that "almost took the roof off with their cheers and laughter." Yet not one of these charmed listeners ventured to come forward and shake hands with the lecturer afterwards, "for fear of being marked for landlord boycotting." So, again, in Inverness, the gentleman who had been chiefly instrumental in getting Mr. George to speak there and who had

offered to guarantee all the expenses, "sat on a front bench, but did not dare once to applaud or bid the speaker good-bye, for the reason that he was a business man and could easily have been ruined by the landowning interest." In London when Mr. George first arrived, he easily procured permission to lecture in St. James's Hall, but when his friends desired to find some central place for a farewell meeting, they discovered that every door in the huge metropolis was closed to them. Halls, theatres, churches, everything resembling a public building, proved inaccessible, and the meeting had to be abandoned altogether. Of course Mr. George explained all this in his own way. He found a crofter in the Highlands whose scale of bugbears commenced with the Almighty, in the positive degree, and thence ascended, through landlords in the comparative, to factors in the superlative. This child of nature supplied the Colorado economist with ideas. It was plain that all England was under the same reign of landlord terror. Thenceforth Mr. George revelled in the difficulties he had to encounter, regarding opposition as a sign of the vitality of his cause, and it cannot be said that he was wholly mistaken, since the fact that men build fences with broken glass on the top is assuredly a proof of their faith in the vitality of thieves. Yet it would not be strictly correct to say that Mr. George met with no encouragement in the United Kingdom. The Land Restoration League in Scotland was an association after his own heart. The Scotch "having long had a high standard of general education," and being, above all, a religious people, firmly persuaded that Scotland was made by the Creator for all its inhabitants, not for a favored few, took hold of the spoliation theory "splendidly." The promoters of the Land Restoration League are remarkably canny persons. Instead of touting for adherents, they advise all moderate men to keep out of their ranks, and as human nature happens to have a good deal of that swinish element which prompts men to take the paths they are counselled to avoid, the League grows in numbers. Its manifesto, recently issued, declares that, as a matter of justice, the land should not only be restored to the people, but the landlords should be obliged to compensate those they have so long disinherited. The Restorers, however, are magnanimous. They express their willingness to let by-gones be by-gones on condition that the land be immediately given back to its "rightful owners." Among these persons Mr. George found a hearty welcome, but it is decidedly to the credit of Britishers generally that so very few of them felt anything but shame at the idea of participating, directly or indirectly, in a scheme of universal larceny.

If France's foreign policy is properly represented by her soberest writers, she is not likely to lack pretexts for pursuing it in northern Africa. It appears pretty certain that she has become involved in a trouble with Morocco, and rumour hints that her mood does not imply an amicable settlement of the difficulty. The first news of this affair reached Paris on the 5th of May, and the *Temps* of the following day took some pains to deny that any rupture of friendly relations had occurred. Subsequent advices, however, went to confirm the original rumour, and the following account was published on May 13th:—"The cause of the rupture arose from a cruel murder. The secretary to the Governor of Wazan was bastinadoed at the instigation of the son of the

Shereef of Wazan, representing his father as spiritual chief in Morocco, and who enjoys French protection, for having declared the Shereef to be an infidel. The victim died a few days after the infliction of the punishment. The officers sent by the French Minister to Wazan to investigate the circumstances declare that the secretary's death was caused by poison administered by the Governor of Wazan and not by the bastinado. The French Minister then demanded the dismissal of the Governor of Wazan, which demand has not yet been complied with." If France is really bent upon following in Africa the example set by Russia in Central Asia—that is to say, the example of constant progress southward—the alleged crime of the Governor of Wazan may prove as convenient a stepping stone as anything else.

THE telegram recently received, to the effect that Admiral Miot had announced his intention of blockading the whole of Madagascar, was probably an exaggeration. More detailed accounts go to show that the demand made by the French upon the Hovas is simply the recognition of a French protectorate over the island as far as the sixteenth degree of South latitude, and however vigorous the steps Admiral Miot might deem it necessary to take in support of this claim, it is scarcely likely that he would resort to a measure involving a prospect of serious complications with other powers. So far as the claim itself is concerned, the plea of the Hovas, it will be remembered, is that the French title is wholly invalid, being based on a treaty concluded with a native tribe which, at the time, was in open revolt against the Central Government. Valid as this rejoinder sounds it will probably avail little. Admiral Miot is to be reinforced by 1,500 troops from Tonquin, and if the resistance of the Hovas is sufficiently obstinate to require any costly effort on France's part, the business will end as the similar trouble, in Tonquin ended; namely, by a very large extension of the limits of the proposed French protectorate.

A FEW days ago, the people residing in the neighbourhood of Asakusa, Tokiyo, were astonished by the spectacle of a funeral at which the mourners were of the female sex only. There was nothing mean or scamped about the procession or its paraphernalia. On the contrary, the bier was of the whitest pine and the pall of the snowiest sarcenet, while the *jinrikishas* in which the mourners rode bore heraldic devices of a highly aristocratic nature. Sightseers who were curious enough to follow the procession, concluded that some poor little bairn was being carried to its last resting place, for the coffin was of the tinnest description—so small, indeed, that one could scarcely conceive it to be the tenement of anything human. Accordingly, when priests came to meet the bier and chanted the solemn litany of Amida, mothers who watched the obsequies, hoped that the good deity Jizo had carried the little one tenderly over the rough places on the road to the shades, and dropped a sympathetic tear as they remembered that measles or mumps might at any moment change their own rôle from unconcerned observation to sad participation in a similar ceremony. But what could be the meaning of the female mourners? Had anybody ever seen anything of that sort before? Could it be one of the new fashions that had come in the train of the *bummei kaikwa*

which was the boast of this wonderful era of Meiji? These, and a variety of similar queries and conjectures made themselves heard among the marvelling multitude before the truth leaked out, and before the idlers went home amid a chorus of *oyas!* and *naru hodos!*, telling one another that the tenant of the milk-white shell was not a baby at all, but only the favourite cat of the favourite mistress of a very indulgent nobleman. If anybody supposes that these obsequies were without precedent, let him take a journey to the huge cemetery which lies at the foot of the pagoda beyond Uyeno, and he will see there, by the road side, a comely monument, persiding over a well-tended grave, environed by carefully nurtured shrubs, and distinguished by a device which, to those not familiar with oriental ideography, will explain the lengthy epitaph—the device of a cat sleeping. *Requiescat in pace.*

A SUIT has recently been brought by Machida Sagaku, the former incumbent of a parish at Machida-mura, Tone-gori, Kodzuke, against one Nishiyama and 33 other inhabitants of the same village. It is said that, after a preliminary examination, the Prosecutor of the Tokiyo *Koso Saibansho* (Court of Appeal) issued a warrant of arrest against Nishiyama and the 33 others. According to the written statement of the appellant, he was, at one time, a wealthy priest, but incurred the bitter hatred of Nishiyama and others by espousing the cause of the Royalists at the time of the Restoration. He was afterwards imprisoned on suspicion of arson, but released in December, 1870, at the time of the Imperial amnesty. During the period of his imprisonment, Nishiyama and several others exacted 250 *yen* from his family under pretence of an official order. No sooner was the appellant released in 1870 than his enemies brought a charge of insanity against him, obtained a writ of *de lunatico inquirendo*, and confined him anew in a small cell, giving their wretched victim but the scantiest supply of food. He remained in this cell for fourteen years, until the beginning of 1884, when his relations finally reported the matter to the police, and had him liberated. The lock of the cell door was found completely encrusted with rust and useless; and his liberators had to break down the walls before they could free him from his horrible captivity.

THERE was launched on Tuesday, April 29th, from the Low Walker Shipbuilding Yard of Sir W. G. Armstrong, Mitchell & Co., limited, an iron screw-steamer, named the *Sagami Maru* being the last of three vessels ordered for the same owners—the Union Steamship Company of Japan, of which Admiral Ito, of the Japanese Navy, is President. The vessel in question is 270 feet long, 36 feet 6 inches beam, and 24 feet depth of hold. She is classed 100A1. at Lloyd's, will be fitted up as a first-class cargo steamer with a limited amount of accommodation for first-class passengers, and will embrace all of the most recent appliances for efficient and economical working. Her decks are of teak, and generally speaking the vessel will be fitted out in a superior manner. The launch was entirely successful, the vessel receiving her name from Mrs. C. Mitchel, and amongst others present were Captain A. R. Brown, under whose superintendence the ship has been built; Mr. Watanabe of the firm of Messrs. Mitsui & Co., the Company's agents in

London, Captain J. M. James, formerly of the Japanese Navy, &c. Immediately after the launch the *Sagami Maru* was taken to the Wallsend Slipway and Engineering Company to be fitted with compound engines capable of indicating 1,000 horse-power of the most recent type, with two steel boilers working at 90 lbs. pressure.

THE fall of ashes which took place at Koishikawa, Tokiyo, on the 18th instant, though not in itself an uncommon phenomenon, acquires considerable interest from the fact that it was preceded by a violent eruption of Asama-yama. The distance from that volcano to Tokiyo, as the crow flies, is about 95 miles (English), and it is reported to have discharged large quantities of scorix and ashes on the 7th, 8th and 9th instant, after which it became quiescent. If the phenomenon at Koishikawa and that at Asama-yama stand to one another in the nature of effect and cause, it becomes necessary to suppose that these ashes remained suspended in the upper regions of the atmosphere for nine or ten days, drifting westward the while at the rate of about 10 miles per diem. The chief difficulty about this hypothesis is, that the prevailing winds in the lower strata of the atmosphere between the 9th and 19th instant were easterly and south-easterly, throughout the districts concerned, whereas a westerly wind would have been required to bring the ashes from Asama-yama to Tokiyo. It is, nevertheless, difficult to disassociate the activity of the volcano from the visitation to which the inhabitants of Koishikawa were subjected.

THE Government of the United States has been having quite a lively passage of arms with the Ministers of His Sublime Majesty the Sultan of Turkey. The prime cause of the difficulty is Kerosene. America gives herself so much trouble about this export that one is tempted to speculate what would be the consequences if all the Great Powers were influenced by equally paternal instincts on behalf of their various articles of commerce. The grievance with regard to the Kerosene is that the Sultan is supposed to have sold the exclusive right of oil storage to one of his subjects, granting him, at the same time, a firman by which foreigners are not permitted to put up their own storage houses, however fireproof they may be willing to make them. The consequence is that American importers must store in this Turkish monopolist's godowns whether they like it or no, and the Turk is not slow to take advantage of the position. This is the American story. The Turkish version, as given by Tewfik Pacha, is slightly different:—"I cannot believe that there is anything but a newspaper sensation in that. It is a question of finance, not politics. I think you will find a Standard oil monopoly back of it. There was a time when petroleum shippers stored petroleum in bulk wherever they chose. The result was numerous fires and explosions. Stamboul and other cities were endangered. The government permitted Turkish companies to erect safety warehouses, built of stone, and enacted that petroleum should be stored in them. These facilities cost money. A man must get his money back every fifteen years, with expenses and enough for repairs, or fail in business. Now your Standard or other oil companies objected to the increased price of storage and hence complained to your Minister. The principle is the same here. I have to pay \$90 per month for my rooms. I think it is too high.

Suppose I should complain to the American Government that I was overcharged and demand a settlement of the question as a diplomatic one, I would be doing exactly what your oil companies have done. Your government would rightly tell me to seek apartments elsewhere, would it not? That is the case in Turkey. The oil companies should find a market elsewhere if they cannot consent to take up with municipal regulations as they find them. I think the question will be settled, however, by competition. Russia has lately developed great oil regions. She is nearer our markets and can supply them so much more cheaply that she will soon run out the American oil firms." Both stories are plausible enough, but the Americans have such implicit faith in their own version that, it is said, they propose to "square" the Sultan by buying back the firman, and then putting up the price of storage to such a figure for outsiders, that Russian oil will be no longer able to compete. While these squabbles and projects were in full swing the American Mediterranean Squadron arrived at Tenedos, and its commander, Rear-Admiral Baldwin, telegraphed to General Wallace, United States Representative at Constantinople, to say that he proposed to pass the Dardanelles, a project which the newsmongers at once construed into an armed menace *in re* Kerosene, while the officials at Constantinople were thrown into a terrible flutter, as the United States not having been a party to the Treaty of Paris, the irades close the Dardanelles to the Stars and Stripes. Admiral Baldwin made his way through, all the same, and the strains of his band so delighted the Sublime ears that he only escaped a decoration by accepting a snuff-box set with brilliants, while the bandmaster and his assistants were presented with diamond studs, and the musicians with sundry pieces of jewelry. Meanwhile there has cropped up another question which threatens to be more troublesome than the Kerosene. It is one of the endless dilemmas connected with extraterritorial jurisdiction. Senator Pendleton's bill, now before Congress, for establishing Consular Courts in various countries and defining their jurisdiction, claims that American Consuls in the Turkish Empire shall have jurisdiction over all cases to which American citizens are parties. The Porte, however, will not recognise any such claim. It denies that the treaty of 1830 confers this right on the United States officials, and declares that no country possesses it within Turkish territory. The American version of the treaty provides that citizens of the United States shall not be arrested and imprisoned by local authorities, but shall be tried by their own Minister or Consul. The Porte, on the other hand, affirms that the treaty was mistranslated, and that a special Commissioner appointed by America reported the fact long ago. At all events, the jurisdiction question has been under dispute for fifty years. In a case at Smyrna which arose under the treaty, if was found impossible to reconcile the conflicts of jurisdiction, and the alleged criminal was placed in jail, from which he escaped during the night, both parties conniving at it as the only way out of the entanglement. Turkey insists that foreigners committing offences against Ottoman subjects must be confined in Ottoman jails and tried in Ottoman Courts, and her Ministers assert, with some show of reason, that the dispute cannot be settled by the simple proceeding of America giving her Consular officials exclusive jurisdiction over

citizens of the United States who offend against Turkish subjects or laws. "Other nations claim Consular jurisdiction in Turkey," the Ottoman Minister at Washington says, "only when both parties to a dispute are their own subjects, while America wishes to extend it also to cases in which one party is an Ottoman subject."

DOUBTLESS a great deal of capital will be made out of the St. Leonard's case by persons whose logical pastime it is to demonstrate that because there are, occasionally, black sheep among English peers, the whole nobility is a tainted flock. But if Lord St. Leonards has been a disgrace to his order, it is well to remember that the circumstances of his life have been altogether exceptional. To say that any very large allowance of blue blood runs in his veins would be a slight exaggeration. His great-grandfather was a hairdresser, whose shop in Burlington-street is still open, though of course the name over the door is no longer Sugden. The barber's son rose from being an errand-boy in a conveyancer's office to the position of Lord Chancellor, and died intestate as Lord St. Leonards. Boyle Farm, a beautiful estate lying on the banks of the Thames, represented the whole of the family property, and when, in the sequel of a strange law-suit, it passed into the hands of the present Lord St. Leonards' uncle, the unfortunate nobleman found himself possessed of just forty pounds per annum to support his title. He could not work; to beg he was ashamed. So he took to billiards and pigeon-shooting, until finally, by the kind assistance of his friends, he married a young lady with a dot of £100,000. This was in 1876, and in February, 1883, Sir Cresswell Cresswell was called upon to separate the ill matched couple. The peer was proved to have been guilty of adultery. He had been bad enough before this, but he became worse afterwards, and it is said that there was not a public-house or a hotel in London which did not shut its doors to him. Reduced to great straits, he fell in with a Mr. Crawford, of Twickenham, a gentleman who had made a large fortune in Australia and California, and who, being an exceedingly kind-hearted, hospitable person, invited the bankrupt peer to stay in his house. It was here that Lord St. Leonards committed the criminal assault of which he has just been found guilty at Clerkenwell, and persons familiar with the outline of his life will not be surprised that a reference to his "honorable name" excited derision rather than sympathy in Court.

THE gradually prevailing notion that a citizen of the United States may be his own avenger whenever a woman has been wronged, was the cause of a terrible tragedy in the court-room of Redwood City, on the 10th of May. The victim was a young man named Harry Casey. He was arraigned on a charge of assaulting a Miss Sweeny at a picnic. The story told by the complainant, a girl of fifteen, was full of improbabilities. She said that she met Casey for the first time at the picnic, and that after dancing once with him, they walked a little distance from the dancing platform. There, within sight and call of the other picnickers, Casey, she declared, threw her down and assaulted her, she making no outcry the while, "lest he might have a revolver and shoot her." Even when she rejoined her mother, she did not say anything of what had occurred, but, on the contrary, alleged that she

had been walking with a different person altogether. For the defence, testimony was offered that the accused was not near the spot at the time when the assault was alleged to have taken place, and that he had not escorted Miss Sweeny further than the dancing platform. These facts had just been sworn to, when the girl's father, who was sitting behind the accused, drew a pistol from his pocket, and placing it within a few inches of Casey's head, fired three times, the second ball passing through Casey's body from back to stomach. The wounded man expired two hours afterwards, in the Court-room, whence it was found impossible to remove him. Just before death, he declared himself wholly guiltless of the charge. The Judge also stated that it had been his intention to dismiss the case, so firmly convinced was he of the defendant's innocence. Yet we make no doubt that the shooter, Sweeny, in his turn, will find a jury ready to acquit him on that wonderful plea of "emotional insanity."

THE statistics of the production and exportation of iron throughout Europe and America during the past few years, show, more clearly than anything else, the immense effect produced by the railway speculations of the United States. The following table of comparative figures has recently been published:—

	1869.	1872.	1879.	1882.
Great Britain.....	3,445,757	6,741,929	6,009,434	8,493,287
United States ...	1,916,641	2,854,558	3,070,875	5,178,121
Germany	1,180,579	1,457,835	1,988,676	3,170,957
France	1,018,889	1,217,838	1,344,759	2,033,102
Belgium	534,319	655,065	448,371	717,000

The extraordinary activity of American railway construction reached its maximum in 1882, and has, since then, declined considerably; so much so indeed, that a crisis is expected in the iron market, production having far outstripped demand. In Germany, especially, immense quantities of steel have been manufactured by the processes of Bessemer, Gilchrist, and others, while, on the other hand, the demand for steel seems to have been quite satisfied, and, at the same time, the construction of iron ships has received a sensible check.

How far the treaty, concluded but not yet ratified, between England and Portugal with regard to the Congo, will interfere with the doings of the International Association, it is not easy to determine exactly, but that there will be some friction if the treaty comes into force seems inevitable. At present, however, the Association confines itself to the Upper Congo, while the treaty deals only with the Lower Congo, both banks of which it gives to Portugal. We described, in a recent issue, the great dissatisfaction which the treaty had caused in England. Since then, a letter from Lord Edmund Fitzmaurice to the Manchester Chamber of Commerce has been published. The letter defends the treaty on the grounds that the motives which induced Lord Palmerston and Lord Clarendon to withhold any recognition of Portugal's claims of sovereignty no longer exist, since the slave trade has ceased on the West Coast; and points out that Her Majesty's Government have taken care to secure to British merchants all the trade facilities they now enjoy. The Chamber, however, is not convinced by these arguments. It replied that the export of slaves had practically ceased, and free trade between the natives and the merchants of England been carried on for many years, before Lord Palmerston and Lord Clarendon declared "that the interests of com-

merce rendered it imperative upon Her Majesty's Government to maintain the right of free and unrestricted intercourse with these Congo tribes," who are the sovereigns of the countries, who, until this year, have always been faithful to their engagements, and under direct relations with whom "trade has extended, prospered, and been entirely free from serious disputes." It must be confessed that traces of consistency are not very discernible in a foreign policy which, in the cause of freedom, allows Egypt to be driven out of the Soudan by the Arabs, and at the same time hands over to Portugal the hitherto independent tribes on the Congo. Of course the British and Foreign Anti-Slavery Society has cried out loudly against the treaty, accusing Portugal roundly, "on unquestionable evidence," of still fostering a traffic in slaves wherever she can make it profitable. More serious still is the fact that both France and Germany are reported to have protested. The *Daily Telegraph*, of May 7th, says that France has declared the treaty impossible, and the *North German Gazette* says that Prince Bismarck has sent a formal protest to London and Liverpool against its ratification. This means that if England ratifies the document, British ships and British merchants will have to trade under the French or German flag, unless they wish to be so handicapped that profitable commerce on the West Coast would become hopeless.

It is generally possible to discount at a glance the errors committed by the vernacular press when it undertakes to instruct its readers about the affairs of foreigners, which are doubtless quite as difficult of access to Japanese as Japanese affairs are to us. A Tokiyo Journal, however, recently published a rumour so comical that it tempted us to make special enquires. The story was, that of the two Italian officers employed by the Japanese Government to superintend the manufacture of bronze ordnance at the Osaka Arsenal, one was so taken aback by the unlooked-for development of Japanese scientific methods, that he concluded his services were superfluous and resigned his appointment. As may be anticipated, the result of our enquires is that one of the Italian officers was, indeed, obliged to resign his appointment, but from a wholly different cause. His health unfortunately broke down, and his medical advisers pronounced an immediate return to Italy unavoidable. We understand that his successor is already *en route*, and while recording our sympathy with the invalid, we beg to express our admiration of the very ingenious and entertaining form which the legend assumed in its passage through the hands of Japanese reporters.

THERE is a good deal of mystification about Russia's proceedings in Central Asia. Nothing is quite certain except that she has made great advances. It is plainly intended that the public shall not know more than Russia deems expedient for we read, under date at St. Petersburg, May 18th, that "a rigorous censorship of despatches concerning the Russian policy in Central Asia and Merv had been ordered." A few days previous to this, it was announced that Russia and Persia were "engaged in determining the new frontier in consequence of the recent acquisition of Merv by Russia," and rumour said that one result of this arrangement would be the cession of Sarakhs to the latter Power. The *Journal de St. Petersburg* con-

tradicted this rumour on May 11th, but on May 19th, the following telegram reached London, in connection with the arrival of the Governor of the Caucasus, Prince Dondoukoff Korsakoff, in the Merv district:—"Russia is making rapid strides in Asia, and nations are being conquered in a day. The departure of Prince Dondoukoff for Merv gave occasion for an important leading article in the official journal of the Caucasus, the *Kavkas*, on the object of the Governor-General's journey. The Prince left Tiflis for Baku with the wholly peaceful intent of organizing the administration of the newly annexed district and instituting measures for transforming it into a Russian province. It is carefully stated, however, that 'this time the object of the Prince's journey is quite of a peaceful character,' as though the possibility of journeys being yet taken for other than entirely peaceful objects were strongly impressed upon the mind of the writer.' The next piece of information is important, as showing that Sarakhs becomes Russian, according to a convention already made with Persia, defining the line of demarcation between the Attok and Khorassan; and Prince Dondoukoff will doubtless be present at its evacuation by the Persians—an event which the *Kavkas* intimates is the main condition of this second arrangement with the Shah. Sarakhs will then be made the capital of the new Tejend district adjoining that of Merv. Prince Dondoukoff Korsakoff will furthermore take measures for improving the communications between Askabad and Merv on the one side, and between Merv and Bokhara and the province of Turkestan on the other. He will also consider the necessity of uniting Askabad with Samarcand by telegraph through Merv, Tchardjui, and Bokhara, thus bringing Turkestan, Merv, and Askabad into shorter and more direct communication than over the roundabout Orenburg route. Engineers have been sent from the Caucasus to Teheran to obtain permission to unite Baku with Resht by a new railway running for 350 miles along the shore of the Caspian." It is not easy to see where these advances are to stop, or why they should stop anywhere short of India.

Quem deus vult perdere, &c. We have before this found occasion to doubt the wisdom of certain proceedings on the part of our French friends in the far East. But of all the insane programmes ever put forth by a would-be colonising Power the following strikes us as the most idiotic yet evolved from the inner consciousness of even a Gallic Anglophobe. According to the Vienna correspondent of the *Daily Telegraph*, it is as follows:—"As soon as the authority of France shall be firmly established there, a complete military organisation and administration, independent of Saigon, will be introduced. No foreigner will be allowed to settle in Tonkin, or to purchase land there, without the previous authorisation of the local government, which authorisation will only be granted in case the applicant shall be content to take up French naturalisation. All other than French goods, and particularly those of German origin, will have to pay heavy import duty. By this and other means French colonisation will be encouraged." Now, speaking from more than a passing acquaintance with French colonial policy in the East, we must candidly confess that no more suicidal idea ever emanated even from the brains of an 1848 "colonel." At the

seventeen open ports of China the whole commerce and industry of France, aided, be it noted, by a most careful reservation of "concessions" at most of them, is represented by some five firms, who deal in watches and clarets, and, as regards business, do not even count as a factor in the Eastern trade. The fact is that commerce (out of France) is not the French *métier*; but we little thought that, with the experience of the treaty ports to guide him, the most rabid of anti-foreign French Ministers could have been guilty of so silly a proposition. The French are good military colonists, and nothing more. Such an idea as that described above merely means an enormous addition to the call upon French finances to support a profitless colony.—*Whitehall Review*.

THE *Yomiuri Shimbun* is very severe upon the bazaar recently held at the *Rokumei-kwan* by the Ladies' Benevolent Society of Tokiyo. It says that the ladies behaved badly, and that, on the whole, the affair was neither refined, elegant, nor admirable. If the truth must be confessed, we were prepared for criticism of this nature. It comes with all the better grace, too, from the *Yomiuri Shimbun*, inasmuch as that journal was, at first, enthusiastic in its applause of the project. It had nothing but good words for the kind-heartedness which prompted "fair dames of high degree" to stand at stalls and sell goods to the unwashed multitude, all for the sake of the sick children and women of the metropolis. Now, however, it declares that the ladies forgot their good manners and conducted themselves unbecomingly! Of course one wonders at once whether the editor of the Tokiyo Tattler had the misfortune to carry more money to the Bazaar than he could conveniently afford to squander upon knick-knacks. If so, he probably penned his indictment of the ladies' manners under the influence of sentiments similar to those of the unhappy Scotchman whose saxepe had gone bang in half an hour. Everybody is not gifted with the resignation of that noble-hearted merchant of Nakadori, who, having concealed himself in the crowd and thus passed all the stalls without changing the ten *sen* note he had magnanimously carried with him as a charitable donation, observed, when he was obliged at last to disburse the whole sum for a glass of iced water:—"Well, to be served by the daughter of a Privy Councillor is some excuse even for such extravagance." But whatever private reason the *Yomiuri Shimbun* may have for its censures, we are by no means sure that they ought not to be endorsed. At any rate, we do most sincerely wish that the ladies of Japan, if they borrow the theory of bazaars from the West, would adorn its practice with as many Japanese fashions as possible. It is high treason, perhaps, to criticise such matters at all, but we have a very sincere admiration for the gentle grace and modest unobtrusiveness which distinguish the fair sex in this part of the world, and we cannot be pleased to see these charming qualities exchanged for the styles and methods which Western Ladies have thought fit to adopt at charity bazaars. Throughout the opening day of the Tokiyo Fair everything was faultless. The articles were all legibly marked, and their fair sellers disposed of them in a way that made everybody wish he had a fortune to squander. But on the second day, and above all on the third day, the whole thing was European, and how much it lost by the change we should be afraid to estimate. The impres-

sion which many foreigners carried away on the first day was, that a bazaar in Japan was a far more civilized affair than a bazaar in Europe or America, but, we regret to say, that impression did not survive a second visit. Yet, unless we are misinformed, the proceeds of the first day's sale compared favorably with those of the succeeding days. The fact is, that to be warmly, if not vehemently, solicited inspires in most men a desire to escape the necessity of purchasing, and we strongly recommend the ladies of Japan to leave these methods to those who have made the error of initiating them. The thing is not artistic, and nothing inartistic is becoming in Japan.

DR. SCHWEINFURTH, in an article in the *Pall Mall Gazette*, on the future of the Soudan, makes the following rather startling proposition:—The inhabitants of the valley should be displaced by Chinamen. These inhabitants of the Nile valley are not strictly speaking agricultural at all, and whenever they have the chance they leave their country, preferring the wretched life of shepherds on the borderland of the desert. Others go into service in large cities, or engage in small trades, and especially in the slave trade. In this respect they resemble the Polish Jews, money to them being represented by slaves; they regard the tillage of the soil as degrading; and if they were not rich enough to do it by means of bought slaves, they would neglect it altogether. Thus the entire Soudan, comprising the most distant provinces of the Upper Nile, swarms with these petty traders, who are a downright plague to the country. Thousands of others find the idleness which is so dear to them in the profession of monk or priest. These are the people from whom the Mahdi has chiefly recruited his followers. They are the pest of the country, and a new religion or a new set of immigrants would deprive them of their *raison d'être*. This lazy, corrupt, and stupid population would disappear before the Chinese and the negroes, like the mist before the sun. There would be neither poor nor rich, for China would inexorably level them all.

THE trial, at Leipsic, of M.M. Krazewski and Hentsch, charged with conspiring to furnish secret information on German military matters to the Governments of France, Austria, and Russia, seems to have created considerable excitement. The trial was held in secret, but enough transpired to show that the channel through which the accused were supposed to have conducted their treasonable designs was a Polish Society, said to have existed in Paris from 1864 to 1878, with the object of effecting, if possible, the restoration of Poland's independence. From 1866 to 1878 the chief business of the Society was to collect military reports from all parts of Europe, and several of its members are said to have been employed by the French Government, and especially by Gambetta, to organize an office for the purpose of obtaining news of this nature from Germany, Austria, and Russia. The Society had to reckon with Bismarck, however, who took the trouble to write with his own hand, and forward to the Criminal Court at Leipsic, a statement of the association's organization and objects. In this document it was asserted that, after the arrest of Krazewski, General Thibaudin, lately French Minister of War, ordered a search of the financier Erlanger's house in Paris on a false pretext, the real motive of the

search being that Erlanger was suspected of being a German agent. This story had been public property before the trial, and General Thibaudin would have answered it in the columns of the Parisian press, but was not permitted to do so by General Campeon, the present Minister of War. The reading of Prince Bismarck's memorandum is said to have caused much excitement, and the *Journal de Paris* roundly accused the Prince of falsehood. M. Krazewski, who is a man far advanced in years and possessed of considerable property, denied the charge against him, and declared his belief that certain military essays which he furnished to his friend Zaluski in Paris, and which were intended for publication in the *Paris Journal*, were the documents upon which are founded the charges against him. His friends, also, claimed that the accusation was preposterous, as he was too old to take an active personal interest in such matters, and said that the denunciation received by the German Embassy at Vienna had been actuated by malice and was a private method of revenge taken by a spy who had been defeated in an attempt to blackmail him. There could be no doubt, however, that Krazewski was a bitter enemy of Germany: his writings showed that plainly enough. A number of compromising documents, said to have been found in his handsome residence at Dresden, were used as evidence against him, and among the most important witnesses for the prosecution was a Polish journalist named Adler, who, at the time of Krazewski's arrest, gave the German Ambassador at Vienna papers bearing strongly on the case. With regard to the second prisoner, Hentsch, there appears to have been very little doubt, as letters of his were produced in which he distinctly offered to betray military secrets and fixed the sums he was to receive for the disclosures. He was sentenced to nine years' penal servitude, and Krazewski to three years and six months' imprisonment in the fortress.

AN old British army pensioner relates this story of General "Chinese" Gordon:—On the first day on which fire was opened at Sebastopol from the twenty-one gun battery, the sand-bags forming one of the embrasures caught fire from the flash of a too-closely mounted gun. A corporal and a sapper of the engineers were told off to repair the damage. The corporal ordered the sapper to mount the embrasure, and proposed to hand up the fresh bags to him. They were under heavy fire at the time, and the sapper, with some want of discipline, certainly, demurred to this arrangement, and suggested that the corporal should get up, and that he (the sapper) would go on with the handing-up business. There was a bit of a wrangle over it. Gordon, who was passing, inquired into the matter, and quietly telling the corporal, "Never order a man to do what you are afraid to do yourself," got up on the pile of bags himself and said, "Come up here, both of you," and then ordered the men who were working the gun to hand the bags up. The storm of bullets swept over Gordon and the two men, but his charmed life seemed to protect the trio. He finished his work, and came down as coolly as he had mounted, but the lesson was never forgotten, and there's a fine ring about the words, "Never order a man to do a thing you are afraid to do yourself."

PULPIT independence is a fine thing in its way. A remarkable example of it was recently given by the Rev. J. J. Delo, pastor of the Lutheran

Church at Centre Brunswick in New York. The pastor had had some serious difficulties with his flock and had finally been warned by the Church Council to resign. At first he declined to comply with this suggestion, but when the Council stopped paying him any salary, he decided to go in search of a more sympathetic flock. He preached his farewell sermon on the last Sunday in April, and concluded it with this sentence:—"I have nothing to fear from such as you, and I will be preaching the Gospel when a majority of you are in hell." He is to be tarred and feathered.

THE *North Borneo Herald*, referring to the death of the late Sultan of Sulu, says he has been succeeded on the throne by his young half brother under the style of Paduka Maha Sri Mulama Sultan Mahomed Rajah di Rajah. He is an intelligent lad of some fourteen years of age, and it appears that his mother, Pangeran Dayang Dayang Inche Jamel, and Datu Puyoh, are at present associated with the young prince in the administration of the Government. The lady, his mother, is well known to Europeans for her intelligent and liberal views. The *Herald* hears with regret, however, that a rival claimant to the throne has arisen, in the person of Datu Aliudin, and that he has considerably the largest following of fighting men. Datu Aliudin is of royal blood on his father's side, and he is connected with the present reigning family. His mother, however, was a concubine, a woman of the people, and this, by the custom of Sulu debars him from any right to succeed to the throne. The Spanish are said to be assisting Datu Aliudin with arms and ammunition, although outwardly favouring the cause of the boy Sultan. At Maibun, the Sultan's capital, rude earthworks and other defences are being constructed, and fighting appears to be imminent. Many Chinese traders have left the place with their goods, some fourteen or fifteen of them having taken refuge in Sandakan. The German corvette *Leipzig* recently called in at Maibun and Captain Herbig visited the young Sultan's mother, and received on board a visit from the Sultan himself. The lad was saluted with twenty-one guns as a Royal Prince, but the captain explained that this did not involve any recognition of him as Sultan.

THE sources whence *Public Opinion* gleans its interesting *mélange* are many, but it strikes us that a little more care might well be taken with regard to its literary extracts. In a notice of Mr. Rose's new work, "Three Sheiks: an Oriental Narration," the following remarkable criticism rounds a somewhat eulogistic paragraph:—"The bombastic language of the book is conspicuous by its absence, and in its place a simple style is adopted which rings with true sympathetic grace." This must have driven the author nearly frantic with joy.

A STRANGE thing has been seen in London, says a home paper. The novelty referred to is a jinricksha. To the bulk of newspaper readers the name may not convey a very lucid idea of what is meant, so it may be explained that a jinricksha is a sort of Japanese hansom, the great peculiarity of it being that the jarvey is his own horse, and himself draws the vehicle at a brisk trot. The Japanese are a very ingenious people, and quick to adapt themselves to Western notions. Consequently, though the individual who drew the jinricksha which has aroused so lively an

interest was dressed in "native costume," it differed materially in detail from the style of thing affected by the coolies who perform similar work in Yokohama. That is to say, there was more of it. A good deal of mystery attaches to the turn-out, which created some sensation when it made its appearance in the heart of London.

THE great scientist, M. Louis Pasteur, seems to have discovered what the medical profession has hitherto looked on as undiscoverable—a cure for hydrophobia. The cure is not less remarkable than the fact. It is inoculation, the principle being to modify the virus just as vaccination modifies small-pox. The details of this interesting discovery are given by the *Figaro* in its account of an interview with M. Pasteur, who said:—

Cauterization of the wound immediately after the bite, as is well known, has been more or less effective, but from to-day anybody bitten by a mad dog has only to present himself at the laboratory of the Ecole Normale and by inoculation I will make him completely insusceptible to the effects of hydrophobia, even if bitten subsequently by any number of mad dogs. I have been devoting the last four years to this subject. I found out, in the first place, that the *virus rabique* loses its intensity by transmission to certain animals and increases its intensity by transmission to other animals. With the rabbit, for instance, the *virus rabique* increases; with the monkey it decreases. My method was as follows:—I took the virus direct from the brain of a dog that had died from acute hydrophobia. With this virus I inoculated a monkey. The monkey died. Then with the virus—already weakened in intensity—taken from this monkey I inoculated a second monkey. Then with the virus taken from the second monkey I inoculated a third monkey, and so on until I obtained a virus so weak as to be almost harmless. Then with this almost harmless virus I inoculated a rabbit, the virus being at once increased in intensity. Then with the virus from the first rabbit I inoculated a second rabbit, and there was another increase in the intensity of the virus. Then with the virus of the second rabbit I inoculated a third rabbit, then a fourth, until the virus had regained its maximum intensity. Thus I obtained virus of different degrees of power. I then took a dog and inoculated him, first with the weakest virus from the rabbit, then with the virus from the second rabbit and finally with the rabbit virus of maximum intensity. After a few days more I inoculated the dog with virus taken directly from the brain of a dog that had just died of acute madness. The dog upon which I had experimented proved completely insusceptible to hydrophobia. The experiment was frequently repeated, always with the same successful result. But my discovery does not end here. I took two dogs and inoculated them both with virus taken directly from a dog that had just died of acute hydrophobia. I let one of my two dogs thus inoculated alone, and he went mad and died of acute hydrophobia. I subjected the second dog to my treatment, giving him the three rabbit inoculations, beginning with the weakest and ending with the strongest. This second dog was completely cured, or rather became completely insusceptible to hydrophobia." M. Pasteur then went to a kennel and caressed a dog that had undergone this latter operation. "Voyez!" said M. Pasteur, "comme il est bien gentil. Whoever gets bitten by a mad dog has only to submit to my three little inoculations and he need not have the slightest fear of hydrophobia." M. Pasteur, whose researches in the germ theory are known to, and keenly watched by, scientific men, and followed with interest by the public throughout the world, has now attained his object in the study of hydrophobia, and will read a most important paper before the Academy of Sciences shortly. M. Pasteur possesses quite a collection of mad dogs, destined for experimental purposes. The unfortunate animals are kept in a building annexed to M. Pasteur's laboratory at the Ecole Normale Supérieure, in the Rue d'Ulm, forming part of the old buildings of the Collège Rollin. At present there are thirty-six dogs, nearly one hundred rabbits, several monkeys and guinea pigs, all in a more or less rabid state. The illustrious savant is bringing to a close his thorough inquiry into hydrophobia, and the results will crown the series of his great discoveries on hospital diseases and animal vaccination. He has now succeeded in inoculating animals with hydrophobia in different degrees, and by the application of the method so successful in blood poisoning or carbon diseases in cattle—namely, by the inoculation of virus attenuated in intensity—has now discovered that dogs and all animals generally may be rendered proof against the dread disease by true vaccination. Some of the dogs on which he is experimenting, inoculated three or four times during the last three years, are still alive and well, and henceforth proof against hydrophobia. The dogs used by M. Pasteur are provided from the Paris pound, or *fourrière* in the Rue de Poissy, and cost him two francs a head. After a certain lapse of time all dogs at the *fourrière* not claimed or sold are slaughtered. The animals handed over to M. Pasteur

are divided by him into two categories—the first, called "witnesses," are doomed to death within a given time—that is, the period of the incubation of the rabid virus with which they are totally inoculated; the second are merely subjected to rabic vaccination. The comparison between the effects of natural virus and the same in an attenuated form is thus easily established. Some of the dogs succumb and others escape the disease, according to whether they were or were not vaccinated. All the animals are kept within specially constructed iron cages, the disposition of which allow of the dogs being attended to and watched without risk of being bitten.

THE correspondent of the *Daily News*, who is said to be Mr. J. J. O'Kelly, M.P., in a letter dated at Dongola, April 2nd, gives the following interesting account of the Mahdi and his followers:—"The movement led by Mohammed Ahmed, the Mahdi, is a curious admixture of religious, political, and social fanaticism. It is at once a war against the Turk, infidel, and that common enemy of disinherited humanity—the man of property. Under the new dispensation there are to be no poor and no rich. Every one is to have a little and no one too much. The central idea of the movement may be described with sufficient accuracy as an effort to redistribute surplus property. The new formula would then run—all surplus property is robbery; and with this amendment the new champion of Islam might shake hands with the French and German socialists as a man after their own hearts, only somewhat more thorough. Mohammed Ahmed is in person tall and powerfully built, but somewhat inclined to corpulency. His complexion is between brown and red—what the Arabs call *aïder*—that is, green. The expression of his countenance is agreeable, and when in repose his face is lighted up by a constant placid smile. If the statements of his enemies may be trusted, this outer aspect of benevolence furnishes but a deceptive key to his character. Against those who refuse to recognize the divine nature of the mission he can be severe to cruelty. He is credited with Jeffreys' trick of weeping over the fate of those victims whom he orders to execution, so as to create the impression that he punishes dissent and disobedience with personal regret, at the command of Allah. In barren discussion as to the nature or authority of his mission he loses no time. If any man be bold enough to challenge its divine origin or express disbelief, he is permitted to choose between submission, open acknowledgment, and decapitation. This method of reasoning has the advantage that it is brief and effective. Few men are bold enough to sacrifice their heads for their opinions, and the result is a general acquiescence in the divine authority of Mohammed Ahmed's mission. On the other hand, he protects and encourages those who voluntarily accept him as the true Madhi—the man sent by Allah to reform mankind. Beyond question Mohammed Ahmed is a man of considerable intelligence and extraordinary force of character. No ordinary man could have raised himself from a humble position and made himself master over the restive and jealous Arab tribes as Mohammed Ahmed has succeeded in doing. It has been customary to represent him as the instrument or tool of other men, but if he ever occupied that position he has ceased to do so. To-day Mohammed Ahmed is the absolute master of the life and property of every man from Obeid to Fashoda. He boasts some education, as it is understood in the East—that is, he reads and writes, and is well versed in the Koran and the commentators. He speaks both the Barabari and Arabic languages. Some Catholic priests who have met him personally state that he is by

no means a vulgar impostor, but, on the contrary, impressed them as a man thoroughly convinced of the divine nature of his mission and wholly devoted to carrying out the religious reforms which he claims he has been sent to effect. The more intelligent part of the population do not put any faith in his divine mission; but among the mass of the people, who are sunk in almost absolute ignorance, Mohammed Ahmed is undoubtedly regarded as a prophet sent by Allah, whom it is sinful to resist. 'Had the Mahdi declared himself a king,' said an intelligent merchant the other day, 'no one would have followed him; but because he comes as a prophet the people fear to disobey him, lest they should expose themselves to the divine vengeance.'

LORD RANDOLPH CHURCHILL's doings occupy an important place among our telegraphic advices by this mail. The facts connected with his temporary withdrawal from the Conservative Union appear to be somewhat different from what we had supposed. It is now stated that when he was appointed chairman of that Association, he slighted and ignored the Central Conservative Committee over which Lord Salisbury presided, claiming that the Council of the Union had control of the entire Conservative party, and that it had in fact become a caucus. In pursuance of this view, he proceeded to appoint an executive committee, consisting of himself, Sir Henry Drummond Wolff and Mr. Gorst. The Association, however, adopted a resolution that the Council and the Central Committee should work in harmony, and Lord Randolph, regarding this as a vote of censure on himself, resigned the chairmanship of the Association. Rumours were speedily spread that he had left the Conservative ranks, but these he emphatically denied in a letter to the *Standard*. The *Times*, commenting on the event said:—"The real question at issue between Lord Randolph Churchill and the Conservative Leaders is whether the internal organization of the party shall be established upon a proper representative basis as Lord Randolph Churchill advocates or shall remain upon a secret and irresponsible basis. On this broad and unmistakable issue there can be no doubt but that Lord Randolph is right." A Conference of Conservative representatives was subsequently held, and its leading members waited on Lord Randolph, the Earl of Salisbury and Sir Stafford Northcote, to urge upon them an amicable settlement of the trouble. The result was a private meeting of the Conservative members, when Lord Randolph made a powerful speech, advocating unity, and the general impression after the meeting was that he had gained a substantial victory. In fact there can be little doubt that Lord Randolph is now one of the most popular men in the Parliament. He has everything in his favour, above all, sympathy for the people, whereas Lord Salisbury is credited with a profound disdain for the masses. The *Pall Mall Gazette* says of him that "he has the mind of an Oxford Don and the manners of a family physician." Lord Randolph, however, has to endure a good many gibes from the organs of his own party. Thus the *Standard* tried to make out that his resignation of the Conservative Union's chairmanship was necessitated by an "irritating letter" he had written to Lord Salisbury; but when the irritating letter was published, it turned out to be nothing more than a plea for the open establishment of a Tory caucus. "The caucus," said Lord Randolph,

"may be, perhaps, a name of evil sound and omen in the ears of aristocratic and privileged classes, but it is undeniably the only form of political organization which can collect, guide, and control for common objects large masses of electors, and there is nothing in this particular form of political combination which is in the least repugnant to the working classes in this country." Of course this letter occasioned a terrible outcry on the part of the Conservative journals, but Lord Randolph virtually gained his point, and was unanimously re-elected chairman of the Union. He made another sensation in the House of Commons when the extension of the Franchise Bill to Ireland was discussed in Committee. Mr. Broderick (Conservative) moved to exclude Ireland, but Lord Randolph, amid loud Liberal cheers, opposed the amendment, saying that "although he objected to the bill strongly on account of its provisions, he thought the position taken by the Government was statesmanlike. He had no fear of the result of enfranchising the Irish agricultural laborers, and expressed the hope that the Conservatives would not alienate the good opinion of the Irish by supporting Broderick's amendment." This led to a violent attack by Lord George Hamilton, who told Lord Randolph that if that was "a statement of the democratic Toryism of the future, he (Lord George) declined to follow under such leadership." The incident seems to have caused considerable excitement, and inasmuch as Sir Stafford Northcote and many of his followers quitted the House before the division, leaving Lord Randolph to vote with the Government, it can hardly be said that the split in the Conservative camp is healed yet.

THE Wharton School of Finance and Economy, the first annual report of which has just been made to the University of Pennsylvania, offers certainly a rare opportunity to students of political economy. The American press speak in very high terms of this establishment, which boasts a faculty of distinguished men of letters, among others Professor McMaster, Professor Robert Ellis Thompson (whose works on Political Economy are known the world over), and Professors A. S. Bolles. As an illustration of the practical character of the teaching of Wharton School may be mentioned a series of essays written by members of the class studying subjects connected with governmental administration. The subjects treated in these essays include Civil Service in England and America, History of Federal Taxation, Science of Statistics, Postal Telegraph, County Government, Finance, &c. Original investigation preceded preparation of the essays, and this policy of cultivating a habit of self-reliance permeates all the departments. "We read without surprise," says the *Philadelphia Press*, "that, of the senior class of Wharton School, one is a college graduate of ten years' standing, and another a graduate of the University of Tokio, Japan."

THE *Mainichi Shimbun* publishes the following correspondence from Korea:—Kim Phyoŋg-kuk, President of the T'sung-li Yamên, has sent in his resignation, but it has not been accepted. Zen Ko-sin, who played an important part in the negotiations between Korea and Japan, has been appointed Police Inspector-General for Inchhôn Fu. He is one of the few honest men among Korean officials, and his appointment is very generally looked upon as being that of the right

man in the right place. Owing to the failure of the crops in the interior, burglaries and highway robberies are on the increase. Paupers swarm at the port of Fusan; some 200 beggars in the last stage of misery are living in the vicinity of the Settlement.

A CRICKET MATCH played yesterday between Yokohama and Tokiyo was one of those extraordinary affairs in which chance seems to take possession of the field and do what she pleases with the noble game. On paper Tokiyo had an excellent team. True, it included two men who had never played cricket in their lives before, and whose whole knowledge of the pastime is said to have been acquired by the perusal of handbooks in the train *en route* for the ground. But the remaining nine were all good men and true, every one of whom might have got into double figures with the most ordinary luck. Luck, however, was dead against them from the start to the finish. Their first innings was a fiasco. Its total did not reach twenty. And yet among the batsmen was one gentleman whose record in the only three innings previously played by him this season had been three "not outs" with an average of over fifty runs per innings. Yesterday he was bowled at four, by a ball which beat him by its very simplicity—an accident which all old cricketers will comprehend. The story of the entire innings was similar; a chapter of misfortunes throughout. In their second essay, indeed, the Tokiyo players came out differently; over forty runs for three wickets. But it was then too late to relieve the past, and nothing remained but to reflect that things *might* have been otherwise had the tide of ill-luck turned sooner. We can sympathise heartily with the Tokiyo men, more especially as they showed great pluck in playing at all. The best cricketers cannot dispense altogether with practice, and, as it happens, Tokiyo lacks something essential to practice; namely, a cricket ground. The team had never played together before. Its units met as a team for the first time at the pavilion yesterday; went to the wickets without, in most cases, having seen a bat or a ball for months, and very naturally failed to put runs together. We believe that with equal advantages in the matter of practice, there would not be much to choose between Tokiyo and Yokohama under existing circumstances.

THE *Figaro* has made a new departure in advertising. Recognizing that the men of this nineteenth century are too busy to search the columns of a paper for anything not immediately accessible, the aristocratic French organ now divides its *petites annonces* into twenty categories beginning with "amusements" and ending with "situations wanted." Among these *petites annonces* illustrated advertisements are not admitted—except in the case of a house for sale or to let, when an extra payment of one franc secures the insertion of a diagram. The *Figaro*, however, meets the views of persons desiring to illustrate by publishing an "*Encartage*," with excellently executed pictorial advertisements, for each of which the modest charge is 2,000 francs, when the extra sheet is delivered with the 30,000 copies sent to the journal's regular subscribers, and 4,000 francs when delivered with the *Figaro's* full publication of 80,000. The public is supposed by experts to have come to the conclusion that high-priced advertising mediums

are the cheapest in the end, and in obedience to this discovery the *Figaro's* charge for ordinary advertisements is \$1.20 per line, which means about \$7 per inch. If pecuniary success be any evidence of right judgment, the *Figaro* has undoubtedly judged right, for it is one of the most profitable journalistic enterprises in Paris, and there can be little doubt that its new method of advertising for its clients will prove a most excellent advertisement for itself also.

OUR countrymen, says the *Mainichi Shimbun*, very generally neglect that important sanitary rule, that sufficient care cannot be taken with regard to the quality, as well as the quantity, of the food they eat. It has been the experience of our Navy that many seamen on our war-vessels, though apparently strong and in a normal state of health while in Japanese waters, fall sick and die after two or three months' sojourn in Korean and other foreign ports. Foreign navies can tell the same story. This phenomenon has been fully discussed by our naval medical men, among whom Mr. Takagi, Surgeon-General, has ascribed the high rate of mortality among Japanese seamen to indulgence in improper diet. The daily rations of every seaman have since been altered to 80 *me* of beef, 5 *shaku* of milk, 4 *go* 5 *shaku* of rice, and 40 *me* of vegetables. Two months' trial amply demonstrated the merits of the new dietary system, for it was found that the men had increased 100 *me* in weight on the average, while their general health had much improved.

IN consequence of the despatch received from Mr. Sakurada Chikayoshi, Japanese Chargé d'Affaires for Holland, relative to the death of the Prince of Orange on the 21st instant, H.E. Ito, Minister of the Imperial Household, sent the following telegram to Mr. Sakurada on the 24th instant:—His Imperial Majesty has felt deep sorrow on hearing the news of the sad bereavement of H.M. the King of Holland, and desires the expression of his sympathy to be conveyed to the Minister of the Royal Household.—*Kwampo*.

WE have received the First Section of a Library Edition of "Stormonth's English Dictionary." The work will soon be completed in this very convenient form, and will be thus brought within reach of many who have hitherto refrained from supplying themselves with a copy of the original editions. It is unnecessary for us to say anything of the merits of a book to which the best critics have awarded a high place among English classics, and with which most of our readers are doubtless already familiar. Messrs. Kelly & Co., we observe, are agents for the new edition in Yokohama.

BARNARD, who, it will be remembered, was lately sentenced to two years' imprisonment at Kobe for stabbing the steward of the American ship *El Capitan* during a quarrel in self-defense, which resulted in the death of the latter, arrived on Thursday by the *Takasago Maru* in charge of Captain Taylor, and was conveyed to the U.S. jail where he is to serve his term of imprisonment.

THE *Kwampo* reports that a telegram has been received from the Japanese Legation in St. Petersburg stating that a son was born to the Czarovitch on the 11th instant.

THE CONSULAR TRADE REPORT FOR HIYOGO AND OSAKA.

MR. CONSULAR TROUP'S excellent Report of the trade at Hiyogo and Osaka for 1883, sets forth general results which, as might have been expected, tally, in the main, with those for Yokohama. Commerce has suffered at the Southern ports as well as at the northern, and in both cases from the same cause—currency appreciation. Mr. TROUP recognises this very plainly. He points out that, whereas the specie value of the paper *yen* in the Spring of 1883 was only 70 cents, it had risen to 90 cents by the fall of the year, and remained fairly steady at the latter figure. This appreciation of 20 per cent. is understood, he says, to have been brought about by a process of currency contraction, which consisted in the withdrawal of a portion of the Government's fiat notes by exchanging them for interest-bearing bonds. "There is no doubt," he adds, "that this is a step in the right direction; but in the meantime the change causes considerable depression in the agricultural and trading interests." Having regard to the importance to mercantile men of a thorough acquaintance with the nature of the medium of exchange in which they are required to deal, we have always counted it most unfortunate that enquiry and reflection are so often replaced by hypothesis and prejudice on the part of local journalists who undertake to discuss Japanese financial problems. A year and a half ago, when there existed no longer any room for reasonable doubt that the process of contraction had fairly commenced, and when its consequences ought to have been quite discernible within certain limits, the local press persistently refused to acknowledge the reality of the operation, and helped to accentuate the evil by warning the public against reposing any faith in the Government's efforts, or in the permanence of their already apparent results. We spared no pains at the time to counteract this mischievous tendency, but we were never sanguine of much success. To awaken distrust is always a thousand times easier than to inspire confidence. The Government's policy in the past had not been of a nature to prepare men for the steady, and theoretically sound, though practically over-drastring, course it has pursued during the past three years, and we can only regret now that the determined efforts of Japanese financiers in the right direction were hampered rather than assisted by those from whom more intelligent and sympathetic action might fairly have been expected.

With regard to the details of the trade itself, it will be observed that the conditions of 1882 were reversed in 1883. For whereas in the former year the tendency was towards an increase in the bulk of exports and a decrease in the bulk of im-

ports, the opposite was the case in 1883. The variation, however, is very trifling; the decrease in exports being only 4.3 per cent., the increase in imports 5.2 per cent., and the increase in the whole trade 0.83 per cent. Taken by themselves, these figures would indicate, at the worst, a stationary state of affairs, or even a slight improvement. But Mr. TROUP justly points out that the actual condition of commerce for the year under review, at least so far as imports were concerned, must be measured, not by the quantity of goods which came into foreign godowns, but by the quantity delivered from them. Under this aspect, the figures he furnishes show that the import trade generally was seventeen per cent. less favourable than the trade of the preceding year; and, since the bulk of the export trade fell off 4.3 per cent., it may be safely stated that the business done by foreigners in Hiyogo and Osaka, during 1883, was fully 20 per cent. less than the business done in 1882. This is a very serious result, and, at the same time, it accords better with the general feeling of depression which prevailed throughout the year, than the conclusions recorded in the Report for Kanagawa.

The fact, noticed by Mr. TROUP, that sales made to the Japanese are no longer in large quantities and on contract, but in small quantities and for cash, is probably attributable, in the main, to currency fluctuations, which render anything like accuracy of forecast impossible. The result is recorded, we observe, with satisfaction, as indicating a safer and more healthy method of commerce. It is difficult to endorse this verdict completely. Doubtless the foreign importer would make fewer losses if his transactions were conducted as Mr. TROUP describes, but, on the other hand, such a state of affairs is plainly suggestive of a general timidity and a cramped condition of enterprise on the part of Japanese dealers.

A very interesting point to which attention is drawn by Mr. TROUP, is the difference in the average prices of the teas exported in 1882 and 1883. In the former year, the average was \$24.82 per picul; in the latter \$20.96, being a decrease of more than 15 per cent. This change is referred to a tendency on the American market in favour of lower priced teas, but such an explanation leaves a great deal to be desired. It is much easier to believe, and statistics support the idea, that excessive supply is at the root of the fall in American prices, than to attribute that fall to the deterioration of a taste which was originally created by the superiority of the Japanese product. Doubtless as prices declined in the United States, exporters at this end were obliged, in self-defence, to have recourse to lower grades, so as, if possible, to keep within the narrow, and constantly narrowing, margin offered by American rates. The effect of this must plainly have worked in the direction of accentuating the mischief, since the way

to stimulate a languid demand is certainly not to supply an article of inferior quality. When the trade in Japanese teas first began, the average quality of the exports was much higher than it has been of late years, while, at the same time, the quantity shipped has recently exceeded any reasonable estimate of the demand. If these facts be admitted, it will follow that the American market has been influenced from this end, and consequently that from this end also must the remedy emanate. That remedy is to be found, we believe, in improved processes of preparation and production, and the newly formed Japanese Tea Associations are a step in the right direction. We are surprised that, having regard to the extent and importance of these Associations, the indications of their growth, discernible plainly enough in 1883, did not receive fuller notice in either the Trade Report for Kanagawa or that under review.

The increased export of wheat from Hiyogo is worthy of special remark. In 1882, this article figured for only 5,076 *yen* in the returns, and in that total barley also was included. In 1883, however, the export of wheat alone reached 182,353 *yen*; and if we include Osaka, from which place none was sent at all in 1882, we obtain a total increase of 193,331 *yen* for the two ports. There can be little doubt that in her wheat fields Japan possesses an important source of wealth, which, to become available, needs only improved means of communication.

AN INCIDENT OF THE WALL STREET CRASH.

THE opening incident of the recent great crash in Wall Street is especially interesting, on account of its connection with the GRANT family. The story itself is a wonderful example of the business methods which still prevail among men of sense and reputed shrewdness in the United States. The firm of GRANT and WARD was organized in July, 1880. Mr. FERDINAND WARD was the moving spirit. A young man of little over thirty, he seems to have combined a wonderful capacity for reckless speculation with an almost equal ability to inspire confidence. His original transactions on his own account were so successful, and his prospects seemed so brilliant, that when he proposed a partnership to Mr. U. S. GRANT, junior, the latter twice put the offer aside on the ground of the great difference he supposed to exist between his own business qualities and those of his would-be partner. People who have implicit faith in the prescience of genius will doubtless conclude that all this was a part of the programme WARD had mapped out, and that accident had little to do with a combination so admirably adapted to its purpose. However this may have been, WARD certainly took ample advantage of the situation, for he

induced his too-modest associate to sign articles of agreement providing that he, WARD, should draw all the checks, and manage the whole business, without question or interference. The business was nominally stock-broking, and, up to the collapse of the firm, everybody, WARD himself excepted, confidently believed, that, under the management of the brilliant young financier, fortune was showering her best gifts on the undertaking. A few months after the firm was established, General GRANT entered it as a special partner, contributing a very considerable sum to the capital, and, what was much more important, contributing the prestige of a name which every citizen of the United States was ready to trust. But the General, like his son, did not attempt to master the details of the business. His military experience had doubtless taught him the error of a divided command and the mischief of inexpert meddling. It evidently never occurred to him for a moment to doubt his son's sagacity. In fact, the only bright feature in this unfortunate affair is the mutual confidence and affection of the GRANT family. From the General downwards, each put everything he possessed into the firm, and no one drew anything out. The General put in \$100,000 of his own, and \$150,000 which he borrowed from Mr. VANDERBILT for the purpose. Mr. U. S. GRANT, junior, put in all his own money, his wife's fortune of \$400,000 and a further sum of \$500,000 borrowed from his father-in-law. Colonel FRED. GRANT contributed everything he could command, together with sundry amounts borrowed from his friends, and Mr. JESSE GRANT brought all his worldly belongings to the abyss the day before the crash. Moreover, these four were so firmly persuaded of the wisdom of leaving every dollar to fructify in so paying a concern, that they did not even draw their supposed profits or the interest on their bonds. As for WARD, he seems to have been a species of MONTAGUE TIGG MONTAGUE. Employing General GRANT's name as a decoy, he persuaded about a score of well-known people to deposit money with the firm, on the strength of mysterious hints of big profits to be realized through Government contracts, in which the General was represented as having an indirect interest. Of course the General knew nothing of this. On the contrary, his way of thinking was so decided that he took the trouble, two years ago, to warn WARD, that if the firm had any dealings with the United States Government, he, GRANT, should at once withdraw his name, and insist upon his son's withdrawal also, as the notion of an ex-President profiting by official contracts did not consist with his ideas of honour. It is much to be regretted that the General's precautions rested there, and that he failed to recognise the full scope of the severe obligations devolving on the owner of such a name as his. That,

however, was an error of judgment. It will not mar the feeling of sympathy which, as the *London Times* (May 13th) truly says, "will extend far beyond the immediate circle of General GRANT's friends and even beyond his own countrymen." With the exception of this one warning, WARD was left virtually uncontrolled. Mr. U. S. GRANT, junior, taking a somewhat romantic view of the implicit trust imposed by the above-mentioned articles of agreement, lived in a fool's paradise. His principles about Government contracts were not less severe than those of his father, but WARD satisfied his scruples by assuring him that the firm had no direct interest in such contracts, since it merely advanced money to men who had secured them. WARD also professed to have contracts with private corporations, as railways, and explained that his manner of proceeding was to give the firm's cheques to the railway officials to carry on the work, receiving in return a warrant from the company for the amount with a handsome profit. Once Mr. GRANT was inquisitive enough to ask for further details, but WARD told him that he ought to be satisfied with his profits, and that if there was any loss on the contracts, he, WARD, stood ready to guarantee for the firm. Thus Mr. GRANT never learned, until he was ruined, that the contracts were as fictitious as the profits. This was not the only purpose to which the pretended contracts were applied. It was WARD's habit to make notes for the ostensible purpose of carrying on the contract business, and to use the money obtained on the notes in whatever way he thought fit. How he used it, nobody seems to know clearly yet. Another favourite device was to re-hypothecate collaterals lodged with the firm as security for monies it had advanced; while to receive deposits under promise of a fixed profit by an appointed time was an every-day occurrence. Of course these operations could not have been carried on so long without the connivance of a bank. The Marine National Bank was the assistant. Its president, Mr. FISH, was either a dupe or an accomplice of WARD'S—probably the former, for though FISH is an experienced financier, sixty-five years of age, he is generally accredited with certain traits of character which consort better with indiscretion than with guile. Assuming that he, too, was a victim of misplaced confidence, the service of the bank he controlled must be regarded as an accidental but unfortunate link in the chain of WARD'S evil opportunities. For while FISH was the president of the Marine Bank, one of his sons was cashier; another son acted as the President's secretary; a brother was paying teller; a son-in-law, note teller; a daughter, the note-teller's secretary; and a nephew, check clerk. By this family concern the checks of GRANT and WARD were certified without limit, so that everything went on swimmingly until May 6th; when suddenly,

at 11 o'clock in the forenoon, the Marine Bank closed its doors. The immediate cause of the closure was an order from the President, who, as it subsequently transpired, found that GRANT and WARD'S checks upon the Bank—amounting in one day (5th May) to \$750,000—had left the latter a defaulter at the Clearing House to the extent of more than half a million dollars, and that WARD'S promise to deposit collateral securities for the over-draft had not been fulfilled. The bubble being thus burst, disclosures followed quickly, representing in substance what we have related above. WARD'S last escapade, the day before the crash, had been to sign ten checks, amounting in the aggregate to \$215,000, on the First National Bank, where he had a private account of \$2,000. These checks were passed through the Clearing House on May 5th, and were paid without reference to the Bank, as the latter, unfortunately for itself, happened to have a large balance to its credit at the Clearing House. WARD owned real estate in New York to the value of more than a million, but this he assigned, on the very eve of the crash, to a Mr. WARNER, his creditor to the extent of some two hundred thousand dollars. The assignment was at first supposed to have been wholly fraudulent, but subsequent investigations somewhat modified this verdict. The GRANTS gave up everything that was left to them, the General instantly making over the deeds of his property to Mr. VANDERBILT, from whom, as stated above, he had borrowed \$150,000. VANDERBILT, however, returned the deeds with a most sympathetic letter, but it is nevertheless probable that the General will forfeit everything he possesses. He will not, however, suffer an irreparable loss, as a bill has been introduced into the Senate proposing to place him on the retired list of the army, with the rank and full pay of General, and it is expected that this measure will be speedily carried. An impression is growing that a defence of insanity will be set upon WARD'S behalf, and we cannot but hope that it will be successfully established.

THE "NORTH CHINA DAILY NEWS" AND THE UNITED STATES NAVY.

THE unfortunate trouble between the *North China Daily News* and an officer of the United States Navy has been made the subject of much bitter comment. We call the incident unfortunate, not merely because it does little credit to either of those principally concerned, but because it has exposed the *Daily News* to attacks which the general character of that journal in no respect warrants. The limit of our Shanghai contemporary's error, in the first place, was that he reproduced, without comment or verification, a paragraph from the *Foo-*

chow Herald, reflecting injuriously, and, as it now appears, falsely, on the conduct of the officers of an American man-of-war. Everybody knows that it is the custom with newspapers in China and Japan to fill up a good deal of their space by extracting items from the columns of the outport press. The authority for such extracts is always given, and though it cannot be said that this wholly removes, it certainly largely mitigates, the responsibility of the republishing journal. When, however, the extracts contain matter of a personal nature, and, above all, when they are calculated to injure personal reputations, their indiscriminate reproduction can scarcely be regarded as less culpable than their original publication. Our readers are in a position to judge for themselves how far this principle is recognised in the East. They can very easily see what measure of discretion is exercised, or how much the necessity of filling its columns weighs with a republishing journal against the injustice of helping to bruit abroad *ex-parte* statements. It is not so long since a cruel and wholly baseless charge of callousness and impiety, ventilated by an out-port journal against certain missionaries, was reprinted by a Yokohama newspaper without reflection or query; nor is it so long since attacks made by another out-port journal upon one of Her Majesty's Consuls—a gentleman of learning and high reputation—were recklessly reproduced and taken as a text for further abuse by another Yokohama newspaper, without regard for the obvious fact that since the editor of the out-port journal was himself defendant in the case under review, his version could not, with any semblance of justice, be received as conclusive. We mention these instances merely for the purpose of showing that the fault committed by the *North China Daily News*, though grave enough in the abstract, finds so many precedents in the history of Eastern journalism, that it might fairly have escaped censure at the hands of fellow-sinners. But it appears to us, distant readers of the Shanghai journals, that the attitude assumed by two of them towards their contemporary, is influenced less by sentiments of generosity or fairness than by a consuming desire to find fault. The *North China Daily News* can never be right, it would seem, in the eyes of these critics; and it has, moreover, a habit, above all others galling to eager detractors, the habit of totally ignoring abuse. The silence of contempt is terribly cutting. Men who habitually employ such a buckler must expect to be assailed with double violence when they expose themselves to just attack. This has been the case with our Shanghai contemporary. Having reprinted—doubtless inadvertently, for the selection of extracts cannot always be carefully supervised—an injurious paragraph from the *Foochow Herald*, the Shanghai editor found himself, one day, confronted by an angry naval officer, who

demanding the insertion of an apology, and enforced his demand by the aid of a cane, whether simply flourished or actually applied we cannot say. Of course the editor could not consent to submit his columns to this species of dictation, and equally, of course, he took measures to obtain redress. But they were unfortunate measures. His obvious remedy lay in a court of law: he addressed himself, however, to the naval authorities. Now, it is obvious that in matters of this sort, the latter's interference, though it might be proper under certain circumstances, cannot reasonably or legally be invoked at Shanghai. As a general rule, offences committed by members of the Army or Navy against civilians are not justiciable by military authority, except in places where there is no competent court of civil judicature. The Shanghai editor's obvious remedy was an appeal to the United States Consular Court. He could not possibly expect to receive from the naval authorities any satisfaction other than a polite reminder that the question was entirely personal between himself and his assailant. This was exactly what he did receive. But it seems to have given him great and unjustifiable umbrage. For, under the caption "Condonation of Ruffianism by an American Admiral," he quickly published the correspondence between himself and the commander of the man-of-war in question, accompanying it by a statement that the Admiral and the Captain of the vessel had "combined to shield the perpetrator of the outrage and to ignore his offence," and that the U.S. Navy had not much reason to be concerned about newspaper comments so long as it had men like the editor's assailant in its ranks, and "Admirals and Captains who encouraged them in the commission of lawlessness and outrage." Much excuse will be found for these unjust and ill-advised utterances in the indignation under which a man naturally labours who has been subjected to a personal assault, and it may be taken for granted that the Admiral and the Captain will rely on the discretion of the public to recognise the entire groundlessness of such charges. But the matter has been taken up and commented upon in somewhat warm terms by a local contemporary, who goes so far as to say, that "the officers of the *Enterprise* are quite as much in the wrong as the editor of the *North China Daily News*," and that, "if they do not repudiate the violence of Mr. BOOK, they must be content to accept the stigma of being guilty of conduct unbecoming to officers and gentlemen." Apologizing for the use of a rude expression, we must be permitted to say that all this seems to us very great nonsense. The officers of the *Enterprise* are not called upon to take any action whatsoever in the matter, even supposing that there existed for them any practicable method of "repudiation." As we have observed already, the case between the

editor of the *North China Daily News* and his assailant must be judged by a civil court, and pending its possible submission to such a tribunal, any expression of opinion on the part of the naval authorities would be as indiscreet as it is unnecessary. One would really imagine that no sooner is a complaint formulated by a civilian against a naval officer, than it becomes the duty of the latter's comrades to unite in supporting the accusation. As for the officer who made use of his cane so early in the discussion, it will certainly be admitted that he behaved with most foolish and unbecoming roughness. He would have done very much better had he addressed himself quietly to the editor, and, pointing out the errors contained in the extract, desired the insertion of a correction. But men do not always choose the best route open to them, and there are circumstances under which their mistakes are pardonable. The libel in question being directed against several unnamed officers of the *Enterprise*, a legal remedy was impossible; while the terms of the libel were of such a nature that direct contradiction seemed out of the question. An appeal to the publisher was, therefore, the only resource, and in the United States appeals based upon similar considerations are seldom of a pacific nature. The truculent officer simply forgot that he was not at school. His indignation at the insult put upon his cloth betrayed him into a stupid demonstration; but to say that his conduct "at once puts him outside of the pale of gentlemen" is a little hyperbolic. The *North China Daily News* seems to think that a British naval officer could not possibly be guilty of such a proceeding. If he were more familiar with the history of the service he might be of a different opinion. Neither side has much to boast of in the business, and the sooner it is consigned to oblivion the better. In our eyes, its most regrettable features are, that unwarrantable charges should have been made in Shanghai and repeated in Yokohama against the officers of the *Enterprise*, and that the *North China Daily News*, of all journals in the East, should have allowed itself to be betrayed into utterances savouring so little of its wonted courtesy and discretion.

MONEY MARKET.

IT does not often happen that an English Budget contains matter of special interest for Japan. The financial statement recently made by Mr. CHILDERS to the House of Commons is, however, an exception to the rule. Few persons imagined that a year so little favourable to commercial prosperity in general would see the English Three per Cents. converted into Two and Three-quarters or Two and a Half per Cents. Nevertheless, the conversion would long ago have been possible but for a series of abnormal events—beginning with the Crimean war and ending with that between Russia and Turkey—which disturbed

Europe between 1853 and 1878, and prevented the English Consols from establishing themselves, for any length of time, above par. Add to this the immense development of railway construction during that period, the transformation of the mercantile marine, the extension of foreign commerce, and the growth of the Colonies, all of which helped to raise the rate of interest, and it will be seen that there were many and sufficient influences combining to defer the operation which the Chancellor of the Exchequer now finally contemplates. Only within the past three years have the Three per Cents. risen above par, and Mr. CHILDERS is evidently resolved to observe the traditions of English finance by seizing the opportunity with the least possible delay.

Following Mr. CHILDERS' calculations accurately, the significance of his anticipation is this—that Great Britain can now borrow money at 2.7 per cent. In point of credit she stands at the head of all nations. At the same time, it is easy to show that a fall in the rate of interest has everywhere been taking place of late years. To cite a few examples—the American Four per Cents., which were quoted at 118 to 120 in 1881, now stand at 128; the Italian Five per Cents. were at 89 in 1881 and are now at 94 to 95; the Austrian Four per Cents. have risen from 80 and 81 to nearly 84 in the same period; the Russian Five per Cents., despite the exceptional troubles through which that country has passed, now stand at 97 against 95 in 1881; and similar results are to be recorded of Spain, Portugal, and Sweden. Exceptions to the rule are Belgium, France, and Turkey; especially the last, whose stock has depreciated thirty per cent. Classifying the countries of the world in the order of their finances, we arrive at the following results:—

COUNTRIES OF THE FIRST CLASS.
(Where the rate of interest on public securities varies between 2.7 and 4 per cent.)

	RATE OF INTEREST ON PUBLIC SECURITIES.
England	2.7 per cent.
United States of America	3.1 per cent.
Prussia	3.6 per cent.
Belgium	3.6 per cent.
Holland	3.75 per cent.
France	3.85 per cent.
Sweden	4 per cent.

To this category also belong Geneva, several German States, British India, Australia, and Canada, in none of which countries the rate exceeds 4 per cent.

COUNTRIES OF THE SECOND CLASS.
(Where the rate of interest on public securities varies between 4½ and 5½ per cent.)

	RATE OF INTEREST ON PUBLIC SECURITIES.
Italy	4.7 per cent.
Austria	4.8 per cent.
Hungary	5.25 per cent.
Russia	5.50 per cent.

To this category also belong the richest States of South America, and many of the English Colonies (as the Cape, Jamaica, Mauritius, New Zealand, &c.)

COUNTRIES OF THE THIRD CLASS.
(Which pay their interest regularly, but owing to their unsettled condition or undeveloped resources have to borrow at high rates.)

	RATE OF INTEREST ON PUBLIC SECURITIES.
Spain	6.5 per cent.
Greece	6.75 per cent.
Japan	7.5 per cent.
China	8.5 per cent.

To this category also belong the Argentine Republic, Egypt, &c.

COUNTRIES OF THE FOURTH CLASS.
(Where the national finances are entirely unsound.)
Peru, Mexico, Venezuela, Turkey, &c.

The point to be noted by Japanese financiers in all this is the state of the English money market. In Great Britain men are ready to invest millions at 2.7 per cent. interest. They gladly pay 107 to 108 for Japanese 7 per cent. stock; but Japan, all the while, is selling the same stock to her own people for 91 or 92. In other words, while she could borrow in London at 6.5 per cent., she is borrowing at home at 7.6 per cent. If the condition of her finances were properly understood in England, and the splendid prospects that lie before her railways explained, there can be no doubt that she could float a 7 per cent. loan at par. This means that she would have saved nine hundred thousand dollars on the ten millions she recently raised for purposes of railway construction. She could probably do even better, but taking the least favorable view of the case, the advantages to be reaped by a recourse to the capitalists of England would be very large, as a matter of mere arithmetic, while the stimulus which commerce and industry would receive by an introduction of foreign capital at this juncture, and above all, by a rapid extension of the railway system, is incalculable. Some very strange counsels have been given to Japan on this point. An authenticated story is told of a gentleman well known in Eastern banking, who, when *en route* for Tokiyo with a scheme that was to render the resumption of specie payments a speedy possibility, called on a still better known colonial magnate, and was received by the latter with a prefatory caution, that if his scheme involved any borrowing of money abroad, there was no occasion to discuss it; that one feature sufficed to condemn it. This colonial magnate had unfortunately found himself, some time previously, in a position to put a great many extravagant ideas into the heads of Japanese statesmen, and it need scarcely be observed that his antipathy to foreign money received willing endorsement at the hands of men whose friendship to Japan was heightened by a touch of enmity towards the country where alone money could be borrowed. In spite of all this interested and disinterested counsel, we believe that Japan is rapidly recovering from her unworthy and wholly erroneous apprehension that the result of pecuniary obligations incurred abroad might resemble the mishaps of Turkey or Egypt. From a political point of view, such an apprehension has no foundation, and from a financial point of view, it amounts to this—that Japan is turning her back on the one path to wealth and consideration lest by following it she should become poor and dependent. Of a different nature, and much more worthy of the steady resolution she has brought to bear upon the problem of currency redemp-

tion, is her desire to avoid all recourse to foreign aid until she has set her affairs in thorough order at home. An appeal to the European money market while *kinsatsu* were at 30 or 40 per cent. discount, could only have been successful at a very heavy cost. She is apparently determined to persevere in this route until the redemption of her currency is finally accomplished, and we sincerely trust that her hope will soon be realized. Apart from the incalculable benefits a return to specie payments will confer on commerce, that result is most earnestly to be desired for the sake of the confidence it will give Japan in her ability to command the means of rapidly developing her resources.

THE INSUFFICIENCIES OF BUDDHISM AS A RELIGION.¹

A Lecture delivered in the Meiji Kwaido, Tokiyo, by the Rev. M. L. GORDON, M.D.

Believing, as we do, that Christianity is the religion revealed to man by his Creator, and that it is, as from its source we should expect it to be, a religion at once impartial and all-sufficient, "the power of God unto salvation to every one that believeth," irrespective of race, language, country, or condition, we make its proclamation to the people of Japan our highest duty as it is our greatest privilege.

As we preach these glad tidings month after month and year after year, many there are who hear gladly, and whose purer, happier, and more useful lives attest the reality of their faith. There are others, however, who often say to the Christian preacher, "we already have a religion in Japan, and hence are under no necessity of accepting this religion of Jesus Christ which comes to us from foreign lands." Those who speak in this way are, as a rule, Buddhists, and their meaning is that Buddhism is a religion sufficiently good for the Japanese people; hence it is that I would ask your time and attention for an hour this afternoon, while I briefly speak of the insufficiencies of Buddhism as a religion.

But while I shall speak of the insufficiencies of Buddhism, I hope not to lower myself in your estimation by indulging in a slanderous abuse of that religion.

Its founder, Shaka,² was doubtless an honest and earnest seeker after deliverance from the miseries of this evil world, and I am by no means ready to say that the religion which he taught has been fruitless of good to mankind. It has without doubt borne good fruit; but being simply the product of the wisdom of an ancient Indian sage, it exhibits many insufficiencies and has also both positively and negatively been the cause of much evil.

In speaking of the imperfections and positively evil results of this religion, I hope if possible to avoid giving offence to any Buddhists who may be present, and to examine the subject with such an impartial mind that even they may go with me to the very conclusion. I may fail in the execution of this, but I beg you to believe that this is my purpose.

Buddhism is indeed a widely spread religion. According to one scholar³ its adherents number

¹ Any one who may take the trouble to compare this with the lecture as spoken or printed in Japanese, will find that while the two are the same "for substance of doctrine" they do not correspond exactly in minute details. One is not a close translation of the other. The consciousness of the fact that the audiences would be different, led naturally and almost irresistibly to corresponding changes in the form of the thought presented.

References to works in English to which the writer is indebted are made in the footnotes; these do not however sufficiently express his great indebtedness (here gladly acknowledged), to the Rev. Drs. Eitel and Edkins for the result of their studies in the field of Chinese Buddhism, and also for personal favours received at their hands. In his essays in the study of Japanese Buddhism he has been especially aided by Mr. T. Adachi, formerly a priest of the Jodo sect, to whose ability, faithfulness, and patience he gratefully bears witness.

² This is the Japanese form of Sakya, and as it is by far the most common name used by the Japanese to designate the founder of Buddhism, I shall use it throughout this paper.

³ Cf. Buddhism by T. W. Rhys Davids, page 5.

500,000,000. Of these 30,000,000 belong to Ceylon, Burmah, and other Southern countries; and 470,000,000 are classed as Northern Buddhists, and belong to Thibet, China, Corea, Japan, &c.

These numbers are doubtless too large. In proof of this it may be noticed that the number of Chinese Buddhists is given as 414,000,000; but the latest investigations make it highly probable that the whole population of China is not more than 300,000,000 souls. Furthermore, as is well known, the mass of the Chinese people are Confucianists and Tauists as well as Buddhists; and three-fourths of the people in the Northern provinces are said to be *exclusively* Mohammedans. (Dr. Edkins, Religion in China pp. 57-58.)**

Again, all the Japanese are rated as Buddhists, although, as is well known, there are many here who not only are not Buddhists, but are violent haters of that religion. Still, however much this estimate needs to be diminished, Buddhism is nevertheless spread over an immense territory and is the principal religion of a vast multitude of people. What is this wide-spread religion? As we take up the study of it, we find it divided into two great schools, *Hinayana* and *Mahayana*,—the Little Vehicle and the Great Vehicle. The sūtras of both are known in Japan, but no single sect makes the *Hinayana* prominent in its teaching; all are in fact founded on the *Mahayana* sūtras. The same seems to be true in China, Corea, and other Northern countries; but Southern Buddhism is all of the *Hinayana* school, and the great figures in the *Mahayana* school, Amitābha (Amida), Avalōkitēśvara (Kuanon) Vairocana (Dai Nichi), &c., &c., are entirely unknown. Even though we confine ourselves to the books of the Little Vehicle we find that school as taught in Japan quite different from that of Ceylon; and both may be considerably different from the original teaching of Shaka.

We need then in the first place to discriminate, if possible, between Buddhism as Shaka taught it, and that which prevails in Japan at the present day.

But this is a task of no little difficulty. Shaka was born in the country of Māgadha, and used the Māgadhi language, but not a single sūtra has come down to us in that language. His teaching was not written down in his day. In the opinion of the most competent scholars for several centuries after his death his teachings were handed down orally, and it was only after the lapse of more than 300 years, that they were reduced to writing. This cannot be put earlier than 88 B.C.* In this connection reference may be made to one great discrepancy between the Buddhists of the South and those of the North. According to Japanese Buddhists, Shaka died on the 15th of the 2nd month of the 53rd year of the Chinese Emperor Mu, of the Chow dynasty; that is, as reckoned in Japan, B.C. 944, or 2828 years ago. In China the date most commonly given is B.C. 1027.† The accepted date in Ceylon is B.C. 543, or 2427 years ago. But Western scholars, largely from the study of the Edicts of Asoka (Aiku Ō) (of which more will be said hereafter), declare that Shaka's death cannot have been earlier than about 477° B.C. We thus see that there is on the part of the Northern Buddhists, an error of at least, four or five hundred years respecting the time of Shaka's

death. There are various explanations of the way in which this error arose, the most probable being that of Koeppen, which is as follows:—

Before his death Shaka prophesied that in 1,000 years after that event his religion would enter China. Now Buddhism entered China about A.D. 64, and so in order to conform this event to the prophecy of Shaka, his death was placed more than nine hundred years before the Christian era. We are not sure that Koeppen's is the true explanation, but it is clear that while the Singhalese date is only sixty or seventy years wrong, the Northern Buddhists have an error of about five hundred years. We may infer also that in matters of doctrine the Southern Buddhists are much nearer the true teaching of the founder, an inference which will strengthen as we go on.

The Japanese Buddhists say that Ananda (Anan) and Kashiapa (Kashō), disciples of Shaka, collected the Sūtras of the Little Vehicle; and that those of the Great Vehicle were in like manner collected by Anan and Monjushiri in Tetsuisen. Those of the Little Vehicle may in part have been handed down orally by these two disciples; but, as we have already seen, none of these sūtras were written for three centuries after Shaka's death, and hence long after the death of Ananda. As to that part of the story which relates to the Great Vehicle, it is enough to say here that Tetsuisen is a mountain which has no real existence, and we shall see further on that this school arose in a different time, place, and with a people of a different language; and that its object is radically different from that of the Little Vehicle.

The Chinese translations from the Tripitaka were made from Sanskrit. But this was never more than a learned language in the country where Shaka was born and lived; the language of the people being a corruption of the Sanskrit, a dialect closely related to the Pali. The edicts which were issued about 250 B.C. by Asoka (Aiku-ō), the powerful and celebrated King of Magadha, go to prove this. Asoka, as already remarked, was a devout Buddhist, and issued to his subjects edicts concerning that religion, many of which were inscribed in stone and remain to this day. These edicts are not in Sanskrit, but in Pali, one of the dialects referred to. A study of these edicts shows, further, that at that time there were many who, instead of Shaka's teaching, promulgated their own opinions and other heretical ideas, in consequence of which Asoka called a council of one thousand priests and after a conference of nine months the sūtras containing the genuine teaching of Shaka were fixed upon, and a list of these is found in one of the edicts.

The year following the Great Council, Mahinda, a son of Asoka, taking with him priests and nuns, went to Ceylon, bearing in their memories the sūtras fixed upon in the Council. There they taught Buddhism, which ere long became the religion of the state. These sūtras, afterward written down in Pali, remain to this day in the original language, and Ceylon being an island, and so having comparatively little intercourse with other lands, and Buddhism having never been persecuted there, but always being under the approval and patronage of the government, if we would seek the nearest approach to Shaka's original teaching we must undoubtedly go to Ceylon.‡ Scholars tell us that these Pali sūtras are all of the *Hinayana* school; that the *Mahayana* sūtras are not only not referred to at all in Asoka's inscription, but are also unknown in Ceylon and other Southern Countries even to the present day. Hence we are led to infer that they had a later origin; of which more will be said further on.

What do these old Pali sūtras say of Shaka? Of course, being ignorant of Pali, I have no opinion of my own to offer on the subject. But, as is well known, there are many European scholars who spend their lives in the study of these subjects, so that Buddhist priests from Japan go to them to learn the ancient languages of

their religion. Of Pali scholars and students of Buddhism, Dr. H. Oldenberg, of Berlin University, and T. W. Rhys Davids, of London, stand in the very front rank, and I shall follow them, largely, in what I shall say of Early Buddhism.§

Five or six hundred years before the Christian Era, there lived south-west of the Himalaya mountains an Aryan tribe, called Sakyas, whose Capital was Kapilavastu. They were rich and proud, and often at war with neighbouring tribes. Among them was a wealthy land-holder named Suddhodana Gotama, whose wife Maya gave birth to a son who was called Siddhārtha. The mother, however, died soon after the birth of the child who was therefore reared by his aunt Mahāhajāpati, another wife of Suddhodana.

Early in life Siddhārtha also was married, and one child, a son, Rahula, was born to him. At the age of 29, owing doubtless to the views of the world which prevailed at that time as a place of sorrow and suffering only, he became an ascetic, and of his life up to this time the brief outline just given is practically all the reliable knowledge we have.

In the Buddhist books of Japan, Shaka is said to have been the son of a King, and to have been born in the Lumbini garden amid many most miraculous signs. Heavenly dragons, it is said, brought warm water for his bath, and a lotus flower, springing suddenly from the ground, received him on its bosom—such stories are undoubtedly of far later origin. Japanese Buddhists seem to be of the same opinion; for the new edition of *Shakafu*,§ the standard biography of Shaka, is greatly abridged from the previous edition. That Shaka's stature was sixteen feet, that riding in his chariot from the North, East, West, and South gates of Kapilavastu he saw first an old man, then a sick man, a corpse, and finally a begging ascetic, and so was led to take up the ascetic life, are also stories not found in the Pali Sūtras and so cannot be accepted as genuine; the real truth here being, in all probability, that his meditations on old age, disease, and death, led to his abandonment of the world. The account of Shaka's temptation must be put in the same category.

If we trace back the history of Buddhism to its origin, we find it closely connected with Brahmanism. In very ancient times, Aryan tribes, coming from the north into the Ganges valley, drove out the ancient inhabitants and took their possessions for their own. Here under new surroundings, by contact with the original inhabitants and the influence of a tropical climate, these people ceased to be young and strong, and became more and more a prey to morbid impressions of the sorrow and suffering of the world—impressions which seem indissolubly linked with the Indian character—with no idea of the freedom of the human will, with all the interests of the present world absorbed in and hidden by the contemplation of the world to come, they became "wholly strangers to the highest interests and ideals which are the basis of all healthy national life." Without patriotism, with no thought of the improvement of country or people, they become mere contemplative philosophers, spending days and years in the practice of various rites and austerities, looking upon the ascetic, though a beggar, as far above Kings in dignity and honor.

These Brahman ascetics believed in metempsychosis. The Buddhist *Yemma* is *Yama*, the Brahmanic God of death, *Bishamon* "was originally Kuvēra, the Brahmanic God of Wealth;" and *Taishaku-ten* is Indra, the God of rain. Among these ascetics were many enlightened, i.e. many Buddha, and, as is well known, Buddhist monasticism was a direct result of Brahmanic asceticism.

When Shaka left his home he became one of these ascetics, and for seven years he practiced

§ This is an abridgement of the Sūtra translated by Beal, under the name of "The Romantic Legend."

** The Rev. Dr. Happer, in the *Chinese Recorder* for December, 1883, has an interesting discussion of the question as to the number of Buddhists in the world. He shows very clearly that the large numbers given to the followers of Shaka have been reached by an entirely different method from that pursued in taking the census of Christians. Following the latter method, he estimates the number of Buddhists in China as 20,000,000; in the world (in round numbers), 75,000,000. I cannot but believe that these numbers are too small to represent the influence of Shaka in the world. However, two things cannot be too well borne in mind; (1) that Buddhism is nowhere the *exclusive* religion of a people; and (2) that the monks alone, not the lay adherents, are members of the Church. On (1) compare Rhys Davids: Buddhism page 7. One (2) Cf. Oldenberg, Buddha pp. 162 and 381 ff. As in the Buddhism of ancient India, so in that of modern Japan, no lack of belief, no laxity of morals, nothing except disrespect to the priesthood could lead to the discipline of a lay-brother. "A formal excommunication of unbelieving, unworthy, or scandalously-living lay brothers there was not, and as a result of circumstances, there could not be."

§ The Text, as it lies before us, stands so well against all proofs, whether we compare its different parts one with another, or with the little that is yet known of its Northern counterpart, that we are justified in regarding these Pali books as, in fact, the authentic mirror of the old Māgadhi text as fixed in the central schools of the most ancient Buddhist Church. Sac. Books of the East, Vol. XIII, p. XXVI.

their austere rites without attaining that peace and rest of mind which he was seeking. At the end of seven years he abandoned all their austerities and began teaching the *Four Sacred Truths*, which he himself had discovered, and by which he attained wisdom (*i.e.* became a Buddha) under the Tree of Knowledge.

These truths treat of—

1. Suffering.
2. The Origin of Suffering (which is in the desires).
3. The Extinction of Suffering (Nirvāna).
4. The path to the Extinction of Suffering.

This path, "the holy eight-fold path"—is Right Belief, Right Aspiration, Right Speech, Right Conduct, Right Means of Livelihood, Right Endeavour, Right Memory, Right Meditation. By this path one may enter Nirvāna.

Concerning the meaning of Nirvāna, opinions are so many and various that to even speak of them all would require no little time, while the corresponding profit could not be great. I shall briefly refer to it latter on, and so forbear its discussion. For the present I ask your attention, however, to several points in connection with this early Buddhism:—

1. Shaka's teaching looked to self-culture alone. He became a Buddha with no help from others, and he in turn, although he teaches the way of salvation to others, neither offers to help them himself nor tells them of any outside help to be had either from gods, Buddhas, or anything else. Shaka looked with contempt upon the gods believed in by the people of his age, and declared the Arhat, the good man, to be superior to them. His system is and was meant to be atheistic.

At a certain time he said to one of his disciples, "I am now frail, Ananda, I am an old man who has finished his pilgrimage; eighty years old am I. Be to yourselves, Ananda, your own light, your own refuge; seek no other refuge. Let the truth be your light and your refuge, seek no other refuge * * * * * whosoever now, Ananda, or after my departure, shall be his own light, his own refuge, and shall seek no other refuge, whosoever shall take the truth as his own light and his refuge and shall seek no other refuge, such will henceforth be my true disciples."¹⁰

2. According to Shaka man has no immortal soul. "A seeing, a hearing, a conceiving, above all a suffering, takes place; but an existence which may be regarded as the seer, the hearer, the sufferer, is not recognized in Buddhism."¹¹ As in the case where the parts of a chariot, pole, axle, wheels, body, &c., come together the word "chariot" is used; so where there is the union of corporeal form, sensations, perceptions, conformations, and consciousness, the word person is used; but here subject, in the strict sense of the word, there is none.

3. But if no soul, then, it is needless to say, no personal, individual, existence in the future. The good or bad deeds in one life are followed by gain or loss in a future life, but as already said there is no continuation of personal individual life in any intelligible sense. The flame of one lamp may serve to light a flame in another, but the flames are nevertheless two different things.

But how is it after entering Nirvāna? That Nirvāna is practical annihilation corresponds very well with Buddhist teaching. "Do those who enter Nirvāna really cease to exist?" is a question which Shaka's disciples pressed upon him. But he evaded it. Of this Dr. Oldenberg says, "through the shirking of the question as to the existence or non-existence of the Ego, is heard the answer, to which the premises of Buddhism tended; the Ego is not, or what is equivalent; the Nirvāna is annihilation:"¹² at the most Shaka gave no positive encouragement to any hope for the future.

If we turn now to the consideration of the Great Vehicle we learn that, although there are some points not yet clear, the verdict of the best

scholarship¹³ is that its founder was Nagarjuna (Raju Sanzo), and that it did not arise in Magadha, the birthplace of Shaka, but far away in North-west India. There Brahmanism was much more prevalent than in Magadha, and Sanskrit was the language of the common people. Hence the sūtras of the Little Vehicle were translated into Sanskrit, and to these were added many newly-made books of the Mahāyāna school.

In earlier Buddhism attention was chiefly directed to the attainment of Nirvāna. Furthermore, it was taught that after the end of the present religious system (variously estimated at from 4,000 years upwards), the world would become so wicked that all knowledge of the law would be lost, and a new Buddha, Maitreya, must necessarily come into the world to make a new proclamation of the law. Hence it was that three or four centuries after the death of Shaka, Buddhist believers came to think far less of securing one's own personal deliverance from the evils of the world by entering Nirvāna, and much more of the duties of a bodhisattwa, by which merit might be acquired sufficient for the salvation of multitudes of others.

At first there was no thought of overthrowing the earlier teaching, but the new doctrine being in its essence diametrically opposed to the old, the result was that the sūtras of the Little Vehicle, though valued as history, speedily fell into disuse as religious teaching; and the Mahāyāna Sūtras only were made the basis of religious instruction. In order to secure for these newly-made sūtras the belief of the people that they were the teaching of Shaka, the typical beginning of the old sūtras, "thus by me it has been heard," was prefixed. In order also to encourage the people in the practice of the duties of a bodhisattwa, many fictitious bodhisattwas were imagined and declared to have been Shaka's hearers when the New Sūtras were taught. And giving free rein to the imagination, the number of these fictitious beings was from time to time increased, so that in the end, the age of a sūtra could be determined by the number of bodhisattwas said to have been present. To give an example, the names of Avalokitesvāra and Manjushiri are not in the Lalita Vistara (Jindo Yukikiyo), but are in the Sūtra of the Lotus of the Wonderful Law (Miyo-ho-rengekiyo); hence it is concluded that the former is the earlier of the two, a conclusion established also on independent grounds.

As already remarked, in the Mahāyāna Sūtras there is an evident recognition of the unsatisfying nature of the Hinayāna Sūtras, which therefore was followed by an attempt to make good their deficiencies by the doctrine of salvation through the power of imaginary Buddhas and bodhisattwas.

If we study the condition of mankind the world over, we find that everywhere there are such evidences of weakness and sin that men instinctively lift their hearts for help to some being or beings above them, wiser, stronger, better than they, calling them gods, spirits, Buddhas, or referring to them by some other name. So undoubtedly true is this, that man may very properly be called a praying animal, a religious animal. As man is possessed of these ineradicable instincts, later followers of Shaka in India, Ceylon, and other southern countries, disobeying their master's teaching, either worshipped him as a god or worshipped, various other gods and demons. In the North, giving full play to their imagination, they sought to satisfy this instinct by the worship of such fictitious beings as Amitābha, Akshobhya, and many others.¹⁴ In the northern countries also the

worship of demons, the worship of stars, the worship of the innumerable gods of Japan and elsewhere, was associated with the worship of Buddhas. By this means Buddhism became rapidly powerful, but it was also the clearest evidence of its inherent inability to satisfy man's nature. The remark may be made here once for all concerning these Mahāyāna sūtras, that while they in many respects more nearly meet the instincts of mankind than does the earlier teaching, they are, as has been shown, destitute of the authority of Shaka's name, and are rendered utterly worthless as a religion, because even in the minds of many priests the beings whose aid is invoked are destitute of all outward actual existence.

In the same way man's instinctive belief that he is a *soul*, asserts itself even when he is beguiled into declaring the opposite to be true. Hence the Northern Buddhists not only recognize a soul in man, but teach that matter is the production of mind. A distinguished Buddhist priest once said to me, "according to the Hinayāna school, matter was the eternal: according to the Mahāyāna school, matter is regarded as a reflection of mind." Even in Northern Buddhism the Christian idea of the soul as an endless personal identity is not reached; but the ordinary teaching of the priests of Japan is far more in accord with the instincts of mankind in this respect than was early Buddhism.

It is just the same with respect to the doctrine of the future. Nirvāna is unsatisfying. It has never been popular among the Northern Buddhists.¹⁵ These—the mass of the people—look for a real and conscious existence in the world to come—in Sukhavatī (Goku-Raku), and other heavens where the highest gratification of the senses is pictured.

We thus see very plainly an attempt on the part of the Mahāyāna school to make up the insufficiencies of the Hinayāna school; but if we carefully study the sūtras of the former school and the condition of its various sects we shall see that, having cut loose from established fact, and given full play to the imagination, they not only disagree with Shaka's early teaching as we have seen, but so thoroughly do the various sects disagree among themselves that there results a confusion in doctrine and worship, so great that no intelligent man can find in the Buddhism of Japan or China anything which meets the wants of his religious nature.

To these disagreements, and manifest absurdities let us turn our thoughts for a few moments. To understand them we need no knowledge of Sanskrit or Pali, or of the ancient history of China or India; we have only to use our eyes and ears in the study of the Buddhism which we see around us every day.

Take for example the *Ten Dai* sect. It divides the Tripitaka into four portions. It was not Shaka's object to teach any of these except the fourth, the Sūtra of the Lotus of the Wonderful Law. The first-three were taught because the people were not ready for the fourth; they do not contain Shaka's true mind, and so have only a temporary value. The one book of permanent value is the Sūtra of the Lotus of the Wonderful Law—the Saddharma Pundarika Sūtra.

This sect being founded on the doctrine of self-culture, it is not necessary to pray to Buddhas, bodhisattwas, gods, or other beings; but *as men naturally have praying hearts it allows them to pray to whomsoever they please*—a very accommodating religion indeed—and hence there are temples of this sect dedicated to the worship of Amida, Shaka, and other Buddhas and bodhisattwas.

The *Shingon* sect bases its teaching not upon the Hinayāna Sūtras nor the Sūtra of the Wonderful Law so highly prized by the Ten Dai sect. According to this sect, the one Sūtra of importance is the Sūtra which teaches the worship of Vairochana, one of the Dhyani Buddhas. But they worship Akshobya (another Dhyani Buddha)

¹⁰ Of Encyclopedia Britanica, articles "Buddhism" and "Lamaism."

¹¹ The writer is not unaware that the above view is radically different from that taken by Mr. Arthur Lillie in his "Buddha and early Buddhism." Mr. Lillie's book is perhaps its best refutation, but it may be noticed further that he contradicts almost every scholar of note; and that, to the student of Japanese Buddhism, the utter untrustworthiness of his book is settled by the following two sentences: "under the title Niyorai, a loftier and more abstract divinity still (than Amitābha) is known to the Japanese. It must be remembered that Japan derived its Buddhism from Ceylon"—p. 17. It is true that Mr. Lillie apparently makes Mr. Pfouder his authority—a very hazardous thing for any author to do—for these astounding statements, and we may perhaps excuse the ignorance which takes Niyorai (Tathāgata), an epithet of every Buddha, and makes a lofty "divinity" out of it; but the geographical relations of the countries ought to have kept him from the last statement unless enforced by the clearest proof. It is hardly necessary to say that if there is one event in Japanese history clearly established, it is that its Buddhism came from Corea and China.

¹⁵ The common people in Southern countries also, have never accepted it. Cf. the writers article in the "Chrysanthemum," April, 1883.

¹⁰ Buddha, Oldenberg, p. 198.

¹² Buddha p. 273.

also, and many other gods and Buddhas. This sect in its doctrine belongs to those which teach the duty of self-culture, but its followers are encouraged to acquire merit by repeating magical formulas, and many superstitious practices are indulged in.

If we turn now to the *Jōdō* sect, we find that its "Sacred Books" are not the *Hinayāna Sūtras* nor the *Sūtra of the Lotus of the Wonderful Law*, nor the *Vāirōchana Sūtra*, held in such high esteem by the sect just spoken of. The teaching of this sect is based on the so-called *Jōdō sambu kiyo*. (The *Sūtras* concerning the Pure Land) and the *Ōjo Jōdo Ron* (*Aparimitāyus sūtra sāstra*) by *Vasubandha* (*Tenjin Bosatsu*). All other books of the *Tripitaka* are held in comparatively low esteem. In early Buddhism, knowledge was exalted; the attainment of buddhaship meaning enlightenment. The *Jōdō* sect, on the contrary, teaches salvation for the ignorant by trusting to the help of *Amida Buddha*, or his servants *Avalōkitesvara* (*Kuwanon*) or *Mahāsthama* (*Seishi*). In theory these alone are to be worshiped; in practice priests and people unite in worshipping other Buddhas, bodhisattvas, and innumerable gods.

Let us pass now to the *Shin* sect. This is in fact a branch from the *Jōdō* sect and uses the same "Sacred Books." It teaches, however, that the only object of worship is *Amitābha*, and its practice in this respect more nearly conforms to its teaching than that of most other sects.

In the *Jōdō* sect they are taught to pray to *Amitābha* all life long. In the *Shin* sect, however, they say that this is not true "Salvation by the Power of Another;" but that even once calling upon the name of *Amitābha*, is sufficient for salvation, all further repetition of the formula *Namu Amida Butsu* being thanksgiving for salvation already received.

Of all the sects of Buddhists in Japan, this is farthest from the original teaching of *Shaka*. It puts a low estimate on moral conduct, and it is said that more persons from this sect are in prison than from any other sect. In their *O Fumi*, which ranks next to the "Sacred Books" just mentioned, it is said: "The object before the believer of this sect is not to cleanse a bad heart or to check wayward thoughts. A man may buy, sell, or engage in other business, but his only object is with a single heart to trust in *Amitābha* for his help to be born into the Western Paradise. The calling upon the name of *Amitābha* has no other object than this."

In this connection, the words of Prof. Max Muller, of Oxford University, may be quoted. I give them in a somewhat abbreviated form. Referring to the Buddhist priests who have gone to Oxford to study Sanskrit and Pali, he speaks of the *Mahāyāna sūtras*, and especially of this doctrine of *Amitābha*, as follows: This sounds to us very different from the original teaching of Buddha. And so it is. Nevertheless, it is the most widely read *sūtra* in Japan. "Repeat the name of *Amitābha* as often as you can, and you will go straight to *Suakhavati* and be happy forever." Buddha taught that as a man soweth so shall he reap, and that by a stock of good works accumulated on earth the way is opened to higher knowledge and higher bliss. This *sūtra* says no. Not by good works done on earth, but by a mere repetition of the name of *Amitābha* is an entrance gained to the land of bliss. It may be that in a lower stage of civilization even such teaching has produced some kind of good. But Japan is surely ripe for better things. Is it not high time that the millions of Japan who profess faith in Buddha, should be taught that this doctrine of *Amitābha*, and all the *Mahāyāna* doctrine, is a secondary form of Buddhism, a corruption of the pure doctrine of *Shaka*, and that if they mean to be Buddhists they should return to the words of Buddha as they are preserved to us in the old *sūtras*? But these latter are evidently far less considered in Japan than the silly and mischievous stories of *Amitābha* and his paradise. Buddha, I feel convinced, never knew even the names of *Amitābha*, *Avālokitesvara*, or *Suakhavati*.¹

I have already referred to the wide separation between the teaching of this sect and that of early Buddhism. One or two other points may be mentioned. And first, they put little stress upon the "Law of Karma." Again, they eat flesh and marry; things strictly forbidden in early Buddhism, where the disciple left home, family, and friends, as did *Shaka*, and became an ascetic. This is not done by the *Shin* priests. They live under their own roof, eat flesh, drink saké, and have their wives and concubines. What would be *Shaka's* thoughts at the sight of all this? What would he say of the conduct of the head of one branch of this sect who, as every one knows, has in addition to his wife at least a half a score of concubines? What a view of morality, what an estimate of woman is implied in the fact, also well-known, that several were given to be concubines of the Head of the Sect as a religious act (and so accepted) by Buddhist believers? Shall we not exclaim with Professor Muller, "surely Japan is ripe for better things" than this "silly and mischievous doctrine of *Amitābha*?"

Time would fail me to enumerate the many insufficiencies and inconsistencies of Buddhism, but one or two others may be referred to.

The *Zen* sect speaks slightly of other sects which make *Sūtras* the basis of their teaching; and boasts of its own exclusive reliance on inward illumination. And yet, as an actual fact, many priests of this sect do read the "Sūtra of the Lotus of the Good Law," and other books."

But what shall we say of the *Nichi Ren* sect? This, although calling itself a Buddhist sect, is always saying hard things of other sects. The *Jōdō*, *Shin*, and *Zen* believers are destined for punishment in some of the various hells, while other sects are pronounced the destroyers and robbers of their country. They worship the stars, especially the North star; *Katō Kiyomasa*, the persecutor of Christianity in the 16th century, and many and various gods. They offer forked *daikon* to *Daikokuten*, and pomegranates to *Kishibojin*, *Hārītī*, the sometime destroyer of many children; exorcise foxes from persons possessed thereby, and practice many other similar absurdities.

This cursory examination of the various sects of Japanese Buddhists shows us that they are opposed to each other as regards the *sūtras* which form their "Sacred Books," as to the beings they worship, and also as to the means and method of securing salvation. What is the meaning of all this? Is it not clearly this, that none of these various forms of Buddhism satisfies the needs of man's weak and sinful heart? This great fact of failure to satisfy man's needs is the explanation, and the only rational explanation, of the constant changes made in Buddhist teaching as the centuries have gone by and as it has encountered different races and civilizations. This alone sufficiently accounts for the multiplying of Buddhas and bodhisattvas in the teaching of all the Northern countries, and the mixing with Buddhist rites the worship of demons in Ceylon; "nats" in Burmah; the extravagances of the *Tantra* school in Thibet; Taoist worship in China, and the worship of all the Shinto gods in Japan. If a physician has a medicine which always cures a certain disease he does not spend his days in search of some other medicine to treat that disease. For him to do so would be to confess the insufficient power of the medicine which he possesses. This is the interpretation which we must place upon that confusion in which the constant changes made in the teaching of Buddhists have resulted.

But here I am sure to be met with the question, Are there not sects in the Christian Church? Yes, there are, but the fact needs to be clearly apprehended that the existence of sects among Christians is a very different thing from the sects of Buddhism.

For example: I look upon this Bible as God's revealed will, and aim to make it the guide of my life. Around me are those of different nationalities and denominations, but not one of them has a different Bible. If we go to those branches of the Christian body farthest separated from the Christian represented here, the Roman

and Greek Churches, and ask them if the Bible is not God's Revelation to man, his guide in the discharge of the duties of the present world and in the preparation for the world to come, they will most assuredly answer in the affirmative, acknowledging it to be their rule of faith and practice also.

But is there no difference? Yes, there is a difference. Those two Churches accept the New Testament exactly as we have it without addition or change; they also accept the Old Testament as we have it, but add thereto a few unimportant books. Yet these few small books contain no new doctrine. They have no other God than Him we worship; no other Saviour; no different way of salvation. It is true that we look upon some of these Christians as in error on some points of more or less importance, such as the worship of Mary, the saints, &c., &c., but even they would put Mary and other saints far below God. And it is not because they have a few books which we do not recognize as a part of the Sacred Canon that they thus err—but because of a wrong interpretation and explanation of this Bible which all Christians accept in common with them.

Among the Christians of all nations there are none who deny that this is God's revelation; there are none who do not worship Jehovah as the only true God; there are none who refuse to trust in Jesus Christ as the only "name under heaven given among men where by we must be saved;" or who deny the necessity of seeking the cleansing of the Holy Spirit of God. Hence, it is that I boldly declare that the existence of sects in the Christian Church is something totally different from the confusion and opposition in the teaching and practice of Buddhists. Here some one meets us with the assertion that the differences between the Little and Great Vehicles have their parallel in the differences between the Old and New Testaments. As Christian believers who receive the Old Testament do not pronounce the new false because it differs from the Old; so it is said the *Sūtras* of the Great Vehicle are not necessarily false because they differ from early Buddhism.

This has a semblance of truth, but a little thought will show the great difference.

Note that history tells us nothing of Buddhism before *Shaka* came into the world. There was Brahmanism, and from this *Shaka* borrowed largely; but Brahmanism did not prophesy of the coming of *Shaka*. Before him there was not a single Buddhist book.

The Old Testament books, however, were all produced long before Christ's time. Some five hundred, some a thousand, years and more before the Christian Era. In them are the prophecies of the Savior's coming; in them also is clearly foretold a New Covenant higher and better than the old. Even Ernest Renan says that the Christian religion began more than 700 years before Christ. Buddhism has nothing like this. Neither Vehicle antedates *Shaka*.

Notice also that the worship of the Creator—the one only true God—is taught in both the New and in the Old. There is no new or different object of worship. The New brings a fuller revelation of the character and attributes of the God of the Old Testament, and a different mode of worship and service follows. It is the change from the seed to the plant.

If we study the old Pali *Sūtras* we find nothing of *Amitābha* or *Avālokitesvara*, nothing which can by any stretching of the imagination be called the seeds of their worship. How can a doctrine, which says "Be your own light, your own help, seek no other help," contain the germs of the teaching that the only important thing is to rely wholly upon the help of *Amida*?

And as already observed, these spurious *sūtras* all come bearing *Shaka's* name and claiming his authority—of the falsity of which there is the clearest evidence.

Putting aside now for the present the distinction between early and later Buddhism, and speaking of that religion in general, we note:

1.—That Buddhism does not recognize a Creator of the universe. Men have always asked

¹ Chips from a German Workshop, vol. 5, p. 234 ff.

and always will ask how this universe came into existence; but to this question Buddhism gives no answer. Had this world a beginning or not? is a question which one of Shaka's disciples once asked him, but he replied that that is something which men do not know. The question was pressed, and Shaka at length said, "O disciples, think not such thoughts as the world thinks; the world is everlasting, or the world is not everlasting; the world is finite or the world is not finite. If ye think, O disciples, thus think ye; this is suffering; this is the origin of suffering; this is the extinction of suffering; this is the path to the extinction of suffering."¹⁷

Who can be satisfied with such a reply? or who can be satisfied with the teaching of Northern Buddhists that the world and all therein came into existence because, and by means, of the thoughts and feelings of various sentient beings?

The verdict of the wisest men in ancient times, as in the present, is that there must be an intelligent creator of the universe; but it is plain that in just the proportion that this fact is established by proof, so is atheistic Buddhism overthrown.

2. As Buddhism does not recognize a Benevolent Creator it is pessimistic, and, in accordance with the "Four Sacred Truths,"—looks upon the world as one of suffering only—a world to flee from.

Suffering is indeed a marked characteristic of the world we live in; but the dark cloud is not without its silver lining. The wonderful order and harmony of the heavenly bodies; the beauty of mountain and valley; and the wonderful provision made for the wants of man, are but a few of the blessings given us by the good God above us. And so any view of the world which sees nothing but sorrow and suffering, nothing to be grateful for, is shallow and mischievous. The object of the true Buddhist being to flee the world and enter Nirvāna, he has nothing to do with social reform and progress. "Let the State and society remain what they are; the Buddhist priest has renounced the world and has no part in its cares and occupations."¹⁸ "Buddhism has succeeded in taming barbarians, and still shows itself admirably calculated to assist in maintaining order and discipline; but has it ever supported a people in their endeavours after progress, in their recuperative efforts when smitten by disaster, in their struggle against despotism? No such instances are known."¹⁹

Call the roll of Buddhist countries. Are they civilized? Do they have even the physical appliances of civilization, railroads, steamships, telegraphs, &c., &c.? Are their Governments liberal and their people free? Are their schools and colleges famed for their excellence, and is education widely disseminated among all classes? Are the text-books used in yonder Imperial University, on Chemistry, Astronomy, Politics, and Psychology brought from Buddhist countries? When Japanese priests wish to study Sanskrit or Pali do they go to China, or Thibet, or Ceylon? do they not go to a Christian land, to a school founded by disciples of Christ? Has any other than Christian soil ever produced an inductive science?

The people of ancient India, as is well known, were divided into four castes, and so strictly were the distinctions observed as to make them one of the greatest banes of the national life.

It has often been asserted that Shaka assailed and overthrew caste in India.²⁰ This, however, is a great mistake.²¹ It is true that persons of any caste could become monks, and when once in the order caste distinctions were no longer known. This was most excellent. But scholars tell us that there were ascetics in India before Shaka's day who admitted members without distinction as to sex or social position. It is also true that the Buddhas who from time to time come into the world are all to be born of one of the two higher castes. If further proof were needed, it would be found in the fact that caste

prevails to this day in India and in Buddhist Ceylon.

We may notice also the great prominence given to kindness in the teaching of Shaka; kindness to both men and animals, and this can not be too highly praised. But if we look for hospitals, asylums for the unfortunate and distressed, we shall be greatly disappointed, for such institutions there are practically none.

3. As Buddhists do not believe in an overruling God, they have no adequate conception of sin. Suffering is much more dwelt upon than sin. This is exactly the opposite of Christianity, which makes sin the evil of all evils. On the advent of the son of God it was said by an Angel from God, "thou shalt call his name Jesus for he shall save his people," not from suffering punishment but "from their sins."

Those who have the deepest sense of sin are those who regard it as committed against a personal, loving, and holy God. Buddhism has no fifty-first Psalm.

Again, those who have disobeyed the Creator's will and broken his laws cannot have full peace of mind until assured of his forgiveness. This God's revealed religion alone can give.

It is true that Buddhism teaches that sin is followed by suffering; but it also teaches that this suffering destroys sin. There is therefore no need of forgiveness. If suffering wipes out sin, then sin is not such a terrible thing after all. I may go on in sin if suffering—that of myself or some one who inherits my "Karma"—is sure to wipe it out, with no fear of meeting a righteous God.

I do not wish to speak evil of the Buddhist priesthood. But I only repeat what I hear on every side when I say that their reputation is far from good. You know more of this than I can. I therefore ask you if Buddhist priests are often selected as patterns of purity and nobility of character. Do parents as they take their children by the hand and seek to encourage them in virtuous living say to them, Be like the priests! Physicians have told me, and the records of hospitals in Japan are said to state, that the lives of the priests are tainted with immoralities.²² Is not one reason of this to be found in the fact that they do not recognize an all-seeing, righteous God who judges all men?

Let me speak of one thing more. Those who teach of salvation by the "power of another" refer principally if not exclusively to being born into the western Paradise. As the extract made from the *O Fumi*, cited a while ago, declares, the object of this sect "is not to cleanse a bad heart or to quiet wayward thoughts." This "Power of Another," is it a real, actually existing power outside of ourselves? or is it something wholly subjective? If you press this question upon an intelligent priest he will, although teaching to the laity that the Western Paradise and Amitābha are actual and real existences, admit that they have no existence outside of the human heart.²³

Can we rest our faith on such a power? Trusting in Amitābha or Avālokitesvara for salvation, may be more agreeable to our weak nature than the stern moral self-culture taught in early Buddhism; but if these beings have no real objective existence, can such a trust save us from sin, its guilt, or its punishment? If we seek salvation by the "power of another," the prime question is, has that power a real existence? If there is just ground for doubt in this respect, the most difficult self-culture is far more reasonable.

One of the greatest defects of Buddhism is its teaching with reference to woman. According to this religion, women are greater sinners than men; they hardly know the difference between truth and falsehood, and so are the greatest snares to mankind.

"Unfathomably deep, like a fish's course in water, is the character of women, robbers with many artifices, with whom truth is hard to find, to whom a lie is like the truth and the truth like a lie." "Master" Buddha is asked by Ananda, "how shall we behave before women?" "You

should shun their gaze, Ananda."²⁴ "But if we do see them, Master, what then are we to do?" "Not speak to them, Ananda." "But if we do speak to them, Master, what then?" "Then you must watch over yourselves, Ananda."²⁵

Furthermore, Shaka is said to have feared greatly the effect of the admission of women to his order, and it was only with grave misgiving that he yielded to the pressure of his foster mother, to receive women as his disciples. As Dr. Oldenberg says with unconscious pathos: "Buddhism has not had a Mary of Bethany. * * * throughout women are treated as a tolerated, and reluctantly tolerated, element in the Buddhist church."

If we study the "Rules for the Order of Nuns," we shall see their greatly inferior position, their complete subjection to the priests. These rules inculcate almost nothing else. "A nun of a hundred years experience must bow reverentially before every monk, even though he be ordained only on this day." "Under no circumstances is a nun to revile or scold a monk." "From this day forth is the path of speech against the monks closed against the nuns; yet is not the path of speech against the nuns closed against the monks."²⁶

We notice, further, that only men can enter Nirvāna, or become buddhas. In the *O-Fumi* of the Shin sect women are spoken of as filled with doubts: as ignorant and sinful, and so as cast off by all the buddhas; Amitābha alone looks mercifully upon them. We have in this a very clear instance of the way in which the attempt was made in the later teaching to supply the deficiencies of early Buddhism; but even the merciful Amitābha can take women to his paradise only by first changing them to men.

But aside from the question of entering Nirvāna or being born into the Western paradise, the position assigned woman in this world is truly a degrading one. In the Buddhism of ancient India, as well as in the teaching of all the sects in Japan, woman is said to be a sinner with "five impediments" and "three obediences." I will not take your time to speak of the impediments; the obediences are as follows: "In childhood let her be subjected to the will of her father; in adult life to the will of her husband; to her son's will when her husband has died; a woman is not permitted to enjoy independence."²⁷ In this connection there is in the ancient books a story worth repeating. Shaka went one day, in his begging tour, to the house of a wealthy merchant Anāthapindaka (Shudatsu). Hearing loud conversation and wrangling, he asks the reason, and is told that the daughter-in-law will not listen to her husband or parents-in-law. Shaka calls her to him and tells her that there are seven kinds of wives which a man may have. "What are they?" asks the wife. Shaka explains, "one resembles a murderess, another a robber, another a mistress, another a mother, a sister, a friend, and the seventh, resembles, a servant, always submissive to her husband's will and bearing without a murmur all he says and does." "These, Sujata," are the seven kinds of wives which a man may have. Which of the seven art thou? "From this day forward sire, replies the wife, may the Exalted One esteem me as one who is to her husband a wife who resembles a servant."²⁸

This story may or may not be true; but it serves well to illustrate the position in which Buddhism places woman. And it indicates furthermore her actual condition to-day in countries where Buddhism has full sway. Her education is immensely behind that of her brothers; indeed, there is often an avowed purpose to keep her in ignorance that she may be more obedient, that she may be more nearly and truly the servant, the slave, of men. Her father, her husband, or her brother, may command her to spend weary years in a brothel for his pecuniary gain; to the sinner with "three obediences",

²⁸ Oldenberg, Buddha p. 188, note.

there is left only the choice between obedience and death: the latter choice is by no means rarely taken in Japan. Gentlemen, in the New Japan which is just rising above the horizon, do you propose to follow a religion which makes your mothers, wives, sisters, and daughters, the worst of sinners, and condemns them to lives of ignorance and subjection? Surely you have no such purpose. I take the presence of Japanese girls in the common schools of Japan to-day as an evidence of this. I accept the vigorous public addresses, and articles in the Japanese newspapers and magazines upon female education, as pointing to the same conclusion. I take yonder "Normal School for Young Ladies," under the special patronage of Her Imperial Majesty the Empress of Japan, as proof sufficient, and more than sufficient, that your plans and purposes for the civilization of New Japan include the education and elevation of women.

Look then, Gentlemen, at those nations where the position of woman is most exalted, at the most civilized nations of the earth! Are they not founded on Christianity? And is it not true that just in proportion as a pure Christianity is believed and practiced in those nations, their grade of civilization is high? In these countries even, there are many people who do not heartily accept Christianity, so that in the acts of these Governments, and in the daily life of the people, there are many wrong and shameful things; yet if we compare them, even in their present condition, with the non-Christian civilizations, is there not an immense difference? If we may believe the reports that reach us, Mr. Itagaki and H.E. Mr. Ito both were strongly impressed with this fact on their recent trip to Europe.

If therefore you desire to advance your country in civilization, ought you not to seek for it that religion which is so clearly the foundation of the civilization of the most enlightened nations? If so, then examine the claim of Christianity. Examine Christianity itself. To do so it is not necessary, as you might suppose, to read a large library of books. An understanding of this Bible, this one volume, is sufficient. Nay, take up a single gospel, put its spirit into your heart and life, and you are in possession of the very essence of the religion of Jesus.

It is true, as already mentioned, that there are various Christian sects. But as all draw their life from this gospel, these differences are of minor importance. If in what I may say or in what any of these Japanese or foreign teachers of Christianity may teach, there is anything contrary to the gospel, all will unite in urging you to believe the gospel and not our words or the creeds of our denominations. If you go to the teachers of the Roman or Greek Churches they will reply in the same strain, "Put the gospel far above our words."

This being so, I do not ask you to join any special branch of the Christian Church; what I do urge upon you is that you take this Bible as your guide in life, the foundation of your Civilization. Whoever thus takes this book as the guide of his life and in humble dependence upon God for wisdom and strength, obeys the precept of Jesus Christ "Thou shall love thy neighbour as thyself," is a true Christian without regard to his ecclesiastical relations.

Christianity differs from Buddhism in that it brings satisfaction and peace to the heart. Its believers worship no other gods. In all countries where it has spread, its followers abandon their old worship and worship God, the Creator, alone.

Buddhism, not satisfying man's wants, we find that in Ceylon, Burmah, Thibet, China, and Japan, in addition to the rites of their own religion, Buddhists worship gods, demons, and various other beings. When Shinran Shōnin was about to establish the new *Shin* sect he went to the temple of Sanno on Hiyeizan, and not only implored the aid of the gods, but also made a covenant with them. What clearer proof could be given that Buddhism is insufficient to satisfy the cravings of the human heart, for guidance, strength, and peace?

On the other hand, when Christianity entered

Europe, the Greeks, Romans, and the rude inhabitants of the North, had many and various gods, but, now the worship of such gods is unknown. In America, in Africa, and in the Pacific Islands, it has been just the same. The people who have accepted Christianity find it a sufficient religion and give up their false gods, bearing witness that the Gospel of Christ is "the power of God unto salvation to everyone that believeth, to the Jew, and also to the Gentile" of whatever language or race.

Gentlemen, may I ask, How is it with you? Will you not now accept this religion? Or do you still look upon the religion of your fathers as superior to Christianity? If so I have a proposition to make to you:—Choose some Buddhist book, one of the Sukhavati Sūtras (Sambi Kiyo), the Vairōchana Sūtra (Dai Nichi Kiyo), or the *O Fumi* of the Shin sect, I care not what. We Christians will choose from the Bible a book of equal length. Let these two be bound together in one volume and sent out among the people of Japan, who can thus easily compare them and decide which is the better, which promises most for the country. If you will consent to such a course, I gladly promise to furnish half the money needed for the experiment.

According to Buddhism, as the present age (Shōzōmatsz no sanji) passes by, the people will grow worse and worse until there is complete ignorance of the Buddhist Law. In other words, Buddhism itself prophesies its own decay and death.

With Christianity, exactly the opposite is true. When Jesus Christ had but a few unlearned disciples he called them together and commanded them to "make disciples of all the nations," and an angel from heaven declared that "of his Kingdom there shall be no end." Viewed in the light of the eighteen centuries that have passed away since that time, its final triumph is certain.

TRANSLATIONS FROM NATIVE JOURNALS.

AMERICAN INFLUENCE ON JAPAN.

(Translated from the *Fiji Shimpō*.)

That grand epoch-marking event of the period of Kayei, the opening of this Empire of Japan, was brought about solely by the efforts of the United States of America. With the advent of an American fleet into the calm waters of the Bay of Yedo, our countrymen were suddenly awakened from the sleep of centuries. Since then, Japan has had constant intercourse with foreign countries, and now "progress" is all she thinks of. Up to the time of Kayei* our countrymen were entirely ignorant of the outer world; so that the advent of Commodore Perry's fleet struck terror to their minds, for they knew not what to make of those great marine castles. The word "America" had then the force of what is understood by "Western Nations" at the present day. All the improvements and successes of Occidental civilization were ascribed to the United States; and even the peasantry thought America ahead of all other countries. Advanced as our present knowledge of the western world now is, in our countrymen's conception of the world at large there are no longer any traces of American supremacy. Even quite recently American silks and satins were spoken of as being imported from Europe; and our forefathers certainly did once apply the epithet "American" to every foreign import.

But since those days our intercourse with Western lands has gradually become more and more intimate. Sciences, arts, commercial systems, indeed almost every modern improvement, have been adopted from the Occident. That Japan will still continue this course in future and finally attain the summit of true civilization is the one aspiration of every patriotic heart. Strange to say, however, there are persons who seem to have an unaccountable fear of anything like rapid progress. They stop as if dazed, and look longingly back to the past, evidently distressed by some temporary and local abuses amidst the grand advance of civilization. There may, indeed, exist certain inconveniences in connection with the progress of Japan, but these are more than outweighed by our great

successes. We are not prepared to answer every charge that may be brought against the radical changes effected in the national constitution during the past three or four decades. And yet it is of the first importance that our countrymen should direct their full attention to the great possibilities of the future, and bear the burden of the present in patient silence. We sincerely sympathize with the old *daimiyo* and *samurai*, who were, at one blow, deprived of their onetime power and revenues by the establishment of prefectures. The law prohibiting the carrying of swords left the warrior *samurai* mourning over their empty scabbards. Since the days of the Restoration many old temples and antique archives have been destroyed, while the resorts of the gentry have undergone cruel changes. The alteration in the rate of the land-tax, though seemingly a splendid achievement, has entailed great sufferings upon the inhabitants of certain localities. Our modern laws are without a flaw so far as the protection of the lives and properties of the Japanese are concerned; and yet, when viewed from behind the scenes, some people persist in thinking that they encourage heinous offences. All these supposititious abuses may be extremely trying to certain classes of people in one or two localities: but the advance of civilization is rather a national than an individual affair. Anything which impedes its onward course must be swept wholesale away, despite the murmurs of the few who may suffer therefrom.

By a peculiar veering round of the social weather-vane, certain sections of our community have now begun to call the progress of New Japan rash and superficial. All objectionable results brought about by the supposed forcible subversion of the former dispensation are laid by them at the door of America. Nothing could be more irrational. They both misinterpret the result and ignore the real facts. For the sake of America's prestige, we shall endeavour to prove how unfounded is this imputation. America was the principal lever in introducing civilization into Japan. It is due to her sole influence that Japan has been led to know the world and to enjoy the benefits of modern science. Were these false views held by men of little or no culture, we might find it excusable; but we cannot understand how men of high social standing and ripe judgment can entertain such puerile ideas.

Perhaps the Republican doctrines of the United States have taken strong hold on the minds of those pessimists, who, out of sheer amazement at the marvellous rapidity of our civilization, ascribe many of the supposed nuisances to America. It is true that America is a Republic, but that is not all; for, in common with other nations, she steadfastly devotes her attention to the further development of science, art, commerce, and the manufacturing industries. The term "Republic" may convey to some the sense of "unrestrained license," but in America, at all events, there exist the most stringent and effective laws. Our intercourse with that country does not invariably lead to the importation of Republican vagaries. The adoption of American improvements for the benefit of Japanese civilization should in no wise prove a stumbling-block to any one. Those members of our community are utterly at fault in imputing elements of Republicanism to every foreign matter, whether social or individual, visible or invisible. We have nothing but pity for the shallowness of their views; and we cannot believe that there is anything else weighty enough to give dissatisfaction to certain conservative factions in society. Think for a moment how the prevalence of such ideas, the hatred of Americanism—to borrow their own words—would bear upon the friendly intercourse between Japan and the United States.

It cannot be too greatly emphasized that America was chiefly instrumental in the opening of Japan. Ever since those days our intercourse with that great country has gone on without interruption, and, of late, approaches a still closer intimacy. In recent years, however, the social tide has flowed in an opposite direction, and some speakers have given vent to unjustifiable complaints against America, urging that Germany should be our model. While this may tend to cause some unpleasant feeling in the United States, it must be remembered that all such ideas result but from the transient infatuation of certain classes. The originators of these unfounded complaints are biassed by existant abuses which are of short duration and of no great importance at worst. The true sentiments of the Japanese are now as ever on the side of civilization and intellectual enlightenment. Those who can read the signs of the times make no discrimination between one country and another. We should esteem Germany, we should love America, and all other nations should be our honoured friends. America has been in intimate relationship with us for three decades, and no dispute or cold feeling has ever come between her and Japan,—truly, an ideal

* 1847-1854.

friendship! Though separated the one from the other by a broad ocean, there is every facility of inter-communication. The Americans speak that universal language, English, and their prosperous industry, their wonderful achievements in art and science, their rapid means of communication, their national prosperity rising above the horizon of civilization like the morning sun, finally their land itself, peopled by the most enterprising and vigorous offshoots of the Old World, endear them to us ever more and more. There is no Japanese who entertains a feeling of hatred towards America, and, if there were, he would be treated as insane, and his opinions worth nothing more than the ravings of delirium. Ask any one thoroughly acquainted with the social institutions of the country, well informed of the movements of the younger members of the American community, and his opinion will more than uphold what we say. But as the United States have a Republican form of government, our pessimists argue that Young America is likely to go to extremes and indulge in hasty and hot-tempered discussion, so that the Japanese students at present in that country are sure to be affected by the violent tenets of their fellow-students. Not so, say we. The students of America are practical and deliberate; they do not commit deeds of violence, nor do they indulge in objectionable opinions. It is the experience of every keen observer that American students are singularly mild and quiet in comparison with those of Germany or France. The idea that, because the Government is Republican, the youths of the country are full of a spirit of rebellions independence, is the very opposite of the real state of affairs in the United States. In our opinion, there is no country in the world in which commerce, industry, science and the other departments of human skill and erudition keep equal pace with America; no other country whose development is so little affected by political disorders. In commercial circles money getting and money making form the sole subject of discussion, and politics do not enter into this region. In scientific circles philosophical investigation is the one all-absorbing topic, a topic from which no political dissensions can cause them to swerve. These most excellent characteristics of the American people mark them out as different from all other nations. And so, however intimate our future relations may be, we can anticipate no possible injury to ourselves, but have rather a prospect of decided advantage. We send this message to the American people, that Japan is not pausing in her progress towards civilization; that the intellectual men of Japan know how necessary it is to cultivate friendship with the United States; and, finally, that whatever they may now and then hear to the contrary is not worthy of their attention. Let the upright men of the United States not misinterpret the real feelings of the Japanese towards the Great Republic.

THE DIVISIONAL AND DISTRICT ASSEMBLIES.

(Translated from the *Nichi Nichi Shimbun*.)

A retrospect of past events shows that the cities and prefectures were divided into *Gun* and *Ku* (Urban and Rural Divisions) in the 11th year of Meiji (1878), at the time when the *Fu* (City) and *Ken* (Prefectural) Assemblies were organized, and that on the 22nd of July of the same year, a special Notification was issued by the Government requiring the organization of the *Ku* (Urban Division), *Cho* (Ward), and *Son* (Rural District) Assemblies. The fourth article of this Notification runs as follows:—"In each of the three cities and other towns, the *Ku*, *Cho*, or *Son* Assembly must be held in accordance with the nature of the locality, for the purpose of determining the amount of public expenses outside of the local taxes.

These expenses may be determined in conformity with the customary methods of calculation, such as *Chika-wari**, *Kosu-wari*, *Koma-wari*, *Maguchi-wari*, and *Buai-kin*.

NOTE:—When the regulations for the *Ku*, *Cho*, and *Son* Assemblies are definitely established, a detailed report must be forwarded to the Home Minister for approval.

Since the publication of this Notification, *Ku*, *Cho*, and *Son* Assemblies have sprung up in many localities. There is now no district in which such Assemblies are not organized. Subsequently, however, the general principles of these urban rural assemblies were established simultaneously with the revision

of the Regulations for the *Fu* and *Ken* Assemblies. The organization of the *Ku*, *Cho*, and *Son* Assemblies was thus legally determined from the outset. The object of establishing these principles was explained as a desire to facilitate the formation of special regulations for the guidance of rural assemblies. If the formation of these regulations were exclusively entrusted to a Governor or Prefect, all the towns and villages in a city or prefecture would be compelled to observe the same rules, and, in localities where the popular customs and usages are of different natures, serious inconveniences might ensue. The enforcement of this ordinance would then virtually become impossible. Acting upon this idea, only the fundamental regulations were published, leaving the form and style of the by-laws to the pleasure of the local inhabitants. This is the reason why the fundamental rules in question were spoken of as the "principles of the Urban and Rural Assemblies." The *Ku*, *Cho*, and *Son* Assemblies were allowed to draft and decide upon their own rules, while a copy of these rules was given to each Governor or Prefect by whom they had to be sanctioned. But as these rules were often framed by inexperienced assemblies, the results were far from being satisfactory. Some of the rules, or rather by-laws, were so unsatisfactory, that the municipal authorities often conducted their affairs in a most defective manner; others were too intricate, and their enforcement was a matter of considerable difficulty. On the whole, if they have not actually impeded the proper management of local affairs, they have certainly retarded the freedom of the people. We are, also, forced to suppose that, at the outset of the establishment of these regulations, the local Governors and Prefects had not sufficient time to examine into them closely and make the necessary corrections. And thus it came that considerable inconveniences were experienced, quite unexpectedly, immediately after the opening of the *Ku*, *Cho*, and *Son* Assemblies. And although these inconveniences have chiefly arisen from the defective nature of the by-laws, the modification of which could only be effected by the Assemblies themselves, yet they had to be borne patiently by the people, who were unable to adopt the necessary corrective measures. Still, we are not disposed to blame the Urban and Rural Assemblies for having drafted imperfect rules at the outset, inasmuch as the fault was not that of the Assemblies alone, forced, as they were, to undertake a difficult task without previous experience. The abuses that have resulted from the inexperience of the Assemblies must be ascribed in part to the Governors and Prefects. The Government itself, in granting the right of framing by-laws to the *Ku*, *Cho*, and *Son*, did not, at the time, possess sufficient experience. Such accidents are sure to occur wherever a progressive policy is pursued, and the only way in which they can be avoided is by revising the rules as frequently and thoroughly as possible. It is in accordance with these principles that the Regulations for the *Ku*, *Cho*, and *Son* Assemblies have undergone their present revision, and this revision had become absolutely indispensable for the sake of society at large.

It is one of the most important points of our local administration that all municipal taxes and expenses are determined by the *Fu* and *Ken* Assemblies in the case of cities and prefectures, and by the *Ku*, *Cho*, and *Son* Assemblies in the case of an Urban or Rural Division or District. If we compare the former Assemblies with the latter, we find a remarkable difference in point of size and importance, and yet both alike serve as efficient machines in enforcing municipal administration. In some cases, the *Ku*, *Cho*, and *Son* Assemblies appear to have a more intimate connection with the well-being of the local inhabitants than have the *Fu*, and *Ken* Assemblies. Although but a few years have elapsed since the organization of these bodies, many of our countrymen have made remarkably rapid progress in the development of their political ideas, and the sentiments of the public seem to have undergone a complete change. The municipal assemblies have greatly contributed to the increase of popular rights and liberties, as well as to the promotion of the public welfare and happiness; but as, at the same time, the defects in their organization have become painfully apparent, our Government has reconstructed the organization of the *Fu* and *Ken* Assemblies. This has been done in order to promote the usefulness of the municipal conventions on the one hand, and to suppress the source of abuses, on the other. Thus, the City and Prefectural Assemblies have gradually been brought to perfection, and there was no reason why our Government should leave the *Ku*, *Cho*, and *Son* Assemblies to their own resources. Active measures have latterly been taken in order to introduce reforms into the organization of the Urban and Rural Assemblies, so as to augment their efficiency in the maintenance of municipal administration. Unless the wheels run smoothly, the

proper adjustment of local affairs can hardly be expected. And it is, therefore, absolutely indispensable for our statesmen to have a thorough insight into the workings of these Assemblies.

The principal reforms introduced into the *Ku*, *Cho*, and *Son* Assemblies are as follows:—First, that the Governor or Prefect shall exercise the right of opening the Assembly as well as of determining its duties by the establishment of by-laws; secondly, that the right of convoking the members of the Assembly and of presenting subjects for debate shall be vested in an Urban or Rural Magistrate or Headman (*Kocho*); thirdly, that the Urban or Rural Magistrate or Headman in question shall act as President of the Assembly. The revised organization of the *Ku*, *Cho*, and *Son* Assemblies seems to have been modelled on the system of the *Fu* and *Ken* Assemblies. At all events, the new arrangements will not fail to alter the actual condition of municipal administration and to facilitate the adjustment of public affairs.

TREATY REVISION.

(Translated from the *Mainichi Shimbun*.)

Treaty revision is an important question which concerns every citizen of Japan. For the modification of the treaties once effected, it will not be easy to change them ever again, and so our national prestige and welfare depend upon the nature of the revision.

The advantages or disadvantages that may result from the modification of the treaties will not be of so little import as those which must arise from any alteration in the internal administration of this country. Now that the question of treaty revision has been brought before the public, our thinking men and our literati are engaged in discussing it very thoroughly, in order to arrive at conclusions beneficial to our nation. But it seems that there is great difficulty in arriving at any satisfactory result. Although our system of government has undergone great changes since the Restoration, and although many of the less enlightened customs of former days have been abolished, yet are the Japanese people not yet allowed to take a part in the administration of the country. It often happens, therefore, that we fail to obtain any information concerning even the most ordinary transactions of the Government, transactions which should not be kept secret—their nature not being likely to produce any ill effect if made known to the public. England and France are separated from us by broad seas and oceans. Yet the condition of their Governments is made known to us from time to time with wonderful fidelity and accuracy. We can ascertain by telegrams and correspondence what policy has been adopted by the English Government in Egypt; what propositions were advanced by those statesmen who are disposed to resist any interference with Egyptian affairs; what expense was incurred by the French in sending their expedition to Annam; what demands were advanced by them from the Chinese; and how the proposals made by Mr. So and So on this or that day were discussed by Parliament. The telegrams announcing these particulars reach us within a few days, while correspondence, which is generally more accurate than telegraphic despatches, reaches us about two months after it has been written. There is, thus, no serious difficulty in ascertaining the policy of western powers, although our country lies in the Far East. It is however, not so easy for us to have an insight into our own affairs. We are utterly ignorant of the policy adopted by our Cabinet in connection with internal administration; we know not what opinions are entertained by our authorities with regard to our foreign relations; whether it was true that the Chinese Government had objected to our proposals for the settlement of the late Riu Kiu affair, or how the difficulties with China in respect to that contested territory were adjusted; we cannot tell what policy the Government intends to pursue in Korea, nor what may be the true course of our administration and the real views of our statesmen on any subject. In some cases, the proceedings of the Government have transpired, and we have been able to form some definite idea of its policy; but our position is as though we were only able to catch the confused sound of voices in a neighbouring house, from which we are separated by thick walls. And yet the Government does not desire to keep all matters secret, so as to prevent us from obtaining any trustworthy information. But it does seem as though the Oriental system of administration, which differs so greatly from the democratic policy pursued by the various European states, forbids all inquiry into the inner workings of the Government. That H.I.M. the Mikado has announced his resolution to convene a national elective assembly in the 23rd year of Meiji

* *Chika-wari* is the method of calculating the local expenses in proportion to the value of land, while *Kosu-wari* and *Koma-wari* take the number of houses into consideration. *Maguchi-wari* depends upon measuring the length of a house along the highway, while *Buai-kin* determines the percentage of the incomes of the land-owners.

(1890) may have arisen from his desire to abolish this great evil for all time. Even the ordinary proceedings of our Government are involved in mystery, and this is more particularly the case with regard to diplomatic affairs.

Ever since the creed, "it is necessary to keep all diplomatic matters secret," became the common belief of our statesmen, even those proceedings which should not have been kept private have ceased to be made known to the public. Whether this may be due to extreme prudence on the part of our officials, or to the inability of distinguishing between privacy and publicity, we do not know. When we comment upon the political affairs of the Government, it is very much as though we endeavoured to form an idea of the real form of an object by observing the shadow it casts. The public is deeply interested in the question of treaty revision, but suffers great inconvenience from being unable to ascertain the real facts in the case. It is extremely difficult for us to discuss this all-absorbing topic with patience. What is most strange is that, while we fail to obtain a precise idea of the diplomatic policy of our Government, we often glean important hints from our foreign intelligence. We live in the same capital in which our Emperor resides; and as we lead a journalistic life, it may reasonably be supposed that we enjoy special facilities in acquiring a knowledge of our Governmental proceedings. In most cases, however, we are utterly unable to obtain such knowledge, and what information we have, too often comes from foreigners who live many thousand miles away from us. In regard to treaty revision, too, we have heard only that the foreign representatives in the capital have assembled in the Foreign Department for the purpose of discussing the question. But we have failed to learn the nature of the decisions made by this assembly, whereas the newspapers in England and America have actually published comments on the speeches delivered by officials in those countries with regard to the proposals of our Government. In this clumsy style have we, for the first time, become familiar with the purport of treaty revision. That we have learned the intentions of our Government by virtue of intelligence received from a far-distant country, while our people at large have failed to gain any insight into the diplomacy of their own land, is a fact which shows only too well how great is the difference between the systems of administration in this and other lands. Quite recently, Mr. Charles Eby, an English missionary, published a pamphlet commenting upon the question of treaty revision. This pamphlet contains the gist of all the proposals submitted by our Government to the several foreign representatives. Many of these proposals are quite new to us, and we will translate them into Japanese in order to furnish the public with materials for discussion. The proposals referred to are as follows:—

1. At first, neither a complete removal of extraterritoriality, nor a complete opening of the country to every right for foreigners. This in the interest of both foreigner and native.

2. That for a definite period, say for five, eight, or ten years, as fixed by treaty with the powers, the jurisdiction of Japanese courts over foreigners shall extend only to misdemeanours and delicts, leaving "crimes" as at present.

During that time the country shall be open to foreigners for travel and trade, but not for permanent residence, nor for the holding of property, excepting in such places as now have settlements, which settlements would be so enlarged as to take in the whole of City or Prefecture, in which such settlement exists, for permanent residence and for the holding of property, but such property should be held under Japanese property law.

3. That even in misdemeanours and delicts, in all cases where foreigners come under Japanese jurisdiction, there shall be foreign judges and magistrates appointed, foreign lawyers allowed, so that the real decision shall still be in hands of foreign judges.

4. Where commercial codes, civil codes, marriage laws, &c., do not yet exist in Japan or are not yet remodelled according to Western principles, the principles of foreign laws shall be applied and administered by the foreign judges before mentioned; thus leaving the foreigner in as good a position as at present, and if this applies to the plaintiff also, in a better condition.

5. That when the Japanese codes shall be completed on Western principles, and the modes of procedure shall have become assimilated to those of the West and normal in their working, the jurisdiction of the Courts of Japan shall extend to all cases; the assistance of foreign judges still being retained if the Powers think necessary, for a further period, with the prospect of, perhaps, not engaging new ones, but of allowing those already appointed to serve out a lifetime, in the hope that native judges will then be fit to have full control of the judiciary.

6. That police laws, rights of religions, &c., being matters of detail, shall as rapidly as possible be assimilated to the usages of Western law, but where not these are still to be under his own national usage.

7. Foreigners shall have special rights of appeal, and of course always, as in all lands, the protection of their own Consuls and Ministers in case of hardship.

These are said to be the original proposals advanced by our Government; and, with regard to the custom's tariff, the average rate of duty is to be fixed at ten per cent. It is said that the propositions regarding the right of jurisdiction over aliens were

opposed by most of the foreign representatives, especially by the English Minister.

What position our Government has since taken we know not; whether it has still insisted upon its original proposals for modification or whether alterations have been made in former propositions on account of the opposition of foreigners. We are told, nevertheless, that the Government will shortly re-open negotiations for revision. What may be the results of these negotiations, we most earnestly wish to know. We cannot but regret that we were unable to find out what steps were taken at the outset of the revision of the treaties; now, in especial, that we have obtained precise information from a foreign pen.

THE FORMAL OPENING OF THE TOKYO-TAKASAKI RAILWAY.

(Translated from the *Choya Shimbun*.)

As had been announced, the opening ceremony of the *Tetsudo-gwaisha* came off the day before yesterday. Leaving the Palace at 6.30 a.m., H.I.M. the Mikado and suite, which was composed of Their Excellencies Tokudaiji, Ito, Sasaki, and several officers of the Imperial Household, arrived at Ueno at half-past seven. Upon the arrival of the Imperial Party the military bands played the Japanese National Anthem. Their Imperial Highnesses Arisugawa, Fushimi, Komatsu, Yamashino, and Kitashira-kawa, Their Excellencies Sanjo, Oki, Yamada, Fukuoka, Matsugata, Saigo, Kawamura, and the Ministers for England, America, China, France and Germany, were already on the ground.

Shortly afterwards there was a display of fireworks, and at eight o'clock, a train consisting of 13 carriages left for Takasaki. The Imperial Party occupied the centre of the train, in the adjoining car was a posse of policemen, while all the other carriages were occupied by the shareholders of the Company and the invited guests.

Upon returning to Ueno, His Majesty the EMPEROR, delivered the following speech:—Through the efforts of the Nippon Railway Company, the completion of the Tokiyo-Takasaki line has now become an accomplished fact, and the ceremony of opening that railway is hereby performed. That the Capital and the localities to which the line will be a means of communication will largely benefit by the undertaking there can be no question, and it gives me much pleasure to be informed that the people are already extensively availing themselves of the facilities afforded by the Tokiyo-Takasaki Railway.

His Excellency SASAKI, Minister of Public Works, then said:—The construction of the Tokiyo-Takasaki Railway was completed in April last, but this day has been appointed for the opening ceremony, and as His Imperial Majesty the Mikado has graciously honoured the occasion with his august presence, I venture to express my humble congratulations on the event. The Company was formed in 1881, and as it was expected that great benefits would accrue through the formation of a line of railway connecting Tokiyo and Awomori, the present work is a most laudable undertaking. The Tokiyo-Takasaki line was commenced in June, 1882, and was consequently completed in something under two years, showing great industry on the part of those who undertook its construction. There can be no question that increased facilities for transport, whether marine or overland, tending as they do to the better distribution of commodities, will have the effect of stimulating production and increasing business, thus adding to the prosperity and happiness of all classes of the community. Taking this view, I say that the ceremony of to-day is a most important one, as indicating the social and commercial advance of our country, and I, Takayuki, venture to congratulate the nation on another important achievement, and to express my hope that a great future lies before the Company.

It is rumoured that both the Military and Naval officers stationed in Korea are to be granted certain sums as table-money.

In Fukushima Prefecture, the silk-worms of earlier growth have suffered greatly from the irregularity of the weather. Spinning is progressing favourably at Kaibegori, although it began ten days later than last year. The new crop will be above the average.

A new military hospital for *kakke* patients is to be built at Karuizawa, Nagano Prefecture, now that a new road has been constructed through the Usui Range. The number of patients at the Tokiyo Military Hospital number two hundred.—*Fiji Shimpō*.

REVIEW.

La Guerre porchaine entre la France et l'Allemagne. Par HENRI BOLAND. Paris, 1884.

IN the style of the "German Conquest of Great Britain in 1875," one of those numerous would-be prophetic compilations which appeared shortly after the close of the Franco-Prussian War, M. Henri Boland, a pessimist of the purest water, has taken it upon himself to predict a second war between the two erst hostile nations, which war is to be most sanguinary and, of course, terminate in favour of the French Republic. The German magazines have, equally of course, taken the matter up; but, be it said to their credit, less heatedly than one might, on the whole, have reasonably expected. The *Deutsche Rundschau*, to whose review of M. Boland's effusion we are chiefly indebted, criticizes the work in a dignified and trenchant manner, and the other journals on the right side of the Rhine are not slow to follow suit. Despite the fact that ten years of peace have reigned in the German Empire, M. Boland writes (p. 61): "L'empire allemand est fondé sur la guerre, il ne peut subsister qu'à la condition de guerroyer; tous ses actes politiques sont des agressions et des provocations à l'adresse de ses voisins." This is very evidently the result of that acute stroke of diplomacy, the presentation of the Uhlan Colonelcy to King Alphonso; but M. Boland explains the matter in a different way. He says:—"Germany is eager to find a pretext to declare war with France because the Empire is unable to stand the pressure of inaction, and is on the verge of a ruinous bankruptcy; because, too, Germany is in a state of the most wretched misery, for emigration is increasing with unheard-of rapidity, there is a revolutionary spirit distinctly sensible in many provinces, the strongest opposition in the Reichstag, and a want of unanimity throughout the Empire." France, he continues, should be prepared for immediate action, for there is the German *Hannibal ad portas* (p. 111). Germany will, he declares, be answerable for the next war as she was for the one of 1870-71; for the declaration on her part will be due to her bitter hatred of France, which latter country has shown, during the past ten years, marvellous dignity and self-control (p. 110). M. Boland relates how Gambetta once sent him on a secret mission into Germany, but he must either have learnt nothing of the country he visited—he is obviously unacquainted with the language—or else actually prefers to tell untruths. He writes (p. 20):—"L'école en Allemagne a une odeur de caserne, les élèves y sont traités en recrues et maintenus dans les règles inflexibles du devoir par des punitions sévères, qui soulevaient en France la réprobation générale." With regard to the war of 1870-71, M. Boland makes the remarkable statement that Germany sent her allies into battle before bringing out her own troops, "leur réservant le premier choc, les offrant, pour ainsi dire, en hécatombe à l'ennemi, pendant que les troupes prussiennes formaient l'arrière-garde et, sans être exposées au même degré que les autres, recueillaient tous les fruits de la victoire" (pp. 66-67). On page 67 he contends that all the Germans outside of the sacred limits of Prussia are very hardly treated, and a most discontented race. "Pour comble d'ironie, le chancelier de l'Empire (poor Bismarck!) a divisé lui-même les sujets de l'Allemagne impériale en Allemands de première classe (les Prussiens) et en Allemands de deuxième classe." Finally, on page 71, he falls into an error which betrays the full extent of his arrogant suppositions:—"Au surplus, en supposant qu'il prit au sérieux le principe de l'unité allemande, M. de Bismarck devrait s'empresse de restituer au Danemark le *Holstein*, dont la population est danoise!" M. Boland has very evidently inherited a scanty modicum of the world-renowned good manners of his country; his idea is palpably apparent: to bind the French people closer together he uses Germany as the boggy wherewith to frighten them, and, to make his boggy all the more terrible, clothes it with the most awe-inspiring garments he can find in his mental wardrobe. If France of the present can lend a willing ear to ravens of so gloomy a persuasion, one can only say, *vult decipi*; but the more rational politicians of the French nation will surely not let themselves be deceived by such evil counsels. Contrary to what M. Boland has written, the German press is far from expressing any feelings of ill-will towards its peppery neighbour; indeed, a spirit of tolerance and good-fellowship pervades all it writes; but it cannot be denied that the Triple Alliance, and the outspoken friendship of Russia for Germany, weigh somewhat over-heavily on the minds of French writers, and their complaints are not without some reason at bottom.

NOTES FROM JAPANESE PAPERS.

It is said that an iron factory is to be erected at Kawaguchi, in connection with the construction of the Nakasendo Railway. The original plan was to erect the factory at Shimbashi, but this was given up on account of the distance.

Twenty-five officers of *Sonin* rank attached to the Finance Department, and fifteen officers of the same rank in the Home Department, are now learning the equestrian art under the guidance of Mr. Kusakari. This is done in consequence of the proposed use of ponies by all officials of high rank.—*Fiyu Shimibun*.

Upon the arrival of H.I.M. the Mikado at Takasaki on Wednesday last, the towns-people presented His Majesty with a number of large eels and cat-fish (*namadzu*).

A Court of Compromise is to be established in the Prefecture of Okinawa (*Riukiu*). The *Kenrei* and his Secretaries have hitherto occupied the Bench. In future, the education of the inhabitants is to be conducted in the same manner as on the main island, and several Government schools will shortly be opened.—*Hochi Shimibun*.

The Imperial Body Guards, as well as the Garrison stationed in Tokiyo, are to receive instruction in swimming from the beginning of next month.

The stations along the proposed Osaka-Sakai Railway will be as follows:—Namba, Imamiya, Tengajaya, Sumiyoshi, Yamatogawa, and Adzumbashi.

The fishermen living along the coast of Musashi, Sagami, Kadzusa, and Shimosa, used to hold frequent conferences with regard to their peculiar avocations. This practice, which was discontinued at the time of the Restoration, will be recommenced this year.

There are 6,119 druggists in Tomiya, in the province of Yechiu, and their annual sales amount to more than one million *yen*. Since the publication of the Medical Stamp Regulations their business has fallen off by two-thirds of what it formerly was, and they can now hardly make a living.

The editor of the *Japan Herald*, in his issue of the 25th instant, wrote that the United States were pursuing a different policy in Turkey and Japan. With regard to the views of the American Ministers in Tokiyo and Constantinople, he remarked that their policy savoured of contradiction. We, however, see nothing remarkable in the fact that the policy pursued in each country is different, for surely our nation and Turkey can never be spoken of in the same breath.—*Choya Shimibun*.

The Naval Ordinance Bureau is about to order 25 Armstrong guns from Germany. (?)

The thirty-eight graduates of the Law School attached to the Judicial Department entered that institution in the month of September, 1876. They received most careful instruction in every branch of legal science. Civil Law in especial, which is one of the chief departments of French jurisprudence, was, in itself, a study of four years. All honour is due to the French jurist who taught them so industriously and conscientiously.—*Fiji Shimpō*.

On the 24th instant, the third new silk market opened at Mayebashi, but it was very poorly attended, owing to the inclement weather. Some 100 bales were sold at 36.8 *momme* to 37 *momme*. The market proved firmer than in Yokohama.

In Kodzuke (Joshiu), there are several silk factories, silk being the chief produce of the province. Those at Tomioka and Shinmachi are under Government control, while the others are private establishments. Since 1881, that year of total failure in the silk trade, the number of private factories has considerably fallen off, and those of the present, with few exceptions, are heavily in debt. The favourable prospects of the silk crop in Italy, France, and China, may prove an unpleasant stumbling-block to similar private institutions.—*Bukka Shimpō*.

It is rumoured than an Assistant Judge or Recorder—we do not know which—of a certain Court of First Instance, met with a well-deserved rebuff at the hands of a foreigner the other day. It seems that the foreigner had a case in court, and that the speculative judge applied to him for a bribe. We shall report the matter more fully so soon as we have ascertained all the facts. At all events, such a piece of sheer impudence will not only bring the perpetrator into serious difficulties, but reflect upon our honour as a nation. The rascal cannot be too heavily punished.—*Rikken Seito Shimibun*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 21st.

THE REFORM BILL.

In the House of Commons the Reform Bill has passed through Committee.

ANNEXATION OF CAMBODIA.

The annexation of Cambodia by France has been completed. The King has been pensioned.

London, June 22nd.

THE CONVERSION OF CONSOLS BILL.

In the House of Commons, the Bill for the Conversion of Consols has been read a third time and passed.

London, June 24th.

AFFAIRS IN EGYPT.

England and France have come to an agreement on the Egyptian question, and it is decided that the British evacuation shall take place in 1888.

It is agreed that the Treasury of the Public Debt (Egypt) shall be under the Presidency of an Englishman.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, JUNE 20TH, 1884.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

Dashed line—represents velocity of wind.

Percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in Inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 20.5 miles per hour on Saturday, at 2 p.m.

The highest reading of the barometer for the week was 30.078 inches on Friday at 10 p.m., and the lowest was 29.539 inches on Sunday, at 6 p.m.

The highest temperature for the week was 86.0 on Sunday, and the lowest was 61.0 on Friday. The maximum and minimum for the corresponding week of last year were 86.3 and 63.0 respectively.

The total amount of rain for the week was 1.160 inches, against 2.081 inches for the corresponding week of last year.

SUNDAY CHURCH SERVICES.

Christ Church: 11 a.m. and 5.30 p.m.

Union Church: 11 a.m. and 8 p.m.

Roman Catholic Church: 8 and 9.30 a.m.

English Church, No. 12, Sakaicho, Shiba, Tokiyo: 11 a.m.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Naniwa Maru*, from Yokkaichi:—18 Japanese.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—H.E. Yamagata Aritomo, Mr. and Mrs. A. Evers, child and nurse, Messrs. K. Nakayama, T. Hoshi, and N. Chosan in cabin; and 128 Japanese in steerage.

Per American steamer *City of Peking*, from Hongkong:—Messrs. Charles de Merawed, Aug. Petel, Francis R. Gouthern, and B. C. Mosby in cabin. For San Francisco: Rev. and Mrs. D. Rassalp and 2 children, Miss Kilmote, Mr. and Mrs. Choy Fung, 2 children and servant, Madame Dufresnil Messrs. C. Jantzen, F. Caramanzama, Captain Geo. R. Lefavour, and Mr. Quan Sun Fue in cabin; and 843 Chinese in steerage.

Per Japanese steamer *Ise Maru*, from Kobe:—30 Japanese.

Per Japanese steamer *Kosuge Maru*, from Kobe:—30 Japanese.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Mrs. Iversen, Mrs. Leyenberger, Messrs. Hiraoka, H. E. Charlesworth, and Louis Wertheimer in cabin; and 1 European, 1 Chinese, and 113 Japanese in steerage. For San Francisco: Messrs. W. Paterson, M. C. Nickels, and N. A. Popoff in cabin.

Per Japanese steamer *Sakaye Maru*, from Yokkaichi:—33 Japanese.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—68 Japanese.

Per Japanese steamer *Kairio Maru*, from Yokkaichi:—49 Japanese.

Per Japanese steamer *Seisho Maru*, from Kobe:—23 Japanese.

Per Japanese steamer *Tsukai Maru*, from Sagara:—17 Japanese.

Per Japanese steamer *Gembu Maru*, from Yokkaichi:—39 Japanese.

Per Japanese steamer *Takasago Maru*, from Kobe:—Mrs. Hill, Master Sagel, Captain Taylor,

Messrs. Sagel, Smith, Barnard, Dallas, and 9 Japanese in cabin; and 138 Japanese in steerage.

Per Japanese steamer *Shidzuoka Maru*, from Shimidzu:—36 Japanese.

Per Japanese steamer *Dzukaye Maru*, from Atami:—21 Japanese.

Per Japanese steamer *Saiko Maru*, from Shimidzu:—21 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—66 Japanese.

Per Japanese steamer *Takachiho Maru*, from Hakodate:—40 Japanese.

Per Japanese steamer *Toyoshima Maru*, from Kobe:—35 Japanese.

Per Japanese steamer *Mikuni Maru*, from Kobe:—63 Japanese.

Per Japanese steamer *Owari Maru*, from Hakodate:—35 Japanese.

Per Japanese steamer *Suminoye Maru*, from Hakodate:—58 Japanese.

DEPARTED.

Per Japanese steamer *Takasago Maru*, for Kobe:—Mr. and Mrs. Ishikawa, Messrs. G. Tanaka, Dallas, and Lesler in cabin; and 100 Japanese in steerage.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Colonel and Mr. Hobson, 3 children and 2 servants, Mr. and Messrs. Chun Khim and infant, Mrs. Thomas, Mrs. Oyaye and servant, Lieutenant Brownlow, R.N., Mr. J. H. Gubbins and servant, Messrs. W. Barr, F. S. Lévy, R. L. Grahame, W. de Russett, H. W. William, E. Osborne, Osaki, and Puang Sung in cabin; and 4 Chinese and 24 Japanese in steerage.

Per Japanese steamer *Horai Maru*, for Yokkaichi:—Mr. S. Saito in cabin; and 80 Japanese in steerage.

Per Japanese steamer *Wakanoura Maru*, for Hakodate via Ogino-hama:—Messrs. M. Fujioka and K. Kurata in cabin; and 80 Japanese in steerage.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—80 Japanese in steerage.

Per American steamer *City of Peking*, for San Francisco and Europe:—Mr. and Mrs. John Swire and servant, Mr. and Mrs. F. D. Hitch, Mr. and Mrs. Stanley Mitchell, and the Misses Mitchell, Rev. and Mrs. D. Rassalp and 2 children, Mr. and Mrs. Choy Fung, 2 children and servant, Madame Dufresnil, Miss Kilmote, Major-General P. H. Cunliffe, Captain Geo. R. Lefavour, Dr. W. G. Dickson, Mr. C. B. H. Harter and servant, Sir John Sinclair, Mr. J. H. Hanney and servant, Messrs. Leopold Paulhan, A. Blumenthal, Hajitagero, A. A. Meyer, Dyson Moore, A. E. Kent, J. H. Richardson, J. J. Hardy, A. B. Black, J. Wallace, A. Primaven, T. S. Anderson, F. Carlisle, Chas. A. Taylor, A. H. Dawborn, J. E. MacComas, C. Jantzen, F. Caramanzama, and Quan Sun Fue in cabin; and 1 European and 15 Japanese in European steerage; and 9 Japanese and 810 Chinese in native steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Mr. and Mrs. Ogasawara, Mr. Hosokawa and son, Mrs. Tajima, Colonel Imano, Messrs. J. J. Fraser, C. Hervey, H. W. Hagart, J. Calder, W. H. Devine, G. Sale, D. Robertson, K. Abbe, Yanosuke Iwasaki, A. Katayanagi, S. Murata, T. Hara, N. Murakami, G. Takata, M. Shimohara, M. Ito, Uyematsu, K. Iwasaki, M. Fujioka, G. Futatsubashi, and M. Suyenobe in cabin.

CARGOES.

Per British steamer *Thibet*, for Hongkong via Kobe and Nagasaki:—Silk for France, 30 bales; for England 4 bales; total 34 bales.

Per American steamer *City of Peking*, for San Francisco:—

REPORTS.

The American steamer *City of Peking*, Captain Berry, reports leaving Hongkong on the 16th June, at 3 p.m. with good weather and light S.E. monsoon throughout the passage.

LATEST COMMERCIAL.

IMPORTS.

Extreme dullness has now changed into almost stagnation so far as the general tone of the Market is concerned. Sales have been almost nil and clearances wretchedly small.

COTTON YARN.—An occasional lot of 25 bales passes into dealers' hands, but buyers and sellers seem to be equally indifferent about business at the rates current, and total sales are a mere bagatelle, whilst prices are more or less nominal.

COTTON PIECE GOODS.—Small sales of 9lb. Grey Shirtings have been made at lower prices. T. Cloths at previous rates, but the demand has been trifling to a degree. Turkey Reds and Velvets have been very quiet and quotations weaker.

WOOLLENS.—Mousseline de Laine have been taken to the extent of few thousand pieces, and Italian Cloths to the extent of a few hundred only. Other articles are dull and difficult of sale.

COTTON YARNS.

Nailrod, small size	2.85 to 3.15

KEROSENE.

There have been no sales whatever during the week; and quotations are purely nominal at the undernoted figures. The Stock is fully 590,000 cases, and business is apparently suspended for the time being. Doubtless the renewed financial panicky feeling in New York, will have its effect on the price of Oil there.

	PER CASE.
Devoe	\$1.67½
Comet	1.65
Stella	1.62½

SUGAR.

With large arrivals and more on the way, the Market has been exceedingly dull, nothing being done except in a retail way. We do not alter the quotations, but they are purely nominal.

	PER PICUL.

Brown Formosa	3.00 to 3.05

EXPORTS.

RAW SILK.

Our last report was dated 21st instant: during the interval a small business has been passing, and Settlements for the week are about 85 piculs. The business done has been chiefly in small sample lots of New Hanks, sundry buyers appearing anxious to have a few representative bales on the way. Some little has also been done in *Filatures*, both old and new, at about former prices. There is not

very much New Silk yet in the Market, but arrivals in quantity are expected in a few days.

At last there is definite news of the European crop, telegraphic advices give the information that (including Asia Minor) there will be an average crop. This being ascertained, we should now settle down to business here, at a low and safe range of prices. The only obstacle would seem to be the generally dull and unsatisfactory news received from consuming markets. In Europe prices are naturally kept down by the large crop there and elsewhere: while in New York the renewed financial trouble seems to have a depressing effect on all commerce.

Japanese dealers are still disposed to keep moving at current rates: the interior Markets decline slowly, the prices at *Maibashi* on the 24th being quoted 37 to 38 *momme*, according to quality. Still, the native brokers assert that Yokohama quotations do not give a covering price; although we imagine that the margin on the wrong side must be very small, even with the present rates for currency.

The P. & O. steamer *Thibet*, which left this for Hongkong, via ports, on the 22nd instant, carried 34 bales, of which 30 bales were entered for Marseille and 4 bales as going to London. Of these 34 bales, about half were New Hanks, the remainder being Old *Filatures* of fine size. The P. M. S.S. *City of Peking*, which sailed for San Francisco on the morning of the 25th, had on board 117 bales for the American Markets; and of these, 10 bales were direct shipments, the balance being a mixture of New and Old *Filatures*. Export to date is now 29,697 bales, against 28,477 bales last year, and 21,776 bales in 1882.

Hanks.—No more business to report in Old staple; but several small parcels of New Hanks have been settled at a trifle under last week's quotations. Among the transactions, we notice *Omama* at \$160, *Maibashi* at \$145, and \$143, with two or three lots *Hachoji* at from \$430 to \$425. Some New *Tukasaki* reported at \$455, and a fair quantity *Foshiu Hanks* are now on offer.

Filatures.—There has been something done both in Old and New. At present nothing but *Koshu* sorts have come in, with one parcel "Suwa" reeling from *Koshu* cocoons. Among the shipments by the *City of Peking* were New *Kosansha* at \$577½, with Old at \$562½, New *Gomeisha* \$575, and New *Yajima* at \$582½. Since the mail went, there has not been much done, the few purchases made including New *Hagiwara* \$580, Old *Nattori* \$565, and Old *Hikone* reported at \$580.

Re-reels.—No arrivals beyond three boxes "Tor-toise" chop, which were settled for the American mail at \$570. A larger parcel, same chop, is expected down in a few days.

In other sorts no transactions. Our quotations this week are for New Silk, the old staple now on the Market will doubtless be gradually absorbed for internal use.

	SEASON 1883-84.	1882-83.	1881-82.
	BALERS.	BALERS.	BALERS.
France and Italy	17,271	14,318	11,107
America	9,783	9,589	7,022
England	2,643	4,570	3,647
Total	29,697	28,477	21,776

WASTE SILK.

Business in this department is practically over for the season. Settlements for the week under review are not more than 12 piculs, and we withdraw all quotations pending the arrival of new staple. The Stock on hand of old fibre remains about the same as to quantity, and will, it is hoped, soon be absorbed for use in the native spinning-mills. Some of these are doing good work with machinery imported from Europe, and turn out a very respectable quality of native-made spun cloth called *tsumugi*.

From present indications it would seem that the

new crop will be abundant and of good quality. Next month should see some business: no idea of price can yet be foreshadowed, but the Market for *Noshi* should certainly open considerably under last year's quotations.

The P. & O. steamer *Thibet*, on the 22nd inst., carried 17 bales Waste and 1 bale *Pierced Cocoons* all for the Continent, thus bringing the Export figures up to 23,881 piculs, against 24,913 piculs last year, and 26,355 piculs at same date two years ago.

The business done was but one lot inferior *Filature Noshi* at \$105, and a parcel Medium *Neri* at \$11. In other sorts nothing to remark.

Export Table, Waste Silk, to 26th June, 1884:—

	SEASON 1883-1884.	1882-1883.	1881-1882.
	PICULS.	PICULS.	PICULS.
Waste Silk	21,670	21,619	22,117
Pierced Cocoons	2,202	3,294	4,238
	23,881	24,913	26,355

Exchange has continued along upon an even keel, the tone of the Market being firm. LONDON, 4 m/s., Credits, 3/9½; Documents, 3/9½; NEW YORK, 30 d/s., 90½; 60 d/s., 91; PARIS, 4 m/s., fcs. 4.76; 6 m/s., fcs. 4.79. *Kinsatsu* have maintained their course at about 105 per \$100.

Estimated Silk Stock (Old and New), 26th June, 1884:—

RAW.	PICULS.	WASTE.	PICULS.
Hanks	450	Pierced Cocoons	—
Filature & Re-reels	200	Noshi-ito	110
Kakeda	150	Kibiso	300
Sendai & Hamatsuki	90	Mawata	100
Taysam Kinds	10	Sundries	90
Total piculs	900	Total piculs	600

TEA.

The closing week shows a considerable decrease in the settlements, from that commented on in our last Market Review, the Settlements since the 20th instant amounting to the small figure of 6,700 piculs, as compared with 10,170 piculs at the corresponding date in 1883. All Teas grading from Common to Fine have suffered a decline of one dollar per picul on our previous quotations, whilst the higher grades remain stationary and cannot be quoted any lower. Receipts from the producing districts during the interval do not differ very materially from the week previous. The latest telegrams from New York are not very encouraging to Tea exporters, in fact it makes them feel a little too warm to operate at such low prices as are now ruling on the other side. The various grades of Teas settled during the week are as follows:—Common, 725 piculs; Good Common, 1,080 piculs; Medium, 1,395 piculs; Good Medium, 2,370 piculs; Fine, 700 piculs; Finest, 325 piculs; Choice, 75 piculs; and Choicest, 30 piculs; making a total of 6,700 piculs. Since our last report we have the following Tea shipments to chronicle viz:—583,371 lbs. for New York, and 386,730 lbs. for Canada, per steamship *Mosser* (sailed June 19th) 287,015 lbs. for New York, and 72,909 lbs. for Canada, per steamship *Strathmore* (sailed June 20th), 82,539 lbs. for New York, 184,831 lbs. for Chicago, 13,915 lbs. for Buffalo, 39,419 lbs. for Saint Paul, 360 lbs. for Saint Louis, 150,234 lbs. for California, and 150,951 lbs. for Canada, making in all by the steamship *City of Peking*, 622,249 lbs. The Market closes steady as under.

QUOTATIONS.

Common	\$11 & under
Good Common	12 to 13
Medium	14 to 15
Good Medium	17 to 19
Fine	21 to 23
Finest	25 to 28
Choice	30 to 33
Choicest	35 & up/ds.

} Very scarce and not freely offered.

* The ONLY ONE awarded to any Tin Plate Manufacturer.
Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their virtue."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.
